The attitude of Governor Cox on labor is indicated by the labor legislation passed during the period he has been Governor of Ohio. The records show favorable action by him upon each of the fifty-nine measures of interest to labor which have come before him. Among the more important measures enacted are those providing for a compulsory workmen's compensation law, accepted as a model by other progressive states; a State Industrial Commission, with a state mediator; a survey of occupational diseases; the elimination of sweatshop labor; and an eight-hour working day on all public contracts.

In his speech of acceptance, Governor Cox said:

"Morals cannot easily be produced by statute. The writ of injunction should not be abused. Intended as a safeguard to person and property, it could easily by abuse cease to be the protective device it was intended to be."

Referring to collective bargaining, the Governor said:

"Capital develops into large units without violence to public sentiment or injury to public interest—the same

principle should not be denied to labor. Collective bargaining thru the means of representatives selected by the employer and employee respectively will be helpful rather than harmful to the general interest. . . ."

Concerning the right to strike, he said:

"We should not, by law, abridge a man's right to labor or to quit his employment. However, neither labor nor capital should at any time or in any circumstances take action that would put in jeopardy the public welfare."

"We need," said he, continuing, "a definite and precise statement of policy as to what business men and workingmen may do and may not do by way of collective action. The law is now so nebulous that it almost turns upon the economic predilections of judge or jury."

Speaking of child labor, he said:

"The child life of the nation should be conserved; if labor in immature years is permitted by one generation, it is practicing unfairness to the next."

Of eighteen labor measures, Harding Senator Harding is recorded as voting favorably upon seven; unfavorably upon ten; and paired unfavorably upon one.

He favored the civil rights bill; war risk insurance; the measure to increase the appropriation for the Bureau of Conciliation of the Department of Labor; and the amendment to the retirement bill prohibiting affiliation of federal employees with organized labor.

Among the measures upon which he voted unfavorably are the motion to strike the labor charter from the League of Nations; the motion to extend federal control of railroads for two years; and the Esch-Cummins railroad bill, with its anti-strike provision.

As a presidential candidate, in his speech of acceptance, his pronouncements sound well, but, needless to say, are unsatisfactory to organized labor. He said:

"The chief trouble today is that the world war wrought the destruction of healthful competition, left our storehouses empty, and there is a minimum production when our need is maximum. . . . I wish the higher wage to abide, on one explicit condition—that the wage-earner will give full return for the wage received. It is the best assurance we can have for a reduced cost of living. . . ."

"I want, somehow, to appeal to the sons and daughters of the republic, to every producer, to join hand and brain in production. . . . patriotic production, because patriotic production is no less a defense of our best civilization than that of armed force. Profiteering is a crime of commission, underproduction is a crime of omission. . . . We must stabilize and strive for normalcy. . . ."

"I decline to recognize any conflict of interest among the participants in industry. The destruction of one is the ruin of the other, the suspicion or rebellion of one unavoidably involves the other. . . . the insistent call is for labor, management and capital to reach

## But One Cent

Serves that dish of Quaker Oats

When you think of high food cost think also of Quaker Oats. One cent still serves a large dish of this food of foods.

Other breakfast dishes cost many times as much. Meats, eggs and fish, for the same calory value, average nearly ten times the cost.

No price can buy a better food. The oat is the greatest food that grows. It is almost the ideal food in balance and completeness. Its fame is age-old as a body-builder and a vim-food.

Quaker Oats, whatever they cost, would be the proper breakfast. It is wise for every one to start the day on oats. But the cost is a trifle. It means not only better feeding but a vastly lower food cost.

Quaker Oats should be your basic breakfast. It was always important, but never so much as now.

### Cost Per 1,000 Calories

Quaker Oats	6½c
Average Meats	45c
Average Fish	50c
Hen's Eggs	60c
Vegetables	11c to 75c

### Saves 35c a meal

Note the cost per calory of some necessary foods, based on prices at this writing. The needed breakfast calories in Quaker Oats will cost the average family about 35 cents less than they cost in meat foods. The calory is the energy unit used to measure food value.

# Quaker Oats

Just the Cream of the Oats

1810 Calories  
Per Pound

Round Steak  
Yields 890

Eggs 635

Serve the finest oat dish you can get. It costs no extra price. Quaker Oats is flaked from queen grains only—just the rich, plump, flavory oats. We get but ten pounds from a bushel. So this brand is famed the world over for delightful flavor.

Mellin's Food Company, Boston, Mass.

understanding, . . . and all of them must understand their relationship to the people and their obligation to the republic."

Concerning collective bargaining, Senator Harding continued:

"We do not oppose, but approve, collective bargaining, because that is an outstanding right, but we are unalterably insistent that its exercise must not destroy the equally sacred right of the individual, in his necessary pursuit of livelihood. . . . The group must not endanger the individual, and we must discourage groups preying upon one another, and none shall be allowed to forget that Government's obligations are alike to all the people."

As to Government strikes, Senator Harding said:

"The strike against the Government is properly denied, for Government service involves none of the elements of profit which relate to competitive enterprise."

Referring to child labor, he said:

"I believe in holding fast to every forward step in unshackling child labor and elevating conditions of woman's employment."

#### FINANCE

In his speech of acceptance, Governor Cox said:

"One of the first things to be done is the repeal of war taxes. . . .

"Without hampering essential national administrative departments, by the elimination of all others and strict economy everywhere, national taxes can be reduced in excess of \$2,000,000,000 yearly. Annoying consumption taxes, once willingly borne, now unjustified, should be repealed. The incomes from war-made fortunes, those of non-producers and those derived from industries that exist by unfair privilege may be able to carry their present load, but taxes on the earnings of the wage-earner, of the salaried and professional man, of the agricultural producer and of the small tradesman should be sharply modified."

The stand taken on taxation Harding by Senator Harding at various times in the Senate is of interest. He voted against an amendment to the revenue bill providing that income returns be so filed as to be accessible to the public, and opposed various measures aimed at corporations and individuals of wealth. According to authorities, he voted fourteen times against measures to increase the amount paid by profiteers and others with large incomes for the cost of the war. . . .

In his speech of acceptance, he said: "Gross expansion of currency and credit have depreciated the dollar just as expansion and inflation have discredited the coins of the world. . . . Deflation on the one hand and restoration of the 100-cent dollar on the other ought to have begun on the day after the armistice. . . .

"We will attempt intelligent and courageous deflation, and strike at Government borrowing which enlarges the evil. . . .

"In all sincerity we promise the pre-

vention of unreasonable profits, we challenge profiteering with all the moral force and the legal powers of government and people, but it is fair, aye, it is timely, to give reminder that law is not the sole corrective of our economic ills. . . .

"I believe the tax burdens imposed for the war emergency must be revised to the needs of peace, and in the interest of equity in distribution of the burden."

Senator Harding, as Congressional records show, has been in no sense a leader. He has been a "follower," a consistent follower, a follower of Senator Lodge and his reactionary group. If he seems by this rehearsal of public records to have changed his position on the important issues under discussion, as either more light came to him or political expediency dictated (his friends will say the one thing, his opponents the other), we may perhaps congratulate him upon his openmindedness. Or does this temper hold a real peril for the nation that is facing the destiny hour of her history? Upon one point, however, Senator Harding has never wavered. While he seems anything but clear in his own mind as to how his so-called "Association of Nations" is to function, not for one moment, either on the floor of the Senate or in the pronouncements which he has made away from Washington, has he permitted us to believe that he is not "for America first."

The records show that while Governor Cox was "a party regular" during his Congressional term, yet he did not, as has been stated by legislative authorities, maintain a specially close relation with "the machine element." He is referred to by those who have made a careful study of his Congressional record as "the facile politician inclined to an interest in progressive policies," his "votes, whether proceeding from native sympathy or from considerations of political expediency" having "in general been of the progressive rather than the stand-pat variety." In Congress he was interested in such subjects as conservation, the initiative and referendum, the Children's Bureau and service pensions, and particularly in the questions of tariff and food for soldiers' homes. His Congressional acts are not here discussed in more detail for the reason that upon recent important issues his record in Congress would throw little light. As Governor of Ohio he has proved himself a progressive in thought and an executive who acts; he has comprehended the problems of the people and he has provided solutions. If he is known as a "social welfare legislation" Governor, is this to his discredit at the present hour? Has the country ever more needed such legislation? While, like Senator Harding, upon some questions he is vague and indefinite, and bombastic and "political" to a maddening degree, upon the supreme issue before the country he speaks out clearly: "Organized government has a definite duty all over the world."

## One chance in three you're eating wrong

*Enough food, probably, but not enough of the right kind. Are you getting these vital elements?*

**T**HIS morning someone probably greeted you with the old familiar question "How are you?"—and you said, "Oh, all right." Most folks say "All right."

But did you really mean it? *Are you feeling right up to the mark—all right. Or do you sometimes feel that the pace is telling on you; that a "rest" is what you need?*

If the truth were known a lot of us would show up below par. Our vital reserves aren't what they should be.

Experts in nutrition say that right here in America one person in every three—rich and poor alike—suffers from malnutrition without realizing it.

In the three square meals you and your family get each day there's enough food probably, but very likely there's *not* enough of the right kind.

If you lack vitality; if a child of yours doesn't seem to thrive, the chances are you're not getting a sufficient supply of certain food elements.

### The 16 vital elements

Sixteen natural food elements (as shown in the panel) are needed to keep the body strong and well. All of these are vital elements.

Nature provides them in the wheat grain more nearly in the proper proportion than in any other food, save possibly milk.

But many of the most important of these elements are lost in modern methods of wheat preparation, through removal of the six outer layers of the kernel, commonly called the bran. The iron, for instance, which

makes red blood to carry the life-giving oxygen to every cell. The phosphorus without which, a scientist said, there could be no thoughts.

And the calcium upon which the development of the whole bone framework of our bodies largely depends.

Only in the entire wheat grain can *all* of the needed elements be secured—the proteids, the carbohydrates, the fats and these vital mineral elements.

### The 16-vital-elements food

Thousands now draw from Nature's larder these sixteen vital elements in Pettijohn's, a whole wheat breakfast food of rich and gratifying taste.

Its steaming fragrance awakes sluggish appetites in old and young alike. Its natural nut-like flavor will delight you and your children.

With cream and a bit of sugar, if you wish, it makes a vital energy ration of particularly luscious flavor.

Try Pettijohn's if you're feeling below your normal in energy and vim. Give its natural bran laxative a chance to set you right, as nature intended you should be. Give its sixteen vital elements a chance to renew your strength.

Let your children have Pettijohn's. Their bodies crave the food elements it supplies.

Your grocer has Pettijohn's—or will gladly get it for you. Make tomorrow's breakfast of this sixteen-vital-elements food.

Made by the Quaker Oats Co., 1625 K Railway Exchange Bldg., Chicago, U. S. A.

### The sixteen vital elements of nutrition

Oxygen	Sodium
Hydrogen	Chlorine
Nitrogen	Fluorine
Carbon	Silicon
Sulphur	Manganese
Magnesium	Potassium
Phosphorus	Iron
Calcium	Iodine

Each grain of wheat contains all of these 16 vital elements, but 12 of them are largely lost in the removal of the six outer layers of the grain, commonly called the bran.

*If you feel below normal in energy, lack vitality, feel "run down," you're not getting enough of these elements in your food.*

Vitality Scales

## DIVIDENDS

**AMERICAN CAR AND FOUNDRY COMPANY**  
New York, September 1, 1920.

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

### English, Literature and Composition

#### I. By Their Laws We May Know Them.

1. Debate the question, Resolved, that Governor Cox is a better candidate for the Presidency than Senator Harding, or, Resolved, that Senator Harding is a better candidate, etc., basing your argument on their Congressional records and adhering closely to the classification made by the author, League of Nations, Woman Suffrage, Prohibition, etc.

#### II. Go North, Young Man!

1. Write contrasting paragraphs on the West in pioneer days and Alaska as it is today. Which would you say held the greater number of opportunities for the attainment of wealth, achievement? Compare the rigors of life in each, the climate, the position on the globe, the vegetation, animal life.
2. What would you do if you went to Alaska? Farm? Prospect? Build railroads? Write a paragraph on your choice, giving your reasons.
3. Explain exactly what the author means by saying the United States has a special responsibility in Alaska. Name five ways in which Alaska could be of use to the United States.

#### III. A Billion Dollar Bank.

1. What does Mr. Purinton mean by the question, Do you bank on it (your bank) or just in it. He has "played on" different uses of the word bank. Which of the two is a slang use?
2. The author says that National City Bank men are bankers to the world. How does he explain this in greater detail in the article? Give an oral recitation on any other ways that occur to you, in which the National City Bank as a world institution might be of greater usefulness.
3. What part does the author say character has played in the development of the National City Bank? Is character here used in the sense in which one speaks of a person's character?
4. Write a short narration on the outstanding points of difference between the work day of a stenographer in a commercial office and in the National City Bank. Would she need a pass to enter or leave the building, in your estimation? Would she take her luncheon in some restaurant outside of the building or in the building itself? If the latter, why do you consider this arrangement necessary in a bank?
5. List five safeguards a bank makes against the possibility of an employee's dishonesty; five others protecting the employee should bank robbers enter.

#### IV. What Shape Shall the League Take?

1. In an oral recitation, give the history of the movement toward a League of Nations, starting with the organization of the League to Enforce Peace.
2. In contrasting paragraphs, give a résumé of the author's statements as to the shortcomings of Senator Harding's and Governor Cox's attitude on the League of Nations.
3. Tell briefly why most people prefer a Court to a Council.
4. Prepare a letter to send to Senator Harding asking him to define his attitude toward labor.

#### V. The Senate Despotism.

1. State the function or functions which the author believes the Senate has taken, altho properly belonging to the House of Representatives.
2. Read the article in the *Atlantic Monthly* which the author mentions and then summarize the statements you find there bearing out Mr. Hapgood's statements.
3. Could the alleged wrongful power of the Senate be taken away? Write out your answer.

#### VI. Echoes of the Campaign.

1. What relation does this page bear to the article on the relative achievements of Governor Cox and Senator Harding in Congress? Can you add any later developments to it?

#### VII. Two Kinds of Walking.

1. Criticize this article from a literary standpoint.

### History, Civics and Economics

#### I. The Lithuanian Polish War.

1. Who are the Lithuanians? What is their history? Are they Slavs like the Russians and Poles? What was their relation to the ancient Prussians?
2. Look up Lithuania on a map. Point out Vilna, Grodno, Suwalki and Augustowo. Are they in Poland, Lithuania or Russia? Which of three armies now holds them?
3. If you were a Polish general on what lines would you want to attack Russia? If you were a Russian general on what lines would you want to attack Poland? In either case what advantage would it be to you to march across Lithuanian territory?
4. Would it be to Lithuania's advantage to be independent or to join Poland or to join Russia? Give your reasons.

#### II. Free Fiume.

1. Point out on a map the situation of the proposed "Italian Regency of Quernaro." Where does it get its name?
2. Look up the history of Fiume in the encyclopedia. What historical claims have the Italians on it? Did it ever belong to Italy?
3. What was the status of Fiume before the war? Was it a part of Austria or Hungary? Had it self-government?
4. What is a "free city"? How does it differ from a "free port"? Name some of the important free cities of the past. What would be the advantages and disadvantages of being a free city?
5. Debate the Fiume question. What are the arguments for its annexation to Italy? What are the arguments for its annexation to Yugoslavia?
6. Look up President Wilson's notes on the question in back numbers of *The Independent*.

#### III. Obregon Elected. Mexico Disarming.

1. Why is it worth mentioning that Mexico had a peaceable election?
2. How many presidents has Mexico had since 1911? How many in the preceding twenty-five years?
3. Tell what you have heard before about Villa, Carranza and Obregon.
4. Why are revolution and brigandage more common in Mexico than in the United States or Canada?
5. If you were president of Mexico how would you try to put a stop to such disorders?
6. Show by the map how Lower California might more easily secede than any other Mexican state.

#### IV. Two Sides of the MacSwiney Case. Cox on Ireland.

1. Read the statement of Bonar Law and decide what you would do in the case of Mayor MacSwiney.
2. What would be the effect of his release? What would be the effect of his death in prison from voluntary starvation? As a pure matter of political policy which would be preferable?
3. What action did the British Government take when the suffragets went on a hunger strike? Why do not all prisoners adopt this plan of getting released?
4. What is the principle of self-determination? Does it apply to Ireland? Does it apply to Ulster? Are there any limits to its application?

#### V. Harding on the League, Hoover on the League.

1. How does Senator Harding's idea of a League of Nations differ from that established by the Covenant?
2. How do Cox and Harding differ on this question?
3. Read Article X of the Covenant and explain why it is so much debated. Under this article could American troops be ordered to take part in a European conflict without the consent of the American Government?
4. What is a "justiciable question"? What questions are justiciable? How could a League of Nations settle them?
5. What is the difference between a court and a conference?
6. How could the decisions of a world court be enforced?
7. Look up Root's plan for a world court in last week's *Independent* and explain how it would operate in a case of a disputed boundary or infraction of a treaty.

#### VI. A Billion Dollar Bank.

1. What qualifications should the ideal bank have?
2. "The growing power of the American banker is to be one of the main factors in the reconstruction of the world." Explain this more fully.

# The Independent

FOUNDED 1848

## New Plays

*Paddy the Next Best Thing.* An old-fashioned Irish play with a sprightly colleen. (Shubert Theater.)

*The Woman of Bronze* provides Margaret Anglin an opportunity for emotional acting of a very high order. (Frazee Theater.)

*Blue Bonnet.* A diverting, improbable comedy in which Ernest Truex is at his best as the bashful young cowboy who never owned a gun. (Princess Theater.)

*The Bad Man.* A clever satire on the familiar Mexican melodrama. Acted with delightful humor by Holbrook Blinn as the bandit and James A. Devine as the man from Maine. (Comedy Theater.)

*Genius and the Crowd.* produced by George M. Cohan. The trials and triumphs of artistic temperament. Clever craftsmanship has made, out of a story that is fundamentally unsuited to the stage, a play that is mildly entertaining, even if wholly unconvincing. (George M. Cohan Theater.)

*A Man of the People.* Thomas Dixon's play suffers from the inevitable comparison with last season's Lincoln play by John Drinkwater, but is a much better balanced and more sympathetic presentation of Civil War times than might have been expected from its author. Howard Hall as Abraham Lincoln is an actor who would have carried off an even weaker drama. He is St. Gaudens's statue come to life. (Bijou Theater.)

## Pebbles

Jack's face was so ugly that it had been described as an "offense to the landscape," and he was as poor as he was "homely." One day a neighbor met him and said: "And how are ye, Jack?"

"Mighty bad," he answered, "it's starvation that is staring me in the face."

"Is that so?" said the sympathetic inquirer. "Sure, and it can't be very pleasant for ayther of ye."—*New York Globe.*

"What's worrying you, Jim?" asked a miner as he met another miner.

"These women!" replied the other, a newly married man. "They are queer cattle."

"What's the matter?"

"Well," said the young husband, "this morning the missus chased me out o' the house wi' a frying pan, and when I went home tonight she was crying her eyes out because I hadn't kissed her when I went out!"—*New York Globe.*

A preacher conducting a revival meeting announced that he would speak the next night on "Liars," and he requested his hearers to read in advance the 17th chapter of St. Mark.

The next evening, before opening, he asked all who had read the chapter to hold up their hands. A score or more of hands were raised.

"Well, you're the persons I want to talk to," he said. "There isn't any 17th chapter of St. Mark."—*Lincoln (Neb.) Journal.*

## Remarkable Remarks

MARY PICKFORD FAIRBANKS—I wear ten-year-old clothes.

GOVERNOR COX—I ask you to forget that you are of any party.

MRS. VINCENT ASTOR—Nothing would make me a woman politician.

W. L. GEORGE—One never knows a woman till he makes loves to her.

CLINTON W. GILBERT Cox is at his best in cross-roads talks to voters.

H. W. GOSSARD—In the figure of every woman lie the possibilities of beauty.

DAVID W. GRIFFITH—The direct road to a man's heart is by way of his vanity.

H. C. NIXON—It is a comfort to think that only one candidate can get elected.

DR. CHARLES M. SHELDON—It does not pay to live at all unless we live for all.

REV. GEORGE CHALMERS RICHMOND—Have mercy on the Governor of Illinois.

OTTO H. KAHN—The blight of the Peace Treaty of Versailles still lies upon Europe.

CORRA HARRIS—You never know what is in a woman unless she becomes a widow.

JOHN BURROUGHS—When we deny God it is always in behalf of some other god.

JOHN CHAPMAN HILDER—It is not necessary to have the shirt, tie and socks match.

CALVIN COOLIDGE—The suspension of one man's dividends is the suspension of another man's pay envelope.

LADY DUFF-GORDON—The dress should be the servant of its wearer and never the wearer the servant of the dress.

C. N. WISNER—There are people in New York City who think the high cost of living is the only Hell there is.

HERBERT HOOVER—About one-third of our people are responsible for most of the extravagance and waste in this country.

ELMER H. DOVER—To all real Americans Harding stands out as a shining light against the barroom talk of Governor Cox.

HARRY COLLINS—Dress is drapery in movement, life wedded to art in a form that blends the beauty of repose with the fascination of rhythm.

DR. PEASE—The corset retards abdominal breathing, interferes with the free action of the diaphragm, and forces the viscera into the pelvic cavity.

ROY K. MOULTON—I will be very glad when the reign of sophists, idealists, nuts, cranks and thimblegriggers thruout the world has drawn to a close.

RHODA BROUGHTON—The girl of 1920 does a great deal more and suffers a great deal less than her elder sisters of the fifties and sixties of last century.

PREMIER LLOYD GEORGE—The Covenant is the trade union of nations where the whole of the community engages to defend and protect a weak member.

# Gorham Silverware

*To Her Future Happiness*

THEIR lovely daughter. Entrusted to the keeping of a new son. Wonder memories, as the intimacies of her expanding life since babyhood float like a panorama of beauty through the thoughts of her loved ones gathered here. Her own wedding breakfast! And her mother's wedding silver too—silently suggesting another joyful day of long ago—reflecting an enchanting background, such as only silver can—sometime to be handed down to mingle with the silver gifts of the new bride—there to be treasured through all the years as the priceless reminder of happy family ties.

## Politicians!

Can They Fool All the People All the Time?

By Chester T. Crowell

**N**OT only the Presidential campaign but scores of minor campaigns are raging today in every state in the Union. We have recently seen the primary system in operation. This is perhaps a very good time to take stock of our political system and contemplate its faults and advantages.

I am one of those who believe that we have an excellent system and an excellent form of government. Our difficulties result almost entirely from failure to live up to the very ordinary standard of honesty requisite to a successful working of our system. It is my observation that our politicians, figuratively speaking, try to burglarize our capitols. They try to enter the structures by tearing down several of the front portals.

To be specific. The charge is made in every campaign that Wall Street or big moneyed interests—national or local, according to the size of the political unit in which an election is being held—has subscribed an enormous sum of money to elect a certain candidate. It is very doubtful if money ever has or ever could control an election in the United States. It is absolutely certain that the American voter would be stirred to furious resentment by an effort to make the campaign fund the most potent factor in the contest. No other act except a resort to arms would be so bitterly resented. This is exactly as it should be. It shows that our people are politically sound, patriotic and capable of self-government.

**Wolf! Wolf!**

What, then, of the politician who sounds a false alarm? This has no specific reference to the fact that Mr. Cox recently sounded such an alarm. This campaign cry is old in American politics. It is used in almost every campaign. But if the cry is false, then in my opinion it is not very far removed from treason.

This is not the only crime committed by politicians of all parties and of all sections of our country. One of the most serious crimes I have observed them committing in broad daylight and before vast multitudes, is to declare themselves firm believers in, and stout champions of any bias or prejudice dominant in the particular community where they happen to be speaking. In the fifteen years during which I have been a close observer of political campaigns—usually as the staff correspondent for a daily newspaper—I have met only four or five public men who bravely dared to educate the public. There was a time in American politics when men of constructive thought, of broad vision, who believed they possessed theories which would advance the interests and happiness of the republic, ran for office in order to obtain publicity for their ideas. In brief, they

were serving the idea rather than themselves. Today such men are publishers. As long as men of that type are active, our Government is safe. Our Government today lives on those ideas. Its hope of the future rests upon such men. There are still such men. If there were not, I believe our Government would fall within thirty days. But there are not enough such men. Our Government is shaken today by the lack of them.

### One Man and Many Cowards

The names which live in our history are nearly all the names of men who went forth to serve ideas and who did not fear to advance them before hostile audiences. William Jennings Bryan is such a man. I am out of accord with him on nearly every theory he has advanced, but I firmly believe his name will live as one of the greatest Americans for the simple reason that he did not fear to espouse the cause of suffrage long before the battle was won; that he fought bravely for prohibition when it was a struggling minority; that he battled for Government ownership when the very suggestion was regarded in many quarters as almost criminal. No man ever faced a more difficult problem than William Jennings Bryan when he went before the American public to make his campaign for free silver. It involved an elucidation of complicated financial theories before the masses of the people. Beaten in his race for the Presidency three times, he still stands as probably the most potent one man in American politics.

By way of contrast, let us consider the ordinary, garden variety, run-of-mill politician:

He charges frightful waste of public money, both when it is true and when it is not true.

He charges abuse of power in almost every campaign, whether it is true or not true.

He charges domination of the Administration by selfish interests, whether it is true or not true.

He makes violent, scandalous charges against the good name of his opponent, whether it is true or not true.

In brief, charges which might very well be made the basis of impeachment are the ordinary campaign clap-trap of almost every contest from constable on up.

After having made charges which bear out nearly every assertion of the Bolsheviks against our form of government, our eloquent candidate closes his address with a soul-stirring plea for 100 per cent Americanism. It is to laugh. Our brave candidate loathes and despises the Socialists. He would put the Bolsheviks in jail or hurl them into the sea. His heart throbs with patriotism. He froths at the mouth with Americanism. But

his hatred of the Bolsheviks and Socialists is quite evidently based largely upon the fact that they are silly enough to believe what he says about the administration of our public affairs.

In my own state of Texas, I know many politicians who have been prohibitionists in the prohibition end of the state and anti-prohibitionists in the anti-prohibition end of the state. Largely as a result of the persistent and perennial labors of peanut politicians, there grew up in Texas the belief that every anti-prohibitionist was a hireling of the breweries. A man's belief in prohibition became the test of his honesty. This made easy sailing for the crooks. Under those circumstances it became highly advisable for a crook to represent the "moral element."

### Does a Weather-Vane Get Your Vote?

I know of no clearer demonstration of the type of man most numerous in county politics than was afforded in the county in which I lived at the time the United States entered the World War. There was a large German vote in that county. For several years these Germans had been reading the war news with tragic interest. They were nearly all pro-German. The remainder of the populace was mildly pro-ally or not interested. At once the politicians became pro-German among the Germans, and they did not mention the issue anywhere else. It had been the custom for ten years or more for minor candidates to go into these German colonies and utter the most absurd flattery of the German people and of the German Government. Actually they slobbered over everything Teutonic. I have been present when men of pure Irish descent declared before these German audiences that they were German. I feel safe in making the assertion that for ten years no American had made the slightest effort to Americanize those German communities. The politicians had kissed their feet and declared them superior to Americans—this in specific terms, using the very words "superior to Americans." But when the United States entered the war, these great-hearted patriots felt their Americanism seething within them. Suddenly the remainder of the community had become keenly interested in the war. The remainder of the community was in the majority. These same men who had behaved like flunkies of a czar did all they could to add to the war hysteria. One politician sought the occasion to brutally beat a fat old German baker on a public street for no other reason than that he thought it would advance his political fortunes. He was one of the men who had told those Germans that he was a German and that he was pro-German in the war.

### The H. C. of 'Lection

These types are numerous in every county in this nation. They are parasites upon our system. They seek favor under our system by tearing at its very foundation stones. The primary system of nomination of candidates has done much to develop this type. Men feel that it is necessary to do something sensational. The primary system has also contributed very largely to the increasing cost of campaigns in this country. I would hesitate about going back to the convention system with all its obvious faults. But so far as my own state of Texas is concerned, I feel certain that the primary system has distinctly lowered the standard of our public service. I believe this is because we have merely placed the primary system on our statute books and not even approximately lived up to the principles upon which it rests.

Under the old convention system a man would become prominent in the state and, when the governorship

was to be bestowed, the small number of men making up a state convention would think of this man. Under the primary system a man must become prominent in the state to such an extent that many hundreds of thousands of men think of him in connection with the governorship. Unless he is a man of unusual attainment and has had some stroke of luck which brought him before the public, his name would not ordinarily occur to hundreds of thousands of voters. He and his friends must then go out and manufacture acquaintance. This costs money. I can remember when \$30,000 was a very ample campaign fund in Texas. Today a quarter of a million dollars is a modest campaign fund. That development has come very rapidly. It is a surprise to vast numbers of our people. Not having analyzed the change in conditions, the ordinary voter is puzzled by the evidences of the use of this money. Instead of the politicians frankly explaining that campaigns are now more expensive, each political camp calls attention to the "vast sum" being expended by the other camp—the voter observes that both statements are true and despairs.

### Behind the Mud Barrage

In my state nearly five hundred thousand votes will be cast in a Democratic primary election. A campaign fund of a quarter of a million dollars means less than fifty cents per voter. That is very, very small. With great constructive issues before the public, it seems to me that one dollar to three dollars per vote would not be too much to spend in a campaign of education. But in every campaign I find leather-lunged, flat-headed mercenaries rushing madly about with their catfish mouths wide open, asserting that the other side is trying to buy the governorship, when they might easily discover, if they cared to, that their own camp is spending the same amount of money or more, that both camps are in dire need of money and that neither of them is having money thrust upon it. Anyone who thinks it is easy to raise money for any sort of a campaign should try it once.

If a public man is sincerely alarmed about the rising costs of political campaigns, there is a way for him to challenge the assumed necessity for large sums. Instead of using so many hired hands and such large quantities of print paper and buttons and bunting and bands and other claptrap, he might set out with a definite budget, which he would make public to begin with, and endeavor to carry a much larger share of the campaign effort personally. He might tell each audience that he depended upon them to pay his expenses to the next place where he intended to speak, and take up a collection right there, truthfully assuring those people that he intended to depend upon this means of raising his money. But I have never seen any of these persons who are so horrified about the use of money in campaigns doing anything of this sort. I really believe it would be one of the best political strokes that a candidate could use. It would be impossible for a candidate for the Presidency, but it is not at all impossible for a candidate for state or district or county office.

I have seen some enormous campaign funds expended. It has not been my observation that any of them were very effective. As a rough estimate it is my guess that about three-fourths of every political campaign fund is a net loss. I have never seen a political campaign that I thought was even approximately efficient.

There is a remedy within easy reach; a way to drive peanut politicians out of the prominence they enjoy in our public affairs today. If a man, or two or three men of high standards will offer themselves as candidates and make the best [Continued on page 387

A village on this plan, with its farms radiating from a community center, would cure the loneliness and discontent that drive so many Americans into crowded cities and uncongenial work

# Applepieville

By Charlotte Perkins Gilman

*Mrs. Gilman has pioneered for many years in the solution of the problems that beset women's progress. In Europe and in the United States she has lectured widely on economics, ethics and sociology, preaching in all these subjects a stimulating program of radical common sense. Mrs. Gilman is the editor of "The Forerunner" and the author of "The Home," "Moving the Mountain," and "Human Work"*

**A**PIE is usually circular—tho I have once seen a square one, but when we say "pie-shaped" we mean the shape of a piece of pie, not of a whole one.

Said piece is a species of triangle with one side curved according to the size of the plate, and the angle varying with the generosity of the person who cuts it.

How this irregular triangle applies to farm land will now be explained.

Our great slow, easy-going American public is beginning to feel anxious about the farm, the farmer, and, most immediately, the farmer's wife.

We are used to seeing the young man leave the farm and go to work in the city.

We have been forced to accept the similar departure of the young woman.

Then father grew morose, and vowed he would not plant what he had not labor power to reap. But now mother is beginning to protest, and we are anxious. She never made any fuss before. She worked for the whole family and the "hands." She had no help, no mechanical conveniences, no rest, no amusements, no society.

She made no complaints but died in relays. It used to take three women to get the average farmer thru life; a girl, who bore many children and was worked to death before forty; a sturdy widow who brought up the children and lasted perhaps twenty years; and then he

married another girl and presently died himself, of well-earned indigestion, leaving her to be the widow for another man.

Besides this facility in dying the farmer's wife went insane more frequently than any other class of women.

The summer Chautauquas, the woman's clubs, and the spread of progressive literature have pretty generally waked this lady up.

She is no longer contented with her "lot." She thinks that "lot" could be cultivated to better advantage.

In a recent survey made by the Department of Agriculture reports have been made on some ten thousand homes, as to the condition of the farm woman.

Eighty-seven per cent of them have no real vacation.

In summer they work over thirteen hours.

Sixty per cent of them have to bring water from the spring, or well, or pump.

They have on the average a seven room house to keep clean.

Ninety-two per cent do some or all of the family sewing.

More than half do garden work, and almost all the poultry is cared for by the women. About a quarter help with the stock and do field work in harvest time.

This report is among thirty-three northern and western states; much worse conditions could be found elsewhere.

If there were any alleviations [Continued on page 393]

# Planning for Tomorrow

A Message from the United States Government to the American People

By George Otis Smith

Director of the United States Geological Survey

**P**LANNING for tomorrow—no other three words can so well define the purpose or describe the program of the United States Geological Survey. Forty years ago Clarence King, the first director of this scientific bureau, in outlining its future, wrote of the development of our material resources as a problem demanding scientific research. "In the industrial conquest of a continent the tide of victory has never ebbed," said Director King, but he added that without adequate information in the possession of the Federal Government as to the needs of industry, without scientific knowledge of all the elements of national wealth, commerce is mere transportation, industry is short-lived, and the equilibrium of population with local resources is not to be attained. This view of the value of facts has persisted and has become the foundation of the Geological Survey's policy, and for forty years the self-appointed task of this branch of the public service has been to know the natural resources of America better.

Stock-taking is a continuous performance with the Geological Survey—the field activities of its scientists and engineers include mapping the national domain, measuring the flow of the rivers and determining the country's mineral wealth. The sun-bronzed young man bending over a plane-table on the edge of a South Carolina swamp, or the more heavily clad engineer lowering a current meter thru a hole on an ice-covered western stream, or the geologist hunting for oil seepages in the Alaskan wilderness—each is simply a representative member of the Geological Survey's field force of specially trained men who are each day adding to our

knowledge of what this country of ours is, what it contains, and not only what it is good for, but what it is best fitted for. Such is the democratic route to wise utilization of national resources.

The Federal function of supplying the people with basic facts involves a program that changes with the decades. Conservation was not a political issue in 1879, even tho Congress was outspoken in its intent that this newly established scientific bureau should do its part in preventing waste of natural resources. At that time the exploration and exploitation stages in national development were slowly passing and the need of a surer basis for community building was realized. The Survey's field of greatest endeavor has always been the West, where it has helped to discover and utilize the wealth of mountain and of valley. Yet even today its activities exhibit the wide contrast between the pioneer work of the Government explorer in Alaska and the more detailed examination of some ore deposit in Alabama, where development has reached the intensive stage; the point of view changes considerably with the longitude.

**T**HE great expansion of American industry today brings us face to face with an insatiable demand for raw materials that may exceed the domestic supply, for even the United States, most favored of nations in abundance and variety of minerals, is not independent of other continents. The Federal geologist in his investigations of the raw material requirements of a war program was led far beyond our national boundaries and so it happens that as a by-product of its war work the Geological Survey has now in press a "World Atlas of Commercial Geology." This publication in its original form prepared for the Peace Conference and now planned for the desk of the business man as well as of the college student, will exhibit graphically the distribution of mineral wealth over the entire surface of the earth.

No longer is it sufficient to know America only; the world view of the raw material situation is necessary if we are to build safe our industrial structure. What America can best spare and what America most needs to supplement its domestic supply are questions that cannot too soon be answered in planning for industries that are to last. The geologist's responsibility in making his part of the inventory of the nation's assets is all the greater, for the reason that of the minerals so essential to industry there is but one crop to harvest. However difficult it may be to measure the limits to our coal beds, or our ore deposits, or our underground reservoirs of petroleum, the supply is surely limited, and every ton of anthracite or copper ore or barrel of oil that we use is one less for our children's children to use.

The United States Geological Survey has another duty in planning for tomorrow, not only raw material but energy is needed to insure the life and health of American industry. In its study of the water resources of the country, the Geological Survey made its earlier contributions largely to the end of putting water upon arid land, the pioneer appeals of Director Powell for Federal irrigation at last finding an answer in the cre-

George Otis Smith, Director of the United States Geological Survey, is not only the oldest bureau chief in the Department of the Interior but one of the oldest, in point of service, in the entire governmental organization. Mr. Smith came up from the ranks. He has held his present position for thirteen years, serving under Presidents Roosevelt, Taft and Wilson; and despite the high cost of living, has not been lured away by outside offers of more money. He is intensely interested in getting the basic facts about this country's resources

ative work of the Reclamation Service; but now the authoritative stream flow data collected by the Federal engineers are used not only in determining the highest use of the streams on the public lands, whether for irrigation or for power, but in planning power development all over the country. To lighten the load of labor and indeed to furnish the energy in the large measure which is required by industry, but for which there is no human supply available, is a project which cannot be longer delayed. For this task the results of over thirty years' investigations are ready and herein lies one great distinction between a long-term study by a scientific bureau and an opportunist investigation by a newly created commission or war-board; the slowly accumulated facts and the carefully worked out conclusions possess an accuracy and perspective that better fit them for inclusion in plans that are to last. The political question of the hour may demand and receive a quick answer, but the economic problem of national scope requires a longer course of treatment.

The latest fruit of the Geological Survey's study of the power problem is the super-power investigation now under way. The recognition of the North Atlantic seaboard region as our industrial front-line trench in any international competition led the present Congress to authorize a special study of the power requirements of both the industries and the railroads between Boston and Washington. Electrification is the only solution of the transportation problems that now confront us and the rapidly mounting fuel costs force home the conviction that we must make a far better use of our coal. Hitching up every feasible water power with large, well planned steam stations, should furnish a power supply that will be adequate, dependable, and relatively cheap. Such planning is necessary to meet our demand for energy even today, but it must also provide for the industrial expansion we confidently expect is bound to take place tomorrow.

Industrial strategy that plans future campaigns must provide at the front adequate supplies of both material and energy. But to determine what will be adequate tomorrow is itself a major problem in statecraft. We are prone to underestimate the current growth of our country. The results of the statistical inquiries long made by the Geological Survey afford some historic grounds for prophecy. In the lifetime of most of us,

## COPPER

## PETROLEUM

13 1870

3.38 BBLs IN 1918

Know America is the slogan of the field force of specially trained men in the Geological Survey service. This engineer, lowering a current meter thru a hole in an ice-covered Western stream is taking stock of our natural resources

Conservation was not the issue it is today along about 1870 when the Geological Survey bureau was new. Since then, however, not only has the population of the United States trebled but its consumption of coal and iron has increased twenty fold—its consumption of copper and petroleum, seventy fold! No wonder that the Survey—realizing that there is only one mineral crop to harvest—gave official warning of this twelve years ago

while the population of the United States has trebled, our consumption of such raw materials as coal and iron, copper and petroleum has increased about twenty-fold and seventy-fold respectively. The raw material issue will not disappear with the years but rather may some time force a national crisis.

For this reason the Survey collects and publishes weekly figures of coal output and monthly figures of oil output—the finger must be kept on the pulse, for the nation in these days cannot wait for an annual diagnosis. Nor are the facts of energy consumption less enlightening; the monthly reports made by the 3000 central power stations of the country to the Geological Survey show that the output of electric current last year exceeded even the war "peak" and already in 1920 the output is 16.7 per cent in excess of that of the corresponding period in 1919. As a barometer of business and industrial conditions, this monthly statement of the electricity put on the wires for use by American citizens deserves careful consideration. The war expansion is past, but our country continues to develop.

In a nation whose industrial progress is by leaps and bounds the look ahead must be a long one. The official warning by the United States Geological Survey twelve years ago that our consumption of petroleum was increasing faster than our production might well have been heeded in that day of plenty; measures of economy should have been adopted when there was more oil to save. Just now the American problem is both a fuel and a power problem—demand continues to increase faster than supply.

Coal and oil are needed to keep the wheels turning—not to weave O. D. cloth, nor to forge guns, nor to make ammunition, but to grind out wheat, fashion farm machinery, make shoes, light our streets and homes, and above all, carry our goods to market. Most of the power that drives these wheels comes from coal, the steady movement of which from mine to market is like the flow of the very life blood of an industrial nation; yet more spectacular, because newer, is the part played by gasoline in generating automotive power. So every citizen, whether the owner of a limousine or a farm tractor or simply the humble strap-hanger, may well watch the weekly output of coal or of oil; our daily life depends upon our having enough fuel to keep the wheels going round. The nation needs to provide more power and to use less fuel than it does now in making that power.

While it is the duty of every American to think in terms of the America of tomorrow, it is plainly the function of every Government scientific bureau to provide the basic facts from which plans may be wisely formulated. To plan for tomorrow is present-day patriotism.

Washington, D. C.

# Our Greatest Victory

## The First Complete Story of Our Combat Operations

By Captain Joseph Mills Hanson

**N**ORTH and northeast of Verdun, in the rugged hills of the Meuse, among which lie the remains of Fort de Souville, Fort de Vaux and Fort de Douaumont and the dust of the vanished villages of Vaux, Fleury and Douaumont; Louvemont, Beaumont and Samogneux, is a region possibly twelve kilometers long and six broad which has seen, probably, the most prolonged single battle and the most prodigal expenditure of human blood of any area of similar extent in the world. For this narrow area, every foot of whose surface has been turned many times by bursting shells, was the center of the battle of Verdun, which, beginning with the furious attack of the army of the German Crown Prince on February 21, 1916, on the outlying forts along the crest of the heights, reached its high tide only at the end of the following June when the assailants attained their extreme advance at Fleury and in the moat of Fort de Souville, less than four kilometers from the outskirts of Verdun, and practically terminated on the fifteenth of December with the last counterattack of the French which drove the Germans back to the line, averaging about ten kilometers from the city, which remained the stabilized front until the autumn of 1918. During the course of this battle the Crown Prince expended 56½ divisions in his vain efforts to reduce the fortress whose constant menace to the hinge of their Western front was the ever-present nightmare of the German high command and he lost upon those shell-ploughed slopes so many scores of thousands of his best troops that there resulted a permanent reduction in the man power of the central empire, confessed by the German soldiers in the nickname which they applied to Verdun—"the charnel house of Germany."

It was from the French front line, thus stabilized at the end of 1916, that there was launched on the 8th of October, 1918, the attack of General Claudel's 17th French Corps, a part of the right wing of the First American Army, which was destined finally to free Verdun from its state of semi-investment of more than four years' duration. In this region, appealing to the French, with an awe and eloquence scarcely comprehensible to their new American allies, of gigantic struggles past and hosts of comrades slain, American and French divisions were to share the toil and the glory of hurling the common enemy back from positions as strongly fortified and as vitally necessary to his continued possession of the invaded regions of France and Belgium as any on the Western front.

As has been pointed out in a previous article, in ex-

This map shows the River Aire, the Argonne Forest, the heights of the Meuse from which the German army continually bombarded advancing American troops, and Verdun, German stronghold, afterward nicknamed "the charnel house of Germany"

tending the front of attack of the First American Army to the east bank of the Meuse, General Pershing's primary object, to which the freeing of Verdun was merely a corollary, was the reduction of what we have termed the great eastern bastion of the enemy's Meuse-Argonne front; that is, the portion of the Heights of the Meuse from which his artillery was continually bombarding the advancing troops of General Bullard's and

General Cameron's corps west of the river. Added to the advantage of eliminating this flank fire would be that of compelling the German divisions east of the Meuse to remain there in defense of the heights instead of being available for reinforcing the hard-pressed troops of General von der Marwitz's right, struggling to maintain themselves along the Aire and in the Argonne Forest, while, if sufficiently pushed, they would even require reinforcements themselves, thus further weakening the resistance to the main American attack. The skilful coordination of effort at all points along the wide battle front is aptly illustrated when it is recalled that on October 7 General Muir's 28th Division and General Duncan's 82nd Division launched their attack on the escarpments of the Argonne at and north of Chatel-Chehery. This attack was so timed as to draw the attention of the Germans from the opposite flank, where General Claudel opened his offensive on the following morning.

The 17th Corps, as it lay at dawn of October 8, consisted of General Bell's 33rd Division, which had been transferred from General Bullard's command to that of General Claudel, lying on the west bank of the Meuse opposite Consenvoye; the 18th French Division lying in the stabilized trenches from Samogneux, on the eastern bank of the river, to a point two and one-half kilometers east of that village, opposite to the Bois de Caures; and General Belenet's 26th French Division, similarly extending from the flank of the 18th Division a distance of two and one-half kilometers to Beaumont. Ready for introduction into the battle line between the 18th French and the 33rd United States Divisions as his French divisions should push northward, General Claudel had the 29th United States Division under General Charles G. Morton. In reserve he had General C. R. Edwards' 26th Division. Beaumont was the right limit of the front of attack, but east of the 17th Corps lay the 33rd French Corps under General Leconte with the 15th and 10th French Colonial Divisions in line, and beyond that General Blondlat's 2nd French Colonial Corps. General Guerin's 15th Colonial Division was to execute a strong demonstration in favor of the main

attack while the 10th Division and General Blondlat's corps were to stand ready to extend the front of the latter whenever the opportune time should arrive.

It should be clearly borne in mind that the attack in this region was directed against the northern part of the long ridge extending from Dun-sur-Meuse southeast along the east side of the river past Verdun, St. Mihiel, Commercy and Toul to finally merge into the Vosges Mountains of Alsace. The Heights of the Meuse which were captured by the Americans in the battle of the St. Mihiel salient were a part of the same Heights of the Meuse which General Claudel's corps was now about to attack. In 1914 the Germans had overrun the portion of them at St. Mihiel and the portion north of Verdun, while the French had been able to retain the portion lying east and southeast of Verdun. The front line from which the 18th and 26th French Divisions were to move forward stretched from the level of the Meuse up over the crest of the heights so that the advance of these divisions northward would have to be made diagonally up the face of the ridge with their left flank in the valley and their right flank on the crest. As they pushed north, the 18th toward Haumont and the Bois de Brabant, the 26th toward the Bois de Caures and Flabas, leaving an ever-widening space between their left flank and the river, flowing off to the northwest, the 29th American Division would gradually be introduced between the 18th French and the 33rd American Divisions and would drive north from Samogneux and Brabant against the Bois de Consenvoye and the Bois Plat-Chene. Last of all, as the advancing front came up level with Consenvoye, General Bell's division, crossing the river at that place, would further extend the attack against the Bois de Chaume and the village of Sivry, at the head of the bend above Brioules.

All of the territory to be traversed was a perfect labyrinth of trenches and wire entanglements making up the several tellings of the Germans, the front ones facing the French lines, the rear ones, among which were interspersed their heavy artillery positions and observatories, tending more to the northwest along the main crest of the ridge from Ornes by Flabas to the Grande Montagne, the culminating summit of this region. Thence they swung west across the Meuse in the vicinity of Brioules. This area of rough hills, fur-

This is the seventh of a series of articles in which Captain Hanson tells the complete story of what the American troops did on the battle line in France—a series written from a thorough study of the official records and with the background of actual experience overseas. "Up the Line from Cantigny" was published in The Independent of March 27, "Those Desperate Days at Chateau-Thierry" in the April 24 number, "Zero Hour Along the Marne" May 29, "One Day's Work at St. Mihiel" June 19-26, "Covered with Mud and Glory" July 24-31, and "Getting on to Berlin" August 28.

rowed by deep ravines and densely clothed with forests, ascending abruptly in the summit of the Grande Montagne, seven kilometers north of Samogneux and five kilometers northeast of Consenvoye, to an elevation of more than 550 feet above the level of the river, was the meeting place of all the German defensive zones; "the exact point," as General Pershing phrases it in his final report, "on which the German armies must pivot in order to withdraw from northern France." It was naturally to be expected that the German fortifications here, covering their Metz-Valenciennes railway, would be as formidable as skill could make them and that the resistance of their forces would be as desperate as had anywhere been developed.

During the night of October 7-8, the French engineers threw pontoon bridges across the Meuse at Samogneux and Regneville and at dawn those of General Bell's division, under intense shell fire, laid one at Brabant and one at Consenvoye. In order to gain the maximum surprise effect, no preliminary bombardment was fired, but at 5 o'clock on the morning of the 8th the two French divisions went over the top shielded by a heavy barrage. They promptly swept thru Haumont and the Bois de Caures, taking many prisoners and immediately thereafter Colonel B. A. Caldwell's 58th Infantry Brigade of the 29th Division attacked from the bank of the canal between Samogneux and Brabant, driving with few casualties across the lower ground and into the Bois de Consenvoye. This cleared the flank of the 33rd Division and at 9 a. m., Colonel Abel Davis' 132nd Infantry crossed the river on the bridge at Brabant and pushed north four kilometers into the Bois de Chaume. At nightfall the front line had achieved an advance varying from one kilometer at the extreme flanks to six in the center and it was well up among the ravines and ridges making down from the Grande Montagne.

Difficulties, however, now multiplied, as they had after the initial attack on the Meuse-Argonne front. The enemy, recovering from his surprise, began utilizing to the full the advantages of his position and his huge concentrations of artillery and machine guns. Progress, from the morning of the 9th, became slow and it was attained at the cost of hard fighting and heavy losses in the broken, obscure country. In order to approach the enemy's rear lines at right angles the Franco-American divisions were obliged gradually to turn the direction of their advance northeastward on the pivot of their attack near Beaumont. By this movement the front of the divisions on the left was expanded, fanwise, requiring the constant extension of the troops there and the introduction of new units. Both brigades of General Mor-

The Tenth French and Second American armies pushed the German army thru the Valley of the Sarre River and Metz back toward the Rhine. On this map of the general area over which they fought is shown the relative position of Metz, Verdun, the River Meuse, Luxembourg

# The War Bills

By Edwin E. Slosson

THE war was fully paid for on the day it closed. All its losses and expenses had been settled for—by somebody. Of course we believe that there should be a readjustment of burdens, that the Germans should pay for the property they destroyed in Belgium and the Austrians for the damage they did in Serbia and that those who helped out their governments in the hour of peril by the loan of their money should ultimately be reimbursed with interest. But these are mere matters of bookkeeping, transfers of obligations from one person to another. Such exchanges, however just and necessary, add nothing to the wealth of the world; on the contrary they always consume something and sometimes a great deal. In international affairs as in private affairs it occasionally costs more to collect a debt than is got out of it.

We often hear it said that the war has "robbed the future," "borrowed from the future," "mortgaged the future" and the like. Obviously the war could do nothing of the sort for the simple reason that the future is not the present and the present is all we have at our command. Such language is of course figurative, but it is a common error to mistake figurative language for fact. We could not waste the wealth of future generations because that wealth is not yet in existence. We could not waste the wealth of past generations to any great extent for they did not leave us much. The people of Europe after working for 2500 years under more or less civilized conditions had saved up less than a thousand dollars apiece (\$915 as I figure it). That is what their total property amounted to at the beginning of the war. Not a large part of this was consumed in the war, for the devastated region was comparatively small and most of the accumulated wealth was unsuitable for war purposes. In using up our coal and oil supplies so fast, in cutting down trees to bury in trenches and in digging out iron to sink it in the sea we may indeed be said to have wasted our resources and deprived posterity of what it will need. But for the most part the war paid its way as it went on by supplies produced for that purpose, food raised the same year, uniforms and munitions made a few weeks before.

The total cost of the war is estimated by the experts of the Carnegie Endowment to have been \$338,000,000,000. This includes the indirect losses, such as the falling off of production, the economic value of the lives sacrificed and the damage to neutrals. The net economic cost of the war to the active belligerents was probably about \$223,000,000,000. This is \$350 per capita. That is to say each inhabitant of the fifteen countries involved spent on the average more than a third as much as he and all his ancestors had accumulated from the beginning of historic time down to 1914. But this is less than the average annual income (\$360) of people working under such conditions as prevail in the United States. Americans, being the richest people in the world as well as the most reckless when they are in a hurry, spent more money than any other single belligerent after they had made up their minds to enter the war.

Before the war the belligerent countries were getting richer at the rate of \$15,000,000,000 a year. This was their annual increase in wealth. If they had kept on working instead of fighting they might have been saving \$50,000,000,000 instead of wasting \$200,000,000,000.

The national debts which before the war were considered almost unbearable burdens have been increased from \$27,000,000,000 to over \$200,000,000,000. To pay the interest on these debts as well as the running expenses of the Government will take taxes amounting to 5 per cent

of the total income of the Americans, 28 per cent of the income of the Englishmen and 40 per cent of the income of the Frenchmen. Or to put it another way the American will hereafter have to spend fifteen of his 300 work days in working for his Government, the Englishman will have to spend eighty-four and the Frenchman 120 days a year working for his Government. The German will have to devote ninety days every year to the payment of his own internal war debt and administration expenses and much more if he pays to the Allies all he has promised to pay by the Treaty of Versailles. Westward the course of indebtedness takes its way. Germany owes England and France; they owe the United States. We owe ourselves.

But the point to be borne in mind is that these figures of indebtedness do not represent losses or gains in the total of the world's wealth. If all governments repudiated them tomorrow or everybody burnt up their bonds the world as a whole would be neither richer nor poorer. Such a general cancellation of obligations would apparently wipe out at once the whole cost of the war. This "perpetual burden upon posterity," as we hear it called, would vanish, yet posterity would be in no wise relieved and nobody would be better off. On the contrary we all would be worse off for the wholesale disowning of debts would be highly unjust to individuals and nations and ruinous to the financial system and commercial credit of the world, so nobody with any more brains than a Bolshevik is likely to advocate converting war bonds into scraps of paper. But if these \$200,000,000,000 of national and international obligations could be so easily reduced to zero in a moment by the use of a match on the part of the creditor or by a simple shake of the head on the part of the debtor it is evident that they do not constitute real wealth in themselves and that they do not measure the extent of the destruction of pre-existent property by the war.

The coming generation will not be much poorer on account of the war, but will be less rich than it might have been. It starts in the race not far behind the scratch of 1914. Its handicap is psychological rather than material.

## Back to School

"GOOD morning, children. Back from your vacation and ready (if not exactly eager) for study. We have everything ready for you, except the teachers. Mr. Jones has left us because he could make three times his present salary laying brick. Miss Smith has become a stenographer. Miss Robinson has starved to death. The remaining teachers will take their classes until the vacancies can be filled."

## This Equal Suffrage Planet

WOMAN suffrage has now become the rule rather than the exception the world around. Only five regions remain in which the question of votes for women is still an open issue: (1) Latin Europe; (2) Latin America; (3) Balkan Europe; (4) "native" Asia; (5) colonial Africa. The backwardness of the Latin countries on the suffrage issue is probably due to the influence of the Roman law, including its development in the Code Napoleon, which assigns to woman an inferior position in the eyes of the law. Nevertheless, active suffrage propaganda is being carried on in France, in Italy and in many Latin American countries and another decade will probably see South America and southern Europe standing with North America and northern Europe on the platform of equal rights. Balkan Europe is behind the procession simply because it is in every way a neglected and unenlightened part of the world;

ten or fifteen years of education will remedy this. The only real obstacle remaining to woman suffrage is met with outside the pale of Christendom in the social and religious prejudices of the Turk, the Hindu, the Chinaman and the Japanese. Those whose religion countenances polygamy or teaches the subjection of woman to man will be the last converts to woman suffrage. In the last analysis, therefore, the woman suffrage propaganda will narrow down to the support of ordinary Christian missions.

## Concerning the League

By Norman Hapgood

**W**HEN Colonel House last sailed for the other side many were surprised to see this cautious and taciturn statesman going into newspaper work. But as usual the Colonel knew what he was doing. He can always separate the big things from the other things. The big thing now is to make an effort, however desperate the chances, to arouse the people of this prosperous country, in order that they may take a far-seeing and heroic view of the world's life, instead of becoming a nation of quitters and following the lead of Henry Cabot Lodge to national disgrace. Colonel House describes conditions with such moderation that nobody can take offense and nobody who knows his record can doubt that he carefully understands. Here is one example:

Strangely enough, the arguments used against the League by the Bolshevik government are in all essentials the same as those used by the opponents of the League in the United States. This attitude is directly opposed to that of organized labor thruout the world. This is a hopeful sign.

Labor and liberal opinion in every land, save Bolshevik Russia, are for the League. Bolshevik Russia is for the rule of the proletariat in all countries working as a unit as opposed to the idea of the League, which is an association of governments for the purpose of maintaining peace among nations and bringing about a better understanding between citizens of every class and creed.

In another article the Colonel points out that matters of the most intense interest to us are now being settled in regard to Asia by England and Japan and there is nobody to see that the League takes action to see that the settlement in Asia is made with our interests and principles in mind.

Mr. Hoover is another American whose understanding of the situation abroad makes his opinions of value on the needs and the meanings of the Treaty, even tho it has to be acknowledged that the morass of partizan politics into which he allowed himself to be tempted makes it difficult for him to speak with the freedom and authority that might have been his. On September 8 he again exprest himself on the League. The Treaty, he said, comprized a total of 600 articles, of which some twenty-seven comprize the Covenant, and of which only eight or ten have been under criticism, particularly Article 10 (which is so vigorously defended by Mr. Taft). Leaving out these debated sections the remainder, in Mr. Hoover's opinion, "are not only the basis of European stability, but are of great political and economic importance to the United States." Many of these matters of importance to us "could not be settled by a separate treaty with Germany even if we desired it." Of the League itself he said:

It is an actual going concern that has gained in membership ten nations during the last sixty days, to a total of thirty-nine nations, representing nearly 75 per cent of the population of the globe, with a number of new nations applying for admission. . . . It might be, if we refused to enter it in some form, that we would find ourselves in the ridiculous position of having to sign a treaty with the League officials themselves, in order to trade in these League-governed areas.

Senator Harding, facing a world-situation of this size, has the task, congenial to his disposition, of taking refuge in a mass of long and silly sentences that nobody can parse. His "object all sublime" is to make Mr. Taft, Mr. Wick-

ersham, and Mr. Hoover believe we are going into the League, while he makes Senator Johnson and Senator Lodge believe we are not. The essential aspect of this confusion is that Senator Johnson and his followers have Harding by the hair, with a firm grip. Tom Watson is going to the Senate from Georgia pledged against the League. Reed is against it. Other parochial Democrats who were kept in line by Wilson will be glad to help Hiram Johnson kick Harding all around the lot if he should show any disposition to fight for generosity, honor, and intelligence.

## America First

**A** GOOD motto. But it comes with ill-grace from those who would have America last to take a part in the councils of the nations.

## Why Not Lithuania?

**T**HE Colby note of last month declaring that the United States would not recognize any of the alien nations that have split off from the Russian empire, except Finland, Poland and Armenia, was a hard blow to the liberty-loving Lithuanians in this country as well as in Europe.

There are about 800,000 Lithuanians in the United States. They are as a rule laborious and loyal. They over-subscribed their quota of Liberty bonds. They put some 30,000 of their young men in the American army to fight for self-determination and the rights of small nations.

But now when the fight is won they find the United States Government refusing to recognize the right of the ancient realm of Lithuania to freedom from its Russian rulers. Not only that, but the Colby note asserts that it will never recognize the Lithuanian and other new republics until after the Soviet Government is overthrown. Not only that, but the Colby note insists that the "true boundaries of Russia . . . should include the whole of the former Russian empire" with the three exceptions mentioned. Not only that, but the Colby note asks the allied and associated nations to join the United States in a declaration in favor of the restoration of Russia to its original limits except for Finland, Poland and Armenia.

But in the old empire of the Czars the true Russians were in a minority, ruling ruthlessly the alien peoples they had conquered from the Baltic to the Pacific. Suppose old Russia restored under as democratic a government as you please, what chance would 3,000,000 Lithuanians have to get from the other 150,000,000 permission to withdraw? No, their only chance for independence is to take it now when Russia is weak.

It may be that it is unwise of the Lithuanians to seek independence. But anyhow they want it and they have got it and they are going to try to hold on to it in spite of the United States. They have fought for their freedom against the Germans, the Bolsheviks, and the Poles. They now hold undisputed possession of nearly all their ethnographic territory. Their boundary on the north has been determined by agreement with Latvia. Their boundary on the west will be determined by a plebiscite. Their boundary on the east has been settled by treaty with Russia and in compliance with this the Bolshevik troops have been withdrawn from all Lithuanian territory except the Grodno district. Their boundary on the south is disputed by the Poles, but the conference now being held at Miriampol may soon settle that.

Lithuania has now been recognized as having a *de facto* government by all the leading nations—except the United States. Italy has recognized it as a government *de jure* as well as *de facto*. We should naturally expect that the United States would be the first to welcome the Lithuanian republic instead of the last to hold out against it, for Americans have taken a large part in its formation. A Chicago lawyer, B. Balutis, is its foreign minister. Americans are

Another view of what would happen if the middle class majority of the general public acquired class consciousness

assisting in the training of its army and airmen. Lithuanians in America have formed companies for opening up trade with Lithuania, but they cannot do it because the United States refuses to appoint or receive consuls. Consequently British dealers are getting a monopoly of the trade of the Baltic provinces. Emigrants to America have a hard time getting thru because the United States declines to recognize Lithuanian passports. Not far from one-quarter of the Lithuanians of Europe had come to America before the war and they are finding great difficulty in sending or getting money or keeping in communication with their relatives in the old home because, in the opinion of the American Government, there is no such nation as Lithuania on the map. Uncle Sam is the only one who can't see it. Why has he this blind spot in his eye?

The Poles, who are close kindred to the Russians, are trying to break away and become independent. Our Government quite rightly applauds their efforts and promises them all possible aid. The Lithuanians who are not Slavs at all, but of quite another race, language and religion from the Russians, are equally determined to secure separation. But our Government refuses to recognize them.

### The Issue

THE issue of the campaign is this: after next March will there be more children christened Harding Coolidge Smith or Cox Roosevelt Smith?

### The Missing Bonehead

IT must now be admitted that the Treaty of Versailles cannot be carried out in its entirety. The trouble is not with Article 10, but with Article 246, which requires the delivery within six months to His Britannic Majesty of the skull of the Sultan Mkwawa, late of German East Africa. Exactly why King George had such a longing for this particular sample of negrohead has not been made clear to a wondering world. To be sure his cousin, the Kaiser, wanted it so bad in 1896 that he offered a reward of 6000 rupees for it, but that was when it was attached to the shoulders of the Sultan, who was seriously interfering with the German plans for the peaceful penetration of his native jungle. Accordingly, Captain von Prinz set out to capture Mkwawa in his fastness near Lake Tanganyika. The Sultan was surrounded but suicided rather than surrender.

From here on authorities differ. Some say that he bequeathed his head as Mirabeau would do, to his followers, and that it was carried as the symbol of sovereignty back to the tribe. But on the other hand Sergeant Merkl delivered to the German fort a head which he said he had severed from the Sultan's own shoulders and claimed the 6000 rupees reward. The head was put in alcohol to keep until it could be taken down to Dar-es-Salaam on the coast and cashed in. But before this could be done the alcohol was drawn off by somebody who wanted it very much and the uncovered head was found to bear no resemblance to the defunct monarch. Either Sergeant Merkl had tried to palm off the wrong cranium on the German Government or Mkwawa's faithful warriors had broken into the fort at night and carried off his skull to bury it in the tomb of his ancestors and had substituted in the alcohol jar the head of another negro freshly procured for that purpose. This latter is the story that Merkl tells and his statement is authenticated by the widow of Captain von Prinz, since the captain himself was killed in the Great War. Affidavits to this effect have been presented to the British Government and the German papers express the hope that the Allies will be satisfied with this explanation and not occupy the Ruhr valley and Frankfort as a penalty for the German failure to comply with the Treaty in this respect. But it seems that the war was fought in vain so far as this one of its aims is concerned.

### Boiling with Apathy

IF no romantic murder case takes place; if no new yacht races or baseball marvels or pugilistic championships usurp the first pages of the newspapers; if Mexico will start a closed season for revolutions; if the fall styles contain nothing sensational—then we may expect a little publicity for the election before November. We are told, of course, what a stirring campaign this is, and it really is a little more exciting than Judge Parker's attempt to take the Presidency while Roosevelt wasn't looking in 1904, but to anyone who can remember 1896—!

### Election or Elimination?

By Preston Slosson

"YOU never vote f'r a man, Hinmissy, you vote agin his opponent," said Mr. Dooley. If you doubt Mr. Dooley's wisdom listen to scraps of election gossip or read the campaign correspondence in the papers. Are not the recurrent phrases such as these: "Whom shall we pick to defeat—"; "I can't stand—"; "I'll never vote for a man who would—"; "Our duty at this election is to prevent—"? Politics, like war, seems to be a game won by the general who makes the fewest blunders. Every party that is in power by the mere fact of being in power makes more enemies than friends, for benefits are taken for granted and every error of act or word is laid up for use as a deadly missile at the next election. Hence the so-called swing of the pendulum in politics. Men tend to fly not toward some yet unattained paradise but away from an existing purgatory. They vote the ticket which for the moment repels them least.

Pure enthusiasm for a man or a cause is the privilege of a few idealists and hero-worshippers. Most of us can work up enthusiasm most readily if it can be directed *against* something. In one of H. G. Wells's political novels a doctrinaire tries to give currency to the phrase "love and fine thinking" as the slogan of a political campaign. A practical politician takes issue with him: "Hate's the driving force. What is morality? Hate of rotten goings on. What's patriotism? Hate of interloping foreigners. What's radicalism? Hate of lords. What's Toryism? Hate of disturbance. If you couldn't get hate into an election people wouldn't poll."

Isn't that so? Do reformers shout "Put the experts in" or "Turn the rascals out"? Cities overthrow machine rule because they are roused to anger by the misdeeds of the local plunderbund. Then, at the next election, they return to the regime of bosses, graft and civic corruption because "we are sick of these highbrow reformers." New York politics, for example, is one perpetual shudder between the devil of Tammany and the deep sea of Puritanism. Socialism is in the main not a constructive effort toward a collectivist social order but a blind revolt against capitalism. The unifying principle of Republicanism appears to be a dread of rule by Southern politicians. The unifying principle of Democracy appears to be a dread of rule by the business men of Boston and New York. In our party platforms "view with alarm" bears ten times the emphasis of "point with pride." The only thing that all parties seem to be agreed about is that the nation instead of advancing along a solid highroad of progress is perpetually reeling on the brink of the bottomless pit and every election is a frantic clutch to save our liberties from annihilation. The poor constitution has to be "saved" afresh every four years from autocracy or plutocracy or Bolshevism or some other current bugbear.

But we should build the fabric of our statecraft as the walls of Jerusalem were built—with both trowel and sword. It is all very well to use the sword of criticism now and then on some gross public evil or dangerous demagog, but if our politics is to be all fighting our walls will not get

finished. The trouble with our party system is that there is too little rivalry in the sense of emulation about it; tho there is rivalry enough in the sense of conflict. A party platform should be a positive creation, almost an artistic achievement, instead of a mere refuge behind which to conceal opinions. A party nominee should be the biggest man in sight, even tho a big man may be a conspicuous target. There is too much trench warfare in politics. If people would vote for what they like as eagerly as they vote against what they dislike a record of positive achievement, even flawed with errors, would be better campaign strategy than standing pat for fear of displeasing somebody. We are tired of electing Mr. Smith for no better reason than to save us from the worse fate of electing Mr. Jones.

### Passive and Active Egotism

THERE are two kinds of egotists, very different. One will sit and listen to you with the greatest delight so long as you talk about what he has done. The other will interrupt your warmest praise of him because he wants to talk about what he is going to do. It is the second kind that accomplishes things.

### What Did Newcomb Say?

EVERY little while some writer who wants to show the fallibility of science comes out with the statement that Professor Simon Newcomb proved to his own satisfaction that it was an absolute impossibility for man ever to fly. For instance in the September *Scribner's* Edgar James Swift says:

Yet, as late as 1902, Simon Newcomb "proved beyond question" that it was "impossible" for a heavier-than-air machine to fly. Was his mistake caused by mathematical inability? One hesitates at this conclusion in a mathematician of such renown. The explanation seems to be mental and emotional resistance to a view so inconsistent with "established" scientific principles. Professor Newcomb could not see and understand mathematical relations that conflicted with "known facts."

Now before condemning Dr. Newcomb to eternal opprobrium, along with the English scientist who figured out that no steamship could cross the ocean, would it not be well to see what he did say in that often mentioned but rarely read article? Turning to *The Independent* of October 22, 1903, page 2510, we read:

Quite likely the twentieth century is destined to see the natural forces which will enable us to fly from continent to continent with a speed far exceeding that of the bird.

Not "quite impossible" but "quite likely!" This prediction has not been discredited. On the contrary it was fulfilled in May, 1919, when the N-C 4 flew from Rockaway, New York, to Plymouth, England. But Dr. Newcomb adds:

But when we inquire whether aerial flight is possible *in the present state of our knowledge*; whether, *with such materials as we possess*, a combination of steel, cloth and wire can be made, which moved by the power of *electricity or steam* shall form a successful flying machine, the *outlook may be* altogether different.

The qualifying words in italics are surely sufficient to show positively that Newcomb did not disregard due scientific caution. The problem has been solved in the way he said it could be solved, that is by a new and stronger motive power. Our airplanes are not run by electricity or steam, but by the gas engine, which has developed into a prime mover of unprecedented lightness and efficiency. The ideal force, as Newcomb pointed out, would be the energy of radium, but so far this has only been used in the paper airships invented by H. G. Wells and Rudyard Kipling.

Newcomb's purpose in writing the article was to show the fallacy in the common belief expressed by that earliest of American inventors of flying machines, Darius Green, in the couplet: "Birds can fly; So why can't I?"

Newcomb points out that the reason man cannot fly by

his own strength is because he is too big. The Australian crane must be about the limit of self-supported flight; the ostrich is beyond it. Even if man had wings instead of arms or made himself wings to run by treading he could not carry himself thru the air. The addition of a motor of more than man power extends the limit, but does not abolish it, for as the linear dimensions increase the weight increases as the cube while the supporting power, the area of the wings increases as the square. The fact that toys can be made to fly does not prove that larger machines would be equally successful. For if the inventor builds a machine twice as large—"on the same model," Newcomb is careful to stipulate—it will be eight times as heavy but have a sustaining surface only four times as great and therefore its efficiency is only one-half of the smaller model. Newcomb admits the point raised by Graham Bell that this law of limits might be evaded by combining a lot of little flying machines. "Yes, a sufficient number of humming birds, if we could combine their forces, would carry an aerial excursion party thru the air." But he does not see how Bell can get his little machines to pull together and so far nobody else has shown how either.

Newcomb thought that the most promising line of experimentation was the development of the helicopter, which does away with airplanes and relies for support upon vertical screws. This was applied successfully to a toy model by Cayley as early as 1796 and inventors have not yet given up the idea, for it would have the advantage over the airplane of being able to rise straight up from a confined space like a city street and hover over the same place as long as it was wanted to, for dropping bombs or better purposes.

Newcomb showed that the difficulty with the airplane was not the making but the running of it. Since the airplane depends entirely upon its speed for its support, the faster it goes the less the necessary inclination of the wings and the less the power required to keep it up. But the slower it goes the harder it is to handle and Newcomb questioned whether man could ever attain sufficient flexibility and control over his artificial wings to make landing safe. That this is still the great difficulty and danger is proved by the frequent casualties reported in the newspapers, but it was not so insurmountable as it seemed at that time. Langley's last flying machine had come to smash the week before Newcomb wrote and Sir Hiram Maxim, after spending millions and proving that airplane flight was possible, had abandoned his experiments. Newcomb could not know that while he was penning his pessimistic prophecy the Wright brothers were tackling the problem at the very point where he had put his question mark. They learned to fly before they built their flying machine. After they had mastered the secret of the flexible wings by soaring over the sand dunes they attached a gas engine and off they flew. Since then it has been, comparatively speaking, plain sailing.

Simon Newcomb was undoubtedly too pessimistic of the possibilities of the airplane. He underestimated the resourcefulness of invention and the courage of man. But he was by no means so dogmatic and blinded by theory as he is supposed to have been.

### About This Time of Year

THERE will write to the papers the "man who voted for Fremont in 1856" and is voting for the first time for the Democratic ticket; a Republican manager will announce that this campaign will mean the "first break in the Solid South"; Constant Subscriber will write more in sorrow than in anger to his favorite newspaper that hitherto in spite of minor differences of opinion he had kept up the subscription handed down from grandfather, but now the parting of the ways had come; two thousand newspapers will remark editorially that "this election is the most vital to the welfare of the nation since that of 1860."

One of the youngest women rulers in the world, Grand-duchess Charlotte of Luxembourg, has been decorated with the French order of the Legion of Honor in recognition of her wise and able work during the Great War

*© Keys in View*

Mrs. Ella Boole, suffragist and prohibitionist, failed to defeat Senator James W. Wadsworth, who has been both anti-suffrage and anti-prohibition, in the primary vote for United States Senator from New York this fall. But lacking the Republican nomination Mrs. Boole is to be a candidate for Senator on the Prohibition ticket, and she expects many women's votes on her promise to carry out prohibition and to see that ex-service men and their dependents are given better care

*Wide World*

# The Story of the Week

## As Goes Maine—

"AS goes Maine so goes the nation" is one of the traditional political proverbs which our readers are free to believe or disbelieve as they will. The accident that Maine holds her state and Congressional election in September has always been considered a boon to the forecaster who seeks some indication of what will happen two months later in the nation at large. This year the Republicans are heartened by a sweeping victory overtopping their largest plurality of the past.

Frederick Parkhurst has been elected Governor over Bertrand McIntire by a majority of nearly two to one. The granting of suffrage to women made the total vote much larger than in previous elections, but all the increase seems to have gone to the Republicans as the Democratic vote does not show much change from that of 1916. This does not mean, of course, that all the newly enfranchised voters are Republicans, altho a majority of the women seem to have voted on the winning side; it means that there has been a change of heart among many of those who voted Democratic four years ago. There is no question as to the overwhelming nature of the Republican landslide, but the politicians are divided as to its significance for next November. Secretary Daniels of the Navy, who campaigned for the Democrats in the state, ascribes the result to "state issues," whereas Governor Coolidge of Massachusetts holds on the contrary that "such a decisive vote in Maine must indicate the trend of public opinion thruout the nation." It is conceded by all parties that Republicans in Maine were more thoroly organized than their rivals and had conducted a far more active campaign. Besides carrying to victory the state ticket the Republicans held all four seats in the House of Representatives.

## Tom Watson Sweeps Georgia

AFTER a long series of victories in the southern states over opponents of the League of Nations, the Administration met a defeat in Georgia in the Senatorial primary of the Democratic party. The nomination is probably equivalent to election, as the Republican party has little more than a nominal existence in the states of the solid South. Three candidates sought the Georgia Senatorship. Hoke Smith, the present incumbent, is a reservationist and not very friendly to the Wilson Administration. Governor Hugh M. Dorsey was therefore selected to battle for the League. Thomas E. Watson, the third aspirant, was a bitter opponent of both the war and the peace treaty. His extreme radical position on all issues, foreign and domestic, made conservative Georgians regard his nomination as out of the question and centered public attention on the fight between Senator Smith and Governor Dorsey. The overwhelming victory of Watson over his two opponents came as a general surprize to the state and the nation and political experts are still busy trying to explain it.

Thomas E. Watson has had a picturesque career as a popular agitator and in the course of years has gathered about himself a devoted personal following among the "poor whites" of the state. He began his career as a Democratic politician, but soon after joined the People's party, which he represented in Congress in 1891. In 1896 he was nominated for Vice-President as the Populist running mate to Bryan and in 1904 he was the Populist candidate for President. With the collapse of Populism he turned his attention

Chapin in St. Louis Star

The crumbling foundation

to journalism and established the *Weekly Jeffersonian*. He opposed the entrance of the United States into the Great War and his paper was excluded from the mails for carrying on violent anti-conscription propaganda.

The victory of Watson is a blow to the prestige of the Administration in Georgia; aggravated by the fact that ex-Senator Hardwick, nominated at the primaries for Governor, is another foe of President Wilson's policies. It will also mean that at least one Democratic vote in the Senate will always be counted against the Treaty and the Covenant. The importance of this, however, is diminished by the fact that Watson will succeed Senator Smith, who has also been hostile to the League of Nations, tho in a less unpromising degree. It would be truer to say that President Wilson has failed to gain, rather than that he has lost. It is, however, a serious matter from the national point of view that a record of active opposition to the national cause during the Great War has ceased to be a handicap to politicians in some parts of the country. That issue transcends party politics.

## Some Republican Straws

THE Republican Senatorial primaries have been watched with interest. Perhaps in no previous political campaign has the Senate been so much the battle ground. If the League of Nations Covenant is to be taken as the chief issue of the campaign, and it is certainly one of the leading issues, the next President will be largely at the mercy of the next Senate in carrying into effect his pre-election pledges. Other factors centering popular interest in the Senate contests are the present system of direct election of

Senators, the fact that one of the candidates for President is himself a Senator and the almost balanced strength of the two parties in the Senate.

In New England the "old guard" won two important victories. In New Hampshire Senator George Moses, foe of woman suffrage and of the League of Nations, secured a renomination at the primaries over his opponent, Huntley N. Spaulding, former state food administrator. Senator Brandegee was renominated from Connecticut by the Republican state convention. He was a "bitter ender" on the Treaty and is charged by woman suffragists with exerting his influence to prevent the Governor from calling into session the Connecticut Legislature for the consideration of the nineteenth amendment. Many Republicans are apprehensive lest the renomination of anti-suffrage Senators cost the party the votes of many enfranchised women in November, but the party managers seem certain that the Republican landslide will be great enough to overcome this handicap.

In New York also the Republicans renominated at the primaries an anti-League and anti-suffrage Senator of "old guard" affiliations, James Wadsworth, Jr. He triumphed by a large majority over two opponents, Mrs. Ella Boole and George H. Payne. His opponent in November will be Lieutenant Governor Harry C. Walker, who defeated at the primaries Mayor Lunn of Schenectady, former Socialist and now a leading figure in anti-Tammany Democracy. In both parties the organization nominees for state offices were victorious over all insurgent competitors. Judge Nathan L. Miller will head the Republican state ticket, having decisively defeated his rival, State Senator George F. Thompson. The Democrats renominated without opposition Governor Alfred Smith.

In Wisconsin the renomination of Senator Lenroot over James Thompson is not only a personal tribute to the Wisconsin Senator but a rebuke to his colleague, Senator La Follette. Thompson was known as a La Follette follower and had the backing of the Non-Partisan League. Senator Lenroot did not join the pacifist movement sponsored by La Follette during the war and thereby alienated the extreme pro-Germans of the state. He supported ratification of the Treaty and the Covenant with the Senate reservations. In the Chicago convention he was Governor Coolidge's chief rival for the Vice-Presidency.

## Suffrage Connecticut

ON September 14 the Connecticut Legislature ratified the nineteenth amendment to the national constitution. In the House the vote stood 216 to 11 and in the Senate 33 to none; the size of the majority indicating that had the legislators been free to act when the amendment was in doubt Connecticut would have been one of the first instead of the last state to ratify. But the obstinate refusal of Governor Holcomb to permit the calling of an extra session to consider woman suffrage thwarted the will of the state. Tennessee took from Connecticut the honor of being the state to cast the decisive vote which legalized the amendment. This does not mean that the action of Connecticut was superfluous or unwelcome. Some anti-suffragists threatened to attack the legality of Tennessee's action on the ground that the method of ratification was contrary to the provisions of the state constitution and also that one branch of the state legislature had by a "snap vote" reversed its action after ratification. Neither contention is regarded by the authorities at Washington as having any legal validity, but to put the matter quite beyond a doubt it was well to have more states ratify than the law required.

Senator Brandegee of Connecticut, hitherto an obstinate opponent of woman suffrage, brought forward the legal tangle in Tennessee as a reason why Connecticut should

now act favorably, as it was more important to prevent a shadow of doubt being cast on the validity of the November elections than to persist in an attitude of opposition to equal suffrage. Governor Holcomb was of the same opinion, tho he expressed some irritation that the legislature acted on the amendment before he had formally called upon it to do so. The action of Connecticut helps out the suffrage record of the Republican party. With the exception of Vermont, which has not acted, and Delaware, which was hostile, all the Republican legislatures in the country have now gone on record in favor of the enfranchisement of women.

## Harding Lauds Railroad Law

SENATOR Harding has discovered an issue—a controversial issue at that—on which he feels free to speak without reservations. It is the Esch-Cummins Transportation Act which restored the railroads of the country to private ownership. In his opinion this law is a triumph of sound statesmanship. The Senator said in part:

I do not venture to say that the law is perfect, or that it is the final word in Government regulation and coöperation. I do insist that the measure represents the best expression of Congress which could be worked out in the time at the command of the two Houses, and that it has made the just restoration of the railway properties to their owners, and has happily provided the means and fixed a policy under which the railways can be restored to that degree of efficiency which is so essential to the requirements of service to our common country.

He admitted that during the war it might have been necessary to establish Federal control of the railway system of the nation, but he charged the Administration with intending to use the wartime emergency as an excuse for embarking on a permanent policy of Government ownership:

If the experiment with the railroads and these communication lines (telegraph and telephone) had been successful, it reasonably may be assumed that the policy would have been made permanent; such was the undoubted intent of the present Administration.

Government ownership having proved impossible on financial grounds, it became the duty of Congress to make the transition back to private ownership as easy as possible. This was most ably done by the Esch-Cummins law.

### FIRST REGULAR TRANSCONTINENTAL AIR MAIL SERVICE

To extend the air mail service from the Mississippi to the Pacific. Pilot Randolph G. Page started from Mineola, Long Island, with 16,000 letters for far Western points. The trip is to consist of fourteen hops covering 2651 miles, and it is expected that, once established, the time consumed will be between fifty-four and fifty-seven hours, or thirty-seven hours less than it takes by train.

Underwood &amp; Underwood

## MOVING DAY IN THE MORNING

This is not a Halloween prank but the deliberate work of moving men on strike in New York City

Senator Harding defended the policy of guaranteeing to the railroad companies earnings of 5½ per cent for the period of transition:

If we had returned the railroads without this temporary guarantee of earnings, in all probability the great American systems would have broken down entirely and we should have found ourselves in a state of railway paralysis which the country could not tolerate. . . . I have already alluded to the restrictions which the Government has placed upon railway capital, railway rates and railway earnings. We have eliminated every speculative phase of railway operation, until the railway business has become an extremely conservative one, with nothing left to inspire efficiency and pride in management, except competition in service.

Senator Harding approved the tribunal established by the Transportation Act for the consideration of the claims of labor and contended that the effect of the law was to encourage unionism and collective bargaining. On the other hand, he denounced emphatically any proposal to turn the railroad properties over in whole or in part to the control of railway workers. National honor demanded, in his opinion, that when the railroads were given back to private ownership that such ownership should be solely vested in "those who held title thereto":

Naturally this enactment did not appeal to those radical advocates of railway ownership or those socialistic theorists who thought the railways ought to be seized by the Government and placed at the disposal of the railway workers for permanent operation and profit. . . . To have violated the good faith of America and to have seized railway properties and turned them over to a favored class in America would have involved the destruction of our very system of government and revolutionized the republic.

## Cox Among the Drys

GOVERNOR Cox, in spite of a slight throat trouble from an overexercized voice, has continued his tour of the Far West. The issue which he most stressed was the League of Nations Covenant. His audiences seemed to support his stand on this issue, but they were inquisitive on another point; the attitude of the candidate to the eighteenth amendment. Cox's reputation as an alleged "wet" may serve him in good stead in New Jersey, but it is embarrassing rather than otherwise in the prohibitionist West. So the Governor determined to put rumor to rest by an unqualified statement that he would stand by the constitution and the laws. Apparently the battle cry of "Cox and cocktails" will have to be discarded by both parties now that the Democratic candidate has declared the liquor issue "as dead as the issue of slavery." He added:

So far as the Presidency is concerned, the issue under the

eighteenth amendment is one of law enforcement. We must judge men by performance rather than promise and by comparison. As Governor of Ohio I enforced the laws. For the first time in the history of the state I closed not only the front door but the back door of the saloons on the Sabbath. I enforced all the laws. As President of the United States I shall continue to enforce all the laws, regardless of what interests may be affected.

## The Wrangel Campaign

ON the day when the Poles under General Pilsudski launched their counter-offensive that nearly cleared Poland of Bolsheviki, General Wrangel landed a force on the north shore of the Sea of Azov that has advanced into the hinterland almost to Alexandrovsk. The Soviet troops that had crossed the Dnieper river were all thrown back or captured. Most of the Taurida province has been recovered by Wrangel.

On the other hand his efforts to gain control of the Caucasus have failed. It had been given out from his headquarters that Kuban Cossacks had accepted his leadership and were ready to revolt against Soviet rule on the slightest provocation. But no one of the four expeditions that Wrangel sent to the Black Sea coast was able to hold its ground. The expedition under General Vlagai that landed on the Kuban coast was, according to the Bolshevik report, "completely annihilated." According to the Wrangel report it was "unsuccessful but not fruitless," for General Vlagai destroyed two Bolshevik divisions, captured 7000 prisoners and retired with twice the number of troops with which he began, due to Cossack enlistments.

The British Government opposed this new offensive against Soviet Russia and the British labor unions threatened a general strike if any aid is sent to Wrangel. The French, however, have adopted quite the contrary policy. They have recognized Wrangel's government and are shipping him munitions. The French fleet covered the landing of his troops on the Sea of Azov. A High Commissioner, M. Martel, has been sent to represent the French Government at Sevastopol, the headquarters of General Wrangel. Professor Miliukov, who played a leading role in the revolution against the Czar, but left the country when the Bolsheviki came in, has gone from Paris to the Crimea to take a position in the South Russian Government. The Russian officers left in France are organizing to join Wrangel, while in Warsaw General Boris Savinkov, who was war minister under Kerensky, is raising an army of Russian refugees to coöperate with the South Russian by attacking the Bolsheviki from the Polish side while Wrangel attacks them from the south.

General Wrangel expresses great gratitude to the United States for the encouragement given by the Colby note, which reiterates the determination of the American Government never to make peace with Soviet Russia. An official announcement by the Russian Liberation Committee in London

## FROM A WATERY GRAVE

Members of the crew of the Submarine "S-5," which was submerged thirty-five hours off the Delaware Capes, are here seen boarding one of the rescuing vessels

SCENE OF THE ITALIAN EARTHQUAKES

The Italian peninsula has been shaken by earthquakes from Milan to Messina. The center of disturbance is an oval area in the Apennines of Emilia, where over a hundred towns and villages have been damaged or demolished. The town of Fivizzano was the greatest sufferer.

states that Rear Admiral McCully, the American representative in Constantinople, has offered the Wrangel Government economic aid. Secretary Colby denies that any such instructions have been sent to McCully, but states that there is no embargo to prevent Americans from trading with the Crimea. Professor Michael Rostovtzeff, chairman of the Russian Liberation Committee, who has come to the United States to lecture at the University of Wisconsin, has been received by the Secretary of State at Washington. He urges the United States to support General Wrangel with munitions and supplies for the army and aid for the destitute civil population. But the radicals here as well as abroad are trying to prevent such assistance being sent to anti-Soviet forces. The I. W. W. longshoremen of Philadelphia and New York have refused to load ships with munitions for Wrangel. In Genoa the Italian workmen seized the ship "Rbosto" belonging to the South Russian Government, carrying arms for the Crimea.

## British Attitude Toward Wrangel

WHEN General Wrangel took charge of the remnants of Denikin's army that had sought refuge in the Crimea the British Foreign Minister, Lord Curzon, wrote on April 14 a note to Tchitcherine, the Soviet Foreign Minister, requesting him in the name of humanity to suspend hostilities and grant amnesty to Wrangel's men who, Lord Curzon said, were "no longer capable of any serious offensive northward." Tchitcherine in reply expressed his willingness to open negotiations thru Great Britain for peace and amnesty and Curzon promised to take it up with Wrangel. But meanwhile Wrangel was organizing for a renewal of the offensive and in an army order of May 5 refers to the intervention of Great Britain as giving him an opportunity to prepare a fresh blow against Soviet Russia.

Kameneff, the Soviet envoy in London, addressed a note of protest to the British Government for having given protection and support to the Wrangel movement, which since its recognition by France has become a formidable menace to Soviet Russia. Premier Lloyd George in reply says:

After the withdrawal of General Denikin the British Government was only concerned to ensure the security of the troops

and refugees under General Wrangel. General Denikin's successor and to put them in a position to defend themselves in the Crimea, until a guarantee of safety was accorded to them. They had no intention of encouraging General Wrangel in an offensive, and as soon as they heard that he was considering the possibility, the British Government warned him against it, and declared that if he undertook it, the British Government would accept no responsibility for himself or his troops and would immediately withdraw their British military mission, which, on General Wrangel undertaking the offensive, they immediately did.

## Earthquakes in Italy

A violent earthquake shock coming at 7:55 on the morning of September 7 and followed by minor tremors for several days thereafter, caused widespread disaster in the province of Emilia and the Apennine mountains to the west. Over a hundred towns and villages were badly damaged and some were completely demolished. In the town of Fivizzano, that felt the full force of the shock, nearly all the houses were shaken down and 432 persons were killed. Other villages in the vicinity of the famous marble quarries of Carrara suffered almost as severely. An active volcanic crater opened at the top of Pizzo d'Ucello, a mountain near Spezia. The shocks started avalanches in the Swiss Alps and were felt as far south as Naples. Ten thousand people are left homeless. The King and Queen visited the scenes of the disaster in automobiles to console the afflicted and distribute relief.

## Troubles in Mesopotamia

THE British, who have undertaken the administration of the valleys of the Tigris and Euphrates under the mandatory system, are finding the task more difficult than they expected. The Arabs of that region have virtually been without government for five years, during which time they have had lots of fighting, plenty of loot and no taxation. They resent being obliged to relinquish these privileges and to settle down to the life of order and labor that the British are trying to impose upon them. It is evident that the administration failed in not following the advice of Kipling, "Don't try to hustle the East." The reforms they have attempted to introduce were undeniably needed and the plans they had prepared for the irrigation of the region between the rivers would have restored to it the prosperity it enjoyed in the days of the Babylonian and Assyrian empires, but the Arabs took no interest in such projects and refused to accept an uncongenial foreign rule.

It was at first reported that the natives preferred British administration to any ruler of their own race. In November, 1918, the question of this alternative was addressed to every tribe and district from Basra to Mosul and the replies were said to be overwhelmingly and enthusiastically in favor of British rule. But Colonel Lawrence says that these pro-British declarations were "extorted by official pressure, by aeroplane demonstrations, by deportations to India." Colonel Lawrence is the young Oxford archeologist who put on Arab costume and organized the Arab forces that aided Allenby in the conquest of Palestine and put Prince Feisal on the throne of Syria. He says further:

Our Government is worse than the old Turkish system. They kept 14,000 local conscripts embodied, and killed a yearly average of 200 Arabs in maintaining peace. We keep 90,000 men, with aeroplanes, armored cars, gunboats, and armored trains. We have killed about 10,000 Arabs in this rising this summer. We cannot hope to maintain such an average; it is a poor country sparsely peopled; but Abd el Hamid would applaud his masters, if he saw us working.

The British have now to keep nearly half as many troops in Mesopotamia with a population of about 3,000,000 as they used to need before the war in India with its population of about 300,000,000. Even with this number they are not able to protect the outlying stations about Bagdad or

C. Kopsstone View

#### KING FEISAL'S SOLDIERS CAPTURED BY FRENCH

The Arab prince Feisal, son of the Emir of Mecca, coöperated with the British in the conquest of Palestine and was thru their aid set up as ruler in Damascus. But when Feisal claimed to be king over all Syria, including the coast which had been assigned to France, the French forces marched to Damascus and drove him out.

their communications with the Persian Gulf. The garrison at Kufa, less than a hundred miles south of Bagdad, was besieged by 2000 tribesmen. The railroad station at Feluja, thirty-five miles west of Bagdad, was looted and Colonel Leachman murdered there. At Hillah, sixty miles south, the garrison kept off the Arabs with shell fire until they were rescued by an expedition of Sikhs. At Samawa 4000 natives attacked an armored train that had broken down there. The train crew of forty killed some 500 of their opponents, but were overpowered and a field gun, a Lewis gun, three machine guns and forty boxes of ammunition passed into Arab hands. The railroad lines leading north from Bagdad toward Mosul and to the Persian border have been cut. The British camp at Bakuba, thirty miles north, was attacked and looted.

A belated effort is being made to win the coöperation of the Arabs by calling the notables to meet at Bagdad to frame proposals for an electoral law to elect an advisory assembly.

According to the Sykes-Picot agreement as to the partition of Turkey concluded in the midst of the war between England and France, the upper part of the Tigris valley, including Mosul, was to come within the French sphere of influence, but by a recent agreement Mosul was resigned to the British on condition that the French receive a quarter of the petroleum that gives this region its value.

## Canada Pays Too

THE United States is not alone in facing increased railroad rates. The Dominion Railway Commission has authorized increases in freight rates from September 13 until the end of the year amounting to 35 per cent in western Canada and 40 per cent in the east. Thereafter the increase in the west will be 30 per cent and in the east 35. A 20 per cent advance is sanctioned for passenger rates, but only temporarily; and additional charges are allowed for sleeping and parlor car privileges and for excess baggage. These increases closely parallel those granted in the

United States and are based on practically the same grounds.

As Chairman Carvell of the Railway Commission put the matter:

It was admitted by all parties at the hearing that the cost of everything entering into the operating and maintenance of railways has increased more than 100 per cent during the past four years. . . . While the rates herein established fall far below the increased cost of everything else yet I feel they will be sufficient to enable the railways to carry on during the term to which they apply, and that the people in the light of the actual facts will cheerfully contribute their quota in order to keep these utilities in a position to efficiently transport the business of the country.

## Communism Spreads in Italy

THE red flag and the Soviet emblem of the crossed hammer and sickle are now flying over five hundred factories in Italy. The movement started in the foundries and machine shops of Milan and Turin, but has extended to allied industries and various others. The employers are powerless to recover their plants and the Government declines to intervene. Deputations of industrial magnates have motored out to Bardonnecchia where Premier Giolitti has his summer home, but evidently receive no satisfaction for they came back more willing to compromise.

The workmen refuse to turn over the factories to their owners except on condition that they be kept under the control of a council or soviet of employees. They also demand increased wages and pay for all the time they have been on strike and occupied the works. According to the employers' statement the increase in wages asked by the men amounts to \$300,000,000 a year, which is more than half the total value of the works themselves.

It was expected by the factory owners that the men would soon be obliged to close down for lack of raw materials, but the Fiat and Longetto works have been kept going by means of supplies smuggled in by night thru the complicity of the railway men. In order to provide the chemicals essential for the metallurgical industries the employees in more than 200 chemical plants of Turin seized the establishments

simultaneously upon signal of three blasts of a siren.

The operation of the works by the employees has been hampered by the refusal in most cases of the engineers and technical staff to serve under their management. The workmen who occupied the Armstrong factory at Pozzuoli, near Naples, issued an ultimatum to the clerks and engineers that unless they returned to work within forty-eight hours they would be discharged and their places filled.

In Turin the strikers have taken possession of about fifty private houses adjacent to the works, evicting the families and throwing their belongings out of the windows.

The miners of Luini have taken possession of the lignite mines and in Sicily the farmers of the Pius X Coöperative Association have taken over the lands they worked.

At Triest, the Adriatic seaport acquired by Italy thru the war, the Socialists attempted to seize the city. They

WAR MAP OF MESOPOTAMIA

The British are having a hard time to hold the Mesopotamian region that was allotted to them under the mandatory system. Arab risings have taken place at all the towns underlined on the map and the railroads leading out from Bagdad in all directions have been cut at times. The possession of this territory is of immense economic importance because of the oil fields about Mosul and of the irrigable valleys of the Tigris and Euphrates.

erected barricades across the streets in the heart of the city and defended them with rifles and bombs. But in the evening of the third day the military brought up artillery and forced the insurgents out. Seven persons were killed and fifty wounded.

## Italian Labor Favors Communists

THE action of the metal workers in seizing the plants is approved and supported by an almost unanimous vote of the National Labor Convention at Milan, representing more than a million members. The whole power of the organization will be employed to back up the metal workers in holding the ground they have gained and to prevent the dispute from being settled by a compromise and an increase of wages. All the other labor unions will contribute funds for their support in the hope that this may lead to socialization of all industrial establishments. The resolution that was presented by Deputy Daragona and passed by the convention opens with the words:

Today's historical moment renders impossible hereafter the present relations between masters and workmen and determines that the further direction of the present movement be taken over by the General Confederation of Labor, with the assistance of the Socialist party, and that the aim of the struggle be an acknowledgment on the part of the masters of the principle that their works shall be controlled by the men's union.

This action, radical as it may seem in American eyes, is regarded as conservative in Italy, for the Milan Labor Convention first excluded by the vote of a large majority the anarchist and syndicalist organizations and later defeated a Maximalist resolution presented by Deputy Ducco of the Socialist party, which called for the extension of the movement into the political field and the immediate establishment of the soviet system thruout Italy. The Ducco or Bolshevik motion received the votes of delegates representing 409,000 workers, while the more modern resolution of Daragona carried by 591,000. The contest between the two factions was a hot one and at times the uproar approached a riot. But in the end the antagonists shook hands and kissed each other's cheeks.

The Confederation of Labor demands the immediate con-

vocation of the Chamber of Deputies to examine the situation and pass measures "which, thru the requisition of industrial plants and participation in their management by workmen, will prepare the way for direct control of workers in the interests of collectivity." There are 156 Socialist members in the Chamber of Deputies.

Even if the Government were disposed to evict the workmen by force it is doubtful whether orders to that effect could be carried out. The Railwaymen's Syndicate meeting at Bologna has decided not to allow any trains carrying troops to pass thru that city on the way north to the scene of the disturbances. All trains are searched and held until every soldier or policeman is taken off.

Altho the Italian Government makes no effort to protect the property of its own people, other Governments will not take so lenient a view of it. The French Consul General at Turin has lodged an official protest against the occupation of the Michelin Tire Works by the workmen, as this is a French concern and the property of foreign subjects is guaranteed by international law.

## Pity the Poor Packer

PRESIDENT Wilson, not the one who is chief executive of the United States, but the other Wilson who is head of the Institute of American Meat Packers, has prepared some interesting statistics to show that the high cost of meat cannot be ascribed to the excessive profits of the "meat trust." He listed eighty-one of the greatest corporations of the United States, including five great meat packing concerns, in order to compare the profits earned by the packing industry as compared with big business in general.

None of the packers received as much as a cent and a half of profit on each dollar of sales for 1919. Their average was only 0.83 cents to the dollar. In other words, for every dollar you spend for a porterhouse steak or breakfast bacon the "meat trust" gets less than a penny of profit. The packer with the highest return received only a seven per cent profit, or about half as much as the average for other branches of manufacture.

Maura, the baby daughter of the hunger-striking Lord Mayor of Cork, and her mother, Lady Mayoress Muriel MacSwiney

Several hundred Dublin children, in company with 4000 railway workers, prayed for the Lord Mayor of Cork at the church of the Oblate Fathers at Inchicore. Premier Lloyd George, in refusing to free Mayor MacSwiney, said that more than eighty men of the Irish forces, many of them ex-soldiers, had been killed by the so-called Irish Republican army, especially by the brigade in which Mayor MacSwiney was an officer, and that he believed the Lord Mayor to be a murderer, deliberately committing suicide in a way the British Government was powerless to prevent, rather than an ardent patriot being done to death in a British jail

# A Little of Everything

## Come with Me to My Garden in Spain

By Cecilia Beaux

Miss Beaux is one of the very fine American portrait painters whom the art world honors with prizes and medals of honor but to whom the sweetest fruit of recognition is embodied in a studio on a hillside, open to garden fragrances, salt air and the rain. Miss Beaux has paintings hanging in the Pennsylvania Academy of Fine Arts, the Toledo Art Museum, Brooks Memorial Academy, Memphis, John Herron Art Institute, Indianapolis, and the Metropolitan Museum, New York City. Director of the American Federation of Arts, she also belongs to the Societe des Beaux Arts. Her Garden in Spain is in Gloucester, Massachusetts, that port from which so many sailing vessels in their day have gone searching for spices, fine fabrics,—and dreams

Strictly speaking, I have no garden at all, just a triangular piece of wooded land, an acre and a half in extent, which lies on the eastern shore of Gloucester Harbor. But there are two things for which I am very thankful,—the land slopes down toward the sunset—toward Spain—over the Harbor, and the morning sun filters thru thick branches on the east.

From the highest point of a ledge of rocks that trends downward toward the harbor, the sea, not half a mile away, is visible thru tupelo trees. In fact, at least half of the triangle, on its broadest side, is a forest-primeval of tupelos, high blueberry, clethra, bay and ilex, often grown over by a thick entanglement of cat-brier, so that the paths that give its name to the place literally have green walls, clipped, often meeting overhead, but not concealing the firm, twisted, old, gray, interlacing boughs, in which there

are many nests hidden. In the early weeks of spring, the chorus begins with one timid note, soon after two, and continues until the sun is high.

The boundary on the road is really the thick wood itself, but a woven wattle of cedar-posts, and strips, clasps and fortifies it impenetrably, except where a small gate between two of the largest trees, opens upon the path or "alley" that terminates at the low door of the

There is an upper terrace where one may look out toward Spain over the Harbor, mist-wreathed or sail-ridden, and blue as the sky above it

small white house, which is of course invisible from the road.

The path hardly seems to end under the trellis of the eastern door, for another door on the west permits the eye a sudden vision of a schooner sail passing on the harbor against the purple western shore, and in August the evening sun shoots a beam straight thru the house, like a gold needle, and one finds splashes of deep orange upon gray

trunks and branches, far in the wood.

I have never planted anything in the wood but ferns, and as some of the ground is swampy they do extremely well, and look particularly at home bending over the mossy stone edge of an oval pool in a little glade. In autumn this pool is intensely black, and when I pay it a morning visit, I often find its glassy surface flecked with the scarlet and gold of fallen leaves from the tupelos around it.

A double loggia of whitewashed brick arches unites the house with the high ledge of rock, and thru this loggia, and an arched doorway, one can pass to the west; to a brick paved terrace; to a path leading down by lawn and cedar clumps to the harbor and beach, or by another rocky path to the studio, which is white, like the house, and covered with vines.

An upper terrace reached by a flight of cement steps, lies along the top of the ledge, on a level with the second story and, here, from the little tea-house loggia, at the far end of the terrace, one may look out toward Spain, and watch the harbor, mist-wreathed or sail-ridden, and blue as the sky above it. There is another pool on this terrace, in which the moon sometimes deigns to shine, and once a group of white lilies consented to reign here for a season. A purple clematis hangs over one corner, and two or three dwarf pines break the line of the low cement wall.

We have not yet come to the flowers in this so-called garden. There are many wild ones. First, the dog-tooth violets, then the wild roses and daisies, and later golden rod and asters. Otherwise there are only two small beds of roses, a long border of phlox, and a bed of heliotrope. All these are domesticated along with the vegetable garden, below the studio. Except the phlox, they are not decorative, but in their sheltered placing have a comfortable air of their own, not without charm.

Perhaps it may be interesting to rose growers to hear that from a Lady Pirrie, planted in June, I, the following November, picked a bud on a very rich mahogany-colored stalk, with dark green, leathery leaves. This bud, standing in a glass vase and abundant water, opened until it was six inches across; separate petals measuring three inches each way. Its perfume and color had all the exquisite majesty of its high birth, and in queenly state it received the homage of the household and guests for more than a week; but

Up these steps and level with the ridge is a secret terrace where purple clematis hangs over a wall, two or three dwarf pines stand sentinel and the moon sometimes shines in a hidden pool

# NERVE EXHAUSTION

*How We Become Shell-Shocked in Every-Day Life*

By PAUL VON BOECKMANN

*Lecturer and Author of numerous books and treatises on Mental and Physical Energy, Respiration, Psychology, Sexual Science and Nerve Culture*

**T**HERE is but one malady more terrible than Nerve Exhaustion, and that is its kin, Insanity. Only those who have passed through a siege of Nerve Exhaustion can understand the true meaning of this statement. It is HELL; no other word can express it. At first, the victim is afraid he will die, and as it grips him deeper, he is afraid he will not die; so great is his mental torture. He becomes panic-stricken and irresolute. A sickening sensation of weakness and helplessness overcomes him. He becomes obsessed with the thought of self-destruction.

Nerve Exhaustion means Nerve Bankruptcy. The wonderful organ we term the Nervous System consists of countless millions of cells. These cells are reservoirs which store a mysterious energy we term Nerve Force. The amount stored represents our Nerve Capital. Every organ works with all its might to keep the supply of Nerve Force in these cells at a high level, for Life itself depends more upon Nerve Force than on the food we eat or even the air we breathe.

If we unduly tax the nerves through overwork, worry, excitement, or grief, or if we subject the muscular system to excessive strain, we consume more Nerve Force than the organs produce, and the natural result must be Nerve Exhaustion.

Nerve Exhaustion is not a malady that comes suddenly. It may be years in developing and the decline is accompanied by unmistakable symptoms, which, unfortunately, cannot readily be recognized. The average person thinks that when his hands do not tremble and his muscles do not twitch, he cannot possibly be nervous. This is a dangerous assumption, for people with hands as solid as a rock and who appear to be in perfect health may be dangerously near Nerve Collapse.

One of the first symptoms of Nerve Exhaustion is the derangement of the Sympathetic Nervous System, the nerve branch which governs the vital organs (see diagram). In other words, the vital organs become sluggish because of insufficient supply of Nerve Energy. This is manifested by a cycle of weaknesses and disturbances in digestion, constipation, poor blood circulation and general muscular lassitude usually being the first to be noticed.

I have for more than thirty years studied the health problem from every angle. My investigations and deductions always brought me back to the immutable truth that Nerve Derangement and Nerve Weakness is the basic cause of nearly every bodily ailment, pain or disorder. I agree with the noted British authority on the nerves, Alfred T. Schofield, M.D., the author of numerous works on the subject, who says: "It is my belief that the greatest single factor in the maintenance of health is that the nerves be in order."

The great war has taught us how frail the nervous system is, and how sensitive it is to strain, especially mental and emotional strain. Shell Shock, it was proved, does not injure the nerve fibres in themselves. The effect is entirely mental. Thousands lost their reason thereby, over 135 cases from New York alone being in asylums for the insane. Many more thousands became nervous wrecks. The strongest men became paralyzed so that they could not stand, eat or even speak. One-third of all the hospital cases were "nerve cases," all due to excessive strain of the Sympathetic Nervous System.

The mile-a-minute life of to-day, with its worry, hurry, grief and mental tension is exactly the same as Shell Shock, except

that the shock is less forcible, but more prolonged, and in the end just as disastrous. Our crowded insane asylums bear witness to the truth of this statement. Nine people out of ten you meet have "frazzled nerves."

Perhaps you have chased from doctor to doctor seeking relief for a mysterious "something the matter with you." Each doctor tells you that there is nothing the matter with you; that every organ is perfect. But you know there is something the matter. You feel it, and you act it. You are tired, dizzy, cannot sleep, cannot digest your food and you have pains here and there. You are told you are "run down" and need a rest. Or the doctor may give you a tonic. Leave nerve tonics alone. It is like making a tired horse run by towing him behind an automobile.

Our Health, Happiness and Success in life demands that we face these facts understandingly. I have written a 64-page book on this subject which teaches how to protect the nerves from every day Shell Shock. It teaches how to soothe, calm and care for the nerves; how to nourish them

Through them you experience all that makes life worth living, for to be dull nerved means to be dull brained, insensible to the higher phases of life—love, moral courage, ambition and temperament. The finer your brain is, the finer and more delicate is your nervous system, and the more imperative it is that you care for your nerves. The book is especially important to those who have "high strung" nerves and those who must tax their nerves to the limit.

The following are extracts from letters from people who have read the book and were greatly benefited by the teachings set forth therein:

"I have gained 12 pounds since reading your book, and I feel so energetic. I had about given up hope of ever finding the cause of my low weight."

"I have been treated by a number of nerve specialists, and have traveled from country to country in an endeavor to restore my nerves to normal. Your little book has done more for me than all other methods combined."

"Your book did more for me for indigestion than two courses in dieting."

"My heart is now regular again and my nerves are fine. I thought I had heart trouble, but it was simply a case of abused nerves. I have reread your book at least ten times."

A woman writes: "Your book has helped my nerves wonderfully. I am sleeping so well and in the morning I feel so rested."

"The advice given in your book on relaxation and calming of nerves has cleared my brain. Before I was half dizzy all the time."

A physician says: "Your book shows you have a scientific and profound knowledge of the nerves and nervous people. I am recommending your book to my patients."

A prominent lawyer in Ansonia, Conn., says: "Your book saved me from a nervous collapse, such as I had three years ago. I now sleep soundly and am gaining weight. I can again do a real day's work."

## The Prevention of Colds

Of the various books, pamphlets and treatises which I have written on the subject of health and efficiency, none has attracted more favorable comment than my sixteen-page booklet entitled, "The Prevention of Colds."

There is no human being absolutely immune to Colds. However, people who breathe correctly and deeply are not easily susceptible to Colds. This is clearly explained in my book NERVE FORCE. Other important factors, nevertheless, play an important part in the prevention of Colds—factors that concern the matter of ventilation, clothing, humidity, temperature, etc. These factors are fully discussed in the booklet, Prevention of Colds.

No ailment is of greater danger than an "ordinary cold," as it may lead to Influenza, Grippe, Pneumonia or Tuberculosis. More deaths resulted during the recent "Flu" epidemic than were killed during the entire war, over 6,000,000 people dying in India alone.

A copy of the booklet Prevention of Colds will be sent *Free* with either the 25c or 50c book NERVE FORCE. You will agree that this alone is worth many times the price asked for both books.

**PAUL VON BOECKMANN**  
Studio 237, 110 West 40th St., New York

**The Sympathetic Nervous System**

*Showing how Every Vital Organ is governed by the Nervous System, and how the Solar Plexus, commonly known as the Abdominal Brain, is the Great Central Station for the distribution of Nerve Force*

through proper breathing and other means. The cost of the book is only 25 cents. Bound in cloth, 50 cents. Remit in coin or stamps. See address at the bottom of page. If the book does not meet your fullest expectations, your money will be refunded, plus your outlay of postage.

The book "Nerve Force" solves the problem for you and will enable you to diagnose your troubles understandingly. The facts presented will prove a revelation to you, and the advice given will be of incalculable value to you.

You should send for this book today. It is for you, whether you have had trouble with your nerves or not. Your nerves are the most precious possession you have.

its chief guardian and servant had many sweet private moments with it, changing the light for fresh views of noble contours.

## Hooks and Eyes

It is estimated that four miles of an ordinary spider's thread would weigh scarcely a grain.

\*\*\*

One person is killed by an automobile in the United States every thirty-five minutes. This is three times the fatalities caused by all the accidents in factories, mines, railroads and other industries in America.

## Your Book, Sir

By Dr. William T. Foster

President of Reed College

In that adventurous era when we ran the risk of pauperizing everybody by granting the free use of books, we called the public library "The People's University." The name was inevitable. In that day almost anything became a "university" overnight. The library, if not without distinction in the name, was not without authority for its use. Had not Carlyle said, "A true university in our day is a collection of books"?

It is the oft-quoted saying of a wise man, but not a wise saying. A collection of books was not even in Carlyle's day a true university. In our own day a mere collection of books is not even a public library. Indeed, the modern library is, in many respects, more of a university than the most progressive university of Carlyle's time. Both the librarian as a "keeper" of books and the teacher as a "keeper" of school have passed into tradition.

In order that books may be read, one of our libraries has gone so far as to relieve readers from the trouble of bringing their cards; and many libraries, mindful of the slogan "carrying the university to the people," have carried themselves to fire stations and corner groceries—even to loggers and forest rangers. Out on the banks of the

Columbia River, on a knoll in a wide wheat field, is a one-story building, a branch of the central county library. That remote cabin gives free access to four hundred thousand volumes. Both the university and the library are going even farther than they have yet ventured in search of people hitherto beyond their domain.

While welcoming all people, the library cannot be as hospitable to books. In its university mission it must be selective. The true university always has been selective. It is hardly "a place where any one may study anything at any time." It is true that the American

university long ago abandoned its table d'hôte curriculum and is now said to offer à la carte service or even a quick lunch. But the modern bill of fare, however indigestible, would pass a benevolent pure knowledge inspector. It is not utterly void of brain calories. Faculties cling to the idea that every seeker after truth, even the youngest, needs guidance. Still exercising some control over courses of study, they do not often invite waste of time upon the latest follies.

Public libraries, too, as they become more critical of their "university" title, will become more selective; they will create demand, not merely supply it; they will enlarge their teaching functions in a hundred ways; they will lead the forum frequenters farther than they planned to go: for which high purpose they will pay their staffs as high wages as mechanics

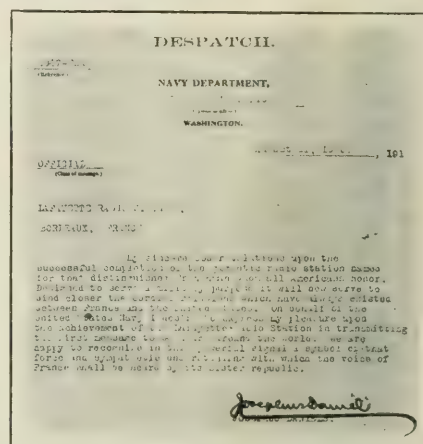

Keystone View

THE BLOW-HARD Thru the Willesden glass works which intend to turn out ten million square feet of glass a year, England is fast capturing an industry which before the war was almost entirely continental and mainly Belgian

Keystone View

From the wireless station Lafayette, at Croix D'Hine, 17 miles from Bordeaux, was recently transmitted the first wireless message to be heard around the world. This station, which is twice as powerful as the one at Annapolis, will be formally presented to the French Government by the United States on October 4.

and conductors, even if they are thereby forced to spend less money on the empty and the ephemeral—the newest novel, for example, wet, as Ruskin would say, with the latest spray of the fountain of folly.

But the library is no credit to the name of "university" that rejects a book merely because its ideas may be too radical. The utterly bad books are those without ideas—those that leave the reader just as empty-headed as before; as ill nourished mentally as he would be physically if he fed upon the gay pasteboard wrappings of all the latest breakfast foods. The public library will be more worthy the name of "The People's University" when it spends less money on cheap books and more money on rare human beings, selected for their power to guide the people to good reading, and, haply, to really great literature.

Portland, Oregon

## Big Bertha Makes Low Score

The high-explosive shell is by far the deadliest and most destructive weapon ever fashioned by man. Yet Dr. Mercher of the French Academy of Medicine estimates that it required on the average 395 shells to kill one soldier during the Great War and half that number to wound one.

This estimate was reached after an investigation of the number of shells which fell on the French lines during five months in 1917. This number has been placed at a total of 3,690,000. By comparing with the French casualty list of men killed or wounded by shell explosions during the five months in question it was possible to estimate the average number of shells required to

kill one individual. As no one contends that the German artillery consists of incompetent men, the huge expenditure of ammunition seems evidence rather of the magnificent defensive qualities of earthwork trenches than of the inferiority of German marksmanship. Certainly in the Middle Ages an archer who had to expend 395 arrows before slaying his first foe would have been regarded as very wasteful of his arrows. The weapons which are in themselves the most formidable seem least effective in the cheap and rapid annihilation of the enemy because of the improved defensive tactics which they make necessary.

## A Cupboard That Looks Both Ways

By Caroline Keife Myers

The double cupboard built between our dining room and kitchen eliminates so much useless work that we call it the best thing in our new house.

It is built of oak and is seven feet high. The upper section is a dish and serving closet. Wooden doors open into both kitchen and dining room. We keep our table dishes, relishes and condiments here. Hav-

ing been washed at the sink nearby, the dishes are easily placed on the shelves and are at hand when we wish to set the table.

The lower part is divided vertically. On one side is a large cupboard for kitchen utensils, while the other side has buffet drawers for linen and silver. The top of the lower section forms a roomy serving table, divided lengthwise by vertical panels into two parts, with slide between.

Kitchen stove and dining room table are conveniently near. Using cup-

## To Insure Christmas Delivery *Monogrammed Handkerchiefs Should be ordered now*

THE variety of smart new sport styles and our ever large assortment of hand-embroidered, lace-edged and hemstitched handkerchiefs afford a wide selection to the early shopper.

But the ever welcome gift of handkerchiefs acquires a truly personal charm only when it bears a distinctive monogram.

To insure delivery for the holidays, orders for monogramming should be placed not later than the first week of November.

## Use Your Garbage By Harold A. Caparn

Garbage is commonly regarded as an entirely unpleasant and useless product, an unavoidable nuisance, to be gotten rid of utterly, to be carried away as far out of sight and smell as possible. But garbage is only the concentrated and unconcentrated product of the soil, the concentrated being the animal, the unconcentrated the vegetable matter, and both should be returned to the soil from which they came, this being the method by which Nature has made the earth habitable for man.

In 1916, the writer having no pigs or chickens to consume the garbage, spread a little soil and sifted coal ashes over

the daily deposit—just enough to cover it. The ashes were used to lighten the soil which was too stiff and soggy for a good garden. By the summer of 1917, when the mass was turned over, the garbage had disappeared; in its place was a pile of rich soil highly charged with disintegrated vegetable matter. So simple it is to get rid of your garbage by saving it to become valuable and useful.

To do this properly there should be a receptacle with a lid and the best kind is a pit lined with concrete, say three feet deep and four feet wide or more, depending on how much garbage you have to dispose of. The use of the lid is not to keep in the smell—the dressing of soil will do that—but to keep out dogs, cats, chickens, rats and mice which would upset it and attract flies.

Of course, you can mix in all the weeds, dead leaves and lawn sweepings that you can get, but the receptacle would have to be proportionately larger to hold them all. This is an excellent way to dispose not only of your own leaves, but of those from the street and your neighbor's as well, which are usually burned. On an acreage place it is quite practicable to have a garbage pile without a receptacle, which really means having one compost heap for leaves, garden refuse and garbage; but it is not a sightly thing, so should be screened from view, and it is not so easy to keep covered with soil. If the pile is turned over once in a while it will disintegrate quicker.

Thus, instead of paying somebody to take away your garbage, you can put it on your gardens or lawns as a fertilizer for your choice trees, plants or bushes, or use it to make specially fine soil for flower beds. It will take hardly any longer to put it on the pile than for the garbage man to call for it and load it on to his wagon; and if you have a hired man, he can do it without the added expense of the garbage man, so that you save to gain instead of paying to lose. And it will add to the soil just what so many soils are woefully deficient in—humus, or vegetable matter.

Underwood & Underwood

### THE DOOMED

This statue, created as propaganda against capital punishment, has aroused much discussion, particularly in New York state, during the legislature's discussion of a bill to abolish capital punishment. The sculptor, Ruotolo, is an Italian-American. His native land long since abolished capital punishment and he is eager to see his adopted country achieve the same standard

Keystone View

Twenty o'clock is the breakfast hour at Riga on the Lake of Garda, if one is to go by the twenty-four hour timepiece over the marketplace

board, table, and slide, food is served very easily. After a meal dishes are passed to the sink by the same method.

It is surprising how this plan minimizes the work before and after a meal.

## Domesticating Radium

Radium is the rarest metal known to the world. There is, it is supposed, less than a pound of it in existence. And the present price of it is \$3,260,000 an ounce, compared to platinum for instance, which is only \$150 an ounce. A whole ton of carnotite, the ore from which radium is derived in the American mines in Utah and Colorado, yields only five milligrams of radium, an amount smaller than the head of a pin. And yet, radium is being used to illumine electric light switches, light pull chains, bedroom slippers, dark hall angles, key holes and aisle seat numbers in theaters.

Other luminous articles in common use are clock dials and watch dials, hospital call buttons, gasoline gauges for the motorist, automobile and motorcycle speedometers, numerous airplane instruments of exceeding usefulness, compasses, ships' telegraph dials, mine signs that are dependable and eliminate the danger from explosion by coal gas, steam gauges, pistol sights to increase accuracy of aim at night, keyholes, automobile steering wheel locks, and safe combination dials. For the sportsman there are fish bait painted luminously. For the child there are numerous toy animals and dolls with bright eyes. Even poison bottles are marked with radium buttons.

Keystone View

As primitive as the wigwam of the American Indian or the igloo of the Eskimo is the capanne which shelters families of Italian farm laborers. At its single door-window one indeed needs a talisman to guard away the Evil Eye, for malaria ever sweeps from the low-lying marshes, taking toll of work people and children

## Politicians

(Continued from page 364)

campaign possible with small amounts of money, they will rally to themselves those elements of the political entity intelligent enough to appreciate them. The vast mass of the people will have an opportunity to make comparison. Probably the men of high standards would be defeated the first time. Perhaps they would be defeated the second time, and even the third time. Democracy is a slow-moving machine. Nearly every big idea recently written upon fundamental law has been defeated again and again and again. But if these men will go patiently on—they need not be the same men every time—the peanut politician cannot stand the comparison. It would be only a matter of a few years until the great mass of the people would avail themselves of the opportunity to raise the standard for public service.

The complaint of the intelligent voter is that both camps offer about the same types. It is this fact which has suggested to the minds of some analytical thinkers the initiative and referendum. They said in effect: "Our so-called leadership does not lead. It merely adopts as truth anything popular with the majority. Our leadership is like the old school teacher out of a job who was willing to teach that the world was flat or round just as the school board might decide. We will remedy this by letting the voters initiate legislation and by giving them the right to pass upon it by vote." But this remedy has a tendency to result in confusion.

I believe there are two essentials to successful democracy. One is education for the masses of the people; the other is willingness, on the part of men of outstanding ability, to serve the country and consider themselves richly paid in honors.

The mass of the people cannot initiate. The mass of the people is clumsy. The mass of the people is better able to judge men than measures. Over a long period of time the mass of the people is nearly always right about the man. But suppose the man who has something to offer prefers to go into the lumber business and make money.

Theoretically, our politician ought to be making his money as a miller or as a jeweler, as a grocer or a lawyer. But in fact, our politician makes his money as a politician. Defeat to him is disaster. He fears to go educating the people, he prefers to find out what they think and please them by asserting that he also holds that belief. The next step is obvious. He charges that his opponent does not hold those beliefs. The whole thing degenerates into mud-slinging and nothingness.

Some petty person goes to Congress at the highest salary he has ever received in his life. It becomes necessary for him as a Congressman to decide whether specialists and scientists shall be employed by the Government, and he refuses to pay anybody more money than he is receiving. He likes to hire

## An Office without a Monroe is like a Plant without Machinery

**T**HINK of your office as turning out a manufactured product. That product is figure-work. A machine that cuts the cost of producing this figure-work in your office is as valuable to you as a machine that lowers production costs back in your factory.

### Speed up Your Figure Production with the Monroe

The Monroe makes all figuring as easy as turning a crank. It's around this intelligent little crank that the whole simple principle of Monroe operation centers. Its crank operation makes trained operators as unnecessary as complements and reciprocals. It reduces multiplication and addition to a simple *forward* turning of the crank; division and subtraction to a simple *backward* turning of the crank.

And absolute accuracy is guaranteed by the Monroe proof dials and the Monroe keyboard—all factors of your problem are in plain view.

The Monroe "Book of Facts" gives complete information about the Monroe—how it will help you figure payrolls, invoices, chain discounts, interest, percentages, estimates, etc. A copy will be mailed to you upon receipt of coupon below. Sign it and send it today.

### Saves 70% of Time

"In making up our reports and estimates, the Monroe saves us at least 70% of the time previously given to this work."

—International Harvester Co. of America.

WATCHES • CLOCKS • SILVERWARE

large numbers of men and women at approximately one hundred dollars a month. Washington is a seething mass of them; so is every state capital. But they are all woefully deficient in experts, in scientists, in accountants and in trained executives for institutions and for plants.

In a preceding paragraph I said that education for the masses of the people is an essential to successful democracy. No proponent of democracy or defender of it has ever failed to state this essential. But our public school system has been going backward for ten years. Its condition today is alarming. Can we blind ourselves to the fact that this is in part due to our acceptance of leadership which does not even realize that our whole form of government rests upon the primary school? Without schools we fail utterly. I believe that ten years more of our present condition of the public schools will bring actual revolution in this country. Fortunately the mass of the people is awake to that now. Our leadership is going to be forced into remedying that condition. But can we blind ourselves to the fact that our form of government has been more attacked during the last ten years than during any period of our independence? The number of voters in our country who do not really understand our theory of government was never so large as it is today.

The author of a recent book discussing capitalism reaches the very sound conclusion that the remedy for the faults of the capitalistic system is more capitalists. If the capitalistic system is to survive, we must have more home owners and more depositors in banks, more bond holders, more graduates of high schools. And so the remedy for the faults of the democratic system and the primary election system is more democracy, better democracy, a higher standard of democracy, sincerer appreciation of the benefits of democracy, a firm desire to serve democracy and to reap a benefit from that service by enjoying the high privilege of loving democracy. You don't really love anything that you don't serve; any more than you can serve anything that you don't love.

We have got to get rid of the type of man who burglarizes the capitol and the courthouse. We have got to get rid of the man who claws and bites and jimmies and vilifies his way into public office. We can't kill him. We can't prevent him from running for office. We can't prevent him from forming a political party. We can't put his friends in jail. But we can, if we will, furnish a contrast. We can make him face the contrast every time he runs for office.

If we really love democracy, if we have faith in our form of government, if we believe, like Abraham Lincoln, that you can fool all of the people part of the time and part of the people all of the time, but that you can't fool all of the people all of the time, then we will not have the slightest doubt about the outcome.

New York City

## ADVANCE INFORMATION

### About Forthcoming Books

**THE GRAPHIC ARTS.** By Joseph Pennell. A new volume in the series of Scammon Lectures at the Art Institute of Chicago. This volume deals with the modern development of all the graphic arts and is richly illustrated. \$5.00.

**MODERN TENDENCIES IN SCULPTURE.** By Lorado Taft. An important volume in the series of Scammon Lectures at the Art Institute of Chicago. This book, by the famous Chicago sculptor, discusses the work of Auguste Rodin, other European sculpture, and Augustus Saint-Gaudens and American sculpture. Profusely illustrated. \$5.00.

**THE FINANCIAL ORGANIZATION OF SOCIETY.** By H. G. Moulton. A study of the financial aspects of modern society. Money, credit facilities, and our financial institutions are closely interwoven with the entire economic organization. They should be studied in this relation and not as isolated economic agencies. \$4.00.

**PRINCIPLES OF ACCOUNTING.** By A. O. M. Hodge and J. O. McKinsey. Designed to help those who expect to become executives or expert accountants as members of the organization of a particular business enterprise, rather than as public accountants. \$3.00.

**INTRODUCTION TO THE STUDY OF SOCIOLOGY.** By Robert E. Park and Ernest W. Burgess. This book is based on the belief that the use of concrete material makes possible a clearer understanding of the principles of sociology than has been possible with the method of presentation in the past. It defines and illustrates the concepts and principles of sociology. \$4.50.

## Our Greatest Victory

(Continued from page 369)

ton's division were in the battle line by October 12 but, beyond taking most of the Bois de Consenvoye, the Blue and Gray Division had gained little ground for the German fire, sweeping across the ravine of Molleville Farm from the slopes of the Grande Montagne and the Bois d'Etrayes, east of it, was so terrific that it eventually mowed down all the thick underbrush in the Bois de Consenvoye. In conjunction with General Bell's Illinoisans, the left of the 29th had also struggled ahead on the 11th in the Bois de Chaume and the Bois Plat-Chene. Progress northward on this part of the front grew steadily more difficult, however, as the troops to the right swung eastward, thus exposing these in the two woodlands to flanking fire from the mountain. Nevertheless the 33rd Division had gained the ridge running down from the mountain toward Sivry and was nearly up to the latter village in the river valley when, about October 21, it turned over its sector to General Guerin's 15th Division of French Colonial Infantry, which had been relieved on the Woivre front to come into the battle.

General Morton's men, remaining in line, gradually worked their way around the Molleville Farm ravine and up the slopes of the Grande Montagne until, on the morning of the 23rd, after a heavy artillery preparation, they made a strong attack in conjunction with General Edwards' 26th Division which further to the right in front of Le Houppy Bois, Belleu Bois and the Bois d'Ormont, had meantime relieved the 18th French Division. Near their point of junction the two divisions conquered the ridge in the Bois d'Etrayes and seized the important German observatory on its crest, holding their gains against violent counterattacks. The New Englanders further to the right also made a handsome advance but, tho they succeeded in taking and holding the nearer woodlands and in entering the Belleu Bois and the Bois d'Ormont, the German counterattacks were so desperate that they were driven back from these elevated spots which, lying close to the eastern edge of the hights, gave observation to the Germans as far as the Meuse and which, if lost to them, would serve the Americans equally well for looking out over the plain of the Woivre.

Thruout the 24th and 25th of October the 101st Infantry, in the Belleu Bois, and the 102nd Infantry, in the Bois d'Ormont, fought a stubborn battle against a hurricane of artillery and machine gun fire and furious counterattacks. But it was not until the 27th that the Belleu Bois was finally taken by the 104th Infantry, while the Bois d'Ormont remained in the enemy's hands until November 7. Meantime, General Joseph E. Kuhn's 79th Division came in on the left of the 26th, relieving the 29th Division and taking over a part of the sector of the 26th Division so that the latter could side-

# Why Teeth Stain

You leave a film-coat on them

*All statements approved by high dental authorities*

Most teeth are dimmed more or less by a film. Smokers' teeth often become darkly coated.

That film makes teeth look dingy, and most tooth troubles are now traced to it.

Millions now combat that film in a new, scientific way. This is to offer a test to you, to show the unique results.

It is the film-coat that discolors, not the teeth. Film is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea.

## You must end film

The film is viscous—you can feel it with your tongue. It clings to teeth, enters crevices and stays.

Ordinary brushing methods leave much of this film intact. So millions find that well-brushed teeth discolor and decay. You must attack film in a better way, else you will suffer from it.

## Efficient ways

Dental science, after painstaking research, has developed effective ways to fight film. The world's highest authorities now approve them, after careful tests.

These ways are combined in a dentifrice called Pepsodent. And leading dentists everywhere now advise its daily use. A ten-day tube is being sent to everyone who asks.

## Watch these new effects

One ingredient is pepsin. One multiplies the starch digestant in the saliva to dissolve the starch deposits that cling. One multiplies the alkalinity of the saliva to neutralize mouth acids as they form.

Two factors directly attack the film. One keeps the teeth so highly polished that film cannot easily cling.

Pepsodent has brought a new era in

teeth cleaning. It fights the tooth destroyers as was never done before.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the slimy film. See how teeth whiten as the film-coat disappears.

You will always brush teeth in this new way when you watch the results for a week. Cut out the coupon now.

slip to the right and relieve General Belenet's 26th French Division north of Beaumont.

Toward the close of October the right of General Claudel's corps was thus advancing in a general northeasterly direction and approaching the escarpments of the Heights of the Meuse on that side while the divisions of its left were still exerting their pressure northward. Since the beginning of the attack the artillery cross-fire on the American troops west of the Meuse, tho not entirely eliminated, had been greatly diminished. It is hard to estimate precisely how much the general situation of the German armies was influenced by the advance in this quarter, but in his memoirs General Ludendorff indicates the urgent haste of the measures which they were taking all along the Western front at about this period. After telling of the German retirement to successive rear defensive lines, he says:

The evacuation of the ground behind the new positions was carried on with all speed. The railways were continually worked to the utmost limit of their capacity. Enormous masses of war material had to be dealt with, involving weeks and months of work. I laid great stress on the importance of thorough preparation for the destruction of lines and bridges, which could not but have its effect on operations, and upon the removal to Germany of our own material. I continually discussed with the chiefs of staff the problems of evacuation and destruction. . . . Further in the rear we were working hard on the Antwerp-Meuse line, and I had a new line surveyed along the German frontier.

Up to the end of October the closest threat to the main German railway line paralleling the southern part of their battle front was the advance east of the Meuse. Altho after the break-thru of November 1 on the Meuse-Argonne front this ceased to be true and altho the rapid advance of the First American and the Fourth French Armies to Sedan then rendered entirely impracticable the Antwerp-Meuse defensive line mentioned by General Ludendorff, previous to that date the operations of the 17th Corps constituted the most serious danger to such a proposed retirement position.

General Claudel's corps, having in line from right to left the 26th and 79th American and the 15th Colonial Divisions, did not participate in the general attack which was made west of the Meuse on November 1. But on the morning of the 4th, concealed by a heavy fog and well covered by artillery fire, General Kuhn's men assaulted the Borne de Cornouiller, or Hill 378, the highest spur of the Grande Montagne, while General Guerin's Colonials moved against Villeneuve and Sillon-Fontaine Farms, lying at the top of the steep slopes running down to the valley of the Meuse near Sivry. After a hard struggle both divisions were repulsed. They renewed their attack, however, on the next day and both gained their objectives, clearing the summit of the Grande Montagne. General McMahon's 5th Division, on the

## Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein.

**Dr. Esenwein** for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 10 cents; annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

**THE INDEPENDENT**  
311 Sixth Avenue, New York City

right of the 3rd Corps, had meantime crossed the Meuse at Brioules and below on November 4 and was sweeping eastward up the wooded heights north of General Claudel's corps. But the enemy, tho he was being rapidly outflanked by General McMahon's men, held with determination to the lines of trenches on the ridge next north of the Grand Montagne, about Solferino Farm and Hill 398, and the attacks of the American and French troops on these positions during the 6th were all put down.

But next day the battle was more successful. The Germans, after a bitter struggle lasting until evening, were ejected from their last line on the heights around Hill 398. Both the 79th and the 15th Colonial Divisions then turned the direction of their advance due eastward to drive down the slopes into the Woivre plain, while further north the other American corps were crossing the Meuse and advancing on the axis Longuyon-Longwy in the same general direction.

Rehabilitated after its hard battle around Romagne-sous-Montfaucon, General Hahn's 32nd Division was introduced into the line on the night of November 8 between the 15th Colonial and the 5th American Divisions. General Blondlat and the staff of the 2nd Colonial Corps had now replaced General Claudel's 17th Corps staff, which went to General Bullard's army. With the whole battle line gradually straightening out from the Meuse at Stenay down the front of the 2nd Colonial Corps to Beaumont and thence along the eastern edge of the Heights of the Meuse to the front of General Bullard's Second Army, the divisions of General Blondlat pushed forward during the 9th into the low ground ahead of them, at Pouvillers and Damvillers and past Flabas, the last-named village, tho strongly fortified, falling to General Edwards' men. The front now lay in the valley of the little Theinte River with no more organized German positions ahead of it excepting those on an irregular line of isolated hills east of that river, chief of which were the Jumelles d'Ornes, the Cote de Romagne, Cote de Morimont and Cote d'Orne. All were in the sectors either of General Edwards or General McMahon's divisions and their troops were pressing the attack and on the point of clearing away these last obstacles to their advance into Etain and Spincourt when the armistice came into effect on November 11.

Before concluding the narrative of the Meuse-Argonne operations of the First American Army, a few words should be said concerning the offensive whose opening phase was begun by General Bullard's Second Army on November 10; an offensive which, supplementing the advance of General Liggett's forces, would have been productive of the most far-reaching results had time permitted its full development. Anticipating the advantages of an extension of the front of attack General Pershing as early as the first of November gave detailed instructions

Organized 1850

to General Bullard for an advance on Conflans and Briey. This advance was not to be executed until ordered; meantime General Bullard's men, as they had been doing ever since the beginning of the battle between the Meuse and the Argonne, kept the Germans in their front in a constant state of alarm by vigorous patrolling and formidable trench raids. Following the collapse of the enemy in the Meuse-Argonne and the northeastward sweep of the First Army across the river, the moment arrived for the Second Army to swing into line, pivoting on the Moselle north of Pont-a-Mousson.

General Bullard, as before stated, ordered the advance to commence on the morning of November 10. At the time he had only four divisions in line on his fifty-kilometer front, but five more divisions were in motion to reinforce him. The divisions in line were the 92nd, General Charles C. Ballou, astride the Moselle on the right; then the 7th Division, General Edmund Wittenmyer, extending to the Rupt de Mad; then General William H. May's 28th Division, reaching to a point north of Hatton-Chatel, and then General Bell's 33rd Division, which covered the front to Fresnes-en-Woevre. Preparatory to an immediate increase in the number of divisions, three corps staffs were already functioning under the Second Army; General Omar Bundy's 2nd Corps with, at the time, the 92nd and 7th Divisions under it, General C. H. Muir's 4th Corps with only the 28th Division under it and General Claudel's 17th French Corps with only the 33rd Division under it.

The plan was for the Second Army in its advance to avoid the fortress of Metz, its right flank passing to the west of the outer defenses of the place. On November 14, when it was judged that General Bullard's attack would be well developed and making progress, General Mangin with the 10th French Army was to open a similar attack along the front southeast of Metz, directed against Chatcau-Salins, the valley of the Sarre River and eventually the Rhine. General Mangin's offensive was to be conducted with twenty French divisions while, by an extension of the right flank of the Second American Army, six American divisions were to cooperate with him in front of and on the eastern side of Metz. The consequence of these dispositions would be that Metz would be isolated and surrounded by American troops. As the enemy, on the whole line to be assailed, had only about sixteen depleted divisions of inferior quality, with none whatever in reserve, this combined attack of the Second American and 10th French Armies could only have resulted in immediately throwing the enemy back across the Rhine not only on the 120-kilometer front of the offensive but also down to the frontier of Switzerland thru the outflanking of the rest of his defensive line in the Vosges Mountains.

As the situation developed, General Bullard's forces had only time to make a beginning. The Second Army front

was lying, as it had been since the close of the St. Mihiel operation, directly in front of the heavily fortified Michel Position of General von Fuch's Army Detachment "C." On the morning of November 10, General Ballou's colored troops pushed forward about two and one-half kilometers and occupied a large salient of woodlands and open ground which the enemy had long occupied on the east side of the Moselle. The 7th Division advanced thru the rough country on both sides of the Rupt de Mad, closely approached Rembercourt, took Mon Plaisir Farm and stopped in the edge of the mats of enemy wire. The 28th Division drove the Germans back for three kilometers on both sides of Lake Lachaussee, bringing the whole lake within the American lines, while the 33rd Division, in the flat plain still further to the northwest, gained from two to three kilometers and took the villages of St. Hilaire, Butgneville and part of Marcheville.

Beyond the left flank of General Bullard's army as great activity prevailed. General Charles J. Bailey's 81st American Division and the French 10th Colonial Division, which, as the right divisions of General Liggett's army, formed the link between it and General Bullard's forces, carried out their part of the general advance by fighting their way forward into the Woevre plain five or six kilometers, releasing several villages from the hands of the invaders. Thus at the hour of the armistice General Pershing's Army Group, with thirteen American and two French divisions in line, was moving forward toward Germany on a front of 120 kilometers, driving thirty-six divisions of the defeated enemy ahead and with every prospect of shortly reaching the Rhine at the cost of losses which would have been slight in comparison with those which had already been suffered.

From the western edge of the Argonne to the Moselle between September 20 and November 11, twenty-three American divisions shared in the greatest victory American arms ever achieved on the field of battle. Of these divisions eight went into line twice and one went in three times. The divisions were, the 1st (twice), 2nd, 3rd, 4th, 5th (twice), 7th, 26th, 28th (twice), 29th, 32nd (twice), 33rd (twice), 35th, 37th, 42nd (twice), 77th (twice), 78th, 79th (twice), 80th (three times), 82nd, 89th, 90th, 91st and 92nd. As has been previously stated, the greatest number of American troops of the First Army for whom supplies were provided on any one day was 896,000 on October 6. To this should be added, as part of the First Army strength, the number of French troops operating under its orders which reached on October 10, according to the figures of the French Mission at American General Headquarters, a total of 133,300 men. Thus, at its maximum, the First Army had a total strength of 1,034,300 men. Since these figures are for dates previous to the organization of the Second Army, they include the forces which later

came under the command of General Bullard. No exact figures are available for the strength of the latter, but they probably amounted at the date of the armistice to not less than 275,000. If reconstituted divisions be counted each time they returned to the battle, the total of purely American troops engaged during the whole course of the operations amounts to the formidable figure of about 1,200,000.

Brigadier General Fox Conner, Chief of the Operations Section (G-3), American General Headquarters, has stated that thruout the course of America's participation in the war, "in the defense no American division lost ground intrusted to it except locally and then only for a few hours and no American division failed in attack." This statement applies with particular force to the bitterly contested battle of the Meuse-Argonne and the fact justified every word of the tribute paid by General Pershing to his men in his General Orders No. 203, published on the 12th of November, 1918, which read, in part, as follows:

The enemy has capitulated. It is fitting that I address myself in thanks directly to the officers and soldiers of the American Expeditionary Forces who by their heroic efforts have made possible this glorious result. Our armies, heroically raised and hastily trained, met a veteran enemy and by courage, discipline and skill, always defeated him. Without complaint you have endured incessant toil, privation and danger. You have seen many of your comrades make the supreme sacrifice that freedom may live. I thank you for the patience and courage with which you have endured. I congratulate you upon the splendid fruits of victory which your heroism and the blood of our gallant dead are now presenting to our nation. Your deeds will live forever on the most glorious pages of America's history. . . .

Yankton, South Dakota

## Appleville

(Continued from page 365)

to this ceaseless labor, if these women had near neighbors to chat with, movies to go to, any sort of easy entertainment, to say nothing of time to rest, they would not so readily fly from home to the grave or the insane asylum.

Under the stress of all these difficulties the farmer is growing discouraged, and it is being forced in on the public mind that food is rather an important factor in life.

To raise food we must have farmers, and farmers must have wives.

So it begins to look as if it was worth while to do something to make life more comfortable for the woman on the farm.

This is no longer an academic question; it is one of immediate practical importance.

The general cause of all these troubles is in one word—isolation.

It is the loneliness, the primitive individualism of the farm, which makes it so hard for women and children.

It is hard on the men, too, but they have some little contact with human life; they sell their products to other people and for other people; they have

## The Ethics of Production

Under conditions existing in the world today the welfare of nations and of individuals is dependent on a return to adequate production of the necessities of life.

Forces that retard production are contrary to public good and those that increase it constitute constructive effort for human well-being.

JOHN P. MUNN, M. D., President.

Good territory open for high class, personal producers, under direct contracts with the Company. Address Home Office, 277 Broadway, New York City.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

dealings with those who sell livestock and machinery; and in most cases the farmer "goes to the store" more frequently, and has more and longer talks with his fellow men.

There is no real reason for our isolated farms, except in the remote and extended ranges and ranches of the West.

In all our settled states there is absolutely nothing to prevent our adoption of the system of village farming.

This is no novelty. On the contrary it is the method employed over almost all of the world's surface.

The primitive village is only a group of huts, without any collective features save some central "common" or market place, or a church of some sort.

We, in the life of today, need more.

There is a certain minimum requirement for normal human living today. Let us measure it by the children.

A good kindergarten and school is required for the right rearing of children. How many families, living within close walking distance, would be needed to support a kindergarten?

Children are a permanent class in the community, but a very transient one in the family.

To keep up an attendance of some twenty little ones would call for perhaps a hundred families.

A hundred farms, at present, even if we take those nearest together, lie straggling over a wide stretch of country, "remote, unfriended, solitary, slow." As to shape, they do not consider it. Each one is forced to be a self-supporting unit like an island. It must have a wood-lot, to furnish fuel; a pasture for the cattle, enough meadow land to give hay for winter feed, and enough more to raise whatever the farmer sells to buy the other necessities of life.

On these scattered farms the men work hard and long, for very small pay, and the women work hard and longer, for no pay at all. Any efficiency expert, applying the rudiments of his science to this economic problem, would utterly condemn it.

Perhaps they own among them an average of one hundred acres apiece, ten thousand acres. This land, as a producing agent, is pitifully ill-handled. There is a maximum of effort, and a minimum of result. Each of the hundred families drags out a laborious life, over-burdened and under-supplied with all that makes for the joy and stimulus of real civilization.

Now let us suppose that this amount of land be differently arranged, each farmer retaining his individual ownership, of the same number of acres, but all "pie-shaped," radiating from a common center.

It is this center which makes all the difference in the world to the women and children.

Here would be a "common" or park, with a band-stand, seats, and shade trees; with a playground for the younger children, with, if possible, a bathing pool at least for the little ones—every child has a right to learn to swim.

Around this would stand the neces-

sary buildings to meet the common needs of a hundred families, some five hundred persons.

A school, with kindergarten and nursery, connecting with the playground and park; a church, a store and post-office; and that great necessity, a Community House. This should connect with a small hotel, and model kitchen, and should include a library, a good hall for lectures, dances, movies, all manner of general use in entertainment; and also ample provision for clubrooms, for men, women and children.

Then there is the necessary blacksmith's shop; there should be a well-supported tinker and cobbler, and a first-class cleaning and laundry establishment.

Around this social center would be the hundred homes of the owners, arranged on circular streets, with pleasant gardens.

Behind these private homes would stretch the private farms, widening as they went, with radiating roads and lanes between.

The vegetables and small fruits would be nearest to the houses, the larger crops coming next, and the pasture and woodland on the circumference. This is not intended as a rigid geometrical design; it would have to vary with the nature of the land, of course, but the great issue is to have the dwelling houses near together, and in close touch with social conveniences.

The advantages of this long established system of "village farming" are not yet understood in our country.

We are so set on "independence" that we would rather suffer, starve and go crazy alone than unite for our common advantage.

Yet the very spirit of this same great country is Union. United we stand and divided we fall, just as truly in economics as in politics.

So long as each family has its own house and grounds there is no danger of too much companionship; and so long as each farmer has his own land to work as he chooses, he need not fear losing any of his individuality.

But farmers as well as other men are learning the benefits of organization. Such a group as is here outlined would soon find the advantages of having one creamery to handle their milk, one competent selling agent to market their produce, and the purchase and use of expensive farm machinery in common.

They might find it wiser to throw their wood-lot holding together, have the whole scientifically forested, and take each his share of the annual output. If this gave them more and better wood for less labor why should they object?

But the basic reason for adopting such a form of group farming is the advantage to the women and children.

At present a hundred farmers require the services of a hundred women merely to do the housework; and usually get more than that out of them too in labor with the poultry, and dairy products. The short-sighted farmer thinks it economical to do this. He never measures

the money value of the woman's labor—because she is not paid.

Yet even at the wages now paid to a common "char-woman," which is three to four dollars in our cities, the earning power of the most ordinary woman is now about a thousand dollars a year—"and up."

If our hundred farmers realized that they were using a hundred thousand dollars' worth of labor a year, in their kitchens and poultry yards, they would be rather horrified.

It need not take a hundred women, nor anything like a hundred women to do this.

With organization, specialization, and proper mechanical appliances, twenty or twenty-five women could do the cooking, with hot meals delivered to the homes in "thermos"-like containers; the cleaning, laundry work, sewing and mending, and nursery-governessing that is now done by a hundred, and do it in an eight hour day.

This would leave seventy-five to specialize in other work, to raise vegetables and small fruits and preserve them for the market; to keep bees; to raise poultry on a paying scale; or whatever industry they like and found practicable.

With congenial work for shorter hours, with their children having the best advantages in education, with neighbors and friends close at hand, with easy access to various amusements, we should soon see the farmer's wife thriving and happy.

Admitting that our inherited prejudices will object at first to any such organization of labor among women, the business sense of both man and wife can hardly fail to see its advantages. The organization among the men will somewhat increase the family incomes, but that of the women, by freeing seventy-five of them for productive industry, could add something like seventy-five thousand to the income of that group, or \$750 a year to each family.

This would vary, naturally, according to the ability of the woman, and the character of her work, but whatever that might be the family would be the richer, not only by what she earned, but by her greater health and happiness.

Stronger, happier mothers, better education for little children, a pleasant and stimulating social life, and a larger income—are not these things worth the sacrifice of a few pet prejudices?

*New York City*

There's trouble in the Balkans.  
And Poland's in a mess.  
They're fighting now in Persia.  
And everywhere, I guess.

The Greeks are fighting Turkey.  
The Irish want a scrap.  
And wars and fights and riots  
Are spread across the map.

The world is in a pickle.  
There is no doubt of that.  
But I have some real trouble.  
I've got to find a flat.

—*New York Evening Mail.*

"The Leading FIRE INSURANCE Co. of America"

WM. B. CLARK, President

1819 - 1920

101 Years of Service

Losses Paid over \$183,000,000

FIRE	TORNADO
MARINE	PARCEL POST
AUTOMOBILE	REGISTERED MAIL
SPRINKLER LEAKAGE	CIVIL COMMOTION

Agents at All Important Points

1920

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Chartered by the State of New York in 1842

Insures against Marine and Inland Transportation Risk and will issue policies making loss payable in Europe, Australia, New Zealand, and Oriental Countries

During its existence the company has insured property to the value of .....	\$32,804,754,598.00	
Received premiums thereon to the extent of .....		\$326,850,930.98
Paid losses during that period .....	\$160,150,570.79	
Issued certificates of profits to dealers .....	\$102,412,590.00	
Of which there have been redeemed .....	\$96,523,710.00	
Leaving outstanding at present time .....	\$5,888,880.00	
Interest paid on certificates amounts to .....	\$25,206,690.15	
On December 31, 1919, the assets of the company amounted to ..		\$16,958,683.35

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

CORNELIUS ELDERT, President,  
WALTER WOOD PARSONS, Vice-President,  
CHARLES E. FAY, 2d Vice-President,  
WILLIAM D. WINTER, 3rd Vice-President.

G. STANTON FLOYD-JONES, Secretary.

## DIVIDENDS

**AMERICAN TELEPHONE AND TELEGRAPH COMPANY**

Three Year-Six Per Cent. Gold Notes  
Due October 1, 1922

Coupons from these Notes, payable by their terms on October 1, 1922, at the office or agency of the Company in New York or in Boston, will be paid in New York at the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

**American Telephone and Telegraph Company**

A dividend of Two Dollars per share will be paid on Friday, October 15, 1920, to stockholders of record at the close of business on Monday, September 20, 1920.

G. D. MILNE, Treasurer.

**THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY**

NOTICE OF DIVIDENDS ON NEW PREFERRED AND NEW COMMON STOCK.

The Board of Directors of the American Brake Shoe and Foundry Company has this day declared a quarterly dividend of one and three-quarters per cent. (1.34%) upon the new preferred stock of the company and a quarterly dividend of One Dollar (\$1.00) per share upon the new common stock of the company, said dividends to be payable, in the case of each class of stock, on September 30, 1920, to stockholders of record at 3 o'clock P. M. on September 22, 1920, and thereafter to the holders of all such new preferred and new common stock of the company as may be issued and exchanged for preferred and common stock of the company authorized prior to and outstanding at the time of the amendment to the certificate of incorporation of the company.

Checks will be mailed.

GEORGE M. JUDD, Secretary.

Dated, New York, September 14, 1920.

**UNITED FRUIT COMPANY**

## DIVIDEND NO. 85

A quarterly dividend of three per cent (three dollars per share) on the capital stock of this Company has been declared, payable on October 15, 1920, to stockholders of record at the close of business September 20, 1920.

JOHN W. DAMON, Treasurer.

**WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY.**

A Quarterly Dividend of 2% (\$1.00 per share) on the PREFERRED Stock of this Company will be paid October 15, 1920.

A dividend of 2% (\$1.00 per share) on the COMMON Stock of this Company for the quarter ending September 30, 1920, will be paid October 30, 1920.

Both dividends are payable to Stockholders of record as of September 30, 1920.

H. F. BAETZ, Treasurer.

New York, September 18, 1920.

**RAY CONSOLIDATED COPPER CO.**

25 Broad Street, New York, September 10, 1920.

The Executive Committee of the Ray Consolidated Copper Company has this day declared a quarterly distribution of \$.25 per share, payable September 30, 1920, will be paid October 30, the close of business September 18th, 1920.

E. P. SHOVE, Treasurer.

**UTAH COPPER COMPANY**

25 Broad Street, New York, September 10, 1920.

The Board of Directors of Utah Copper Company has this day declared a quarterly distribution of \$1.50 per share, payable September 30, 1920, to stockholders of record at the close of business September 18, 1920.

JOHN RIDGWAY, Assistant Treasurer.

**THE NEW YORK CENTRAL RAILROAD CO.**

New York, September 15, 1920.

A dividend of One Dollar and Twenty-five Cents (\$1.25) per share on the Capital Stock of this Company has been declared payable November 1st, 1920, at the office of the General Treasurer, to stockholders of record at the close of business October 1st, 1920.

MILTON S. BARGER, General Treasurer.

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

### English, Literature and Composition

### History, Civics and Economics

**I. Politicians!**

1. What does the author mean by the statement, "It is my observation that our politicians, figuratively speaking, try to burglarize our capitals"? On the assumption that burglary is a crime, write a paragraph giving any reasons that may occur to you as to why this alleged burglary by politicians is not considered criminal.
2. Notice the subheadings. How do they improve the text? Suggest other subheadings, at other places in the article.
3. "The names which live in our history are nearly all the names of men who went forth to serve ideas and who did not fear to advance them before hostile audiences." Write a paragraph on three other such men, comparing the ideas espoused by each.

**II. Applepieville.**

1. What is the style of this article? How does the author gain the reader's interest? Give two instances of the principles of contrast, reiteration, illustration.
2. "She is no longer contented with her 'lot.' She thinks that 'lot' should be cultivated to better advantage." Define "lot" as used in the first and in the second sentence.
3. Give an oral recitation on the form of community suggested by Mrs. Gilman. What points of similarity has it with a pie? Why is the article headed Applepieville? Can you suggest other titles?
4. "It is the loneliness, the primitive individualism, of the farm, which makes it so hard for women and children." Using this sentence as the point of departure, write a synopsis for a short story.

**III. Planning for Tomorrow.**

1. Give five reasons stated in the article why "planning for tomorrow" is a good slogan for the United States Geological Survey.
2. Give a résumé of the work that has been accomplished by the Survey since it was established forty years ago.
3. In what ways do the problems confronting the Survey today differ from its problems of 1879, according to the author?
4. Define expansion, insatiable, equilibrium, geologist, exploitation.
5. Write an exposition on why "it is the duty of every American to think in terms of the America of tomorrow."

**IV. The War Bills.**

1. Give a short oral explanation of the statement, "The war was fully paid for on the day it closed."
2. Define the following words: Repudiate, posterity, psychological, economic, reimbursement.

**V. Election or Elimination.**

1. "Hate's the driving force." Write an essay or a story with this statement as its basic idea.
2. Who is Mr. Dooley? Who is H. G. Wells?
3. Find some striking examples in the editorials or cartoons of the daily papers to fit Mr. Slosson's description of campaign propaganda "directed against something." Can you find equally good examples of campaign propaganda that "point with pride"?

**VI. The Story of the Week.**

1. List the important events of the past week (a) in the United States, (b) in foreign countries.
2. Give a short talk on any one of the foreign topics discussed in "The Story of the Week."
3. Write a colorful description of the Communist uprising in Italy.
4. Explain the significance of Tom Watson's nomination as Democratic senator from Georgia.
5. Pick out from the foreign news items half a dozen names that have been made famous in literature.

**VII. Come With Me to My Garden in Spain.**

1. What is the significance of the title?
2. Choose one or two of the best bits of description and examine the technic by which the author succeeds in painting word pictures. Get a similar effect in a description of some scene familiar to you.

**VIII. Back to School.**

1. What form of writing is this editorial? Why is it effective?
2. Write an entirely different editorial on the same subject.

**I. Science and the Federal Government—Planning for Tomorrow.**

1. Under what Department at Washington is the Geological Survey? What other functions has this Department?
2. By what clauses in the constitution is the Federal Government authorized to undertake scientific research?
3. Suppose the budget system were adopted by Congress and you were required to make estimates for the expenses of the coming year. About what percentage of the year's appropriations would you devote to scientific research in geology? In what ways would the money so spent increase the wealth and taxpaying capacity of the nation? Can it be considered investment as well as expenditure?

**II. The Campaign—Politicians. As Goes Maine, Harding Lauds Railroad Law. Cox Among the Drys.**

1. What does Mr. Crowell think of the charge of excessive campaign expenditures? Do you agree that this is a false issue?
2. State the issue which Senator Harding has raised in connection with the railroads.
3. Why is neither candidate willing to champion the "wets"? In what parts of the country does anti-prohibition sentiment linger? Why?

**III. The Primary System—Some Republican Straws. Tom Watson Sweeps Georgia. Suffrage Connecticut.**

1. Does your state have the direct primary? What do people say about how it works? Does it add to the cost of elections? Does it prove a check on the "machine"?
2. Does your state retain the party "state convention"? If so, how was it chosen?
3. Do you think that woman suffrage has had any influence on the results of recent primary elections?
4. What was the Populist movement? Compare it with the Progressive Party, the Farmers' Non-Partisan League, the Farmer-Labor Party, the Socialist Party.

**IV. Radicalism in Italy. — Communism Spreads in Italy. Italian Labor Favors Communists.**

1. What reasons can you find for the spread of radicalism in Italy? Do you think that revolution will go as far as in Russia?
2. What has been the recent attitude of the Italian Government towards intervention in Russia? Why was the American note on Russian affairs sent to Italy? If there had been syndicalist outbreaks in France as extensive as those in Italy what effect might it have on French foreign policy?

**V. Russian Problems—Why Not Lithuania? The Wrangel Campaign. British Attitude Toward Wrangel.**

1. What was the "Colby note"? What principles of American policy did it lay down?
2. Why did the United States make an exception in favor of Finland, Poland and Armenia in withholding recognition from independent Governments which have broken away from Russia? Can you suggest a reason for this policy in the history or geographical position of these three States? What parts of Armenia and Poland were formerly Russian?
3. On an outline map of Europe or of Russia shade the regions under control of the Bolsheviks. Shade the regions dominated by the armies of Wrangel. How does the war in southern Russia affect the war between the Bolsheviks and the Poles?

**VI. The American War—Our Greatest Victory.**

1. Why did the Germans devote so much effort to the attempt to take Verdun? Compare the German attack on Verdun in 1916 with the American and French advance from Verdun in 1918. Why in each case was this portion of the line selected as the most important for an offensive?
2. If the Germans should start a war of invasion against France today, without passing thru any other country, what lines of defense would they have to conquer to reach Paris? How has the annexation of Alsace-Lorraine simplified the military problem of defending France?

**VII. Rural Housing—Applepieville.**

1. Compare "Applepieville" with any country village you know. What advantages arise from the mere shape of the village? What advantages depend on community buildings and other improvements?

# The Independent

## An Old Philosopher's View of the League of Nations

By Benjamin Old

What's this here League of Nations? Tell you what  
It's one good thing this country might 'a got  
From out the hides of them world-conquerin' Dutch,  
Leastways I think it such.

I gives no tho't to high falutin' phrase,  
And them great statesmen quar'lin' for the praise  
They're matchin' human lives 'gainst politics,  
With all its turns and tricks.

I'm one of them the books calls "pioneers";  
I cros't the hills for gold them early years  
And lived my time in growin' minin' camps  
With God-forsaken scamps.

We fit—as every man will fight some times,  
No other way to square things in them climes,  
And many a good man turned untimely toes  
To where the daisy grows.

"Pot luck," we calls it, when he hits the skids,  
But what about his woman and the kids?  
That's it! Men's allus braggin' 'bout their guns,  
God sees the sufferin' ones.

In Jim's saloon one bloomin' hot July  
Some twenty kilt and no one knew just why,  
And when we'd sobered then we realized  
'Twas time we civilized.

We got a small committee to begin  
And swore we'd back 'em up thru thick and thin,  
They tells us that we got to change our aims  
Keep off our neighbors' claims—

Stop trigger shootin'—settle up our "busts"  
Before Tom Smith—a man we miners trusts,  
And then the hardest—'gainst the grain it runs—  
We must—stop totin' guns.

Give up our rights? Give up our guns? Oh, Lord!  
There was some yelpin' when we got the word.  
And Henry Cabbage, from the Old Bay State,  
My God! he did orate.

And yet we tried it—'twarn't just perfect—no,  
But a perfessor told me wunst 'twas so  
That our small camp was but a picture show'n  
Just how the world had grown.

I've read this League of Nations plan and say  
It's just the same—they promises to stay  
On their own claims, stop makin' guns and wait  
While judges arbitrate.

That's all? Sounds simple? Most things really air,  
If you just hunt for what is right and fair,  
And good men don't assert their rights; if so  
They quit on what they owe.

This Hiram Johnson—he's a candi-date  
And Borah kind of thinks he'd fit the slate,  
And Lodge—he hates old Woodrow man to  
man,  
And so—they spoilt the plan.

Eight million kilt and marched to'rd heaven  
or hell,  
And thirty million wrecked by shot and  
shell!  
They fought for peace—By God, some day  
they'll call  
The men who spoilt it all.

## Remarkable Remarks

BONAR LAW—I would much prefer to  
say nothing.

GOVERNOR COX—The issues are supreme  
and rise above any party.

WINSTON CHURCHILL—It is no part of  
my duty to read "John Bull."

FRANKLIN D. ROOSEVELT—The Repub-  
lican platform is a hymn of hate.

DAVID W. GRIFFITH—On every tongue  
in the world are the words "I want ap-  
preciation."

W. L. GEORGE, Novelist—I do not be-  
lieve that complete equality of the sexes  
will ever exist.

MARY PICKFORD FAIRBANKS—We've 16  
Alaskan dogs, 12 cats, 20 canaries, a Jer-  
sey cow, and 6 horses.

OTTO H. KAHN—England has secured  
greater advantages from the Peace Treaty  
than any other nation.

THEODORE ROOSEVELT, JR.—Franklin  
Roosevelt is a maverick—he does not have  
the brand of our family.

DOROTHY DIX—Nobody has a heart or a  
soul at breakfast time; these are organs  
we develop later in the day.

MRS. VINCENT ASTOR—Anybody who  
expects me to typify the "social whirl"  
will be greatly disappointed.

GOVERNOR COOLIDGE—The people who  
start to elect a man to get what he can  
for his district will probably find they have  
elected a man who will get what he can  
for himself.

## New Plays

*Welcome Stranger*, a good comedy by  
Aaron Hoffman, dealing with Jews, Chris-  
tian Science and electricity. A combination  
that George Sidney, in the role of Isadore  
Solomon, makes exceedingly humorous.  
(Cohan and Harris Theater.)

*An Enemy of the People*. Of all Ibsen's  
plays this is the one that nobody can call  
"obscure," "psychological" or "highbrow."  
Its satire is plain and its points are, un-  
fortunately, still pertinent wherever the  
solid majority suppresses the truth. (Lex-  
ington Theater.)

*Poldekín*, by Booth Tarkington, lives up  
to the author's theory that the cure for  
Bolshevism is to laugh at it. Unfortunately  
there are dreary wastes between the  
laughs, but the play has moments of real  
brilliance and a never failing charm when  
George Arliss is on the stage. (Park  
Theater.)

# The one instrument that plays Victor Records perfectly

That instrument is the Victrola. It is specially made to play Victor Records, and similarly Victor Records are made to be played on the Victrola. No combination of substitutes will enable you to hear the great artists of the world as they themselves have chosen to be heard.

Victrolas \$25 to \$1500. New Victor Records demonstrated at all dealers on the 1st of each month.

## The Way to Peace and Progress

A Message from the Democratic Candidate to the American People

By Governor James M. Cox

**W**HAT kind of government is America to have for four years?

That is the real issue before the American people. It really underlies the discussions that have taken place in the days that have passed since the nominations were made by the two great political organizations.

Are the American people to have a government which is willing that America shall take her proper place at the table of the society of nations, or do they wish a government which shall desert its associates, make a separate peace with Germany, and set about on a career of arrogant dictatorship, while the dark forces of the world make real peace an impossibility for another generation? Shall we on domestic issues appeal to conscience or to the power of might?

These questions are raised by the utterances of the two great partizan organizations and still more definitely raised by the candidates themselves. The record of both is known to the country. They have lived in the same state and both have had a part in its history.

It is not necessary to review my own record here and I shall not do so. It speaks for itself, and tho I have experienced temporary reverses because I took my stand for progressive measures and principles, I am well satisfied with the permanent record that has been written in Ohio. That record as expressed by legislation is so well established in Ohio that it will not be repealed, it dare not be repealed by any set of officials who value their official careers.

I mention this to give point to what I have said about the issue—the supreme issue in this contest. Senator Harding's course in connection with the progressive changes in the state government gives us the bent of his mind. At the time when popular distrust of government was great because of abuses in the courts, he referred to those who proposed modern changes and reforms as "revolutionists." It has always been the thought of the people of Ohio that he was sincere in this statement and no one has contradicted this view.

When legislative changes to carry out the mandatory reforms which the people had voted into the Ohio constitution were to be carried out, Senator Harding led the opposition. He even established a weekly newspaper at the Capital in order that it might be circulated among the members of the General Assembly. This newspaper decried the legislation to require the registration of lobbyists,

and it opposed the workmen's compensation law and every progressive piece of legislation proposed. It sneered at the efforts to bring about better conditions in the schools and it scoffed at prison reform. In truth, there was not a single departure proposed which it did not ridicule.

Doubtless its work was a factor in the elevation of Senator Harding to his present position and to the temporary reverse sustained by the progressive forces in Ohio. But the utterances which were contained in the publications could not be repeated by Senator Harding today without his being regarded as lacking in mental equipoise. The point to this is that he was so entirely given over to reaction that the reactionary forces of today would find him too far behind them. But while the statements of those days are no longer made, the spirit that prompted them still lives in the candidate for President. It has assumed a different form. That is all.

Partizan rancor and bitterness were responsible for the framing of the opposition of the senatorial oligarchy to the Peace Treaty and Senator Harding was docile under its direction. He did not even utter a protest against the attempts of this band when it was seeking to undermine the standing of America before the world.

Of very necessity a cry has been raised to deceive and that cry has been shouted with flagrant insincerity to all the world. American nationality is at stake, said the enemies of the League of Nations. American sovereignty will be surrendered, was another sentiment expressed. And those who uttered these cries knew that they were false and wilfully so.

American nationality will be scrupulously guarded under the League of Nations and honestly and properly so. Americans who have made sacrifices to sustain the American honor will see that it is so. And nearly a score and a half of other nations which have entered the League will guard their own nationality as rigorously as do we. Friendship and amity among the nations will teach each to respect the other's rights.

The inner reason which motivates those who raise this cry is simple. They are true disciples of Prussianism and their arguments, reduced to simple terms, have a strange similarity to those advanced by the junkers in explanation and justification of their policy.

This brings me to a short analysis of the various ele-

---

Before election each candidate for President of the United States will present in The Independent his message to the American people. This article by Governor Cox begins the series

---

ments that have opposed the Treaty of Versailles, elements of which those who have been sponsor for and have directed the utterances of Senator Harding and his associates have sought to take full, even if questionable, advantage.

The largest single element is the frankly disloyal. It is composed of those who were pro-German before the war, pro-German when the acts of the Kaiser's Government made it impossible that we remain neutral, and pro-German during the war. I have had experience with the class in the Liberty loan, War Savings Stamps, food conservation, Red Cross and other activities. If there is a community in Ohio in which anti-treaty sentiment is militant that community is one in which we had trouble in organization of the various things that were necessary to the winning of the war. My travels have disclosed that this is true of other parts of the United States. I make this observation with shame.

Then there is the element which does not believe that various racial entities have attained the ideal under the Treaty. The sympathy which does not divide allegiance may be forgiven, but that which challenges true faith and allegiance is questionable in peace time and treason in war. It will be understood in good time that the League of Nations Covenant provides a method for bringing to the attention of the council and the assembly provided by the League the grievances of peoples who are qualified for self-government and have not yet attained it. Any nation, Ireland, Egypt, China, or any other may be heard under this provision.

There is no reason why the second element which has been mentioned should associate its fortunes with the first, either purposely or by chance. It is not surprising that the third element which I shall mention should employ the first for its purposes for it, like the Kaiserites of Berlin, knows no difference between right and wrong. This is the element of munition makers and those who expect to fatten on the profits of discord. It is represented by the war profiteers, the powder makers and those who would subvert patriotism to gain. Has it struck the discernment of the people that every single one of the representatives of these forces that profit by chauvinism have already aligned itself with the junker candidate for President?

A fourth element opposed to the Treaty is that of the radical Socialistic or Communistic forces. Its reasons for adherence to the Moscow Internationale is plain. Pretending to represent the cause of international brotherhood, its members have upheld the cruelties and barbarities of the Bolsheviki régime, and are hostile to any attempt on the part of the forces of civilization to form a compact for mutual protection. They reason, and I fear they reason rightly, that another war would destroy civilization itself and they might come to control as they have done in Russia.

There has not been included herein the smaller groups of persons who are fearful that America will recognize that isolation is no longer possible. It is a sentiment credible in

the remote mountains of the South to which modern communication and means of transport have not penetrated, but it is a feeling which cannot be accounted for among a people who have felt the grip of world movements in the pains and triumphs of the past few years.

I have spoken with a great deal of frankness about the forces which make for rejection of the Treaty and, doubtless aside from the obviously disloyal, containing many who believe themselves to be as good patriots as those who with heart and hand, and mind and tongue, and even with life itself, sought to work out the great conception of war banished from the earth.

It was not surprising to me that those who attempted to turn these forces to partizan advantage in this campaign hoped to fortify their chances with an enormous campaign fund. I sensed this more than a year ago and gave solemn warning of what was to happen. But those who had determined upon their course believed that the matter could be kept from public knowledge until the election was over and then it could be laughed down. They boldly prepared their career of money-getting, stopping at nothing, and when the evidence against them was produced, there was dismay in their camp—but dismay only that the truth was found out—in part at least.

The complete facts will come to light in the course of this campaign, and the American people will know the truth, if it is possible for it to be told them. Every fact that I have shall, in all frankness, be given them. There will be nothing concealed, and the Senatorial committee conducting the inquiry will have the opportunity of trying at the bar of public opinion this criminal cabal which has been at work. Developments will continue during the campaign.

And now I have a suggestion to make to you who are not of the money-givers. Granted that you honestly believe in the type of reaction represented by our opponents, what will be your fate if victory is theirs? You have the lesson and experience of other years before you. Services are little valued in money campaigns. The ideal begins with and ends with the dollar. Nothing else counts. You may help in every way by giving your

time and your thought to the campaign of the Republican candidate, Senator Harding. But when preferment is to be determined or when policies are to be determined, you will find the check-book man will be preferred. His voice will be heard and his wishes met while others stand in the outside reception room at the White House. Senator Harding has undergone reproach of conscience for these men and they have for him, and between him and the group who have yielded their check-books is a bond of sympathy and affection and of mutual understanding that those who are not large contributors cannot pierce. You may link your fortunes to his but he cannot link his to yours. That is impossible. I address this especially to young men for these records now made or soon to be made will be remembered. Eighth article in the Independent's Industrial Series on the big plants that are finding a successful answer to the problems of labor unrest

The Shop Committee of the Nunn, Bush & Weldon Shoe Company, of Milwaukee, discussing the pros and cons of a department's grievances

# The Shop Committee in Control

By Professor John R. Commons of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcolm Sharp, Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

THE chairman of the shop committee was formerly the acting business agent of the shoe workers' union. After the disastrous strike of 1914 this was the only shoe factory that would hire him. Now he is the business agent of his "shop union." He is elected by the employees and paid by them the same wages that he had been earning at the bench. He has his private office, gives all his time to grievances and shop management, works under the direction of a shop committee also elected by the employees.

A foreman comes in with a discharge slip. A boy had poured a can of oil into a batch of cement. His discharge had been approved by the Joint Council, the highest authority in the shop, composed of four representatives of the company and four representatives of the employees. But the boy cannot be discharged unless that business agent of the employees O. K.'s the discharge slip. He hesitates, makes inquiries, flatly refuses. The foreman is surprised, chagrined, "beats it."

The facts were there. The boy had committed the offense two months before. The foreman had not discharged him then but had waited two months, until he did not need him. The business agent of the employees did not approve that style of discipline.

A new employee is hired by the company's employment department and put to work. He cannot continue at work unless he joins the shop union and pays the dues. But he cannot join the union unless the chairman and the employees approve. So he is sent to the chairman for an interview. The chairman usually knows whether he has been a "scab" or a professional troublemaker. He has had experience with such. So he tells the new employee there is no chance for him in the factory. Or, he tells him that he can go to work and explains to him the advantages of the shop union and why he should be a member and pay the dues.

Thus the business agent, along with the shop committee, has the last word in hiring and firing.

This government by employees did not drop down suddenly. It was not a brilliant thought of the Nunn, Bush & Weldon Shoe Company of the city of Milwaukee. It was not thrown at the employees without previous notice. It was not fought for and won by them to make the shop safe for democracy. It was not a struggle for power. It just grewed, like Topsy and the British constitution. It has taken seven years to reach its present shape, but it keeps on growing—rapidly. You have to visit it at least once in three months, or else you will be talking about history instead of a live up-to-the-minute representative democracy.

Seven years ago Mr. H. L. Nunn, general manager of the company, did all of the hiring and firing. The firm was rapidly expanding. Superintendents and foremen got between him and the workers. It occurred to him that it would be a good thing to organize the older employees and give them a voice in affairs that concerned them. The older ones took to it. They organized the Nunn-Bush Coöperative Association. Membership was limited to those who had been with the company three years or longer. The "board of directors"—not of the corporation but of the Coöperative Association—was equally divided, three appointed by the company, three elected from the association by its members.

The general manager of the company turned over to this board the right to discharge any member of the association, as well as the settlement of all grievances affecting any member. If the board could not agree the case was to be settled by arbitration.

The board soon discovered that it was not big enough. There were twelve departments in the factory, but only three could find representation on the board. So a new board was created—a grievance committee. The board of directors of the association appointed this grievance committee of twelve members, one from each department. The grievance committee could only investigate and recommend. It investigated grievances,

made findings of fact, then made its recommendations to the board of directors.

The next step in constitutional history was the extension of the suffrage. Only members of the Coöperative Association vote for the employee representatives on the Joint Council.

After a short experience the membership was enlarged by admitting employees after two years' service, instead of three. Then, after a little more experience, it was reduced to one year. Then, an attack from the outside convinced them that they must admit every regular employee to membership in the association.

The United Shoe Workers, a seceding union from the Boot and Shoe Workers of America, began organizing one of the departments. About a dozen of the forty employees in that department had signed up. They were the more recent employees not eligible to the association. The situation became acute. A meeting of that department was called. Each side presented its case. The decision was reached to remain with the association. So the suffrage was widened to admit all employees who might otherwise be admitted to the United Shoe Workers' Union.

It was before this trouble that Louis Karl, formerly the acting business agent of the union, found employment in the shop and membership in the Coöperative Association, altho retaining his membership in the Shoe Workers' Union.

The extension of the suffrage was followed by a revision of the constitution. The old "board of directors" of six members now gave way to a "Joint Council" of eight members—four company appointees, four employee representatives, the latter elected by all the employees.

Much more important was the change in the grievance committee. The former committee was *appointed* by the board of directors. The new one was *elected* by the employees. Each of the twelve departments elects separately its representative on the grievance committee of twelve. The grievance committee now becomes a House of Representatives and its name is changed to shop committee.

The next step was evidently for this shop committee to take over power from the Joint Council. The shop committee represents solely the employees, elected by departments. The Joint Council is equally divided between employer and employees, the latter elected by the whole shop.

The shop committee began to grow in several directions. It added a chairman, nominated by itself, elected and paid by the employees. This is Louis Karl, the business agent. Karl presides at all meetings of the shop committee. He personally investigates all grievances in the factory, takes them up with the foreman or superintendent, and in this way settles 80 per cent of the grievances. He investigates wages and hours in other shops.

The company gives him access to every part of the factory and all its records and books. He is a bureau of investigation and statistics for the shop committee and the employees.

But the shop committee finds itself too bulky to handle all the grievances. So the next step was to appoint an "investigating committee," composed of its chairman, the representative from the department where the trouble arises and three others from its own membership. Karl is chairman also of this investigating committee. He brings before it any of the troubles he has not been able to settle directly with the foreman, superintendent, or general manager. The committee notifies both sides to appear and present their respective sides of the controversy. Here the dissatisfied worker is not afraid to express himself. Karl tells him to forget his "grammar" and tell the committee just what his trouble is and what he thinks about it.

Seldom is a matter seriously contested. Before the investigating committee recently a small group of employees asked an increase in pay and submitted what they claimed were the "facts" to the committee. The company took issue on these "facts." The committee had previously gathered information which conflicted with the statements of the complainants. It concluded that here was a bald attempt to deceive them. It sent back the reply: "If you want this committee to represent you, you must tell the truth."

The investigating committee completes its work on Wednesday, reports its findings and recommendations to the shop committee of twelve which meets on Thursday at 4 o'clock.

Here Karl again is chairman. The shop committee may also take testimony if it wishes. One of the best workmen had been transferred to a new job with the understanding that he would receive the same pay by the week. After several months he showed no improvement. The company, suspecting that he was taking advantage of the situation, appeared before the shop committee and asked permission to substitute a piece rate. The worker stated that he would have his own price or quit. The committee decided against him and he quit.

One of the representatives of the shop committee reports that two workmen in his department wanted "more money." The committee voted to investigate this claim. The next Thursday the same representative reports two or three others in the same department who had asked him to get them a "raise." This time the committee decided to investigate the entire wage scale in that department, and agreed that it was their business to do justice, not merely for those who had the "nerve to kick," but for everybody. So they instruct

Karl and the investigating committee to find out what the other shoe factories are paying for the same kind of work. They reason that it would not be fair to ask the company to pay wages that would [Continued on page 33]

# Our Most American City

By  
Chester T. Crowell

OF all the cities along the eastern seaboard I think Philadelphia has the most "class"—to use an expressive slang phrase. Since departing from my Texas prairies last November I have seen all of the larger cities of the East—and I like them. Readers of *The Independent* will recall my observation that the Boston of tradition is somewhat submerged by the tidal waves of immigration. New York is a collection of clans, races, nationalities, and religions. Buffalo Bill used to have a feature in his show that he called "The Congress of Nations." That is New York—and Buffalo Bill would make a very acceptable bally-ho man for the town if it needed a bally-ho man.

Philadelphia also has received many thousands of immigrants, but they are a distinct minority. So far as I can observe, their ideas have not impressed themselves upon the city in any manner visible to the man who makes a short visit. Philadelphia is what I wanted it to be and hoped it would be.

There is no inconsiderable amount of excellent architecture in Philadelphia. Many of the principal streets have width and dignity, while miles and miles of the residence streets are shaded by beautiful trees. I noticed also that the queer little brick coops people in the East call homes had pathetic efforts at porches—galleries, we call them in Texas. Still the effort to have a gallery pleased me. My idea of an ideal home is eight to ten rooms arranged in a rectangle with an interior court—Mexican style—and galleries all the way around the exterior. At least two sides should afford room for dancing, and the rear gallery would be the summer kitchen. One gallery would be the nursery and children's play room. I realize that such a house would not be entirely suited to the climate of the East. Nevertheless, it is my idea of a house, and I approved of the little porches I saw in Philadelphia. I suppose a gallery is a porch in Philadelphia.

I went over to Philadelphia twice last winter to lecture. One evening I ate dinner à la Broadway on the hotel roof. I was particularly interested in the crowd. About three-fourths of those present were young men and women who had come to dance. Several hundreds were present. I do not think I have ever seen their equal for attractiveness of face and figure.

The newspapers of Philadelphia are an interesting revelation of the character of the city. In the first place they are very numerous. That, in itself, is an index. And I did not observe a single sensational, really yellow newspaper in the whole collection. The competition between them seems to be along the line of better service, accuracy, completeness, and decent conserva-

Philadelphia impressed me as a worthy city to possess the Liberty Bell and Independence Hall

*Another entertaining sketch in which a Texan gives the impressions of his first visit to the "effete East"*

tism without leaning over backward. I do not think there is another city in the United States with as many daily newspapers as Philadelphia has which can show such uniform good quality. Philadelphia's best is good enough for any city on earth. Philadelphia's worst I considered several thousand per cent superior to New York's worst.

For pure American types, Texas cannot be excelled, but the Texas climate does not produce good complexions. "Peaches and cream" skin, however, is not infrequent in Philadelphia.

The places of amusement are generally a reliable index to the character of the people they serve. I went out to Willow Grove, near Philadelphia. It is the cleanest and neatest, and prettiest amusement place of the sort I have ever seen. I did not suppose it was possible to keep such a place so clean. It had the appearance of having been opened to the public about five minutes before I arrived. The crowds were orderly and happy. The only time I heard their voices was when they laughed. In New York, when a crowd gathers, there are always voices, shrill, hysterical, furious and threatening. I turn expecting to see the excited man who is yelling and gesticulating slaughter the woman by his side. But it subsequently develops that he is entertaining her with an account of what happened at the lodge meeting or he is reporting the news he received in a letter from his mother. What sounds like a stream of European profanity turns out to be a request for her to hurry. The change to Philadelphia crowds was quite restful.

I also noticed that prices for little things which may properly be compared are lower in Philadelphia than in New York City. As for staple commodities I doubt if the difference would be notable. Admission to the baseball park grandstand there is one dollar, including war tax. The management, in order to make the price an even dollar, simply fails to collect the sum of one penny in addition to each dollar. That is a very decent and sensible way out of a clumsy situation with regard to making change. But it impressed me because the way to meet a situation like that in New York City is to add twenty-four cents to the penny and collect a dollar and a quarter. Drinks and cigars are sold at Philadelphia places of amusement at the standard prices. At the baseball park I bought an excellent ham sandwich for ten cents. In New York City, at the Polo Grounds, an atrocious thing erroneously called cigar sells for twenty cents. That is the minimum.

One afternoon in Philadelphia I decided to while away the time riding street cars. In this manner about ten or twelve conductors came under my observation. Every one was American; I noticed that they were polite and that their voices had [Continued on page 30]

# Remaking Men

A Message from the United States Government to the American People

By Uel W. Lamkin

Director of the Federal Board for Vocational Education

**T**O help the man disabled in the military service of the United States, whose disability is a handicap to him in making a living, overcome such handicap by restoring his former or creating in him a new earning power, is the purpose of the Vocational Rehabilitation Act passed by Congress in June, 1918.

This task was committed to the Federal Board for Vocational Education which had been created in 1917 for the purpose of cooperating with the several states in the promotion of vocational education. Four *ex-officio* and three appointed members compose the board—the Secretaries of Agriculture, Commerce and Labor, and the United States Commissioner of Education, and persons named by the President representing the fields of manufacturing and commerce,

labor and agriculture. The board has recently been charged by Congress with a third responsibility, that of cooperation with the states in the rehabilitation of persons disabled in industry. In two of its three functions, therefore—vocational education and rehabilitation of the disabled in industry—there is a joint national and state responsibility.

But the rehabilitation of the disabled in military service is the duty of the Federal Government. The men served the United States, not the several states as such. As a matter of right to the man, and as a wise national economic policy, he should be helped by the nation as a whole to overcome every handicap resulting from a war disability.

This duty of the Government must not be confused with money compensation for injuries received. The War Risk Insurance Act, an entirely different statute, makes provision for such payments thru the Bureau of War Risk Insurance—the amounts and the length of time for which they are paid varying with the disability. The War Risk Insurance Bureau and the Public Health Service provide for hospital and medical care for war disabilities in order that physical restoration may be complete, while the work of the Federal Board

is that of vocational rather than physical rehabilitation.

For a disabled man to be entitled to training the law provides that four conditions must be met:

- (1) Honorable discharge from military service;
- (2) A disability incurred in or increased by such service;
- (3) That such disability is a vocational handicap, and
- (4) That training is feasible.

To such as meet these conditions the board offers training with maintenance allowances varying from \$80 to \$170 per month during the training period, the amount determined by the number of dependents. During the time this allowance is being paid, compensation is suspended by the Bureau of War Risk Insurance. To others who have disabilities for which the Bureau of War Risk Insurance has awarded compensation, but whose disabilities do not constitute vocational handicaps, similar training can be given but no maintenance payments can be made by the board.

Two of the conditions named require no exercise of judgment—while the question of whether the disability

It's a doubly long row to hoe when you have to keep one eye on an artificial limb that wants to balk and the other eye on your watering can

© Press Illustrating

Education began not at home but in bed in the case of wounded soldiers, who were put into regular classes in basketry, hand and frame knitting, toy making and weaving as soon as they were at all able to take up the work, the theory being that the sooner you can get a man's mind off his ailments, the sooner you will have him well again

constitutes a vocational handicap, and whether or not training is feasible, are matters which must be determined by the board or its representatives acting upon the best advice it is able to secure. For instance, a disability which for one man is no handicap in his occupation may totally disable another. An injury to the left hand might interfere very little with a bookkeeper in his occupation, but would prevent a professional pianist from making a living as he formerly did. It is not feasible to place a man suffering from tuberculosis which is in an active state in training until after the disease becomes arrested. In general the board holds that wherever it is feasible for a man to be employed, training for that employment is feasible.

Five elements enter into the determination of the

kind of training which can be given:

- (1) The man's education;
- (2) His previous industrial experience;
- (3) The nature of his disability;
- (4) His preference as to kind of training;
- (5) The opportunity for employment after training.

In education the range is from the illiterate to the college graduate; in industrial experience from one who has had no settled trade or occupation to the highly trained professional man or the skilled mechanic; in degree of disability from those which are slight to the double amputations or the totally blinded; in preference from the occupation which requires no skill to the highest trained specialist, and in employment opportunity from those trades where labor is always in demand to those which are always overcrowded.

The giving of proper advice and continued counsel to the men who are being trained is one of the most difficult and complex tasks of the board and its employees. Many mistakes are made and will continue to be made. Frequently the disabled man does not know what he wants to do, his education has been meager, his experience limited, while his disability makes it uncertain as to what he can do. Consequently every course of training must be more or less a "try out" course. Continual contact must be maintained with the men. Shifts must be made from time to time so that every man may, to the extent of his ability, profit by the opportunity afforded him.

The ultimate aim of the work of the rehabilitation service is gainful employment for the disabled men. Training, therefore, must have a definite employment objective and last as long as is necessary (but not longer) to fit the man to "carry on" successfully. The board recognizes ability to carry on as the best test of training. In some instances that ability may be determined by examination, such as state examinations for admission to the bar, or for embalmers' licenses. In other cases it must be ascertained by observation in actual employment. Where the training has been begun in educational institutions, it is completed under employment conditions.

It is doubtful whether the size or the complexity of the problem has been or is understood. When the matter was being considered by Congress it was estimated by Canadian authorities called in for consultation, and by others, based on the experience of other countries, that there would be some 13,000 to 15,000 men to be trained. On September 1, 1920, more than 55,000 men had entered training

French Official Photograph © Western Newspaper Union

Man's ingenuity and courage would seem to have no limit if one is to judge by this ex-soldier who blinded and maimed still succeeds in reaping his fields

and more than 46,000 were actually in training. In addition some 25,000 had been declared eligible for training with maintenance allowances, and about 40,000 were entitled to training without maintenance allowances. Men had been sent to more than 2000 educational institutions, scattered throughout the United States, while about 9000 factories, shops, mills and offices were being used to give training under actual employment conditions. Training was being given for more than three hundred different trades or occupations. Of the men taking advantage of the act about 15 per cent were in pre-vocational work such as English,

civics, and "try out" courses; 35 per cent in trade and industrial courses; 26 per cent were fitting themselves for "commercial" occupations; 11 per cent for agriculture and 13 per cent for the professions.

The United States was the only country in the war which discharged its men from military service before the questions of compensation (or pensions as called in some countries), rehabilitation, where provided at all, and continued medical care were settled. As a consequence, more or less disabled service men who may be entitled to vocational rehabilitation are scattered throughout the country. These the board, thru its fourteen district offices, each of which has ample authority to act without delay and without reference to the Central Office at Washington, is attempting to reach. Agents are being sent to various centers to interview men and make awards, thus decentralizing its operation to a greater extent than has ever [Continued on page 35]

Farming according to Hoyle is the problem these ex-service men were intent on mastering while they were still convalescent

# Sun Dogs

By Edwin E. Slosson

THESE mathematicians are insatiable. Give them an inch and they will take an elevated railroad. Grant them three dimensions and they ask for four. Grant them four and they ask for five. They said they needed a fourth dimension to give room for the curvature of three-dimension space. So they took time as a fourth dimension. They constructed out of these four dimensions—three of them spatial and the other temporal—a playhouse in which they could exercise their imaginations. But now they come clamoring, like spoiled children, for a new dimension. "What for?" we ask. "To roll up our four-dimensional universe in," they reply. "Why do you want to roll up space, anyhow?" we ask. They do not answer, but we suspect it is merely to prove old Euclid wrong. For the students who pass in geometry and grow up to teach it seem to have a grudge against Euclid just as much as the students who had to leave the university at the end of the term on account of sore eyes.

But never mind, let them have all the dimensions they want since empty space does not cost us anything and it is about the only thing that does not nowadays. Besides it is interesting to watch what they will do with this new play space. But, look, two of the liveliest youngsters of the lot are quarreling over which way to roll up the four-dimensional universe. One of them, a Swiss Jew named Einstein, wants to roll it up into a cylinder, leaving the time dimension sticking out at the ends. The other, a Dutchman named de Sitter, wants to make it round like a ball. But both of them agree that the space-time world is curved so as to come back on itself some time or somewhere—if such expressions can be applied to the new notions. That is, space is not endless but has a definite, possibly measurable size. In fact they go so far as to figure how big it must be and they make out that the radius of world space, that is the distance from anywhere to nowhere, is equal to the distance from the earth to the sun multiplied by the thirteenth power of ten. Paper costs too much to print it cut, but you can just put down 93,000,000 miles and add thirteen zeros.

From this idea some curious consequences may be drawn, but I had rather let Professor Eddington of Cambridge draw them lest you should think I am drawing the long bow. Professor Eddington is the foremost champion of Einstein in English. When he lectured on relativity before the Royal Society of London, Sir Oliver Lodge, who opposes the new theory on account of his attachment to the ether, opened the discussion with the remark that one of the things that astonished him most about it was that Professor Eddington thought that he understood it. But since Professor Eddington does—that is, does think so—I will quote what he says on this point:

A ray of light from the sun would thus take about 1000 million years to go round the world; and after the journey the rays would converge again at the starting point, and then diverge for the next circuit. The convergent would have all the characteristics of a real sun so far as light and heat are concerned, only there would be no substantial body present. Thus corresponding to the sun we might see a series of ghosts occupying the positions where the sun was 1000, 2000, 3000, etc., million years ago, if (as seems probable) the sun has been luminous for so long.

It is rather a pleasing speculation that records of the previous states of the sidereal universe may be automatically reforming themselves on the original sites. Perhaps one or more of the many spiral nebulae are really phantoms of our own stellar system. Or it may be that only a proportion of the stars are substantial bodies; the remainder are optical ghosts revisiting their old haunts.

This means that if the world—I mean the whole universe, not our own minor planet—is really round, a ray

of light would roll round and round in it like a ball inside a roulette wheel, or rather, since that simile will be incomprehensible to my readers, like the marble of pigs-in-clover. Altho the light from the sun disperses on every direction all the rays come together again at this antipodal focus only scatter again to meet at their original rendezvous. Tho of course many of them must get lost on the way by running up against planets or being absorbed by drifting dust or pulled out of the straight track by the attraction of gravitation as Einstein discovered.

It is an interesting idea anyhow and probably some preacher will pick it up and make a sermon out of it. For the sun is not the only thing that is dogged by the images of its past selves. We shine too, altho only by reflected light. It must be then that our radiations are traveling about somewhere in the world and will be reproducing our looks and acts on the cinema screen of the farthest horizon of space and time a thousand million years after we are dead. If we are going to have that sort of immortality imposed upon us we would prefer to pick our poses. The moral of it is—altho probably the preacher would draw a different one—that if we are going to do anything we are ashamed of we should go inside the house and pull down the blinds or wait till it is dark. But this lesson is needless, for such precautions are customary. Even then one can't feel quite safe in sinning. There are the x-rays, you know—and nobody knows what other invisible pencils may be registering all our actions or even thoughts—or what's worse, the desires that we don't dare think. They, too, must leave their mark somewhere.

## Woman Suffrage

NOW watch all the dire predictions of the ill effects of women on politics and politics on women start not happening.

## Wanted: A Book Binding

THE cost of bookmaking is rising so rapidly that publishers do not dare to announce the selling price in advance and they often have to raise the figure after the slip cover is printed. A large part of the expense, twenty to thirty-five per cent. of it, goes for the binding, so the suggestion is frequently made that American publishers might follow the example of the French and sell their books unbound. But a French book is a botheration that Americans would never endure. Covered with thin paper and held together by a single thread it is dogeared and disheveled by the time it has passed thru two hands. Sections fall out and the volume splits in two.

The leather bindings we get now only last a few years before they rub off in brown powder. The ordinary muslin cracks and peels. Buckram is too costly. Some material must be found that is more durable than paper, more flexible than boards and less expensive than cloth. With the infinite variety of new fabrics of the soluble cellulose order to draw upon there must be something that would be almost as cheap as paper and almost as lasting as cloth. It must be found if we are not to be wholly dependent upon periodicals for our intellectual provender. Assuming that periodicals of the better class derive half their revenue from their advertizing, there is no reason why a book should cost more than twice as much as a magazine of the same amount of matter. In fact it could be sold for less because it is less ephemeral. Actually the book costs more than ten times as much and does not reach one-hundredth as many as a mag-

azine, tho the matter may be the same. If the American publisher will devise a new form of binding and new methods of marketing he will sell books by the million instead of the thousand.

## How Will the Farmer's Wife Vote

By L. Wayne Army

THE women's vote in the coming election is, of course, an enigma. It is a political factor without precedent upon which either party seems to be able to find some justification for counting with some degree of confidence. As with many other issues, however, the city and country can be divided along fairly clear cut lines. The women of both groups have distinct viewpoints that are markedly dissimilar.

It would be futile as well as misleading to predict the trend of the rural feminine vote for the country at large or for any group of states without first making a careful survey of the territory in question. It may be significant, however, to examine a specific locality, small enough to make possible a detailed forecast, but yet one that is typically rural.

I find myself in such a one at the moment. It is a truly rural and agricultural region in which the women regard their right to vote with a mixture of excitement over the novelty of the situation and bewilderment at the responsibility that it entails. There are, however, a large number of women here who will not vote. The majority of them will dutifully follow the wishes of their timid husbands for whom equal suffrage is a much too radical departure to be embraced without first seeing where the experiment will lead. Several farmers have said to me that "No women folks of theirs would vote if they could stop it," and one especially nervous individual went as far as predicting that "this business would be the ruination of the country."

But confining the discussion to those women who will vote, and the number undoubtedly will be large, one is impressed with the fact that in the cities hereabouts the issue is divided chiefly over the League. In the country one hears little of the League. The party platforms are translated into the more familiar terms of pro-farming or anti-farming. This is natural and logical, for it must be remembered that the farmer's wife has a much more personal interest in and knowledge of her husband's business than does the woman of the city in that occupation which provides her necessities. Legislation that affects agriculture—particularly that which affects it unfavorably—is known to the farmer's wife. A drop in the price of corn at the local mill of a few cents a bushel is a topics of household conversation. Most city women on the other hand are ignorant of the *minutia* of business or the politics pertaining to it.

Viewing the situation from this point of view, it is logical that the majority of country women here—the large majority—are planning to give their first vote to Mr. Harding. The war experience, especially the farm woman's war experience under a Democratic administration, is too fresh in her mind to make any other choice possible. She remembers with a good deal of bitterness the fall of 1918 when wheat was a paramount issue of the war campaign. Her husband drove wheat to the mill only to be told that an order had been received making it unlawful to mill more than 10 per cent of the previous year's milling. The miller already had that much and so refused to accept more. She remembers her wonderment at a Government that would force her husband to feed his wheat to hogs and chickens at a time when the greatest cause in history was weakening for lack of it.

Why did those farmers not ship their wheat in carload lots to the grain corporation? That question was asked many times. But these farmers do not think in terms of

carload lots. Most of them never heard of the grain corporation; they only knew that their Government, under a Democratic administration, made it impossible for them to sell their wheat at the local mill when wheat was a paramount war issue.

The farmer's wife also remembers the assurance to protect farming interests that was given prior to the conscription law. Her husband approved the law on that basis, believing that it would be carried out and that he would be permitted to harvest the crops that were then in the ground. She also remembers, however, the complete disregard of this assurance after the law became operative and her relatives and hired men were drafted into the service when every ounce of energy was needed on the land to harvest the crops that were to sustain our armies.

The heroic work that was done by women on the farms during those trying months is too little known. They had to go into the fields themselves and do even the heavy work or let the sorely needed crops waste away. They did all this and did it uncomplainingly in the same spirit with which their relatives shouldered guns for foreign service.

All of this is now merely the memory of an experience, but it has left its mark. It is an ugly remembrance correlated in the mind of the farmer's wife with a Democratic administration. It is a remembrance that Mr. Cox must needs do a vast amount of reassuring to overcome.

## Nine Points of Law

IN the old days when it used to be held that "the best government is that which governs least," some extremists of this *laissez-faire* theory went so far as to say that eventually the functions of government might be reduced to three, the protection of life and property and the enforcement of contracts. This was regarded as the irreducible minimum below which government could hardly be said to exist at all. Since then the tide has been running the other way and governments have been continually taking on additional duties.

But now in Italy, where the workmen in the machine shops have seized the plants and are running them for their own profit, refusing to recognize any rights of property or any contracts whatever, the Government has declared its "neutrality" and refuses to take any action so long as the shop soviets do not invade the "political" field. That is to say the Italian Government has calmly relinquished without a struggle two-thirds of the minimum duties that a government is supposed to perform.

The Italian situation reminds one of an incident that occurred in a Colorado strike some years ago. As soon as the news of the outbreak reached Denver the Governor telegraphed to the member of the legislature for the disturbed region, asking if troops should be sent. But the member from the mining district replied: "No need for troops. Miners in peaceable possession of the mines."

## Beware of Panic

THE worst aspect of such a wholly evil affair as a dynamite outrage is the flurry of nerves which the news sends across a whole continent. The anarchist crank may be an isolated individual or a member of a small group of degenerates, but to the excited public mind the air seems to tingle with the tension of a world-wide conspiracy, with Bolsheviks lurking around the corner and a social revolution imminent in every labor dispute. Of course this atmosphere of menace is just what the anarchist aims to create. The "anti-Red" panic of last year did far more to advertise Bolshevik propaganda than all the direct efforts of the radical writers and speakers. Let us not have another such panic on account of the Wall Street explosion. In the United States so vast is the conservative and patriotic majority that the repression of sedition is simply a matter of police work, the hunting down of a few individual crim-

inals; it has nothing in common with Italy's problem of coping with a real organized revolution. Of course, one crank armed with a bomb can do a great deal of harm, but he cannot endanger the processes of constitutional government. Among our hundred million people there are bound to be a few who dream of establishing Bolshevism in America by a violent revolution, but we doubt if they number one-tenth of one per cent of the population; and of even this group at least nine-tenths are content with the dreaming.

## Church Union or Christian Union?

By Shailer Mathews

**I**N the minds of many the two are identical. In the minds of others there can be Christian union without church union. In this difference lies no little misunderstanding. The Catholic Christian wants a Church; Protestants want churches. Catholic Christians want orders which distinguish between the religious prerogatives and powers of the clergy and the laity. Protestants want no orders. To disregard these fundamentally different conceptions of the church is to obscure something that prevents organizing church union, much less church unity.

In the light of comparatively recent actions of the Anglican Church it is well to recognize these two great currents in church affairs. Whether they will continue to run parallel courses or, like the Missouri and the Mississippi, ultimately join is as yet a matter of conjecture. Time alone can tell. But time will be gained if each recognizes that it is as yet independent of the other. The "dissenting" Protestant, whether he be Presbyterian, Baptist, Congregationalist, Methodist or Disciple, will not recognize priestly orders or the sacraments as such. He uses the language of ecclesiasticism, but he gives the terms new definitions.

That fact, for instance, lies at the bottom of the question of the validity of ordination. To the churchman who believes in a priesthood the distinction between those ordained and not ordained is as real as between the married and the unmarried. To the members of the other bodies, ordination is simply a formal recognition of a man's vocation. With such differences in definition the two parties seem to have reached an *impasse*. Between their respective views as to the church there is, so far as I can see, no compromise possible. The proposals by a few Congregationalists that non-Episcopalians be reordained in the Episcopal church does not remove the fundamental antithesis. Either one believes in a Catholic Church with its orders, sacraments and apostolic succession, or he does not. Mutual courtesy is possible but not compromise.

Facing such an *impasse*, what are Christian communions to do? In my opinion precisely what they are doing—talk Christian union, practice Christian cooperation, plan Christian programs. That is to say, emphasize the gospel rather than the church. If possible let such matters of ecclesiastical organization and polity as tend towards exclusiveness sink into the background. The way to get together is to work together, talk together, pray together. Let us stop trying to convert one another. We can work together without asking each other to abandon what seems ecclesiastically vital. So long as we Christians do not tell each other what not to do or believe, we can work together to make the world Christian. That will mean Christian union in the spirit. What it ultimately will develop by way of organization we can well wait to see. General principles may be trusted to evolve, from practice in facing common tasks. This unity in the spirit will be in the bonds of ecclesiastical peace. We may never agree on the ecclesiastical level; but the mystery as to how high-churchmen and radical Protestants can unite will be solved on the higher level of

coöperation in the effort of every type of church organization to put the teachings of Jesus Christ into the process of social change.

## The Real Mystery

**T**HE strangest thing about the big explosion in Wall Street is this: It is apparently possible for any unauthorized person to make or buy high explosives in quantities sufficient to wreck a skyscraper and transport it into the heart of the business district in open daylight. If the British authorities in the days of Guy Fawkes had been so easy going as the New York authorities are today, England would have been soon rid of Parliamentary government. Whether accident or crime, there was certainly criminal carelessness.

## The Company We Keep

**O**N September 14 Rumania deposited at Paris her ratification of the Treaty of Versailles. This makes the membership in the League of Nations forty-three. The world is now divided into two groups:

### INSIDE THE LEAGUE OF NATIONS

Argentine Republic, Belgium, Bolivia, Brazil, Great Britain, Canada, Australia, South Africa, New Zealand, India, Chile, China, Colombia, Cuba, Czechoslovakia, Denmark, France, Greece, Guatemala, Haiti, Italy, Japan, Yugoslavia, Liberia, Panama, Netherlands, Nicaragua, Honduras, Norway, Hedjaz, Paraguay, Persia, Peru, Poland, Portugal, Rumania, Salvador, Siam, Spain, Sweden, Switzerland, Uruguay, Venezuela.

### OUTSIDE THE LEAGUE OF NATIONS

Germany, Austria, Hungary, Bulgaria, Turkey, Soviet Russia, Mexico, United States.

## Campaign Slogans

**W**HAT is politics without catchwords? From "fifty-four forty or fight" to "the full dinner pail" and the "square deal" the apt phrase has been half the battle. Unfortunately the managers of this campaign—and the remark applies to all parties—have confused epigram with platitude. *The New Republic* recently exprest some irritation at the Democratic phrase, "Cox-sure," but even this is on a higher literary level than PEACE, PROGRESS, PROSPERITY which stretches across lower Broadway on a canvas spread. This is too much like "potatoes, prunes and prisms," recommended by Dickens to train the lips in a graceful pout. Nor are the Republicans much happier with "America First." Either it means that we should all be patriotic, to which both parties would give equal assent, or else it means, as Cox pointed out in one of his speeches, something very much like "Deutschland über Alles"; that is to say, "Me First and Other Nations Nowhere."

This is a literary editorial, not a political one, so we will try to help out all parties impartially with some really characteristic slogans. A Republican manager with a sense of humor would have tried something like "See America First," or "Wilson—That's All!" A Democratic manager similarly gifted would have replied with "Cox—There's a Reason," or "If It Isn't a Democrat It Isn't Progressive." Or they might invent satiric phrases for each other, such as "The Eagle or the Tiger?" a literary reference sure to be appreciated by Mr. Murphy; or "Ask Root—He Knows; I Don't." These are not the best we can do (or you can do) by any means; we are waiting to receive bids from the politicians before we really extend ourselves.

The small parties require help even more. The Farmer-Labor Party might try "Forty Acres and a Soviet," or "Eventually—Why Not Now?" The Prohibitionists have "We Told You So; Forty Years Ago," a reference to the victory of the eighteenth amendment, and "Keep America Safe from the Damp." The Socialists are sadly in need. At

present they tend to inscribe on their banners some such inspiring slogan as:

The capitalist, profiting from the surplus value of the labor of the proletariat, imposes upon the working classes a bare minimum of subsistence and imbues church and state with a bourgeois ideology. The collectivist state must expropriate the expropriators and establish a proletarian culture on a class-conscious basis.

A revolutionary party ought not to talk like a professor of German metaphysics. We suggest "There's Red in the Red, White and Blue," or "Knock the 'L' out of the H. C. L.," or "Work or Move to Mars." As for the Communists and I. W. W. we suggest that instead of the "dictatorship of the proletariat" they try "Vote in Your Overalls." If campaigns can't be sensible, let them at any rate be breezy. If politics does not further public business, let it at least further public pleasure.

## The Decline of Europe

GIBBON did not venture to write about the "Decline and Fall of the Roman Empire" until 1500 years after. But modern historians are more in a hurry and European writers are already recording the downfall of their own civilization. Professor Demangeon of the University of Paris, one of the leading European geographers, has shown in *Le Declin de l'Europe* published last spring, that the center of gravity of civilization has been moved out of Europe and that the hegemony of the world which it has enjoyed for centuries is now passing into the possession of the American and Asiatic peoples.

A German philosopher, Oswald Spengler, has gone still farther into the future and in his colossal work, *Der Untergang des Abendlandes*, of which the first volume has appeared, he defines the degrees by which European civilization must descend during the next five hundred years. According to Spengler's theory Europe passed from the stage of Culture to that of Civilization in 1800 and has before it the stage of Cæsarism, lasting from 2000 to 2200 A. D. The present disintegration of European states into minor nationalities is the beginning of a gradual decomposition of folk-organisms into amorphous masses of men. These will be ultimately reabsorbed into one empire which will in the course of time degenerate into the character of a primitive Asiatic despotism. The final stage of decadence, coming after the year 2200, is that of "Egyptianism, Mandarinism and Byzantinism," a static and torpid state in which the imperial mechanism will grow gradually weaker and the country will become at length the booty of younger peoples or foreign robbers, resulting in a relapse into the dark ages and finally into the chaos of primeval savagery.

Dr. Spengler believes that he has discovered the universal formula that will define the course and forecast the future of the history of all human institutions and modes of thought, whether political, industrial, esthetic, scientific, religious or philosophical. He brings history into the field of natural history, and makes of it merely a form of comparative morphology. The historian is to him an idle and impotent spectator. He can describe but not prescribe. For the world lives out its life in such invariable sequences as the seven ages of man. "The world is an ego in actuality." "All that is also has been." "What is to come is mirrored in what has been." "All the old problems are here resolved into the genetic." "The cycle of occidental science is complete." These are some of the shortest and simplest sentences picked out of Spengler's first volume. But to give the reader an idea of what sort of sentences he can swing when under full sail this sample was translated:

It is this same creative life-will that in "Tristan" is Schopenhaueristically denied and in "Siegfried" is Darwinistically affirmed; that Nietzsche formulated brilliantly and theatrically in "Zarathustra"; that by the Hegelian Marx was made the motive of a national-economic hypothesis and by the Malthusian Darwin of a zoological hypothesis, both together unobserved hav-

ing transformed the cosmic feeling of the West-European city-dwellers; that from Hebbel's "Judith" to Ibsen's "Epilog" had called forth a series of tragical conceptions of a similar type; but that had therewith exhausted the circle of real philosophical possibilities.

And so Spengler sweeps on for some 1400 pages with the profusion of learning, and the impressiveness of utterance and the cloudiness of meaning and intolerance of all other opinions characteristic of the German scholar.

But we must not too hastily conclude that Spengler's pessimistic point of view is altogether due to the defeat of Germany. He claims that his theory was outlined in 1911 and besides we have utterances quite as gloomy from the other side of the trench line. In this war victory does not seem to have brought elation and self-confidence. On the contrary the victors are as downhearted as the vanquished, equally filled with forebodings of the future, and even more distrustful of their ability to recover. Anatole France says: "Europe is ill, dying. It is Europe that is now the sick man of the world. And peace has not brought its balm." The Duca di Cesaro, a member of the Italian Parliament, believes that civilization has become so materialistic in its psychology and intolerable in its political and economic machinery that it is better for mankind that it perish. Chestoff, the Russian philosopher, accounts for the disintegration of Europe by suggesting that God has again cursed mankind with the confusion of tongues as he did at the building of Babel. This has caused the misunderstandings that set nation against nation and class against class. "The monarchs have killed monarchy. The Democrats have killed democracy. The Socialists and revolutionists have almost killed Socialism and revolution."

And so the wail of despair reëchoes from one country to another and finds expression in philosophy, fiction, drama and art, even in the febrile activity and reckless extravagance of race track and restaurant. To match this spirit of despondency manifested in the European literature of today we must turn back in the book of history some seven hundred years to the pages whereon Bernard of Cluny wrote *Hora novissima, tempora pessima* and Thomas of Celano wrote *Dies irae, dies illa*. "The world is very evil, the times are waxing late." The Day has indeed come; not The Day of Victory looked for by the Germans nor The Day of Vengeance anticipated by the French, but a day of darkness for all in which men stumble because they cannot see which way to go and buffet one another because they cannot distinguish friend from foe.

## Tired Minds

WHETHER we consider Georgia, Illinois, New England or New York, it is evident that the primary voter is not now in a wholesome state of vigilance. We do not think that either the machine-made candidates for Senator along the Atlantic coast, or the factional riots in Chicago, or the enthronement of the ghost of Populism in Georgia represent the best mind of these states. The spirit of indifference, cynicism, "what's the use" enabled the bosses to dictate not only the results of the national conventions, but also to sweep the local primaries and state conventions. The voter just now is relaxing from the moral overstrain of war; he is bored with politics and makes the mistake of trying to ignore the politicians.

## Repeated Folly

THE New York Assembly has once more expelled duly elected members who belonged to the Socialist party. This was done against the advice of many of the most intelligent and most conservative Republican and Democratic leaders and newspapers throught the state. It was done in the face of the verdict of the voters who reëlected the men who had been expelled with increased majorities. Such folly may some day bring about Socialism.

# The Story of the Week

## The Wall Street Massacre

ON Thursday noon, September 16, an explosion of dynamite or some other high explosive killed thirty-three persons and wounded several hundred others in the heart of the financial district of New York City. The center of the explosion was the street between the offices of J. P. Morgan & Co. on the one side and the United States Assay Office and the Sub-Treasury on the other. Many buildings along Wall and Broad streets were damaged, but the greatest loss of life took place in the open among the clerks, stenographers and messenger boys who were on their way to lunch. Had the explosion taken place a few minutes later, when most of the employees of the financial district would have been out in the street for the noon hour, the death list might have mounted into the hundreds. The damage to property is estimated at from \$2,000,000 to \$3,000,000. A large part of this loss was due to the wrecking of acres of plate glass windows in the skyscraper office buildings in the neighborhood, and many persons were badly cut by fragments of the flying glass.

The cause of the explosion is wrapped in the profoundest mystery. The first theory, which seems to have been abandoned by the police, was that a wagon, transporting dynamite, was accidentally rammed by a passing automobile. Several of the injured men testified to having seen a red wagon, such as is used to carry explosives, in the neighborhood shortly before the explosion. But there is a great deal of evidence to indicate that the catastrophe was not an accident. No company manufacturing dynamite or other explosives had contracted for any shipment which would be carried thru the business district of New York at that time; and, in any case, the transportation of explosives in daytime in that part of the city would have been contrary to law. Numerous iron slugs, resembling window sash weights, were found scattered along the streets after the explosion, and their presence can only be satisfactorily accounted for on the theory that they formed part of a huge bomb or infernal machine. Moreover, the fact that the scene of the explosion was the immediate neighborhood of the Morgan offices and the United States Sub-Treasury adds immediately to the probability that the outrage was intentional.

But the adoption of the bomb plot theory of the explosion

does not do much to clear away the mystery. Was it the work of an isolated crank or the deliberate plan of a group of conspirators? To support the crank theory there is the fact that Edward P. Fischer, formerly employed by the French High Commission, had sent out postcards warning some of his friends of an impending disaster to Wall Street. No one paid any attention to his warnings, knowing that

Marcus in the New York Times

Hughes: "Don't take ouija too seriously. He said the same thing to me in 1916!"

he was an eccentric who had for some time been suspected of mental derangement. He was in Canada at the time the postcards were sent out, but he has been extradited and taken to New York to be questioned as to his knowledge of the plot.

A more definite clue pointing to an organized plot was the finding of some circulars placed in a letter box a few blocks from the scene of the disaster threatening "death for all of you" in case political prisoners were not set free. These circulars were signed "American Anarchist Fighters." Various rewards have been offered by public and private agencies to all who can aid in solving the many mysteries connected with the explosion and the person or persons responsible therefor.

## Close Contests in Illinois

MORE than a week after the Illinois primary election of September 14 the result still hung in doubt. Of four major contests only one was clearly settled. James Hamilton Lewis, former Senator from Illinois, was nominated for Governor in the Democratic primaries by a large majority over his opponent, Barratt O'Hara of Chicago. But the Democratic nomination for Senator remained in doubt, with Peter Waller having a slight apparent lead over Robert E. Burke. Mr. Burke is of that Democratic faction which is hostile to the Wilson administration and if he were nominated and elected his vote could not be counted as favorable to the League of Nations Covenant in spite of his party affiliation.

Greater interest attached to the Republican primaries. Altho neither Governor Lowden nor Mayor Thompson of Chicago were candidates for office the primary contest was universally regarded as a test of strength between these

two. Governor Lowden supported a complete state ticket, headed by John G. Oglesby, son of the Civil war Governor of the state. For the Senate Governor Lowden advocated the nomination of Representative William B. McKinley. Mayor Thompson supported a state ticket headed by Len Small of Kankakee and favored Representative Frank L. Smith for Senator. The earliest returns were mostly from Cook County and showed that Mayor Thompson's ticket had carried the city of Chicago by decisive majorities. Down state returns nibbled these majorities to nothing and when the returns were practically complete Representative McKinley was distinctly in the lead for the Senatorship and Mr. Oglesby had a somewhat smaller plurality for Governor. But the final determination of the Republican nominations for Governor and Senator and of the Democratic nomination for Senator was forced to await the official count.

The Republican factional rivalry was so intense in Chicago as to lead to serious disorders. One man was killed in an election riot and several persons were badly beaten. The ill-feeling generated by the contest, certainly not lessened by the prolonged doubt over the result, threatens the harmony of the Republican party in November and gives the Democrats almost their only hope of carrying the state. Illinois rolled up enormous majorities for Hughes in 1916 and has been reckoned by the Republicans as a "sure state" for Harding. Mayor Thompson has instituted a libel suit for \$100,000 against Mr. Oglesby, alleging that in the course of his campaign for the governorship he had attacked the Mayor of Chicago as "seditious and unpatriotic." Mayor Thompson also instituted suits on behalf of the city of Chicago against two opposition newspapers.

## The Hard Coal Strike

FOR nearly a month the anthracite coal districts have suffered from a "vacation" or "outlaw" strike which now appears to have simmered down into comparative insignificance. On August 28 three hundred local delegates, claiming to represent 175,000 miners, met at Wilkes-Barre, Pennsylvania, and passed a resolution calling upon President Wilson to accept the minority report of the coal commission which passed upon wage rates in the anthracite districts. But President Wilson approved the majority report, awarding increases over present pay of from 17 to 20 per cent, and reminded the miners that they had promised in advance to accept as final the findings of the commission. "By all the laws of honor upon which civilization

rests," he said, "that pledge should be fulfilled." The officers of the United Mine Workers of America agreed to stand by their promise, but they were unable to control all of their subordinates.

During the first week of September approximately 100,000 anthracite coal miners refused to go to work. Over a hundred collieries shut down and the loss in wages reached nearly \$650,000 a day. By the second week in September many locals had decided to return to work and many collieries reopened. President Wilson refused to reopen the wages question, as requested by the unions, on the ground that the Government could not afford to yield to the demands of strikers who by the very act of striking were violating their existing contracts. He reminded them that, "Our people have fought a great war and made untold sacrifices to insure among other things that a solemn agreement shall not be considered as a mere scrap of paper" and that bad faith was as much of a menace within a nation as in diplomatic dealings between nations. By the end of the third week most of the miners had abandoned their "vacation" and returned to work, tho in a few districts the men stayed out until they could obtain assurances that they would all be reinstated without penalty in their old positions.

## Voters Vindicate Socialists

AT a special election to fill the five vacancies in the New York State Assembly caused by the expulsion of Socialist Assemblymen during the spring session, the unseated men were returned by large majorities over their opponents. In spite of fusion of the Republicans and Democrats in the five districts to keep the Socialists out, their majorities were in every instance increased over the figures for 1919. The total vote was extremely light, showing that the strik-

Edwin Levick

A new speed record of 73.43 miles an hour was set by Miss America, the boat which won the Gold Challenge Cup of the American Powerboat Association at Detroit

ing Socialist victories were due not to an increase in the number of Socialists but to the refusal of thousands of Republican and Democratic voters to go to the polls. Many have interpreted the result as being not so much a triumph of Socialism as a triumph of the American principle of representative government. The five Socialists whose right to sit in the New York Assembly has thus been vindicated are Louis Waldman and August Claessens, of Manhattan; Samuel De Witt and Samuel Orr, of the Bronx, and Charles Solomon, of Brooklyn.

On September 20 the New York Legislature met in special session on the call of Governor Smith to consider legislation to meet the housing problem. This made it necessary for the leaders of the Assembly to consider whether or not to adhere to their former policy of excluding the Socialists. Leading Republicans, such as Judge Miller, the party nominee for Governor, are believed to have advised against such a step. Speaker Sweet, who engineered the original act of exclusion, permitted the Socialists to take their seats. A resolution declaring the special election of September 16 null and void on the ground that the Socialist Assemblymen were ineligible for election was referred to the Judiciary Committee for future consideration. Speaker Sweet explained his change of attitude by pointing out that the Socialist party had modified certain clauses of its constitution

Wide World

### TRUTH IS STRANGER THAN FICTION

Who would have expected to find the Princes Ustrugoff, brothers and former members of the Czar's body-guard, in the Red Army waging war against Poland?

in the meantime and thus "yielded in outer form and semblance to the demands of patriotic men." Two Tammany Assemblymen, Louis Culliver and Martin McCue, protested against the shelving of the question and demanded that the Socialists be excluded from the start.

On the following day the resolution of expulsion was considered by the Assembly. A compromise measure was determined on. Two of the Socialists, De Witt and Orr, were seated by the vote of a majority of both Republican and Democratic members, tho a few held out against readmitting

any of the excluded men. The other three Socialists, Claessens, Waldman and Solomon, were expelled by a vote of 90 to 45. Seventy-three Republicans and seventene Democrats voted for the expulsion; twenty-eight Republicans and seventeen Democrats against it. The basis of distinction between the three Socialists who were disqualified and the two who were seated was stated in the resolution of exclusion to be "because of reasons of a disqualifying character personal to themselves and apart from the consequence of mere membership in the Socialist Party of America"; referring, apparently, to the alleged pacifist attitude taken by Claessens, Waldman and Solomon during the war. De Witt and Orr refused to profit by the immunity offered them and resigned in sympathy with their excluded colleagues. Assemblyman Martin chairman of the Judiciary committee, exprest the opinion that there was no legal basis for the action of the Assembly since all the Socialists had been originally excluded on the ground of their party membership and not on personal charges.

Altho the entire representation of the Socialist party in the New York Assembly has been lost by exclusion or resignation, the Socialists count the affair a double victory. In the first place, even the Assembly has gone on record that membership in the Socialist party is no bar to office and that the party constitution as it now exists is in complete harmony with the laws of state and nation. In the second place, the action of the voters at the special election gives the Socialists hope that their five Assemblymen will be elected for a third time this November and that possibly popular indignation at the repeated denial of representative rights to the party may win for it some additional seats.

## Reds Not to Be Amnestied

ATTORNEY General Palmer has refused a general amnesty to "political prisoners" convicted under the Espionage Act and other wartime legislation of opposition to the war policies of the Government. Mr. Palmer stated that there were now only 175 such prisoners in the United States. He said that since the armistice no one had been prosecuted under the Espionage Act. He was willing that the cases of persons arrested for sedition or for obstructing the war should be reviewed individually, but he

could hold out no definite promise of a blanket pardon:

A general proclamation would afterward involve the examination of every case, something which we are now doing. The practical effect would be confusing and the holding out of hope to people who could not come under the proclamation. Some of these prisoners may have had other charges preferred against them than those which such a proclamation would cover.

The examination has been conducted with an end to seeing what commutations and changes may be made. It seems improbable that any sentences of great length will be served out. The general disposition of the Government is to ease up on these cases.

The Attorney General refused to make an exception in favor of Eugene Debs, Socialist candidate for President. He insisted that Mr. Debs's anti-war speeches tended to obstruct the operation of the draft, and that his was no special case for clemency. To show that the Department of Justice was not unwilling to reconsider sentences passed during the war he pointed out that 180 prisoners had already been released by pardon or commutation of sentence.

The delegation which waited on Attorney General Palmer with the request for a general amnesty included not only the Socialists, headed by ex-Congressman London, but also a number of labor unionists who had no sympathy with socialism and no personal or party interest in any of the cases involved. Chief of the labor delegation was Mr. Gompers, who presented the amnesty resolution adopted by the American Federation of Labor in its recent annual convention at Montreal.

## Two Sides of t

THE Lord Mayor of Cork, who has refused to eat ever since his imprisonment on August 12, was on the fortieth day of his fast still able to talk, read and bathe himself. Eleven other Sinn Fein prisoners are keeping up a hunger strike in Cork.

Premier Lloyd George in a recent interview said: "The picture of the British Government 'doing to death' an ardent patriot in a British jail has no relation to fact. Everything that can be done has been done to induce Mr. MacSwiney to take food. He is deliberately committing suicide in a way we are powerless to prevent. To release him would be to aggravate a problem which already is far greater than the fate of any individual, for there is no doubt that all of the disastrous effect it would have upon all those in Ireland who are engaged in the effort to restore order.

"There is no doubt that the organization in which Mr. MacSwiney held a very important position and took a leading part—that of Brigadier—was actively concerned in the work of murder, by which more than eighty devoted men of the Irish forces, many of them ex-soldiers, have been slain, and twice as many suffered serious injury. We have positive proof that the so-called Irish republican army and the particular brigade of it to which Mr. MacSwiney was attached, was concerned in these murders and attempts to murder. Papers signed by some of his own commandants have come into the hands of our officials.

"Either, then, we must hand the South of Ireland over to something calling itself a republican army, and leave the North of Ireland to fight it out without intervention, or we must protect men who are defending the flag. All I hear makes it clearer to me that this murder conspiracy is organized by a small body of men who are terrorizing the large mass of Irishmen. Some intelligent Irish Nationalists go just as much in fear of their lives as the Unionists, and our information is that Mr. MacSwiney's predecessor was murdered by this very gang because he would not fall in with their plans.

"Yes, it is irony that the responsibility of this crisis should fall on one who has believed so long and firmly in Celtic nationalities, in their power of making a special contribution of their own to the strength of our empire of many races, a man of a little Celtic land where national feeling is as intense as anywhere in the empire. But campaigns of murder never have succeeded and never will succeed in advancing any great political cause. To this campaign we cannot and will not bow."

## Irish Disorders

THE military authorities learning that a company of Sinn Feiners were drilling in the hills near Enniskerry sent twelve lorries full of troops to round them up. The Sinn Feiners finding themselves surrounded, put up a sharp fight with bombs and rifles, but after one of their number had been killed and several wounded, the rest, more than forty, surrendered.

In the town of Balbriggan, famous for its hosiery, Inspector Burke was killed and his brother, Sergeant Burke, was seriously wounded on the evening of September 20. Incensed by this outrage the auxiliary police, or "Black and Tans," raided the town at midnight and set fire to many business houses and homes. Families were turned out into the street with barely time to dress. Two civilians were shot and several wounded. The hosiery mills, the largest in Ireland and belonging to an English company, were burned down. The town is almost deserted.

In Dublin a motor lorry that was getting bread at noon-day from a bakery on Church street for the Collinstown aerodrome was held up by twenty young men. The guard opened fire and the raiders replied. After a brief exchange of shots the Sinn Feiners retreated, leaving one of their number wounded under the lorry.

A band of Sinn Feiners captured twenty motors in mid-Tyrone and drove around looking for arms.

## The Bad Luck of French Presidents

IT was the intent of the constitution of the Third French republic that the President should be more like a constitutional monarch "who reigns but does not govern" than like an American President who largely directs national policy and becomes the leader of his party. The French President, chosen by Parliament for a term of seven years, was supposed to remain aloof from party controversy and confine himself to official ceremonial and perfunctory approval of ministerial acts.

But as the French system has worked out some of the Presidents have been so involved in political affairs and worried by personal responsibility as to have been forced out of office. Besides this one died and one was killed while in office. In fact only three out of ten Presidents of the Third Republic have been able to complete their full terms of office, as the following list shows:

### WHAT HAPPENED TO FRENCH PRESIDENTS

Thiers—Resigned in 1873 on account of an adverse vote in the Assembly.

Marshal MacMahon—Resigned in 1879 on account of the election of a radical Senate and Chamber of Deputies.

Jules Grévy—Completed one term in peace. But was forced to resign during his second term because of a scandal. His son-in-law was accused of graft.

Sadi Carnot—Assassinated by an anarchist in 1892.

Casimir-Périer—Resigned after a few months because of sensitiveness to political criticism.

Faure—Died of heart failure in 1899.

Loubet—Finished his term.

Fallières—Finished his term.

Poincaré—Finished his term.

Deschanel—Resigned because of nervous breakdown.

## Resignation of Deschanel

PAUL Deschanel has resigned the Presidency of the French Republic and the National Assembly will convene at Versailles on September 25 to elect his successor. Deschanel succeeded Poincaré on January 17, 1920, when his term expired

after the conclusion of peace with Germany. But it gradually became evident that the new President was not equal to the burdens that he was called upon to bear. He became subject to fits of aphasia and showed an increasing dislike to assume responsibility. Altho most of the acts of a French President are purely formal and consist merely in the approving of decisions taken by the ministry, President Deschanel manifested a morbid aversion to even affixing his signature to the documents laid before him. He passed upon and

### THE RETIRING PRESIDENT OF FRANCE

Paul Deschanel, who was elected president of the French Republic last January for seven years, is forced to resign his office after eight months because of nervous prostration and aphasia

## MacSwiney Case

Day by day the tension has increased as neither side is willing to yield. The opposing points of view may be best stated by quoting the words of authoritative spokesmen on either side.

Against this we may set a quotation from a letter to the *London Times* from Dr. Daniel Cohalan, Bishop of Cork: "The Lord Mayor of Cork should be instantly released. What is his crime? Was there any charge of an antecedent crime imputed to him on the night of his arrest? There was none. His pockets and his desk were searched, and a charge was founded on papers found on his person. What were the charges? The first was a copy of the speech he made last March at his inauguration, and which was published in the newspapers. But how is it that the speech delivered in March, and published in the papers, becomes a danger to the realm only in August? The second charge was a copy of a resolution of loyalty to *Dail Eireann*. And, again, how does this become a danger to the realm? The third charge was that the military found, not on his person, but in his desk, a recent police code. But why should the possession of a police code by the lord mayor of a city be considered a danger to a realm?"

"The Prime Minister says that 'if the Lord Mayor were released, every hunger-striker, whatever his offence, would have to be let off.' Obviously that is not true. No one who loves social order would support a demand which would make imprisonment impossible, no matter what the offence. But the offences imputed to the Lord Mayor, as stated, have no substance. The tribunal was a military tribunal. The sentence of two years' imprisonment has no moral sanction; it is a manifest injustice.

"To add a personal touch, let me add I have visited the Lord Mayor of Cork in prison. To put it mildly, I was scrupulously careful against saying anything that would confirm him in his resolution to continue the hunger-strike. He said to me:—'Your lordship, my conscience is quite at ease about the course I am taking; I made a general confession this morning; I receive Holy Communion every morning; I might never again be so well prepared for death; I gladly make the sacrifice; they are trying to break the spirit of our people; my death will be an example and an appeal to our young men to make every sacrifice for Ireland.'"

insisted on reading every word of the routine papers and commissions of appointments of minor officials and postponed decisions as long as possible. There are more than five hundred official documents still awaiting his signature. One night last May a track walker came upon a man in a confused state who said that he was the President. When this was telegraphed to the train on which the President was touring the country, the attendants declared that the President was in his stateroom and refused to disturb him. But on opening the door in the morning they found he was not there and had evidently fallen or jumped from the window of the rapidly moving train. How the accident happened and how he managed to escape death or injury is a mystery.

His physicians explained that his mental disturbance was caused by a cerebral lesion similar to that which caused the collapse of President Wilson. Deschanel's malady was intermittent and some of his friends who visited him reported that he was normal and conversed with his usual brilliancy.

The decision of his physicians to recommend his resignation was precipitated by an incident that occurred on Friday morning, September 10. A fisherman who was sitting on the bank of the canal that runs past the grounds of Chateau Rambouillet, where the President was residing, heard cries for help and discovered that M. Deschanel had walked out into the water up to his shoulders before recovering his presence of mind. On being undressed and put to bed he remarked quietly, "It's cold today."

The logical candidate for his successor is Alexandre Millerand, who is now Premier. He was very reluctant to give up his position in this critical period of reconstruction, but was finally induced to consent to become a candidate. Millerand's successor as Premier may quite possibly be Aristide Briand, who is one of the most brilliant orators and skilful politicians of France. Premier Millerand has been steadfast in defense of French interests as he saw them and has declined to make any concessions to the Germans in the enforcement of the Treaty. His policies have brought him into conflict with Premier Lloyd George on several points, particularly the refusal of Millerand to have anything to do with Soviet Russia, his recognition of Baron Wrangel's government in the Crimea, his support of the Polish offensive and the occupation of Frankfort and other German cities by French troops.

Paul Thompson  
THE LEADING CANDIDATE FOR FRENCH  
PRESIDENT

Alexandre Millerand, at present the premier of the French Government, is expected to succeed Deschanel as president. He entered public life as an ardent socialist but was expelled from the party when first he took office in the cabinet

Sweden and Finland and between the Gulf of Bothnia and the Baltic Sea. There are about three hundred islands in the archipelago, only eighty of which are large enough to have any inhabitants. The total population is about 25,000 mostly Swedish.

The islands were taken from Sweden by Russia along with Finland in 1809. The Swedes tried to get it stipulated in the treaty that Russia should never fortify the islands or use them as a naval base, for a foreign power holding them could blockade most of the Swedish coast and threaten Stockholm. The Russians refused to promise this and in 1834 erected a fortress at Bomarsund. Great Britain, feeling that her rights in the Baltic were also endangered by this Russian outpost in the west, protested against the fortification of the Aland Isles and seized the first occasion, the Crimean War of 1854, to bombard and demolish Bomarsund. At the close of the war Russia was by the treaty of Paris compelled to promise never to fortify the islands or to maintain any military or naval establishments on them. But Russia has always resented and persistently tried to evade this humiliating restriction and in the years immediately preceding the Great War a considerable naval and military force was assembled there, doubtless with the tacit consent of England and France, in view of the impending conflict with Germany.

After the Russian revolution when Finland declared her independence Sweden reclaimed and occupied the Aland Isles. But the Germans who were called in by the Finnish Government to put down the Bolsheviki used the islands as a landing base for their campaign in Finland. Probably Germany would have insisted upon holding them in return for her aid. But the defeat of Germany threw the islands again in dispute. Sweden claimed them on the ground of historic priority and the majority of the population. Finland claimed them on the ground of possession for more than a century and of strategic necessity.

AT THE DISPOSAL OF THE LEAGUE OF NATIONS

The Aland Islands lying midway between Sweden and Finland have for more than a hundred years been a bone of contention between the two countries. But now Sweden and Finland have agreed to leave the question of their ownership to be settled by the arbitration of the League of Nations

## League Settles Aland Islands Dispute

A dispute that has disturbed the peace of Europe for more than a hundred years and more than once led to strife has been peaceably determined by the League of Nations. The Aland Islands (pronounced awl-land), as may be seen from the map, occupy a strong strategic position between

Both countries seemed determined to fight rather than surrender their rights to the Aland Islands, but better counsels prevailed and an appeal was taken to the League of Nations. The committee of international jurists appointed to consider the question reported to the Council that under Articles III and XI of the Covenant the controversy came within the jurisdiction of the League. The Finnish Minister at Paris, Mr. Enckell, has lodged a protest against some technical points in the report of the jurists and against the declaration by Premier Branting of Sweden that Sweden would relinquish her sovereignty over the

islands. But Finland, having first appealed to the League, will probably accept its arbitration. Premier Branting expresses his satisfaction in the following language:

I will not use the word "war," but the situation between Sweden and Finland was tense. The Council of the League, thru its cautious but prompt action, has dissipated the feeling and Sweden believes the Council will settle the matter to the satisfaction of both countries.

Sweden has complete confidence in the League as a means of preventing future wars, and proof of this lies in the fact that we unhesitatingly placed our case in its hands. I believe the action of the League as taken up on the Aland Islands question furnishes proof to the world that the League, even in its present state, is an efficient world court for hearing international difficulties and forestalling conflicts between nations. All that the League needs to make it a most effective and certain instrument of reducing future wars to the absolute minimum is the participation of the United States.

## Soviet Shops in Italy

A triumvirate of young Italian workmen at the head of the Central Soviet of Milan now controls a thousand metallurgical establishments employing 250,000 men and women. Each plant reports daily its output, stock and requirements, and the Central directs the necessary exchanges of raw materials and disposal of the products. A selling organization has been added to the Soviet system. In place of wages the workmen receive their support and orders on their own stores for a limited amount of goods. In this way the owners, the employers, the middlemen and most of the managers have for the time been eliminated from the industrial and commercial system. The Soviet in charge of the Fiat automobile works is issuing its own paper money.

The men spend twelve hours in the shops, eight at work and four at guard duty and military drill. The works are garrisoned day and night to prevent their being retaken by the employers or the troops. Munition factories also under soviet control supply them with rifles, machine guns and ammunition. Most of the plants fly the red flag of socialism with the soviet symbol of crossed sickle and hammer, but some display the black flag of anarchism. Enrico Malatesta, the leader of Italian anarchists, is agitating for a complete political and social revolution, but the Confederation of Labor is against him.

The Italian Engineers' Association takes an intermediate position. It deprecates any nationalization of the metallurgical industry, but demands the suppression of the salary system and advocates in its place a new order of things in which capital and labor, manual and mental, shall work together and share the profits of production.

The movement continues to spread and new industries are passing under the control of their operators. Their latest acquisitions are the cotton mills of Legnano with 6000 employees, the woolen mills of Biella with 5000 employees, and the factories at Terni with 30,000 employees. The only one of the establishments employing the water power of the Terni Falls that was not seized is the Idros plant for the fixation of nitrogen, since this is owned by Americans.

The efficiency of the factories is said to have fallen off more than half due to unskilled management, lack of material and waste of time in discussion and guard duty. The railroad men divert to the soviet shops cars loaded with

raw material they need, but their supply is already running short and cannot last many weeks longer at the most. Since Italy is dependent upon foreign countries for her coal and many of her essential materials, the soviets may be forced out of business if England and France refuse to sell to them. But the British and French labor organizations are relied upon to prevent their governments from placing an embargo upon exports to Italy or their employers from declining to do business with the soviets.

The labor leaders promise that if they are granted a share in the management they will speed up production, while if they go back to the old régime the output will be less than ever. They say that since they have had access to the books they have discovered evidence that the companies have made enormous profits during the war and cheated the Government out of a large part of the taxes they should have paid. The Socialists threaten to publish these figures unless they gain their point.

## Premier Giolitti's Policy

THE Italian Premier took the ground on the start that the strike was a purely industrial dispute, and he has steadfastly refused to use police or troops to dislodge the workmen from the plants they had seized, in spite of the clamors of the owners for the return of their property. But after the employees had tried their hands at running things for three weeks and found their difficulties piling up, and after the employers had come to realize their powerlessness, both sides were more in a mood to compromise. Then Premier Giolitti called a conference of employers and employees and told them plainly that they would have to come to an agreement on the immediate points in dispute such as wages and conditions on which the strikers shall return to work, while leaving the main issue, the share of the workmen in the future control of industry, to be determined at a special session of Parliament.

At the joint conference the employers conceded and the employees accepted the following conditions: an increase of wages in the metal trades of four lire (80 cents at normal exchange) a day, men from eighteen to twenty years old and women over twenty-two to receive 80 per cent of this increase, and women under twenty and boys between fifteen and eighteen to receive 60 per cent. Of this increase 75 per cent is to be considered an allowance for the high cost of living and may be reduced proportionately with a fall in living expenses. Workmen who have been a year in service are entitled to a week's vacation on full pay. After three years' service a man is entitled to two days' full pay for each year of service in case he is dismissed, unless he is discharged as a punishment.

A compromise agreement has been reached and some of the Milan works are being evacuated by the strikers. But this merely opens the fundamental question of who shall manage them in the future. Here the Premier frankly takes his stand with the General Confederation of Labor, which holds that the old conditions can never be restored but that the movement must result in giving the workmen an increasing share in the management of the establishments in which they labor. The Premier made his position plain in his concluding words to the joint conference:

I think the historic moments through which we are passing, he said, can be interpreted in one way only, and that is that a radical revision of the relations hitherto existing between capital and labor is inevitable. It is no longer possible to uphold the criterion that in a great industry there must be only one head in command, while thousands of dependents must obey without possessing the guarantee of control over the activities of the head himself.

I am convinced it is necessary to make it possible for the workers to contribute toward the functioning of a firm to the extent of giving them a true sense of co-responsibility. Once this idea is actuated by raising the function of the workmen they will be placed in conditions which will enable them to learn and to advance and to better their positions.

THE RED BADGE OF  
BOLSHEVISM

The Soviet symbol of the crossed sickle and hammer, emblematic of the union of farm and factory, stamps all of the goods turned out by the Russian manufactories and is now displayed on the walls of shops in Milan

# A Little of Everything

## A Famous Mystic Maze

By Robert H. Moulton

During the reign of William and Mary of England, from 1689 to 1694, there was planted at Hampton Court a remarkable "Mystic Maze" which is still kept in excellent condition and is visited annually by hundreds of American tourists. But probably few of

many give up the attempt altogether, and even when one has succeeded in reaching the center he finds it just as difficult to get out again.

More than a thousand arbor vitae trees compose the maze, which has a base line 226 feet in length.

Puzzle: Find the pond hidden away in this maze. You'd better take a ball of string to find your way out by

these know that this country possesses an exact replica of the original. It is located at Waltham, Massachusetts, and was planted in 1896 under the direction of Miss Cornelia Warren, who conceived the idea of creating this interesting oddity on the lawn of her home after seeing the Hampton Court Maze.

Almost every day, and especially on Sundays, scores of people attempt to solve the intricacies of the maze, which consist of more than a third of a mile of paths walled in by heavy hedges of arbor vitae. The object is to reach thru this labyrinth a little pond located in the center of the maze, the shortest distance to the pond from the entrance being about one-fifth of a mile. It is not unusual for a person to wander about for an hour or more before reaching the coveted goal, while

trying to make a backyard industry out of fishing for the last five years. Potentially, he argues, there exists a real and growing demand for fish as a general food. High beef prices make it imperative that a less expensive substitute is found, and in fish raising, Professor Dyche thinks, lies the solution of the problem. Hay and grains are necessary in the production of beef, and as the amount of land capable of producing this feed is limited and growing in value, and as the number of people to be fed is steadily increasing, the price of meat can never become much lower. But fish thrive without such expensive nourishment. Put them in a good pond of sufficient size and they will multiply rapidly without any proportionate increase in the cost of produc-

## Dry Fishing

Dry fishing, altho an idea new to America, is a panacea for all the ills attendant to the H. C. of L., according to L. L. Dyche, state fish and game warden of Kansas, and professor of zoölogy at the University of Kansas.

Mr. Dyche has been looking upon most unkindly by nature. There are few natural bodies of water in the state, and most of those that are to be found are wholly unfit places in which to produce fish profitably. Many of them are overflow ponds from which the fish would be swept in times of high water, and which go dry during drouth. Other ponds having adequate water supply have muddy bottoms with accumulations of old leaves, weeds, and rubbish blown into the water; old logs, stumps, fallen trees, and brushwood invariably clog the basins of untended ponds. Such bottoms afford poor spawning places for fish and reproduction is hindered by these adverse conditions; while those which are hatched fall prey to turtles, gars, bullfrogs and snakes with which neglected ponds abound.

tion. In an acre body of water, for instance, one pound of German carp will produce from five to ten pounds of fish a season. Such rapid increase makes increase of production practically unlimited while the cost remains the same. If fish were raised more generally, they would be cheaper in the market and the consequent demand for them would amount to nearly eight million dollars a year in Kansas alone, allowing each of the three hundred thousand families in that state to eat fish twice a week. With proper development of the fishing industry on Kansas farms, this demand could easily be met.

Finding such a small number of lakes, and the conditions of those so unfavorable, Professor Dyche concluded that to make fish raising a profitable industry in Kansas nature would have to be helped along at first. Dams must be built so as to form lakes; fish must be procured to stock

these artificial bodies. There is scarcely a farm but that has an unused ravine which might be easily dammed to form a lake. The initial expense in any case would not be very much and the upkeep practically nothing.

Attendant features, almost as valuable as the primary one, go with this dry fishing project. During the spring rains every year, thousands of gallons of water rush down swollen streams which might be diverted into pond basins. A lake an acre in area on each section of Kansas land would make a total water surface of over 80,000 acres, and if four acres could be reserved in every quarter section, the total number of acres of water in the state would be 1,280,000—equal to a body of water 400 miles long and five miles wide, which would be sufficiently large to regulate perceptibly both flood and temperature conditions, and the evaporation of these bodies of water would surely exert a more or less beneficial influence on atmospheric conditions in general.

To make the whole subject of dry fishing simple, Professor Dyche sends out booklets containing complete instructions for building ponds so that any farmer can be his own engineer. And then, his pond constructed, the farmer can send to the state fish hatcheries at Pratt, Kansas, and receive a consignment of fish with which to stock his water.

That dry fishing is practical is attested by a number of Kansas farmers who have tried it out. General adoption of the idea will come when the people have become cognizant of the possibilities of this new kind of irrigated fish culture.

## Shorthand de Luxe

Together with Dickens, President Wilson and many other famous men, Dr. Charles P. Steinmetz, the electrical expert, writes in shorthand. The system he has evolved for himself, based on a Swedish system known as Arends, is phonetic. The word "night," for instance, is written h-i-t, with a long "i." The consonants are written with downward strokes and the vowels with upward strokes.

According to an interview in the *New York Evening Post*, Dr. Steinmetz believes every one should know shorthand, because it is one of the best means in this busy age to save time and energy.

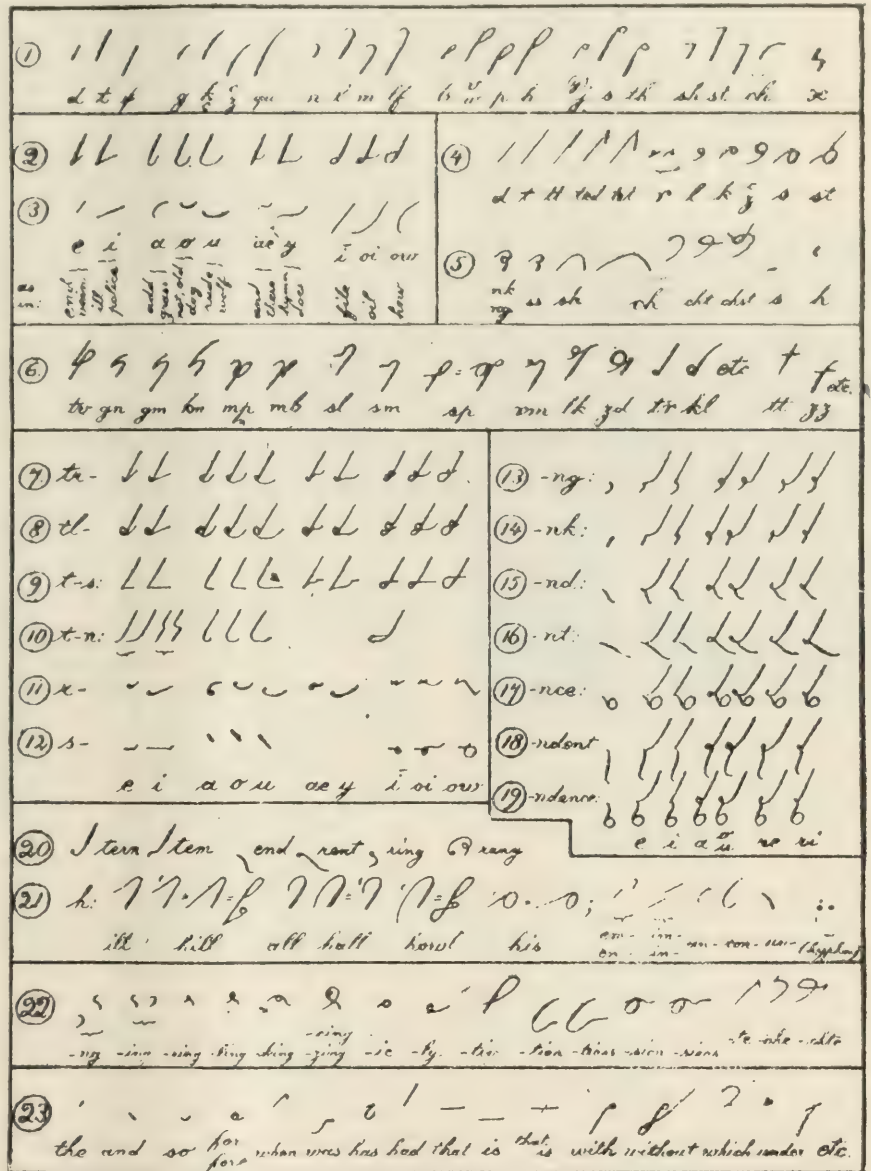

"I learned this system I use while in school in Europe," he explained. "I took all my notes while in college by this system. It was so much faster than longhand. And, what's more, I can still read those same notes, all of which I have in bound volumes.

"My experience has taught me the great advantage of shorthand. I believe every student should know it. He will find it invaluable in taking notes on lectures. The work would be so simple and easy that his attention would not be detracted from the speaker by his writing, as is often the case when one attempts to make notations in longhand.

"Also one can write as fast as he thinks."

In pointing out the simplicity of his shorthand, Dr. Steinmetz jotted down the alphabet he uses, which is reproduced in the illustration. He says that French, Latin, or Greek can also be written perfectly with this system. He originally developed and used it in the German language, but finds it

like swimming in that respect. With many systems, a person who does not use the method for a year or more is apt to forget the greater part of it. My shorthand, once you learn it, sticks, and is, besides, as readable as longhand. I can read today notes I took forty years ago as easily as I could forty minutes after I took them."

*New York Evening Post*

"I can't forget my shorthand," says Dr. Steinmetz, who can still read notes taken when he was a schoolboy forty years ago

equally useful and serviceable in English.

His system is not generally understood in this country, and as a result his notes are somewhat guarded by secrecy. His stenographer has learned the system, so that Dr. Steinmetz now jots down most of his lectures or technical papers in his simplified system and gives them to her to transcribe. Usually, instead of dictating a letter, he will do the shorthand work himself and hand his notes to his stenographer.

Once you learn this system you will never forget it, he declares. "It is

## The Tailor Made Man

In certain countries of Europe it has long been the practice to design uniforms that make their wearers both bulky and ferocious to behold. Germany in her prime knew full well the art of dressing her officers to the best advantage. But none did more to enhance the appearance of the officers than the old Russian Government.

The mere fact that a man is an officer does not make him an Apollo, Hercules, or Sandow. There are other qualifications than mere weight, so to speak. Yet all human kind instinctly

looks up to the powerful and handsome man, hence the officer with a fine physique is considerably ahead of the game at the onset. All Russian officers enjoyed a fine physique, at least as far as appearances went. The secret was to be found in the tailoring shops where their uniforms were made with consummate skill and fastidious care. Indeed, those uniforms were a veritable engineering undertaking, for the contour of each Russian officer had to be corrected by due measures, just as the contour of old Mother Earth is altered by digging and filling at the bidding of the engineer.

All Russian officers had wonderful chests—chests such as we envy when viewing the man who demonstrates

Czar Nicholas of Russia probably had a fine physique, anyway he had a fine tailor, who placed between the former ruler of all the Russias and his people many poise-giving thicknesses of padding, canvas and hard-baked glue

some new exercising device guaranteed to convert us into physical dreadnoughts in a few weeks' time. Those chests were simply padding, nothing more. Five thicknesses of canvas, with interspacings of heavy glue, were sewn together to form a handsome chest some three-quarters of an inch thick. Few if any of the men could fill the interior contour of such a chest, but what did it matter? Once placed under the handsome uniform, with its rows of cleverly placed buttons to accentuate the full chest, the breast-plate more than made good.

And the Russian camouflage did not end with fine chests. Bowed legs were corrected by the use of heavier material on one side of each leg than on the other. Sloping shoulders were built up by means of shoulder pads—twenty thicknesses in dire instances. Giraffe-like necks were reduced by raising the shoulder level. And so it went.

Clothes can be made to say almost anything. In fact, clothes are a man's show window; they sell a man long before one engages in conversation with him. That is why the engineer wears conservative clothes, the stockbroker and theatrical man checked suits, the minister his drab garment.

London Times

The perfection of a monoplane that, thanks to a new wing of great lifting capacity, will carry a four-ton cargo has been announced by the English designers of the torpedoplane. The new plane will carry its cargo in special "cartridges" or containers packed in the hull

## A Freight Train That Flies

The final tests have just been completed in England for a four-ton freight plane with a special form of weight-lifting wing on which its inventor has been working for nine years, according to the *London Times*.

The new wing, which is strikingly bird-like in appearance, with thick center sections and tapering at its ends, has been shown by carefully checked experiments to give 35 per cent more actual lift than any normal weight-carrying plane such as is at present in regular use.

The wing is to be employed, not in high-speed passenger flying, but for the carriage of goods in bulk at an average cruising speed of seventy-two miles an hour. To this end a big monoplane is to be built, which will be known as the "four-ton flying tramp." This machine will have a roomy hull containing as motive power two 450-horsepower engines, either of which will be sufficient, when running alone, to keep the machine in flight. Above the hull, which will be ship-built, will be one widespread sustaining plane on the new principle, built of mahogany planking and so strong that it will not require any external bracing or support.

In the engine-room will be a mechanic constantly in charge of the two motors, while the control of the machine will be effected by a pilot forward in the nose of the fuselage.

An extremely interesting cargo-carrying device is to be employed. The whole front section of the machine, including the pilot's compartment, is hinged so that it can be swung open, and the four tons of goods which the monoplane will carry are to be packed in special "cartridges," or containers, which will slide into a space provided for them in the hull. When these "cartridges," loaded with goods and carefully balanced, have been slipped into the chamber, the front of the machine is swung back and fastened. This will mean that, on the arrival of the monoplane at any airport, these "cartridges" can be brought up ready loaded and inserted in the machine so quickly that the whole operation of loading will be carried out in the time taken by the machine to replenish its fuel tanks. It is intended that cargo containers, ready for filling, should be distributed for use at the various European airports.

It is proposed that a fleet of these big cargo-carrying monoplanes should "tramp" Europe by air in the same way that a tramp steamer operates,

visiting the airports and taking up a load for any other port to which sufficient inducements can be offered the pilot to fly.

The commercial advantages obtained from the new wing, which not only lifts big loads but does so with a surprisingly small amount of "drift," or resistance to its own passage thru the air, will, it is stated, enable a four-ton load to be carried several hundred miles—with all the time-saving implied as compared with land or sea transport—at rates which will amount to only a few pence a pound.

Ex-Premier Caillaux of France has been forbidden to go hunting on his country estate on the ground that, since a court deprived him of his civil rights for communicating with the enemy during the war, he cannot legally apply for a gun license.

## Gas From Straw

A gas which is obtained by the destructive distillation of wheat, oat, and rye straws is now being produced upon a small scale at the experimental farm of the United States Department of Agriculture at Arlington, Virginia. Altho an automobile has been operated with the new combustible, and it has been used for illuminating purposes as well as for cooking, the possibilities of straw gas are not yet fully determined, the department says. Work to determine the exact commercial value of the

gas can be carried on but slowly owing to the limited funds available at present, but it is planned to do much that will determine the quantity and nature of the gas that may be obtained from wheat, oat, barley, rye, and rice straws, and from cornstalks, corncobs, and other vegetable matter usually burned as waste.

If the results of these tests warrant further investigation the experiments will be extended to the problem of plant equipment for producing the gas on a scale sufficient to allow the farmer to supply light and heat for his house, power for stationary engines, and, pos-

sibly, for his tractor from a small individual outfit. If a suitable unit can be constructed so that the farmer's initial cost will be small it seems likely that the straw gas may have a certain economic value in the sections of the country where the raw material from which the gas is made is now considered as waste and burned or left to rot on the fields. In some sections of the country the straw is used as fertilizer, but in the West and North-west there is an

unlimited supply of the material available for conversion into light and fuel for the farm home.

While it has been possible to operate an automobile with straw gas and it is known that fifty pounds of straw will produce about 300 cubic feet of gas—an amount sufficient to drive a light roadster fifteen miles—the problem of reducing the gas to liquid form or condensing it sufficiently to allow it to be carried conveniently is an essential one that must be solved before straw gas can be considered as a possible motor fuel. This will be another of the tasks taken up by the engineers in the development division.

### Cheaper Gas for Your Airship

In these days of rising prices it is good to learn that science has succeeded in making one or two things cheaper. Until 1918 the gas helium, now used on a commercial scale in balloons and airships, was prepared at a cost of nearly \$2,000 a cubic foot. Helium was first discovered in the sun, then detected as a constituent gas of the atmosphere in the proportion of one part in a quarter million, then found in association with the radioactive minerals. Certain natural gases in Texas and other states were found to contain as much as one per cent of helium. But the isolation of the gas from whatever source was always a long, difficult and costly process.

During the Great War the demand for helium increased with the development of military aviation. Hydrogen was both lighter and cheaper, but it had the disadvantage of burning in air. Had the Germans been able to fill their Zeppelins with helium when they bombarded London the midnight sky would not have been illuminated with blazing airships hurtling earthwards to their doom, for no way has yet been discovered to make helium burn or explode. The United States Government undertook experiments on the wholesale preparation of helium during the war and by the end of 1918 was making 8000 cubic feet of helium a day.

A large plant is being completed at Fort Worth, Texas.

### I Cleaned the Ears of the Prodigal Son

The itemized bill of an artist employed in repairing the properties of an old church in Belgium, according to the *British Architect*, included, among other items, the following:

Corrected ten Commandments.

Embellished Pontius Pilate and put new ribbon in his bonnet.

Replumed and gilded the left wing of the Guardian Angel.

Washed the servant of the High Priest and put carmine on his cheek.

Revived the flames of Hell, put a new tail on the Devil, mended his left hoof and did several jobs for the damned.

Put earrings in the ears of Sarah.

Put new stone in David's sling, enlarged the head of Goliath and extended his legs.

Mended the shirt of the Prodigal Son and cleaned his ears.

## BON-OPTO SHARPENS VISION

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

## The Way to Peace and Progress

(Continued from page 4)

bered when Senator Harding and myself and those associated with us shall have passed from the scene of action. I could not do less in the way of service for the young men of our country than call their attention to this fact. Does it need the help of illustration from our past political history—always a safe guide for those who would chart accurately and surely their journey upon the doubtful seas of the future? Let us assume that it does. I shall ask then what has become of the men associated with the famous Foster in "frying the fat," and with Dudley and his "blocks of five," and even of those who were associated with Mark Hanna in the days of the corruption of 1896?

I have steadfastly believed that few young men will join with the "get-the-money" idea that has been made a part of the "salesmanship" campaign of the present year. My vision of a national campaign does not comprehend presentation of great moral issues upon such a basis. I do not subscribe to the idea of "selling a candidate." I believe in converting voters to the principles and policies enunciated by the platform and the candidates, but this is not commercial salesmanship. I use the words of the official bulletins of the headquarters of Senator Harding himself in this statement. They have exhibited a purpose of "selling the candidate," and we are quite content to let it rest there.

It is interesting to note that the two policies were charted long ago in respect to the use of money. When the notification address was made it contained the statement that there was no purpose to compete with dollars with the opposition. We could not have done this if we had wished, and we did not wish to do it.

At this time it is our thought that the case, so far as the management of Senator Harding's campaign is concerned, has been made. The men responsible for the collection of the huge funds have been disclosed in their true light. The scene shifts, and no effort to place any odium upon the management of the campaign of Mr. Roosevelt and myself will be possible. We have challenged and dared any revelations. Those persons who have in past years proclaimed their desertion of the old order—I refer to the Progressives who broke away from the corrupt machine—are now on trial. They have the facts. Will they sanction the completion of a Newberry campaign extended over all this United States?

The observations that have been made with respect to the use of huge corruption funds, whose obvious purpose is to purchase an "underhold on the government," bring us to yet another consideration. The times of stress with reference to world currents released by the great war are not yet at an end. During the next few years it will be necessary for the sober elements of the country to guide it straight in times of peril. We stand in awe of the terrors of life that have assumed form

in great empires across the water, and we wonder how it will be with America in the future years.

Improper tendencies have been conquered in this country not by the bayonet, not by suppression of free speech and free press, not by methods of the kaisers and czars, but by the wholesome force of public opinion. The troubles of recent years furnish the true index to what must be the mode of settlement hereafter if the results are to be lasting and beneficent. But there is at bottom one fundamental. There must be trust in the government. It must appeal to the ordinary man, to the man who is not represented in lists of contributors of swollen campaign funds. The Bolshevik and the communist, preaching their doctrines on the streets and in the highways, must have no reason to point to a President placed there by the organized power of money.

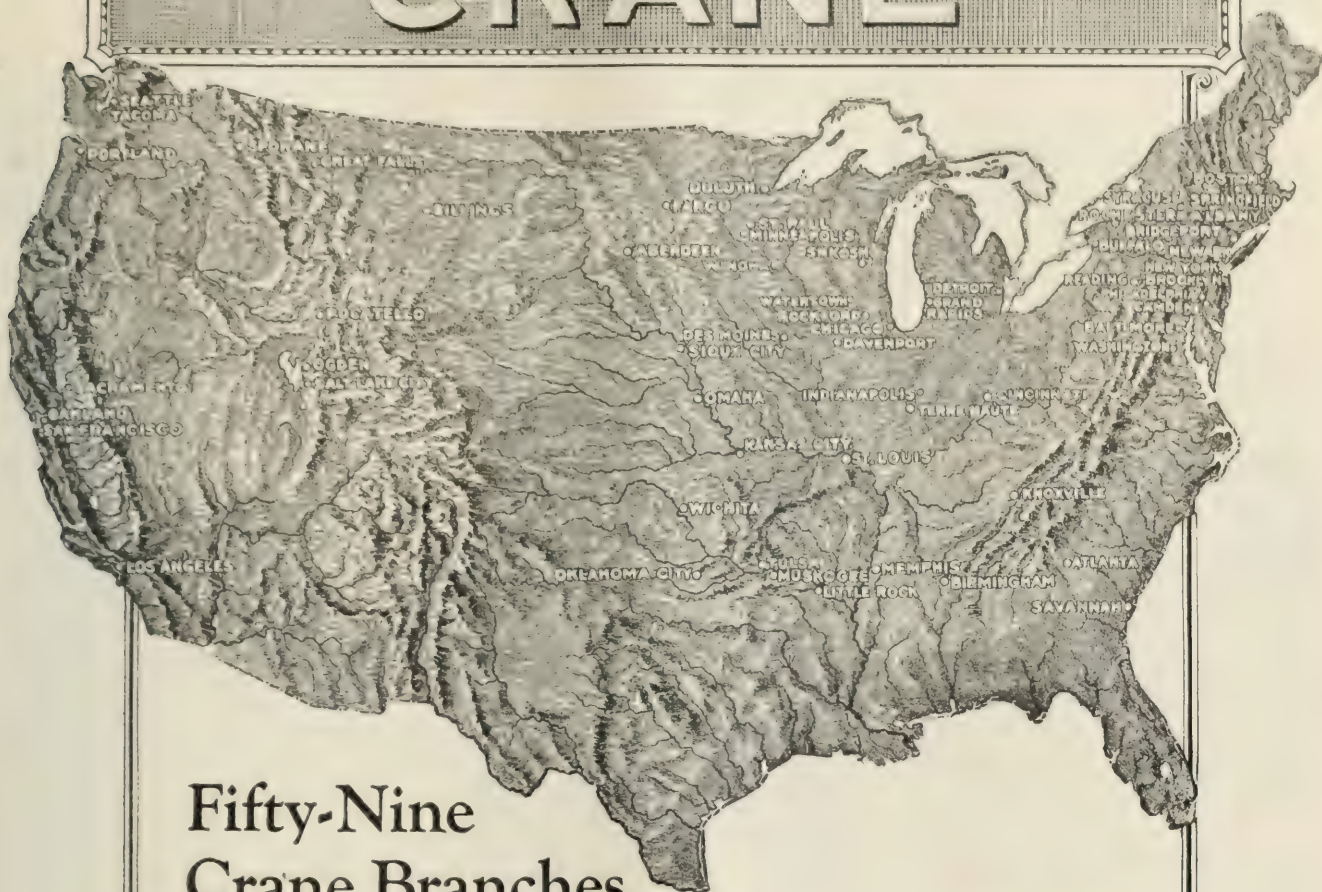

That is one of the real issues of the campaign. It may be one of the overshadowing issues. If the power of the campaign fund, employed by Republican National Chairman Will H. Hays, to arouse racial groups and to poison the sources of information, no less than to debauch a minority of the electorate to bring about the results he seeks, is established, there will be lost to the defense of our institutions that great body of liberal opinion which seeks to vindicate right and which is willing to make any sacrifice, as it did in the late war. But if reaction, by the grace of millions upon millions, shall triumph, there is no doubt of a wave of radicalism which will place our very institutions in danger. That is the real reason for my earnestness in speaking of the danger that has confronted this fair land.

A stain upon a commission to office in this year cannot be wiped out. I had hoped that when the first pronouncement was made on this subject that its lessons would be taken seriously to heart, that the evil things would be repudiated, and that in truth and candor other issues might not be clouded by this shameless attempt at debauchery. I was unwilling to believe that when exposition had been made there would be any doubt of the attitude of the Republican candidate, and I was shocked when I found that Senator Harding was willing to go into history as a candidate in whose behalf had been collected enormous slush funds. It did not seem possible, after the triumph of our moral precepts on the battlefields of France, that these things could be. My humiliation as a citizen was complete.

Admittedly, the manner of dealing with expenditures in campaigns for the presidency is a hard one. Admittedly, the total of expenditures in campaigns will be large if the cause is to be carried to every part of the vast United States as we have purposed to do. But a limit must be fixed, and that limit must be rigid, and stern legal, as well as moral, punishment must be visited on those who violate it. I cannot be-

lieve that merely because the recent Congress failed of its duty in this respect—when it had the humiliating experience preceding the Chicago convention before it—there is no moral obligation resting on those who participate in campaigns. They know the difference between right and wrong. They know that they sought secrecy because they feared honest publicity, and they know in their own hearts the reason for their conduct.

The League and the corruption issues give a foundation for the comparison of the two candidacies. The Democratic

party has been willing, in Lincoln's words, "to finish the great tasks we are in," while the opposition is one of equivocation and evasion. The Democracy is ready to tell the source and amount of its funds and what will be done with them. I wish as much could be said of the opposition. The Democratic candidates are ready to proceed to the settlement of other issues untrammelled by money arrangements and engagements. One thinks in terms of tomorrow while our adversaries properly go back to the days of yesterday.

*Columbus, Ohio*

## Our Most American City

(Continued from page 7)

none of the note of hostility to all mankind so common to the street car conductor. When I was told that the street car men of Philadelphia had aided the company by lending their own savings and had decided not to press a claim for additional wages until the company's finances were in better condition, I was quite ready to believe such an impossible story. And I learned later that the story is true.

This uncertain thing we call Americanism means something different to nearly all of us. At the risk of being severely criticized I am going to try to tell what I think it is. Back of all Americanism is an understanding of the fact that this is an enormous, rich, less than half developed continent, not bound to any set of traditions so firmly that the majority is not always seeking truth, lead where it will. The man who realizes that those two statements about our country are true cannot have any fear in his heart. Above everything else the fear of starvation cannot come into the heart of the man who has what I call Americanism. He knows something about this country. The fear of starvation is what makes persons do sneaking, dishonest, acts for gain. The real American knows that he can always make enough to support himself in comfort and for him the choice between honesty and dishonesty is one of conscience. Some of the Europeans come to us from places where starvation is not at all uncommon and where the possession of a few hoarded pieces of silver or gold may make the difference between liberty and actual imprisonment, abuse, humiliation or hunger. Such persons must have years to learn that no such pressure exists here except in the imagination.

Our country makes a vicarious atonement for the sins of the world as well as its own sins. The abused serf is always a hard taskmaster. It is for America to make taskmasters of the serfs of the earth and then suffer under them.

There is no question about a one-price system of retail sales being excellent. But it must rest upon a foundation of business honesty. Our efforts at a one-price system are continually hampered by the operations of men with European points of view who skulk under the protection of Ameri-

can standards of honesty and try to sell for all the traffic will stand—and who manage to sell only because other and better men have established the belief in the minds of millions of Americans that business men are about 99 per cent honest.

Left to themselves the business men of this country would long ago have established as an axiom of business the principle, "Let the seller beware" instead of "Caveat Emptor." But the European point of view is always at issue with such ideas, not because our people are better than Europeans, but because our people have had a better opportunity than Europeans to carry into effect some of the treasured ideals of humanity.

All along the Atlantic seacoast this conflict between the American idea and the European idea is to be seen. In some places, the European idea has dominated in important lines of trade. But in Philadelphia it seemed to me that the Americans still hold the dominant position and make their viewpoint the accepted highest standard of business. It was a surprise to me to find Philadelphia so much more American than Boston. The old original stock which deals in ancestors is to be found in Boston, but one has to look for it and bring letters of introduction. In Philadelphia the man you meet on the street is American. The crowds are American. I cannot quite recover from the comparison between Willow Grove park and Coney Island—the one so clean and happy, the other littered with greasy papers and greasy looking citizens, and vile places to eat. There is one sin that would damn Coney Island in the estimation of any Southerner. Over the tubs of boiling ears of green corn they have signs which read: "Hot Corns." The idea came into my mind that the men who put up those signs did not know whether corn grows on a vine or a tree. If he doesn't know Indian corn he is no American and if he doesn't know what a roasting ear is he ought not to be selling them. Somehow the old Texas mob spirit got the better of me. I wanted to scoop the ears of corn out of that boiling water to make room for the men who were selling it. Coney Island is a horrible place. Early in the summer I went there expecting to swim. I rode for miles along the beach looking at the swarming hun-

dreds of thousands in the water. I had never seen more than a hundred persons in swimming at one time before in my life. In spite of reason and common sense the idea came into my head that the Atlantic ocean was not a large enough bathtub for all those people and that I would wait until the water is changed before I go in. I love swimming more than any other sport or exercise, but I have not been in the Atlantic. I think I'll wait until I get back to the crystal clear running water of the Comal or Guadalupe or Colorado rivers in Texas.

Philadelphia is the only city I have seen in the East that impressed me as a desirable place for a home. By home I mean a house with some ground around it, a lawn, some vegetables and a few rose bushes. New York City is one vast office where the population theoretically lives to work, tho I find most of them take plenty of time for play. Philadelphia impressed me as a city where people work to live. I saw them mowing the lawn and washing the funny little porches and the stone or brick steps. I think I'll move to Philadelphia some day and build a real house of yellow pine lumber and paint it white with green trimmings around the windows. Perhaps those people would appreciate the suggestion and realize that they have been wrong on the subject of house construction ever since William Penn established himself in business there. And, again, it is possible they have a law against yellow pine lumber houses and shingle roofs. People up this way have a deep affection for brick and stone and steel. If I could take them to Texas for a trip I think I could show them that their favorite building materials are all right for jails and courthouses, but have distinct limitations in the residence districts.

New York City

"Look here, Jason, why don't you pay me that \$20 you owe me?"

"It's your own fault, old man. Last time I paid you some money I owed you, you said you'd forgotten all about it."—Life.

He said to her over the telephone,

After his weekly visit:

"Dearest, will you marry me?"

"Why, yes," she said, "who is it?"  
—Princeton Tiger.

Lou Guernsey was defending one party to an auto collision and was cross-examining a lady witness who was undeniably pretty.

"Have you any idea what caused this accident?" roared Lou.

"I think so," said the fair witness, sweetly.

"Then tell the court how it happened," thundered Lou, eager for facts.

"Must I tell the truth?"

"You have sworn to do so."

"Well, sir, I was standing on the corner and that gentleman turned to look at something and ran into the other machine."

"Ah," divined the astute Guernsey. "He turned to look at you. That makes you an accessory before the fact, madame."

"I—I think it was the—the accessories he was looking at," murmured the witness.  
—Argonaut.

## A Number of Things

By Edwin E. Slosson

One of the most interesting things to a traveler is to observe local idioms. When I was in Los Angeles recently I was told by a resident that "We had a few slight fires last week but they did not shake up the city much."

\*\*\*

The National Association of Masters of Dancing have decreed that the fashionable dances this winter will be the Cat Step, the Camel Walk and the Fox Trot. This leaves over for next year the Kangaroo Leap, the Wombat Waddle and the Worm Squirm.

\*\*\*

Probably many of our boys overseas felt like the Lancashire soldier in the Palestine campaign who wrote home:

Dear Mother—I am now in Bethlehem, where Christ was born: but I wish I was in Wigan, where I was born.

\*\*\*

The task of educating the people in the fundamentals of food science is not an easy one. A lecturer who had given a course in the chemistry of cooking to a class of would-be teachers put into the examination the question, "Define calorie," and received from one of the students this remarkable answer: "The calorie is the unit of value to raise a pound of protein a centigrade of fuel or a gram of heat."

\*\*\*

The tactics of the Sinn Fein in maintaining a government of their own independent of the British reminds me of what I used to hear as a boy of the Free Soil struggle in Kansas. For three years there were two governments in the territory; the official proslavery government of Lecompton imposed upon the people by the Border Ruffians from Missouri and supported by the power of the United States and the real Free State government of Topeka elected by the settlers. At their organization in 1855 the Free State men resolved:

That the body of men who for the last two months have been passing laws for the people of our territory moved, counseled and dictated to by the demagogues of Missouri, are to us a foreign body, representing only the lawless invaders who elected them, and not the people of the territory—that we repudiate their actions as the monstrous consummation of an act of violence, usurpation and fraud, unparalleled in the history of the Union and worthy only of men unfitted for the duties and regardless of the responsibilities of republicans.

That we owe no allegiance or obedience to the tyrannical enactments of this spurious legislature—that their laws have no validity or binding force upon the people of Kansas, and that every freeman among us is at full liberty, consistently with his obligations as a citizen and a man, to obey and resist them if he chooses so to do.

Most of the freemen did choose so to do. They settled their disputes in their own courts. They maintained order thru their own local organizations and police. They ran their own schools. They paid no taxes to the Lecompton government. They refused to appeal

to the officials for protection even when their property was stolen or their persons attacked—not so great a sacrifice as it seems for they could not have obtained justice anyway from a proslavery court. In short they adopted a policy of passive resistance, simply ignoring so far as possible the authorized government.

They held their own elections and refused to vote at any other. They adopted a constitution, held a legislature, established state officers and sent a delegate to Congress who of course was not received. The "Executive Committee of the State of Kansas" at Topeka paid its expenses by issuing paper money or scrip with interest at 10 per cent "for the payment of which the faith of the state is pledged." But it never was redeemed and doubtless packages of it could now be found in the garrets of the old abolition families of New England. As a crowning act of sovereignty and the climax of provocativeness, Jim Lane, chairman of the executive committee of the revolutionary government, issued a Thanksgiving Day proclamation, which in defiance of the governor appointed by the president, set aside December 25 as a day of public praise and prayer for protection against "the most galling and debasing slavery." Jim Lane was not, I believe, a praying man, but he certainly knew the value of prayer.

Governor after governor was sent out from Washington "with full power," but when he got to Kansas he found that he had no power. Nobody paid any attention to his proclamations so he threw up his job in disgust after a few months. The Topeka legislature was dispersed by United States troops. Robinson, the Free State governor, was imprisoned for high treason. Lawrence, "the hell hole of abolition," was raided and sacked by a gang of drunken border ruffians led by a United States marshal.

But the Free State men stuck to their policy of non-resistance to federal authority and in the end they won out. The Republican party came forward to champion free Kansas and the slavery men, beaten at the polls, resorted to war and again were beaten.

I do not mean to carry the comparison of the Free Staters with the Sinn Feiners farther than their organization of a government within a government. Otherwise their aims and methods were widely different. The Free State Kansans would have been satisfied with the most moderate of the Home Rule schemes that have been offered Ireland and they never resorted to assassination of officials or destruction of public property. If the Irish would dispense with violence and confine themselves to simply ignoring the British Government as the Kansans did the bogus legislature they would be much more likely to win their cause as well as the respect of the outside world.

### LILIUM REGALE

By far the most popular lily that has been introduced since the Auratum. It will thrive on more kinds of soil and endure more varied conditions than any other lily we have tried. Ask for our catalogue offering many other varieties of lilies and cold weather plants. Our Autumn Supplement gives an illustration of our Regal lilies in bloom.

## The Shop Committee in Control

(Continued from page 6)

put it at a disadvantage with competitors. They instruct the chairman also to call a secret meeting of that department and report to that meeting the schedule of wages prepared by the investigating committee.

Departmental meetings have their place in this scheme of government. A department may, if it wishes, call a meeting and try to settle a question directly with the management. It is at these meetings also that new members are admitted to the association, for, at the present stage of development, any department can deny an employee's application, and this obliges the company to discharge that employee. The shop committee also calls departmental meetings as recited above to pass judgment on its proposals, before the committee presents them to the company.

Up to October, 1919, the shop committee was merely an investigating committee. It had no power to decide a dispute. It reported all cases to the Joint Council, which alone had power to decide. The Joint Council represents equally the company and the employees. The shop committee represents only the employees. But it was found that the Joint Council was actually approving every report and recommendation of the shop committee—with one exception. So the next step was taken. If the Joint Council nearly always approves, why not give the shop committee power to decide at once and let the Joint Council decide only when either side to a dispute appeals to the Joint Council?

This change was made. The Joint Council is now a court of appeals. The shop committee of employees is the body that makes final decision, unless there is an appeal.

Along with it, another change was made. The employee members of the Joint Council had been elected by direct vote of all employees. Now they are elected by the shop committee, and the chairman of the Joint Council must come from the employees' side. So far, the Joint Council has never failed to reach a unanimous decision, except once. If it divides equally, then the case goes to arbitration, but this has not happened as yet.

The Joint Council is at times even more considerate of the individual employee than the shop committee. A girl was discharged and the discharge was approved by the chairman and the shop committee. The girl appealed to the Joint Council. The testimony showed that the foreman had given her a task that she was not performing according to directions. He ordered her to do what he told her "or get out." She got mad and balked. Dismissal followed. The girl admitted to the council that her actions were wrong, but insisted that the foreman had threatened her and was not a gentleman. Both sides argued the case. The council discussed it at length. It was a choice between insubordination

and gentility. The council decided to reinstate the girl in her old position and to advise the foreman to be a gentleman.

We come to the last chapter up to date.

Karl has resigned his membership in the United Shoe Workers' Union. That is about what the trade unions and the American Federation of Labor have said would happen. The "shop employees' union," they say, is started to undermine and oust the trade union.

But the matter is more complex than that.

Five years ago Karl was the militant leader of the militant United Shoe Workers, a union which had seceded from the conservative Boot and Shoe Workers of the American Federation of Labor. The Boot and Shoe Workers' Union always believed in arbitration. They had a union label. The shoe business is highly competitive. The union did not control all of the shops. The universal rule in the business is piece-work. Hence the conservative union did not try to force piece-rates above the rates paid by non-union shops. What it offered to its members was practically the same piece-rates as in non-union shops, but with this advantage, that the union label and the arbitration agreement would give them steady employment. They could increase their earnings for the year, altho they were paid the same rates per piece as non-unionists.

This was partly why the militant union seceded from the conservative union. It wanted to force up the piece-rates by direct action without the label and without arbitration.

Karl led them in the fight. It failed. Karl now is leading a "shop employees' union." His fellow-workers trust him, for they know the sacrifices he has made in behalf of labor.

He frequently prevents a fellow-worker from taking hasty and ill-advised action.

In March, 1919, they reduced the hours to forty-six.

They have put in a little rest-period of ten minutes every forenoon.

They believe they are earning higher wages for shorter hours than employees in competing factories.

The shop union is becoming gradually an employees' union, with the consent of the company. Competition still continues to keep down the piece-rates, with the consent of the employees' union.

What ought Karl to do? Should he stick to the militant Shoe Workers' Union that seceded?

Should he join the conservative Boot and Shoe Workers' Union and get his company to adopt the label?

Should he stick to the Nunn, Bush & Weldon Coöperative Association and gradually take over government by employees as fast as they show themselves competent to govern?

## How To Use The Independent in the Teaching of English

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 311 Sixth Avenue, New York.

## What Do You Know?

These hundred questions are a fair test of general information, one that you ought to pass *magna cum laude* if you keep properly posted on current events. When this test was given to the boys and girls in the Germantown Friends School of Philadelphia one boy in the senior class got 89, and one girl 88.5. The average grade of the senior boys was 73.2. Try yourself out this evening and see whether you're fit to be a high school senior! The answers will be published next week.

### I

Name: 1. The last four Presidents of the United States. 2. The United States Commissioner of Education. 3. The United States Ambassador to Italy. 4. The Secretary of State. 5. The United States Attorney General. 6. The leader of the Republican party in the Senate. 7. The Governor of Massachusetts. 8. The President of France. 9. The king and queen who visited this country last autumn. 10. The man most talked of for next President, whose party has just been announced.

### II

What special product or manufacture do you associate with: 11. Ceylon. 12. Waltham. 13. Bethlehem, Pennsylvania. 14. Madeira. 15. Grand Rapids. 16. Detroit.

### III

In what games used? 17. pawn; puck. 18. putter; pocket. 19. plate; pony. For what purpose used? 20. bodkin; chisel. 21. skewer; silo. 22. auger; last.

### IV

What is it, or where is it? 23. Stone of Scone. 24. Blarney Stone. 25. Stonehenge. 26. Little Rock. 27. Purock. 28. Plymouth Rock.

### V

What events associated with these ships? 29. "Half Moon." 30. "George Washington." 31. "Deutschland." 32. "Monitor." 33. "Buford." 34. "Titanic."

### VI

From the following list fill the blanks below: Scapa Flow, Appomattox C. H., Gettysburg, Land's End, Louisiana, Alcock, Leacock, Columbus, Sandy Hook, Yorktown, Balboa, Africa, Alaska, Mt. Vernon, Sparta.

35. An hour after passing — we sighted the Statue of Liberty. 36. Scipio carried the war into —. 37. — and Brown flew over the Atlantic. 38. Lee surrendered at —. 39. Russia sold — to the United States. 40. Washington died at —. 41. — discovered the Pacific.

### VII

In what way distinguished? 42. Sir William Osler. 43. John Drinkwater. 44. Daisy Ashford. 45. Sir Oliver Lodge. 46. Edgar Fahs Smith. 47. Amy Lowell. 48. Robert Mantell. 49. Mrs. Malaprop. 50. Robert E. Peary. 51. Gabriel D'Annunzio.

### VIII

Name a woman: 52. Who is president of the International Woman's Suffrage Alliance. 53. Who is a member of the House of Commons. 54. Who has twice received the Nobel prize. 55. Who was the last Queen of England to reign in her own right. 56. Who is called the deliverer of France.

### IX

Give the real names of the authors whose pen-names follow: 57. Poor Richard. 58.

Mark Twain. 59. George Elliot. 60. Lewis Carroll. 61. Diedrich Knickerbocker. 62. Boz.

### X

Continue these series by giving the next three numbers in each case: 63. 21, 27, 33, 39, 45, — — —. 64. 1, 4, 9, 16, 25, 36, — — —.

### XI

67. Name the capitals of Poland and of Soviet Russia. 68. What is the 18th amendment to the constitution? 69. Why are there 29 days in February once every four years? 70. What new baseball rule affects the pitcher? 71. Into what body of water does the Danube flow? The Volga? 72. Into what does the Nile flow? The Colorado? 73. Which of these countries are monarchies: China, France, Germany, Spain, Russia, Italy, Japan, Poland? 74. Group these words to make the names of five railroads: Baltimore, Canadian, Central, Delaware, Hartford, Lackawana, New Haven, New York, New York, Ohio, Pacific, Western. 75. Give commoner names for philatelist; biped. 76. Give commoner names for cinematograph; pedagogue. 77. What action has the Senate taken on the Treaty of Peace?

### XII

Copy the following, filling the blank spaces with the right words. The first five incomplete sentences are proverbs, familiar sayings, or quotations: 78. Brevity is the soul of — (France, loquacity, wit, perdition). 79. Of making many — there is no — (Enemies, books, accounts, end, beginning, automobiles). 80. Where there is a — there is a — (Smoke, idea, way, sidewalk, mad-dog, victory, failure, shall, will). 81. What is sauce for the goose is — for the — (Catsup, sauce, sugar, Greek, gander, gender, consumer). 82. Without regard to race, color, or previous condition of — (Lawlessness, ingratitude, servitude, sanity, impecuniosity). 83. We put the fire out with — (Tar, oil, confetti, coal-gas, palliatives, pyrene). 84. They always make coffee in a — (Percolator, crucible, hiatus, vacuum, perambulator). 85. The government stopped the labor strike by — (Referendum, injunction, equal-suffrage, dynamite, rotation).

### XIII

Read the following list, and answer the questions below. More words are given than you are to use. Albatross, barouche, clavicle, cowslip, cresset, dingo, minaret, oriel, pillory, python, rodent, spinnet, tarantula, upas. 86. Which is a flower? 87. Which is a snake? 88. Which is a bone? 89. Which is a wild dog? 90. Which is a slender tower? 91. Which is a vehicle? 92. Which is a window? 93. Which is a musical instrument? 94. Which is a bird? 95. Which is an animal that gnaws?

### XIV

Identify these quotations by author or book: 96. East is east and west is west. 97. Out of the eater came forth meat, And out of the strong came forth sweetness. 98. His wife and children, perceiving it, began to cry after him to return; but the man put his fingers in his ears and ran on, crying, "Life! Life! Eternal Life!" 99. And who will bring white peace, That he may sleep upon his hill again? 100. All's Well that Ends Well.

## Remaking Men

(Continued from page 9)

been done by any other government agency doing a similar service.

To reach as soon as possible the men who are yet in Public Health Service hospitals or in private institutions as patients of the Bureau of War Risk Insurance, and to insure continuous training, the board is giving instruction in more than sixty hospitals. In twelve communities where there are grouped a number of men who for some reason or another cannot take advantage of other opportunities, training centers have been established. In such hospitals and centers prevocational courses in English and other academic subjects, in commercial branches, and elementary mechanical training are given to more than 3200 men. This service is being extended as the needs require.

Of the appropriations made for the work, \$34,700,000 had been expended from its inception up to June 30, 1920. Of this nearly \$24,000,000 was paid to the men for actual maintenance allowances and about \$3,700,000 more paid for tuition, books and supplies, and necessary travel of the disabled men.

The Rehabilitation Act is more liberal in its provisions, and is more liberally interpreted than that of any other country. The nearest approach to that of the United States is that of Canada, where on July 31, 1920, 36,850 (as compared to more than 50,000 in the United States at that date) disabled men had entered training. In length of training period, in diversity of opportunity, in maintenance allowances, and in other ways the comparison is even more favorable to the United States.

It should be a source of gratification to the American people to know that no larger percentage of men abandon training that ordinarily drop out of college before the completion of the year, that over half of the discontinuances are because of illness, usually a recurrence of the war disability, that the relatively small number of completions is due to the desire to give adequate rather than incomplete training, and that an almost negligible percentage of the men are not making an earnest endeavor to profit to the fullest extent.

The whole rehabilitation program challenges the best thought and the best endeavors of America. Those who can see but isolated cases, or who do not appreciate the magnitude or the complexity of the work, or who have given little careful consideration to its many phases, may criticize. But the Federal Board welcomes the coöperation and suggestions of all those who are interested in the welfare of the disabled men, that thru common counsel and close coöperation of individuals and organizations, public and private, the Government may insure to those who came back with probably little more than actual life remaining, that they may live that life "more abundantly."

Washington, D. C.

## Ten years without a corn

Countless people boast that record now.

Years ago they started using Blue-jay. Never since has a corn pained twice. And never has a corn stayed a week.

You can quickly prove that corns are needless. Millions have already done it.

Think what it means.

No more paring, no more pain, no more unsightly pads. Dainty shoes without unhappy hours.

Apply a touch of liquid Blue-jay or a Blue-jay plaster.

The corn pain will end. And soon the whole corn will loosen and come out.

The action is gentle but sure. Blue-jay is the scientific method, created by this world-famed laboratory.

It is not like the methods which are harsh and crude.

Try Blue-jay on one corn. Buy it tonight from your druggist. Live the rest of your life without corns.

**Journalism As An Aid To History Teaching**

By EDWIN E. SLOSSON, Ph.D

Literary Editor of The Independent

Associate in the School of Journalism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers.—Write to The Independent, 311 Sixth Avenue, New York.

**How to Study This Number**

## THE INDEPENDENT LESSON PLANS

## English, Literature and Composition

## History, Civics and Economics

**I. The Way to Peace and Prosperity.**

1. What does the author consider the "real issue" before the American people? What principles governing clearness does he use in describing the situation? Point out the topic sentence in each of the first five paragraphs. What is its position in the paragraph? Does the author put his strongest sentence at the end of the paragraph; if so, what effect does he obtain by doing so?
2. Suppose you were to debate the question, "Shall the United States enter the League of Nations." List the arguments presented by Governor Cox as well as the additional one you find in the editorial entitled, "The Company We Keep." Do you believe that the United States should, or should not, join the League? Write a short paragraph setting forth your reasons.

**II. Remaking Men.**

1. Give an outline of this article, starting with the first sentence, "To help the man disabled in the military service of the United States, etc., is the purpose of the Vocational Rehabilitation Act passed by Congress in June, 1918." How does the work of the Federal Board for Vocational Education differ from that of the War Risk Insurance Bureau and the Public Health Service? Write a short paragraph on each.
2. Define the following words: maintenance, dependent, compensation, handicap, disability, rehabilitation. What part does each of these words play in the development of the article? Write a sentence, using each word.

**III. Our Most American City.**

1. Why does Mr. Crowell believe Philadelphia to be "our most American city"? Do you agree with him? Write a comparison of Philadelphia as Mr. Crowell describes it and the community in which you live. What would you think Texas to be like, after reading Mr. Crowell's series of articles?
2. Does he employ reiteration, assonance, alliteration, contrast, variety in this article? How does he develop his idea? Would you call the article an exposition, or a description, or both? Is he more concerned with interest or with clearness? How does this article differ from the one by Governor Cox? Which do you like better, and why?

**IV. The Story of the Week.**

1. Give a short lecture on the news of the week, presenting each topic briefly and clearly. This lecture should last not more than twenty minutes and be suitable for a group of people who meet every week in a club or classroom to discuss current events. Instead of having one person give the entire lecture it can be arranged like a relay race, with each topic assigned to a different person.
2. Explain with the use of the map the problem concerning the Aland Islands that was settled by the League of Nations.
3. Write a letter to a friend or for a small town newspaper telling the story of "the Wall Street massacre." You may assume that you can choose just one of the photographs on page 15 to send in illustration of your story. Give some reasons for making your choice.

**V. Campaign Slogans.**

1. What should be the qualifications of a good slogan? Should it have literary merit?
2. Invent the best campaign slogan that you can for one of the political parties. Give a short talk in which you show its publicity value.
3. Rewrite the sentences printed in small type, using the simplest words and style possible.

**VI. Sun Dogs.**

1. What means does Dr. Slosson use to make both interesting and clear a subject commonly considered abstruse and difficult to understand?
2. Explain to one of your schoolmates what is meant by the fourth dimension and show him why the mathematicians find it essential to their calculations.

**VII. An Old Philosopher's View of the League of Nations.**

1. To what class of verse does this poem belong? What is its purpose? What advantages has it that prose argument lacks?
2. Do you find points of comparison here with the "Biglow Papers"? Are the "Biglow Papers" primarily famous for their literary or their political appeal?

**I. Democratic National Policy—The Way to Peace and Progress.**

1. State the issue between "progressiveness" and "reaction" as it looks to Governor Cox. What particular tendencies and policies are covered by those words as he uses them?
2. How does Governor Cox explain the outcry against the League of Nations? What elements of the opposition does he mention? Can you name any others?
3. Suppose that you were a reporter and were going to interview Governor Cox on the basis of this article. What questions would suggest themselves to you? What points would you like to have him develop more fully or explain more adequately?
4. Looking thru back numbers of The Independent and any other sources handy for you, what can you find out about the record and personality of Governor Cox? Combine into one mental picture this article and everything else you can find out about the candidate and think hard between now and November whether in your opinion he measures up to the Presidency or not. Remember to do the same with each of the other Presidential candidates when his article appears in The Independent.

**II. French Government—Resignation of Deschanel. The Bad Luck of French Presidents.**

1. Compare the position of the Presidents of the United States and of France with reference to (a) term of office, (b) method of election, (c) relation to the legislative branch of the Government, (d) relation to the cabinet (or ministry), (e) individual power.
2. Are there any features of the French constitution we could borrow with advantage?
3. What is the meaning of the phrase "the third Republic"? What changes of rule did France have between 1789 and 1871?

**III. Radicalism in America—The Wall Street Massacre. Reds Not to Be Amnestied. Voters Vindicate Socialists. The Hard Coal Strike.**

1. How do you distinguish the following: "anarchist," "communist," "Socialist"?
2. Do you think Attorney General Palmer justified in refusing pardon to Debs? Do you think the New York Assembly justified in refusing membership to Socialists? Give reasons for your "yes" or "no."
3. What remedies would you suggest for the revolutionary spirit in this country?

**IV. Labor in Business Management—The Shop Committee in Control. Premier Giolitti's Policy. Soviet Shops in Italy. Nine Points of Law.**

1. Describe the organization and powers of the Coöperative Association in the Nunn, Bush & Weldon Shoe Company. What seem to be the elements of its success?
2. Compare this conservative experiment in management by the workers with the revolutionary experiments in this line now being attempted in Italy.

**V. The Government and the Soldier—Remaking Men.**

1. What departments, bureaus or other agencies of the Federal Government are mentioned in the course of this article? Explain briefly what is the function of each.
2. What has the Government accomplished on behalf of the wounded soldier?

**VI. What Is the League Doing?—The Company We Keep. League Settles Aland Islands Dispute.**

1. Is it true that the League of Nations has done nothing to prevent wars in Europe? What has Premier Branting of Sweden to say on this point?
2. If you were on the League of Nations Council, with the facts before you as given in the Story of the Week article, what decision would you render with respect to the Aland Islands dispute?

**VII. The Decline of Europe.**

1. What great civilizations of the past have disappeared? Do you agree that the civilization of modern Europe is in danger of the same decline and fall? Give reasons for your opinion.

**VIII. How Will the Farmer's Wife Vote?**

1. Imagine that you were running for President. Give an address to a farming community, stressing the issues most apt to interest your audience.

# The Independent

FOUNDED 1848

## Just a Word

Did you ever wonder why The Independent devotes so much of its space to The Story of the Week? We cannot, in the nature of things, quite compete with your daily paper in rapid news service, tho we come as near to doing so as the possibilities of weekly publication allow. Owing to the fact that many of our subscribers live far from New York and that the postal service is not all that perfection might demand, even the news which is hot out of the oven on the day we go to press may be a few days old when it reaches you.

Well, we have three reasons. In the first place a weekly periodical of scholarly traditions can bring a sense of perspective into the news which is almost impossible for even the best daily paper and which many newspapers do not even try to attain. We omit the sensational accidents and crimes, the incidents of local politics and sport which fill four-fifths of an ordinary daily and give you nothing that does not seem to us of nation-wide interest. We are impartial not only as between one party and another but as between one section of the country and another, and between one foreign country and another. We give you foreign news without propaganda, and not based on American sources only, but also on a careful study of foreign periodicals and authoritative public documents.

In the second place, our Story of the Week columns are so conducted as to form a continued story from week to week. If you have the excellent habit of keeping your old copies of The Independent you can follow a particular topic back from month to month and from year to year. By plentiful illustration with maps and pictures and by various special articles and explanatory editorials we supplement this news narrative so that every event falls into its proper setting instead of standing out as a mere isolated and meaningless incident. A year's subscription to The Independent is a history of the world for one year.

In the third place we do not think that a periodical should contain only comment. We have our editorial pages, in which we very frankly and freely express our individual views on topics of current interest. But we want you also to know just what are the events on which we comment and the facts to which we refer. Thus, if we discuss the war between Poland and Soviet Russia we want to give you within the covers of the same magazine an account of the actual military position and the claims of the contending parties. The Independent has often changed its make-up to enlarge or rearrange different departments of the magazine, but thruout all the years of its existence it has striven to avoid being either a mere digest of facts or a mere compilation of essays. Always in some form we have had the Story of the Week and the editorial comment on it. It is this division of labor and coöperation of purpose between the two departments that has made The Independent of living value to three generations.

## Remarkable Remarks

ANATOLE FRANCE—Europe is dying.

GOVERNOR COX—Ours is a fight of faith.

ED. HOWE—Every woman has some in-growing grief.

SENATOR HARDING—We need the Senate to save America.

MRS. ASQUITH— I have never met a single person who has been improved by this war.

GENERAL BOOTH—I find in nearly every country there is emerging a kind of antipathy to work.

ROY K. MOULTON—I never got any particular satisfaction out of voting; but if the ladies think they can, they have my permission.

LILLIAN RUSSELL—Practically every benefit you are receiving from the National Government comes from the Republican party.

H. W. GOSSARD—The most flawless statue of faultless proportion is not comparable with the beauty of the wind-driven clouds or the grace of the flying bird.

COLONEL LAWRENCE—The Bolsheviks have declared that they will not send troops to Persia but they are sending ideas which are far more explosive things.

MARGUERITE M. MARSHALL—Once lovers shyly applied to each other such romantic names as sweetheart, but nowadays the most ardent affection is expressed in such epithets as "Kiddo."

## New Plays

*The Guest of Honor* affords the popular William Hodge only a moderate vehicle for the exploitation of his special abilities. Good, but not "darn" good. (Broadhurst Theater.)

*The Tavern*, Cohanized, starts out as an old-fashioned melodrama, and turns into a clever satire, without losing its original mystery and fun. Arnold Daly plays the part of the swaggering vagabond excellently. (George M. Cohan Theater.)

*Anna Ascends*, by Harry Chapman Ford, shows Alice Brady in the "speakies." The play, which describes the rise of a Syrian immigrant girl into the higher strata of American social life, blends a certain amount of sheer melodrama with much witty and observant realism. (Playhouse Theater.)

*The San Carlo Grand Opera Company* is better than ever this season, as the crowded houses attest. The taboo on German opera was broken when this Italian opera company gave *Lohengrin* in Italian. By this translation Wagner becomes virtually a member of the *entente cordiale*. Anna Fitzu makes a charming Elsa. In *Madame Butterfly* a new Japanese prima donna, Nobuko Hara, makes her debut in America. She is as graceful in her undulations as a figure on a fan and wins all hearts for this pathetic victim of American cruelty. (Manhattan Opera House.)

International

### The Latest Thriller in the Air

Aviator McLaughlin has succeeded to the preëminence formerly held by Locklear as a flying gymnast, and has achieved new heights of daring. The stunt that he is performing here was photographed from a third plane during his exhibition at Milwaukee. McLaughlin is changing from one plane to another while they are in rapid flight. He hangs by his toes from a rope ladder on the upper plane and as the other flies below he grasps its natural fittings and drops to the wing from which he can crawl into the cockpit. McLaughlin is the only aviator who performs this stunt without using extra apparatus or specially fitted planes

## Nine Steps to a New Age

The Message of the Socialist Party to the American People

By Seymour Stedman

Socialist Candidate for Vice-President of the United States

**T**HE two old parties have an artificial difference. Both are shifty, cowardly and dishonest sponsors for a moribund system.

Some phases of civilization have been long, others short, none eternal. Some by slow degrees were quietly replaced; others passed away with a shock, the new order rising quickly from the ashes of the old.

We are in the midst of a social revolution, the collapse of capitalist society, and the coming of a new phase of civilization.

"In Europe," says the new British ambassador, Sir Auckland Geddes, "we know that an age is dying." Most of us in America have this to learn. The *Chicago Tribune* says, "Whether we in America are in a better state to come thru the ordeal than Europe we cannot confidently assert."

The Socialists appreciate and understand the passing of the old, and know the good that is coming with the new.

The old parties, without hope or vision for the future, are digging themselves in to stop an avalanche.

Capitalist society is based upon the private ownership of the great means of production, its motive is production for profit. Socialism means the collective ownership and democratic control of the means of production, its motive is production for use.

There is no stable compromise between these two extremes, and a truce is but a breathing space to permit the reformation of forces.

Inexorably the social process works its way. Understand it, adapt ourselves to it, and it will bring us peace and a great life; thwart it, and it will crumble us into dust, and destroy our civilization.

Human intelligence, will and force are part of this so-

International

Mr. Stedman is a Chicago lawyer who has long been prominent as one of the chief legal advisers to the Socialist party. He took charge of the defense of the Socialist legislators who were expelled from the New York Assembly after their election to it last fall.

cial process, but as ships cannot ignore the weight of water displaced, nor farmers the weather or the soil, neither can we ignore the social forces of which we are so small a part, therefore we cannot create revolutions or stop them, but must adapt ourselves to the changes they bring.

The mere adjustment of *political differences* is no longer enough; an *economic and industrial* change must be made. Therefore a political-industrial party is the only party qualified to meet present day problems.

Of all the parties seeking the suffrages of the American people, the only one which proposes an economic change, basic and fundamental, is the Socialist party.

The old party platforms are sterile, their candidates fussy manikins. The Republican candidates emphasize the need for reservations in the Treaty; and for a domestic issue they propose a reverence for law. Mr. Cox is taking orders from the reigning dynasty, and would make us a police force to secure British and French war robberies.

Europe is in the throes of great changes, class wars, nationalistic wars, revolutions, repudiation of debts, starvation, revenge, subjugation, outbursts of the oppressed, strikes, the fall of kings and cabinets; and Asia is shaking as she stretches to arise. The people of our country stagger under high prices—wage increase added to price and price to wage increase—a vicious spiral.

Railroad service is demoralized; miners are working less than half time; a coal shortage threatens, the currency is inflated to the benefit and profit of speculators; business suffers, profiteering stalks with wartime assurance in time of peace; farmers curtail

---

Before election each candidate for President of the United States will present in *The Independent* his message to the American people. The series began last week with an article by Governor Cox. In this issue are messages from the Socialist and Prohibition candidates

---

their productive area; woolen mills declare 300 per cent dividends and close down to keep up prices, their employees face starvation and the wool grower has no market for his product; homes are looted and men and women arrested without process of law; mob violence is encouraged; judges, before whom workingmen are tried, are browbeaten by the so-called better class; men and women are whipped, tarred and feathered, even murdered for making speeches advocating a union; the closed shop is outlawed; many newspapers are suppressed as a pretended war measure (for we are still at war, legally); the American Legion becomes in many places the political black legion of stupid, brutal capitalists; carfare, telephone rates, coal, rents, are climbing up. We are up on the crest and the top is curling and carrying us toward the shoals.

The remedy proposed by the old parties?

Reservations and no reservations, and a multitude of platitudes. Even for the business class they have no well defined domestic or foreign policies, but an inconsistent jumble of provincial and international phrases.

We propose:

**First**—Restore the right of free and untrammelled speech. At this time above all others we will find wisdom in a multitude of counsellors. We can properly settle our problems by mass, or popular intellect, not by mass ignorance and misinformation. If this country cannot stand free speech, it is doomed, because a people who cannot maintain free criticism, suggestion and denunciation cannot avoid destruction. A national campaign with a wartime gag law in full force and effect betrays a disease at the heart of things.

**Second**—Release all religious, and political wartime prisoners.

## Why the Socialist Candidate for President Cannot Speak for Himself

A Letter from His Brother

My dear Mr. Holt:—

*Gene asked me to write you and say that he was deeply indebted to you for your kindness in the past, and that he would comply only too gladly with your recent request for an article if prison rules permitted. But it is impossible under the rules. He asks me to assure you of his kindest regards and very best wishes.*

Sincerely,

(Signed) Theodore Debs

The letter above explains why the message from the Socialist party in this issue is presented by the candidate for Vice-President instead of by the Presidential candidate, Eugene V. Debs. Mr. Debs is in the Atlanta penitentiary where he was imprisoned because of his opposition to the wartime policies of the Government. The Attorney General has refused several labor delegations' appeals that an exception be made in favor of Mr. Debs's release.

Keystone View.

In the one campaign statement that the prison authorities have permitted him to make, Eugene V. Debs appealed to Socialists to support the following program:

"To the workers, their tools and the entire product of their labor, no profit to capitalists, no rent to landlords and no interest to bankers!

The Socialist party is the only real democratic party in the world, and when it succeeds to power it will transfer the nation's industry to the people and establish a social order in which all shall be useful workers, all receive the full equivalent of what they produce and all share equally in the opportunity to enjoy life, liberty and happiness.

"The Socialist party proposes to wipe out capitalism and retire profiteering capitalists from business."

Imprisonment is for two purposes—to reform the offender and to deter others from committing a similar offense. If we are about to enter another bloody conflict, there is some excuse for continuing confinement. If we are not, then we are guilty of savage revenge against idealists—men of moral courage, self-sacrificing men who wish well for the people of their country and who speak the truth as they see it.

**Third**—Restore the freedom of the press.

If editors and publishers are lawbreakers, the courts are open to prosecutions. To permit a tyrannical narrow-gauged junker postmaster to act as press censor with power to destroy publications by arbitrarily denying them mailing privileges, is the essence of the blackest despotism and constitutes in the minds of many a sufficient justification for secret agitation for revolt.

Deny the minority the right to convert the majority to its judgment, and progress is paralyzed and freedom is dead—better chaos with hope, than despotism.

**Fourth**—Aliens should not be deported without a public trial by jury, and not at all for participation in industrial struggles or for expressing opinions upon political and industrial affairs.

Aliens who have married American born women and who have American-born children, have been taken from their families; families have been torn asunder by politicians in a frenzy of fear or by shameless chauvinists seeking political advancement; these political tools of the billionaires have disgraced America and brought shame to those who have boasted of our liberalism.

**Fifth**—The franchises should be extended, guaranteed to every adult man and woman. It should be [Continued on page 59]

# The One Consistent Party

A Message from the Prohibition Candidate to the American People

By Aaron S. Watkins

**I**T is easy to eulogize the heroes of the past and to admire the men of vision who live in the future. It is not so easy to see the practical wisdom and clear insight of those who live in the present and whose views do not coincide with our own.

The Prohibition party is not a relic of the past nor an indefinite vision of the future. We stand for the bravest and the most practical statesmanship of this year of 1920.

In every political platform there are some planks that are almost self-evident and will provoke no discussion. In the campaign just now beginning, there are about a half dozen questions that will engross the attention of politicians and voters and upon them the discussions will doubtless center.

At present, the League of Nations is at the forefront of political controversy. On this question, the Democratic party has practically adopted the entire program of the President, notwithstanding the fact that the entire country either rejects his program or demands a material revision of the same. The Republican party declares for a League of Nations, but in the large number of radical reservations called for and in the discussions by Mr. Harding and others, it becomes apparent that the attitude is one of almost unqualified opposition.

We believe in some reservations, but the assumption that all "super-government" is wrong, un-patriotic and un-American makes any real League an impossibility. It thus becomes a choice between a League that goes far beyond the desires and convictions of the nation and a League so spineless, weak and inadequate that it no longer deserves the name.

We are not frightened by the cry of Americanism. We believe that the truest American is the man who recognizes the duty and obligation of America to all the nations. The arguments against a League are not new. They were urged against the formation of a Federal Union more than a century ago. The fear was quite general that the formation of a central government would take from the colonies their power and sovereignty. No one doubts now, that Massachusetts as a member of the Union is a greater commonwealth than would ever have been possible as a separate colony. Civil liberty is built on a surrender of so-called personal liberty. So in the long run, whatever concessions may be granted by America to the League of Nations will be more than repaid by the prestige and power that will accrue to our nation from those concerned in world affairs.

We believe that our Mexican policy—or lack of policy—has been weak and vacillating, and that "watchful waiting" and disgraceful dawdling should cease and a more vigorous policy be pursued.

We believe, since loyalty, patriotism and fraternity are not matters of longitude and mileage, that we owe

There is one party in the field—the Prohibition party—whose platforms have never been weather-vanes, and whose doctrines have been political history

no more protection to Mexico than to Armenia. Patriotism was once tribal, then provincial, then national, and in America it became continental or hemispherical. Now the air is vibrating with a divine and human call to world loyalty, without sacrifice of any part of the lower and narrower loyalty. We are now approaching the light on which the Great Teacher and Supreme Statesman stood when he said, "The field is the world." How does it happen that America owes a greater debt to Patagonia or Greenland than to Belgium or Poland? Whence comes this idea of Pan-Americanism? God made the earth; man draws arbitrary lines upon it.

Another great question of the year is the attitude of

government and of society toward labor and capital. We declare for industrial peace and that this can only be secured by considering first of all the rights of the public, then those of labor and capital. Contending classes should not be allowed to paralyze the business of the country while they fight out their differences. We need a proper tribunal, so constituted that it will command the respect of all classes, before which all industrial differences can be brought, and while this court is in session business should proceed as usual for the benefit of the chief party at interest, the public.

We have always been friendly to union labor and to the farmer. Our party is made up of men and women who eat their bread by the sweat of their own brow, and not by the efforts of another, secured by oppression, discrimination or profiteering.

On the question of equal suffrage all parties have declared and are in perfect harmony. Hence, this is not now an issue. But we call attention of the country to the fact that most of these declarations are of recent origin and that in the strenuous days when this was a real battleground, these parties were silent and their leaders openly disrespectful toward the cause, or at best, non-committal. We have stood for equal suffrage since the organization of the party, and we now believe we have the first right and chief claim upon the suffrage of the newly enfranchised womanhood of America.

To us, the supreme question is none of these just mentioned, but the utter extinction of the liquor traffic. Some fondly imagine that the question is settled. The mere declaration of law never settled any question. Law without enforcement is not law, but mere theory, desire or sentiment. There has of course been some enforcement and conditions are vastly improved. But no one doubts that there is much violation of law and much of official blindness to such violation. To the question, "How dry is it?" a great daily paper answered, "Too dry for the wets and too wet for the dries."

The situation will never be satisfactory until three things are true: First, the law in stringent form in

D. Leigh Colvin is the candidate for the Vice-Presidency on the Prohibition ticket

consideration of all American voters the eulogy of party government given by Senator Harding. We have always contended, and still insist, that parties silent on the question will not only fail to settle it, but will be a barrier against the will of the people.

It may sound like statesmanship to say, "Let us put it in the hands of the people;" but this is a representative government, and the people have put much of their power in the hands of their officers. Place us in power and we will settle the question and the people may settle with us at the ballot box.

We are told that the great task before us this year is the election of a dry Congress, and not the election of a President. This objection assumes that the President has no legislative power. Such an assumption is a very great error. The legislative power of the President is legally equivalent to eighty-seven members of Congress. The difference between a bare majority required to pass a bill with his approval and the two-thirds necessary to pass it over his veto, is seventy-two in the House and fifteen in the Senate. Add to this his personal influence, and he becomes equivalent to one hundred members of Congress, and the election of a President in harmony with the Eighteenth amendment and the Volstead law is not the slight and unimportant matter that many have concluded, but the great and urgent business of the year.

We are informed that the law is here to stay. We hope so, but we remember the many dry laws passed and repealed—and we wonder! "But," the objector reminds us, "it is now in the Constitution." Ohio placed a no-

statutes and constitutions of the states and of the nation; second, parties declaring for the enforcement of the same; and third, executive, legislative and judicial officers with sentiments and convictions in harmony with the law. The platforms of the other parties are silent on the question and their candidates are not in hearty sympathy with the law. They merely make formal and perfunctory promises of law enforcement.

We commend to the favorable con-

license plank in her constitution in 1851 and a license clause in 1912. Ohio, the mother of Presidents—and Presidential candidates—is the only state that declared against license in her fundamental law in the first great prohibition period, 1850-60, and the only one to insert license in the twentieth century. The doors of legislation, like the doors of the saloon, swing both ways; and it is the part of wisdom to safeguard, with every precaution, the laws we now have. We remember the time-honored order, "Put none but Americans on guard," and in this time of danger we appeal to the voters of America to put none but out-and-out bone-dry men on guard.

There is one party in the field whose platforms have never been weather-vanes, and whose policy has always been a constructive one. Our doctrines have been the political history of the nation, written prophetically. There is scarcely a reform of any consequence that has been enacted into law in the last forty years, or is now nearing its completion, that was not advocated by the Prohibition party. The steps of progress that our statesmen demanded as justice and predicted as the inevitable, were ignored, ridiculed, opposed, and finally accepted without credit or quotation mark and we blazed the trail for other reforms.

In this campaign, as in former years, we are abreast of the times while others are dragging out the old tariff joss from the dust of the national garret; and we will, if elected, do all in our power to advance the right, pull down the wrong and bring in the better day for which we all so fervently hope and labor.

*Germantown, Ohio*

## A Song of Quiet Hearts By Martha Haskell Clark

Out of the gray-spun shadow, and the taper-glow there steals  
In the hush of the village twilight, the song of a hundred wheels,  
And I see them turning and turning, 'neath pewter-bright plates a'row,  
While shadowy hands at the casements fling busily to and fro.  
Oh women of hearts unhaunted, oh women with quiet eyes,  
I too would spin in the star-time by the light of my chimney-breast  
Would shut my heart and its crying from the call of the spring-touched skies,  
And still with a low-crooned hearth-song the stir of my wild unrest.

For oh, the whirr of my turning wheel sings never of home to me!  
'Tis the beating of wide gray sea-gulls' wings swept in from a crested sea;  
'Tis the sea-wind's buffeting brother-hail, the song of the shore-flung surf,  
And the thud of the wild moor-ponies' hoofs that spurn at the spray-wet turf.

Over each low-thatched roof-tree of the wry, white-cobbled street,  
There broods like a fragrant shadow the smell of the burning peat,  
And I see the red of the embers, and the black of a reaching crane,  
And the grave, sweet faces of women that pass at the latticed pane.  
Oh women of hearts unhaunted, oh women of mute content,  
I too, would bend by a hearth-side and waken the sleeping fire,  
Would shut my heart and its longing from the lure of its smoke-sweet scent,  
And dim to a fire-lit dreaming the tears of my mad desire.

For oh, the smell of the burning peat cries never of walls to me!  
'Tis the far blue thread of a wayside fire, with the moor-wind blowing free,  
'Tis the frail faint scent of the beachland mould, and the breath of a brackened  
down  
With never a trail to lead the feet to the gate of a huddled town.

Out of the dew-drenched twilight where a nesting linnet sings,  
Shoulder the green-aisled hedges grown gnarled with a hundred springs.  
And I see thru each close-clipped archway, the gleam of a kerchief's snow  
Where the women walk in the gardens while the light of the day burns low.  
Oh women of hearts unhaunted, oh women with path-set feet,  
I too, would walk in a garden, with the tasks of the daytime o'er;  
Would lull my heart and its fevered dreams with the breath of the blossoms sweet  
That grow as a gardener wills them by the side of a cottage door.

For oh, the scent of my garden dusk breathes never of peace to me!  
'Tis the sweet white stars a'blowing on a gipsying hawthorn-tree  
'Tis the sun on the hillside heather, the wind in the upland fern,  
And the heart of a wild pink wander-rose that blossoms beyond the turn.

# Uncle Sam and His Southern Cousins

A Message from the United States Government to the American People

By Leo S. Rowe

Director-General of the Pan-American Union

**T**HE United States, in seeking to carry out its mission on the American continent, has made very great strides during the last twenty-five years toward closer political relations with the republics of Central and South America.

The natural affiliations of Latin-America—the natural culture currents, the currents of racial tradition and the currents of commerce and trade—it must be remembered, were not with the United States but with Europe. "Pan-Americanism" therefore represents a movement that had to rest on a clear recognition of the unity of interests of the republics of the American continent and of the great service which they might perform toward one another by developing a unity of policy. The obstacles it encountered were numerous.

While all of Latin-America was exceedingly grateful to the United States for the promulgation of the Monroe Doctrine, and the warning it gave to Europe that she could no longer colonize or dominate the republics of America, nor engage in any movement to overthrow American institutions on this continent, yet in the development of that doctrine it came to be looked upon, by the growing republics of Latin-America as something in the nature of a protectorate extended over them by the United States.

The Monroe Doctrine was a warning to Europe, but it gave no assurance to the republics of the American continent as to the use of the power the United States had acquired. The undercurrent of distrust, which developed as a natural result of this uncertainty, was strengthened by the Mexican war, but a counter-movement set in toward the end of the nineteenth century, due in part to the unselfish policy we had shown with reference to the independence of Cuba, and in part to a better acquaintance of Latin-American statesmen with the policies and the personalities of leaders in the United States and, reciprocally, a better acquaintance on the part of our statesmen with the leaders of Latin-America.

Up to this point, however, the movement was one merely for closer coöperation between the governments—the people of America were still far apart. It has been the object of the Pan-American Union, while maintaining and strengthening the coöperation between governments, at the same time to bring about a better acquaintance and understanding between the peoples.

There are two principal methods thru which we can work toward the accomplishment of this fundamental

© Keystone View

Dr. Leo S. Rowe is an economist who among other important Pan-American positions was on the Commission to Revise and Compile the laws of Porto Rico and an honorary member of the National Historical Society of Argentine. His knowledge of economic and cultural conditions in Latin-America is very wide and he advocates greater knowledge of Latin-American countries on the part of the residents of the United States in order that there may be unity of purpose in the Americas

purpose: the first is thru the development of closer commercial ties and the second thru the development of closer cultural ties between the peoples of America.

One of the greatest obstacles to the development of such ties has been the ignorance that exists in the United States with reference to the civilization of Latin-America, an ignorance far deeper than the ignorance of Latin-America with reference to this country. Study has been given in Latin-America to our history, our resources and our political organizations. We have failed to give equal attention to the development of Latin-America and this fact goes a long way to explain our timidity in entering upon commercial relations on a large scale.

One of the most important steps that could be taken in the strengthening of our commercial ties would be the investment of American capital to assist in the development of Latin-America's abundant resources. It is one of the truisms of international trade that exchanges of goods are stimulated by investment, yet the number of American cor-

porations that have made large financial investments in Latin-America is astonishingly small.

Europeans have given more study than we to the resources and the opportunities of Latin-America and it frequently happens that a European corporation will borrow money in the United States for investment in Latin-American projects. The American lenders would serve a very much better purpose if they made their investments in Latin-America direct—and they would profit more, for the European investor of American capital invariably earns a higher return than is paid to those who furnish the money in the first instance.

One of the most significant movements looking to the development of closer cultural ties between this country and Latin-America is that being inaugurated by student organizations in South America for the purpose of coming in closer contact with students in the United States. This movement will result very soon I hope in the organization of a Pan-American students' conference that will bring together the men who in a few years will be the leaders in various fields of activity in their respective countries for the purpose of strengthening the ties between the American nations.

Students from Central and South America are already coming to our colleges and universities in considerable numbers—and nothing has done so much to make Latin-America acquainted with the United States. Our own university people should be encouraged not only to visit but to study the [Continued on page 60

# The Discovery of the "Mayflower"

By Hamilton Holt

*The Editor of The Independent went to Europe this summer as the representative of the American Mayflower Council and attended the "Mayflower" Tercentenary celebrations in Holland, where the Pilgrims spent eleven years after they left England, and at Plymouth, England, where they stopped during their epoch-making voyage to the New World. In a later article he will tell the story of these celebrations, each held just three hundred years after the event itself. Three centuries ago today the Pilgrims were crossing the ocean in the "Mayflower," which after years of obscurity is now reported to have been discovered in an old barn in Buckinghamshire. Mr. Holt investigated this discovery for himself and he presents the full account in the following article*

A few Sundays before I embarked for Europe on the twenty-fourth of July, I heard Dr. Charles E. Jefferson, pastor of the Broadway Tabernacle, New York City, preach a sermon on the "Mayflower." I had forgotten, until he emphasized it, that nobody knows what became of the "Mayflower." "Was it sold to be split up into kindling wood? Or was it allowed to lie out on the sand and gradually fall to pieces? Or did a cruel storm wound it, and on some black night did it go down to the bottom of the sea with not even a star looking on?" These are the questions Dr. Jefferson asked. And then he concluded: "The 'Mayflower' you can neither touch or see. The person who owns a piece of Plymouth rock is counted among the luckiest of all mortals. The man who could say 'I have a piece of the "Mayflower"' would be ranked among the semi-gods."

With this sermon fresh in my memory what was my astonishment, when I landed in Liverpool on August 1, to find that only two days previous the almost unbelievable announcement had been made that the "Mayflower" had been discovered.

On one of the most silent, beautiful and leafiest lanes on an upland in Buckinghamshire, not twenty miles from London, stands an old black weather-stained barn. The frame of this barn is claimed to be nothing else than the timber of the "Mayflower" whose fame in history Dr. Jefferson says will only be equalled by the vessel that carried Columbus to America, the ship which brought Paul from Asia to Europe, and the little fishing boat which carried Jesus and his apostles thru a storm on the Sea of Galilee. Of course I determined to visit forthwith this antique relic and see with my own eyes the living remains of the sturdy vessel which just three hundred years ago to a month bore the 102 im-

It is the hay barn near this old Quaker Meeting House at Chalfont St. Giles, in Buckinghamshire, England, that is supposed to be built of the "Mayflower." The property now is owned by the Society of Friends

Wide World

Part of the circumstantial evidence that the old Quaker barn is actually the "Mayflower" lies in the fact that this fireplace device in the Jordans hostel (the Friends' house to which the "Mayflower barn belongs) bears the coat-of-arms of James I and the date 1618, showing that the building was put up in the early part of the seventeenth century. There is more direct evidence in the carving on the old door to the right, which is also in the Jordans house. The door braces are decorated in a floral emblem, possibly a mayflower, and it is suggested that they may have belonged originally on the cabin door of the "Mayflower"

The Quaker Meeting House has historical fame whether it is proved that its neighboring barn is the "Mayflower" or not. In its Quaker burial ground the stone in the foreground at the left marks the grave of William Penn

mortal Pilgrims across the ocean to establish on the bleak shores of New England a state without a king and a church without a bishop.

It was a bright and early morning on August 7 when our little party of three left the Baker Street station at London for Chorley Wood (I warn the printer not

to spell it "Charley"). We were bound for what one of Thomas Cook's prospectuses calls the "William Penn Country." For it was in recognition of the sylvan charms of this country that Penn called the great state which he founded in the New World "Sylvania." We took a carriage at the little railroad station and in five minutes were out among the green fields and hedgerows. The farmers were cutting and binding the grain; fat cows were grazing in the luscious meadows. It was a scene of peace, beauty and plenty such as only England affords.

Chenies, our first stopping place, is one of the most picturesque and untouched of English country villages. My outing would have been a marked success if I had seen nothing more that day than the ancient parish church with its superb chapel in which remain intact the tombs of the successive generations of noblemen and their ladies who lie buried there. The ancient medieval monuments are still in a perfect state of preservation—far better than those in Westminster Abbey, or any other place I have visited.

Leaving Chenies we drove for half an hour along the pretty country roads that curve over the little hills and wind thru the well cultivated valleys, until we arrived at Chalfont (Cold fount) St. Giles, famous thruout England as containing that "pretty box" where Milton made the final corrections to the proof of "Paradise Lost," and where Ellwood, the Quaker poet, suggested to him the composition of "Paradise Regained." I shall never forget that tiny thatched-roof, low-ceilinged cottage, with the pear tree flattened like an ivy plant against the brick wall and the clematis and pink and white phlox completely filling the little garden up to the full bloomed apple tree by the wall.

After the caretaker had showed us all the relics, we took to our carriage and struck out for the open country again. We had gone hardly a mile when we descended a little hill and there at the bottom, standing back from the roadside and sheltered by groups of fine old trees, was a severely plain brick building, with tiled

This old weather-beaten hay-barn in Buckinghamshire is believed to be built of the timbers of the good ship "Mayflower"

roofs and latticed windows. It was the old Quaker Meeting House, where William Penn used to worship and beyond whose dooryard rest the remains of Penn, his first and second wives, and seven of his nine sons and daughters. I have never seen a more simple and unpretentious but beautiful spot. The old ivy-clad Meeting House, with its roses and pansies at the door, dates back to 1688. The memory of many Quaker worthies who suffered much for their faith is closely connected with this Meeting House and graveyard. The interior of the house has a brick floor with plain wooden panels on the side of the walls, and benches on which many generations of worshippers sat. An old gate-legged table, that once belonged to Penn, is still in the back of the room, while a balcony in the rear affords a separate place where the women could worship without mingling with the men. I noted original letters of William Penn framed on the wall and also a copy of Penn's treaty with the Indians. The little diamond paned windows, the old-fashioned furniture and the general air of simplicity gave the room a very staid and somber but not unattractive appearance.

After the old caretaker and his wife had taken us thru the meeting house, we went outdoors, peered down in a sort of cellar in the rear where Penn used to stable his horse, and then walked up a little hill, thru a beech grove and across a pasture, into a pretty orchard, and there passing thru a gate found ourselves in the old Jordans hostel, now owned by the Society of Friends. This hostel was used during the war as the quarters of one of the Friends' Ambulance Units. Before that it was [Continued on page 61

Turn this picture of the interior of the barn upside down and you can see at once the fact that its framework was formerly that of a ship. There is evidence in the iron clamps attached to the beams that the framework is that of the "Mayflower." Additional evidence, considerably disputed, is the markings of the beam shown at the right, which some experts take for ER HAR, part of the name "Mayflower, Harwich." The supposed HAR shows in the center of this photograph

# Dynamite or Discussion?

By Talcott Williams

THE bomb exploded at the corner of Broad and Wall streets, New York City, between the United States sub-treasury and the banking office of J. Pierpont Morgan & Co. (public capital on one side, private on the other), is the last word in the policy of violence and "direct action."

Criminal as is the act, it has the inner and silent sympathy of a very much larger number of men and women than anyone can realize whose life and work has not brought him in contact with those who believe that our political, property and social system needs to be made over radically. Such persons are in the Christian and Jewish ministry, in men holding subordinate and ill-paid posts in finance and business, in college settlements, in teaching, particularly in high schools, colleges and universities, in subordinate posts in newspapers, in "social work," among the subordinates in the organizing work of trades unions and among those with inherited incomes, small or large, who do not have to work or go hungry and who have a far stronger appetite for what they consider new ideas as to "social reorganization" than for hard work or a share in the tasks of the social system which supports them.

You do not have to go very far in the classes just summarized without finding those whose attitude towards the Wall Street bomb recognizes the crime, but who, at the same time, feel that things must be very bad or even a small group would not be moved to such an act. The wickedness of the crime is for such a measure not of the evil that is in men, but of the evil that is in our social system.

Not one, of the many I have met who had this view, possessed the aggressive, organizing spirit which leads men and women when they see an evil to go to work to rid the world of it, at the earliest possible moment. Nor have I ever met a man or woman who was fighting some definite wrong tooth and nail, alone or in an organization, who had any place, room or bent for any sympathy for "violence," dynamite or other, as a political instrument. The one radical cure for vague brooding over "the evil and injustice of our existing social system" is to attack some one definite evil and set it right. Once you step into the ring, fighting a real, able-bodied wrong, big or little, and you are cured of vague brooding or dubious sympathies with criminal acts done in the name of improvement. If a man once has felt the grim joy of fighting with the beasts at Ephesus, like Paul he will say "henceforth none of these things can move me."

ABOVE all the teacher, the clergyman, the social worker, the reformer, the "parlor Socialist," any or all, will find that the air clears, the light comes and the trumpet sounds when you take the evil next you and fight it. They are all about. The battlefield is spread. There is not anyone, man or woman, who has not at their door and on their own sidewalk some evil or injustice that needs to be knocked on the head. The world of wriggling snakes of evil all about us does not call for brooding over "the evil and injustice of existing society," but for killing a snake, the nearest one. Begin early—high school and college is an excellent place to attack the evils about you. You will not be liked or popular; but you will be remembered. Keep at it as soon as you are out and active life begins. You will be amazed at the end of forty years in how many reforms you have shared and how many funerals of wrong you have joyfully attended.

The United States Constitution was organized on this very principle. The child of revolution and of violence,

those who had shared in that very work for the first time in human history did all they possibly could to make discussion and amendment easy under the Federal Constitution. Organized violence, the agreement of men to use force, they labeled treason and defined it as making war on the United States. Any idea could be presented; any new plan could be proposed. But violence must not be organized, aroused or fomented. Any new ideas or plans were made free in peace; but these must not be presented so as to breed violence, create disorder or, in war, obstruct the armed forces of the United States.

All things were left open to change by two systems of constitutional amendment. Specific evils could be attacked by single amendments. If two-thirds of the Senate and House voted for the amendment and three quarters of the State Legislatures ratified, the specific evil was laid open to suppression, without any compensation for any property right destroyed.

Still more, if three-fourths of the State Legislatures demanded it, Congress is bound to call a new Constitutional Convention. When this met, everything could go into the melting pot. In such a convention, all is open to change. Any property right can be abolished, without compensation. Any institution can be changed. The entire structure of our Government can be altered. A change as radical as the Soviet could be introduced by such a convention in a new constitution and, if approved by the people, would go into effect, at once. Any human relation, marriage descent, inheritance, the power to make a will and dispose of property after death—all these could be swept aside, lawfully constitutionally, if the American people so willed, without appeal or revolution, so three-fourths of the State Legislatures asked when Congress must call a Federal Constitutional Convention and a majority of the voters ratified the constitution drawn by the convention.

These sweeping Revolutionary powers were imbedded by our fathers in the Federal Constitution. The momentous changes already outlined have not come because the American people did not want them. The will of the people is supreme and complete. The path was left open to any alteration; but with the path open, the American people has refused to tread this path of change, not because of any occult sinister power; but because self-reverence, self-knowledge and self-control, which lead life to sovereign power, barred the way.

Dynamite is not only criminal, but silly when the fundamental law has laid the question open to discussion and to change. Why prattle and plot of Revolution or violence, when all that is needed to bring any change is to persuade a majority of the American people that it is wise to take the new step. Dynamite is a loud voiced confession that the people will otherwise.

Few are aware of these powers in the Federal Constitution. "It is not possible that the American Constitution is so radical," said one of the greatest of our railroad presidents when a journalist told him of these powers. "Ask your counsel, across the table," said the newspaper man. "It is all true," said the counsel, "though as a lawyer I cannot approve giving away so much constitutional law, without a fee." "Why didn't you ever tell me?" said the irritated and alarmed president. "What is the use," said the counsel, "You and I cannot change the will of the American people."

Many who read these lines are as ignorant as was this railroad president, whose lasting monument is the Pennsylvania Terminal in New York City. Was ever such op-

portunity for good laid before the citizenry of a great nation as these widespread and constant powers to amend?

No evil exists which cannot be remedied by peaceful discussion. The working memory of a single life is a brief span in the life of a nation, but within such a memory, I have seen adopted the amendments abolishing slavery, liquor and race as a bar to suffrage, introducing woman suffrage, electing senators by popular vote, laying every income open to any tax. All these within my memory as a boy were looked upon as distant, impossible reforms.

The next forty years will see changes as great and results as momentous. What puerile folly is a charge of dynamite as argument or weapon, by the side of the possibilities of sweeping change for any good and any reform present in the Federal Constitution of this indissoluble union of indestructible states?

### The Cut in Tin Lizzies

If Mr. Ford had thought to make that cut in prices two years ago he might be Senator today.

## Weeping and Bleeding Images

By Edwin E. Slosson

EUROPE is rapidly slipping back into medievalism, both materially and mentally. The revival of racial and religious warfare, the dissolution of imperial aggregates into numerous petty independencies, the breakdown of international credit and communication, the reversion to primitive forms of trade, industry and morality, the imitation of savage styles of music and art, the glorification of physical prowess and brutality, the growing contempt for science and the recrudescence of superstition, all point in the same direction, that is toward the Dark Ages. Magic is again in vogue. More books on necromancy are being published than on chemistry and have a vastly wider circulation. The worship of Satan reappears and the Black Mass is again celebrated. During the war one of the leading writers on Satanism, M. Jules Bois, was sent over to this country by the atheistic French government to urge us on to the war. Witchcraft is becoming popular and is appearing again in the courts. In January, 1920, a case came before the correctional tribunal of Bordeaux in which the defense was a charge of sorcery. The story, as told at length in the *Mercure de France* of August 1 is a curious illustration of the prevailing psychology. The affair originated with the Weeping Virgin of Bordeaux. In 1907 Marie Mesmin, a poor but pious concierge and housekeeper, aged 52, made a pilgrimage to Lourdes and brought back one of the ordinary plaster statuettes sold there of the Virgin of the Grotto who in 1858 revealed to a peasant girl the miraculous spring to which more than half a million invalids resort every year. Madame Mesmin set up the image in her kitchen and as she said her prayers to it day by day she noticed that tears came from its eyes and rolled down its cheeks. The priest to whom she reported the miracle was not convinced and advised her not to talk about it. But nevertheless the news spread and pilgrims came from all over France and from foreign lands to witness the miracle. As the tears gained repute for the healing of diseases their flow increased. The cashier of the National Insurance Company, presumably a hard-headed business man, testified in court that he had collected a small glassful of the tears and when a larger glass was brought that was repeatedly filled to the brim. A flask of the alleged lachrymal fluid was sent to the convent but the skeptical mother superior forwarded the sample to a chemist who reported that it was plain water without the salt and mucous that characterize human tears. When the image was removed to the convent the tears ceased to appear. But when another sacred image, a reproduction of the Santissimo Bambina of Milan, replaced the Weeping Virgin

in the kitchen, tears soon gathered in its enameled eyes and rolled down its plaster cheeks. One might surmise that the humidity of the basement kitchen caused a condensation upon the statues, but that would not account for the abundant flow of water.

The unsympathetic owners of the house, annoyed by the throngs of pilgrims, evicted Madame Mesmin and her miracle-working image but her devoted adherents installed it on an altar in an oratory provided for the purpose. Here there was no further flow of tears but the image developed another miraculous virtue. It exhaled a perpetual perfume that filled the chapel and impregnated with a strange and delightful fragrance all articles brought near it. During the war pictures and cloths carrying the celestial scent were much in demand at the front, and an extensive commerce in such pious objects developed under the directorship of a Syrian priest who was stranded in France by the war, the archimandrite Siboungi, vicar general of the diocese of Sidon, doctor of philosophy and theology of Rome. But after three years Madame Mesmin quarreled with her director and accused him of being in league with the Luciferians to torment her. Altho he had gone to Nantes, 300 miles away, Madame Mesmin testified that thru her clairvoyant power she could see him at night performing the indecent rites of the Black Mass with the blood of a frog in the chalice and making out of the black cloth of his robe silhouettes of the persons he wished to destroy. The canon of Bordeaux, who endeavored to relieve her paroxysms by repeatedly practicing exorcism by permission of the cardinal archbishop, testified to his belief that she was obsessed by a demon sent by Saboungi; and that the demon, tortured by the holy water thrown in the face of his victim, had begged thru her mouth to have the man who sent him killed.

THE feeling spread among the circle of believers that Mgr. Saboungi was bringing suffering and death upon his enemies by means of his enchantments, and four men from Bordeaux, realizing that they could get no aid from an infidel government, determined to put a stop to his evil practices by direct action. So they went to Nantes and binding the priest to his bed, gave him a thrashing with a dog-whip and a rubber tube. There seems something anachronistic about flogging a man for witchcraft with an automobile tire. They searched his room for evidences of sorcery but found nothing suspicious except a skull—not a skeleton—in the closet.

The archimandrite brought suit against his assailants who in defense produced witnesses to prove the injuries inflicted by Siboungi's "sendings" as well as the expert evidence of Dr. Rochas, who in a well-known book on "The Exteriorization of Sensibility" had adduced experiments to show that sticking pins into a waxen image of a person would produce similar wounds on the individual himself. In spite of this the court decided that the four men from Bordeaux were guilty of unprovoked assault and sent them to prison for three months. But the verdict is so cautiously worded as to leave undetermined the witchcraft issue. On this point the court held:

That in the actual state of science it is not certain that the injuries of which Marie Mesmin complains were caused by the malefactions of the Abbé Saboungi and that her life was in danger;

That on the other hand it is not certain that the means employed by the accused were of a nature to put a stop to the suffering that she felt.

We do not therefore have in the Bordeaux case a judicial decision in validation of the reality of witchcraft but the respectful hearing given to it and the non-committal verdict lead us to expect this will come in the future.

Many similar signs and wonders were reported in France during the war, but Ireland seems likely to take the lead in this renaissance of the miraculous, for Tipperary boasts

# The Bleeding Statues of Tipperary

*Wide World*

Pilgrims by the thousands, the blind, the lame, and the halt, are thronging from all over Ireland and from more distant parts of Europe to see the announced miracle of the bleeding statues in the house of Thomas Dwan in Templemore, Tipperary. These four statues—the Virgin Mary with the Child Jesus, the Crucifixion, the Virgin Mary, and St. Joseph—are reported to have been made the medium of a miracle in which blood dropped from the eyes of the images. An American priest, Father Byrne, of Beresford, South Dakota, has testified to having seen the statues shed drops of blood

*Central News*

Thirty thousand is the daily average of visitors to the Tipperary statues. Two rows at a time the pilgrims kneel to pray before the statues, and many of them on rising announce that the ills of which they asked to be cured have disappeared. There is a pile of crutches outside the yard left by lame people who were able to discard them after their prayer

*Central News*

*Wide World*

Touching one of the "bleeding" statues to the eyes of the blind is said to restore sight. Even a rosary held before the statues acquires a special blessing from their supposedly miraculous healing power. At the right is part of the crowd waiting outside the Dwan shop to see the statues bleed

*Wide World*

of not one but several marvelous statues and they exude not water but blood.

The Reverend Father Byrne, of Beresford, South Dakota, who has just visited the scene of these manifestations, is reported by the New York papers as saying:

The place where all these miracles have been performed is in a bedroom of a small thatched cottage, where the Blessed Virgin appeared to James Welch, a poor boy seventeen years old, on July 2 and told him to dig a small round hole in the earthen floor of his sleeping room, which would become a well for healing the sick, the lame and the blind. He told me that the Holy Mother had appeared to him in visions several times during June, but he had been afraid to mention it until he was convinced that it was his duty to do so after making the well. When he had made the hole, about the size of a small washing basin, he said the Blessed Virgin passed her hand around the rim and the water began to flow, and it has been kept filled ever since.

The next demonstration was on August 14, when the statues in his room began to bleed. I saw blood coming from the mouth of the statue of the Holy Mother and blood from the eyes of the statue of the Saviour. When I was at Templemore pilgrims were arriving there at the rate of 30,000 a day from all parts of Great Britain. I saw an Irish soldier who had his leg withered away to the bone from a wound received in the war walk away from the cottage after having the limb anointed with the blessed water. The lad, James Welch, followed him and advised him not to throw away his iron plate for three days.

Outside of the cottage there are piles of crutches left by pilgrims who have had the use of their limbs restored to them. Blind people who had to be led to the shrine walked away without assistance, as their sight had been restored. The small well will never be empty, as it was blessed by the Holy Mother and the water will flow forever.

It's a long, long way to Tipperary, but we can hear of healings almost as wonderful in our own neighborhood.

These things are not important in themselves but are of great interest as signs of the times. It does not matter much whether the narrations are true or false or rather what may be the truth about them. The significant thing about them is that they are so widely and readily accepted. At the close of the nineteenth century the view was commonly expressed that all such things as astrology, magic, witchcraft, demonology and divination were exploded myths. Now the medieval mind is again in the ascendant. Medieval costumes and customs are being revived and medieval institutions, like the guild system and village commune, are being advocated. Marvelous incidents which a few years ago would not have been accepted on any amount of evidence are now accepted on no evidence at all. The public mind is shifting from a narrow and dogmatic skepticism to an uncritical and boundless credulity. Even where the ecclesiastical authorities, as at Bordeaux, endeavor to nip in the bud a nascent sensation the popular demand for wonders proves irresistible. The Catholic Church opposes modern spiritualism as strenuously as it opposed medieval witchcraft, but even its own adherents sometimes succumb to the wiles of the Ouija board. Church and state are alike powerless to oppose such a general movement and science offers little opposition. In fact some of the most prominent men of science are now relating personal experiences more amazing than the legends of the middle ages.

### The League and Ireland

SENATOR Harding recently said that "American advocates of Irish independence bitterly opposed the League as proposed, because it not only closed the door to Ireland but committed us to force to maintain territorial integrity as it exists today." The Senator is right in supposing that some Irish sympathizers have taken this position. But we trust that the Senator himself does not hold that opinion, for it would indicate that he had not read the Covenant of the League, which undertakes to guarantee territorial integrity only as against *external* aggression. Now if Irish "aggression" against England is external—a war between sovereign states—then Irish independence

is already a recognized fact and it is hard to see what the fighting in Ireland is about. If, on the other hand, Irish independence has not been diplomatically recognized by England and the other League Powers then there is no external aggression on the part of Ireland, but simply an internal revolutionary movement with which, as a domestic concern of the British Empire, the League has nothing whatever to do.

## Government by Bullying

By Franklin H. Giddings

HAVE the American people become tired of liberty? Have they had enough of the freedom of adult and normally sane men and women to worship God in their own way which Pilgrims and Puritans came to New England to establish and which Huguenots and Scotchmen, Swedes and Palatinate Germans came later to enjoy? Are we weary of those local and communal liberties that were asserted and fostered in the town meetings of Massachusetts and Connecticut and in the southern commonwealths, and of those individual liberties that were begotten of the self-reliant life of the western frontiers? Do we now despise all of those political principles that were set forth in the Declaration of Independence, for which the War of Independence was fought, and which were formulated in the earlier amendments of the Federal Constitution; or have we only forgotten and become indifferent to them?

My own impression and my fear is that the facts are worse than these questions presume. The American has always been addicted to minding his neighbor's business. Brought up in New England, and knowing well its folk-lore and traditions, but a sojourner in later years in various other parts, and having had good opportunities to see much of the West and the South, I am convinced that this propensity is both the most characteristic and the worst American vice, and that from the earliest days it has been the most serious menace to the ideals and the institutions in which, in our nobler moments, we take just pride. It was this unworthy propensity that made possible the shocking witchcraft craze in Massachusetts, and that, throughout our history, has made possible a collective lawlessness that has too often disgraced us, not only by the horrible brutalities of lynching but also by a thousand less gruesome attacks upon individuals, sectarian groups, economic experimenters, and even harmless dissenters from prevailing conventions and customs. We have thrown off the power of monarchs to regulate our lives only to create a more intolerant power of majorities to standardize us and of aggressive minorities to drive us this way and that by organized bullying. This power we use to raise our standards of conduct and to improve our neighbor's habits, according to our own conceptions of what his habits ought to be, and with precious little regard to his own convictions on the subject.

Of late this vicious propensity has shown a tendency to become fanatical and to get out of hand. War always fosters and strengthens it, because in war it is always necessary to maintain unity of purpose and momentum of drive at any sacrifice of individual liberty. New and highly coercive methods of achieving these results were developed during our participation in the European war, and they have left an evil heritage of direct action for ends alleged to be good, the practice of which, however, will infallibly give aid and comfort to social revolutionaries, and Bolshevik minds of every persuasion. It is alleged, and I think not denied in responsible quarters, that the methods of "the drive" were somewhat too freely used in putting thru both the eighteenth and nineteenth amendments.

What well meaning people who resort to these methods to promote good ends always forget is, that when the methods have once been accepted as matters of course and

are generally employed, society has no effective protection against their employment for evil ends by any gang of desperadoes sufficiently clever and determined. The state of affairs in Russia today is the logical culmination of bullying methods begun for good ends and inevitably perverted to bad ones.

A similar observation applies to the practice of trying to accomplish thru the coercive methods of law (and worst of all by constitutional amendment) ends that in the nature of the facts can be attained only thru changes in the ideas, the daily habits and the slow upbuilding of self-control of man himself. The well intentioned men and women who try to reform morals by law and administration because they have become impatient with the slow processes of religion, education and natural selection, forget that every new piece of legislation creates a new company, regiment or army of office holding parasites for taxpayers to support, a new mob of crooks to provide (for a price) ways and opportunities to beat the law and a new indifference to law itself and even a contempt for it when experience proves that it cannot be honestly and effectively enforced. It is because I am so strongly convinced that these are true observations of fact that I am obliged to dissent from that belief in the expediency of the eighteenth amendment which has so often been expressed by some of my honored associates on the editorial staff of *The Independent*. I expect to see this amendment discredited. We shall shut our eyes to the facts (or lie about them), professing a virtue that we cannot and do not possess. Having "driven" thru the amendment we shall live up to it by hypocrisy.

### They Had to Draft Millerand

WELL, our country escapes at least one difficulty that the French have. It is not hard to induce prominent men to accept the Presidency.

### Sovietism

MR. Hughes performed another service to the nation when he found the perfect word to stigmatize the conduct of the New York Assembly in excluding Socialist members. He said rightly that this was "sovietism"; for it is of the very essence of Bolshevik rule never to accept a verdict at the polls if it goes against you, but to maintain the ascendancy of your party by any form of fraud or violence which may be convenient.

### Machine Shock

THERE is some hope that the lessons learned in the stern school of war may be applied to the problems of peace. The casualty list of our shops and mines is longer than that of the army. More people are killed and wounded on streets and railroad tracks than in the trenches. And there is no armistice in the accidents of daily life.

It was found in the army that some of the most serious cases of injury were not physiological but psychological; "shell shock" they were called, tho in many instances they were not caused by shell or shock. They were neurasthenic disturbances, caused by monotony, anxiety, strain, fear or suppressed emotion. Their symptoms were capricious and unreliable. Their cure was slow and difficult. The most successful method of treatment has been to restore steadiness and self-confidence by setting the patient at some absorbing industry.

But now, that the attention of physicians has been directed toward "shell shock" so-called they find it more common in everyday life than was formerly suspected. Professor Collis in a paper on "The Psychology of Industrial Convalescence" read before the British Association for the Advancement of Science, said that:

The strain of industrial life in peace time is just as productive of neurasthenia as the conditions of active military service.

Indeed industrial neurasthenia plays an important part in every illness that befalls a worker, whether due to accident or disease.

Professor Collis suggests that the remedy is "a hair of the dog that did the biting." That is, he would use industry as a therapeutic agent and have the convalescent workmen set at some part time employment under the advice of experts in vocational psychology so that they could regain self-reliance thru self-support. But better than the cure of the victims of our industrial system are the measures now being taken to relieve the monotony and strain of machine tending that causes so many cases of nervous breakdown and erratic action.

## Can a Nation Be Moral?

By Shailer Mathews

I DO not mean "Can the citizens of a nation be moral?" That goes without saying. The real difficulty comes when one considers a nation as a whole. Can it have a morality and can it be judged as individuals are judged? Or is it above—or below—moral restraints?

Current discussions of the League of Nations too often neglect this issue. One speaker seems to ignore and another to assume it. As a matter of fact it is the "previous question" in the whole discussion. Do we or don't we want the United States as a nation to act as a moral being?

Nations generally have not so acted. They have reverted to the methods of pre-humans. They have fought and the stronger has enforced his will on the weaker—provided he chose to let the weaker survive. But brutality however bedizened is not morality. It remains brutality.

One difficulty has always faced patriots who believed in a nation-morality. There has been no social group of which individual nations are members and within which customs could lay a foundation for genuine moral action. For morality is the outgrowth of group life. Men began to be moral when they began to organize ways in which they could live together. They had either to do that or live in terror of each other.

When tribes and nations began they too lived as uncivilized men. They fought each other relentlessly. Gradually they learned better and devised makeshifts for true morality. They made alliances and drew up treaties. Intimations of moral sanction began to be felt. But treaties were kept about in proportion to the desire not to fight.

The process went a bit further when men began to speak of international law. As everybody ought to know, such law is a sort of morality in the nebulous state. It furnishes no sanction beyond self-respect and a regard for reputation among nations. But it marks a new and significant interpretation of the bases upon which national life is to rest. It is a long way from savagery to a Hague Tribunal.

From this point of view a League of Nations has more than mere political meaning. To propose such a League is to propose taking a new step in moral evolution. For such a League will be the social group within which a morality of nations can develop. When we see this we shall see that more than party-policy is at stake. We are hesitating at the threshold of a new region of morality. Some day men will be intelligent enough to enter this Promised Land and nations will find themselves moral persons.

### What Can We Do?

THE American Government has protested to Japan against her military occupation of the northern half of the island of Saghalien contrary to the Peace of Portsmouth. But the Japanese paper, *Yorodzu*, replies: "Northern Saghalien is not American territory and the United States is not a member of the League of Nations, therefore what need is there for Japan defending her action to America?"

Is this retort pertinent or impertinent?

A British cartoon of congratulation on the news that prices have begun to fall in the United States

No wonder the crowd cheers wildly at the prospect that this season means the fall of the cost of living

**Fine! But it isn't every vehicle that can make as short a turn as a Henry!**

And most of us are forced to place all our money on the third horse!

Twenty per cent looks like a lot when you're at the top, but after all it's a long way from the starting point of "Reasonable Basis." And the path down has its dangers

The wave can't stand up forever

BEWARE OF THE DOG!

Siamese twins

# The Story of the Week

## The New French President

PAUL Deschanel, who became president of the French Republic on January 17 when Poincaré's term expired, became gradually incapacitated to perform the duties of his office because of a nervous breakdown which showed itself in morbid aversion to responsibility and fear of assassination. Upon his resignation the Senate and Chamber of Deputies met at Versailles and elected to the presidency Premier Millerand. He received 695 votes out of a possible total of 892. There was no rival candidate of importance. The United Socialists cast their sixty-nine votes for Gustave Delory, deputy from Lille, but this was merely a formal demonstration of their disapproval of Millerand's anti-Soviet policy. There were a few scattering votes; the rest were blank. There had been a considerable faction opposed to Millerand because of his avowed intention to make the presidency a real power instead of a rubber stamp, but these opponents were won over by his promise to postpone radical changes in the constitution to a less critical time.

Ordinarily a month is allowed between the election of a president and his installation in the Elysée Palace, but in this case, on account of the accumulation of business that Poincaré was too ill to attend to, the new president entered upon the duties of his office within ten minutes after his election. He wrote his inaugural address while the senators and deputies were filing thru the tribune to deposit their ballots in the urn.

In this address he declared his determination to carry out completely the Treaty of Versailles. He expressed confidence in the progress of the League of Nations and pointed out the necessity of its being supported by force. He forecast his constitutional policy in the following words:

Universal suffrage is the master and its will is expressed by elected representatives. In order that it be executed and respected there is a need of free executive power under the control of parliament and an independent judiciary.

Confusion of authority always leads to tyranny. You must choose the time you deem best in consultation with the Government to bring about prudently the required modification of the constitution.

## Millerand's Career

THE fact that Alexandre Millerand secured for the presidency practically all of the votes of the French parliament except those of the extreme Socialists is curious, considering that he began his parliamentary career as an extreme Socialist. He came of revolutionary stock for his father, Etienne Millerand, took part in the Commune of 1871 and was shot for it by order of General Galliffet. Alexandre is pure Parisian by birth and breeding. He was born in the heart of Paris, Montmartre, in 1859, and was educated at the Lycées of Henri IV and Michelet. After being admitted to the bar his first case of public importance was the defense of the agitators of the Decazville strike of 1883. Clemenceau then made Millerand editor of his paper, *La Justice*, and in 1883 he aided Clemenceau in the attack upon President Grévy that forced him to resign. Like Clemenceau, Millerand rose to the premiership by means of the press. As editor of *La Petite République* and later of *La Lanterne* he took an active part in exposing the Panama scandals and the Dreyfus conspiracy. This involved him in two duels, one with pistols and the other with swords. One day in the height of

the Dreyfus fight the irate wife of a deputy whom Millerand had attacked walked into the office of *La Lanterne* and shot M. Olivier, the assistant editor, on the assumption that the man at the desk must be the editor-in-chief.

But gradually Millerand became more interested in the carrying out of practical reforms in labor conditions than in the continuance of the class war and in 1899, when the republic seemed likely to be overthrown by the monarchical and reactionary elements, he consented to take the portfolio of Commerce in the "Cabinet of Republican Defense" formed by Waldeck-Rousseau. This involved breaking with his comrades, for it is one of the rules of the Socialists that no member of the party shall take any post in a bourgeois administration. So the party voted his expulsion, altho the greatest of its leaders, Jean Jaurès, urged his retention. In this cabinet he found himself the colleague of General Galliffet, Minister of War.

Millerand further incurred the enmity of all his former radical associates in taking strong measures for the maintenance of public order in the great railroad strike of 1910. He was then Minister of Public Works, Posts and Telegraphs and in the same cabinet were two other Socialists or ex-Socialists, Viviani as Minister of Labor and Briand as Premier and Minister of the Interior. The strike broke out on the northern railroads, that is those leading toward the German frontier, and the Government took the ground that the stoppage of transportation and the destruction of railroad property put the nation in peril of foreign invasion. Accordingly the three ministers adopted the unprecedented course of calling the strikers to the colors and then setting them as soldiers at their old work of running the railroads, not with the increase of wages they demanded

O LOOK WHO'S HERE!

The Republican Pharaoh's daughter discovers the abandoned League

but with no wages at all. Refusal to obey orders under such circumstances was of course mutiny and punishable by death. Under this pressure the strike collapsed and the action of the Government was sustained on account of the general recognition of the extreme danger of the crisis.

At the outbreak of the Great War in August, 1914, Viviani was premier and when he organized his coalition cabinet of all parties for national defense Millerand was called to take charge of the Ministry of War. Here he became unpopular because of his refusal to allow the parliamentarians to interfere with the field operations or to admit them to advance knowledge of the plans of the campaign. Accordingly on the reorganization of the ministry in October, 1915, he was left out. When Alsace-Lorraine was recovered in 1919 he was appointed its first governor and on Clemenceau's resignation he became premier.

In this position as in all others he distinguished himself by firmness and indefatigability. He acted on his own responsibility and did not hesitate to thwart the plans of his chief ally, England. He sent African troops to occupy the German city of Frankfurt without the knowledge and in opposition to the wishes of Lloyd George. When Prince Feisal, a *protégé* of the British, set himself up as King of Syria, Millerand sent French forces to Damascus and drove him out. He refused absolutely to recognize the Soviet government and declined to participate in the conference for the restoration of trade relations with Russia that Lloyd George had called in London. While the British premier was advising the Poles to accept the Soviet terms of peace the French premier urged and aided them to continue at war and he recognized Baron Wrangel's South Russian government, while the British Government repudiated his offensive against the Bolsheviks. Millerand at first refused the proffer of the presidency because he did not want to relinquish his power in this critical period and when later he withdrew his refusal he made it plain that he intended to exercise his constitutional right to negotiate treaties altho previous presidents have left that to their premiers.

## AN ENDOWED STATESMAN

Georges Leygues, who succeeds Millerand as Premier of the French Republic, is not subject to the temptation to which some politicians succumb of taking bribes or sacrificing their principles for position. A Parisian merchant left him a fortune of \$3,000,000 that he might be financially independent for life

In 1917, when again the safety of the country was imperilled by internal intrigue, this time in conjunction with foreign invasion, and Clemenceau, "the Tiger," undertook the formation of a coalition cabinet of such efficiency as to carry the war thru to victory, he called Leygues to take charge of the Marine. In this position he had to supervise the plans for circumventing the U-boats and to arrange for the reception of the American transports. He favored the work of the Y. M. C. A. at the ports and asked to have it extended to the French seamen. He married his daughter, Jeanne Leygues, to Paul Rockwell, an Atlanta newspaper man who had volunteered for service in the French Foreign Legion.

M. Leygues is perhaps the only endowed statesman in the world. M. Chauchard, the proprietor of the well known Paris department store, Magazines du Louvre, was so pleased at receiving the grand cordon of the Legion of Honor that he bequeathed to Leygues a fortune of \$3,000,000.

In assuming the office of Premier he has declared his intention to carry out the policies of his predecessor, which he specified as follows:

Regarding internal affairs, to defend our liberties and laws, to strengthen and improve our republican institutions, accomplish the social reforms awaited by our democracy and to pay to our valiant wounded and to the families of our glorious dead the sacred debt we have contracted toward them. Regarding foreign affairs, to exact a strict application of treaties, not to permit the limitation of any of our rights, make of the League of Nations a living, powerful organism to end the era of great wars, and to constitute the army and navy as a part of our policy to maintain our prestige at the height to which it has been lifted by our victory.

## Soviet Peace Terms

WHEN a peace conference was arranged in August between the Polish and Russian Governments the Bolsheviks insisted that it be held on the frontier and inside their own territory, instead of in neutral territory, as desired by the Poles. Accordingly the envoys of the two countries met first at Minsk. But in the meantime the rapid advance of the Polish armies and the rout of the Bolsheviks had so altered the situation and stiffened up the backbone of the Poles that they flatly refused all but one of the fifteen points of the Soviet peace terms and insisted upon the transfer of the conference to Riga, the chief city in the now independent republic of Latvia.

So the next meeting of the peace delegations was in the historic Hall of the Blackheads, which in the palmy days of the Hanseatic League was a bachelors' club with St. Maurice the Moor as their patron saint. The Soviet delegates raised the question of the propriety of the presence of an American destroyer in the harbor since the United States is at war with Soviet Russia, but the Latvian Government explained that the American vessels were like the British, merely sharing the hospitality of this neutral port. The American Commissioner to the Baltic States, Captain Young, and the American military attaché, Colonel Holliday, attended the opening session of the peace conference at the invitation of the Latvian Government and shared a box with the French, Italian and German representatives. The head of the Soviet delegation, Joffé, rode up to the hall in the Czar's limousine while the head of the Polish delegation, Dombrowski, was content with a dilapidated one-horse carriage.

When Joffé made his opening address it became evident that he recognized the reversal of Russian fortunes, for he announced his intention of withdrawing the proposals to which the Poles had chiefly objected at Minsk. These were the demand for the reduction of the Polish army, the turning over of arms to a workmen's militia and the control of a railroad connecting Soviet Russia with East Prussia and passing thru Polish territory. Joffé accused

## The New French Premier

PRESIDENT Millerand selected for his successor at the head of the cabinet Georges Leygues, who also takes the foreign portfolio. Leygues is a year older than Millerand, having been born at Villeneuve-sur-Lot in 1858. At the age of twenty-five he was elected to the Chamber of Deputies for his home district and has represented that department ever since. He has had a seat in seven cabinets, usually in the ministry of education, where he has effected important reforms in secondary education. He entered with Millerand into the famous "Cabinet of Republican Defense" that was formed in 1899.

the entente of driving the Poles into a winter campaign with the purpose of destroying both Poland and Russia. In order to prevent this he said the Soviet Government would hold out liberal terms for an armistice to be concluded by October 5. He offered the Poles a boundary line east of that allowed them by the Supreme Council on December 3, 1919. This would give Poland more territory on condition the inhabitants voted to join Poland rather than Russia. The question of eastern Galicia would likewise be settled by a plebiscite. The arrangements for holding this referendum could be settled after the armistice had been concluded. Poland is asked to recognize the independence of Ukraine, Lithuania and White Russia.

The Polish terms for an armistice as presented by Domb-ski include mutual amnesty, exchange of prisoners, guar-

© Keystone View

What good does it do to disarm Germany along her western border if she is to be given arms in the east? When the Russian Cossacks made camp at Arys, East Prussia, after Poland had shown too much fight, they turned over to the Germans their rifles as well as a number of British and French machine guns

antees against attack, no war indemnities, and delimitation of disputed territories, not in a spirit of historical revenge, but on a basis of the just conciliation of vital interests of both parties and of the democratic determination of nationality.

But while these discussions are going on in the Black-heads' Hall the Polish and Russian armies are keeping up the fighting in the field, with the advantage still in favor of the Poles. They have captured Grodno, which is beyond their boundary as prescribed by the Supreme Council.

## Settling the Italian Strike

**I**N most cases the workmen have confirmed the compromise arranged between the General Confederation of Labor and the Italian Government. According to this agreement the strikers were promised an increase of wages of eighty cents a day on condition of evacuating the plants they had seized and Premier Giolitti promised to put some measure thru parliament by which the employees were to have an actual share in the control of the establishments in which they work. The referendum of the Metallurgic Union gave 132,000 votes for and 45,000 against the acceptance of the agreement. The machine shops in Milan and in most other cities have been peaceably returned to their owners. The red flag of the soviet has been hauled down and the Italian flag raised. But the anarchists and syndicalists are furious at having to relinquish an advantage that they hoped would lead to a complete revolution and they have wherever possible instigated resistance and incited violence. At Turin they took advantage of the funeral of two workmen to start an attack on the armory of the Royal Guards. This developed into a pitched battle in the main streets of the city where the strikers fought with hand grenades and the troops fired from motor lorries. Seven deaths are reported in Turin.

When the Senate met in Rome the Government was

severely criticized for its supineness in allowing the strikers to confiscate the factories, organize their own armed forces, establish their own tribunals, and otherwise exert illegal authority over the community. Senator Tanari said:

Those who opposed the war are the same who today are trying to drag the country into civil war. In the province of Bologna alone in the last few months there have been 200 cases of incendiarism, and likewise disorders, persecutions and boycotts, with the loss of 50,000 tons of fodder and 60,000 tons of wheat.

This is a hit at Premier Giolitti, who in 1915 tried to prevent Italy from entering the war.

Ex-Premier Orlando on the other hand supports the policy of the present government. He argues that production is a partnership in which one side contributes labor and the other side capital. This, he thinks, gives both parties the right to share in the control of the establishment.

The Giolitti Government is in serious difficulty over the food question. In order to keep bread down to a reasonable cost the Government has been buying wheat abroad and selling it below cost in Italy. But this involves an annual loss of 6,000,000,000 lire (normally \$1,200,000,000), and the Government is constantly running deeper into debt. Senator Pellerino called attention to the fact that while the Italian workmen claim that they cannot afford to pay the cost price of bread they are wasting 5,000,000,000 lire a year on wine. Premier Giolitti proposes to take the bounty off bread and put an equivalent tax on wine.

## Raids and Reprisals

**T**HE struggle between the Sinn Fein and the military is becoming more violent and unruly. Neither party keeps to fair fighting and the restrictions of civilized warfare are disregarded. Assassination and incendiarism are the weapons employed and on both sides it is a war of armed men against unarmed men and of many against one. The murder of constables and the burning of barracks by the Sinn Feiners are now followed by reckless reprisals by the British troops and the police auxiliaries commonly called the "Black and Tans" who shoot up a town in Wild West fashion.

A typical instance of this guerilla warfare occurred in County Meath, where the Sinn Feiners carried out a successful gun raid on the village of Trim. On Sunday morning the telegraph and telephone wires were cut and all the roads leading to the village were blocked by felling trees across them. Then a band of a hundred men, armed and masked, appeared and stormed the police barracks. This is a two-story building surrounded by a high wall. But the garrison numbered only ten, of whom five were at mass. The head constable was shot and the other four surrendered. When the rest returned from church they too were held up. The raiders then burned down the barracks after carrying away in their motors a thousand rounds of ammunition together with rifles, bombs and Verey lights.

In the afternoon when the young men were as usual hurling on the village green a detachment of Scotch troops appeared in motor lorries and fired upon them, killing two. The priests intervened and the mayor promised to keep the people off the streets, so the soldiers left. But during the night three lorries of the Black and Tan police invaded the village and attacked the houses supposed to contain Sinn Fein sympathizers with machine guns and bombs. Gasoline was commandeered and used for setting fire to the houses and shops. The town hall and nearly every building on the main street were burned down. Men, women and children fled to the fields in their night clothes with such belongings as they could catch up. In some cases the cottagers were given time to get their furniture into the street.

In County Clare a police lorry passing along a country road near Lahinch at night was ambushed by a band of a hundred Sinn Feiners. Six constables were killed and sev-

eral of their assailants. In reprisal for this Lahinch, Ennistymon, Milltown and Malbay were raided by uniformed men. Houses and hayricks were burned and several of the inhabitants killed.

In Belfast four constables patrolling the streets in the Catholic quarter on the night of September 25 were shot. One of them was killed and two were wounded. The other ran away. The Unionists took prompt revenge. Parties of masked men visited the homes of three well known Sinn Feiners, called them from their beds and shot them dead, in the presence of their families.

The largest shop in Cork was blown open by explosives, supposed to be a bomb, that shook the city to its circumference.

Mayor MacSwiney is still alive on the forty-eighth day of his self-imposed fast in Brixton prison. Archbishop Mannix called it "a veritable miracle" but some suspect that he is being secretly fed either by the Government physicians or his family and friends who have free access to him.

## Prohibition in Scotland

A HOT campaign against "hot Scotch" is being carried on in Scotland and in November it is expected that a large part of the country will go under a no-license régime. The temperance movement in Scotland began about thirty years ago and in 1913 a local option act was passed thru Parliament. But operation was postponed for seven years so as to give the liquor men a fair chance to get out of the business if they thought there was any danger of their being closed up. But most of them did not take the matter seriously until now when they perceive that their craft is in danger.

The law provides that 10 per cent of the registered voters in every polling district may, by filing petitions during the month of September, demand a ballot on the subject. The ballot provides for three options: (1) No change, (2) Reduction of licenses by 25 per cent, (3) No license. The first or second may be carried by a simple majority, but for "no-license" a majority of 55 per cent of those voting and comprising at least 35 per cent of the registered voters is required.

Scotland is divided into 1300 such voting areas. In the country districts they are the parishes; in boroughs of less than 25,000 inhabitants the borough, and in cities the municipal wards. There are to start with 250 dry areas. Glasgow is divided into thirty-seven precincts and it is expected that from five to eight of them will vote no license.

A house-to-house canvass is now being made thruout the country and it is expected that the 10 per cent of signatures necessary to secure a vote on the question will be secured in almost all of the thousand precincts. The various temperance forces are organized under the National Citizens' Council of Glasgow with Colonel Kyle of the Highland Light Infantry in charge of its field campaign. In order to avoid prejudice the Council has refused to accept money or literature from America, but several American speakers and organizers, among them "Pussyfoot" Johnson, have been engaged. Colonel Kyle is relying largely on the women's vote, but states that the cause has also "the support of the churches, many industrial magnates and some of the labor forces." A flying battalion of workingmen has been organized to speak at the hundreds of meetings now being held all over Scotland.

On the other hand the liquor interests are more strongly entrenched in Scotland than almost anywhere else and they have unlimited funds to combat prohibition. They have announced their willingness to compromise on a reduction of licenses with compensation and limitation of hours and to introduce drastic reforms in the character of the public houses. An *Anti-Prohibition Journal* has been started and

beer bottles bear a red-edged label reading: "Prohibition means more taxation. Vote no change." Bands of ex-service men have been recruited to go about the country breaking up temperance meetings by heckling and hissing.

But even where "no-license" is carried it does not mean prohibition in the American sense, but merely the abolition of the saloon and barroom, for hotels and restaurants having licenses may still serve alcoholic drinks with regular meals.

The wet forces of Scotland are receiving financial aid from the liquor interests south of the border, for it is realized that if any considerable part of Scotland goes dry England will follow suit. The rapid increase in drinking and drunkenness since the war is causing serious alarm even among the most conservative. In England and Wales there was in 1919 an increase of almost a hundred per cent in convictions for drunkenness over 1918. In the greater city of London the increase was 107.6 per cent. In 1914 the United Kingdom spent for intoxicating beverages \$822,500,000. But in 1919 it had risen to \$1,930,000,000 and estimates for 1920 make it more than two billion dollars. Lord Leverhulme, who came over to America opposed to prohibition, went back a convert. He found a greater efficiency in the United States and is convinced that Great Britain cannot compete so long as she has to stand this handicap and extravagance. He points out that if Great Britain saved the money she now spends on drink she could pay off her debt to the United States within five years, but "as it is the lender is saving money and the debtor spending it."

## Varied Views on Prohibition

AT a recent session of the International Congress Against Alcoholism held at Washington the Prohibition candidate for President offered to withdraw from the race if either the Republican or the Democratic candidate came out in favor of the strict enforcement and maintenance of the eighteenth amendment and the Volstead Act. Mr. Watkins asserted that "there are six candidates in the race for the Presidency this year and only one of them has declared for our program." Both Senator Harding and Governor Cox have promised to enforce the prohibitory laws as long as they are on the statute books, but apparently Mr. Watkins is afraid that they will not be sufficiently zealous in resisting any attempt by Congress to alter the stringent provisions of the Volstead Act.

Wide World

A GOOD BAD MAN

Francisco Villa, the Mexican bandit, has given himself up to the Mexican Government and it, in turn, intends to let him live on a large estate near San Pedro, Mexico, where he is to be kept good by fifty guards

Dr. Baker contrasted the barren record of the Prohibition Party with the positive achievements of the Anti-Saloon League, of which he is general superintendent. To the non-partizan tactics of the League he ascribed the Webb-Kenyon Act, the Eighteenth Amendment and the Volstead Enforcement Act. "No good will come," he said, "of a Prohibition Party which polls just enough votes to give some wet candidate the election."

A man with the inappropriate name of Rosewater startled the session with a defense of light wines and beer. He declared that "at present the nation is dry in law and wet in fact and is destined to become wetter as the knowledge of the art of home brewing, fermenting and distilling grows among the populace." He said that it was a scientific fact that a beverage containing 2.75 per cent of alcohol by weight is non-intoxicating. Dr. Wiley, the pure food expert, challenged this statement. He told of a drinking match in Germany, based on beer of low alcohol content, in which 900 out of the 3000 drinkers became intoxicated before the evening was over.

## Cox in the Sunset States

Governor Cox has spent several weeks attempting to hold steady that part of the country which gave President Wilson his victory four years ago. In a wide swing around the circle, rivaling the most ambitious tours of Bryan or Taft or any other peripatetic candidate, he has carried the war into nearly every doubtful state in the Far West. According to political experts of both parties he has greatly strengthened Democratic chances in states that a few weeks earlier had been considered surely Republican, but no one claims that there will be a "solid West" this year as there was in 1916.

Much of Governor Cox's success as a speaker was due largely to his tactful identification of his own sentiments with those of the western people. In California he spoke well of Senator Johnson's former work for progressive causes and declared that he would like to have men of the type of Mr. Hoover in his cabinet. He had much to say on the development of western resources, the irrigation of arid regions and other topics of local interest in the plateau states. He strongly disclaimed the "wet" label which many of his eastern supporters had tried to fasten on him and gave repeated promise to uphold the eighteenth amendment.

But turning from minor topics the Governor returned again and again to the League of Nations as the paramount issue of his campaign. At Laramie, Wyoming, he accused Senator Harding of making a secret agreement with Senator Johnson to "scrap the League." Senator Harding replied: "I say nothing to anybody on the subject of foreign relations that I do not say in public utterances." But Governor Cox claims to have found in the "public utterances" of Senator Harding at least nine different and mutually inconsistent proposals with regard to the League. His own position remains to get the Treaty ratified with "interpretative reservations." In a telegram to Professor Irving Fisher of Yale he said:

I have no doubt that Republican and Democratic Senators alike will loyally fulfill the people's mandate which my election will signify. I shall endeavor to meet all reasonable desires for proper reservations which are offered in sincerity and not merely presented as trumped up for political purposes. My heart is in this fight, and I will put forth all effort and make any reasonable concession to win it that we may secure membership in the League of Nations.

© Keystone View

Jacob H. Schiff, philanthropist and financier, died recently at his home on Fifth Avenue. Senior member of the banking firm of Kuhn, Loeb & Co., he was one of the most dignified and important figures in the life of New York. Mr. Schiff was born in Frankfort-on-the-Main on January 10, 1847. He started his career in the United States at the age of eighteen as a bank clerk, later becoming junior member of the brokerage firm of Budge, Schiff & Co. In 1875 he married Theresa Loeb, daughter of Solomon Loeb, head of Kuhn, Loeb & Co., and ten years later became head of the firm. Having established his reputation as a financier, during the rest of his life he found leisure and money for a great diversity of philanthropic and idealistic interests which benefited thousands of afflicted persons and aided in the education of other thousands.

## Harding on Ireland

SENATOR Harding has been accused by his opponents of attempting to swing the Irish vote away from the Democrats, but at least he has frankly admitted that the United States cannot officially work for Irish independence. An expression of sympathy with Irish national aspirations was as far, he thought, as a foreign nation could properly go:

There are two phases of the so-called Irish question in America. Individual sentiment is one thing, and it is recognized that there is widespread sympathy here for the cause of Irish autonomy. We voted an expression of that sympathy in the Senate at the time the peace delegates were conferring in Paris.

Official consideration is quite another thing. It is not a question for official America. America has already meddled abroad excessively without invitation. I have said, as I truly believe, that under the provisions of the League of Nations the Irish question is internal or domestic, and I recall distinctly that at the hearings before the Foreign Relations Committee the American advocates of Irish independence bitterly opposed the League as proposed because it not only closed the door to Ireland but committed us to the use of force to maintain territorial integrity as it exists today.

## Wilson Opposes Shipping Law

PRESIDENT Wilson has once again thrust a stick into the Congressional hornet's nest. He refuses to carry out that clause of the Merchant Marine Act of this year authorizing and directing him to terminate commercial treaties with foreign nations restricting the right of the United States to impose discriminating cus-

tom duties on imports and discriminating tonnage dues according to whether the carrier vessels were American or foreign. He pointed out that the treaties in question contained no provision for their being terminated in the manner laid down by the law:

The action sought to be imposed upon the Executive would amount to nothing less than the breach or violation of said treaties, which are thirty-two in number and cover every point of contact and mutual dependence which constitute the modern relations between friendly states. Such a course would be wholly irreconcilable with the historical respect which the United States has shown for its international engagements and would falsify every profession of our belief in the binding force and the reciprocal obligation of treaties in general.

The legal situation created by President Wilson's act is rather involved. The President signed the Merchant Marine Act at the time it was passed by Congress and therefore there is no analogy with an ordinary act of veto. Nor does he now contend that the act as a whole is invalid; his objection relates to one section of a long and complicated measure. The opponents of the President contend that there is no precedent for a President refusing to carry out the provisions of a law passed by Congress and signed by himself; still less to single out one clause and refuse to enforce that while carrying into effect the law as a whole. They also contend that the Seamen's Act of 1915 contained a provision for the termination of commercial treaties providing for the arrest of sailors charged with desertion, and

that this created a precedent for similar action with respect to commercial treaties prohibiting discriminatory dues and duties against foreign shipping.

The President's supporters, on the other hand, say that the President is not opposing his personal will to that of Congress in refusing to carry out the disputed provision, but simply pointing out that Congress acted in excess of its constitutional powers in attempting to make statute law override treaty stipulations. Secretary Colby cited the words of President Hayes in vetoing the Chinese Exclusion Act of 1879:

The power of making new treaties or modifying existing treaties is not lodged by the Constitution in Congress, but in the President, by and with the advice and consent of the Senate, as shown by the concurrence of two-thirds of that body. . . . As the power of modifying an existing treaty, whether by adding or striking out provisions, is a part of the treaty-making power under the Constitution, its exercise is not competent for Congress.

## Another Non-Partizan Movement

A group of former Socialists, representing the "right wing" of the Socialist movement and composed largely of men who left the party on account of its opposition to American participation in the war, has organized a Social Democratic League for political action. This is not a new third party, like the Farmer-Labor Party, but an association of progressive voters to hold the balance of power between Republicans and Democrats by supporting the most progressive candidates for office. In this respect its tactics will parallel those of the American Federation of Labor, the Farmers' Non-Partizan League and the Anti-Saloon League. Among the organizers of the Social Democratic League are such prominent writers as William English Walling, Charles Edward Russell, W. J. Ghent, Charlotte Perkins Gilman and Henry L. Slobodin.

The declaration of the new League condemns the organization of third party movements at the present time as weakening the influence of progressivism in the two great parties. The League of Nations is commended, subject to the condition that the Covenant be revised from time to time in the direction of meeting more adequately the demands of liberalism and democracy:

In joining the League under her own conditions, America will be giving her support, not to a fixed treaty or unalterable covenant but to a continuous process of international reconstruction in which she can wield a greater power than any other nation. This is the only progressive possibility that lies before us. The alternative spells nothing but obstruction and delay.

With respect to other issues, the Social Democratic League condemns intervention in Mexico, denounces profiteering, upholds direct taxation, opposes compulsory arbitration and advocates governmental credit to coöperative stores and housing associations.

## New York Gets New Housing Laws

IN response to the appeal of Governor Smith the New York Legislature has passed some drastic legislation designed to relieve the immediate pressure of the housing shortage and especially to prevent the wholesale eviction of tenants threatened by landlords for the first of October. The Governor signed all of the measures presented, but expressed his regret that further legislation was not adopted to provide permanent agencies to prevent any recurrence in the future of a housing shortage. Nearly all the laws enacted are really emergency legislation and do not offer a permanent solution of the problem.

The new laws are designed to place the burden of proof on the landlord who desires to evict a tenant. The limit of 25 per cent increase over the rent of the previous year is abolished, and thus far the landlord is favored. But should the tenant allege that *any* increase of rentals is unjust, unreasonable and oppressive the landlord must file a bill

of particulars with the courts to prove the reasonableness of the increase. "Issue shall not be deemed joined until the filing of such bill of particulars. Upon the petitioner's failing to file said bill of particulars within the time limited, the court, judge or justice upon motion of the defendant shall dismiss the proceeding." During the period of public emergency, moreover, defined as extending to November 1, 1922, the landlord who wishes to recover possession of premises occupied by a tenant by way of summary procedure must prove to the satisfaction of the court that the tenant is objectionable, or that he seeks in good faith to recover the premises for the personal occupancy of himself and his family as a dwelling, or that he intends to demolish the premises "with the intention of constructing a new building, plans for which new building shall have been duly filed and approved by the proper authorities." Another law makes the landlord responsible for the refusal of an agent or janitor to supply tenants with hot or cold water, heat, light, power or any service express or implied by the contract or lease. The only way in which a landlord can compel the payment of increased rents is by bringing an action against the tenant to determine the reasonableness of the increase. While the action is still before the courts the tenant must pay the old monthly rent and pay the additional sum after the court's decision if it is in favor of the landlord. Another law, designed to encourage building, exempts newly built dwellings from local taxation for a period of ten years, subject to the discretion of the local authorities.

## The State of the Union

THE National Industrial Conference Board has presented statistical estimates on the rising cost of living from July, 1914, to July, 1920. During this period prices a little more than doubled; the average increase of all listed prices being 104.5 per cent. Food prices increased by 119 per cent and clothing by 166 per cent. In spite of the building crisis and recent rent booms in the great cities the cost of housing increased the least of the major items of expense of the American citizen's budget; an increase of but 58 per cent. The cost of fuel, heat and light increased by 66 per cent in the six years, or almost by two-thirds. Carfare was increased in 120 cities. Within the last few months the cost of clothing showed a slight decline and more recently a shading of prices has been noted on some items of food, but taking the last year as a whole the tendency of prices has continued upwards almost as sharply as during the war. From July, 1919, to July, 1920, food costs rose on the average by 15 per cent and clothing by 33 per cent.

Franklin K. Lane, former Secretary of the Interior, has published a report based on financial statistics gathered from all parts of the country. His conclusions are on the whole optimistic. He asserts that "Economically the United States is shown to be better off than any other country in the world." He found very little evidence of unemployment or of shortage of raw materials, with the exception of coal. Transportation conditions were everywhere bettering. "In no section of the country did investigators find sentiment in favor of Government ownership of the railroads." Wages had advanced from 10 to 50 per cent thruout the country.

The growing conservatism of the buyer has caused price cutting in clothing all over the country. The retail shoe trade is discovering that a large part of the American public is following the example of Governor Coolidge and wearing old shoes. Perhaps the most conspicuous instance of price cutting was Henry Ford's sudden reduction in the price of his automobiles; the most widely sold motor cars in the world. This reduction was in itself important, but Mr. Ford hoped that it would be still more influential as an example to other merchants, both within and without the motor industry.

# McCutcheon's

## In Harmony with Autumn

Reg. Trade Mark

**G**AILY colored as the autumn leaves, and in bright woodsy hues, our smart new Sweaters and Wool Hats are a part of the season itself.

For a brisk tramp across country, for a round of golf, for general outdoor wear, a Sweater with a becoming Hat of Wool is a charming necessity.

Models of dainty Chiffon Alpaca, Soft Camel's Hair and the various other Wools in vogue; you will find them all in a most satisfying assortment.

### Illustrated

The model illustrated may be had in either light or heavy weight Chiffon Alpaca with a braided girdle of the same material. The Lighter Weight Model, at \$18.50, comes in Black, White, Navy, Copen, Jade, Pink, Silver, Rose, Lavender, Turquoise and Purple; while the Heavier, at \$15.75, may be had in Black, White, Navy, Camel, Brown and Purple Heather.

The Hat illustrated is one of our exclusive models and is priced at \$12.50. Color combinations: Camel trimmed with Brown Chenille, all White, White with Black Chenille, Black with White, Navy with Grey, Grey with Navy, and Brown with Tan.

## Letters to the Great and the Near Great By John Citizen

Mary Citizen,  
Homeville, Anystate,

Dear Mary:

It seems rather silly to be writing a letter to one's own wife at one's own post office address. But this time I am not addressing you in your sweet individual capacity but collectively—as the Newly Enfranchised Sex. Please to remember, Madam, that for the purposes of this letter you are a symbol of some twenty million voters, and that I am the Typical American Husband.

For a long time we shied off from equal suffrage because we could think of it only in connection with the exceptional woman—the feminist, the militant, the suffraget, the lady novelist, the spectacled sociologist, the working woman in the unionized factory. It was for these that political emancipation was chiefly urged. And this tactical blunder worked against woman suffrage in a double way. Some exceptional women were very great, and we said to ourselves, "It may be hard lines that they can't vote, but you can't argue from Joan of Arc or Madame Curie to Mary Ann in the kitchen." Other exceptional women were exceptionally unpleasant, and we said to ourselves, "We don't want *them* in politics." All the time, my dear Mary Citizen, we were forgetting the millions of you. If we had reflected we would have realized sooner that equal suffrage did not mean Socialist rule or even feminist rule, but simply "home rule," not in the Irish sense but in the literal sense; rule by the American housewife and mother, rule by the safest, soundest, sanest citizens in all the world. So congratulations, Mary, on your nineteenth amendment, and may you never vote less wisely than I do!

Your loving husband,  
JOHN CITIZEN.

Archbishop Daniel Mannix,  
Somewhere-in-England.

Reverend Sir:

I confess that until recently my sympathy with you has been slight. At the hour of greatest peril for civilization you were acting as a brake on the energies of Australia.

But while I cannot approve your political record, I have, like other Americans, Irish blood enough to enjoy a good joke with you, especially when it is a joke on England. You are entitled to a deep chuckle at the elaborate statescraft which diverts a shipping route in order to land you at Liverpool and then takes you off the boat so as to land you somewhere else. Has Lloyd George lost his erstwhile saving sense of humor? Or did he do the whole thing as a practical joke? Perhaps he took you off the boat at Penzance as a rehearsal for the Gilbert and Sullivan opera, *The Pirates of Penzance*.

Sincerely and amusedly yours,  
JOHN CITIZEN.

## Nine Steps to a New Age

(Continued from page 50)

available to migratory workers, that army of men and women who move with the season—pickers, harvesters and timber workers. At present no means are provided for their ballots; they are social and political pariahs. The men and women who cannot speak politically, that is, vote to make the laws of their country, cannot, and should not honor, laws imposed upon them by others, altho they are forced to respect them. It is impossible for them to respect a country which does not respect them.

Women should be raised from the idiot, infantile and felon class and fully enfranchised. For this cause our party was the pioneer.

Negroes should be guaranteed equal suffrage. States faithful to the principle that all power of government is derived from the governed should be disciplined by curtailment of congressional representation and beneficial national assistance, *except* for educational purposes of which they are in sore need.

*Sixth*—If a man is not property, not a commodity, he has the inalienable right to stop work when it pleases him.

A thousand or ten thousand men are not less human because they act in concert, but the law which declares one to be human, makes a thousand acting in concert *property* by injunction law, and so treats them under the logic that as a combination of property interests constitutes a public injury, so a combination of men on strike or a boycott is illegal. A blacklist, or lockout, the employer's sabotage against workers, is not a crime. We oppose the system which in fact and law declares men to be property—a commodity—to be dealt with as bales of cotton, pigs or canned beef. This analysis and attack is not answered by the claim of public interest, which never invokes successfully the law against the lockout and blacklist of our capitalist masters, or capitalist combinations to crush men, women and children by denying the right to organize.

*Seventh*—Federal judges should be elected by popular vote; or the federal courts created by Congress should be abolished and state courts empowered to enforce federal enactments.

Jefferson expressed his fear of the federal court system. History has proven his fears well founded. These all too powerful, irresponsible despots should be kept close to those who feed and clothe them, and who provide them with imposing court rooms.

*Eighth*—The railroads must be nationalized now, and democratically managed.

This industry has been for three-quarters of a century the golden highway of finance buccaneers. They have been granted millions of acres of most fertile lands, and billions in bounties. The records of the federal courts are replete with the history of manifold robberies of investors by railroad

manipulators. Again and again the courts thru foreclosures and receivers have rebaptized railroad systems and sent them forth to loot the people.

At the opening of the war they collapsed, the Government was forced to increase efficiency by taking control. It invested \$1,200,000,000 for rehabilitation, paid to stockholders a dividend averaging more than that ever paid to stockholders before, and then made immense savings thru consolidation of departments, shortening of hauls by more direct routes, and by hundreds of other economies.

Now with the end of the war comes the most brazen and colossal robbery of the American people. The loot of unrestrained war profiteers is unmatched by the Republican and Democratic gift to the railroad buccaneers. Wages of the workers are increased six hundred and twenty-eight million. Good. Their rates are raised one billion and a half. A dollar a day for every average family, or \$73 a year for every man, woman and child is loaded upon the present high cost of living. This is not all. Dividends are guaranteed upon the water stock valuations; crimes of the past are not punished, but rewarded. The footpad gets interest upon his thefts—surely the cup of the railroad magnates runneth over. Passengers stand eight and ten hours in overcrowded trains.

Socialists would take over the rail-

roads, adopt in principle the Plumb plan, multiply coal and wheat cars immediately to meet the heating and food requirements—then the carriers of building materials for homes, and run the railroads for the people.

*Ninth*—We propose a league of nations, a congress of elected delegates from free countries. We oppose the proposed coterie of international imperialistic financiers looking to exploit the workers of the world under a swindling device from Versailles.

We oppose a treaty which hitches the republic of Ireland to the imperial chariot of Great Britain as it is driven over the necks of four hundred million East Indian serfs. We oppose a league of nations which guarantees the French usurers their pound of flesh for loans to Tzars to crush rising liberalism.

We insist upon self determination, the pledge of America to the world, and open covenants of peace.

The old parties represent private property in banks, railroads, the steel industry and other means for exploiting the producer. We demand the socialization of all such property. Two contending classes confront each other. There is no middle ground. The Greenbackers, the Populists, the Roosevelt Progressives, the Forty-eighters, have been wiped out, and the Farmer-Labor party will go the way of its forerunners.

## Uncle Sam and His Southern Cousins

*(Continued from page 43)*

republics to the south of us. A regular exchange of university professors would do much to strengthen our cultural ties.

I recall in this connection an incident that impressed me very deeply when I was in Argentina. Sarmiento, a former president of that country, brought to Argentina two American Normal school teachers who organized a Normal school in one of the northern provinces.

These two Normal school teachers did more to make the United States known, to make the people of the United States known, to make our attitude toward those people known, than all the ministers and all the ambassadors that have ever been sent to Argentina, and that is no particular reflection on the ministers and ambassadors. It was due to the fact that they were in close contact with the people, and their memory in that province is revered as the memory of great leaders.

In the same way a number of countries in Latin-America are asking us for expert financial advice. Our financial advisers are asked not only to advise as to the best method of increasing revenues, but also as to increasing the revenue in such a way that the masses of the people shall no longer bear the entire burden of taxation, and that the great land-holding classes which have heretofore been able to escape taxation by reason of overpower-

ing influence shall pay their share. Thru constructive service of this character we will bring all the nations of Latin-America closer to us in a bond of unity which at first will be based on our service to them, but which in time will also enable them to render important service to us.

We probably are facing a long period of chaos in Europe. All the indications are that the recovery will require one, two and possibly more generations. The balancing wheel, the influence which will again set Europe on the road to national well-being, must come from the American continent.

The United States and many of the countries of South America have surpluses of food which can be made available to prevent what is now menacing Europe—general starvation. I mean literal starvation, not undernourishment, but the literal starvation of millions of people. The unity of America must therefore be used to meet that need, and I am certain that coming generations will be ashamed of us if we do not meet it. That is the immediate pressing need.

There is a larger need for capital goods with which to resuscitate, to reestablish European industry. Up to the present time the only nation with a large available supply of capital with the possibility of assisting Europe has been the United States, and now the spirit of saving must be developed

to a much larger degree in Latin-America in order that she also may be able to contribute her share.

In that unity of purpose, in that unity of policy of all the republics of America, we can also exert a steadying influence on the politics of Europe. We can assist orderly development, we can discourage anarchistic chaos because we hold in our hands the great weapons of life and death of entire populations. Let us not delude ourselves with the fallacy that what is happening in Europe will not affect us. If Europe enters upon a long period of chaos, its reaction upon the United States and upon all the countries of the American continent will be felt—and it will be felt more severely, more rapidly in South America than in this country, because those nations have not yet assimilated their foreign population to anything like the same degree that we have. Therefore, any anarchistic movement, any subversive movement that is successful in Europe will immediately have a corresponding counterpart in the larger countries of Latin-America.

And then there is the further purpose—the welding together of the peoples of the American continent in order that when the world is again menaced, if it is again menaced by war, America may not again be caught napping, without a definite continental policy.

It is practically certain, as far as events are foreseen, that with a united American policy, with all the republics of the American continent agreed as to the policy which they will pursue at the first indication of another European conflagration, America's influence can do much toward restricting the area of conflict, if it is not entirely successful in preventing the conflict, and, as I look upon the future this unity of sentiment, this unity of policy, this close understanding not only between governments but between the peoples of America, can be made the greatest guarantee of the world's peace. In furnishing that guarantee this continent will be performing its greatest mission, and will give the truest and noblest concept to the term "Pan-Americanism."

Washington, D. C.

## The Discovery of the "Mayflower"

(Continued from page 45)

used as a sort of Quaker home. It consists of the farmhouse, an old stable, a hay-barn, and an old Dutch sunken garden, all built about a pleasant quadrangle that in the olden times used to be the barnyard, but is now turfed over and is broken up by paths of flagstones. The two barns are now used for an overflow of guests when the Quakers have some specially large meeting.

It is the hay-barn directly across the quadrangle from the farmhouse that is supposed to be the "Mayflower." As I approached the barn from the orchard it looked almost as black as

## Mr. Aesop gets a shock

The genial fable-maker of Greece pointed many a moral against self-interest. But what seemed to him an evil, today we place in the column of virtues. Shocking indeed to Aesop!

Events have been happening in the electric light and power industry to prove that self-interest in each of us can benefit our neighbors as much as ourselves. And thereby hangs a tale—

There is a certain broad valley in this land where till recently business was poorer than a church mouse, and the cost of living higher than folks liked to think about. Therefore some merchants and artisans and farmers met to find the remedy.

Said a farmer, "If the electric power plant only reached out my way, I could irrigate a hundred acres more."

"Then I'd build you a new barn," a carpenter replied.

Said a real estate man, "I've fifty building lots nobody will buy, because I can't get electricity there."

"Think of all the furnishings I might sell to fifty homes," sighed a department store man.

Electric light and power! That was the need. The Electric Company couldn't furnish half enough. It hadn't the money to extend its service. Rates were low. Investors wouldn't invest.

So these business men asked the public service commission to grant the Company a higher rate.

The commission raised the rate. That made the Electric Company a safer investment, and people began to buy its bonds. With the added resources the Company built a bigger service. Homes sprang up along the lines. Everybody's sales increased. Factories and farms, with ample power to produce larger quantities, sold with profit at lower prices.

*Moral:* Perhaps in your own community the Electric Company is hampered by a lack of funds. Then, to invest in the Company's bonds or to pay a little more on your electric bill may be the surest way to boost your own business—and boost your town as well.

**No. 19** Reaching into every corner of this broad land, even to the most secluded farm, the Western Electric organization brings all the conveniences and the utility of electric light, power and communication.

## Training for Authorship

How to write, what to write, and where to sell.

Dr. E. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

tho it had been charred by a fire. A nearer view, however, disclosed the fact that its blackness was that of age alone. I could see that originally it was red. Upon entering the barn I was instantly struck with the idea that I was in a ship turned upside down. For the beams that make the skeleton of the barn are put in almost the same position that they would be in the skeleton of a boat. The man who holds the honor of making the discovery that the barn is the "Mayflower" is Dr. J. Rendel Harris, whose writings on archaeology and Biblical research in *The Independent* a generation ago our older readers will remember. Professor Harris has lived part of his life in America and has always been a deep student of Pilgrim history. He was attending a funeral at the old Quaker Meeting House two years ago when someone remarked to him, "That barn yonder was built out of the 'Mayflower.'" That gave him the clue and he forthwith began an examination of the barn and a search of the public records until he collected the evidence I shall now present.

1. The timbers of the barn at old Jordans have been examined by ship experts and they all pronounce them to be ship timbers quite three hundred years old of a schooner-built vessel, which is about 190 feet long and 150 tons. The "Mayflower," it is believed, was of 180 tons.

2. Bits of iron used as clamps on a ship found attached to the beams of the barn are believed to be parts of the keel of the ship. I have indicated where one of these clamps is located by a black circle in the lower left corner of the accompanying picture of the interior of the barn.

3. There is an iron clamp under the central cross beam which tallies with the story in the "Journal" of Bradford. In Bradford's Journal it is stated that while in mid-ocean the middle beam of the "Mayflower" became cracked and bowed, and on going below the captain declared that the ship was sound below water, but it was weak above. The Pilgrims then produced a great iron screw out of the hold, probably taken from the printing press which they brought with them from Leyden. After screwing the beam together undoubtedly a clamp or bolt was attached to prevent the beam from splitting again. One can see in the picture that there is a split ten or fifteen feet long in the cross beam of the barn. The clamp cannot be seen in the photograph as it is on the underside of the beam behind the supporting arm on the left. Now the question is whether this clamp is preventive or remedial. If it is remedial the case of the "Mayflower" is practically proved. Professor Harris had an expert pronounce upon this clamp, but he did not sustain the professor's hypothesis, saying that it was put in to prevent the beam from cracking. I am only a layman, but it was evident to me while standing in the barn, and I think it must be to any reader of *The Independent* that looks at the beam even

in the photograph, that the clamp must have been put on before the beam was used in the barn because the whole weight of the barn would evidently tend to compress the crack and not extend it, and there would be no use in strengthening it after it was in place. But in view of the expert's opinion we must not make too much of this link in the argument chain, until further corroboration is obtained.

4. Three letters less than an inch long have been found on one of the horizontal timbers at the end of the barn. It is said that three of the letters are clearly decipherable as being H A R and that there may be two letters before these that are E R. If this is the case E R would be the last two letters of Mayflower. The H A R would be the first three letters of Harwich, the name of the port which is known to be the "Mayflower's" port of reference or registration. The Public Record Office established the fact that the "Mayflower" was from Harwich, and also that the "Mayflower's" captain was Christopher Jones. I confess that if I had not known of the historical issue connected with the barn and I had been asked what letters, if any, were on the beam, I could not have read a single one of them. In order to leave no stone unturned I went into the farmhouse and borrowed a mirror and set it in the door as to reflect the bright light of the sun on the letters, thus hoping to throw them in the sharpest relief of light and shadow; but even then I could not see anything very much clearer than the reader can see in the accompanying photograph.

5. Inside the farmhouse there is an old door, shown in the accompanying picture, whose braces have floral emblems carved upon them. It is suggested that these braces were part of the cabin door of the "Mayflower" and the floral emblems may be the May or "Mary-flowers" or Hawthorne flowers carved in conventional design.

6. Part of the ingle-nooked fireside in the old farmhouse also consists of a coat-of-arms of King James the first. This coat-of-arms bears the date 1618. This is evidence that the building was put up in the early part of the seventeenth century.

7. The bricks in the foundation of the barn are also known to have been made between 1618 and 1625, for the sizes of bricks were at that time established by law and no other sizes were permitted to be made or used in England.

8. Probably the most important documentary evidence of all is the fact that in the Public Record Office is an application for the appraisement of the "Mayflower." It seems that the owners of the Mayflower on May 26, 1624, made application to the admiralty to appoint an appraiser so that three of the four owners might sell the boat and get their share of its value. The three owners were Robert Child, Thomas Moore, and Johanna Jones, relict of the captain of the "Mayflower." The fourth owner's name did not ap-

pear. The appraisers were appointed and the document evidently shows that the ship was broken up before appraisal was granted, because the phrase used in the application for appraisal states that the ship was "in ruinis esse." Having discovered this the next step was to trace out the ownership of the "Mayflower" and see if the owners had any connection with Buckinghamshire. The whole countryside, it turns out, was redolent of the Child family.

9. Another very interesting fact turns on the coincidence that in Plymouth, Massachusetts, there is a little green patch known as Coleshill. One of the first emigrants to America, probably on the "Mayflower," tho this is not certain, was a man by the name of Gardner, and Gardner is the name of the owner of the old Jordans hostelry of the seventeenth century. Dr. Harris suspects that these Gardners are one and the same, and that Coleshill in Massachusetts was named after the Coleshill near Jordans. Gardner, therefore, may have been the fourth owner of the "Mayflower," who returned from America and caused the timbers of the old hull to be brought from Rotherhithe, where she was dismantled, and converted into a barn on his small estate. Did he buy it back on appraisal? Or how did he get it? One of the appointed appraisers was Crayford, and Crayford and Gardner are believed to be related.

These are the chief evidences so far unearthed to prove that the barn at Jordans Hostel is the "Mayflower." The proof is wholly circumstantial. It is therefore not complete, but it all points in the right direction. The barn, Americans will be glad to know, is in a perfect state of preservation, and as yet has none of those disgraceful earmarks which certain types of American souvenir hunters and name carvers love to leave behind them. Let us hope that the good Friends who own this priceless relic will keep it as safe and sound in the future as it has been kept intact for the past three centuries.

After a full inspection of the barn and the hostel, we drove back to the station at Chorley Wood and I took the train to Amersham, five miles up the railroad, where the "English-Speaking Union" had "booked" me to preach in the Free Church the following Sunday morning. It was the first large British congregation I ever addressed and I seemed to see in the faces before me the very descendants of the old English families who populated the neighborhood three hundred years ago, and who undoubtedly gave to the world many of our Pilgrim and Puritan ancestors. I naturally made my text the Pilgrims and ended my address with the statement that if I was the first American they had ever seen, I would certainly not be the last if the discovery that had just been made in the neighboring countryside turned out to be the immortal little vessel whose memory the world is honoring today.

## The Wonders of a Puffed Grain

Each Puffed Wheat bubble is a whole grain puffed to eight times normal size. A hundred million steam explosions have occurred within it.

Every food cell is exploded, so you see an airy, toasted morsel as flimsy as a snowflake.

Puffed Rice is whole rice puffed in like way. Puffed Corn is broken corn puffed to raindrop size.

The texture is enticing, the flavor is like nuts. The airy granules seem to melt away.

### But think what they are

But these delightful bits are grain foods, fitted for digestion as grains never were before. Float the Puffed Wheat grains in milk and you have the greatest food in existence.

Serve with cream and sugar, mix with fruit. Douse with melted butter for hungry-hour delights. Use like nut-meats on ice cream.

In all ways these Puffed Grains are like flavory confections, yet they are supreme foods.

Millions now enjoy them. Serve all three in all the ways you can. No other grain food can compare with them.

**Puffed  
Wheat**

**Puffed  
Rice**

**Puffed  
Corn**

*Also Puffed Rice Pancake Flour*

### A pancake surprise

We now mix Puffed Rice flour in an ideal pancake blend. It makes the pancakes fluffy and gives a nutlike taste. You will surprise your folks with the finest pancakes ever tasted when you use it. Ask for Puffed Rice Pancake Flour. It is self-raising—simply add milk or water.

# Here Are Books—And Books

## America at Work

Another series of *The Chronicles of America*, published by the Yale University Press, takes us into the workshops of history and proves that the plow and hammer contribute as truly as the rifle and the ballot to the making of a nation. The time has gone by when a history could venture to ignore the market place. This is especially true of American history, where politics is always incidental to the main theme of the development of the resources of a continent. Samuel P. Orth contributes two volumes in this field: *The Armies of Labor*, a life-history of the labor union movement in the United States, and *Our Foreigners*, a study of the characteristics of each successive wave of immigration. Particularly worth noting is the chapter on "Utopias in America," which describes the various attempts which have been made to found communistic colonies in the New World by idealists from the Old World. *The Agrarian Crusade*, by Solon J. Buck, deals with the political activities of the class-conscious farmer and more especially with the Populist party. Nor is the man on top ignored by the chroniclers of America. Did you know that high finance could be "history" just as much as high politics? John Moody in *The Masters of Capital* tells you just what Morgan, Carnegie, Rockefeller, Frick, Wall Street, the railway combines, the trusts, the "dollar a year men" during the war, the insurance gamblers, Standard Oil and the panic of 1907 meant in the history of the United States. This book deals mainly with the financing of industry; in the field of industry itself, Mr. Moody has also given us a study of *The Railroad Builders*. This topic leads naturally to that of river navigation, of which Arthur B. Hulbert has given us a study in *The Paths of Inland Commerce*.

Other recently published volumes in the *Chronicles of America* series include *The New South*, by Holland Thompson, covering especially the introduction of manufactures into an agricultural section with all the political and social results of these economic changes; *The Fight for a Free Sea*, by Ralph D. Paine, a vivid and picturesque narrative of the war of 1812, impartially chronicling victories and defeats; *The Canadian Dominion*, a brief history of our northern neighbor by Oscar D. Skelton; and Constance Lindsay Skinner's romantic story of the first explorations in the far northwest by *The Adventurers of Oregon*. Not one volume of the series as yet published has found it necessary to sacrifice interest to accuracy.

*The Armies of Labor*, by Samuel P. Orth. *Our Foreigners*, by Samuel P. Orth. *The Agrarian Crusade*, by Solon J. Buck. *The Masters of Capital*, by John Moody. *The Railroad Builders*, by John Moody. *The Paths of Inland Commerce*, by Arthur B. Hulbert. *The New South*, by Holland Thompson. *The Fight for a Free Sea*, by Ralph D. Paine. *The Canadian Dominion*, by Oscar D. Skelton. *The Adventurers of Oregon*, by Constance Lindsay Skinner. Yale University Press.

Mme. Magdeleine Marx, the author of "Woman." "To me the originality of this book," says Stefan Zweig, "resides in the fact that it describes a perfectly normal case, a form of life that is undoubtedly the true feminine form, and describes it with a frankness and a beauty that make the natural as lovely as a discovery. . . . I am sure I am not detracting from this book if I say that nothing about it surprises me except that it could have been written. It is all truth. . . . Behind the human figure of the woman in it you see the whole of feminine humanity and the eternal lot of womanhood."

## Woman

This is a generation of revolt. Life holds such marvelous opportunities, there are such wonderful things to say, if we could only hold up our hand as a traffic policeman does and stop the industrial machine before it bore down upon us and made us into pavement or having passed, "stopped our mouths with dust." Many young men have dared to voice revolt at lack of self-realization or loss of beauty, Sassoon in his war verse, Barbellion in "His Journal of a Disappointed Man," but it has taken a woman, a French one at that, to tell us something of what the gentler sex has to say. And being a French woman, what she tells us is of love.

For Mme. Magdeleine Marx's anonymous heroine in her book, *Woman*, knows the needs of her nature and is courageous—or selfish—enough to demand their fulfilment. "Listen. I have been thinking. Don't let us part again. Never. It is I who am asking you. Let us live together. . . . I cannot say anything else, that sums up everything, it is everything, to live together," she says in a proposal that is in keeping with the truth that a woman really does the wooing but out of joint with the custom, which at least puts the words into the man's mouth.

They are married. The unknown heroine goes on working. "In our times," she says, "no woman has a right to live under the shelter of a man's labor. The woman who dares to accept such shelter should abdicate and commit her dignity to the hands that are productive. She should consent to her dethronement and take the condescending love that is fed to the weaker

without complaining." There is a child. And eventually—there is another man. Of course, she loves him. And likewise of course she tells her husband, whose "cheeks are ashen, whose eyes are quite wet," who is hurt, but who is big enough to know that if she really cares, she will come back, and if she doesn't, there is no need of rebelling, anyway. She does come back. But in giving her reasons for so doing, as in giving her reasons for going, she is a bit too selfish, too much of an ego-worshipper, to be quite fair to the other person. Both men go to the war, however, and are killed, so that she, in turn, suffers thru separation, the separation of death.

Thruout the entire book, however, there is no doubt that Mme. Marx's heroine feels deeply and that Mme. Marx herself has succeeded in setting down in a fragmentary but quite clear manner the essence of that feeling and the mental reflections caused by it. As she says, "What matters is not the delirium in which two people lose themselves, but the truth they discover." Doubtless Mme. Marx's truth will pain many people, despite the fact that it has won great praise from such European liberals as Romain Rolland, Barbusse and Stefan Zweig.

*Woman*, by Magdeleine Marx. Thomas Seltzer.

## The All-American Poets

"The most poetic period in native literature" is Louis Untermeyer's estimate of the last few decades in these United States, and to prove this point he has gathered into a peculiarly attractive small blue volume examples of *Modern American Poetry* ranging from Emily Dickinson to Stephen Benet. It is a comprehensive and unusually satisfying collection, including almost all of the poems you would have picked out yourself—the test of perfection in any anthology. To any one who doubts the existence of American verse as distinct from British it will be illuminating. It would be a first class book to give to a foreigner sincerely curious to know something of that spirit of America we talk so much about, for the spirit really exists between those two blue covers.

Louis Untermeyer has done another thing which it is harder to understand, to wit including *Horace* which is, he says, "an effort to suggest, through the veil of parody, how certain other poets would have used Horatian subjects." He presents "Integer vitae" as it might have been written by Robert Browning, Amy Lowell, Irving Berlin and others. It is an amusing performance with an immense deal of skill and labor behind it but it leaves you with the same, well, what of it feeling that you have after watching a man on a tight rope.

If *Modern American Poetry* excites, as it undoubtedly will, a desire for a wider knowledge of the field there are a number of recent volumes which will interest you.

In Edgar Lee Masters' *Starved Rock* there is little music but much food for thought, thought on man and America and hypocrisy and a good many other things worth thinking about even though you do not in the least agree with the poet's point of view.

In Arthur Guiterman's *Ballads of old New York* a delightful idea is somewhat disappointingly worked out. He has found and dug up and invented legends of old Manhattan in its Dutch, English Colonial and Revolutionary periods and has woven them into ballads with interludes of various form between.

Among the poets whom Mr. Undermeyer might have included in his anthology, and didn't, is Mary Carolyn Davies. Youth is her greatest asset and her greatest joy, her poetry is spilling over with it; but youth does not exclude technique in which she is very skilful. Though she does some elaborate things well she is at her best in simple little eight line verses, like "The Door:"

The littlest door, the inner door,  
I swing it wide.  
Now in my heart there is no more  
To hide.

The farthest door—the latch at last  
Is lifted: see.  
I kept the little fortress fast.  
—Be good to me.

Her poetry is astonishingly intimate, the revelation apparently of the innermost depths of her soul which makes it peculiarly poignant and effective, but also leaves you with a devout thankfulness that you are not her best friend.

A poet as reserved as Mary Carolyn Davies is confiding is George O'Neil, who is also very young. "Always," as Zoe Akins say in her enthusiastic introduction to *The Cobbler in Willow Street*, "his is the composed statement of the artist—never the disconcerted and disconcerting struggle merely of a personality recording itself." Which does not mean for a moment that the writer is unstirred by emotion or that he leaves his reader so. The emotion is quiet but very sweet and tender and there is a fascinating originality in his turns of thought and phrase:

April brings her violets—  
Introspective little things that hide in  
leaves;  
And nuns—do you ever think of violets as  
nuns?

To leap from youth to age we have Marjorie Allen Seiffert boldly labeling her book of poems, *A Woman of Thirty*, and of course, consequently, the poems are sophisticated and a little cynical. She writes free verse naturally, unaffectedly and effectively. It is clear cut verse, most of it, a little hard, wrought in metals, like her "Japanese Vase":

Five harsh, black birds in shining bronze  
come crying  
into a silver sky.  
Piercing and jubilant is the shape of their  
flying.  
Their beaks are pointed with delight.  
Curved sharply with desire.  
The passionate direction of their flight.  
Clear and high.  
Stretches their bodies taut like humming  
wire.

## The Irish Case

Before the Court of Public Opinion

Illustrated. \$2.50

## Stop the Leaks That Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

*Wide World*

G. K. Chesterton since his recent illness  
has been traveling in Palestine

**Chesterton, Meet Ireland**

Mr. Gilbert Keith Chesterton, who has often in the past written enthusiastically about John Bull's other island, visited that country in the later days of the Great War and has given us his *Irish Impressions* as the fruit of his sojourn. Altho the most patriotic of Englishmen, Chesterton found Ireland nearer to his social ideal than England, for in Ireland there was an agricultural civilization based on religion, family and peasant proprietorship. These are the things he loves as much as he detests their opposites in England—agnosticism, Socialism, industrialism and the landed aristocracy. He supports Home Rule, tho not Sinn Fein, and has little use for Protestant Ulster. At this point the reviewer steps aside to let Mr. Chesterton speak for himself:

Property, when properly distributed, is the poetry of the average man.

Half the case for Home Rule was that Ireland could not be trusted to the English Home Rulers.

It is where property is well distributed that it will be well defended.

In Ireland a man carries the family mansion about with him like a snail; and his father's ghost follows him like a shadow.

The Allies were more right than they realized. Nay, they hardly had a right to be so right as they were. The modern Babylon of capitalistic states was hardly worthy to go on such a crusade against the heathen; as perhaps decadent Byzantium was hardly worthy to defend the Cross against the Crescent.

There is too much separatism in Ireland. I do not speak of separation from England; which happened long ago in the only serious sense, and is a condition to be assumed, not a conclusion to be avoided. Nor do I mean separation from a federation of free states unfortunately known as the British Empire; for that is a conclusion that could still be avoided with a little common sense and common honesty in our own politics. I mean separation from Europe, from the common Christian civilization. . . . This is the deep and real reason why their alienation from the Allied cause was a disaster for their own national cause.

*Irish Impressions*, by Gilbert K. Chesterton.  
John Lane Co.

**The Schoolboy Speaks**

Education just at present is having double innings. It is being pushed forward as the panacea for all ills, social, political, international, and at the same time it is being attacked with peculiar vehemence by those who are supposed to be administering it, and particularly by those who, supposing that they had received it, now feel themselves cheated. They do not as a general rule, however, vent their wrath in print until their school days are many years behind them, so it is particularly interesting to find a well constructed story of school life written by an English lad of seventeen. Our school system lacks some of the faults, as well as some of the virtues, of its English progenitor, but wherever a group of boys is gathered together certain similar problems are bound to arise.

Alec Waugh's *The Loom of Youth* is a story of one boy's progress thru a typical English public school. Its central theme is the harm wrought by the deification of athletics, and it is inspired by a desire to tell the world the real truth of the situation. There are very definite signs of youth in the minuteness of detail in all matters and in the exhaustive descriptions of cricket and football matches, but the writing on the whole is astonishingly mature, and the various boys and masters who figure in the story stand out definitely and clearly. One cannot help being curious to know what the author will try his hand at next.

*The Loom of Youth*, by Alec Waugh. George H. Doran Co.

**Real Wild West Stories**

*The Killer*, the first story in Stewart Edward White's new book, is crammed with action, exciting, unexpected, mysterious; in the last story, "The Ranch," nothing happens at all and yet the chances are that you will read them both with interest and joy. The moral of which of course is that the important thing about a tale is the way you tell it. Mr. White paints the west, the real wild and woolly west of cowboys and bucking bronchos, with all the color, and the truth, with which the

movies are obliged to dispense. He uses the same skill in description that he uses in the construction of rattling good plots. There are several other

good things in the book beside those already mentioned, in particular an account of motoring over the Arizona desert in a tin car driven by a cowboy.

*The Killer*, by Stewart Edward White, Doubleday, Page & Co.

### France and Ourselves

Really good books about France are all too few and most of those we have deal with the spirit of the people, their manners and customs rather than their politics. Of these the average American knows little and ought to know much, so Herbert Adams Gibbons's *France and Ourselves* is particularly welcome. The book is a collection of articles, many of which have appeared in magazine form, written by a clear thinking journalist who thoroughly understands the French attitude and understands also the points at which it needs to be explained to an American. The articles deal with the Reconstruction of Northern France, the French Attitude Toward Peace, The Industrial Effort of France During the War, How We Can Help France, and similar questions.

*France and Ourselves*, by Herbert Adams Gibbons. Century Co.

### All Over the Place

The Great War has compelled the rewriting of books on every nation. Not only are new and rejuvenated peoples to be introduced, but old acquaintances have been so altered by five years of war and revolution that we can barely recognize them. This note of necessary reintroduction is struck in *New Italy*, by Helen Zimmern and Antonio Agresti, which emphasizes the recent industrial development of Italy and the recent orientations of its foreign and domestic policy. For the necessary background and complement of this brief study of contemporary conditions in Italy, Janet Penrose Trevelyan has painted a broad canvas of Italian history from the downfall of the Roman Empire to the union of Italy in 1870 in *A Short History of the Italian People*.

*The New Germany* is depicted with great sympathy by George Young, a British diplomatist of liberal tendencies who visited Germany during the months of revolution. The appendix gives the full English text of the admirable new constitution which German liberalism has at last achieved. *Germany After the Armistice*, by Lieutenant Maurice Berger of the Belgian army, consists mainly of interviews with German diplomats, politicians, radical leaders, financiers, generals and journalists. No better account has appeared of the individuals who are directing the destinies of the young republic. Count Ottokar Czernin's study of the downfall of Austria-Hungary in *The World War* is interesting not only because of the historic events which are related and the vital part which the former Minister of Foreign Affairs played in them, but also on account of the good-natured spirit shown by this representative of a defeated

The waters around the British Isles were thick with submarines during the war, if one is to judge from this reproduction of a daily chart compiled at Admiral Sims's headquarters in London. Information about the positions of submarines, as well as a great deal other data on the operations of the American navy in Europe, is given in John Langdon Leighton's "Simsadus: London," a title taken from the cable address of the American Navy in Europe, which means "Sims—Admiral—U. S." "The presence and exact position of the majority of submarines at sea was learned every night by an elaborate system of radio stations along the coast," Ensign Leighton says. "It was the custom of submarines to communicate with their headquarters in Germany almost nightly by wireless. . . . Every time a submarine wirelessly to Germany, English radio stations would pick up the message. The wireless instruments at the stations were equipped with an apparatus known as a radio-direction-finder by which the direction or bearing of the origin of the message could be determined to a fraction of a degree. . . . In order to illustrate how the submarine's position was then determined, let us take an imaginary example. Wireless stations at Land's End, Milford Haven, and Queenstown have all sent telegrams to the Admiralty stating that a submarine at eleven o'clock at night communicated with Berlin, and that this submarine was in a position bearing due West from Land's End, Southwest from Milford Haven and due South from Queenstown; these bearings naturally would be given in degrees rather than in terms of West and Southwest. When this information was received by the Admiralty, the officers there on duty would draw lines West from Land's End, Southwest from Milford Haven, and due South from Queenstown, and where those lines crossed, there would be the submarine. . . . As soon as the position of each submarine had been worked out on the charts, such information was sent to the different bases or wirelessly to those ships to which the information might be of use. The Admiralty took the greatest care that this method of locating submarines should not be discovered by the enemy, for the authorities regarded it as the greatest secret in their possession; and there is no evidence to show that the Germans ever did discover it"

## Gilbert Parker's

first full-length novel  
in four years

# NO DEFENCE

4 Illustrations by C. D. Williams. \$2 net

Not only has Sir Gilbert written again a thrilling Parker romance-adventure, with its high lights and deep shades, its warm and human love episodes, its problems of universal appeal, its absorbing interplay of soul upon soul, but in addition, with penetrating insight and great artistry, the author has contrasted the Irish and English temperaments in many deft and tragi-humorous scenes. The plot is irresistibly dramatic from the meeting of the two lovers in Ireland until the final scene on the island of Jamaica. "No Defence" will take high place among the really great romances.

## SEEING THE FAR WEST

By JOHN T. FARIS, author of "Seeing Pennsylvania," etc. Here is not only a wonderful panorama in text, with 113 illustrations and 2 maps, of the scenic glories of the States from the Rockies to the Pacific, but also an intensely interesting narrative overflowing with personal observations and bits of history and romance, making it a particularly entertaining volume for both travelers and general readers. Almost every spot of beauty and interest is described—the unknown regions as well as those already familiar. This is the most complete and comprehensive volume on the territory covered. \$6.00 net.

## ANNE

By OLGA HARTLEY. An original and wholly delightful story. A comedy with just that touch of sadness that brings laughter near to tears. Anne, butterfly like, flits through life and leads the reader into many thrilling, humorous, and sometimes tragic, scenes; yet Anne is finer than her friends suspect. Deep trouble leads her to great happiness in the final dramatic act in her life. \$1.90 net.

## A Sheaf of Good Books

The new sixth edition of PENNELL'S "LIFE OF WHISTLER," just published, comes as practically a new book. It has been revised and contains new material and new illustrations. Profusely illustrated, octavo, \$6.50 net. "MRS. WILSON'S COOK BOOK" suits every purse. Menus of the simplest to the most elaborate can be prepared from the hundreds of new recipes. Women will appreciate the author's new method of presenting them. \$2.50 net. "THE CHARM OF FINE MANNERS," by Mrs. Starrett, will be a great boon to fathers and mothers. In a charming way the author writes about behavior, self-culture, habits, conversation, etc. \$1.00 net. "THE BOOK OF COURAGE," by Dr. Faris, is not psychological medicine for neurasthenics, but strong, wholesome food for the mental digestion of every one. \$1.50 net. "THE ORIENT IN BIBLE TIMES," by Professor Grant, is a wonderful and historically accurate panorama of the Oriental world: its peoples, civilizations, and history. It humanizes Bible study. Thirty illustrations, \$2.50 net. "CLOTHING—CHOICE, CARE, COST," by Mrs. Woolman, fairly overruns with valuable suggestions and information on how to dress well at a cost within reason. Illustrated, \$2.00 net.

## ARE YOUR CHILDREN PROPERLY TRAINED?

It has been said that nine-tenths of all parents and teachers are not qualified to have the care of children.

Do **you** properly understand the psychology of the child mind so as to measure up to the great responsibility of rearing or training children?

Scientific child study has shown the mistakes usually made by parents and teachers, and clearly points out the correct methods. The correct training of the child from infancy to maturity is covered in a set of nine books, "The Parent's Library," uniformly bound in cloth, just out. Every parent and teacher should have these books. The cost is negligible, compared with the great issues involved.

- First Steps in Child Training**, by M. V. O'SHEA, Professor of Education, Univ. of Wis. Covers Intellectual Development, Health, Ethics, Social, Language, Disposition, etc. .... \$1.50
- The Trend of the Teens**, by M. V. O'SHEA. The Crucial Ages; Boy Problems; Girl Problems; the Tender Passion; Controlling Bad Habits; etc. .... 1.50
- The Faults of Childhood and Youth**, by M. V. O'SHEA. Destructiveness; Headlessness; Dullness; Disobedience; Nervousness; etc. .... 1.50
- Everyday Problems in Child Training**, by M. V. O'SHEA. Home Problems; Training Children to Study Effectively; Suggestion in Training the Young; the Scientific Era in Education; etc. .... 1.50
- Putting Young America in Tune**, by HENRIETTE WEBER. When is a Child Musical? When and How to Begin Musical Training; Taking Lessons; Linking Up with the School; Good Taste; etc. .... 1.50
- Home Guide to Good Reading**, by DAVID HARRISON STEVENS, Univ. of Chicago. Critical notes on over 900 of the best books of all ages. .... 1.50
- The Proper Feeding of Infants**, by W. H. GALLAND, M. D. A thorough treatment of the subject. .... 1.50
- Diseases of Infancy and Childhood**, by W. H. GALLAND, M. D. Information every mother must have or fall short of her duty. .... 1.50
- Maternity and Infant Care**, by W. H. GALLAND, M. D. Conditions Unfavorable to Pregnancy; Interruptions of Pregnancy; Personal Hygiene; Care of the New-Born Babe; etc. .... 1.50

**Every Book Guaranteed**, and worth many times the cost. Any book or entire Library sent, prepaid, on receipt of price. If not satisfactory return in five days and your money will be returned in full.

**BIG CATALOG FREE.** Fully describes hundreds of very useful and valuable books. Write today.

and dismembered empire. While he places much of the blame for the war on the Allies and on Austria's too dominant partner, Germany, he seems to feel that in any case the Hapsburg Empire was doomed to disintegration: "Austria-Hungary's watch had run down. . . . I believe today that even without the war the fall of the monarchy would have happened, and that the assassination in Serbia was the first sign."

Turning to the little nations which have profited from the peace we may first mention a general study of *Poland and the Poles*, by A. Bruce Boswell, which deals with the Polish people of today and their achievements in every field of activity from poetry to politics. *From Serbia to Jugoslavia*, by Gordon Gordon-Smith, is mainly a military narrative of the campaigns in the region south of the Danube from 1914 to the end of the Great War. *Some Personal Impressions*, by Take Jonescu, is an interesting series of essays by the wittiest and shrewdest of Rumanian statesmen, a twentieth century Cavour whose political outlook is a strange blend of professional diplomatic cynicism and liberal and progressive principles. His account of an interview before the war with the Hungarian statesman Banffy is worth quoting:

"He began rather brusquely by saying, 'I hope you are not going to tell me that you don't want to annex Transylvania.' 'No,' I replied, 'I shall not tell you that; if I did you would not believe it, and would only think you were dealing with a liar or with a man who does not love his country. I want to annex Transylvania, but I can't do it.'"

And then in my turn I said to him, "I hope you are not going to tell me that you don't wish to move the frontiers of the Magyar state to the Black Sea." With real good temper Banffy replied, "No, I won't tell you that. I do want to move Hungary's frontier to the Black Sea, but I can't do it."

*The Riddle of Nearer Asia*, a study of the conflict between Christianity and Islam in the region of the old Turkish Empire, and *Armenia and the Armenians*, a national history by Kevork Aslan, introduce us to a resurrection of the dry bones of the oldest human civilization.

*The Mastery of the Far East*, by Arthur Judson Brown, deals mainly with the absorption of the ancient Korean Kingdom by the vigorous Empire of Japan. In this limited field the book is exceptionally full and informing on points of detail and must also be commended for its fair-minded attitude toward Japanese imperialism. It does not in the least gloss over the cruelty and greed which the Japanese have sometimes shown to their little neighbor, so temptingly weak and inefficient, but it does not fail to give full credit to Japan for spreading the gospel of modernism and efficiency among somnolent and backward peoples.

Even South America, so far from the seat of war, has been made new in the last few years and J. O. P. Bland's account of *Men, Manners and*

*Morals in South America*, tho rambling in manner and somewhat cynical in tone, is an illuminating introduction to a little understood part of the world; nowhere less understood than by North Americans.

*The New Italy*, by Helen Zimmern and Antonio Agresti. Harcourt, Brace & Howe. *A Short History of the Italian People*, by Janet Penrose Trevelyan. Putnam. *The New Germany*, by George Young. Harcourt, Brace & Howe. *Germany After the Armistice*, by Lieut. Maurice Berger. Putnam. *In the World War*, by Count Ottokar Czernin. Harpers. *Poland and the Poles*, by A. Bruce Boswell. Dodd, Mead & Co. *From Serbia to Jugoslavia*, by Gordon Gordon-Smith. Putnam. *Some Personal Impressions*, by Take Jonescu. Stokes. *The Riddle of Nearer Asia*, by Basil Matthews. Doran. *Armenia and the Armenians*, by Kevork Aslan. Macmillan. *The Mastery of the Far East*, by Arthur Judson Brown. Scribners. *Men, Manners and Morals in South America*, by J. O. P. Bland. Scribners.

## What Is Shell Shock?

Any series of physical phenomena as, for instance, earthquakes, storms, etc., which are comparable in magnitude to the events of the war would probably precipitate characteristic mental disorders. Dr. Southard in this encyclopedic work on psychiatry and the war emphasizes the importance of shell explosion as a physical event in the etiology of the war neuroses, but finds that there is little justification for the creation of a separate disease entity under the term shell-shock and places the majority of these cases in the psycho-neurosis group.

He has abstracted from the psychiatric literature of all the warring countries 589 case histories. A significant section of the book is devoted to psycho-therapeutic measures in these cases. The very comprehensive bibliography includes over two thousand titles.

*Shell-shock and Other Neuropsychiatric Problems*, by E. E. Southard. Monograph No. 3 of the Psychopathic Department of the Boston State Hospital. W. M. Leonard. Boston.

## Books and Things in General

The trouble with a volume of good essays is that one lures you on to another, you read too many in succession and put the book down a little weary and not quite so pleased with it as you were when you began. Most novels gain by being read thru at a sitting, but essays should lie about on your table to be picked up at odd moments; which is probably one reason we read so few of them—if you leave a book on the table today there is so apt to be a new one on top of it tomorrow.

These reflections were induced by three recent volumes of essays which are delightful reading if not taken in large gulps; Philip Littell's *Books and Things* and Solomon Eagle's two series of *Books in General*. The first set appeared in *The New Republic*, the second in *The New Statesman*, under the pseudonym of Solomon Eagle. There ought to be an interesting basis of comparison between the way an American and an Englishman do the same thing, but there isn't. If you did not know which man belonged to which nation you would find it a little difficult to guess. Possibly this is because

Mr. Littell is a graduate of Harvard.

Mr. Squires, who recently left the editorship of *The New Statesman* to become editor of *The London Mercury*, is on the whole a little more skilful with his pen than Mr. Littell, he is happier and seems to have rather more use for the world in general. However, the comments of both on books, politics and things in general are thoughtful, amusing and suggestive, worth reading and thinking about.

*Books and Things*, by Philip Littell, Harcourt, Brace & Howe, New York. *Books in General* (First and Second Series), by J. C. Squires, Alfred A. Knopf.

## Militant Culture

Professor John Erskine of Columbia University, and during the war educational director of the A. E. F. University at Baune, has collected a number of recent addresses under the title, *Democracy and Ideals*. The wholesome and democratic spirit of modern scholarship is well illustrated in the following passage:

If the university should be thrown open to the world—if, for example, we allowed in our classrooms any who desired to enter, there might at first be embarrassment and confusion, but there would be no vulgarization of any scholarship that is really on the frontier of truth. . . . Part of our ideal will be realized when the university says to the community: "Whatever you do, whether for use or for pleasure, can be done beautifully. I am here to show you the way. Whatever you do has a meaning also. I am here to tell you what it means. That I am here at all, after the centuries, is a sign that those long dead, who bade me say this to you, touched the work of their hour with the enduring mind."

*Democracy and Ideals*, by John Erskine. Doran.

## The Real Y. M. C. A.

Katherine Mayo's history of the war service of "That Damn Y" is one of the important chapters in a future account of America's war with Germany. The author went to France, half as volunteer war worker, half as an impartial and (as she admits) not over-friendly critic to find out the real truth of what the Y. M. C. A. had done in France. She visited all the principal leave areas, became acquainted with conditions at the front, questioned headquarters both of the Y. M. C. A. and the A. E. F., and at last was able to write the fullest, completest and most interesting account of Y. M. C. A. activities which has yet appeared. The official army reckoning, here cited, is that "the Y performed 90 per cent of all the welfare work done overseas." That it was frequently short of supplies is admitted; but it is pointed out that the army was able to furnish only 47 per cent of the tonnage space required for canteen supplies and promised in advance to the Y. M. C. A. for its work. But rather than give up the work the Y. M. C. A. continued its necessarily inadequate service; unable to give any explanation at the time because the army forbade any statements of tonnage shortage to be published during the war lest it encourage the

## Training For Service

What science and engineering have done to develop the mechanical efficiency of the telephone, specialized training has done in the development of workers.

Plant engineers, linemen, directory clerks, toll operators, equipment installers, electrolysis engineers, trouble hunters, line repairmen, test table operators, chief operators, contract agents, building engineers, line installers, exchange repairmen, plant inspectors, trouble operators, fundamental plan engineers, draftsmen, estimate clerks, exchange operators, cable testmen, equipment in-

spectors, wire chiefs, traffic engineers, galvanometer men, cable splicers, facilities engineers, surveyors, information operators, switchboard installers, accountants, testmen, supervisors, station repairmen, equipment engineers, directory operators, statisticians, appraisal engineers, routing operators and scores of other skilled employees are specially trained for the exacting work of providing telephone service.

Throughout all work of telephone construction and operation there is a ceaseless endeavor at mastery of service that makes for improvements beneficial to the public.

Germans to believe their submarine campaign a success. In the same way it kept in service a few "47 per cent" secretaries because it was short of personnel for the vast task it had undertaken. For both failure of supplies and the occasional (but very exceptional) failure of individual competence the Y. M. C. A. reaped unmeasured blame, but in both cases the alternative to partial service was no service at all. This is the truth, well known to the Government and the army headquarters, but not so well known to the public and the army at large.

"That Damn Y," by Katherine Mayo. Houghton Mifflin Co.

## What Galsworthy Thinks

John Galsworthy as a playwright has two uncommon talents: he can writeactable plays which are also good reading and he can write plays of propaganda which are also highly dramatic. "Justice" proved that to us several years ago. His fourth series of *Plays* contains two which have been, apparently with success, produced in England. The third, "A Bit of Love," is somewhat indefinite and unconvincing, tho it has effective passages.

"The Foundations" deals with class relations, labor and the lord and his footmen. Its author calls it "an extravagant play," and it is, but that doesn't prevent it from being both amusing and convincing. As usual, Mr. Galsworthy sympathizes with both sides so strongly that he does not succeed in proving anything. However, it is a relief in this day and generation to find any one who can sympathize with both sides.

"A Skin Game" is a dramatic and rather terrible battle between an old county family and the family of a wealthy manufacturer who want to dominate the district. There is good character, tho no character development. In a personal contest like this the ability to sympathize with both sides is a very strong asset. Mr. Galsworthy has written better plays than these, but

if you care for his plays at all you will find them worth reading.

Another unusual thing about Mr. Galsworthy is the number of literary fields in which he works successfully. As a novelist, a short story writer, a playwright, an essayist he has attained definite distinction, and even as a poet, tho not so many people think of him in that role. The reasons lie in his skill in using the English language, which reaches its high in such descriptions as "Buttercup Night" in *Tatterdemalion*, a collection of essays and sketches written during and since the war. Some of them are sheer beauty, some of them are propaganda of one sort or another, many of them are character sketches, and these are the least satisfying. There is a beautiful haze about them; the people are not quite alive.

*Plays, Fourth Series. Tatterdemalion*, by John Galsworthy. Charles Scribner's Sons.

## Colorful Italian Tales

Gabriele d'Annunzio's *Tales of My Native Town* are not to be recommended as throwing any light on Fiume. They are tales in which the author is almost entirely non-existent, and they are somewhat disappointing, for it takes, as Joseph Hergesheimer points out in his exceedingly interesting preface, a rather carefully prepared attitude of mind to thoroly enjoy them. "They are as different from our own short imaginative fiction as the town of Pescara, on the Adriatic Sea, is different from Marblehead in Massachusetts." One difference, which will attract some readers and repel others, is that they are not stories in the sense of having carefully conceived or skilfully twisted plots; they are little pieces of life, not cleanly sliced off from the whole. They are full of rich, warm color and life and emotion. They are written with art and skill but with a lack of reticence in description which is likely to disturb the Anglo-Saxon. If you enjoy Russian short stories you will probably enjoy these.

*Tales of My Native Town*, by Gabriele d'Annunzio. Doubleday, Page & Co.

## What Do You Know?

Here are the answers to the hundred questions in the General Information Test that we published last week. The school instructions for grading the answers are as follows:

Give each question 1.  $\frac{1}{2}$ , or 0. Full answers not always to be required for full credit, for the kind of knowledge to be tested is not so much exceptional verbal memory as ability to identify. But no credit should be given when the answer is wrong: e. g. No. 4, "Mr. Lausang" is wrong, altho it indicates some knowledge, and for No. 26, "capital of state" should only count half, unless the state is named; but "city in Arkansas" should count right, even if no mention is made of capital.

### I

1. William McKinley. Theodore Roosevelt. William Howard Taft. Woodrow Wilson. 2. Philander P. Claxton. 3. Robert Underwood Johnson. 4. Bainbridge Colby. 5. A. Mitchell Palmer. 6. Henry Cabot Lodge. 7. Calvin Coolidge. 8. Alexandre Millerand. 9. Albert, King and Queen of

Belgium. Queen Elizabeth. 10. Cannot be answered accurately.

### II

11. Tea. 12. Watches. 13. Steel. 14. Embroidery on fine linens. 15. Furniture. 16. Automobiles.

### III

17. Chess; hockey (ice). 18. Golf; pool. 19. Baseball; polo. 20. *Bodkin*: used to draw tape thru a hem; to pierce holes in cloth: a pin to fasten the hair; to pick type. *Chisel*: used in carpentry, woodwork and on marble. 21. *Skewer*: a pin, often wood, to hold meat. *Silo*: place where green fodder is kept from air or water, container for ensilage or silage. 22. To bore holes; a wooden form for making shoes.

### IV

23. A stone upon which the kings of Scotland were formerly crowned—now a part of the throne of England. In Westminster Abbey. 24. A stone in the wall of the Castle of Blarney, in Ireland—the kissing of which brings a gift of fluent, flattering speech. 25. Supposed ruins of a Druidical temple; Salisbury Plain, Eng-

land (group of huge stones in England). 26. City in Arkansas. State Capital. 27. A commercial product, drinking water. 28. Landing place of Pilgrims on coast of Massachusetts. A well known breed of chickens.

V

29. Henry Hudson's ship. Discovery of Hudson River. 1609. 30. Only ship on which a President of the United States ever went abroad. President Wilson's ship. 31. German submarine which crossed the Atlantic. 32. Battle of "Monitor" with "Merrimac" in Hampton Roads, Civil War. First ironclad with revolving turret. 33. Deportation of "reds." 34. Giant C-mander, sunk in 1912 on maiden voyage, on striking iceberg.

VI

35. Sandy Hook. 36. Africa. 37. Alecock. 38. Appomattox Court House. 39. Alaska. 40. Mt. Vernon. 41. Balboa.

VII

42. Medical science. 43. Dramatist: wrote "Abraham Lincoln"; "writer" is correct. 44. Writer. A girl of nine years who wrote "The Young Visitors" (sic). 45. Scientist, philosopher: lectures on life after death. 46. Provost of University of Pennsylvania. Resignation recently presented. 47. Writer of poetry; leading American writer of free verse and other new kinds of poetry. 48. Actor. 49. Character in "The Rivals," by Sheridan. 50. Explorer; discoverer of North Pole. 51. Italian writer, patriot, and leader of Fiume expedition.

VIII

52. Mrs. Carrie C. Catt. 53. Lady Astor. 54. Madam Curie. 55. Queen Victoria. 56. Jean of Arc (Jeanne d'Arc).

IX

57. Benjamin Franklin. 58. Samuel Clemens. 59. Marian Evans (Mrs. Cross). 60. Charles L. Dodgson. 61. Washington Irving. 62. Charles Dickens.

X

63. 51. 52. 63. 64. 69. 64. 81.

XI

67. Warsaw; Moscow. 68. Prohibition of manufacture or sale of alcoholic beverages. 69. The earth goes around the sun in about 365 1/4 days. Every four years the quarters add up to one day, the 29th of February. (Exception, most years ending in 00). 70. Spit ball prohibited. Ball may not be "treated" or in any way injured. Deliberate "passing" of batsman restrained. 71. Black Sea; Caspian Sea. 72. Mediterranean; Gulf of California. 73. Monarchies: Spain, Italy, Japan. If two are right, give 1; if less than two, count 0. If wrong names are added, take away the value of a name rightly given for each addition. 74. Baltimore and Ohio; Canadian Pacific; New York Central; Delaware, Lackawanna and Western; New York, New Haven and Hartford. Count 1/2 if three or more are right; give 1 only if all five are right. 75. Stamp collector; having two feet, or legs. 76. Movie machine; teacher. 77. Failed to ratify or pass it.

XII

78. wit. 79. books; end. 80. will; way. 81. sauce; gander. 82. servitude. 83. pyrene. 84. percolator. 85. injunction.

XIII

86. cowslip. 87. python. 88. clavicle. 89. dingo. 90. minaret. 91. barouche. 92. oriel. 93. spinnet. 94. albatross ("oriel" is wrong). 95. rodent.

XIV

96. Kipling. 97. Bible; Judges XIV. 14. 98. Bunyan; Pilgrim's Progress. 99. Vachel Lindsay; Abraham Lincoln Walks at Midnight. 100. Title of play by Shakespeare.

## U.S. Taxes Open \$10,000 Jobs

Federal and State Governments and 900,000 incorporated and unincorporated firms need tax trained experts for next year's tax season. Salaries and fees run from \$5,000 to \$30,000 a year and more. Attorneys, accountants, auditors, bookkeepers — any man with a fundamental knowledge of business — can quickly prepare for work in Federal Tax Procedure under the direction of a firm of Corporation Legal specialists having many thousands of clients. Our training service is used in the Standard Oil Co., Ford Motor Co., International Harvester Co., U. S. Rubber Co., Johns-Manville Co., U. S. Tire Co., etc.

## \$5,000 Often Saved

We teach you how the Income Taxes, Excess Profits Taxes, Capital Stock, Inheritance Taxes, etc., *work together*—how to compute ALL the legal deductions the tax payer is entitled to. Students frequently report savings of \$5,000 to \$100,000. You will be trained at home for the same standard of proficiency as men in our own Service Department.

(Important—Our Training Service is being used with amazing success by executives in preparing their own Tax Returns.)

**Write Today** Send for our free booklet, "The Income Tax Expert" and "Everyman's Income Tax." Both contain information of vital importance to every tax payer. Opportunity is calling. Write today!

## 7% Higher Interest Rates.

Owing to a general advance in interest rates, we shall for a short time at least, be able to get Seven Per Cent for our customers on First Mortgage Loans. We suggest that you take advantage of this and arrange to take some of these loans at the higher rate. Good loans are offering. Write for Loan List No. 710

Perkins & Co., Lawrence, Kansas

### DIVIDENDS

## American Telephone and Telegraph Company

A dividend of Two Dollars per share will be paid on Friday, October 15, 1920, to stockholders of record at the close of business on Monday, September 20, 1920.

G. D. MILNE, Treasurer.

## UNITED FRUIT COMPANY

DIVIDEND NO. 85

A quarterly dividend of three per cent (three dollars per share) on the capital stock of this Company has been declared, payable on October 15, 1920, to stockholders of record at the close of business September 20, 1920.

JOHN W. DAMON, Treasurer.

## INTERCOLLEGIATE TOURS TO EUROPE

Sail in April, May and June. Churches, Galleries, Alpine Summits, Italian Hill Towns. Superb routes. Splendid leaders.

Art, Music, Literature, History, French, Spanish  
65 E. Franklin St. Boston, Mass.

## Inventions Wanted. Cash or Royalty

St. Louis, Mo.

## How to Use the Independent in the Teaching of English

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 311 Sixth Avenue, New York.

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

### English, Literature and Composition

- I. The Discovery of the "Mayflower."
  1. The teacher should take advantage of the approaching tercentenary celebration for the study of the literature of the subject. What poets have written about the Pilgrim Fathers or the voyage of the "Mayflower"?
  2. Write a poem yourself entitled "The Mayflower Found Once More." If this is done as a class exercise have the poems collected and read by the teacher, without giving the names of the writers, and permit the class to criticize them freely and vote which is the best one.
- II. Uncle Sam and His Southern Cousins.
  1. Imagine yourself a citizen of some South American republic. Write a letter on Pan-Americanism to "Uncle Sam" and sign it "One of Your Southern Cousins."
- III. Nine Steps to a New Age.
  1. Each of Mr. Stedman's nine "points" begins with a "topic sentence." Show how this is developed and expanded into a complete statement by the succeeding sentences.
  2. Define the following words and phrases: "moribund," "manikins," "junker," "chauvinists," "Pariahs," "self determination," "socialization of property."
  3. Outline Mr. Stedman's article as the affirmative brief for a debate on the question: "Resolved, That the Socialist national ticket should be supported by the voters." Prepare a similar brief for the negative.
- IV. The One Consistent Party.
  1. Compare Mr. Watkins' article with that of Mr. Stedman. Entirely apart from your opinion of prohibition or Socialism, give your opinion as to which article: (1) Reads most smoothly, (2) Makes its points most effectively, (3) Is the most adequate account of the party point of view.
  2. "There is one party whose platforms have never been weather-vanes." What figure of speech is this? How do you distinguish it from the figure of speech in the previous paragraph: "The doors of legislation, like the doors of the saloon, swing both ways"?
- V. A Song of Quiet Hearts.
  1. Count the number of hyphenated adjectives and nouns. Evidently this poem intentionally makes use of this peculiar form. Is it used effectively? Which of these "couplings" are new to you; which seem familiar?
  2. Write a descriptive prose paragraph on some picture or image in the poem which particularly attracts you.
  3. Compare this poem with some of the descriptive verse given in the book review, "The All-American Poets."

### VI. Weeping and Bleeding Images

1. Write a story in the first person of a pilgrim's visit to one of the supposedly miraculous images. Choose one of the accompanying photographs to illustrate the story and give reasons for your choice.

### VII. Dynamite or Discussion?

1. Make a short speech suitable for a street corner meeting, in which you present Dr. Williams' chief arguments. What new elements of appeal would you introduce to meet your audience?
2. Write a brief history of the constitutional amendments adopted by the United States.
3. Write a description of the methods by which any one of the last five amendments was "sold" to the people.

### VIII. Here Are Books—and Books.

1. If you could buy four of all the books reviewed under this head which would you choose? Give your reasons in full.
2. Write a short article or essay on "The Books I Want to Own." Explain, incidentally, your theory of the best way to acquire a library.

### IX. Can a Nation Be Moral?

1. Define morality. What distinction of meaning is there between morality and ethics? Give two synonyms of moral.
2. What does the author mean by his statement, "For morality is the outgrowth of group life"? Would you call such a group life as that of the ants moral? Give your reasons.

### History, Civics and Economics

- I. Prohibition—The One Consistent Party. Prohibition in Scotland. Varied Views on Prohibition.
  1. Why does the Prohibition party continue its work now that prohibition is part of the national constitution?
  2. Do you agree that working thru a separate political party is the best way to attain and to safeguard prohibition?
  3. What other issues does Mr. Watkins stress in his appeal to the voters?
  4. Give a summary of the liquor issue from the standpoint of the Scotch voter. Why has the prohibition movement made more rapid progress in the United States than in Great Britain?
- II. Socialism—Nine Steps to a New Age. Another Non-Partizan Movement.
  1. Find the sentences in which Mr. Stedman defines "capitalist society" and contrasts it with "Socialism." Illustrate his definitions by taking some particular industry, such as the railroads or clothing manufacture, and describing how it would be owned and managed under a "capitalist" system and under a "Socialist" system.
  2. What are the nine points of policy proposed by Mr. Stedman? Select one of these as the basis for a classroom debate.
  3. In what respects does the attitude of the Social Democratic League seem to differ from that of the Socialist Party?
- III. American History—The Discovery of the Mayflower.
  1. Who were the Puritans? The Pilgrims? Give an account of the founding of the first settlements in New England.
  2. What new facts do you learn from Mr. Holt's article that you do not find in your history text-book?
- IV. Latin America—Uncle Sam and His Southern Cousins.
  1. Why are the countries south of us called "Latin" America? What languages do they speak? How many are there? Which of them would you consider "backward" in civilization and which "progressive"?
  2. What is the "Monroe Doctrine"? When and why was it first adopted as an American policy? What do you find about it in the Covenant of the League of Nations?
  3. Dr. Rowe says that the food surplus of South America can do much to relieve conditions in Europe. What are the chief exports of the South American nations? What do they produce that the United States does not?
- V. Constitutional Amendments—Dynamite or Discussion?
  1. What methods of amending the Federal Constitution are possible? What nineteen amendments have been adopted? In what manner can your State Constitution be amended?
- VI. The President's Authority—Wilson Opposes Shipping Law.
  1. State the legal case for and against the President's refusal to enforce discriminating dues against foreign shipping. On the evidence as given in the Story of the Week which side do you think has the stronger case?
- VII. French Policy—The New French President. Millerand's Career. The New French Premier.
  1. What has been the foreign policy of M. Millerand as Premier? Why should a French radical and former Socialist have shown himself so hostile to the Russian Bolsheviks? In what respects is France interested in Russian affairs?
  2. What is the "platform" of Premier Leygues? What does he say about the League of Nations?
- VIII. The Irish Question—Raids and Reprisals. Harding on Ireland. The League and Ireland.
  1. If there is a "war" in Ireland why does not the League of Nations stop it? Can you find anything in the Covenant of the League which would authorize intervention either for or against Irish independence? Is there any sure test known to you by which a "rebellion" can be told from a "foreign war"?
  2. How far do you think one nation has the right to express official sympathy with a revolutionary movement within another nation? At what point would Senator Harding draw the line?

# The Independent

## Just a Word

This week we introduce to you Robert C. Macauley, who will address you on behalf of his own candidacy for president and bespeak also your good will on behalf of the Single Tax Party in general. In our columns you have already been addressed by Governor Cox, representing the Democratic Party; Mr. Watkins, the third candidate from Ohio, who believes that the passing of the eighteenth amendment has not destroyed the usefulness of the Prohibition Party, and Mr. Stedman, Socialist candidate for vice-president, who has already fulfilled one duty of a vice-president in acting as a substitute for his chief when the latter was unable to act on his own account. Between now and election we shall also give space to the messages of Senator Harding, the Republican nominee; and Mr. Christensen, candidate for president of the Farmer-Labor Party.

It has been an old tradition of The Independent to assemble the party nominees each four years to speak directly to our readers. We have not confined our invitations to the Republican and Democratic standard bearers, but have gone into the highways and byways to bring to our symposium also the nominees of the third parties, whose very names are now often unfamiliar. Thus in 1896, in addition to an article by Mr. McKinley and another by Mr. Bryan, we had messages from the Populists, the National (Gold) Democrats, the Prohibitionists, the National Party and the Socialist Labor Party. Four years later we had messages from the Populists, Prohibitionists and Socialist Laborites and from two new groups also, the short lived Union Reform Party and the Social Democratic Party, now known as the Socialist but then as now captained by Mr. Debs. In 1904 the two Socialist parties; the Populists, now captained by Tom Watson; the Prohibitionists, whose nominee bore the inappropriate name of Swallow, and the National Liberty Party contributed to our pages.

1908 was a good year for the man who likes plenty of variety from which to select. We had contributions from the Republican and Democratic Williams (Taft and Bryan); from the Socialist and Prohibitionist Eugenes (Debs and Chafin); from the Populist and Independent Thomases (Watson and Hisgen), not to mention one August, Gillhaus of the Socialist Laborites. In 1912 we printed messages from the Big Three—Woodrow Wilson the Democrat, President Taft, Republican, and Theodore Roosevelt, Progressive—as well as from the leaders of three smaller parties, Debs the Socialist, Chafin the Prohibitionist, and Reimer of Socialist Labor. In 1916, the Progressive Party having followed the Populists into the mists of the past, only four parties remained. President Wilson and Justice Hughes crossed swords in our pages, Mr. J. Frank Hanly upheld the Prohibition cause, and Mr. Allan Benson defended Socialism. Apparently the era of small parties has returned once more, for this year you have not four but six Presidential nominees who have elected The Independent as a forum in which to plead the cause of their respective parties.

## Remarkable Remarks

DR. PEASE Tobacco is more deadly than opium.

GOVERNOR COX—My creed is "God Almighty first."

THE PRINCE OF WALES—I hate to say farewell to anyone.

HERBERT HOOVER—We should save every possible five cent piece.

MRS. CHRISTINE FREDERICK—I certainly cannot keep house without tomatoes.

JOHN BURROUGHS—If you can tickle a frog's back in any way you can put a spell on him.

MME. CLEMENCEAU JACQUEMAIRE—American women do not use cosmetics and scarcely any powder.

SIR G. YOUNGER—There never was better government anywhere than the county government of Scotland.

ROY K. MOULTON—I often wonder what war we are paying for when we buy a theater ticket or a glass of soda.

DR. CHARLES M. SHELDON—Selfishness is the best known sin in the world, and it does not improve on acquaintance.

## New Plays

*Jim Jam Jems*, as might be expected, is a musical comedy of girls and gorgeous costumes. That's all. (Cort Theater.)

*The Merchants of Venus*. Interesting study of the utility or futility of marrying for money, by no means as foolish as the title. Excellent cast and star. (Punch and Judy Theater.)

*The Dawn of Ireland*, a melodrama depicting the sufferings of Erin of the present day. Unfortunately, the production would lack interest to even an ardent Sinn Feiner. (Lexington Theater.)

The much heralded young violin virtuoso by the remarkable name of Mischa Violin, whose debut took place last week before a large audience, was a distinct disappointment. He has ability, however, and he will grow older. (Carnegie Hall)

*Three Live Ghosts*—a cockney comedy with "Bert" of "The Better 'Ole" playing the lead of a returned Tommy "officially dead." Clean cut, humorous entertainment that deserves to be ranked in the best six plays of the season. (Greenwich Village Theater.)

*The Treasure*—David Pinski's comedy of the Yiddish grave-digger whose neighbors thought he had found a fortune—is admirably presented under the direction of Emmanuel Reicher by the Theater Guild. But its four acts could well be cut to one to suit an American audience. (Garrikk Theater.)

The San Carlo Opera Company sticks to the old conventions of staging and acting in its presentation of *Lucia di Lammermoor*. Regina Vicarino combines sentiment with technique in singing the difficult role of "Lucia." In Ponchinelli's *La Gioconda* the universally popular "Dance of the Hours" attracted most applause. (Manhattan Opera House.)

*Forty thousand birds* would be needed to carry a day's grist of messages from the Mimeograph. Five thousand well-printed copies of a letter, bulletin, form, diagram, or design is its habitual hourly output. It is the quickest and most direct means of speeding the idea from its author to the many who should receive it. The work is easily and privately done at negligible cost—without dirt or fuss. This inexpensive device is making important short cuts and saving remarkable sums of money for unnumbered thousands of the world's most progressive institutions. Costs but little to install and operate. Let us show you how it will put wings to your ideas. A request will bring new booklet "E-10." A. B. Dick Company, Chicago—and New York.

## No One "Owns" Land

A Message from the Candidate of the Single Tax Party

By Robert C. Macauley

**F**AILURE of the old political parties, indeed their flat refusal, to deal adequately and justly in correcting our faulty taxation system, which makes possible appropriation by a special-privileged few of the production of the many, made the formation of the Single Tax party imperative.

The Single Tax party, which was organized five years ago, and which now has organizations in twenty-six states of the Union, declares the remedy for existing taxation ills is embodied in its platform adopted at the National convention held in Chicago, July 10 to 14; and which is unique by reason of its brevity.

This platform demands the collection by government (all the people) of the rental value of land, and that all improvements, industry and enterprise shall be exempt from taxation.

Being convinced that only in this way can involuntary poverty and the fear of poverty be abolished; the just division of the products of labor be had; equal opportunity be achieved; and industrial justice consummated, the Single Tax party calls upon all men and women, regardless of their former political affiliation, to join this movement for the emancipation of mankind.

The demand that the full ground rent be collected by the Government instead of by private individuals, as under the present system, is based on the principle of justice. No human effort did or could produce the land; and it is reverently submitted that Almighty God did not open a land office from which issued the first title. In addition, the ever increasing use value of the land arises entirely from the activity, industry and enterprise of the community and not from any effort or skill exerted by the title holder.

The insistence on the abolition of all fines on production—now known under the term of taxes—is predicated on the application of the principle of common honesty.

As individuals, none has the right to take even a fraction of another's production without laying himself open to the ugly

New York Globe

Robert C. Macauley

charge of theft. An hundred million of people, calling themselves government, even under the guise of taxation, have no greater right.

Government, properly recognized and understood, is simply a corporate body in which each member of the organization has, or should have, equality of right. Each owes to the government only the value of the service received from such government. Investigation will prove that all government service is accurately and exactly reflected in the rental and selling value of land.

Government service enhances the value of no other commodity save land. This fact is easily demonstrated in the history of every frontier settlement. Before the formation of a stable government in these settlements, land was virtually without rental or sale value; and labor commodities always commanded the highest prices in such communities. With the establishment of a stable government, exactly the reverse was true.

Plainly stated the Single Tax party insists that service alone furnishes the only just basis for compensation; and that healthy industry shall not be fined for producing wealth, as under the present archaic and unscientific system.

We long have applied the principle of fining malefactors. Experience has taught us that such fining had the desired effect of reducing the number of violators of the law. We apply the same principle to production, but expect it, however, to bring about a diametrically opposite result.

A man produces more than he consumes and gives expression to that surplus, let us say, in the form of a home for his family. Immediately he is visited by the real estate assessor, charged with making an improvement, and heavily fined (now called taxed) not only

once but every succeeding year so long as the house lasts. It would seem, therefore, that our present laws regard the building of a home a more serious offense than that of the ordinary malefactor—for it fines him but once.

---

This article is the fourth of the series in which each candidate for President of the United States presents in the Independent his message to the American people

---

Under prevalent rates of taxation, the man's house, which he produced, either actually or thru the exchange of service with him who did, has virtually been confiscated in a period approximating thirty-five years, for during that time he has been compelled, in the form of what we call taxes, but in reality fines, to pay a sum totaling in excess of the entire value of his home.

How is it, however, in the case of the land, particularly in the large cities?

Here due to increased population and thereby of competition, the use of the land has greatly increased in value; with the result that large fortunes have been amassed by the title holders thereof, who never expended an ounce of effort in the creating of these land values; but which our present unjust laws enable them to appropriate.

The title holder has done nothing, but has received something. The tragic part of all this is, that the community which created the values has gotten nothing for the something it produced; for wealth and value do not come into existence only as a result of industry and

## An Empty House

### By Victor Starbuck

*This place was home: and here were hearts made glad  
With simple things, bread, laughter, wind and sun,  
Red dawn, gray dusk, and rest when day was done.  
(O House, have you forgot the dreams they had?)  
Around it was a whisper of the leaves,  
The smoke curled skyward in the evening air,  
And there were children's feet upon the stair,  
And twittering swallows wheeled about the eaves,  
But now no footfall crosses any room:  
No finger lifts the latch. The hearth is cold  
And black with ash. Nor thru the deepening gloom  
Does any window cast its bar of gold.  
O House of Dreams, will you remember yet  
The hearts that loved you, when all else forget?*

hard work. When, therefore, someone gets something for nothing, it must necessarily be at the expense of someone else, who gets nothing for something. The individuals making up the community pay their share of this virtual confiscation, in proportion to their consumption; for all present taxes and other charges are added to the price of the commodities they are compelled to use.

The Single Tax party, however, has no quarrel concerning the inequalities of wealth possessed by the individual; for it recognizes that nature not only created some more capable than others, but, what is probably of still greater importance, it made some more industrious than their fellows. The Single Tax party does, however, insist that service must be the only recognized measure of compensation. It demands that those who render no service shall receive no compensation.

When laws embodying this principle are enacted no odium will attach, even to a billionaire; for under such a system he must have proven himself one of the best of citizens, for the reason that to be possessed of it he must have rendered the most service.

The present taxation system permits not only the appropriation of wealth by persons who rendered no service in its production, but it makes profitable the holding out of use, more than 80 per cent of our land for purely speculative purposes, thereby depriving man of his natural opportunity to employ himself.

Control of man's opportunity to work, for he must work to live, makes possible his exploitation by the

beneficiaries of the system of private ownership of the earth; for man of necessity must get from the earth everything required for his continued existence.

The power to exploit men in the mill, factory or in mercantile life is made possible only thru his being first exploited on the land or driven off it by the simple process of demanding in the form of ground rent too large a part of his production for the mere permission to work; for that is all that is received in exchange for the rent of bare land.

It will therefore be seen that the present system of private ownership of land is the real regulator of wages, for in normal times it can be and often has been used to artificially regulate the demand for workers. It requires no argument to convince everyone of the effect artificial control of the supply and demand of workers would have on the scale of wages.

Watering of stocks has long been recognized as an iniquitous system by which dishonest manipulators receive return on imaginary investment. But does not the present system of private ownership of ground rent constitute a like offense against justice, ethics and morals?

The land was given by nature to all mankind to provide for its continued existence, and did not cost the expenditure of a single moment of human labor. The ever increasing value of its use, as has already been pointed out, arises not from any effort or service on the part of the title holder, but is purely a community created value. Surely it would seem unreasonable, therefore, that its own production should not be made an instrumentality for taking a larger and ever increasing proportion of this community created wealth. Yet the steadily increasing capitalization of the rent of land makes this possible.

There is just so much land. Man can neither add to nor subtract from this amount. No matter what he may do, the earth still remains. It cannot be destroyed; neither does it wear out as do the products of man's labor.

Can it not be seen clearly that with the amount of land the same and the increased value of its use created by the community that its appraised value—in the United States estimated to be \$150,000,000,000—represents the amount of "water" on which the people of the nation must pay "adequate" return to a few beneficiaries of the present system of private ownership of the land?

And, is it not readily seen that figured at a rate of six per cent return this enormous so-called investment constitutes an overhead charge of \$9,000,000,000 annually, which must come out of the production of the people of the nation in exchange for the mere opportunity to work and produce?

As has already been indicated, the capitalization of land rent is being increased daily. Should the same percentage of increase obtain during the next fifty years as for the last half century, the amount of unearned wealth, now collected by less than five per cent of the population will be in the neighborhood of \$20,000,000,000 annually. A formidable tribute for the citizens of Free America to pay in exchange for mere permission to live in and work on the soil of their own country.

As to the methods by which this alleged right to private ownership of the earth was acquired in the beginning and later sold to others, the least said the better, for the reason that any investigation into the methods employed would show them to have been either force or chicanery.

Probably the best illustration of the injustice of the present system of pri- [Continued on page 100]

# The New Spirit in the Old World

A Message to the American People

By Ernest P. Bicknell

Deputy Commissioner for Europe of the American Red Cross

**T**AKEN as a whole, Europe has made marked progress toward recovery from the effects of the war in the twenty-two months since the armistice. There have been periods of depression in every country, during which the gravest fears for the future were entertained, and in which little progress was made. A new spirit has taken hold of the western nations during comparatively recent months and, barring a serious setback in the immediate future, their progress toward complete rehabilitation from this time forward should be rapid.

The future of the nations of Eastern Europe is more difficult to forecast. No one can tell what is going to happen to Russia. Few persons know what is happening in Russia at the present time. The future of the countries bordering Russia is inevitably linked to a degree with the future of that unfortunate nation.

The bright spot in Western Europe is Belgium and in Eastern Europe Czecho-Slovakia. The darkest spot in all of Europe, with the possible exception of Russia, is Austria. Not only has Austria failed to make progress since the armistice, but there seems no possibility of progress in the future for Austria without radical alteration of the conditions of peace imposed upon her.

Europe has come to realize that complete rehabilitation for the continent is impossible, unless Germany is returned to health. Soon it must realize that the same thing is true of both Austria and Russia. No one set of nations can prosper at the expense of the others.

All of the nations of Europe are suffering from shortages of man-power, due to their losses in killed and wounded in the war. There is only one way in which these shortages can be overcome and that is by a better utilization of the labor that is available thru the adoption of labor saving devices. Hand labor was cheap before the war, particularly in the Latin and Slavic countries, but under post-war conditions labor is dear. Many of the tasks that are still being done by hand could be done less expensively by machine.

The demoralizing effects of army life have made it difficult for the workers who returned from the war to settle down in their old jobs. This, coupled with the feeling of disappointment over the incomplete realization of the things they hoped the war would give, has resulted in a marked decrease in the efficiency of labor. In time this unrest will disappear; it is diminishing already. When it has vanished completely one of the greatest obstacles to quick European rehabilitation will have been removed.

The diminished efficiency of labor and the consequent reduction in the output of raw materials and manufactured

products, led a great many intelligent men in Great Britain to doubt whether full recovery from the effects of the war was possible for Great Britain. There continues to be talk of strikes and other industrial disturbances in Great Britain, but the whole atmosphere has changed during the last few months and all but the most pessimistic now feel that Great Britain will sooner or later be able to get [Continued on page 102]

From these steps at the "Barbican" or "water front" at Plymouth, England, the Pilgrims set sail for the New World. The dock has been lengthened in recent years, however, so that when you look at this picture you must cut off about three-quarters of it to imagine the place as it was 300 years ago

# The Old World's Homage to the Pilgrims

By Hamilton Holt

*Last week the editor of the Independent described his visit to Old Jordans in Buckinghamshire, England, where he examined the barn which is supposed to have been made out of the timbers of the "Mayflower." This week he gives some of his impressions of the recent "Mayflower" celebrations in Holland and in England, which he attended as a representative of the American "Mayflower" Council.*

The memorial tablet to John Robinson, pastor of the Pilgrims, which was presented to Leyden, Holland, where the Pilgrim Fathers lived eleven years after leaving England, by the National Council of Congregational Churches in America

IT was natural that the Pilgrim celebrations this year should begin in Holland. For it was from "the Low Countries where was freedom of religion for all men" that the Pilgrims first set sail for America. Holland had made great preparations for her celebrations. They began Sunday, August 29, with religious services thruout the Kingdom and continued

without interruption during the five succeeding days.

Queen Wilhelmina had invited all the American and English Pilgrims to a garden party on the 28th. But as my two daughters and I were attending the conference of the World Alliance for Promoting International Friendship Thru the Churches, at St. Beatenberg, Switzerland, where for the first time in history representatives of all denominations of Christendom, except the Roman Catholic Church, were meeting in friendly conference, we could not accept Her Majesty's invitation, and in fact did not arrive in Holland until late Sunday night.

Our trip from Switzerland thru France and Belgium was a nightmare. Traveling in Europe these days is anything but unalloyed bliss. But when we crossed the border into Holland our troubles ended. Instead of dilapidated, overcrowded, dirty trains bumping and jerking over run-down roadbeds, we found spacious, clean, and well-painted carriages with plenty of room for everybody. The Dutch, as everybody knows, are a hospitable people, and the hundred pilgrims from America and England were not permitted to go to hotels, but were taken into the homes of the people—always the best and pleasantest way to live in a foreign country. Our host, Mr. Tyo H. van Eeghen, a member

of the executive committee of the Pilgrim Fathers' Commission of Holland, met us at the Haarlem station and took us out by motor to his charming country estate on the outskirts of the city. You can well imagine what a joy it was after an unspeakable day and evening in the crowded Wagon-Lits to find Mrs. van Eeghen waiting up to receive us and a pretty table set with eatables and drinkables, the teapot boiling, and the odor of ham, Dutch cheese, and buttered toast whetting the appetite.

Holland is not a country of "magnificent expanses," and Haarlem was within easy auto distance of Leyden, Amsterdam, The Hague, and Rotterdam, where the principal festivities were to take place. So the next morning we all motored to Leyden, which three centuries ago Bradford called "a fair and beautiful city and of a sweet situation." I had not been in Holland since I visited the Second Hague Conference in 1907. I was delighted to find that the flat country was as beautiful to me as ever with its unfenced green meadows, little white farmhouses with red roofs, giant stately windmills, and innumerable sailboats in the innumerable canals, which in the distance looked as tho they were crawling on land. It was fine to see again the sturdy citizens going about their business, the laughing peasants in their fancy lace caps and wooden shoes, and the dogs tugging at the big carts along the roadsides.

Arriving at Leyden we registered at the conference hall, and found that already some forty American and sixty British Pilgrims had signed the book before us.

The first thing we did was to walk down a heavily shaded street by the side of a large canal to the ancient University of Leyden. The faculty in their caps and gowns were already in the front seats and the rector, or president, sat like a judge in court on a high bench overlooking the congregation. We listened to speeches galore, beginning with the rector's address of welcome in Latin. America on this occasion was represented by Mr. W. B. H. Dowse, who was introduced as "the Deputy Governor" of Massachusetts. Mr. Dowse made a very telling little speech, in which he informed the good people of Holland and England of the forthcoming celebrations in Massachusetts this autumn. When he referred to the fact that one of the American delegates present, the Rev. Samuel W. Eliot, was the son of America's "foremost citizen," ex-President Eliot of Harvard, there was universal applause. But when Mr. Dowse added that one of our greatest Americans was to give the principal address at the American Plymouth celebration, and mentioned the name of Senator Henry Cabot Lodge as the speaker, there was not even the faintest

handclap. At the conclusion of the exercises the faculty departed, being led by two beadle-like university officials with enormous silver chains around their necks and carrying great maces in their hands.

After luncheon we attended the first session of the celebration in the Town Hall and then walked about town to see where John Robinson, the pastor of the Pilgrims, lived during his stay in Holland. We saw his home, built about a pretty courtyard, and we visited the church where he preached and read the memorial tablet presented in 1891 by the National Council of Congregational Churches in America and herewith reproduced.

In the evening we drove out into the open country for half an hour to an old castle, situated on a pretty lake, which has recently been converted into a country club. There we were given a sumptuous banquet which it seemed almost a sin to eat after we had just come from hungry France and starving Germany. After the usual toasts to the Queen of Holland, the King of England and the President of the United States, we motored back to town where the Burgomaster of Leyden was to give a reception at the Staathuis.

As we reached the city the pretty chimes were ringing for a quarter of an hour in honor of the Pilgrims. The entire city was lighted and bedecked with flags and bunting. It seemed as tho the whole populace had come out to line the streets thru which the guests proceeded to the Staathuis. My host told me that many of the people actually thought the foreign delegates were real Pilgrims and they expected to see us dressed in round hats and the same somber costumes that were worn by our ancestors as they [Continued on page 104]

In the hall in Plymouth, shown above, the Pilgrims met to weep, pray and say farewell

#### International

The celebration of the sailing of the Pilgrims held at Leyden, Holland, was religious in tone, that held at Plymouth, England, political. Among the celebrities present at the latter were the Lord Chief Justice of England and Lady Astor (shown in the foreground at the right). The American guests may be seen about half way up the procession

# Wanted: a House

Some Practical Advice That Will Help You Meet the Problems of Our Housing Shortage

By Austin C. Lescarbours

**T**HAT there is a serious housing shortage today, not only in the United States but thruout the civilized world, is a generally known fact. For months back our newspapers have reiterated over and over again the story of little or no building activities and the scarcity of dwellings; we have heard of fabulous bonuses being offered by persons seeking livable quarters in our cities; the "To Let" sign has become a thing of the past; and the ever-increasing independence of the landlords reflects the operation of that inexorable law of supply and demand, now applied to housing facilities with a vengeance. The scarcity of dwellings in our cities is responsible for increase in disease and crime which invariably follow lowered housing standards. Factories, which have been expanded to meet the requirements of business, now find it impossible to house their increased working forces. So serious is this situation as a whole that the Federal, State, and municipal governments are hard at work on the problem of ameliorating the unsatisfactory and even dangerous conditions which we are facing at this moment.

Meanwhile everyone must solve his own housing problem.

There are two courses open: renting and purchasing. Under former conditions it was relatively simple to rent apartments or houses at almost any time; but with the scarcity of buildings and the unduly high prices now possible in the face of such heavy demands for homes, it is becoming increasingly difficult to rent suitable premises. The coöperatively owned apartment house plan is flourishing as never before.

So one's thoughts soon turn to buying a home, and again one encounters alarming conditions. Houses

which formerly sold for less than five thousand dollars now command a tidy eight thousand dollars and more. One writes in haste to the real estate agent who advertises "a modest little cottage for sale, suitable for a young business man," only to learn that said modest little cottage is selling for the *modest* sum of eighteen thousand dollars.

But that is not all. Formerly it was quite the thing to pay only a small sum down on a house, paying off the mortgage on the balance at so much per month. Today a small sum down is no longer accepted; so brisk is the business of selling houses that one is usually confronted with the demand for half the sale price as first payment, or, as a very special concession, perhaps one-third.

Well, then, the next thing to do is to build a house. Here again one is doomed to a severe shock, for building prices are almost prohibitive. In fact, about the only building that is going on in New York City just

Built in 1853 as the stable on a large estate at the upper end of Manhattan Island, New York City, this building was remodeled two years ago into a comfortable home

## INCREASE IN BUILDING COSTS DURING 1919 ST. LOUIS, MO.

These costs are based upon an analysis of the actual cost of a particular 6 room brick house with full basement, hot water heat, tile roof and brick and cement porch. The cost of the lot is not included. The same house was built in quantities of six or more at one time and in the same locality—except no houses have been built under January first prices.

### LEGEND

- [Solid black bar] = COST MARCH 1, 1919.
- [Hatched bar] = COST SEPTEMBER 1, 1919
- [Dotted bar] = COST JANUARY 1, 1920

Houses which formerly sold for less than five thousand dollars now command a tidy eight thousand dollars and more

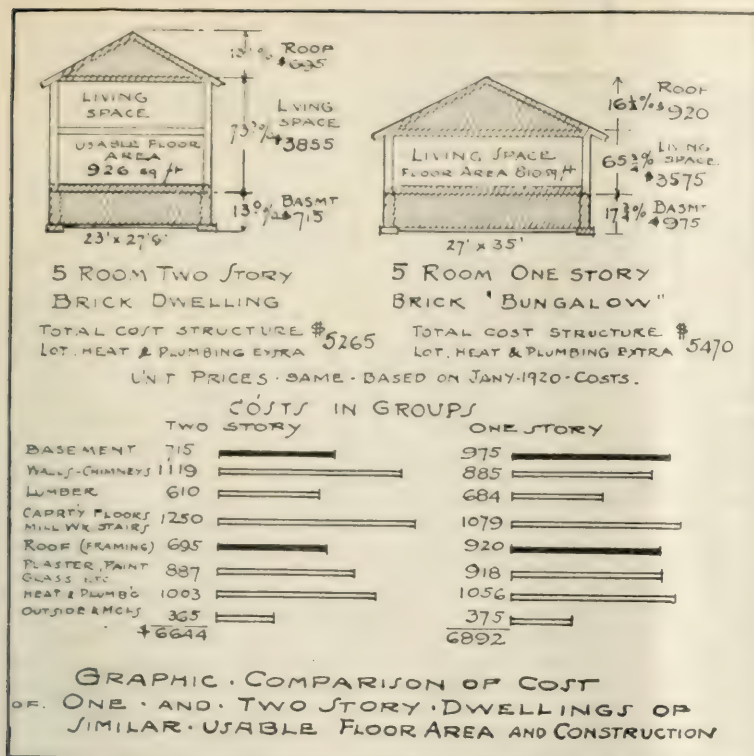

now are a small number of apartments, a formidable assembly of large theaters, and a still larger array of all kinds of garages. The returns from apartment houses, even at the greatly increased rentals, are said to be insufficient to interest the investment of capital in houses costing three times what they would have cost but a few years ago. But theater and garage returns do warrant the building of such structures irrespective of costs.

Why are building costs high? In considering this subject it is wise to recollect that the raw materials in the mines, forest and the clay banks amount to about 15 per cent of the total cost and that the remaining 85 per cent consists of labor used in mining, quarrying or felling the raw materials, transporting them to the factories, transferring them to centers of distribution and ultimately incorporating them into the completed structure.

In normal times the ranks of labor are increased by the youth of the country, but this has never been sufficient; consequently, immigration was resorted to. Immigration, which has just begun again, stopped completely about the middle of 1914.

This labor shortage is reflected in all lines of business thruout the country. The cost of labor per hour in building work has practically been doubled and has a tendency to increase.

Strange as it may seem, in analyzing the cost of dwellings, it will be found that the so-called bungalow is probably the most expensive type of any of them.

Normally building construction in this country amounted to about three billion dollars per annum. From the middle of 1914 until 1917 building decreased in volume, due to the uncertainty of war conditions. In 1917-18—a period of two years—building practically ceased because we were in the war. Now everyone is trying to make up for lost time and it will take years before we are again on a normal basis. Materials are hard to obtain because of shortage of labor and a shortage of transportation facilities. This is the situation briefly stated. An analysis of the conditions demonstrates that building is apt to increase before a decline sets in, but the decline, when it comes, will be gradual and when conditions become normal, prices will be little, if any, lower than they are today.

All of which means that if prices are high there is no help for it. Nothing is gained by waiting. If one decides to build a house, one must be prepared to pay the prices being exacted for materials and labor. True, things were more favorable even a year ago; but why lament over what is past and beyond adjustment?

The high cost of labor has brought the ready-cut house to the front as never before. Made in a factory with all parts cut by machinery so as to reduce manual work, and shipped to the building site in many pieces that fit together without extra sawing and fitting, the ready-cut house should show a saving of quite a neat sum over the usual hand-built house. There is a general misconception about ready-cut houses to the effect that these dwellings are of a portable nature, and more like a garage or bath-house than anything else. This idea is all wrong; ready-cut houses come in all sizes and styles, ranging from the modest one-room hut to the palatial twelve-room home with every conceivable im-

provement, modern appliance and comfort.

In order to escape the high lumber prices, one is tempted to turn to concrete or brick construction. But a study of either of these construction methods soon reveals the fact that nothing is gained over the usual frame construction. Concrete costs about as much; brick is generally more expensive.

Strange as it may seem, in analyzing the cost of dwellings it will be found first that the so-called "bungalow" is probably the most expensive type of dwelling. By reference to the chart, which shows a graphic comparison of the cost of one- and two-story dwellings of similar size, it will be seen that in the "bungalow" about two-thirds of the cost is applied to the actual living space as compared with three-quarters in the case of the two-story house.

The city of St. Louis has done much in the way of studying the problem of relieving the housing shortage. The City Plan Commission of that progressive city, to whom the author is indebted for part of the general information contained in this discussion, has suggested a number of ingenious ideas for reducing the cost of construction which are well worth consideration throughout the country. In the first place, assuming that the prospective builder considers his requirements to be a five-story house, either a "bungalow" or a two-story building, together

with a suitable lot with street improvements, he must be prepared for a cost at least from \$7,000 to \$8,000, upon which any usual financing plan will require a monthly payment of approximately 1 per cent in addition to the original cash payment. It is obvious that many persons who ordinarily might have considered such a type of house must now attempt to find some other form of dwelling at less cost or otherwise sacrifice in other ways to increase their payments. The following methods may be considered for reducing the cost of dwelling:

Arrange houses in groups so as not to require as much original lot cost or as large a cost for outside improvements, including plumbing connections. In the five-room house these two items now amount to from \$1,300 to \$1,500 or from 15 to 18 per cent of the total cost. Deep rear yards are very often little used and a proper group plan will prove ample, light and airy and at the same time reduce the lot cost from 30 to 50 per cent, a saving of [Continued on page 108]

Second-hand lumber and other building material is on sale at Camp Merritt, New Jersey, where the buildings are being dismantled.

# The Next Congress

## Shall We Elect Republicans or Democrats?

### Vote for Liberals, Not Labels

By Norman Hapgood

**D**R. Williams and I have had a pleasant scrimmage in the columns of *The Independent* about the issues and the candidates for President and Vice-President, but we have not crossed swords on the House and Senate. The attitude of the candidates toward Congress has its bearing on the subject. Cox has gotten on extremely well with the Ohio legislature, as the record of laws championed by him shows, but, although he is good at team play, he is captain, and he has announced that if he is elected President he will act as President. Harding, on the other hand, is almost engagingly frank in his repudiation of any claim to a soul of his own. A friend of mine asked him this question: "You say, Senator, that if you are elected President you will be guided largely by the Senate. Have you any individuals in mind?" The Senator's answer was priceless: "Well," he said, "Senator Lodge is a good man. So is Senator Penrose. So is Senator Smoot."

**C**OX has not only asserted and proved by his record that he will show a certain individuality, but he has publicly announced, in spite of Hoover's support of Harding, that if elected he plans to offer Hoover a place in his Cabinet, thus indicating an ability to get away from the most narrow partizanship and also to be free from resentment. Harding will assuredly not have any ideas of his own. Do you remember these lines from Ruddygore?

My boy you may take it from me,  
That of all the afflictions accurst  
With which a man's saddled  
And hampered and addled  
A diffident nature's the worst.

Mr. Taft failed in the Presidency for lack of decision, and Mr. Harding, if elected, will make Taft look like a great leader.

And speaking of Mr. Taft, he has an article in the October number of the *Yale Review* in which he blames President Wilson for putting Justices Brandeis and Clarke on the Supreme Court, and thinks it will be a grand thing to have Mr. Harding choose the four men who will presumably be appointed to that court during the next four years. There you have an excellent illustration. Wilson thought for himself and appointed Brandeis. Penrose will think for Harding and I shudder to conceive what the Supreme Court will be like when 1924 arrives, if next month there is a Harding-Penrose victory.

Such being the situation, the wise thing for the voter to do is to support the most liberal candidates he can for the House and Senate, not being too much bound by party ties. Both in domestic matters and in foreign relations the safest effort, in this period of fatigue and stupidity, is to keep alive some liberalism and free intelligence. As the Democratic party has been so much influenced by Wilson, and as the Republican party has been captured by its most reactionary elements, the chances are that a Democratic nominee will be more liberal than a Republican nominee, but this rule will not hold in all cases. If William Kent had not been beaten by his reactionary opponent in the Republican primaries of California he would have been an ideal candidate for liberals to support. In Wisconsin the

Republican candidate for the Senate, Lenroot, is an admirable man, but it happens that in the same state the Democrats have put up just the right type of man in Dr. Reinsch, who has the advantage of being more enlightened about the League of Nations than Mr. Lenroot is. A demagogic opponent of the League has been nominated for Senator by the Democrats of Georgia, and he will join the Republican bitter-enders at Washington. Among the narrowest opponents of the League has been Moses of New Hampshire, who is now running for re-election against Ray Stevens. Stevens has a splendid record in his state, in Congress, and on the Shipping Board, and it would indeed be a pity if that brilliant and honorable young statesman should not be chosen in preference to his opponent. Brandegee of Connecticut is a reactionary of the deepest dye. No liberal could vote for him. He has been as bitter against Mr. Taft on the League issue as he has against the President. He said of Mr. Taft a year ago: "I never pay any attention to the froth he emits." Wadsworth of New York is popular and attractive, but I cannot remember that he ever voted against the wishes of Boss Barnes in New York or against the Senate gang since he has been in Washington. Of the Big Three, chiefs of the Senate oligarchy, Smoot is the only one who can be beaten of the two who come up for re-election. He is not the person to be in public life in the twentieth century. Of him might be said what some women are saying of his New York companion, "Wadsworth's place is in the home." Penrose also is up, but unhappily his re-election is a certainty.

If in almost any campaign independent voters should give their strength to able and honest liberals, regardless of their party labels, it is a still sounder principle in the election in front of us. Actual party questions, properly so called, will be few: the reimposition of a higher tariff is perhaps the only one. Most questions will be decided on knowledge, honesty, and the presence or absence of liberal sympathies. The Senate today would be a tie if Newberry's seat, called tainted by the courts, were held by Newberry's Democratic opponent. It is possible for Cox to be elected with a Republican Senate or for Harding to be elected with a Democratic Senate. The safe and wise thing to do is to elect the man whose view of our foreign opportunities is generous and whose view of domestic questions is modern. Watson and Reed are essentially in the same party as Brandegee and Penrose. Whether for the House or the Senate those people should be put out of business, all the more because if Harding is elected he will take the color of the majority. He is more comfortable as a standpatter, but he will be a rubber-stamp of the prevailing spirit, whatever it is. You can get his full official record by sending ten cents to the Searchlight Company, Woodward Building, Washington. The exhaustive analysis ends up: "The Senate today stands at the lowest ebb of statesmanship ever known . . . Harding stands at the very bottom of the list." With that man as a possibility for the Presidency the intelligent voter will be doubly anxious to put into the House and Senate men of courage and wisdom, above all men who stand boldly for world cooperation against war, as already being practised by over thirty nations, with

the total, including the applicants, being over forty. In 1915 Col. Roosevelt wrote:

The nations should agree on certain rights which should not be questioned, such as territorial integrity. . . . All should guarantee each of their members in the possession of these rights. . . . They should furthermore agree not only to abide, each of them, by the decision of the court, but all of them to unite with their military forces to enforce the decree of the court as against any recalcitrant member.

Vote, above all things, for the men who will endorse that statement: vote against the narrow-minded and obstructive, in favor of those who believe now what was recommended by Roosevelt, Taft, Hoover, Root, Wickersham, Lowell, and Strauss before the eddies of partizan politics deflected some of them from their proper course.

## Have Done with Waste and Indecision

By Talcott Williams

THE League issue divides the campaign for the Presidency. Governor Cox refuses to say what he will do when he faces, as Wilson has, the inability to get a two-thirds majority in the Senate. Senator Harding will not define his international "agreement" with a court instead of a council as its center. Still, there is here a definite issue.

In the fight over Congress, there is none. Maine was carried against the League by the woman vote. As a Republican canvasser said to me: "You see the women are timid-like and they don't think their first vote is the right time to experiment. So they just votes the family ticket or stays at home." In Maine, the Republican women did one thing and the Democratic the other. In New Hampshire, Senator Moses won the Republican primary, with Republican votes enough against him to beat him at the polls. In Georgia, Hoke Smith was attacked because he was lukewarm on the League and a rank Populist. Thomas E. Watson, far more opposed to the League, goes to the Senate in his place. Massachusetts Republicans manage to support the League and Lodge. Illinois is in doubt from a factious split in the Republican party. In New York, an independent vote and a woman vote will be cast against Senator Wadsworth, though the Democratic candidate, Lieut. Gov. Harry Walker is weak.

No one issue divides in all the States on Congress. No real economic issue divides the two parties. On sugar, rice, tobacco, citrus fruits, cotton goods, the metals, Southern and Northern Democrats are for a high tariff. Currency and banking no longer are on party lines. "Winning" the Senate and House does little more than decide the organization and committee chairmanships. In the present Senate, both parties split on the League. It could have been ratified, if President Wilson had not preferred a futile appeal to the country.

The open current sets towards a Republican majority. This is true now. In five weeks, any change may come. In 1884, the Presidency and House were lost by the Republican party in the last week of the campaign because of one speech. A Republican majority in the Senate and House and for the Presidency seems—I do not say is—likely because the world of business, manufacturing, industry, banking and farming has lost confidence in Democratic leadership, legislation and administration. Do you meet any sanguine Democrats? I do not. But it was also a Republican journalist from Chicago, enjoying a lucid interval in New York, who said: "When I think over Cox, I feel I must hurry up and vote for Harding. Then I read one of Harding's speeches and I say: 'isn't there something to be said for Cox?'"

The Democrats start with 31 Senators in the South, a third of the Senate and 133 Representatives no Repub-

lican can defeat, because the negro is deprived both of his vote and of the education that would make him intelligent. In 1912, '14, '16, the Democrats added enough votes in the North to control Congress. In 1918, the Republicans, aided by President Wilson's foolish letter, gained two majority in the Senate and 50 plurality or 47 majority over all in the House. Can they keep it? When the solid core of the American people grows anxious over business it turns to the Republican party.

The Democratic party, while in control, 1911-19, undoubtedly gained by enacting the Federal Reserve Banking Act—tho this was the work of both parties—the Federal Farm Loan Bank and Board, the Bureau of Markets, Farm Management, the Cotton Futures, Grain Grading and Warehouse Acts and the Federal Trade Commission. Both parties agreed in giving the President the largest powers he has ever had in war and the creation of great Federal corporations for shipping, the issue of securities and many objects came with this.

These acts were generally approved, but their administration has bred widespread distrust.

The Federal Reserve Banking system has brought a perilous expansion of the currency, heavy interest rates and large banking profits. The farm loan system has led to a dangerous inflation of credits. The array of farm legislation has not borne fruit. The Federal Trade Commission has been well-meaning but ineffective and has created great irritation because its personnel has stirred things up and accomplished little the public sees and adjusted much not generally known.

THE business world is alarmed partly owing to war results, but also because the Democratic party has tried to make Uncle Sam a sort of Universal Manager, tho its leaders are always talking of a government of limited powers. This policy has brought the errors and mismanagement of this vast economic legislation on many subjects and in many fields to the doors of every business, big and little. The parcel post has swamped our mails. The enormous operations of the Government in the war have brought blunders close to all men. "Priority orders" on freight, recklessly used by young army and navy officers at the opening of the war, deranged our freight transportation. You really had to see the thing at first hand to realize how an ignorant young West Pointer could tear up a freight yard in an hour or two and put business back, his own included, for days. You were appalled, if you saw the contradictory "priority," "rush" and "special" orders from the War and Navy Departments and Bureaus deranging the operation of a great manufacturing business staggering along with every machine running on three shifts a day. New men, new products, new orders and all hindered and halted by graduates, young and old, of Annapolis and West Point meddling with a mechanism of which they knew nothing. The Government railroad management had ideas, doubtless right in purpose but futile in result, of treating every one alike by "centers of car distribution," rolling up car-mileage, which costs, and reducing ton-miles, which pay. In the zeal to get men, wages were raised to exorbitant figures in new plants, like Hog Island, and government work elsewhere held back by dislocating establishments meeting contracts. Some marine insurance cases have very unpleasant records of wooden rivets and no rivets at all in vessels built at yards that were "beating the world's record" instead of building safe ships. Recent freight rates of the Government Shipping Board were \$20 a ton, New Orleans to Havana, a day's run, \$14 a ton to Buenos Ayres and \$10 to \$12 a ton across the Atlantic Ocean.

When the army was across and functioning as a military machine, the work done was amazing. The three phases, (1) the reconstruction of Brest and Bordeaux and a new railroad system, (2) the transport and feeding, (3) the

# These Workers Seized the Factories in Italy

*International*

These women employees at the Metal Works in Milan stand ready to fight for their soviet at the barricaded entrance to the factory. But in general there was little violence, for the Italian Government refused to send troops against the strikers

*Wide World*

The Fiat automobile works, at Turin, were one of the largest of the 600 factories in Italy where the workmen took over control of the factories and "locked out" the owners. After a month of this inverted strike the workmen found that they needed the managers back, so a compromise was effected and higher wages promised to the men. At the Fiat plant it is planned to organize a cooperative company so that the workmen may have a permanent share in the management

*International*

*Wide World*

A noon-day meeting in the Fiat Central Works at Turin, where 15,000 workmen met to discuss their strike. At the left are four Milan workmen using more violent methods to carry out the strike. It was in Milan that the seizure of factories was begun; the strikers there fortified the factories with elaborate barricades and barbed wire. Their red flags bore the slogan "Viva Lenin"

*Wide World*

During the month of their control of the factories many of the Italian workmen worked eight hours a day and did guard duty for four more. But the factories' production fell off, frequently to less than half their former efficiency, partly perhaps because the soviet conception of work included more discussion than actual labor. In the left upper corner of this photograph is the strikers' emblem; it shows a factory entrance on one side and the Bolshevik crossed hammer and sickle on the other

fighting, the country has not yet begun to realize. Perhaps it never will. But these "close-ups" as the movies say, of mal-administration in the rush of preparation, have soaked into the business consciousness of the country. Joined to the failure to work successfully the legislation, I have outlined, it has filled the land with a conviction that a change is necessary. Every one who reads this, will recognize something he or she has personally known which confirms all I have said and, second, that he or she is conscious that this conviction is all about, leading logically to the election of a Republican Congress, Senate and House.

At bottom this is the bitter fruit of the lying cry four years ago: "He has kept us out of war." Postponing preparedness for war greatly increased the cost of war, when it came. Haste in preparing brought waste and extravagance. This bred such carelessness in the estimates of the Administration, that a Republican Congress could cut them for the year ending last June by \$1,685,867,893 and for the current year \$1,474,422,602. This careless waste can only be known or appreciated by those who, like the writer, have patiently studied Federal outlay from Alexander Hamilton down.

What effect, the close-locked fight on the labor position of the Republican party will have, no one can predict. There are many signs that the American public has determined to show once for all, that the people's peace and the individual bargain shall be protected as well as the collective bargain. Governor Cox has, on this point, declared that he will not use the army to keep the peace as President Cleveland did at Chicago when the Governor of Illinois refused as Governor Cox did in Ohio.

A progressive is any one who is walking in one's own direction.

## The Case for Bluffing

By Preston Slosson

WE might as well admit that the student who can get high marks with a small fund of knowledge may be getting a better education than the student who can crush every examination with brute force of memorized information. A general who is outnumbered requires far more skill than his opponent. Such generals as Hannibal and Lee and Napoleon are ranked high by students of strategy, altho they were in the end defeated, because they managed to hold at bay for many years greater forces than their own. Since the average human being never uses his wits unless he has to, every obstacle and disadvantage which is not great enough to discourage effort is an added incentive to thought. The student who knows his lesson may make no use of any power but memory. The student who does not know, but must make it seem as tho he knew, will have to make use of logic, ingenuity, imagination and all the faculties of the creative reason.

Suppose for example that the student forgets a rule in mathematics in working out a problem. If he is to get the right answer he will have to think the rule out for himself; for the moment he is not just a pupil in mathematics but a real mathematician. Suppose he forgets a formula in chemistry. He will have to call to his mind the way in which the chemical elements generally behave and apply it to the particular case in hand. One student will say "Oh, I remember how potassium would act. It is on page 365 of Wasserstoff's Elements of Chemistry." The other will puzzle it out: "I can't for the life of me remember that blame formula, but I know what sodium would do and I think potassium and sodium are enough alike so that potassium would react in a similar way.

It is the same way in translating a foreign language. Two students get a passage of Cicero on their examination. One remembers the passage perfectly and writes out the translation without difficulty. The other scamped that part of the term's work. The passage is only vaguely familiar to him; virtually it is sight translation. He must feel every cog of memory for conjugations and declensions and pick the sentence to pieces in his mind in order to put it together the English way. Some of the words have dropt out of his vocabulary. He must either infer what they are from the general setting of the rest of the sentence (an excellent mental exercise) or else think out some English words which they resemble, which is good training in philology. He may know less Latin than the other student and get poorer marks but, for the moment at least, he is learning more.

But the sciences and languages are so full of exact fact as to give the bluffer but occasional scope. Far greater opportunities are open to him in the more generalized branches of study, such as history, economics, sociology and philosophy. The impact of social forces and classes on each other is as observable to a bright girl or boy as to Ricardo or Marx, and in philosophy every human being starts from "scratch." Someday, perhaps, the advance of knowledge will clip the wings of theory in metaphysics and the social sciences as it has already in the natural sciences, but at present it may be more profitable to let students evolve their own notions, provided they are tested by the criticisms of the instructor and of the class than to learn to label those notions with the names of Kant, Rousseau or Adam Smith.

Even in history a museum of properly dated events is not the ideal. An approximate date that represents some real sense of the relations between events is far better than an exact date memorized from the book. Suppose that the examination paper asks "When did Columbus discover America?" That is a definite, specific question and the student who writes "1492" is sure to get a higher mark than the one who puts down "about 1500." Yet the first student may simply have called to mind the jingle:

In fourteen hundred ninety-two  
Columbus sailed the ocean blue—

whereas the second student might have reached his date by true historical logic. Thus for instance: "Well, let's see. The Pilgrims came over in 1620. That's just three hundred years ago because we are celebrating it. Lucky for me, or I wouldn't have remembered even that date. Now the English didn't come over till a long time after the Spanish had discovered the place. Mebbe a century. Now I come to think of it, Spain was a great power all thru the sixteenth century. Must have had a boom on. Was it the gold from the new world? Likely. So they must have found America not much later than 1500. Could it have been much earlier? No, they weren't hunting for America; they were after a trade route to Asia. They didn't need that till the Turks took Constantinople and that was some time along in the fifteenth century. Then they tried to get around to India by way of Africa for a long time before they thought of cutting across the Atlantic. It couldn't have been much earlier than 1500. That's a good round number, let's put it down."

Such is bluffing at its best. It is not to be confused with cheating, which exercises no mental faculties except the cunning of the sneak thief, or mere guessing, which should be the last resort of the bluffer since it is as apt to be wrong as right. Real educational bluffing is the piecing together of what one knows to cover a gap of ignorance. If the gap is too wide or the bridge of fact too flimsy the attempt will fail, but even such failures may be instructive. No educational system is perfect that does not make allowance for mental adventure as well as for routine memory work.

But bluffing is a game for the bold and the alert. Let no student think that because of the high educational value of being caught unprepared it is well for him to go to school with lessons half learned. Being treed by a bear or surrounded by a superior force of hostile savages or trying to delude a sophisticated professor into a belief that one has studied the textbook are all excellent sharpeners of the wits.

But there is a two-fold drawback. In the first place you may not get out in safety. In the second place, even if you do, you pay for your escape by the most arduous mental toil. Lazy students should always study their lessons. It is, after all, the easiest way.

### The Real Blow

THE muckrakers told the American public that business was full of graft. They replied "business is business." They pointed out corruption in politics. Nobody was much excited. But when it was learned that even baseball was dishonest, then indeed the American people felt that the pillars of society were shaken!

## French Ways and Ours

By Edwin E. Slosson

ON September 22 President Deschanel resigned on account of nervous prostration that made it impossible for him to perform the duties of his office. On the following day an election was held by Parliament and Millerand was elected. He wrote his inaugural while the balloting was going on and within ten minutes after his election was announced he was at work signing bills and commissions.

The amount spent on the campaign was not \$15,000,000 nor \$5,000,000. The time spent on the campaign was limited to the two weeks after the President's physicians had recommended his retirement. There was no effort expended in educating on the political issues of the day millions of people whose opinions would be of no possible value even after they were "educated." There was no hiatus in business. There was no night of rioting and extravagance when the result of the election was announced. There was no inaugural procession outrivalling in splendor the coronation of a king. There was no grand ball in the Pension Building. It was a simple, sensible, business-like and democratic procedure.

Now when Mr. Harding or Mr. Cox is elected it will be four months before he can exercise any authority in the Government. It will be thirteen months before the new Congress will convene in its first regular session. Meantime business must hold its breath, not knowing what is going to happen. If Harding should be elected and the Democrats get a majority in the House of Representatives the country will be ruled for nearly half a year by a repudiated President and for more than a year by a discredited Congress. This is the very opposite of popular government.

The French not only get their Presidents prompt and cheaper, but they get quite as good ones. Poincaré was fully the equal of Wilson in scholarship and culture. Millerand would get as high a grade in an intelligence test as either Cox or Harding. A constitution like everything else must be judged by its results. A government is as good as it works—and no better.

On the other hand the American system of government has some manifest points of advantage over the French. Our President is not a figurehead like the French. He is commander of the armies in time of war and he initiates foreign policy in time of peace. In foreign relations, both of peace and war, the nation must act as a unit and this means concentrating responsibility for leadership upon

some single individual, however much his decisions may be subject to the control of the legislative body. An American President appoints his own cabinet; men who can best work with him and under him, "secretaries," not "ministers." A French President may find his cabinet composed of the men he most hates and distrusts.

The superiority of the American cabinet system in efficiency, smoothness of working and stability became strikingly manifest during the war. Under the European system the entire government is instantly thrown out of office whenever any measure favored by the cabinet is voted down by a majority of Parliament or any act of any member of the administration meets with disapproval. For instance, every department of the administration may be giving general satisfaction except perhaps one more than half the members of the Chamber of Deputies or House of Commons may think that the postmaster general is paying too much for the site of a new building and so all of a sudden the entire ministry is put out of power. Or it may be that the Premier's wife is giving an unusually attractive dinner and so the supporters of the Government may be late at the session. The opposition may then get a majority in a snap vote on a trivial question and the whole Government will be thrown into confusion, altho the most delicate negotiations with a foreign power may be approaching a crisis. That is no way to run a government. During the war every one of the belligerents, except the United States, suffered from frequent, unwarrantable and unpredictable changes of government, amounting in some cases to veritable revolution. No European premier or minister can be sure that he would be in office next week. But in the United States we are assured of a continuity of administration for four or eight years. Cabinet changes are relatively rare and mostly for personal reasons. This security of tenure gives time for working out a consistent policy and even if an appointee does not know much about the business of his department he has a chance to learn something before he leaves. Legislators may well be changed frequently to accord with the fluctuations of public opinion, but executives should be as permanent as possible.

The war has shown the defects of the European system of ministerial responsibility and in fact it was found impossible to prosecute the campaign without reducing the parliaments to a nullity. Since then there has been much discussion as how these defects can be removed and France is likely to be the first to reform her system to bring it more nearly into accord with the American. Premier Millerand was elected on the distinct understanding that he would effect certain constitutional reforms, among which are that the President shall have power to negotiate and ratify treaties; that he and not the Premier shall appoint the members of the cabinet; that the President and not the Premier shall preside at cabinet meetings; and in general that the President shall be the real leader of the nation. These proposals met with the approval of all factions in the French Parliament except the Bolsheviks, who shouted "Down with the dictator!"

The French constitution was originally designed to give the President such a position of power as Millerand desires, but it has, since 1871, been perverted by gradual encroachments by the Premier. In the same way the Mayors of the Palace took the power away from the *rois fainéants* or do-nothing kings of the Merovingian dynasty; the Shoguns relegated the Mikado to seclusion; and in England the Premiers have reduced the King to a picturesque historical relic. But Millerand sees no reason why a French President should not have as much power as an American President.

So one nation may learn from another provided we put aside prejudice and cease to hold the conceit that our way is necessarily the best merely because it is our way.

# Hard Hit by Crooked Baseball

It was a blow to the confidence and enthusiasm of baseball fans all over the United States when these eight White Sox players were indicted on the charge of having accepted bribes to lose the world's series last year

© Keystone View

"Buck" Weaver, the popular Chicago third baseman, is said to have sold his right to the fans' applause for \$5000. Weaver has denied the accusation

© 1920, New York Tribune, Inc.

Great Scott, they'll ruin public confidence in the sport if they aren't careful!

© Keystone View

"Happy" Felsch, outfielder, got \$5000, according to his own confession, for his part in helping the White Sox lose the world's series in 1919

© Keystone View

Claude Williams, pitcher, is named as the first man "fixed" by the gamblers who bribed the White Sox

© Keystone View

Joe Jackson, left fielder, has confessed that he accepted bribes to muf the ball. At the left are Charles Risberg, shortstop, and "Chick" Gandil, first base, also indicted

Right: The pitcher whose confessions revealed the whole baseball scandal, Eddie Cicotte, shaking hands with the Red pitcher just before he deliberately "threw" the series to the Reds

Fred McMullin, utility man on the White Sox team, is said to have received the largest bribe, \$15,000

# The Story of the Week

## The Old Chief Enters the Battle

**P**RESIDENT Wilson does not yet enjoy that degree of physical health which would permit him to take a personal part in the campaign and to make speeches, even in Washington. But rather than leave Governor Cox without any direct aid from the Administration he has agreed to issue written appeals to the public on behalf of the Democratic ticket and the League of Nations.

His first appeal was dated October 3 and dealt entirely with the League, particularly emphasizing the much discussed Article X of the Covenant. He said in part:

You have been grossly misled with regard to the treaty, and particularly with regard to the proposed character of the League of Nations, by those who have assumed the serious responsibility of opposing it. They have gone so far that those who have spent their lives, as I have spent my life, in familiarizing themselves with the history and traditions and policies of the nation, must stand amazed at the gross ignorance and impudent audacity which have led them to attempt to invent an "Americanism" of their own, which has no foundation whatever in any of the authentic traditions of the Government.

Americanism, as they conceive it, reverses the whole process of the last few tragical years. It would substitute America for Prussia in the policy of isolation and defiant segregation. Their conception of the dignity of the nation and its interest is that we should stand apart and watch for opportunities to advance our own interests, involve ourselves in no responsibility for the maintenance of the right in the world or for the continued vindication of any of the things for which we entered the war to fight.

The conception of the great creators of the Government was absolutely opposite to this. They thought of America as the light of the world, as created to lead the world in the assertion of the rights of peoples and the rights of free nations; as destined to set a responsible example to all the world of what free government is and can do for the maintenance of right standards, both national and international.

This light the opponents of the League would quench. They would relegate the United States to a subordinate role in the affairs of the world.

Why should we be afraid of responsibilities which we are qualified to sustain and which the whole of our history has constituted a promise to the world we would sustain?

Those who do not care to tell you the truth about the League of Nations tell you that Article X of the Covenant of the League would make it possible for other nations to lead us into war, whether we will it by our own independent judgment or not. This is absolutely false. There is nothing in the Covenant which in the least interferes with or impairs the right of Congress to declare war or not declare war, according to its own independent judgment, as our Constitution provides.

Those who drew the Covenant of the League were careful that it should contain nothing which interfered with or impaired the constitutional arrangements of any of the great nations which are to constitute its members. They would have been amazed and indignant at the things that are now being ignorantly said about this great and sincere document.

## Republican Strategy

**S**ENATOR Harding has quit the "porch," not to make a grand swing around the circle like his rival, but to speak in a few strategic centers. So far as the Senator's own campaign for presidency is concerned the Republicans hardly think it necessary for him to exert himself, but they desire his influence to carry local elections and to strengthen the Republican representation in Congress. Republican confidence as to the chances of Senator Harding has been much increased not only by the favorable results of the Maine elections but by the opening of the "straw vote" season. Three wholesale non-partizan straw ballots have been started within the last few days: one conducted by the New York *Telegram*, one by a chain of drug stores, one by moving picture theaters. All of them

Thomas in Detroit News

Time for a forward pass

thus far point to a Republican victory—perhaps to a Republican landslide that will bring back the good old majorities of the McKinley and Roosevelt era.

Of controlling the Senate the Republicans are not nearly so sure. The present Senate contains only forty-nine Republicans to forty-seven Democrats. Of the Senators to be replaced this November eighteen are Democratic. But Alabama (two senators), Arkansas, Florida, Georgia, Louisiana, North Carolina, Oklahoma and South Carolina are "certain sure" Democratic states, so that the Republican offensive in the Senate is limited to nine possibilities. In Arizona, Maryland, Kentucky and Nevada the normal Democratic sentiment should withstand anything but a general landslide. Oregon may go Republican, but the personal popularity of Senator Chamberlain should save his seat for the Democrats. California, Colorado, Idaho, South Dakota are Republican opportunities, but none are certainties.

Many Republican seats are endangered by the Democratic counter-offensive. Penrose is doubtless safe in Pennsylvania and Dillingham in Vermont and Curtis in Kansas are almost equally secure, but all the other Republican Senators will have to fight to hold their own. Wadsworth in New York, Moses in New Hampshire and Brandegee in Connecticut are handicapped by their anti-suffrage record in facing the recently enfranchised women voters. Illinois and Wisconsin are confidently counted on for Harding, but the factional hostility of the followers of Mayor Thompson to McKinley in Illinois and the followers of La Follette to Senator Lenroot in Wisconsin may endanger two seats otherwise safe. In Indiana Taggart on the Democratic ticket seriously threatens Senator Watson's place. Senator Cummins in Iowa will probably win out in spite of the hostility of some labor unions on account of his railroad policy. In North Dakota the Republican victorious in the primaries is an adherent of the Non-Partizan League and cannot be count-

ed as a party "regular." Ohio must find a successor to Senator Harding and the Republican nominee, ex-Governor Willis, must fight to hold the seat now held by a Presidential candidate in the most hotly contested state in the Union. In Missouri Senator Spencer's seat is very doubtful and the Democrats are confident of capturing it. Senator Smoot in Utah has great personal prestige, but the state is doubtful this year. Senator Jones will probably be elected from Washington, but his victory will depend on Harding's carrying the state. There are very few Republican Senators this year who will not, for one reason or another, run behind the nominee for President.

## Ireland and Article XI

IT seems impossible to keep Ireland out of an American Presidential campaign. Article X seems to have frightened many Irish sympathizers, altho, as The Independent pointed out in its issue of October 9, its guarantee against external aggression cannot be applied to the suppression of a revolutionary movement within an Empire. It is true, however, that Article X would forbid a foreign nation, such as the United States, from going to war with Great Britain in order to secure the independence of Ireland and even this limitation is offensive to some extremist Sinn Fein advocates.

But President Wilson, thru a letter prepared by his secretary, Mr. Tumulty, points out that Article X is not the only part of the Covenant which should be considered in connection with the Irish national movement. Article XI reads as follows:

Any war or threat of war, whether immediately affecting any of the members of the League or not, is hereby declared a matter of concern to the whole League, and the League shall take any action that may be deemed wise and effectual to safeguard the peace of nations. In case any such emergency should arise the Secretary General shall, on the request of any member of the League, forthwith summon a meeting of the Council. It is also declared to be the friendly right of each member of the League to bring to the attention of the Assembly or of the Council any circumstance whatever affecting international relations which threatens to disturb international peace or the good understanding between nations upon which peace depends.

According to the last sentence of the article either of the two deliberative bodies of the League of Nations, the Council of the Powers or the Assembly of all the Member Nations, would have the right to consider the Irish question if in their opinion it threatened "the good understand-

ing between nations," for example between Great Britain and the United States. Governor Cox believes that if the United States enters the League it may properly raise the Irish question as a matter for international consideration under Article XI.

The Republicans declare that this is but a Democratic trick to capture the Irish vote. Ex-Judge Hughes points out that, since the League can only act in important matters by unanimous agreement, the objections of Great Britain would put an end

to any attempt to take action on behalf of Ireland within the League Council or Assembly. Granting this, however, some may think it an advantage to Ireland to have the Irish question discussed in the forum of the nations, even if no positive action can be taken.

### AN OPPONENT OF THE LEAGUE

Thomas E. Watson gained an overwhelming victory over Hoke Smith in the Senatorial primary of the Democratic party in Georgia. If he is elected—and his nomination is probably equivalent to election—at least one Democratic vote in the Senate will always be counted against the Treaty and the Covenant

## Has Harding Scrapped the League?

WHEN Senator Harding spoke in Baltimore to an audience of twenty thousand Mr. Edward Ryan interrupted him to inquire: "Senator Harding, I want to ask you whether you stand with Senator Johnson in his proposal to scrap the League?" To this he replied: "If I believed in one-man government I could answer the gentleman's question"; adding "I am at present without a specific program in foreign affairs." The heckler was arrested for persisting in his question, tho the arrest was without Senator Harding's knowledge or consent, but he repeated his question in later correspondence with the Senator, declaring himself still unsatisfied with the replies he had received. Recent events have given point

General Marie Emile Fayolle, the personal representative of Marshal Foch to the American Legion Convention in Cleveland. General Fayolle had under his command Gen. Robert Lee Bullard's First American Division, made up of the first American troops to actively occupy a sector along the French front; the Cantigny sector north of Paris in the Amiens salient

Connecticut, who are pledged to fight against the League to the last ditch. This news gave rise to rumors that Harding would take the side of Taft and Root and that Borah and Johnson were ready to bolt. These rumors, however, seem to have been mistaken. Senator Harding promptly declared: "I am perfectly satisfied with Senator Borah's support. I am satisfied with what he has said and I'm sure I'll be satisfied with what he will say." He declared of one of Senator Johnson's speeches: "It dissipates conclusively any notion that Senator Johnson is out of harmony with the platform and the candidate." Since it is well known that Senators Johnson and Borah are opposed to entering the League of Nations even with the most stringent reservations it would seem as tho' the Republican candidate had abandoned his pro-League supporters to save the loyalty of the irreconcilables. But as an offset to this Senator Harding has again assured the country that "America is going to be able to agree on a program that will give the country an opportunity to play its part in expressing the new world conscience."

Senator Harding has raised a new issue in proposing to enlarge the cabinet by establishing a Department of Public Welfare. In this connection he said:

At the present time we find social welfare bureaus and social welfare undertakings scattered hopelessly thru the departments, sometimes the one overlapping the work of the other, and sometimes, indeed, engaging in bickerings between themselves. The picture is one of inefficiency and of wasted funds. . . . When making the proposal for a Department of Public Welfare to America, I am aware that I have made a step in advance of any platform.

to the question. It has been announced that ex-President Taft and Mr. Hoover, both ardent champions of the League of Nations, will go on the stump in behalf of the Republican national ticket. This announcement was followed by the startling news that Senator Borah of Idaho, most uncompromising of all Republican foes of the League, would hereafter conduct his own speaking tour irrespective of the plans of the Republican national leaders. He will devote his time largely to working for the reelection of Senators, such as Brandegee of

## Labor Versus Bolshevism

THE American Federation of Labor, thru its officials Samuel Gompers and Matthew Woll, has protested against the proposal of European labor-unionists to take "direct action" in opposition to the Russian policy of the Powers. The International Federation of Trade Unions sent a note to the American Federation proposing that in the event of war with Soviet Russia not a train or a ship should be loaded or moved by union labor and that if necessary the war should be stopped by a general strike. The Council of Action of the British Labor Party made similar proposals. To such appeals the American Federation makes the reply:

The American Federation is not a revolutionary body and has never had any affiliation with any revolutionary body which would require it to give serious consideration to revolutionary proposals of any kind. . . . One year ago the International Federation of Trades Unions indorsed the League of Nations and proposed to reshape it to correspond to the aspirations of labor. Today it takes a position of anarchistic hostility to all governments without discrimination. . . .

The organized labor of this country does not regard the Bolsheviks as being "the Russian revolution." It is fully aware of the existence of millions of Russian Mensheviks, Social Revolutionaries and trade unionists who object to Soviet tyranny. Polish imperialism is repudiated by labor in this country along with all other imperialisms, and it may have been the chief factor in the Polish offensive, but we also recall that the Soviets have never ceased to threaten to set up Soviet governments with military aid as well as by subsidized revolutionary movements in neighboring countries. . . .

The United States is a republic based upon the principles of justice, freedom and universal suffrage. Our men and our women are not likely to throw these rights and principles into the scrap heap for the dictatorship of Moscow's Lenin and Trotsky.

The attitude of Mr. Debs and the Socialists towards the Russian situation is of course very different from that of Mr. Gompers and the conservative labor unionists, but even the Socialists fight shy of committing themselves too far to Russian terrorism. Mr. Debs, Socialist candidate for President, is reported to have declared to one of his party comrades who visited him in prison: "The indefiniteness of autocratic interference and the experiments of the Third International make it impossible for us to affiliate with them at present without reservation." This agrees with the position taken by the Socialist National Convention in May

© Keystone View

Alexandre Millerand, the new President of France, reviewed the French troops at Wiesbaden, Germany, last month, when he made a tour of inspection of the occupied German territory

that the American Socialists would affiliate with the Third International (organized around the Russian Bolshevik movement) but only on condition that no "special formula for the attainment of the Socialist Commonwealth be imposed or exacted" as condition of affiliation," or, in other words, that the Socialist Party in America be free to choose peaceful and political methods of bringing about Socialism instead of being committed to any program of violent revolution.

## Chilean President Named

THE specially constituted Court of Arbiters which has long been studying the disputed Presidential election in the Republic of Chile has awarded the decision by a vote of five to two in favor of Arturo Alessandri of the Liberal Alliance Party. Elections in Chile were held on June 25, not directly for President but, after the model of the United States, for Presidential electors. The two important candidates were Alessandri of the Liberal Alliance Party and Barros Borgoño of the more conservative Liberal Unionist Party. One month after the popular election the Presidential electors met and cast 179 votes for Alessandri to 174 for Borgoño. The Liberal Unionists contested the election and charged various illegalities sufficient to upset the result. Both parties agreed to submit the case to a special arbitral tribunal which examined all the claims of both sides and decided that 177 electoral votes were correctly awarded to Alessandri and 176 to Borgoño.

It is remarkable how closely the Chilean Presidential contest followed the disputed election of 1876 in the United States. In both cases the result in the electoral college was challenged. In both cases a special bi-partizan tribunal was constituted to examine the claims of each side. In both cases the victorious party had a majority of but one electoral vote. And both nations have shown the world that even a disputed Presidential election, when party passions are at their highest and charges and counter-charges of dishonesty are rife, can be settled without recourse to violence. In many other American republics such an incident as the Hayes-Tilden contest of 1876 or the Alessandri-Borgoño contest of 1920 would have been followed by a civil war; but the United States and Chile stand at a higher level of political evolution than the turbulent nations of the tropics.

## Irish Raids and Reprisals

THE British authorities in Ireland have publicly warned their troops against reprisals against civilians but no effective measures have been taken to prevent such violations of discipline. General Gough, who cannot be suspected of sympathy with Sinn Féin since it was he who just before the outbreak of the war refused to enforce the Home Rule Act against Ulster, writes to the *Manchester Guardian*:

I don't think any truthful or sane person can avoid the conclusion that the authorities in Ireland are deliberately encouraging—what is more actually screening—reprisals and counter murders by armed forces of the Crown. The police and army are being organized as one body and being recruited with a special view to reprisals.

The most sinister feature of the present policy is that lax discipline is actually connived at. This can only have one result—namely, create the most dangerous demoralized force, a terror not only to people in that country but eventually to the government.

I've some evidence I'm not at liberty to disclose, which makes me strongly suspect that actual murder is organized as a method of Irish government.

The military barracks at Mallow were raided in broad daylight by an armed body of 120 Sinn Féiners. Most of the troops, a company of the 17th Lancers, were out exercising with only a dozen left to guard the building. One of these was shot and then the rest were overpowered, leaving

Adachi

### A NEW "LADIES' AID"

The first time in history that the women of Japan have been allowed to take an active part in entertaining foreign visitors was when a party composed of the families of United States Congressmen was received by the Ladies' Welcoming Committee of Japan at the residence of Marquis Kuroda

the raiders free to carry off a machine gun, a number of rifles and revolvers and a large store of ammunition, all of which was loaded into the waiting automobiles. The soldiers took revenge at midnight by setting the town on fire. The town hall, the creamery, the mills and many houses were burned up. The Cork fire brigade was called out but owing to the curfew law was unable to leave before three o'clock.

Captain Lendrum, resident magistrate of County Clare, disappeared on September 22 and was supposed to have been kidnaped. The police posted notices on the houses in Kilkee, Kilrush, Carrigaholt, Doonbeg and Kilprinhill, stating that these towns would be burned unless Lendrum was returned within forty-eight hours. Two men then visited the District Inspectors of County Clare to say that they had been compelled by threats of the Republican army to inform the authorities that Lendrum had been ambushed and shot and his body cast into the sea, but that if the police would forbear burning the villages the body would be recovered and returned. Next morning the body was found on the railroad track wrapped in a water-stained sheet and enclosed in a white wood coffin.

Five hundred Irish Volunteers in uniform followed the bodies of the two Sinn Féiners killed at Belfast, as they were borne thru the streets of that city to the cemetery. The coffins were covered with the flag of the Irish Republic. The procession was protected by lines of British troops with rifles ready. The night before two more civilians had been killed at Belfast in the fighting between the Sinn Féiners and Unionists.

On the night of October 2 a squad of police on Patrick street were fired upon. One constable was killed and four wounded.

A police patrol was ambushed near Tubbercurry, County Sligo, and District Inspector Brady shot dead. That night Tubbercurry was visited by four lorries full of the "Black and Tan" police who spent three hours there, firing guns and throwing bombs and setting fire to buildings. Two creameries were burned.

The burning of the Irish creameries is one of the most serious features of these reprisals for the coöperative creameries have been founded thru the joint action of all factions and have been the chief means of bringing pros-

perity to the country. Their product brings in \$60,000,000 a year and the destruction of so many of them is ruinous to the farmers who have put their money in them.

## Polish-Lithuanian Boundary Dispute

A dramatic and touching scene occurred at the Ninth Session of the Council of the League of Nations held in Paris on September 20, when Paderewski of Poland and Woldemar of Lithuania clasped hands as a token of their acceptance of the good offices of the League in the settlement of the question over which their countrymen are fighting. The chairman of the Council sent messages to both governments expressing his pleasure at their submission of the case to the League. A conference of Polish and Lithuanian delegates is arranging to meet immediately at Suwalki in the disputed territory under the auspices of the League of Nations. The Soviet Government has declared its willingness to withdraw all the Bolshevik troops from Lithuanian territory if the Poles will do the same.

But the Poles prefer to oust the Bolsheviks from Lithuania for themselves. The important railroad junctions of Grodno and Lida, which are within the confines of Lithuania proper but were occupied by the Soviet forces, have now been captured by the Poles. The Lithuanians fear that the Poles will continue their advance and again take Vilna, the capital of Lithuania, which contains no Bolsheviks. To prevent this the Lithuanian Government issued the following call to the peasantry:

Rise and arm yourselves with rifles, scythes and axes and repel the Polish invaders, who are driving into the heart of our fatherland.

It was such a rising of the Lithuanian population that drove the Polish troops out of Seiny last month. The Lithuanians claim the Seiny district by right of race but it has been put on the Polish side by the Curzon line. The Colby note of August 10 denying to Lithuania the right to independence so long as the Soviet rules in Russia has hit the Lithuanians hard for they supposed they had established their position in securing the recognition of all the Allies as well as of Soviet Russia.

## The Riga Conference

At the opening session of the peace conference at Riga it became apparent that Russia is desperately anxious to conclude an immediate armistice and a prompt peace with Poland. The chairman of the Soviet delegation, Joffé, began by withdrawing all of the armistice terms to which the Poles had objected at the previous conference at Minsk. He presented a new set, much more advantageous to Poland, and announced that Poland would have ten days in which to accept them. In reply the chairman of the Polish delegation, Dombiski, refused to consider anything in the nature of an ultimatum but expressed his willingness to proceed to the examination of the questions at issue. Joffé thereupon set aside his own set of peace terms and took the Polish set as a basis for negotiation. He also consented to waive the stipulation that the Bolsheviks have hitherto insisted upon in all their peace conferences,—that the discussions be carried on in public. Both peace programs were summarized in last week's Independent. The manifest eagerness of Bolshevik leaders to make peace at any price has again given rise to reports that the fall of the Soviet Government is imminent. This has been so often prophesied during the last three years that the public has grown skeptical of such prognostications. But it receives now a certain support in the rumors of industrial disturbances and violent strikes in various parts of Russia. In Petrograd, it is said, that the workmen in all the Government factories have struck and that several of the Soviet commissaries

have been killed. Mutinies among the Red troops are reported and mass meetings demanding a prompt peace have been held. The peasants also are in revolt against the Bolshevik regime.

A preliminary agreement on the armistice terms was reached on October 8. The Poles seem to have won most of their points. The opposing forces will remain about where they stand until peace is finally concluded. This means that the Poles will occupy the comfortable winter quarters on the old German front and that they will hold a corridor cutting off Soviet Russia from Lithuania and Germany.

## The Russo-Polish War

THE conflict between Poland and Soviet Russia is fundamentally a revival of the age-long blood feud between Poles and Russians. Observers with the Polish armies

THE PROBLEM OF POLISH BOUNDARIES

A peace conference is now being held at Riga between the representatives of Poland and Soviet Russia to determine the dividing line between these two states over which they are still fighting. The Paris Peace Conference defined in part the boundary between Poland and Germany, but left the eastern frontier undetermined. The Supreme Council of the Allies, on December 8, 1919, drew a provisional line running thru Brest Litovsk, as indicated on the map. This represents approximately the ethnographical limit of the Polish people but the Polish expansionists demand the restoration of the whole of Poland as it was previous to the first partition of 1772. The Polish armies in their eastward drive last summer went even beyond this line and captured Kiev. In their present drive the Poles have overstepped the line drawn by the Supreme Council and have also infringed upon Lithuanian territory. Grodno and Lida, which the Poles have taken, are within the bounds of Lithuania as defined in the recent treaty between Lithuania and Soviet Russia. The Lithuanians also claim a majority of the population about Seiny and Suwalki.

agree in reporting that the Poles show intense hatred against the Russians and Jews in the territory they take, an animosity that too often finds expression in the ill-treatment of prisoners and civilians, but that the Poles manifest no special dislike toward the Bolsheviks as such. On the other hand the Czar's officers who have entered the service of the Soviet are fighting, not for the Soviet, but for the protection of integral Russia against Polish invasion. The Soviet leaders, being in theory internationalists care little where the boundary is drawn. They have already offered the Poles a more generous boundary than did the Supreme Council of the Allies and possibly might consent to grant them more of Russian territory to secure peace were it not for fear of alienating their czarist supporters.

If the imperial régime were restored or if a real Russian republic were reconstituted, either would be less liberal in the allowance of land to the Poles than the present Soviet Government. That the Polish attack is not, like Baron Wrangel's, primarily designed to overthrow Soviet rule, is evident from the fact that it received the support of the Polish Socialists and that Pilsudski who is the instigator and leader of the campaign is himself a Socialist.

Both Premier Lloyd George and Secretary Colby warned the Poles, when they started their eastward advance last August, that they should not go beyond the limits of ethnographic Poland as defined by the boundary line drawn by the Supreme Council of the Allies December 8, 1919. But the French Government on the contrary told the Poles to go as far as they liked and they have taken the French advice in preference to the British and American. They have taken the cities of Pinsk and Baranovitchi, which are on the Russian side of the line, and the cities of Grodno and Lida, which are on the Lithuanian side of the line as delineated at Paris. The rout of the Red armies seems to be complete. The entire Fourth Russian Army was encircled between Grodno and Lida and captured with all its staff except the chief and the commanding general. The number of prisoners was 42,000 and the booty included 900 machine guns, 166 light field guns, 46 heavy field guns, and 1,800 armored cars.

## Industrial Reorganization in Italy

**D**URING the great Italian strike in which the employees seized 600 factories and ran them to suit themselves, the dispossessed owners were loud in demanding that the Government employ the police and military to recover their property. But Premier Giolitti refused to use force and pursued a neutral policy for a month during which time the employers came to realize their incapacity to help themselves and the employees to realize their incapacity to carry on factory production without expert management. For a time the plants ran on as usual by their own momentum and the men worked more zealously than ever under the

red flag, but there was no money for wages and no way of selling the goods. Coal and raw materials gave out, so the works had to close.

When this time came Premier Giolitti called a conference and arranged a compromise by which the works are restored to their owners, the workmen get higher pay and the question of control is to be settled by parliament in accordance with the recommendations of a joint commission of employers and employees. Each party is to choose six commissioners of whom two in

each case are to be of the technical or managerial staff.

The movement started among the metal workers who were receiving only 16 to 20 lire a day, which is less than one dollar in American money. The companies had made much money during the war, and their employees, not having access to the books, greatly exaggerated their profits. The workmen asked for an increase of four lire in their wages. This was refused, so the workmen, instead of submitting to a lock-out, stayed

in the works and ran them to suit themselves. Premier Giolitti points out that if he used soldiers and machine guns for dislodging the workmen the country would have been plunged into civil war and hundreds, if not thousands, of people would have been killed.

The Premier concludes:

Honestly, I think Italy is to be congratulated. Few countries can boast of having gone through such a radical transformation in relations between employers and workers with so little injury to all concerned. The theory of those who urged that the attitude of 500,000 men be considered in the same light as though it were that of only one man is untenable. Whenever offenses against the criminal law have been committed, judicial authorities promptly have taken action, and those found guilty will be punished.

In most cases the factories have been restored without reluctance tho in some places the anarchists and syndicalists resorted to violence.

When the "automobile king," Signor Agnelli, head of the great F. I. A. T. concern, came back to his Milan factory he was greeted with shouts of "Viva Agnelli, the workman's friend!" from the thousands of employees assembled at the gate to receive him, and when he entered his office he found it just as he left it thirty days before except the Soviet emblem of the hammer and scythe had been left upon the walls and a bouquet of red carnations had been placed upon his desk.

Signor Agnelli proposes to reorganize the F. I. A. T. firm into a coöperative company.

He explains his change of policy with regard to his factory in *Il Secolo* as follows:

The progress of revolutionary ideas among the masses and the concrete form those ideas were assuming made it impossible for a great company like the F. I. A. T. to be any longer ruled with authoritarian methods and according to the forms of the capitalist system. For some months past the F. I. A. T. Directors, despite all their endeavors on behalf of the men, had been exasperated by the nightmare of having some tens of thousands of employees in their works who were not coöperators, but enemies. It is impossible to go forward in these conditions, which threaten to grow still graver through the result of actual struggle which has meant the humiliation of masters in the face of their workmen. The future greatness of the F. I. A. T. firm in international industry depends on the overcoming of the present internal crisis, in which event the F. I. A. T. may furnish the pioneer example in Italy of a perfect modern industrial organization.

# A Little of Everything

## Revival of the Gothic Grotesque

A symptom of the renaissance of medievalism in Europe is the appearance of a magazine devoted entirely to the horrible and uncanny, *Der Orchideengarten*, published in Munich. In this "Garden of Orchids" are to be found the most shivery tales of Poe, Maupassant, Hawthorne, and Hugo, intermingled with modern psychic stories while the old "Dance of Death" woodcuts find congenial companions in the futuristic monstrosities. There is a book department for the review of fantastic literature of all countries and ages. It would seem that the people of Central Europe would have had enough of horrors during the last six years, but apparently they, like their ancestors of the Middle Ages, seek relief from the pain of the present in weird imaginings.

The Saurian. A woodcut by Max Schenke from *Der Orchideengarten*

## A Memorial Clubhouse

As London has six Army and Navy Clubs for officers, and Paris three, it seems especially suitable that a memorial in New York should take the form of permanent headquarters for the Army and Navy Club of America, which has never had adequate quarters in its thirty-five years of existence.

In the memorial clubhouse, which is to cost \$3,000,000, there will be a memorial court or hall which will contain in special compartments the records of all officers, both living and dead, who served in the World War. Already letters from the families and next-of-kin of deceased officers are

pouring in to the present temporary headquarters of the Army and Navy Club at 18 Gramercy Park, offering assistance in the record compiling and in financing the project as well (altho no request for material aid has been sent to them).

With the records and biographic data of officers will be photographs, letters, war souvenirs and other personal material contributed by relatives and friends. The collection of records, of immense historical value, will be preserved in the national headquarters of the Army and Navy Club, for all our citizens to read. Already the records of 2000 officers are promised to the club and are in process of preparation by the respective families. A persistent search is being made by the Army and Navy Club for records of

As the mysterious man ascended the winding stairs in the dark he bore an awful burden on his back. Woodcut by Otto Nückel in *Der Orchideengarten*

the remaining 1500 officers deceased in the war, with an effort to reach them thru the official records of the individual states as no complete list of officers who died in service in the war yet exists in Washington in available form. It is therefore especially desired by the Army and Navy Club that all families whether or not an appeal reaches them, send in records of officer sons or brothers killed in the war, so that complete data can be kept on file in this Memorial Clubhouse.

## Try It Yourself

Arthur MacDonald in the *Open Court* tells of an experiment tried to test the rival philosophies of optimist and pessimist. For thousands of years philosophers have been debating as to whether there was more pleasure or pain in life, but no statistics were forthcoming to take the debate out of the realm of pure speculation. Mr. MacDonald persuaded a Government clerk in Washington to keep a record of a day's emotional experiences by listing the number of his pleasant thoughts, feelings and sensations on

How a German audience looks to a frightened speaker. From *Der Orchideengarten*

each of us about \$0.000282, or less than four cents a century. A war under modern conditions may cost a great nation anything from one to one hundred million dollars a day, according to whether you get a whale of a war or only a minnow. The insurance premium involved in adhering to the League Covenant, however, is not excessive.

The walking skeleton. Illustration of a Dumas story in *Der Orchideengarten*

one side of the ledger and the number of unpleasant or painful thoughts and sensations on the other. At the end of the day the clerk added them up and found he had experienced 521 pleasant and 158 unpleasant states of consciousness. In other words it was the end of a 76.7 per cent perfect day.

The experiment will not be accepted by the pessimist school as conclusive, because they may allege that the clerk was an exceptionally happy man or that it was an unusually enjoyable day. But at least it opens the way to further observations on happiness and misery. The chief difficulty to us is that examining a state of mind is like stopping a clock to find out how it ticks. A person is happiest not when he is brooding on his happiness but when he is forgetting himself entirely in some outburst of enthusiasm. And a very miserable man may find the new game of counting his successive emotional waves so fascinating that he forgets to be miserable. If this difficulty can be got over, or due allowance made for correcting it in the statistics, perhaps a general happiness census could be taken which would solve once for all the greatest problem of the ages: Is life worth living?

## Peace Is Cheap

War is the most expensive thing in the world; peace is the cheapest. The Secretariat of the League of Nations has communicated to the American Department of State its budget of expenses. In the course of nine months its budget amounted to 10,000,000 francs, which at current exchange rates would be about \$650,000. This is what it costs to run the so-called "super-government" of the world for three-fourths of a year! The share of the United States, had we been among the Member Nations, would have come to about \$31,000. This would cost

The big black spider. From *Der Orchideengarten*

## In a Nutshell

Japan's first census will be taken on October 1 of this year.

Germany and Austria are said to have jewels worth over \$300,000,000 safely on deposit in Switzerland.

\*\*\*

New York business men have started a carry-your-own-lunch movement to bring down the high cost of eating at restaurants. The "full dinner pail" thus enlarges its political appeal.

\*\*\*

There are more millionaires in Akron, Ohio, in proportion to the population, than in any other city of the nation. The tire business brings into this small city an increment of about \$700,000,000 a year.

## Flowers That Play Hookey

Sometimes flowers run away from gardens and are caught by the truant officer in unexpected places. My experience has been an unusual one. Strange sights there have been for me and my comrade in miles of wandering over pastures and thru woods.

Once, when breaking our way thru a dense undergrowth of sweet fern, low blackberry bushes, brakes and dwarf oaks and sumach, what should meet our eyes, rising above the tangle, but a cluster of spikes of beautiful white flowers. Nothing of this kind was known in this region; and no one could identify it. It proved, when analyzed, to be a pentstemon and was supposed to have come from the West in some bag of grain kept in the storehouse at the foot of the hill.

Quite as unaccountable things have happened since. For instance, in a hollow in the same pasture, we came upon a most luxuriant scarlet trumpet honeysuckle in lavish bloom; and as there was not so much as a sweet fern bush in its way or anything for it to climb it had spread for yards over the ground. The nearest place where there was a honeysuckle was a garden an eighth of a mile away. Of course some bird had been the agent in bringing one of the juicy berries to the spot.

As for a certain tiger lily, found far from home, it may be said that if there was anything eatable about its juiceless and flavorless seeds its presence in a double wall bounding a field on a farm could be accounted for. Perhaps

persons not accustomed to seeing some of the rougher New England farms

International

The Utah country beyond which an exploring party of Mormons under Brigham Young entered the Great Salt Lake Valley and chose it as their home has now become Zion National Park. "Thru that canyon they came in the summer of '47," says Heber J. Grant, president of the Mormon Church, "and those who didn't have light wagons or a seat in a stage coach, pushed their worldly goods in carts." The Mormons didn't thrive at first in the State of Deseret, their name for Utah, but they lived on potato water thickened with flour, and pluck, until they could prove that systematic irrigation—first practised here on a large scale in the United States—would turn the desert into a garden. When Brigham Young died, he had \$2,000,000, twenty-five wives and forty children

may wonder what is meant by a double wall. Just this, in the early days farmers enclosed their fields by stone walls, rude perhaps and uneven, but wonderfully picturesque and to get rid of the numerous stone what was easier and more natural than to add more breadth to the boundary walls, so that they were sometimes four or five feet thick, favorite racing places and hiding places for squirrels, in one of those walls where there was not soil enough for an ant-hill, there appeared a single tiger lily standing erect and stately on its stiff stem.

It is well known that birds distribute seeds. One of the most interesting facts known to me concerns some barberry bushes. A long time ago a minister's wife brought from her home by the sea, a barberry bush and set it out on the parsonage grounds. Years and years after, a man who loved to collect plants and shrubs secured two sprouts from the original bush and set them out by his garden fence. No others of the kind were known in the region, but before many years here and there one was discovered in the nearest pasture.

The minister's experience with the garget must not pass unnoticed. One of his requisitions was a garget root, secured with considerable difficulty and set out in a remote corner of his garden. The result was a nuisance of seeds. The plant grew luxuriantly and produced seeds in lavish quantity, easily discovered by the birds, who with their claws and beaks full might be traced anywhere, everywhere about the premises by the great splashes of rich purple juice. Nor was that all. Garget plants came up all

Owing to the scarcity of metal in Germany, it has been suggested that porcelain coins be used instead. Badge pieces are now made of porcelain, as is also the tram currency used in Hamburg. Above are shown some German "biscuit" porcelain coins: 2, 3 and 5 mark pieces

over the garden and round about, and finally had to be exterminated.

And what but a bird could ever have removed the seeds from their hard enclosure and planted two sweet-briar bushes miles apart?

Of garden flowers away from home, a clump of poet's narcissus, golden coreopsis, sweet Williams, fly-traps, corn flowers, and others, grow bravely in the ruts of a cart-path across a field, brought there probably in the scrapings of the barnyard, and surviving

London Sphere

In England, altho only 237,000,000 tons of coal have been mined this year, as against 285,000,000 for 1913, the price of coal has more than doubled. Wages, likewise, have increased by 132 per cent and a greater number of men are employed in the mines, despite the fact that the output has materially decreased

# WHAT I THINK OF PELMANISM- By Judge Ben B. Lindsey

**P**ELMANISM is a big, vital, significant contribution to the mental life of America. I have the deep conviction that it is going to strike at the very roots of individual failure, for I see in it a new power, a great driving force.

I first heard of Pelmanism while in England on war work. Sooner or later almost every conversation touched on it, for the movement seemed to have the sweep of a religious conviction. Men and women of every class and circumstance were acclaiming it as a new departure in mental training that gave promise of ending that *preventable* inefficiency which acts as a brake on human progress. Even in France I did not escape the word, for thousands of officers and men were *Pelmanizing* in order to fit themselves for return to civil life.

When I learned that Pelmanism had been brought to America by Americans for Americans, I was among the first to enroll. My reasons were two: first, because I have always felt that every mind needed regular, systematic and scientific exercise, and secondly, because I wanted to find out if Pelmanism was the thing that I could recommend to the hundreds who continually ask my advice in relation to their lives, problems and ambitions.

Failure is a sad word in any language, but it is peculiarly tragic here in America where institutions and resources join to put success within the reach of every individual. In the twenty years that I have sat on the bench of the Juvenile Court of Denver, almost every variety of human failure has passed before me in melancholy procession. By *failure* I do not mean the merely criminal mistakes of the individual, but the faults of training that keep a life from full development and complete expression.

## Pelmanism Comes as an Answer

If I were asked to set down the principal cause of the average failure, I would have to put the blame at the door of our educational system. It is there that trouble begins—trouble that only the gifted and most fortunate are strong enough to overcome in later life.

Either think back on your own experience or else look into a schoolroom in your own town. Routine the ideal, with pupils drilled to do the same thing at the same time in the same way. There is no room for originality or initiative because these qualities would throw the machinery out of gear. Individuality is discouraged and imagination frowned upon for the same reason. No steadfast attempt to appeal to interest or to arouse and develop latent powers, but only the mechanical process of drilling a certain traditional ritual on each little head.

What wonder that our boys and girls come forth into the world with something less than firm purpose, full confidence and leaping courage? What wonder that mind wandering and wool gathering are common, and that so many individuals are shackled by indecisions, doubts and fears? Instead of walking forward to enthusiasm and certainty, they blunder along like people lost in a fog.

It is to these needs and these lacks that Pelmanism comes as an answer. The "twelve little gray books" are a remarkable

JUDGE BEN B. LINDSEY

Judge Ben B. Lindsey is known throughout the whole modern world for his work in the Juvenile Court of Denver. Years ago his vision and courage lifted children out of the cruelties and stupidities of the criminal law, and forced society to recognize its duties and responsibilities in connection with "the citizens of to-morrow." His laws and his court-procedure have been made the model for Acts of Parliament in Great Britain. He is as much an authority in France and Germany and Austria and Italy.

achievement. Not only do they contain the discoveries that science knows about the mind and its workings, but the treatment is so simple that the truths may be grasped by anyone of average education.

In plain words, what Pelmanism has done is to take psychology out of the college and put it into harness for the day's work. It lifts great, helpful truths out of the back water and plants them in the living stream.

As a matter of fact, Pelmanism ought to be the beginning of education instead of a remedy for its faults. First of all, it teaches the science of self-realization; it makes the student *discover* himself; it acquaints him with his sleeping powers and shows him how to develop them. The method is *exercise*, not of the haphazard sort, but a steady, increasing kind that brings each hidden power to full strength without strain or break.

## Pelmanism Pays Large Returns

The human mind is *not* an automatic device. It will *not* "take care of itself." Will power, originality, decision, resourcefulness, imagination, initiative, courage—these things are not gifts but results. Every one of these qualities can be developed by effort just as muscles can be developed by exercise. I do not mean by this that the individual can add to the brains that God gave him, but he can learn to make use of the brains that he has instead of letting them fall into flabbiness through disuse.

Other methods and systems that I have examined, while realizing the value of mental exercise, have made the mistake of limiting their efforts to the development of some single sense. What Pelmanism does is to consider the mind as a whole and treat it as a whole. It goes in for mental team play, training the mind as a unity.

Its big value, however, is the instructional note. Each lesson is accompanied by a work sheet that is really a progress sheet. The student goes forward under a

teacher in the sense that he is followed through from first to last, helped, guided and encouraged at every turn by conscientious experts.

This point, that is its strength to me, may prove to be the weakness of the course. Americans want everything at once. They love to think that they can find something to take at night that will make them "100 percent. efficient" by morning. Pelmanism is no miracle. It calls for application. But I know of nothing that pays larger returns on an investment of one's spare time from day to day.

So I say that Pelmanism is one of the great discoveries of the day. Properly followed, the course guarantees the acquisition of the best of all wealth—the functioning to full capacity of that marvelous machine we call the "mind."

(Signed) BEN B. LINDSEY.

Note: As Judge Lindsey has pointed out, Pelmanism is neither an experiment nor a theory. It has stood the test of twenty years. Its students are in every country in the world. Its benefits are attested by 500,000 men and women in all walks and conditions of life.

The course takes no account of class, creed or circumstance. Its values are for all. Business men, from the great captains of commerce to their clerks, are ardent Pelmanists.

Professional men—lawyers, doctors, clergymen, teachers, artists, authors—have come to the knowledge that Pelmanism will help them to surmount difficulties and achieve a greater degree of success in their vocations. Women—both in the home and in business—find Pelmanism an answer to their problems.

Pelmanism is taught entirely by correspondence. There are twelve lessons—twelve "Little Gray Books." The course can be completed in three to twelve months, depending entirely upon the amount of time devoted to study. Half an hour daily will enable the student to finish in three months.

A special system keeps the examiners in close personal touch with the students right through the course, and insures that individual attention which is so essential to the success of a study of this character.

## How to Become a Pelmanist

"Mind and Memory" is the name of the booklet which describes Pelmanism down to the last detail. It is fascinating in itself with its wealth of original thought and incisive observation. It has benefits of its own that will make the reader keep it.

In its pages will be found the comment and experience of men and women of every trade, profession and calling, telling how Pelmanism works—the observations of scientists with respect to such vital questions as age, sex and circumstance in their bearing on success—"stories from the life" and brilliant little essays on personality, opportunity, etc.—all drawn from facts. So great has been the demand that "Mind and Memory" has already gone into a third edition of 100,000.

Your copy is ready for you. Immediately upon receipt of your request it will be mailed to you absolutely free of charge and free of any obligation. Send for "Mind and Memory" now. Don't "put off." Fill in coupon at once and mail, or call personally at our convenient location—Fifth Avenue at Forty-second. Pelmanism has no secrets.

The booklet, "Mind and Memory," is free. Use the coupon below or postcard and send for it NOW, or call personally. PELMAN INSTITUTE OF AMERICA, Suite 374, No. 2575 Broadway, New York, N. Y.

and blooming tho trampled on by oxen and ground by heavy wheels.

One delightful find remains to the last. The owner of this land used one corner of the pasture as a dumping place; over the wall into a little bog where the water was a foot deep, were hurled broken crockery, tin cans, rusty stovepipe, coils of wire, and all that sort of rubbish. Over that wall one lucky spring day we chanced to look; and there beheld such a sight as had never been seen before, and will never be seen again. Up out of that scummy water, in the midst of the rusty iron and tins, stood strong and sturdy of stem a glorious flower—a daffodil, large and perfect, it seemed to brighten the day. Time and again in the years since, that wonderful sight has been before me. A thousand things more important may have been forgotten, but never that daffodil. How it came there baffles conjecture.

Beautifying Coal Dumps

One of the ugliest sights to be seen from a car window is the black mountains of coal slack that have grown up about the mouths of the mines and threaten to bury the surrounding towns like Pompeii. In South Staffordshire an association has been formed to plant trees on these mounds and according to a report presented to the British Association for the Advancement of Science the experiment is working successfully. The common black alder grows well on the slack dumps, converting them into green wooded mounds, which will later bring in a profitable return from the sale of wood.

Wages Rise

Those who are hoping or fearing that wages will fall from their present peak to their "former level" are taking a short-sighted view. History shows that under the capital-

The new lighthouses send their beams straight up in a revolving or concentrated shaft of light that can be seen 100 miles by air or sea. That erected at the Hounslow Aerodrome, England (shown below), has a beam of 70,000 candle power

© Kadel & Herbert

the rise has been rapid but even before then there was a continuous slow increase. In order to trace such a curve it is necessary to find a trade in which continuous records have been kept for several centuries of work of the same sort in the same locality. The best material for this investigation has been found in the expense accounts of public buildings in London which are complete from 1252 to 1920 with

istic system wages continue to advance so long as production increases. From the time of the industrial revolution at the beginning of the eighteenth century

the exception of a few years that may be filled in from contemporary building operations in the provinces. William Hardy has been able to obtain from these records the daily wage of carpenters, masons, bricklayers, joiners, plumbers, plasterers and common laborers for nearly seven hundred years. From his article in the London Times we reproduce his table in abbreviated form and with the money translated into American currency at the pre-war rate of exchange. We add a curve that shows at a glance the general trend.

In the course of these seven centuries the wage of a common laborer has risen from a penny to over a pound a day. It has never fallen. The price of skilled labor shows almost as constant an increase. The higher wages paid to builders in 1387-1392 may be ascribed to the building of Westminster Abbey and Palace and the extension of the Tower of London. Efforts to fix wages by law were unavailing to prevent their ultimate rise. Henry VII in 1495 fixed by law the wages of all trades except that of laborer at sixpence a day, but under Henry VIII a general rise began. Fire, plague and war have made no perceptible difference up to the present.

During the last 700 years the wages of a common laborer in London have risen from a penny to over a pound a day. Question, is his living condition any better?

## CHAMBERLIN METAL WEATHER STRIPS

SINCE 1893—THE STANDARD

# Draughts are Costly and a Menace to Health

**C**HAMBERLIN Metal Weather Strips seal your home against the entrance of cold draughts, prevent the escape of heat, shut out dust and dirt, exclude noises—and pay for themselves in a short time in the fuel they save.

Your home needs weather strips—Chamberlin Metal Weather Strips. You are paying dearly for being without them in fuel waste—in the danger that besets your family from cold draughts and a chilly house.

Chamberlin guarantees its products for all time. Chamberlin Weather Strips invariably outlast the buildings on which they are installed. Chamberlin is the oldest and largest manufacturer of weather strips in the world. Chamberlin has a permanent service organization with branches in principal cities where weather strip experts are stationed to give immediate installation and adjustment service.

## No One "Owns" Land

(Continued from page 76)

vate ownership of land, and one which will appeal with great force to the average citizen, is afforded in the perpetual railroad and trolley franchises. The citing of a single case, that of the transportation system of Philadelphia, will suffice. It might be well to know, however, that the Philadelphia system is by no means so horrible an example as are those of many other cities.

As is the perpetual franchise to the transportation business, so is the fee simple title deed to every activity arising on the land. The perpetual franchise is now properly regarded as dishonest and iniquitous by virtually everyone save the beneficiaries of the system. In every large city of the nation there has grown up transportation systems out of the smaller organizations which obtained the franchises and for which they generally paid nothing. These underlying companies usually have no physical property, nor do they render any part of the service of transporting the passengers who use them. Yet these underlying companies receive about 80 per cent of the earnings of the systems. Their one contribution is permission to the operating company to engage in the transportation business. Ownership of the people's streets, recognized under existing law, is the continuing right of all its citizens, whether of today or of the time when they were illegally given away. Attention is called to the fact that the city's highways were not the exclusive property of those who gave them away; and consequently the act of the citizens of that day or their officials should in no way be binding on the present inhabitants.

In Philadelphia for the year 1919 the underlying companies of its transportation system received in rentals \$7,700,000, while the return to the operating company was but \$1,500,000, altho it performed the entire service of carrying 2,333,000 passengers on its cars daily, and owns virtually all of the physical property of the system.

There is no essential difference between a perpetual trolley franchise and a fee simple title to land. Both are special privileges to use exclusively certain designated tracts of land. Both make possible monopolies which enable their beneficiaries to appropriate the production of others without rendering any service in exchange.

God made the land for the use of the continuing generations of man. All the people collectively, and not the title holder, are responsible for its increased rental value. This rental value, therefore, belongs properly and morally to the public which created it and should be collected by it and used for community expense, local, State and Federal.

There is, however, a more important phase of the land question than is contained in its mere fiscal injustice. Ownership of the land—the opportunity of man to sustain life—virtually establishes a system of economic and indus-

## The Boys' Magazine

**Start Your  
Boy on the  
Road to True  
Manhood**

Help him to get started right by giving him THE BOYS' MAGAZINE.

Send only 25 cents today for a three months' subscription. By accepting this remarkable low price offer you save 35 cents over the newsstand price as the price per copy is 20 cents.

This is the formative period of your boy's life. What he will amount to in after years depends largely on what he is reading now. You want him to be wide-awake, progressive—forward-looking—to develop ideas and initiative and to learn to make his own way in the world.

You can make him no better gift than a subscription to THE BOYS' MAGAZINE. This great periodical will give him entertainment, instruction and the inspiration to accomplish big things.

Your boy must keep abreast of the times. What he reads has much to do with what he THINKS and DOES. Guard him against trashy, sensational and misleading stories. Give him the kind of reading which entertains, yet inspires and instructs. THE BOYS' MAGAZINE will develop your boy's initiative, foster right THINKING and right DOING, and make him a manly, moral and courageous boy.

Besides a wealth of splendid stories and special articles each issue contains departments devoted to Electricity, Mechanics, Wireless, Popular Science, Athletics and Physical Training, Editorials, Stamp and Coin Collecting, Moving Picture Plays and Players, Amateur Photography, Cartooning, Outdoor Sports, Illustrated Jokes, etc., etc.

Send only 25 cents, today, for a three months' subscription. We will refund your money promptly and without question if you are not more than pleased with THE BOYS' MAGAZINE. (Remit in stamps if more convenient.) Address

THE SCOTT F. REDFIELD CO., Inc.

trial slavery. The land problem is but the logical continuation of the problem of chattel slavery, which was solved by the Proclamation of Emancipation. The chief difference of the economic phase is that about twenty times as many persons are involved as were affected by the system of chattel slavery, and that most of the victims are unaware of the means by which their surplus production is appropriated.

Both systems—economic as well as chattel—were established for the purpose of enabling the beneficiary to appropriate the surplus production of the slave. Under the chattel system the master candidly took the surplus production directly, but was compelled for purely selfish motives to feed, clothe and properly safeguard the life and health of his slave, lest he impair the value of his investment. The present day economic system, while more complex and less direct, is infinitely more efficient than the chattel system, for it compels the exploited one to pay in advance, thru the agency of ground rent, virtually all his surplus production for permission to produce, while at the same time being compelled to keep himself and to protect his own health and vigor.

In 1914, before the outbreak of the European war, this became a serious task for some ten millions of our people who were unable to find work. So serious was the problem that employment bureaus were established by the Government, Federal, State and local, in order that these persons might find opportunity to work. This it must be remembered was in the United States, where, according to the census of 1910, the population was less than thirty-four persons to each square mile of the richest and most productive soil in the world. But it was held out of use by reason of the unscientific taxation and land laws of our country, which enabled the title holder to withhold it from use for purely speculative purposes.

Happily the destruction of the iniquitous property right in human lives, which in the form of chattel slavery had been permitted to grow up under the sanction of our Government, was accomplished thru the Emancipation Proclamation.

It remains for the Single Tax party to destroy the other iniquitous property right—the ownership of man's opportunity to live—which is bound up in the private ownership of the earth, and which has also grown up under the sanction of our Government.

This can be done only thru the collection by the Government of the rent of land and the exemption from taxation of labor and all its products.

By labor is meant every class of service, whether it be mental or physical, that civilization demands.

*Philadelphia*

Son (whose father has received a letter about his debts).—Like their confounded cheek. I'll give them a piece of my mind.

Father.—But do you think you have any to spare?—*Blighty.*

## CONVENIENCE

**N**OWHERE are conveniences more appreciated than in the home. Nowhere is an aid to proper heat control so necessary.

Are you one of the many who dread a winter of fussing with the furnace—the discomfort, work and worry of regulating drafts and dampers with an ever fluctuating temperature?

If you are, there is a way out—a way that promises complete relief from all troublesome attention to the heating plant.

### The "MINNEAPOLIS" HEAT REGULATOR

Regulates the amount of heat in accordance with the temperature you wish to maintain.

By simple adjustments at the thermostat, conveniently located, it is possible to have an evenly heated house all day, say 70 degrees—an evenly heated house all night, say 60—and the drafts opened in the morning before you arise—all operations automatically performed. And then, there is a decided saving in fuel.

The "Minneapolis" has been used successfully for 35 years on every type of heating plant burning coal, gas or oil—lasts a lifetime.

With all the  
Advantages of  
Permanent Binding

**Proudfit**  
LOOSE LEAF DEVICES

Transparent Leaf Body, showing  
Proudfit mechanism unlocked.

**P**ROUDFIT loose leaf binding saves paper, weight and filing space. Provides more writing space; a flat writing surface, irrespective of number of sheets inserted, and instant sheet removal or insertion. Holds sheets along entire binding edge; protects sheets from tearing; uses less than one-half inch of sheet for binding margin. Has no rings, no posts and no projections to scratch desk tops. Holds 1 to 1000 sheets without adjustment. Is adaptable to all loose leaf uses. Proudfit Loose Leaf Binders look like and have all the permanence of fine bound books. Proudfit binding mechanism consists of flexible steel bands, affixed to any style of limp or rigid cover and entirely concealed beneath these covers. This entire binding mechanism may be removed in 10 seconds. It may be locked and sealed to make permanent bound books for county records, etc.

Proudfit Loose Leaf Binders are sold  
direct or through factory branches in  
all large cities—they are supplied in a  
wide variety of sizes in four standard  
lines, as well as made to specifications.

## The New Spirit in the Old World

(Continued from page 77)

onto its feet again and make a new start.

Belgium is the joy of Europe. Belgium had its strikes and got them over with during the first six months of peace, and now the people have set to work with a will to repair the war's damage. The Germans have returned much of the machinery taken into Germany and converted for the manufacture of munitions during the war. Black smoke is pouring from the chimneys and the wheels are humming. In the rural districts there is the same close cultivation of the land as before the war.

Some machinery has also been returned by the Germans to France, and the important French textile industry is beginning to get into operation again. Negotiations with American manufacturers of machinery have been started by the French Government with a view to quick reestablishment of the beet sugar refineries, leveled by the Germans in the devastated areas.

The Germans are carrying out the provisions of the treaty for the return to France of wagons, agricultural machinery and cattle and are making the deliveries of coal to France agreed upon at Spa. It will be a long time before the French mines wrecked by the Germans are again in full operation. I talked with one of the engineers in charge of the work at Lens. He said some coal could be taken from the mines by midsummer next year, but that three years would be consumed in putting the mines in shape to operate to full capacity.

The peoples of the new nations set up by the peace treaties are rejoicing in their freedom and are going about the work of organizing new governmental agencies with the greatest enthusiasm. This is particularly true of Czechoslovakia. Czechoslovakia inherited some of the richest of Austria's resources and her people are undertaking their further development in a spirit that will soon mean prosperity.

Poland's progress has been seriously handicapped by her war with Russia. In their invasion of Poland, the Bolsheviks overran some of her best agricultural areas, destroying the crops. The crops in the regions that were not overrun have suffered from lack of cultivation due to the recruiting of agricultural workers for the army. Poland needs peace. She has rich agricultural lands and important textile industries that could soon be put into operation if the government could give its full attention to economic reconstruction. As it is Poland will face a serious shortage of food this winter.

Austria is the pauper nation of Europe. Her population has been left utterly without the means of supporting itself. There is more under-nourishment of children in Vienna than in any other European city. Unless material assistance is forthcoming from outside sources Austria faces a

winter of the most intense suffering.

For the next four or five years the nations, particularly of Eastern Europe, are going to have to concentrate all their energies and resources on economic and agricultural rehabilitation. They are going to have little time or energy to devote to the welfare of the children—the new generation which must carry forward the work of reconstruction in the future. If America wants to help, I know no service it can perform that will be so gratefully remembered, as looking after the children during this period of inevitable neglect.

Happily, the people of Europe are coming to a better understanding of the attitude toward them of the people of the United States. And this is in part responsible for the new spirit with which they are taking hold of the tasks of reconstruction.

They are no longer looking, as they did for so many months after the armistice, to the United States to pull them thru. They now realize that the United States expects them to do what they can to help themselves and that American assistance will be given only in the measure that they prove thru their own effort that Europe is again going to be a going concern.

The American business man in Europe has done much to make this clear. Our Government cannot help you, he has said, but we will help you if you try to help yourselves. His attitude, generally speaking, has been a most generous one. He has not sought to turn Europe's necessities unduly to his profit. Rather he has in many cases entered into negotiations, wherein he has willingly forfeited the advantage that is his as a result of the present exchange situation, in an effort to get European industry into a condition for doing business again.

It is not only the governments and the business people who are gaining a better understanding of the American attitude. The common people, too, are coming to know us better. I believe, as a matter of fact, that there was less misunderstanding of the position of the United States on the part of the peoples of Europe than of the governments.

The feeling of the common people toward the United States is one of sincere friendship and appreciation. American participation in the war has been belittled in parliaments and cabinet chambers, but the people know the part America played and are thankful. They are thankful particularly for the humanitarian service that the people of the United States rendered to Europe with its ambulances, its doctors and its medical supplies. They are thankful for the food America sent. They are thankful for the care it has given the children.

I have traveled in most of the countries of Europe since the armistice and talked with the followers as well as the leaders. The undercurrent of feeling among the people is one of abiding friendship for this republic. Only a deliberately hostile act on our part can change it.

Washington.

## \$18<sup>25</sup> Per Year

**Serves Quaker Oats each morning to a family of five**

Quaker Oats, the food of foods, costs one cent per large dish. The price of one chop serves 12 dishes.

Five dishes daily cost \$18.25 a year, while just five eggs a day would cost you \$82.

Quaker Oats supplies 1,810 calories of nutriment per pound. That's the energy measure of food value. Round steak yields less than half that.

A boy needs 2,000 calories per day. They would cost 13c in Quaker Oats, in eggs about \$1.30.

These costs mean little in a day. But note what they mean on a year of breakfasts for a family of five.

### Cost per year for serving five, based on this year's average prices

1 chop each, per day, \$219	Average meats. \$146
2 eggs each, per day, \$164	Average fish \$146

### \$125 Saved

Quaker Oats breakfasts, compared with these other desirable breakfasts, save at least \$125 per year.

The Quaker Oats forms the supreme food, almost the ideal food, the greatest food that grows.

It is rich in elements growing children need. As vim-food it has age-old fame. The best food you can serve in mornings is a dish of Quaker Oats.

Serve other foods at other meals. People need variety. But use this one-cent breakfast dish to cut the average cost.

# Quaker Oats

*Extra-flavory flakes*

This brand is flaked from queen grains only—just the rich, plump, flavory oats. We get but ten pounds from a bushel. The delightful flavor has won millions the world over. It is due to yourself that you get it, for it costs no extra price.

# How to Sell

## Real Estate

— your —

Easily! Quickly! Profitably!

**I**F you want to sell your property promptly, economically and at the highest possible price, you should immediately investigate The Simplex Plans for Selling Real Estate, which have already made quick, cash sales of more than 5,000 properties throughout the United States and Canada.

No matter what your property is or where it is, these successful Plans show you just how to sell it to the best possible advantage, without employing agents or paying fees or commissions to any one.

Farms, residences, building lots, ranches, timber, mineral and oil lands, mountain camps, seashore cottages, business property of all kinds, including hotels, boarding-houses, motion-picture theatres, garages, stores, medical and dental practices, etc., etc., can be advantageously marketed by The Simplex Plans.

Every reader of this magazine who is interested in any kind of property anywhere, should investigate The Simplex Plans at once. They are so complete, simple, practical and easy that any intelligent person can use them to the fullest advantage.

The real value of the The Simplex Plans is impossible to measure, but by showing how to get hundreds and thousands of dollars more for properties—by saving big fees and commissions to agents—by saving weeks and months of time in finding buyers—they are daily proving their immense value to property owners in all parts of the country.

Here is what a few of them say: "The Simplex Plans sold my house for cash within two weeks."—A. S., Wauwatosa, Wis. "Sold our place for one-third more than it cost."—F. C. M., Sault Ste. Marie, Can. "Sold my farm for cash."—Mrs. L. A. C., Glenwood, Minn. "Sold my country place in three weeks for cash."—H. M. B., New York City. "Sold my store and real estate."—B. L., San Francisco, Cal. "Sold my hat factory. Endorse your methods."—W. E. B., Buffalo, N. Y. "Sold my property. Your plans quickest I ever saw."—J. S., Waterford, N. J. "Your Plans sold my Colorado ranch."—P. E. V., Lansing, Mich. "Sold my hotel."—G. S. S., Plano, Ill. "Sold three lots for cash."—R. F. M., Ottawa, Canada. "Sold my Michigan farm."—E. A. D., Miami, Fla.

Don't spend a minute's time, an ounce of effort or a cent of money trying to sell, exchange, purchase, lease, build, or do anything else with real estate of any kind, without first of all examining The Simplex Plans.

Send no money. Just sign and mail the coupon, and a complete set of the Plans will be sent to you, prepaid, for free inspection. If, upon examination, you find they are just what you need, send \$10 in full payment for them. Otherwise, return them within ten days after you receive them and you will owe nothing.

THE SIMPLEX CO., Dept. 334, 1133 Broadway, New York

FREE INSPECTION COUPON

THE SIMPLEX COMPANY

## The Old World's Homage to the Pilgrims

(Continued from page 79)

left Leyden three hundred years before.

The Staathuis was built in the fourteenth century and is considered a very fine type of medieval architecture. It is filled with rare tapestries and some beautiful portraits of the fleshy Rubens school. The Burgomaster, attired in flowing robes and with a great silver chain about his neck, read an address of welcome which was responded to by a member from each delegation. Sir Harry Brittain was chosen to speak for England and I for America. Sir Harry, who was knighted not long ago for the fine work he did during the war and before in promoting closer relations between the United States and England, made a very felicitous and brilliant address. So when I came to reply for America it occurred to me to begin by saying that Sir Harry by his eloquence and wit, and especially by his name, was most fitted to represent the British empire on this occasion, but that while I could not hope to emulate him in the oratorical art, I did feel that by name I also was fit to speak on such an occasion. For only that afternoon I learned that the word "holt," which in old English means a little wooded hill, is still the common word for wood today in the Dutch language. In fact, Holland itself means woodland and is a derivative from "holt land," and therefore nothing could be more fitting than that I a Holt, and a direct descendant of New England fathers, should speak in "Holt-land."

The next day we motored back to Leyden and listened to more speeches. How surprised those old Pilgrims—or rather young Pilgrims, for they were mostly in the twenties—would be if they could have heard all the wonderful things now said about them. In the afternoon we were privileged to witness an exhibition of the national sport of Holland, which is called "Ringerijderij," or "tilting competition." The competitors ride in a "Tilbury" or "Sjees," which is Dutch for chaise. The gentleman drives the horse at a fast trot while the lady has to spear with a long wooden sort of a billiard cue a ring hanging on the end of a pole, a-la-merry-go-round. The lady who secures the greatest number of rings within a certain time is declared the winner. There were twenty-four couples in this competition and all sat on high two-wheeled chaises behind fat horses. Some of the contestants wore charming old-fashioned Dutch costumes. It was a pretty sight to see them driving about the flag-bedecked field to the tune of the band and the applause of the onlookers. We watched this competition for a couple of hours until we were driven away by a threat of rain. That night there was another session in the form of a memorial service in the Pieterskerk, and that concluded the Leyden festivities.

The next morning we went to The

Hague to take luncheon with our Ambassador, Mr. Phillips, late of the State Department, who is the handsomest American diplomat I have ever come across. He made an efficient Assistant Secretary of State during the war and comes from the old New England Phillips family which founded Exeter and Andover. He has already made a very favorable impression upon the Dutch people, I am told.

We had a couple of hours for sight-seeing before luncheon so we visited The Hague galleries, where I saw again the overrated Bull by Paul Potter and the repellant dissecting table group by Rembrandt. But what impressed me the most was our visit to the Carnegie Peace Palace. I was present at the laying of the cornerstone in 1907, but I had not seen it since it was completed. It is really a superb building and my daughters were quick to point out that a thing does not necessarily have to be antique to be beautiful. The grounds have been under the gardener's care long enough to bring the shrubs and flowers into a perfect state of cultivation. The building is practically complete, only a few decorations from the various nations are still to be installed. I admired perhaps more than anything else the exquisite Japanese silk embroidered tapestries that completely covered the wall space in the Ambassador's room. I had seen the Japanese artists working on these tapestries back in 1909 when I was in Kyoto. The replica of the statue of the "Christ of the Andes" at the head of the great stairway was impressive with its famous inscription on the pedestal: "Sooner shall these mountains crumble into dust than that Chileans and Argentines break the peace, which at the feet of Christ the Redeemer they have sworn to maintain." Each nation has contributed something to the Peace Palace, and it is a satisfaction to learn that Mr. Elihu Root's committee, which has just framed the Permanent Court of the League of Nations, has recommended that the seat of the Court shall always be at The Hague.

After a delightful luncheon at the Ambassador's, at which there were no speeches—"silence like a poultice came to heal the blows of sound"—we took the train to Amsterdam and arrived there in time to attend a reception by the Burgomaster at the City Hall. Again we found the hall beautified by old tapestries and Flemish paintings, and again we toasted the Pilgrim fathers back and forth. That evening a wonderful religious service was held in the Nieuwe Kerk, where the American, Dutch, and English ecclesiastical delegates spoke. The musical part of the service was taken by the Oratorium Society. There is no finer church music in the world than the old Dutch hymns, and I shall never forget the choral singing that evening. The Nieuwe Kerk is really a cathedral in

size, grandeur and decoration and in its gilded nave Queen Wilhelmina was crowned.

Early next morning the Pilgrims met at Leyden and proceeded down the canal to Delfshaven, following the exact route that the old Pilgrims took three hundred years ago when they bade farewell to the good city which had given them such generous hospitality for eleven years. About noon we landed at the dock at Delfshaven and there a very pretty incident occurred, which was as touching as it was spontaneous. It was from this very dock that the Pilgrims finally set sail for the New World. All the night before they held vigil, praying, weeping and bidding each other farewell, and when finally John Robinson said "Time and tide wait for no man," they all went to the dock and fell on their knees while Robinson prayed to the good God to give them peace and safety on the great adventure they were about to undertake. As we stood around the quay the Rev. F. B. Meyer started to explain to the Pilgrims and the crowd of townspeople the above incident. Then he said, "Let us do as the Pilgrims did," and the entire throng fell on their knees while Dr. Meyer prayed that we in this day and generation might be worthy of those who embarked from the very spot three hundred years ago.

We then walked up a few blocks to the Presbyterian church in Delfshaven with its famous stained glass window representing the departure of the "Speedwell." Again we had a religious service and again we sang the old Dutch hymns and again clergymen representing England, Holland and America explained to the great congregation what the Pilgrims did for the world.

Then after a pretty trip around the harbor of Rotterdam in a large yacht and another service of song and praise in the Rotterdam cathedral, where Rev. Samuel Eliot of our delegation made easily the best address of the entire celebration, we went to the great banquet rooms in the Zoölogical Gardens, where all Holland's dignitaries were assembled to do us honor and bid us farewell. It was a gala occasion and so many times did the orchestra play the various national airs that I seemed to be standing up most of the dinner hour. Before we left each Pilgrim was presented with a very beautiful volume, entitled, "Leyden Documents Relating to the Pilgrim Fathers." It was edited by Dr. D. Plooi of Leyden, who with Professor van Nes deserves the chief credit for making the Holland celebration the success it was, and Dr. J. Rendel Harris of Manchester, who discovered the "Mayflower" in Old Jordans. The volume contains a facsimile of the official documentary look at Leyden which relates to the marriage contracts of the Pilgrims during their residence at Leyden and such of the Pilgrims as remained in Holland. These documents make a unique volume of permanent value and should be in every important

## The Fun of "Doing" a Room

**U**NTIL you try you can't possibly imagine the fun and artistic satisfaction of taking just one room—the one that is now an eyesore and source of mortification every time your friends see it—and transforming it into a perfect gem of daintiness and charm.

Everyone is an artist at heart—your eye knows color harmony. And how exciting it is to find just the right color scheme—tinting walls in a soft, neutral tone, revarnishing old furniture in the wood effect you desire, working doors and wood trim into the color scheme, varnishing the floor and then tying the whole room together with delightful cretonnes or chintz.

Murphy Univernish is splendid for home use. It is not only very fine Varnish but has the invaluable quality of being impervious to boiling water. It is wonderfully durable on floors. Furnished as a clear varnish or in the following transparent wood tones—Light Oak, Dark Oak, Bog Oak, Walnut, Mahogany, Green. Every inch of woodwork in kitchen and bathrooms should be protected with Univernish, for it is sanitary, easily cleaned and durable.

Thousands of stores sell Univernish. We should be glad to direct you to such a store and to send you an attractive color card.

## BON-OPTO

### SHARPENS VISION

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

library of America. Besides the marriage contracts there is a document showing the personal signature of John Robinson, which was hitherto wholly unknown. Another document shows the signature of William Bradford, the historian of the Pilgrims and later Governor of New England, "fresh in memory which smells with odoriferous fragrance." It was drawn up in the very last days before his departure from Leyden to Delfshaven, from where he took passage to England in the "Speedwell," and from where he sailed in the "Mayflower" to New England. The third document is the last will and testament of Bridget Robinson, widow of John Robinson, chiefly important because it gives a number of facts about her children who were yet living in 1643.

After we had bade farewell to our hosts they followed us down to the station and as our special train pulled out of the spotless and spacious station we saw them waving their handkerchiefs and heard them cheering as we disappeared out of sight.

If the keynote of the Holland celebration was religious the essence of the English celebration was political. In Holland it was the character of the Pilgrims, their love of liberty and their passion for religious freedom that was emphasized. At the Dutch celebration even the Protestant churches from France and Switzerland sent delegates. In England, on the contrary, government officials predominated and it was the unity of the English-speaking races which was stressed in most of the speeches.

I spent the 6th, the great day of the English celebrations, at Plymouth. Plymouth is a much larger and handsomer city than I had imagined simply from seeing it from the dock of the steamer in 1907 when we stopped to unload passengers on my first trip to France. The old part of Plymouth down by the "Barbican," or water front, must have looked much the same as it did three hundred years ago, as the accompanying illustration indicates. The celebration was to last a week and every day a pageant was held representing some phase of Pilgrim fact or fiction.

On the great day there was literally a continuous three-ringed performance. I first attended the International Conference at the Corn Exchange. Professor Benjamin W. Bacon of Yale University made the principal American address, while England, Holland, France and Switzerland also had their official spokesmen. At the same time the Lord Chief Justice of England, Lady Astor and other celebrities were laying cornerstones at sailors' homes and Salvation Army barracks.

At 12:30 there was a civic luncheon given at the Guildhall by the English-Speaking Union, the very active British society which is doing so much to promote the solidarity of all people who speak our mother tongue. The luncheon was in honor of their "Right Worshipfuls," the Mayor and Mayor-

ess. It was there I first met Lady Astor, and such a pretty, bright and winning little woman as she was would be hard to find in a day's journey. After seeing and hearing her, I do not wonder that the British people are enthusiastic over their first woman member of Parliament. She was the one who made the most thoughtful speech of any of the delegates and the wittiest, too. To be sure as a good daughter of Virginia she did not permit Massachusetts to receive all the encomiums of the day, but I remember she was the one who first emphasized that America and England are the only two nations whose civilization rests on a genuine belief in the efficiency of the Bible as a guide to conduct and life. The Lord Chief Justice of England made a very pleasing address, but when I came to analyze it afterward I was surprised to discover that it was only a very graceful way of elucidating for over twenty minutes the idea that he was "glad to be present on such an historic occasion."

After luncheon the whole town took a half holiday. It seemed as tho every one of the 150,000 citizens was on the streets. We first assembled at the dock where the Pilgrims set sail for America. The dock has been lengthened in recent years so that when you look at the picture herewith reproduced you must cut off about three-quarters of it to imagine the place as it was three hundred years ago. The Mayor wore his official robes of scarlet and ermine with the gold chain of office about his neck. The Lord Bishops were distinguished by their silk stockings and gaiters. Even the American bishops (who are always addressed in England as "Your Lordship") were in their chromatic costumes. The professors were resplendent in their academic robes and scarlet hoods. Perhaps the prettiest part of the ceremony was the presentation ceremony to Viscountess Astor, acting for Mrs. Walter H. Page, by the city of Plymouth of a beautiful silver replica of the "Mayflower" in honor of the late Ambassador Page, who had been honored with the "freedom of the city" during the war. It was enclosed in a glass case and carried by marines after the ceremony at the head of the procession which formed at the dock and proceeded up to "the Hoe," a word of whose derivation no one seemed to know. The Hoe is a great flat plateau overlooking the harbor and the city, an ideal place for a parade or pageant. As we walked among the cheering crowds that thronged the streets we came to where the costumed actors of the pageant were waiting for us to review them. The English youths of both sexes were dressed up to represent all phases of Pilgrim and Puritan life. There were the wild American Indians, in war paint and feathers, the Puritan mothers, who, as Mr. Choate said, not only had to bear, with the hardships of a New England wilderness but had to bear with the Pilgrim fathers as well. There were John Robinson, Priscilla Alden, Miles Standish and all the other

## Man mills away in wheat vital elements of life

*Largely to this waste we can now trace the fact that one-third of America is undernourished*

**O**NE in every three of us—rich and poor alike—suffers from malnutrition, authorities say.

Not in Russia, in Austria, in Armenia, but here in America, the world's greatest food-producing nation!

You hear, every day, complaints of "that tired feeling." You see your friends developing "nerves," weakening under the strain of our modern life.

Why? Those who study these things say the underlying cause in most cases is malnutrition—lack of the right kind of food. Though you eat *enough* food, the chances are one in three that you or your family do not get enough of certain food elements.

### Elements the body needs

The body is composed of water and sixteen vital chemical and mineral elements. To attain its fullest development, to maintain its health and normal functions it must be supplied with food containing all these elements.

In the whole wheat grain Nature offers us these sixteen vital food elements in more nearly the proper proportion than in any other food, save possibly milk.

But, in the modern preparation of wheat, many of these elements are largely lost through the removal of the six outer layers of the grain, commonly called the bran. The iron, which makes that part of the blood which

carries life-giving oxygen to every cell. The calcium, predominant element in every bone. The phosphorus, which the brain and nerves must have. Elements—these and others—absolutely essential to health and growth.

Only in the whole wheat grain can all of them be secured.

### A sixteen-vital-elements food

There is a food, of delightful flavor, which comes to you undiminished in its nutritive values—Pettijohn's—whole wheat crushed and toasted.

Its natural nut-like sweetness, brought out full in the toasting, appeals to old and young alike.

Served with cream and a bit of sugar if you wish, it makes a vital energy ration of surprising deliciousness.

If you have a child who is not so rosy-cheeked and active as he should be—give him Pettijohn's.

If you yourself are feeling below par in energy and vim—try Pettijohn's.

If you suffer from congestion of the intestinal tract, give this food with its natural bran laxative a chance to set you right.

Make tomorrow's breakfast of Pettijohn's, the sixteen-vital-elements food. Your grocer has it—or will gladly get it for you.

Made by the Quaker Oats Co., 1625 M. Railway Exchange Bldg., Chicago, U. S. A.

### The sixteen vital elements of nutrition

Oxygen	Sodium
Nitrogen	Chlorine
Hydrogen	Fluorine
Carbon	Silicon
Sulphur	Manganese
Magnesium	Potassium
Phosphorus	Iron
Calcium	Iodine

In the whole wheat kernel all of these elements are found. But man mills away most of the last twelve of them in the outer six layers of the grain.

"He has suffered both stomach and intestinal congestion just to the extent that his refining process has been carried on," says one authority. And another says of these wasted elements: "Much ill-health and malnutrition come from their insufficiency."

# Who Owns the Press and Why?

When you read your daily paper, are you reading facts or propaganda? And whose propaganda?

Who furnishes the raw material for your thoughts about life? Is it honest material? No man can ask more important questions than these; and here for the first time the questions are answered in a book

## THE BRASS CHECK

A Study of American Journalism

By UPTON SINCLAIR

Ninth edition just sent to press—a total of 144,000 copies

"The Brass Check" is a book of facts; a book packed solid with facts. Says the introduction:

"Here are names, places, dates — such a mass of material as you cannot doubt, you cannot evade. Here are your sacred names, the very highest of your gods. When you have read this story, you will know the thing called American Journalism; you will know the body and soul of it."

Says Robert Herrick: "I wish to thank you and congratulate you."

Says Charles Zueblin: "'The Brass Check' ought to raise the roof!" (It has done so.)

Says John Haynes Holmes: "The book is tremendous. I have never read a more strongly consistent argument or one so formidably buttressed by facts. You have proved your case to the hilt. I again take satisfaction in saluting you not only as a great novelist, but as the ablest pamphleteer in America today. I am already passing around the word in my church and taking orders for the book."

Says the "Nation" (New York): "A most important book .... a fascinating and thorough treatise upon the American press."

Says the "Nation" (London): "This astonishing production .... a highly curious record .... a telling array of evidence .... a plain factual record."

Says the "Neues Journal" (Vienna): "A Book-trade 'scoop' without equal .... a breath-taking, clutching, frightful book."

448 pages. Single copy, paper 60 cents postpaid; three copies, \$1.50; ten copies, \$4.50. Single copy, cloth, \$1.20 postpaid; three copies, \$3.00; ten copies, \$9.00.

For the beginner or experienced player. Endorsed by great artists. Successful graduates everywhere. Scientific yet easy to understand. Fully illustrated. All music free. Diploma granted. Write today for free book Quinn Conservatory, Studio UJ, 598 Columbia Rd., Boston, 25 Mass.

### How to Use the Independent in the Teaching of English

This brochure, prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 311 Sixth Avenue, New York.

worthies so dear to the American boys and girls. After the children had sung the English and American national anthems, and there had been much band playing and flag waving, the crowds melted away and the chief delegates hurried back to the Guildhall, where more speeches were made and listened to. As if all this was not enough for one day the evening ended with a great banquet given by the Mayor in the assembly rooms. I never saw so many decorations worn at one time before. There were Knights of the Bath and the Garter, and commanders, officers and chevaliers were as common as dirt. I sat next to the doctor who served during the war as surgeon-in-chief of the British army and the breast pin on which hung the replicas of his decorations went almost from shoulder to shoulder. I do not believe I ever saw so many honors dangling on one human being before. It was a great gathering of great Englishmen and Americans and the hands-across-the-sea sentiment was thicker than water. Telegrams were sent to the King and the President and we all drank out of the great loving cup in honor of Anglo-Saxon solidarity.

While I was in Holland I seemed to see the Pilgrims in my mind's eye depart three hundred years before, leaving the weeping, kneeling throng at the Delfshaven dock. While I was in Plymouth I stood on the very stone flags on the dock from which they again departed for the New World. As I write this my phantom "May-flower" is on the seas. By the middle of November she will have landed her precious cargo on the bleak shores of Massachusetts Bay and then it will be the turn of the United States to show what it can do to cement friendship with the people of Holland and England, our brothers by blood and spiritual inheritance.

### Wanted: a House

(Continued from page 81)

from \$500 to \$800 for each house.

The basement is quite a large item of expense at the present time, both excavation and rock work being excessively high and even in a comparatively small house on solid ground, a saving of from \$150 to \$200 may be had by excavating only half of the basement. The entire basement can be omitted, if necessary, and a small hot water heating plant installed in the kitchen with a slight modification of the floor plan. By doing this the entire basement may be omitted with a sufficient saving to more than pay for the increased cost of the heating plant and a sanitary concrete floor thruout the first story. Such a heating plant will save from 30 to 40 per cent of fuel over a basement hot air furnace, an item well worth considering in these days of high cost of fuel.

Houses can be built in pairs, which is often done in certain cities and seems a very acceptable way to reduce cost.

Dwellings can be built in the form of

flats as heretofore done in certain cities and a suitable one-family space can be provided for about 60 per cent of its cost as a single dwelling.

The design of the front of the house is often over-emphasized in the hope that other deficiencies may be overlooked, to help convince the buyer that he is to receive something of special or unusual value. In these days of high costs the buyer will do well to overlook ornamentation of all kinds and return to first principles, so to speak. Good taste and simplicity should rule. "Massive" fronts such as are often placed upon even the smallest houses cannot fail to add to the cost. Heavy stone or brick porch columns which usually reduce the size of the porch are costly, and wide projecting cornices supported by heavy brackets will require frequent painting and repair and will be the first things to show depreciation. Heavy tile roofs with wide overhanging eaves out of all proportion to the size of the houses, which seem to be considered the style, should be omitted.

Certain cities in the East have set the style of building houses in long continuous rows, so that the houses are made available to the average family at a much reduced cost. Such building in the past has not usually produced attractive homes and they have often been dark and badly arranged; but it is possible to build an attractive and very livable type of house in rows or groups containing from four to six houses in each group. These houses have an interesting individual outside appearance and where desired may be of different sizes. They may be individually owned. The saving in construction of such houses is from 20 to 25 per cent for all of the inside houses and from 10 to 15 per cent for the end houses over the cost of the same amount of living space in an individual and independently built house. The saving in cost for fuel is in about the same proportion.

Building at best is certain to prove quite expensive, and then again it requires time. For persons seeking immediate living quarters it is well to look into the matter of old houses, which seem to constitute the major portion of the offerings. The very fact that most buyers will not hesitate to reject a dwelling that does not possess the last word in improvements and architecture, makes it that much easier and less expensive to purchase a house say twenty years old or more. Yet such houses, so we are assured by leading architects, are better value today than the majority of cottages put up during the last two or three years. These old houses are floored almost entirely with white pine, a lumber never excelled for building purposes, but which cannot be found at any price now. Finishings, such as doors, window frames and wainscoting, even in inexpensive buildings of the last quarter century, were of the finest heavy hard wood, which has practically disappeared from the market. Lumber which sold for \$45 to \$48 a thousand feet six years ago now sells for \$200.

Is it any wonder, then, that an old

# **OUR ECONOMIC AND OTHER PROBLEMS**

By Otto H. Kahn

Of Mr. Kahn the late Theodore Roosevelt said: "The soundest economic thinking in this country today is being done by Otto Kahn."

Mr. Kahn occupies an international position in the world of finance. He speaks with an authority that is based on broad practical experience. He deals with today but he brings to his discussion a vision of tomorrow.

Discussing his associate, the late Edward Henry Harriman, Mr. Kahn writes:

"His death coincided with what appears to be the ending of an epoch in our economic development. His career was the embodiment of unfettered individualism. For better or for worse—personally I think for better unless we go too far and too fast—the people appear determined to put limits and restraints upon the absolutism of rulers. Therefore, I believe there will be no successor to Mr. Harriman, there will be no other career like his."

## Talk Convincingly— and the World Is At Your Feet

**W**HY can one man sell where another fails? Why can one man get the sought-after job when another, better qualified, is turned down? Why does everyone "believe in" one man and have no confidence in another, who really has as much ability? The thing that counts is not only what you say but how you say it.

If you are interested, write for free booklet called "The Secret of Being a Convincing Talker—How I Learned it in One Evening."

### THE INDEPENDENT

311 Sixth Avenue

New York

house represents an ideal solution of the housing problem? The person who is handy with tools can purchase an old house and gradually put it in order. Electric wiring, plumbing, a heating system, remodeling the rooms—all these things can be done little by little and at a very moderate cost. Even the ugliest house can be transformed into an attractive dwelling by covering it with metal lathe and plastering it with cement, so as to have stucco finished walls.

Old houses are selling at low prices, and generally a good piece of ground with fine fruit trees and hedges goes with an old house as compared with a barren piece of land measuring but a few feet on all sides of the new house.

Owing to the dismantling of Army and Navy cantonments in various parts of the country, the moment is especially opportune for rebuilding and renovating operations. Second-hand lumber, plumbing supplies, electric wiring, furnaces, etc., can be obtained at less than half cost at the cantonments.

And once the prospective buyer obtains his house he will do well to hold on to it, despite all kinds of tempting offers for it. The high prices commanded by fairly modern houses have caused many owners to sell their homes, in the hopes of realizing several thousand dollars' profit. In their anxiety to lay their hands on so much money at one time, many of these parties have failed to consider their predicament in the event of a sale and their being forced to move into other quarters.

We cannot but help thinking of the individual who lived happily in his own home in a New Jersey town quite near New York City. One day this individual, led astray by the attractive prices being offered for houses in his vicinity, secured a sale on his house at a profit of three thousand dollars. Then he moved to New York, post haste, and set up his home in an elaborate apartment. Six months went by, and the rent took a very noticeable jump. Another six months elapsed, and again the rent went up. Finally, at the end of another six months, the rent went up to a new figure, at which the individual in question began to take stock of his three thousand dollars. To his astonishment he found himself with considerably less than one-third of his original profit, and he betook himself to the little town where once he lived a life of freedom from landlords. Try as he would he could find nothing in the way of a house. Finally, in desperation, he offered to buy back his former home. And he succeeded, but only after paying two thousand dollars more than he had received for it a year and a half before!

Which story is typical of the experiences of thousands who, seeing a seemingly fine opportunity of realizing a handsome profit, have converted their homes into so much money which has soon been found to dwindle away in these days of the dollar which is not worth one hundred cents as of old.

New York City

## A Number of Things

By Edwin E. Slosson

Samuel Pepys was the F. P. A. of the seventeenth century.

Will not the verdict of history be that Woodrow Wilson was a great statesman but a poor politician?

UPROAR CAUSED BY IRISH AT PILGRIMS' MEETING

—Tribune

SINN FEINERS FIGHT AT PILGRIM RALLY

—Times

Land of the Pilgrims' pride?

There are many queer crimes committed in war time. An Australian gunner was courtmartialed in 1915 on the charge:

That he did, to the prejudice of good order and military discipline, at Serapeum, Egypt, tether a piece of cheese to a stake in the ground.

Mrs. Charlie Chaplin has sued for divorce because her husband was too serious and would not allow her more than \$250 a week. It is becoming harder and harder to suit our wives. Not every husband can be funnier than Charlie or afford his wife more than \$250 a week pin money.

If the Senate persists in its opposition to the acceptance of any mandates from the League of Nations we shall have to change a line or two in our national song, "Columbia, the Gem of the Ocean," for this quatrain is obviously incorrect:

Thy mandates make heroes assemble  
When Liberty's form stands in view;  
Thy banners make tyranny tremble  
Three cheers for the Red, White and Blue!

I suggest the following revised version:

Thy mandates make senators tremble  
When liberty's form stands in view;  
Thy treaties make statesmen dissemble,  
Three cheers for the Red, White and Blue.

The London *Times* describes the reception of the Prince of Wales at Ballarat, Australia, in this tactful way:

By the time the Prince reached Ballarat heavy rain was falling. Whatever the cause, the reception at Ballarat was noticeably less warm than elsewhere, tho this is not to say that there was any real failure in proper feeling. Nevertheless, the Prince triumphed again, carrying thru the open-air program in the pouring rain, with the wet dripping from his bared fair hair, and even receiving a present of an elaborate pair of silk pajamas—made by the hands of a number of working girls who devoted themselves during the war years to conspicuously devoted and successful war work—with no more than properly boyish self-consciousness.

Poor little chap, could not somebody hold an umbrella over him to protect his bared fair hair from the wet and to conceal his boyish blushes? It is to be hoped that the silk pajamas will tend to relieve that uneasy feeling caused by wearing a crown in bed.

## Far Reaching Credit

The basis of Commerce and Industry is raw material. The production, gathering and transporting of raw material through jungles, down tropic rivers, across many seas—all these operations are made possible by the far reaching power of credit.

The National Bank of Commerce in New York employs its great credit resources in furthering the processes of production, manufacture and distribution from raw material to final consumption.

Journalism As An  
Aid To History  
Teaching

By EDWIN E. SLOSSON, Ph.D.

Literary Editor of The  
Independent

Associate in the School of Journal-  
ism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers.—Write to The Independent, 311 Sixth Avenue, New York.

## How to Study This Number

## THE INDEPENDENT LESSON PLANS

English, Literature and  
CompositionHistory, Civics and  
Economics

## I. No One "Owns" Land.

1. Make a four minute political speech for the Single Tax party.
2. Plan and prepare (ready to be printed) a four page leaflet of propaganda urging men and women to vote for the Single Tax ticket in the coming Presidential election.
3. Write a brief for debate in opposition to the Single Tax program.

## II. The Old World's Homage to the Pilgrims.

1. Write a 1000 word narrative of the departure of the Pilgrims from England and from Holland.
2. Write a character sketch of any one member of the group that sailed on the "Mayflower."
3. Memorize for recitation a poem commemorating the Pilgrims.
4. Make an after dinner speech suitable to a banquet at which the guests are descendants of the Pilgrims met to celebrate the Tercentenary of the "Mayflower's" voyage.
5. Which incident of all those that Mr. Holt describes during the "Old World" celebrations of the Pilgrims seems to you the most impressive?

## III. The New Spirit in the Old World.

1. Give a brief talk in which you summarize Mr. Bicknell's observations as to the after-war conditions in each of the European countries.
2. Write a letter to a student of your own age in Austria explaining the attitude of the United States toward reconstruction in Europe.
3. "The bright spot in Western Europe is Belgium." Develop a short essay from this as an opening sentence.

## IV. The Next Congress.

1. Write an argument urging the election of (a) Republicans, (b) Democrats to the next Congress.

## V. The Story of the Week.

1. Give a short lecture summing up the important recent events outside the United States.
2. Write a letter, as if from a friend in Ireland, describing the riots there and pointing out the attitude that he thinks Americans should take toward Ireland's difficulties.
3. Write a description of the Soviet control of Italian factories, choosing two pictures from page 84 to illustrate your text.

## VI. Revival of the Gothic Grotesque.

1. Which of the six illustrations impresses you most forcefully? Why?
2. Write a ghost story or a mystery story to which one of these drawings would furnish suitable illustration.
3. Name at least one famous story by each of the following authors: Poe, Maupassant, Hawthorne, Hugo.

## VII. Pebbles.

1. Which of the jokes in this column seems to you funniest? Analyze your reasons.
2. Write four short jokes or humorous anecdotes either from your own imagination or from occurrences that you have seen. Show upon what element the humor of each depends.
3. Charlie Chaplin once said, "People may not know why they laugh at me, but I know." Does comedy or humor always depend upon skilful technique?

## VIII. An Empty House.

1. What form of verse has Mr. Starbuck used? Scan it. How many of the rhymes are perfect?
2. Can you find in the poem examples of personification, onomatopoeia, simile?
3. Write a short descriptive poem about something connected with your own home toward which you feel deep sentiment.

## IX. Wanted: A House.

1. Write a humorous sketch depicting the adventures of two people seeking a house in which to live. Have them consider a discarded street car, a houseboat, an old barn—anything else they might live in other than a dog kennel or a bird house.
2. If you were responsible for building a house for yourself, which of the types mentioned by the author would you choose and why? Write a description of its exterior, garden, etc.; its interior.

## I. Single Tax—No One "Owns" Land.

1. What is the "single tax" and why is it so called? Who was Henry George?
2. Mr. Macauley speaks of taxation on other wealth than land as "fines on production." What does this mean? Do you think this position sound?
3. If all taxation were laid on land and houses and other improvements were exempted do you think it would contribute to solving the housing shortage by forcing unused land into use?
4. Compare the single tax with Socialism. What points of difference do you note brought out in Mr. Macauley's article?

## II. Conditions in Eastern Europe—The New Spirit in the Old World. The Russo-Polish War. The Riga Conference. Polish-Lithuanian Boundary Dispute.

1. Name as many reasons as you can for the rapid recovery of Belgium and Czechoslovakia from war conditions. Explain why neighboring nations in western and eastern Europe have not been so fortunate.
2. How can American business men assist in restoring economic "normalcy" to Russia, Poland and Austria?
3. What is the Russian attitude with respect to Lithuania? What is the Polish attitude? Indicate on a map the (approximate) boundaries of an independent Lithuania.

## III. Bolshevism Abroad—Industrial Reorganization in Italy. Labor versus Bolshevism.

1. To what extent does the industrial movement in Italy show Bolshevik influence? In what respects does it seem more moderate than the Russian movement?
2. Why are the American Socialists and labor unionists opposed to the establishment of Bolshevism in the United States?

## IV. Latin America—Chilean President Named.

1. Compare political conditions in the countries of tropical America with those in Chile and account as well as you can for the greater stability of the latter republic.
2. What can you find out about the contested election of 1876 in the United States?

## V. American History—The Old World's Homage to the Pilgrims.

1. Tell what you can about the temporary Puritan settlements in Holland.
2. Did the Dutch themselves make any settlements in America?

## VI. The Constitution—The Next Congress—A Debate. French Ways and Ours.

1. Why is it important under our form of government for a President to have a majority in both Houses of Congress of his own political faith?
2. In what ways is the President controlled by Congress? For what purposes must he secure a two-thirds vote of the Senate?
3. Are there any features of the French constitution which you would like to see adopted in our own? If you do not like the French method of securing harmony between the legislative and executive branches of the national government can you suggest some other method of securing this result?

## VII. The Campaign—The Next Congress The Old Chief Enters the Battle. Republican Strategy. Has Harding Scrapped the League? Ireland and Article XI.

1. In what states are there Senatorial contests? Which of these states would you rank as "doubtful"? Based on this estimate, what is the greatest majority each party could reasonably hope to have in the next Senate? Do you think it possible for either party to control two-thirds of the next Senate? What is the significance of this with reference to foreign policy?
2. Is there a Senatorial contest in your own state? What two Senators now represent your state? What is their attitude toward the League of Nations?
3. What is the position of Senator Borah on the League of Nations issue? Of ex-President Taft? Which position do you think Senator Harding more nearly agrees with?
4. How does President Wilson explain Article X of the Covenant?
5. How is the Irish question affected by Article XI of the Covenant? Compare the opinions of President Wilson and ex-Justice Hughes on this point.

# The Independent

FOUNDED 1848

## The Cover

The Girl Scout that we publish on the cover of *The Independent* this week is reproduced from the poster which is to announce "Girl Scout Week" from November 6 to 15 and to ask for \$1,033,400 to carry on the work of the Girl Scouts for another year in the United States and its territories.

The Girl Scouts are one of the few national organizations who have not bombarded the country with appeals. Altho their membership is very large—\$2,176 Scouts in forty-seven states, and in 1184 cities of the United States, they have made only one previous general appeal for funds since their founding in 1912.

The budget of \$1,033,400 they are asking for includes a new building for national headquarters—equipment for Girl Scout Camps thruout the country, running expenses for all local organizations, salaries and expenses of staff including fourteen field organizers. The effort of these workers is to be directed toward developing a larger and better equipped group of volunteer leaders for the Scouts who are joining faster than the organization can care for them. There are already over 7200 volunteer officers in the United States in charge of Girl Scout troops as compared with only 211 paid workers in the service of national headquarters and all local organizations.

The public needs no argument for the Girl Scouts.

## Opening Nights

Alma Simpson, in concert, sang "Wiegenlied" and "Auftraege," the first German songs rendered here since the war. A varied program disclosed, somewhat disappointingly, a voice with skill and technique, but little feeling. (Carnegie Hall.)

*The Meanest Man in the World*, by Augustin MacHugh, gives the most popular man in the world—George M. Cohan—an opportunity to demonstrate that all's well that ends well. Delightfully humorous comedy, well played. (Hudson Theater.)

*The Barber of Seville*, Rossini's tuneful opera, is presented by the San Carlo Opera Company with a charming lightness and gaiety that brings out to the full the delicate wit and melodiousness of this popular piece. (Manhattan Opera House.)

*Hedda Gabler*. A Norwegian actress, Madame Borgny, from the National Theater of Christiania, gives us a new interpretation of Ibsen's most enigmatic character but makes her less interesting than did Mrs. Fiske and Madame Nazimova. Charles Laite as Tesman and Rolf Fjell as Judge Brack did good work. (Little Theater.)

*The Mirage*, an unmellow melodrama by Edgar Selwyn, affords the movie queen, Florence Reed, a chance to thrill in person that super sophisticated host of Metropolitan boobs who think all "life" is compassed in New York's "Great White Way." Sensible Americans who live in Erie, Pennsylvania, and other wholesome centers will find it unelevating and tedious. (Times Square Theater.)

## Remarkable Remarks

HERBERT HOOVER—A menacing factor today is the moral let-down.

SENATOR PENROSE—Maine has gone hell-bent for the Republican party.

MME. PAUL LAFORGUE—Not a stitch of underclothing do my children wear.

MRS. VINCENT ASTOR—I have not bought any new clothes for months.

CONGRESSMAN HARRY L. GANDY—The nation should be aroused to the danger of peyote.

KARL H. KITCHIN—The people of Richmond, Indiana, believe their city is the art center of the Middlewest.

ALFRED FANTL—Lack of exercise and excess of rich foods have ruined the figures of the majority of our well-to-do women.

PREMIER CLEMENCEAU—I am going into India's jungles to hunt tigers, which is much less dangerous than French politics.

REV. HENRY DAY—The khaki craze has passed, but maidenly modesty and reserve, in speech, dress and conduct leave much to be desired.

H. N. BRAILSFORD—A greener Europe, calmer, duller and less populous will sit down to revise the essay on population which Malthus wrote during the last universal war.

REV. JOHN R. STRATON—You cannot purify a polecat, you cannot denature a smallpox epidemic, you cannot make a rattlesnake respectable and reliable, and the only thing to do with the entire dancing mania, which has done more to corrupt the morals of this age than any other single force, is to destroy it, root and branch.

## Reflections in Vers Libre

On the Anguish of Being Driven by His Convictions to Enroll as a Democrat for the First Time in a Hitherto Blameless Career.

ME!

Son of two Republicans,  
Grandson of four,  
Related to ninety and nine others,  
Born to the tradition of the Civil War,  
northern exposure only,

Born in a Republican town of a Republican county,

Whose first clear memory, at the age of four,

Is of wearing a Major McKinley cap,

And shouting around the streets—

"Hooray for McKinley, Hobart and Ho-o-o-onest Money!"

ME, the adopted son of New York,

Where Democracy means the Tammany Tiger,

Politics corrupt and cynical, ashes of corruption and civic treason;

ME, the Roosevelt-mad, the enthusiastic Bull Moose,

The cheerer on election night of Roosevelt majorities;

ME: to make THAT a Democrat! . . .

O Lodge, Harding, Penrose, Wadsworth, SEE what you done!

## We Need a Newly Consecrated Americanism

The Message of the Republican Party to the American People

By Senator Warren G. Harding

**T**HE Republican party presents its platform and its record of national service for two-thirds of a century, and asks for the support which has been accorded to it thru-out most of its existence. It keenly recognizes that it is seeking an onerous responsibility; a responsibility proportioned not only to the crisis that confronts the nation and the world, but also to the measure of ineptness that has marked the conduct of national affairs in recent years. But our party has never evaded responsibility, and will not now.

For nearly three years the national administration refused to make any preparation for participation in a war that seemed almost certain to draw us in. It emphasized its devotion to unpreparedness by boasting, on the verge of our involvement, that it had kept us out, and pledging to continue keeping us out. Once in, it was forced to reckless waste and unstinted spending to make up for its failure in foresight. So, despite our advantage of timely warning that none of our allies enjoyed, our part in the war cost us vastly more than like measure of achievement cost any other country.

The most elemental statesmanship would have learned from all this the lesson that preparedness was necessary. Other governments, while engrossed in war, began preparation for peace. Our own refused to make ready for peace, with the same obstinacy that it had refused to make ready for war. So we emerged with our economics confused, our industry out of joint, our finances disorganized, our debt piled mountain high—and no plans for the future.

I say, no plans for the future; but it was really far worse than that. For instead of a program of constructive na-

© Underwood & Underwood

"We will have done with one-man rule," says the Republican candidate for President of the United States. "The substance and fact of common counsel shall replace the broken promise of it"

---

This article is the fifth of the series in which each candidate for President of the United States presents in the Independent his message to the American people.

---

tional rehabilitation, we found our national leadership engrossed with a chimerical scheme of reconstructing the world and making America the chief guarantor of the new order! Because the American people and their representatives refused to assume these obligations; they were punished by a denial of the legal state of peace that had been won on the battlefield. That denial has constituted a grievance to the public, an interference with business, an obstacle to resumption of foreign trade, a refusal of substantial peace-time rights to the people, and a means to keep the executive in possession of extraordinary war powers which ought not to be vested in him in peace.

During the war the Republican masses thruout the land, and their representatives in Congress, united to sustain the Government in every way. They put aside party consideration in Congress, and

supported the necessary war measures with a larger proportion of their voting strength than was accorded by their opponents. For this unstinted loyalty they were repaid with an autocratic demand that the country oust them from every place of official power and influence. That demand was emphatically rejected at the election two years ago.

Yet even that verdict was not enough to discourage the régime of autocracy at Washington. The same self-sufficiency that had refused to prepare in peace for war, or in war for peace, now assumed to dictate, in violence to the constitution, the after-war settlement of the world and our relations therein. Thus the obstinacy

of one man temporarily wielding a power which he would not divide with those constitutionally entitled to share it, delayed and prevented the settlement that all the world acutely needed. Political, economical and

© Harris & Ewing, from Paul Thompson

The Republican candidates, Governor Calvin Coolidge (left) and Senator Harding, stand together on a platform of constructive progress for "America first"

social demoralization spread in consequence to many countries, and the world in "peace" found itself engaged in more wars than before. It felt the very bonds of society disintegrating.

Seeing nothing that was going on in the world, interested only in its fantasy of a power league to prevent war, the Washington administration was deaf to all the pressing considerations of the domestic situation. Unstinted spending continued the rule, and a peace-time Pelion was piled atop a wartime Ossa of national debt. The Republican Congress, the election of which in the midst of war might well have served as an effective warning, sought to initiate policies of reconstruction and rehabilitation. To bring order out of the chaos of public expenditure, a budget system was devised and provided for by Congress, that would have enabled both system and economy. It was promptly vetoed. To insure the most effective employment of the merchant marine we had built and bought during the war, a measure of broad constructive policy looking to trade expansion and industrial growth, was passed. The executive signed it—and then announced that he would refuse to enforce some of its most essential features!

Small wonder that the country has lost confidence in the administrative capability of such a régime! It remembers the record of the Republican party, which first won the Civil War and then rehabilitated and unified the nation. Naturally, the country seeks once more

the help and direction that served it so well in that earlier crisis. These we offer to it, with the promise that we will have done with one-man rule, that the substance and fact of common counsel shall replace the broken promise of it.

There will be, there can be, no return to the old order that has ended. The common people—the people of whom Lincoln said that God must have loved them, because he made so many of them—have seen themselves lifted to a new level in the social and economic scheme of the world; and our problems of the future will be to maintain them there. We propose that so far as is humanly possible they shall be so maintained. That which has been saved out of the world's travail has been saved mainly because they were loyal to our civiliza-

tion; that which they have gained, they have earned a thousand times over, and are entitled to have preserved to them and to their children. We stand inflexibly against whatever suggests revolution or destruction; but on the other hand we stand for those wisely guided processes of social evolution which, running in seven-league boots in these times, tend to carry us forward and upward at a rate that no social movement ever before attained.

For these things and their attainment the Republican party gives its promise. It recognizes the [Continued on page 140]

At the Minnesota State Fair, held in the early fall in St. Paul, a veritable two-ring circus was conducted by Governor Cox and Senator Harding, who both spoke, to the effacement of the prize fruit and stock that had expected to get at least a slight amount of attention

## A Consistent Record

### In 1916 Senator Warren G. Harding said, In an article written for The Independent:

The Republican party has applied the best of thought and honest intent to the solution of all problems which attend exceptional growth, and means to go on—without stopping the growth—deliberately, orderly, conscientiously, neither yielding nor appealing to prejudice or passion, but strengthening the weak in the supremacy of the law, always seeking the ideal over safe and proven paths.

The European war has given us a fictitious, sectional prosperity, but it does not blind us to the depression likely to follow, nor to the industrial reconstruction which must be worked out, nor to the industrial and commercial menace of desperate Europe struggling, after peace is restored, for its own rehabilitation.

We want a real and righteous Americanism abroad, and we need a newly-consecrated Americanism at home. We want the spirit truly American and all-pervading, and we want an outward manifestation. We must be a people with one great ideal, one all-encompassing aspiration, one guiding hope, one common interest, one people and one flag. That's why I am Republican.

We must have a slogan of prosperity and we should make America prosper first.

The Republican party is too big to trail any man. The principles of the party stand ahead of any candidate.

# One Saving Grace of War

A Message from the United States Government to the American People

By William Mather Lewis

Director of the Savings Division, U. S. Treasury Department

**W**AS the war a great victory or a useless, costly experience for America? Some day the balance will be struck and this matter will be determined. And the answer will not come so much from the battlefields of Europe where our soldiers acquitted themselves so nobly as from the counting houses and factories and fields of America in reconstruction days. President Wilson suggested how this momentous question will be answered, when he said: "I doubt if many good by-products can come out of a war, but if our people learn from this war to save, then the war is worth all it cost us in money and materials."

In the latter days of 1917 when our Government was struggling with the problem of raising the staggering amounts called for by an embattled nation, a system was evolved, which enabled every citizen, no matter how small his financial resources, to lend something to the United States. The system was known broadly as "War Savings" and the securities offered were a 25 cent Thrift Stamp and a \$5 War Savings Stamp. As millions of people who had never before saved their money began purchasing these securities, they discovered that in giving aid to their Government they were, in fact, helping themselves.

Those in charge of the work saw its possibilities. The Chairman of the War Savings Committee said: "I see no reason why this should be merely a war measure. I think there may grow out of it a continuing plan to help the people of this country to save and for inculcating thrift into the national character, and if that can be done, if millions of little springs may flow into the reservoir of capital, our financial future will be pretty well assured." His words suggest the reason why the Treasury Department has continued the promotion of War Savings securities since the Armistice. It has seen the vision of what universal saving will mean to America, and, as its share in completing and perpetuating the victory, is striving to place the popular purchase of Government securities on a permanent footing, in order that the people of the country may be taught for their peace-time value the lessons of thrift and savings learned during the war.

In the true Democracy, every worker is a capitalist, every citizen has a financial reserve. The small securi-

ties offered by the Government offer a safe and sure road to such a Democracy. The lesson, like many others of great benefit, is not easy to teach. We have been termed a nation of economic illiterates. 1,250,000 people of America, whose working days are over, are dependent upon charity because the idea of saving was not popular in the America of their productive days. If the safety deposit boxes of the United States would give up their dead stores of fake securities, enough wealth would be disclosed to stagger the imagination. From \$400,000,000 to \$500,000,000 is the estimated amount gathered in each year by fake promoters in this country. Countless numbers of people are losing their hard earned savings each day because they lack knowledge of financial facts. America is overrun with "wild-cat" oil companies today. Such concerns flourish only where there is easy money, when people through incorrect spending habits, develop the "get-rich-quick" germ. No one has to look far to be persuaded of the Biblical statement that "A fool and his money are soon parted."

Economic knowledge has been confined to a few university professors, financiers and advanced college students. The science of finance is a closed book for most of us. When we are sick we consult a doctor, when we need legal advice we see a lawyer, but when the investment bug bites us, instead of consulting a reliable broker or banker, we sneak up an alley and pass our hard earned cash to someone who has hypnotized us with his fairy story of sudden wealth. The Treasury Department finds the answer to this condition in placing financial knowledge before the people in terms which even a child can understand. No greater opportunity has ever come to America than that of making economic literacy universal. It means universal financial independence, and universal financial independence sounds the doom of Bolshevism and industrial unrest, of the power of swollen fortunes. The possibilities of the Savings Movement salvaged from war activities by the Treasury Department are boundless.

That Government securities are the safest kind of an investment is believed by this proprietor of a fruit cart in Washington

Thrift stamps for children are advocated in the public schools of Washington where the members in lines such as this impatiently wait their turn to invest their pennies

The total amount of  
[Continued on page 141]

# Straws in the Wind

## The Results of the Independent Open Forum on the Presidential Election

G OVERNOR James Middleton Cox has won nearly a two-thirds vote from The Independent readers who have responded to our invitation of September 4 for letters on the Presidential contest. Senator Warren Gamaliel Harding has 32 per cent of the vote to 66 per cent for his Democratic rival. The odd two per cent are divided between Eugene Debs, the Socialist, and Aaron Watkins, Prohibitionist. This does not include a very considerable number of letters from correspondents who are still "on the fence" because they cannot make up their minds which ticket they like least!

We are glad that so many of our readers took part in our "straw vote," but our satisfaction is lessened by the fact that the very dimensions of the contest make it impossible to print, or even give extracts from, a quarter of the excellent letters which you have sent us. We will do what we can to give a typical cross-section of our readers' opinions, but the laws of space are as inexorable as the laws of time about which the poets have so much to say.

### Cox and the League

Practically every one of the Cox letters lays chief stress on the League of Nations issue. Many declare outright that but for this issue they would vote the Republican ticket. There are also many readers who consider Governor Cox personally more progressive than Senator Harding; but, generally speaking, the issues are placed first, the man himself second, and the party third.

"A Republican boy in the sixties" makes this plea for Cox and the League:

In 1918 the proposed League was essential in procuring the armistice. Since we profited by the truce and our ene-

Thomas in Detroit News

The League is the vital issue of the campaign

mies' acceptance of its terms, decency forbids we now repudiate this one of its fundamental provisions.

What mother—or father—having a son in the war zone will say the war should have continued rather than make peace on this basis?

What statesman will?

The armistice brought unspeakable relief and joy. I propose to honor its League foundation by voting for such as stand by it—Cox for President and some like-minded man for Senator.

GEO. M. HAGADORN

Anacortes, Washington

A veteran of the Great War writes:

As the situation now stands my vote will probably go to Cox. The League of Nations plank in the Republican platform means nothing to me except a refusal to face the issue. Harding in reference to the League has been indefinite if not evasive. Cox plainly and definitely said he favors going into the League. The Presidency demands of a man energy, courage, resourcefulness, power of decision and vision. If Harding were President it would

hardly be possible for him to stand around, delaying to act until such time as Elihu Root could return from Europe to advise him.

RAY KELLENBARGER

Anselmo, Nebraska

The League as a fire department:

Why Cox? Main question now: Shall Worldville have a live fire company, or dissolve the pick-up volunteer bunch and go back every man to guarding his own house alone with his own bucket? Old days stayed at home, and wondered about the fire-glow beyond the hill. Today, houses are too close together. Sparks fly. So, quench incipient blazes in Balkan Row and Scrappy Quarters before they catch hold in America Block. Harding says, "Not this plan," but "hopelessly approach"—and fiddle. Cox says, "I'm for going in." I vote for the Worldville Fire Company, and a chief who believes in it. Moreover, we have long observed here in Ohio, this: Harding's creed and career, the "grand old" machine, with him a dutiful cog; Cox's way, "What's needed? What'll work? Good. Come on, let's go!" Therefore, for 1920, Cox.

REV. IRVINE L. DUNGAN

Troy, Ohio

This is from a letter typical of many, pleased with neither candidate but anxious to save the League:

I shall vote for Cox tho I admire neither him nor his party. Harding is mediocre and his platform straddles all living issues. Cox is no better and his platform straddles every current issue except the League. I am straight out for the League. Therefore my course is clear.

HOMER FOSTER

Anaheim, California

Several letters stress the economic importance of League membership to America:

Economically the League of Nations is important to America, because American business prestige will be greatly weakened as soon as economic conditions are restored to normal. The nations already members of the

Stinson in Dayton Daily News

The Republican party is leading toward a rejuvenated Prussianism

W. C. Morris for The Independent

Nothing but rebellion and civil war could be worse than the Democratic administration

League, and they are the big majority of the civilized world, will not be too keen to buy from a country which stands aloof in international responsibilities. The world is economically too much linked together, and one country, however great, cannot afford to take an indifferent attitude toward world problems. This being the vital issue of the Presidential campaign, I favor, as an independent voter, Governor James M. Cox and Franklin D. Roosevelt.

NOAH ADLER

#### Stamford, Connecticut

I am for Cox, positive legislation, the League of Nations, and against Harding, negative inactivity, and international chaos. As a nation we have passed the colony stage in which a new country exports its raw materials to the mother country, and we have reached the point where we are exporting more goods to the world than we import—the second stage. If we are to keep on growing industrially we must attain to the third stage, we must go out into the markets of the world and meet foreign competition in order to sell our surplus products. We must invest capital in ships, docks, railroads, and warehouses, in South America, in Asia, in Africa, wherever opportunity for trade offers. In view of this, the League of Nations is an imperative necessity. Certainly we cannot hope to do business in a world which we do not help police. Surely it is our duty to lend, at least the weight of our influence, toward the maintenance of order on the seas, and in the countries with which we trade.

FRANK L. HORMEL

#### West Liberty, Iowa

And then we may consider the letters of some who are impressed with Governor Cox as man and statesman:

I shall vote for Cox, because he thinks straight, talks straight, and, as Governor of Ohio, has acted straight.

R. B. MURPHY

#### Grafton, No. Dak.

Cox is young:

Governor Cox should be near the best age of his life, while Senator Harding (ten to one) is on the decline. We should select younger men to fill our important offices. They are always abreast of the times and will accomplish big things that the older man would not attempt. I call your attention to Theodore Roosevelt.

ARTHUR ROBISON

#### Joy, Illinois

He is independent:

If elected, Senator Harding will feel responsible to his Republican associates only. If Governor Cox is elected, he will feel indebted to the ever-increasing independent vote. Governor Cox does not preach the pernicious theory that in voting for him you are simply voting for Tammany Hall, Tom Taggart and the whole Democratic outfit.

C. BENJAMIN IRWIN

#### Cuyahoga Falls, Ohio

He is energetic and progressive:

The Presidential contest lies between a Governor who has made a remarkably successful record as a state executive and a Senator who has never occupied an executive position, and whose legislative career has no outstanding points worthy of mention.

Cox, as his three terms as Governor of Ohio show, is energetic and aggressive. He is not afraid to hold his ground

against a storm of public criticism. The aggressive and progressive policies of Cox are largely responsible for his nomination at San Francisco.

With Cox as President we would be under an energetic leadership, which is much needed in this critical period at hand, and such as the country became used to under Theodore Roosevelt.

LOYD R. HILL

#### Avon Lake, Ohio

Some voters are dissatisfied with the unwillingness of Senator Harding to make himself a true party leader and assume responsibility for Republican policies:

Republicans who think like Taft on the League and yet follow Harding are in a very Micawber-like attitude, "looking for something to turn up" that will drive Harding and his masters into the League—a hope as unavailing as it ever was with Micawbers.

R. A. D. MORTON

#### El Paso, Texas

Now regarding Mr. Wilson, the Tzar, I admire him for his inflexible qualities. He never in any of his statements has boasted of his party or the man; he has never asked me to do anything of which I or any other would be ashamed. His Fourteen Commandments will go down in history with Moses' Ten. He came from Europe the idol of all humanity, except those people who believe that everyone has a price, and that like Napoleon he would want a crown. Those people, like the beggar, will always be with us, and Washington and Lincoln got spattered with the mud they threw, but mud will wash off and the parties who cast it will disappear and be forgotten.

I am for a One-Man Party when the man who is bossing it is for all humanity instead of a few and who will conduct himself as Mr. Wilson has.

D. C. HALLERAN

#### Independence, Missouri

There are some who believe that the Democratic party deserves support on its record:

Sir Isaac Newton said if he could see further than other men it was because he stood upon the shoulders of giants. The next President of the United States will be a greater man standing on the shoulders of Woodrow Wilson than upon the shoulders of such as Penrose, Smoot and Lodge.

H. N. CARNAHAN

#### Canonsburg, Pa.

In offering the Wilson brand of internationalism as the most potent antidote to that of Lenin, the Democratic party bids high for the support of the existing order. Our two "great" parties are both unfriendly to the dictatorship of the proletariat; but Democrats, more than Republicans, believe that certain features of our social order demand radical readjustments [Continued on page 136]

A Series of Monthly Articles Written from a First Hand Survey of Big Business Enterprises That Have Given the United States the Name of the Foremost Industrial Nation of the World

The big thing about the International Harvester Company, part of whose Chicago plant is shown above, is not that one of its factories makes 100 farm tractors a day, or that another has a weekly output of 1000 tons of binder twine, but that the company has done more than any other corporation on earth to make farm life attractive

The present office of the International Harvester Company, owners of the largest of the world's great farm machine factories

## The Farmer's Right-Hand Man

By Edward Earle Purinton

You can make hay any old day in the International Harvester Company plant, where each machine is put to a field test

**T**HE greatest manufacturer in any nation of the world is the American farmer. He produces more than any other class of citizen.

We don't realize the fact because he hasn't organized himself into a billion dollar corporation, to keep his name on the billboards and in the newspapers, with a catchy trademark for his products. But the fact stands.

In the United States there are some 40,000,000 people earning their living—or at least drawing their pay. Of these, about 13,000,000 work on the farm. The next largest class is the manufacturers and mechanics, totaling 10,000,000. In trades and transportation 7,600,000 are employed. The smallest class includes the professions—law, medicine, ministry, education and others, comprising only 1,800,000.

Last year the American farmer produced crops with an estimated value of \$15,873,000,000. Yet in the five years preceding the war the average yield of a farm products was only \$5,829,000,000. The farmer has nearly trebled his output—while the drift of an average factory hand, truck driver, coal miner, cobbler and plumber has been toward loafing as one kind of profiteering.

This farmer doesn't *talk* about "increased" production." He *gets* it. Regarding both acreage and yield per

acre, he surpasses in output all other farmers in the world, having crops 2.3 larger than British, 2.5 larger than the German, 3.2 larger than the French, and over six times larger than the Italian. And the American farmer uses only 40 per cent of the tillable land of the country, leading the world in spite of this handicap.

The most effective material aid to agriculture is the automatic farm machine, doing the work formerly done by four or five men, with operation or supervision by one man only. Machines of this type include the general utility tractor, the ditching machine, the new model harvester, the mechanical milking machine, the individual farm power plant, the "gang plow," turning three or four furrows on each trip, and the long-legged tractor cultivator which will cultivate corn up to four feet high, two rows at a time. A recent convention of the American Society of Agricultural Engineers took this text for a slogan: "Replace hand labor as much as possible with machinery." The president of the society stated that, in the face of prohibitive wages that farm laborers are demanding, and the general scarcity of such labor, mechanical devices must be used to the limit by farmers who hope to make a reasonable profit from their acres.

But plowing a farm isn't itself half as important as plowing the mind of the farmer. One good plowing and

sowing of the mind may yield a perennial crop of ideas and purposes, that you can plant for seed in the meadows of tomorrow, and of their fruitage reap a hundred-fold. The American farmer to-day *thinks* about his job. He is forever studying, experimenting, listening, reading, learning, improving himself and his work. His mind is open—but his fist closed on the tool of his trade. A winning combination.

The world's largest makers of agricultural implements are plowing and cultivating more fields of thought than acres of land. The big thing about the International Harvester Company of Chicago is not that one of the factories makes 100 farm tractors a day or that another has a weekly output of 1000 tons of binder twine, but that the company has done more than any other corporation on earth to make farm life attractive. Labor is most productive where life is most attractive.

The great common fault of education and production has been that neither was human. Profits are not first in manufacturing, nor books in teaching. The employer who is a slave-driver and the pedagogue who is a book-worm equally fail to get results. The six-horse team that everybody with a heavy-laden wagon of ambition must drive to reach the goal is made up of *Feeling, Thinking, Wanting, Knowing, Trusting, Doing*. No tractor ever made will do the work of this team; and until you get them harnessed you can't pull much of a load of ambition. The International Harvester Company aims to put this team on every farm, *whether or not* the farmer buys a reaper, truck or plow.

I have before me a map of the United States whereon 58,403 dots have been marked. Each dot represents a community meeting held under the auspices of the Agricultural Extension Department of the International Harvester Company, the total being the number of meetings during the first six years of the establishment of the department. These meetings, 800 a month for six years, were purely educational, with a total attendance of 9,340,591 people. The Harvester officials who conducted them traveled more than 1,200,000 miles, purposely to make farmers wiser, farming better, and farming communities more prosperous.

Why should a manufacturing and selling corporation thus resolve itself into an educational institution? We quote the official answer:

The Harvester Company believes that it is the duty of every business organization to build up the community in which it does business, aside from just the things it is required to do by law, or the things directly

Two men can do the work of ten, with a McCormick machine (left). How to produce enough to keep the machine from "lying down on the job" is taught by the McCormick demonstrators

beneficial to itself. This is nothing more than carrying out the obligations of citizenship.

The company sends its forces to help people who are willing to work and do something for themselves. If people are to succeed, they must work out their own problems; but the Agricultural Extension Department of the company will do all it can to help in whatever stands for the betterment of town and country—that which will raise the social, physical, and financial standards of the people throughout the country.

As to results, the company will be benefited just in proportion to the benefit its work will bring to others.

Facts and figures quoted in the I. H. C. campaigns are supplied from the demonstration farms of the company in North and South Dakota; where, for example, fifty-five head of steers bought in St. Paul, November, 1917, were fed so as to bring, when sold back, May, 1918, a gain of \$3,245.93; and where the yield of wheat was developed from twelve and one-half bushels per acre in 1893 to thirty bushels per acre in 1918—with acreage value increased from \$9.50 to \$61.20, based on comparative crops and prices. Would it not pay any farmer, any banker, any merchant, to organize in his community an I. H. C. agricultural club, with a proven possibility of increasing land profits \$51.70 an acre?

Do you know what happened out in Arkansas? The people of the state heard of the wonderful things being done by the Harvester Company Extension Department, and resolved to take advantage of the opportunity. They got together—farmers, bankers, teachers, preachers, newspaper editors, traveling men, railroad and express company heads, officials of the Federated Chambers of Commerce and Young Men's Business Associations—saw the need for a great Profitable Farming Campaign, and asked the Harvester Company to direct the undertaking.

Whereupon the company supplied thirty workers and 360,000 copies of booklets and leaflets on profitable farming, all free. Not to be outdone in generosity, the railroads of the state contributed more than \$18,000 in transportation, and for good measure the Rock Island printed and distributed 50,000 copies of a special 16-page publication. The bankers and business men of Little Rock gladly paid the hotel bills and incidental expenses of the central organization, amounting to about \$3,000. The State Superintendent of Public Instruction arranged to have the subject of better farming discussed by teachers everywhere, and 20,000 booklets distributed to their students. # The Unpuritanic Puritans

By Frederick Houk Law

Head of the English Department of  
Stuyvesant High School, New York

**M**OST people think of the Pilgrims—the first of whom disembarked from the “Mayflower” three hundred years ago, December 21, 1620—as being quite different from the Americans of today. The average person who thinks of celebrating the arrival of the “Mayflower” thinks of the early inhabitants of Plymouth as unusually solemn people who spent most of their time in listening to long sermons or in meditating on religious subjects. He could not imagine a founder of Plymouth smoking a pipe, dancing with a pretty girl, drinking intoxicating liquor, playing cards on Sunday, or even wearing fancy waistcoats. He would be much shocked if someone were to say that the first arrivers from the “Mayflower” stopped their work of building the beginnings of Plymouth long enough to rest—and drink beer! He would hardly admit that the Pilgrims had such ordinary aims as adventure, or money-making. Perhaps the Pilgrims have been made into such popular saints that we have forgotten the very real humanity that makes what they did, and the principles they put forward, so notably great. If an angel works miracles it is a matter to be expected; if an ordinary human being does wonders it is worthy of note.

The people who lived in old Plymouth in its first fifty years did not all come merely because they were saints. Even Myles Standish appears to have been a soldier of fortune who, having missed an inheritance in England, found service in the Dutch army. He was apparently ready for new adventure, and sailed with the “Mayflower.” That interesting young man, John Alden, went on the “Mayflower” because he was hired to go. The company needed a cooper, and engaged Alden at Southampton, he making the bargain that he could return to England at any time he wished. Of the 104 persons who came on the first voyage of the “Mayflower” fourteen were servants, brought by their employers for the sake of service. Four were seamen paid to come. Thirty-one were sons or daughters, many of them being little children, who accompanied their parents.

A certain Thomas Weston of London advanced financial aid to the Pilgrims in the name of a company known as “Merchant Adventur-

John Alden has become a hero who could do no wrong, according to our popular legends, but this tableau in the Pilgrim Tercentenary celebrations at Southampton, England, shows him being punished with his feet in the stocks. Nor does Priscilla here appear the shy retiring maid our fancy painted

ers.” He expected a full return. In 1622 he sent over two shiploads of men who had no other aim than to make money. The men were a poor and shiftless lot, quick to lie, always complaining, and the sort that finds amusement in ridiculing religion. They stole corn from both whites and Indians, and generally brought disgrace upon the people of the settlement. It is not necessarily an honor to be able to trace one’s ancestry to the early inhabitants of Plymouth.

Even the teetotalers find no comfort in studying the story of the Pilgrims. It is hard for the advocates of prohibition to picture the Pilgrim Fathers drinking beer—but drink beer they did. Shortly after the landing from the “Mayflower” on the first celebration of Christmas, the ship’s captain showed his good will toward his passengers by sending ashore a large supply of beer—which was received with joy and thanks. In 1646 the Pilgrims paid the cost of magistrates by levying a tax on wine, strong liquor, and tobacco—and the people of Plymouth bought enough of the articles named to provide the needed funds. At various other times laws were passed regulating the sale of drink and the licensing of inns. One law forbade anyone to take liquor from a cask on Sunday, except for medicinal purposes. In that respect the Pilgrims, narrow-minded as we think them, were more liberal than we are today. Another law forbade smoking in the neighborhood of a church.

One might have said with a feeling of certainty that no one in old Plymouth would have played cards on Sunday—but he would have been wrong. In 1663 a little group was found cozily playing cards on the Sabbath day—and “raided.” The playing of dice—“throwing craps”—must have been comparatively common, for in 1656 a law was passed whose object was to put a stop to dice playing in Plymouth.

At a masquerade dance it is always amusing to see anyone dressed as a Pilgrim. The thought of “Pilgrim” and “dancing” are inharmonious. And yet, in 1652, Mistress Mercy Tubbs was arrested for joining in “mixed dancing”—nor was she the only one arrested on [Continued on page 143]

Once we remember that the “Pilgrim Fathers” were young and adventurous we can credit the authenticity of this episode in the Southampton, England, Tercentenary celebration. It enacts the discovery of the refugee Huguenot who was smuggled from France in a cask to join in the voyage to the New World

# The Successful League of Nations

By Hamilton Holt

**I**N his now famous Des Moines speech of October 7, in which he definitely repudiated the League of Nations, Senator Harding said:

Our opponents are persistently curious to know whether, if—or perhaps I might better say when—I am elected, I intend to “scrap” the League. It might be sufficient in reply to suggest the futility of “scrapping” any thing that is already “scrapped.”

This statement is exactly opposite to the truth and shows gross ignorance of the European situation. The League on the contrary has already achieved more than anyone might have believed possible on January 10, 1920, when it officially came into existence.

I have just returned from a trip to Europe where—as on my two previous trips since 1918—I have devoted the major part of my time to getting into intimate touch with the League of Nations situation. I make no apology, therefore, in presenting at some length, the more salient things that have already been accomplished by the League, or are at the present moment engaging its attention.

In the ten short months of the League's life forty-three nations have become members. Evidently they have no fears that the Covenant violates their constitutions or limits their sovereignty or independence. Indeed at the very first meeting of the Council, Lord Curzon, the British delegate, took occasion to answer this purely American criticism by saying:

It has sometimes been said that the League of Nations implies the establishment of a Super-State or a Super-Sovereignty. The very title “League of Nations” should be sufficient to dispel this misconception. The League does not interfere with nationality. It is upon the fact of nationhood that it rests. The League is an association of sovereign nations whose purpose is to reconcile divergent interests and to promote international coöperation in questions which affect—or may affect—the world at large.

Of the three principal agencies thru which the League functions, the Council and the Secretariat are already completely organized and effectively at work. The third of these, the Assembly, will meet for the first time on November 15.

The Council has so far held nine separate sessions. At each one of them questions of world importance have been discussed and so far the members have been able to come to unanimous agreement on every issue.

The Council has already appointed the various commissions entrusted to it by the Covenant. Perhaps the most important of these is the Permanent Advisory Commission on Military, Naval and Aerial Affairs, which was organized at the San Sebastian session and is now at work. This commission is composed of technical military experts. Its principal duties will be to propose plans for universal disarmament; to advise as to the size of the armaments of the new states who apply for membership in the League; and to suggest plans for obviating the evil effects attendant upon the private manufacture of munitions and implements of war.

The Council has appointed an eminent commission of jurisconsults to work out the constitution of the Permanent Court of International Justice. This commission has already met and submitted its report. It is no secret that Elihu Root was the dominating personality of the commission and to him more than any other member is due credit for the truly admirable plan that was worked out. The court if accepted by the Council and ratified by the Assembly will be the first international tribunal on earth with original jurisdiction. The method of selecting the judges, which has baffled diplomacy since the failure of the Second Hague Conference to agree on a plan, has been happily solved by having the Council and Assembly select

the judges. Thus Elihu Root, who has done so little to help and so much to hinder the establishment of the League of Nations, finds that only thru the machinery of the League can his life dream of a Great World Tribunal be realized.

The Council has appointed a Provisional Committee on Communications and Transit. This commission is already engaged in preparing plans for a permanent commission. It will take up all problems connected with international ports, waterways and railways, and it has been especially charged with making an early report on the abominations that exist thruout the world and especially in Europe since the war began in connection with through tickets, customs and passports.

The Council has called a Conference on International Health, which was held in London last April and chiefly concerned itself with the measures to be taken against the spread of typhus in Poland. This conference proposed that a permanent health commission shall be added to the commissions of the League, and as a means of abolishing typhus in Poland it took measures to establish a chain of seventy-two quarantine stations and 200 hospitals.

The Council has commissioned the great Norwegian statesman and explorer, Dr. Nansen, to supervise the repatriation of the half million prisoners in Russia, ill-fed, almost unclothed, ravaged by disease and driven like slaves. Dr. Nansen has reported to the Council that despite almost insuperable obstacles which are being encountered in finding shipping and raising funds and in carrying out many-sided negotiations between allies, former neutrals and Soviet authorities, there is a fair chance of saving most of the half million soldiers before they starve to death this winter.

The Council has called an International Financial Congress which has just completed its labors in Brussels. Although full reports of the proceedings are not yet available I have read thru five carefully prepared preliminary volumes dealing with international trade, finance, currency and exchange, all embellished with diagrams, tables and colored charts. If the open conclusions openly arrived at in Brussels are anywhere near as significant as the preliminary work on the conference was painstaking and illuminating, the conference must have been an unqualified success.

**T**HE Council has taken cognizance of three international disputes, all of which might otherwise have led to war—those between Sweden and Finland, Poland and Lithuania, and Persia and Soviet Russia. I have only space to comment on the Aland Islands case between Sweden and Finland, which raises the vital issue of the rights of secession under the League. Finland claims the League has no jurisdiction over the case, as the Aland Islands are within her territory and the League cannot pass on matters of purely domestic concern. Sweden claims the League has jurisdiction of the dispute as a matter “affecting the peace of the world.” As Great Britain, a nation stranger to the dispute, has brought the matter to the attention of the League, we have here an almost exact parallel to what would happen if America should bring before the Council the question of Ireland's independence as Governor Cox says he will do if he is elected President. It is evident that if the Council decides in favor of Sweden's contention a weighty precedent will be established for bringing Ireland's case before the public conscience of the world.

The Council has taken up the case of Armenia. As the League has no army or navy or treasury of its own it cannot as yet take the mandate for that tragic country

But it is devising a plan by which some single nation may be authorized to assume the mandate under the collective guarantee of the League.

The Council has in addition to the above selected the commissions who will administer the Sarre Valley and Danzig, it has ordered the Secretariat to ask England and Japan to modify their treaty of offense and defense in the Far East so as to make it consistent with the Covenant, it has called an International Conference of Seamen at Genoa, it has heard India's claim to be included in the governing body of the International Labor Office, it has taken under consideration France's proposal to establish an International University at Brussels, it has admitted Switzerland to membership in the League with such reservations as are required by the Swiss constitution, and it has approved plans for sending a commission of labor leaders and employers into Soviet Russia to survey social and economic conditions there.

All this and more the Council has been doing since last January. The Secretariat has been equally active. I visited its temporary quarters at 117 Picadilly, London, and there collected enough information to fill this entire issue of *The Independent*. Suffice it to say that the League has already appropriated 6,000,000 Swiss francs to purchase the National Hotel and neighboring property at Geneva for the seat of the League, and there the Secretariat will shortly repair. The Secretariat now is divided into the following sections: Legal, Mandates, Health, Transit, Finance, Information, Economics, Political and International Bureaus. Sir Eric Drummond, the secretary, has under him 225 experts and assistants, all of whom are supposed to put the world above country and no one of whom, by decree of the Council, is allowed to accept decorations from governments while in office.

The International Labor Office, which was organized before the Council and Secretariat got in running order, is the farthest advanced of any of the Permanent Commissions of the League and is now functioning at Geneva under Albert Thomas of France, the director general, and a governing body of twenty-four representatives of labor and capital from the most important industrial nations. It has held two important meetings already, one in Washington and the other in Paris. The third will convene April 4, 1921, in Geneva, where agricultural questions will predominate on the program. At the first conference six draft conventions were approved. They included provisions for the eight hour day, protection of women and children in industry and the establishment of unemployment offices and insurance. These labor conventions are the Magna Charta of labor thruout the world and deserve the attention of all people interested in the progress of those who work for their livelihood.

The Assembly has been called by President Wilson to meet in Geneva, November 15. It will pass upon all the work done by the Council and the Secretariat and the Labor Office, which I have enumerated above, and in addition will make its rules of procedure, elect its president and vice-president, take up the admission of Germany and other states, discuss the coördination of statistics, devise a method of selection of the four non-permanent members of the Council (it is suggested that a new state be named each year to serve for a period of four years and not to be subject to reelection for the following period), apportion the expenses of the League, revise, if desired, the Covenant, and determine the question of mandatories.

This, then, is the League of Nations that Senator Harding tells the American people has failed. This is the League that is "already scrapped." This is the League that he would "turn his back upon."

What shall the answer of the American voters be? Governor Cox says if he is elected he will go into the League. Senator Harding says he will stay out. My Republican

friends of the League who are still supporting Mr. Harding justify themselves on the remarkable theory that he can be depended on to break faith with Johnson and Borah after the election and then come into the League. Assuming this to be so, he will undoubtedly come in with such a faint heart, with such a wry face, and with so many misgivings and reservations that I for one will not follow such a caricature of a leader. I think it more probable that Mr. Harding means what he says. If that is the case the United States will stay out of the League altogether, for the Senator's proposition to "declare" a separate peace with Germany—when he knows peace cannot be declared but must be negotiated—and to ask forty-three member nations to "scrap" the existing League, enter another Peace Conference and agree on some undefined experiment, cannot be taken seriously.

The question now confronting the American people is the greatest moral issue since slavery. Shall we play our part in substituting coöperation for competition in international affairs or shall we scuttle? We cannot scrap the League. We can only scrap our prestige as a world power.

Knowing that in case Mr. Harding is elected the verdict of the world will be that America has betrayed the League of Nations, I personally, must leave the Republican party, with which I enrolled last week, and vote for Cox and Roosevelt on November 2. And I make so bold as to urge all those Republicans who put patriotism above party to do likewise. I cannot believe that the American people, if the issue is fairly presented to them, will support Senator Harding's policy of "America last" in bearing her responsibilities for establishing the peace of the world.

## Page Finland, Sweden, Lithuania

The news that the League of Nations is a failure hasn't reached the Baltic nations yet.

## The "Wilson League"

OF all foolish political phrases the most so is "the Wilson League." To treat an organization created by the statesmen of all the Allied and Associated Powers, and now including four-fifths of the people of the earth as if it were the personal hobby of a single individual, is unpardonable confusion of thought. President Wilson did indeed contribute much in the way of detailed suggestion, but he would be the first to admit that the idea was an old one centuries before he was born and that it was inevitable that some attempt would have been made to realize the idea even if he had never lived. He leaves to his opponents the attempt to tag a world-wide association with a single name. To speak of the "Wilson League" is like speaking of "the Marshal Foch War" or "the Saint Luke Bible" or "the Milton English language."

## Good Old Times

THIRTY years ago the chief worry of the politicians was "what to do with the surplus in the Treasury."

Thirty years ago there was widespread discontent because prices were too low.

Thirty years ago anyone advocating labor unionism and collective bargaining was considered a dangerous radical.

Wonder what the world will be like in 1950?

## Who Will Govern?

THE man who will rule the United States during the next four years is still unknown and perhaps will remain unknown for several months after the election. Of course either Senator Harding or Governor Cox will be President. But neither man is of the type that prefers to make decisions alone. Both men eagerly assert in nearly every speech that they will listen to advice and work in

harmony with the statesmen of the party. Whose advice will they follow? Which advisers will they choose from the party? The whole character of the next Administration depends on that. If our next President is to have—we will not say a “boss,” but a right-hand man, a trusted party leader—who will he be? Since we are to return to Parliamentary rule, as a reaction from Wilson’s alleged “Presidential dictatorship,” the next President owes it to the public to make known his choice for Prime Minister.

### The Solid South

IT is a question whether the political solidarity of the eleven formerly Confederate states is an advantage either to themselves or to the Democratic party. As regards the Democratic party an emphasis on sectionalism and historic memories rather than on current issues makes for a corresponding sectionalism in other parts of the country. If South Carolina could once go Republican, Vermont might go Democratic. There is no inherent reason why the League of Nations should be more popular in Florida and Mississippi than in Maine and Pennsylvania, and a general “breaking of the ice” all over the union, making all states doubtful, would be better for a live Democracy than relying on the tradition of a Civil War in which the party was both in the wrong and in a minority. As for the South, its political solidarity deprives it of political influence. No one will nominate a President from a section that cannot by its decision determine an election.

### The Suffering Public Wakes Up

By Franklin H. Giddings

THE Rebellion of the Tenants has been less dramatic and less violent than the peasants’ rebellion in the days of Wat Tyler, but essentially the later protest has been like the earlier. It has obtained concessions, and new rights at law. Also it is probable that, like the understanding arrived at in the summer of 1881, the readjustments of 1920 will have enduring social consequences more important than the immediate economic relief.

A new stage has been reached in the evolution of “The Public.” A collective behavior has become more organized and more conscious.

Every now and then somebody asks, “What is the public? Is there any concrete reality corresponding to the phrase?” Always these questions are put whenever a legislature creates a commission with the proviso that one member of it shall represent capital, another member represent labor and a third member represent “the general public.” Socialists and other labor radicals, in particular, have waxed tiresome and puerile in their contention that, inasmuch as everybody is either a capitalist or a proletarian, there is no third estate, and “the general public” is a pseudo-conception to juggle with.

There has never been any real mystery about the public, nor occasion for any. The socialist argument is as childish as would be a contention that because everybody is a capitalist or a proletarian there is no such person as a wage earning stockholder or a bankrupt out of a job. As a stockholder an individual reacts to certain interests, he is in a certain state of mind, and he behaves in a particular way. As a wage earner he reacts to different interests, he is in another state of mind, and he behaves in another way. In like manner “all of us,” capitalists and proletarians, together are affected with a lot of interests to which we all alike react with a particular behavior and in a particular state of mind: we are producers. And all of us as “the public” are affected with yet a different lot of interests to which we react in a suitable way, in a specific behavior and in a specific state of mind: we are consumers.

This is the distinction. It is simple enough for anybody to grasp; but it is immensely important. Practically all

of us are producers. Practically all of us are consumers. As producers practically all of us are capitalists or proletarians. As consumers practically all of us are “the public.” When a commission is made up of representatives of capital, labor and “the general public,” the representatives of capital and labor should look after the interests that all of us have in production as well as the specific interests that capital and labor have in distribution, while the representatives of “the general public” should look after the interests that all of us have as consumers.

The public, therefore, is never something apart. It is always one term of a relationship. The shoe buying and shoe wearing public is made up of capitalists and wage earners, but as a body of consumers it stands over against the much smaller body of capitalists and wage earners who produce shoes. The traveling public is made up of innumerable groups of capitalists and wage earners, engaged in producing a bewildering variety of commodities, but as shippers and travelers they stand over against the capitalists and wage earners that own and operate railroads. The citizens of a state are occupied with all manner of productive undertakings but in their interests and capacities as citizens they stand over against their government as its beneficiaries. In one capacity only are all of the inhabitants of a national domain members of the same body politic or general public. They stand in this capacity in their relations to other peoples, inhabiting other national domains.

A “public” is always in one way stronger and in one way weaker than the body of producers to which it is related. It is stronger because it is bigger, and when it is aroused and organized, it is irresistible. It is weaker in so far as it is less homogeneous, less compact, usually less well organized, and less continuously “on the job.” The public, therefore, is irregular, uncertain and often erratic in its behavior. Corporations and governments can exploit the public, bully it, and tyrannize over it a long time and impudently before the clumsy collective creature rouses and rebels, but when that creature does rouse and rebel the offender may as well throw up his hands.

For three years the world has been going thru the most extraordinary experience of bullying, tyrannizing, and exploiting in all history. Bolshevism, German and Italian radical socialism, English labor radicalism and American I. W. W. ism are expressions of highly particularistic group interests including the so-called class conscious interests. They are organizations of the workers of particularistic industrial interests. Soviets are their natural organization. Over against them stands the vast general public of the world, composed of the consumers of all commodities, the beneficiaries of all useful services. This heterogeneous multitude has been long suffering. It has been slow to resent, and slower to organize; but it is awake, it is coming to an understanding of itself. It will not stand very much more nonsense. The day of wrath for the bullies, the tyrants, the wreckers, the fools and the lunatics is at hand.

$$2 + 2 = 4?$$

IF one hydrogen atom weighs 1.008 how much will four of them weigh? From what we have been taught in school we should answer 4.032, but it seems that this is wrong. For four hydrogen atoms go to make up one atom of helium and that weighs just four and no more. So Professor Eddington of Cambridge University told the British Association for the Advancement of Science at the recent Cardiff meeting. Here is a loss of weight of one part in 123, yet no matter has escaped in the process. All that has escaped is heat or electricity, in short, radiant energy, mere waves in the ether—if there is any ether. This looks like experimental proof that matter and energy are the same or at least inter-convertible. No wonder that conservatives like Sir Oliver Lodge call the followers of

Einstein "the Bolshevik of Science." Where is this relativity business going to stop? Have we got to give up that good old axiom that the whole is equal to the sum of its parts? It was a sufficient shock to our nerves to be told that an atom—the very name means the indivisible—could be split up into smaller pieces, but now we are told that the pieces weigh more than the whole atom.

## The Blind Ballot

ON November 3 the nation will know who has been elected, but politicians and historians will speculate for many years as to the reasons why. It is a pity the voters cannot write on the ballots the reasons for their choice. As things are, a President may ascribe his election to some issue on which he actually lost votes and may neglect some mandate which the voters intended to give him.

## Nothing But—

By Preston Slosson

BY one phrase you may know the superficial thinker. He is forever belittling and oversimplifying this complex maze of a universe. He does this by the magic wand of "nothing but—." The motives which urge a nation to go to war are "nothing but" malice and greed. A capitalist cares for "nothing but" money; a reformer for "nothing but" self-advertisement. Religion is "nothing but" dread of the unknown, or ancestor worship, or the cunning of a priestly caste or whatever other explanation is adopted. The universe contains "nothing but" matter or (if he be a Christian Scientist) "nothing but" spirit. These hard logicians with their cruel, simple creeds, so thoroly convinced that black and white are the only colors and that the mechanism of the human mind is no more complex than that of a wheelbarrow, are sincere enough and often useful in times of revolution. But they are always wrong. For the truth is never simple.

The most certain fact about God is that whatever we know about him cannot be the whole truth. It may be true as far as it goes, but the finite can never measure the infinite. The most certain fact about Nature is that science will always have new mysteries to reveal. Just when men felt most confident that the atom was the ultimate building stone of the universe, the physicists found in radium the key to unlock another complex universe within the atom itself. We know that there are sounds too high for the ear to hear; we know that there are colors beyond the red in one direction and beyond the violet in another which the eye cannot see. Our five senses touch the real universe at five points and we say of the imperfect copy of reality thus obtained: "Such is the universe we live in." But a more highly organized being than man might have a thousand senses as unintelligible to us as sight would be to a man blind from birth. We know of only three dimensions. But we cannot deny the possibility of thir'y.

What is true of Nature is true of man, Nature's most complex product. If you ask a man the reason for his conduct in a particular matter he will doubtless give you a reason, the one most prominent in his consciousness at the time. But in all probability his course of action has been determined not by that factor alone but by a blend of motives and impulses, conscious and subconscious, which he himself could never analyze. To take a concrete case; why did the Kaiser permit Germany to declare war? Many historians will give some simple and single motive. But it is more probable that the Imperial mind was a whirling chaos of conflicting thoughts and emotions at the decisive moment. Memory scraps of what he learned in youth of Hohenzollern traditions; a mental picture of some bright day on which he watched his army in sham battle and thought "If this were only the real thing—"; a fondness for this English friend balancing a distrust for that Eng-

lish diplomat; a chance newspaper phrase which irritated him; jealousy of the popularity of some member of his Ministry; a rehash of old opinions and prejudices about Russia or Austria or France; a golden dream of Bagdad; recollections of casual conversations with his generals and admirals as to the state of Germany's defenses; apprehensions as to what attitude the Socialists might take—all these and a thousand other factors battled and blended until they coalesced in the final act of will.

As Browning pointed out in *Bishop Blougram's Apology* and other dramatic monologs, you have only to dig deep enough into a hypocrite to find a great deal of sincerity. Few people wholly pretend to believe what they do not; but very many make themselves believe, or half-believe, what it is to their interest to think. Even our simplest acts, such as leaving the office for a noon luncheon, have complex causes; what we call hunger is a blend of physical hunger, anticipatory delight of palate, habit, social custom, and desire for a break in the day's work. As for our more specialized decisions, such as voting a ticket or choosing a wife, or joining a particular church, our reasons, great and small, are as the sands of the seashore for multitude. Every human mind is a Congress, and decisions are obtained after warm debate and many roll calls. Instead of saying, "I made up my mind to become a lawyer rather than a doctor because it paid better," the man who could truly account for all his mental processes (only no such man exists) would say: "My mind gave a majority of 125 votes for being a lawyer over all other occupations; financial considerations casting about 60 per cent of the winning vote. The medical profession came a fair second, and scattering votes were cast for journalism, teaching, business and burglary." "Nothing but" is nothing but nonsense.

## A Ghostly Conference

THESE are the times when unseen presences make themselves felt all about us. Seances are in session everywhere, but the most marvelous of them is that held in the historic Blackheads Hall at Riga. Here, according to the despatches printed in the most reliable newspapers, the representatives of the Polish Government met the representatives of the Russian and Ukrainian Governments to conclude a peace. The representatives of the Lithuanian Government, who are likewise negotiating peace with Poland, were also reported to be present. The American Commissioner to the Baltic States, Captain Young, attended at the invitation of the Latvian Government and sat in a box alongside of the British, French, Italian and German representatives.

Now in the eyes of our Government no one of these five Governments except the Polish is in existence! Kerensky is still President of the Russian Republic and Boris Bakmetieff represents him at Washington. Russia remains united as under the Czar, except for Poland and Finland. The Baltic States have never seceded and Ukraina is unknown. It must then have been a weird experience for Captain Young to sit in that box at the invitation of a non-existent president and watch the invisible delegates and listen to their inaudible speeches as they transacted their impossible business. His companions could see them all but he could not unless he were disloyal to his own Government. To his eyes the Poles were alone in the great hall talking and gesticulating to the empty air on the other side of the green table. But hold, since Esthonia, Latvia and Lithuania, according to the Colby note of August 10, are not in existence and cannot be till united and democratic Russia gives her consent, there can be no "American Commissioner to the Baltic States" and Captain Young must himself be a spook. Or else we must conclude with Hamlet that there are more things in heaven and earth than are dreamt of in our politics.

# The Story of the Week

## Harding's Foreign Policy

IN an address at Des Moines, Iowa, Senator Harding expounded his attitude toward the League of Nations far more explicitly and emphatically than in his speech of acceptance or any of his subsequent addresses on or off the Marion "porch." Iowa is considered a sure Republican state and the candidate has been very chary of his visits even to doubtful states, but he wished to strengthen the position of Senator Cummins, whose railroad policy has been attacked by the labor unions. Senator Harding referred to his colleague from Iowa as "one of the ablest statesmen of the present time and one of the most useful men in public life," and spoke of the Esch-Cummins Transportation Act as "the most progressive measure and the most constructive act of Federal legislation enacted in a decade." Then he turned to foreign policy. He asserted that "the Paris League" had already been "scrapped" by President Wilson's obstinate refusal to accept the reservations desired by the Senate. He would have nothing to do with the "clarifying reservations" proposed by Governor Cox. He declared:

I do not want to clarify these obligations; I want to turn my back on them. It is not interpretation but rejection that I am seeking. . . . I understand the position of the Democratic candidate and he understands mine. . . . In simple words, it is that he favors going into the Paris League and I favor staying out.

This declaration identifies Senator Harding's position entirely with that of Senators Johnson and Borah and the other 'bitter enders.' As long as the existing League of Nations lasts, Senator Harding, if elected President, will keep the United States out of it no matter what reservations may be suggested on either side of the Atlantic. The Senator added, however, that when the present League had been thoroly scrapped and abandoned the United States, acting alone, would devise another League and that Europe would be glad to enter it. "The world

will be glad to have us formulate the plan and point the way." But altho, if we are to take his wording literally, the United States will devise the new League all unaided by foreign statesmanship, Senator Harding refused to assume the responsibility of formulating the plan personally. This duty would fall to the Senate.

There are many

and conflicting opinions among the people and among the members of the Senate upon the subject. These opinions must be reconciled and harmonized if we are to have any international association for peace at all . . . As soon as possible after my election I shall advise with the best minds in the United States, and especially I shall consult in advance with the Senate, with whom, by the terms of the Constitution, I shall indeed be bound to counsel and without whose consent no such international association can be formed.

In a further speech at Omaha, Nebraska, Senator Harding elucidated with equal frankness other features of his foreign policy. He will not have the Treaty of Versailles ratified on any terms; on the contrary he would have Congress "pass a resolution declaring a state of formal peace" and he would sign it. The break with our associates in the Great War is, apparently, to be complete, for we would not only make peace outside the terms of the Treaty negotiated at Paris but would bring home the American army of occupation on the Rhine "just as soon as we declare formal peace." He even declared that the American soldiers in Germany "haven't any business there." With respect to Great Britain he asserted on the one hand that he "certainly wouldn't have the United States Government in

any capacity dominated by Great Britain," and on the other hand that with respect to Ireland he would not "care to undertake to say to Great Britain what she must do any more than I would permit her to tell us what we must do in the Philippines." America and Europe are, it would appear, to go their several ways in completest isolation from each other. This new elucidation of Senator Harding's policy has been jubilantly welcomed by one wing of the Republican party and received in consternation by the other.

## Parsons Bolts G. O. P.

LEUTENANT Colonel Herbert Parsons, former chairman of the Republican County Committee in New York, has announced that he cannot support Senator Harding's recent stand on the League of Nations issue. This announcement created a nation-wide stir, for while it is true that many pro-League Republicans, including men and women of prominence in various walks of life, had declared for the Democratic ticket as the only way to secure ratification of the Covenant, the ranks of professional politics and the "organization" had hitherto held firm. It was a new thing to find a veteran party leader placing principle above party fealty. Mr. Parsons said in part:

The League of Nations offers the one practical opportunity for this generation to unite the nations in an effort to prevent war and effect disarmament. Democracies only make striking changes under the stress of great emotions. It was while fresh with the recollection of the millions of lives lost, the terrible suffering endured and the billions of property destroyed that the people of the world would, if at all, rouse themselves to an arrangement designed to prevent repetition of such a horror. The fainter the recollection became, the less was the likelihood

### OUR NEXT PRESIDENT

Will look something like this. For this is a composite picture made by superimposing photographs of the four leading candidates: Harding, Cox, Debs and Christensen

Knott in Dallas News

They never let him in to see the big show

of action. We are told that the American people are tired of the League. They will be more tired of it after March 4. Less will be possible then than now.

Harding's expressions scattered thru his speeches about an association of nations, an amended League and preserving what is good in the treaty—expressions plainly designed to secure the votes of pro-League Republicans, but intermingled with expressions equally designed to give comfort to those who wish the League scrapped—have induced many distinguished Republicans, who desire to see the United States enter the League, to support Harding. They are being deceived. Harding will not accomplish anything constructive. All his talk is mush.

He says he has no international program and that it is folly to be specific. He is a member of the Senate and of its Committee on Foreign Relations, and has thus had before him the Treaty and the League for over a year, and he now says that he does not know what should be done. He never will know. He is negative and sentimental. On one point he is definite: He is not for what, after a year's consideration, he voted for in the Senate, the League with the Lodge reservations, altho this is the solution which would come nearest to satisfying American aspirations and is substantially what will work out by the election of Cox.

## Spencer Versus Wilson

SENATOR Spencer of Missouri has been nominated for the Ananias Club by President Wilson. The Senator claimed that in a secret session of the Paris Peace Conference President Wilson had pledged the diplomatic representatives of Serbia and Rumania that American military aid would be sent if those countries should ever be endangered by a foreign foe. Secretary Tumulty denied that such assurances had been given, but Senator Spencer questioned Tumulty's authority. Then Wilson wrote directly:

I wish to state that your statement was called to my attention by Mr. Tumulty, and that I requested him to issue the denial to which you refer. I reiterate the denial. The statement you made was false.

Senator Reed of Missouri supported his colleague's assertion. Various journalists have given, in slightly varying form, President Wilson's assurances to the representative of Rumania in the plenary session of May 31, 1919. As the meeting was secret, no one outside of official circles has the

exact text. But Mr. Fred Carlson of Chicago, official American stenographer, has forwarded to Washington his version of the words of President Wilson and this has been given to the press as a more accurate report than the English retranslation of a French translation of President Wilson's speech on which Senator Spencer appears to have relied.

The truth of the matter seems to be this: Premier Brătianu of Rumania and several other representatives of small states expressed some resentment at certain features of the peace settlement. The Rumanians particularly objected to placing the rights of national minorities within the country under international guarantees. President Wilson arose to pour some oil on the troubled waters of the Conference. He reminded the little nations of eastern Europe that they owed their independence, their security and the enlargement of their territories to the good will of the Allied and Associated Powers and pointed out that, since their territorial integrity was guaranteed by the military forces of those Powers under the Covenant of the League of Nations, these Powers had a right to see that the territorial settlement and the position of minority nationalities in the newly acquired areas were such as to promote peace and not war in the future. He did not, however, commit the United States specifically to any undertaking not already agreed to in the League of Nations Covenant itself; still less did he enter into any "secret treaty" or other special agreement with Rumania and Serbia.

© Keystone View

HE'S STILL FROM MISSOURI

Senator Spencer, of Missouri, started a considerable controversy when he charged in a campaign speech that President Wilson had promised Serbia and Rumania the aid of the American fleet and army if the integrity of their territory was threatened. The President denied the truth of the statement and offered to leave the issue of his veracity to be decided by the voters, who are from Missouri, too

THE AMERICAN LEGION'S NEW COMMANDER

Soldier, sailor, business man—Colonel Frederick W. Galbraith has won distinction as all three in turn. He started his career on the sea; he left it to please his mother and went into business, becoming eventually treasurer of the Western Paper Goods Company and international vice-president of the Rotary Club. He foresaw the war before most men and held a commission in the Ohio National Guard for years. He led the 147th Infantry thru the Meuse-Argonne fighting in France, was wounded there, and awarded the D. S. C. and the Croix de Guerre with palm. Since the war he has been commander of the American Legion in his state—Ohio—and he built up its membership there from 16,000 to 44,000. As national leader of the Legion he is going to work first for the interests of the disabled soldiers

## The German-American Bridge

THE agreement between the American Ship and Commerce Corporation, of which W. A. Harriman is president, and the Hamburg-American line for the revival of the carrying trade between Germany and the United States has provoked a good deal of discussion. It has been charged that the agreement was unduly favorable to the German interests and was in fact camouflage for the revival of German mercantile sea-power. Mr. Clegg, vice-president of the Kerr Steamship Company, commented:

The fundamental principle of equal participation is just only after contributions and sacrifices are equal. It would be bad enough if the Hamburg-American Line contributed nothing yet secured equality, but, as the operating agreement is at present drawn, the Americans contribute everything and are repeatedly and consistently penalized. . . . If Shipping Board steamers are operated under this contract the loss to the taxpayer will be enormous with no compensating benefit such as building up the carrying trade for the future. If the provisions of the Jones Bill are enforced, an American marine can be sustained without an alliance of this one-sided character.

On the other hand, Admiral Benson, chairman of the Shipping Board, declared that while the Board had not yet passed on the terms of the Harriman shipping contract: "I have given it my personal approval as chairman, and

believe that it is the greatest thing that can be done to establish the American merchant marine." Mr. Harriman denied that the agreement was one-sided or sacrificed American to German interests:

The American company pays no money to the Hamburg line except for service actually rendered to the American company by the Hamburg line.

The contract gives to the American company the use of the facilities, experience and established trade routes of the Hamburg-American Line. During the twenty years of the contract the American company has complete control of all activities of the Hamburg Line in the United States. The contract gives the American company the right to participate in 50 per cent of all business originated in Hamburg by the most important shipping agent in Germany. Without this contract the American company would have no right whatever to participate in that business.

The American company assumes but one definite obligation, namely, to act as agent in American ports for the Hamburg Line. In all other respects the American company shall put its money and effort only in directions which appear to it to be profitable.

## Night Riders Once More

A few years ago the tobacco growers of the South combined to fight low prices. A few of the wilder spirits threatened personal violence and destruction of property against those who sold their tobacco at an unreasonably low rate. As their reign of terror involved the aid of friendly darkness these terrorists took the name of "night riders." Now the night riders are abroad once more, but this time to keep up the price of cotton.

Their method is to post notices on the ginneries warning the owners that no cotton must be ginned at less than forty cents a pound. A box of matches is sometimes left with the notice as a silent threat of destruction by fire. Mercantile establishments selling raw cotton wholesale have also been ordered to close their doors while prices remained low. In a few instances ginneries and stores which disregarded the warnings of the night riders have been burned and others have had to be protected by armed guards. The Governors of the cotton states have offered rewards for the arrest and conviction of night riders. Rumors are spreading among the negroes that under cover of the night riding movement of the cotton farmers the Klu Klux Klan is being reorganized with political as well as economic motives.

## Uncle Sam's Boys and Girls

THE Census Bureau has at last completed its general count of the population of the United States, exclusive of outlying possessions. The number of inhabitants in the continental United States is 105,683,108. This is an increase of 13,710,842 or 14.9 per cent. since 1910. This increase is less in absolute numbers than that from 1900 to 1910 and less proportionally than in any previous decade. This falling off in the rate of increase is due almost wholly to the cessation of immigration from Europe after the Great War broke out; minor factors are the general downward tendency of the birth rate, the loss of American lives in the Great War, and the heavy death rate during the great influenza epidemic.

For the first time in American history more than half the population is living in urban territory; 54,816,209 per-

"KEEP CALIFORNIA  
WHITE"

The implication of this campaign slogan by which Senator Phelan is seeking reelection from California is justified by prejudice rather than by facts. Japanese and Americans get along amicably on our Western coast except when the professional agitators stir up trouble. As some one phrased it, "It's not the Yellow Peril we need fear, but the Yellow Journalism Peril"

Lothers & Young

sons are resident in incorporated places of at least 2500 inhabitants; 50,866,899 in small villages or rural districts. The number of farms has increased by only 1.5 per cent during the decade and, while there has been some increase in the population of the small villages, the population of the open country shows an actual decrease. One does not have to seek far for an explanation of the high cost of foodstuffs. The manufacture of munitions during the war accelerated the cityward movement.

## Keeping the Lid on Mexico

THE Mexican Government is in the position of a cook whose dishes are all coming to a boil at

once. No sooner is one outbreak attended to than another demands instant action while a third starts to simmer in the distance. Fortunately President De la Huerta and President-elect Obregon and Minister of War Calles have been able to cope with each difficulty as it has arisen, tho not to attain that stable peace which prevents new rebellions from breaking forth. The bandit leaders Villa and Zamora have retired to private life; the rebellion in Lower California has come to an end; the military authorities have ordered the arrest of Rodolfo Herrero, who fled to escape the accusation of having murdered the late President Carranza; General Felix Diaz has recently surrendered after five years of continuous revolutionary activity; political strife in the local governments of the states of Michoacan and Aguas Calientes has been moderated by a policy of watchful neutrality on the part of the Federal authorities. These are no mean achievements for a few weeks of resolute administration, but it must be disheartening to govern a country where a new crisis must be faced each week.

The latest outbreak was in Mexico City itself and bears the brand of "Bolshevism." On September 26 a number of radical workingmen gathered under the red and black banners of the communist party, cheered the Russian and Italian revolutions, listened to incendiary speeches and invaded the balconies of the National Palace. The Government did not interfere with the demonstration but announced later that such lawless conduct would not be tolerated in the future.

Apart from the ever-present danger of a new revolution-

© New York Tribune, Inc.

Going about it in just the right way to start one!

any movement the Mexican Government seems secure. Obregon has thus far worked in harmony with President De la Huerta and his partisans control a majority in both branches of the national congress. Some legalists have contested the legality of Obregon's election to the Presidency on the ground that he had taken part in the revolutionary movement which overthrew Carranza and was thus, under the Mexican constitution, ineligible for office. But none of these critics have the power to make their constitutional theory, whether sound or not, practically effective. It is a drawback to the Mexican Government that the United States has not granted it full recognition, but the main obstacle to recognition appears to be the attempt of the Mexican authorities to carry into effect the Carranza laws respecting alien ownership of oil lands. The American Government has regarded some features of the oil laws as confiscatory of American property rights. If a compromise can be reached on this point it is probable that the Mexican Government will be recognized as there is no question of its *de facto* authority thruout the greater part of the country.

Even if the Obregon Government becomes as thoroughly established as the old regime of Porfirio Diaz, the long years of revolution will leave many an embarrassing legacy. Over ten thousand claims for damages have been filed, principally by Mexicans, for losses sustained during the ten years of disturbance. The Fall committee in the United States Senate estimated American property losses at over \$500,000,000 and placed the number of American citizens in Mexico or on the border killed during the last decade at 784.

## China and Russia

THE Soviet Government has accomplished a clever diplomatic stroke in offering to renounce all the concessions and special privileges that imperial Russia had wrested from the Chinese.

The acceptance of this offer by China has put the other powers, especially Japan, in an embarrassing position. If they fail to follow suit the Chinese will be more favorably inclined toward Bolshevism.

In the famous Colby note of August 10 our Government took the ground that the Soviets having illegally usurped power in Russia, had no right to dispose of any of the territory or privileges of the old empire. Our Secretary of State called upon the European powers

Williams in Indianapolis News

Just when your favorite fruit is right!

powers, especially Germany, intended to make the payment punitive rather than restitutive. The United States after satisfying the claims of its nationals remitted the rest to China and it is being spent in educating Chinese students in America.

But since our Government has renounced part of its share of the Boxer indemnity it cannot with propriety object to Russia's renouncing all of hers. It would look rather peculiar for the United States to intervene and to compel China to pay what Russia now refuses to receive.

Ever since the Czar's overthrow the Chinese Government has been paying the Russian share of the Boxer fund to Prince Kandacheff, who had been appointed Russian Minister to Peking by Kerensky. Of course none of this money has reached Russia but it has been used to support not only the Russian minister in Peking but the diplomatic representative elsewhere, including the United States. Altho the Soviet has been the only real power in Russia for nearly three years, it has never been recognized as a *de facto* government by the United States which holds that Kerensky is still in power and treats his appointee, Boris Bakhmetieff, as the Russian Ambassador to this country.

But the Chinese Government deprives all these absentee officials of support when on September 23 it issued its mandate declaring that:

As the Russian Minister to China and all the Consuls now in the territory of the Republic are no longer in a position to represent their country, the treatment which has heretofore been accorded them as diplomatic and Consular officers is hereby suspended. However, inasmuch as this nation remains as friendly to the Russian people as before, it is but proper that the lives and property of all these Russians now peacefully residing in this country shall be as fully protected as heretofore.

As to the internal political trouble in Russia, we still maintain our neutrality, and will act in accord with the allied and associated powers.

The American Government has instructed Minister Crane to inquire into the action of China and has opened negotiations with other powers looking to concerted action in opposition to such a course. It is proposed to protect Russian interests by an international receivership.

The Soviet Government also restores to China the Chinese Eastern Railroad which forms the short cut of the Siberian line thru Manchuria to Vladivostok. This road is now held by the Japanese who regard it as essential to maintain communications with their troops in Siberia. The Russian tea houses at Hankow are ceded to China.

The Russian note says further:

The Soviet Government restores to China without any compensation whatsoever the mining, forest and all other privilege concessions of which China was robbed by the Government of

Mrs. C. B. Hamilton, of Grand Rapids, who is running for State Senator, is the only woman candidate on the Republican state ticket of Michigan this fall. She won her nomination after a hotly contested campaign against the standpat politicians who either feared or resented the idea of giving the voters a chance to elect a prominent suffragist and civic welfare worker, and a woman, at that!

the Czar, the Government of Kerensky, of the brigands Horvath, Semenoff, Kolchak and Russian generals and capitalists.

The Chinese Government is preparing to take possession of the Russian railroad, mining and forest concessions but if this is attempted it will bring about a conflict with Japan and other powers.

Another embarrassing feature of the affair is the relinquishment by Soviet Russia of the rights of extra-territoriality for her nationals. All foreign nations in China maintain their own consular courts where alone cases involving their own nationals may be tried. The reason for this was that the Chinese courts were corrupt and cruel and could not be trusted to deal justly with foreigners. The same system of the exemption of foreigners from native laws and judges formerly prevailed in Japan, Turkey and Egypt. But it has been abolished in all these countries and the Chinese Republic is naturally anxious to receive the same recognition of its status as a civilized state. The United States and the European powers are not yet ready to follow the example of Soviet Russia, yet it is hard to see how they can prevent China from taking this opportunity to recover her property and privileges.

## Poles Seize Vilna

WHILE the Polish delegates were parleying over peace terms with the Lithuanians at Suwalki and with the Russians at Riga the Polish General Zellgouski took possession of the Lithuanian capital, Vilna, and set up an independent government. His action is apparently instigated by the success of d'Annunzio, who with a body of Italian troops seized the city of Fiume after it had been refused to Italy. Vilna is well inside the ethnic frontier and was conceded to the Lithuanians by Soviet Russia in the recent treaty.

The "Central Lithuanian Government" which has been set up by the mutineers of Vilna is headed by the Polish Nationalist leader, Abramowicz. A proclamation of the new government claims control over all of the territory north of Niemen river, including the cities of Grodno and Lida, recently captured by the Poles from the Russians. Another proclamation promises the prompt convocation of a Diet.

Ostensibly General Zellgouski is acting without authority from the Polish Government and he and his chief of staff sent their resignations to the Polish army headquarters by telephone before establishing their provisional Government at Vilna. The commander-in-chief of the

Polish northern army, General Sikorski, has publicly disavowed the seizure of Vilna. But the Council of Foreign Affairs of the Polish Diet at Warsaw has passed a resolution favoring the annexation of Vilna to Poland. The annexation movement finds support among the Polish landlords of the district in question, but the peasantry is largely Lithuanian. The importance of the strip from Grodno to Vilna lies in the fact that it separates Lithuania from Soviet Russia, which the Poles are very anxious to accomplish.

At the Paris meeting of the Council of the League of Nations recently Paderewski, the Polish delegate, and Woldemar, the Lithuanian delegate, agreed to leave the question of the boundary between their countries to a conference of the contestants to be held at Suwalki under the auspices of the League. The Lithuanian Government has now protested to the League against this violation of the armistice by the Poles "under the treacherous pretense of a mutiny" and Leon Bourgeois, chairman of the executive committee of the Council of the League, has ordered an investigation of the occupation of Vilna.

It was at Vilna that the recognized Lithuanian Government was organized when the Russian revolution first gave the Lithuanians a chance for freedom, but later the Poles took Vilna and the Lithuanian Government had to remove to Kovno, sixty miles west. Last August the Bolsheviki drove the Poles out of Vilna and restored it to the Lithuanians.

Lithuania has been recognized as a *de facto* Government by all the Powers except the United States. Our Government took the ground in the Colby note of August 10 that Lithuania and the other Baltic states had no right to claim independence until after the Soviet Government was overthrown and Russia restored in her entirety. But since the League of Nations has not only recognized Lithuania but has become its protector against Polish encroachments we have the curious spectacle of President Wilson acting in opposition to the League of Nations on this question.

## Polish Russian Truce

AN armistice has been arranged between the Polish and Russian representatives at the Riga conference. A provisional boundary line has been drawn from Drissa on the Dvina river at the north to Kamenets-Podolsk on the Dniester river at the south. This gives Poland considerably more territory than was allowed her by the decision of the Supreme Council on December 9, 1919. The strip of

territory between Grodno and Vilna that is claimed by Lithuania, but held by Polish troops, lies to the west of the new line and it is provided in the armistice that Lithuania and Poland shall settle their ownership between themselves. During the armistice and until peace is concluded both armies shall keep fifteen versts (ten miles) away from the boundary line.

The armistice comes into effect on October 18 and will run for twenty-five days, tho either party may revoke it on forty-eight hours' notice. If it is not broken for twenty-five days it will continue in effect automatically for an indefinite time, but may be broken on ten days' notice. The armistice must be ratified within fifteen days. The document is written in the three languages, Russian, Polish and Ukrainian, all versions equally valid.

The peace treaty will secure the rights of minorities and allow free choice of Polish or Russian citizenship. Indemnities for war losses and damage are reciprocally renounced. Removable state property of economic and cultural importance such as libraries, art collections and memorials shall be returned on both sides. Poland is to have the right of transit thru Russia and Ukraina and *vice versa*.

Both contracting parties assure each other complete respect for their state of sovereignty and agree to refrain from any kind of intervention in the internal affairs of the other. Moreover, both agree to include in the treaty obligations neither to create or support organizations which have for their purpose an armed struggle against the other contracting party, nor to seek the destruction of the existing state and social order of the other side—meaning an attempt against territorial integrity, as well as the organization assuming the role of the government of the other side.

This means on one hand that Poland shall cease to be used as a base for military operations against Soviet Russia and on the other hand that the Bolsheviks shall cease their efforts to start a Soviet movement in Poland.

The ceremony of the signature took place in the historic Hall of the Black Head Knights at Riga on the evening of October 12. The room was crowded with the two hundred spectators, including Lettish officials and the entire diplomatic corps. The Soviet delegation entered the hall first and took seats on one side of the long table. When the Poles entered the Bolsheviks rose to greet them and the two chairmen shook hands across the table. Then the Russian version was read by Joffé, the Polish by Dombbski and the Ukrainian by Manuilski, a tedious proceeding since there are about thirty articles in the document.

A treaty of peace between Soviet Russia and Finland was signed at Dorpat on October 6. Peace had previously been concluded with Esthonia, Latvia and Lithuania, so if the Polish armistice is followed by a permanent treaty

Soviet Russia will have made peace with all five of the Baltic States.

It is reported that the Soviet Government has made peace overtures to Baron Wrangel, who has been invading the Ukraine from the Crimea. He is now making desperate efforts to gain Odessa and the whole Black Sea coast before the peace with Poland enables the Soviet to turn its forces against him. He is being aided by anti-Bolshevik risings in the Ukraine. The Bolsheviks are said to have been expelled from Kiev, the Ukrainian capital, and from Nikolaiev on the Bug river. Kiev has changed hands half a dozen times during the revolution. The loss of Nikolaiev breaks the railroad connection between Moscow and Odessa.

## Lloyd George on Ireland

THE British Premier in a speech to his constituents at Carnarvon, Wales, on October 9, laid down the law on the Irish question in his usual trenchant fashion. He said that 280 policemen had been shot in Ireland during the past year and 109 of them killed. The police are in uniform; their assailants are civilians, undistinguishable from others until they shoot. This is not war but murder. The Sinn Fein leaders do not say a word in condemnation of such crimes. The people refuse to give information against the criminals either because they sympathize with them or because they fear they will be murdered if they do.

Even if you cut Ireland adrift and let an independent republic be set up that will not satisfy the Irish. Ulster will not have it. "While we are trying to restore peace to the world we do not want to negotiate for civil war at our own door." There could not be an independent republic in Ireland any more than we could have one here in Wales.

The Southern States of America had just as good a right to set up an independent republic as Ireland, Wales or Scotland. They were a distinct community. Mr. Gladstone thought they should have been allowed to do so at that time. History now shows that Abraham Lincoln was absolutely right in saying there is a limit to the right which even a separate community has to tear up a large combination which has been working together for the common ends. That is the limit in Ireland.

WINNER OF THE INTERNATIONAL AIR RACE

The French aviator, Lecoq, flying over his own country, won the Gordon Bennett Aerial Cup race this fall, the first international air race. The American contestant, Schroeder, met an accident in landing before the race was flown

If Ireland has Dominion Home Rule as Mr. Asquith advises, Great Britain will have to keep a large standing army recruited by conscription. Ireland was our worry during the war tho we did not say much about it. Every Irish representative in Parliament approved of the war at the start but the Irish are a changeable people.

In 1916 they were shooting down in the streets of Dublin British soldiers, many of them not recovered from wounds received in the war. In 1917 and 1918 they were conspiring with German submarines, and we discovered documents in the pockets of men who were arrested in 1918 showing that they were prepared within two months of a German offensive that they knew of to raise a huge force in Ireland to stab Britain in the back when it was engaged in a life and death struggle for the freedom of the world. What a chance you are asked to take to trust the destinies of Britain and the empire to a people who are apt to get fits of passion that sweep away all reason and make them swing violently from one extreme to another in the middle of a great conflict.

# A Little of Everything

## From Wing to Paddle

"From Wing to Paddle" might be the title of the interesting transition by evolution which time has wrought in the structure of the fore-limb of such vertebrates as birds, fishes and reptiles. It is assumed that the ancestry of, for instance, the penguin had to pass thru a long series of fore-limb modifications before the flipper-like wing of the penguin was developed. Thru an examination of explained specimens of white bones mounted against a black background, the modifications in shape, area and structure of various types of fore-limbs, conforming with their special functions, may be demonstrated. The transformation is of course brought about thru various adaptations of muscles and outer coverings as well as skeletal modifications.

To be adapted to flying a limb must be light and at the same time strong enough to support a large surface of membrane or feathers spread for flight. For this reason such wing-bones are hollow, slender and strong.

For swimming, a limb must be strong and it must furnish adequate support within the space of a comparatively narrow paddle, so the bones are solid, stout and short. The degeneration of the wing may be traced downward from the classes of birds that fly high, soar and remain on the wing for extended periods, as in the case of the vulture or eagle and hawk, to the birds that fly rapidly and soar but little, as the swallow, or to birds that fly heavily and do not soar, as the turkey and hen, and finally to the birds that do not fly at all but use their wings as an aid to running rapidly, as does the ostrich, or that use them to paddle in swimming as does the penguin.

The fore-limbs are divided into generalized and specialized types. The simpler and more generalized the organisms, the lower the form of life. In chang-

ing from wing to paddle the fore-limb of the manatee is the most specialized and that of the beaver, most generalized. The snapping turtle offers another example of the generalized fore-limb, for it has no special modifications to adapt it for any special purpose such as flight. The fingers and digits are much alike, the bones of the wrist or ankle are numerous and similar to one another, as in some earlier reptiles and little motion is possible between the bones of the forearm.

The vulture and eagle, on the other hand, have a specialized fore-limb adapted for rapid and powerful flight, and flight only. In this case, the wing has a good sailing surface, being large in comparison with the weight of the body and long in proportion to its width. Of its three digits or fingers two are small, and the three probably correspond to the third, fourth and fifth fingers of the human hand.

Ascending further in the scale of life, the fore-limb of the monkey is still more highly specialized, being primarily adapted for grasping and climbing. The fingers are long and somewhat curved, the first finger or thumb being in a somewhat different plane from the others so that it may be opposed to them for seizing firm hold of objects. The bones of the forearm move freely, affording the monkey facility in climbing.

Highly specialized for aquatic life is the fore-limb of the penguin. Altho called a wing, it is useless for flight and is modified to form a paddle, the bones being solid and flattened. The feathers are small and scale like. The muscles which raise the wing are stronger than those which lower it. Here the adaptation is just the reverse of the wing muscles of the vulture, each modification being the result of a peculiar need.

Then there is the sea turtle, with its paddle like fore-limb, highly specialized for swimming in which the bones,

American Museum of Natural History

Mr. Penguin, of the Antarctic regions, has developed, according to his needs, a wing that is no use for flying but very efficient as a paddle

American Museum of Natural History

In these forms can be traced the evolution of animal skeletons to meet the change from flying to swimming. Left to right the examples are: (Top row) beaver's fore limb, coot's hind limb, pelican's hind limb, (second row) hen's fore limb, beaver's hind limb, sea turtle's fore limb, swan's hind limb, (third row) great auk's fore limbs, frog's hind limb, (bottom row) penguin's fore limbs, sea-otter's hind limb, manatee's fore limb

elongated and flattened, give additional width. They are completely enveloped by a sheet of skin to form a flapper, as is also the case with the forelimb of the manatee, popularly known as the "sea cow." On the other hand the fins of fishes are not believed to have been derived from or to have passed thru any stage comparable to those passed thru by the limbs of other vertebrates, but to have been developed thru folds of membrane; an entirely different sort of evolution.

## Outwitting the Measles Germ

There is no doubt that the great armies of contagious diseases that in times past, and indeed up to the very present, have swept over the world wiping out vast numbers of the earth's population must ultimately meet complete defeat by modern preventative measures. Already smallpox and yellow fever have succumbed. Others, including the treacherous measles germ, are losing their deadly grip.

The measles germ itself does not do

violence to mankind, but the condition in which it leaves its victims paves the way for the onslaught of a more vicious band of germs—chiefly those producing pneumonia and tuberculosis.

The serious results of measles in army camp life led to a study of "prophylactic inoculation against measles" by Major A. W. Sellards. The men used in the experiments were selected with the greatest care to eliminate any who might by any chance be immune to the disease. Furthermore, all those persons who showed any trace of infection of the respiratory system were refused for the experiments, as were also those who had had a recent attack of tonsilitis. It was the plan of the investigator to conduct the work in a most cautious manner, in order to avoid the risk of a large number of men becoming infected.

The first step in the work showed that the injection of blood taken from measles patients into those who showed no record of ever having had the disease did not produce measles. In all,

eight individuals, who so far as it was possible to determine were susceptible to measles, were inoculated with the blood serum of measles patients. None of these contracted the disease or showed any symptom of an attack, however slight.

That it was not possible to produce an attack of measles in this way does not, according to Major Sellards, prove that the virus of measles is absent from the blood of infected individuals. There was obtained by subsequent studies considerable evidence that these men under experiment were perhaps rendered immune to the disease by the blood injection. When it became apparent that not a single case of measles was going to develop as a result of the blood injections, two of the men were selected to test what the result would be if they were exposed to measles germs in the ordinary way. These two men had the mucous membrane of the eyes, nose, and throat inocu-

Wide World

### A BICYCLE DIVE

A number of sensational dives into the Seine were made by French athletes, including a cycle dive from the end of a cantilever bridge just under the Eiffel Tower

lated with secretions from the mucous membranes of a measles patient. Furthermore, they remained in the room with the patient (a little girl five years old) and played with her for three-quarters of an hour, but they did not contract the disease.

This pioneer work indicates that in the not very distant future science will have the measles germ upon the run.

## On the Side

In the first eight months of 1920 automobiles killed 427 persons in New York City.

\*\*\*

Skunks yielded \$1,000,000 worth of hides to New York State farmers and trappers in one year.

\*\*\*

The United States built more than half of the world's shipping tonnage produced during the Great War.

\*\*\*

During the last fiscal year Federal and state expenditures on road building amounted to \$250,000,000.

\*\*\*

In the last hundred years the number of Federal officeholders has increased ten times as rapidly as the general population.

\*\*\*

Officials of the census bureau estimate that in the United States there are 26,500,000 women eligible to vote this November.

\*\*\*

Fewer passengers and employees were killed on American railroads in 1918 than in 1910 in spite of the increase in volume of traffic.

## Hurrah for the City Manager

There are eighty-six cities in the United States which at present are governed by a city manager. Have they prospered? Here is the answer:

Grand Rapids, Michigan, has the lowest tax rate of any city in the state.

Wichita, Kansas, ended the year with a current surplus of over \$56,000.

Portsmouth, Virginia, saved \$44,000 the first year.

Jackson, Maryland, sold potatoes and fish at less than market rates.

Waltham, Massachusetts, reduced debt \$80,000.

Alameda, California, has the lowest infant mortality of any city in the United States.

Sandusky, Ohio, wiped out a floating deficit of \$18,500.

Albuquerque, New Mexico, recovered stolen goods to exceed total cost of police protection by over \$3000.

Auburn, Maine, ran a Chautauqua at an average charge of 12 cents per entertainment.

San Angelo, Texas, reduced the fire insurance rate from 56 cents to 31 cents.

Norwood, Massachusetts, established a public market and canning kitchen.

Glendale, California, reduced tax rate 5 per cent.

Goldsboro, North Carolina, raised a bond issue of \$90,000 without increasing taxes.

Sumter, South Carolina, has had more improvements in last five years than in all its previous history.

Cadillac, Michigan, by virtue of its city manager, has "done away with all feeling at election time."

Albion, Michigan, has purchased \$10,000 Liberty Bonds.

Taylor, Texas, has saved \$2 per capita the first year.

Fredericksburg, Virginia, saved \$152,602 from current expenses.

Towanda, Pennsylvania, finds no more opposition to the city manager plan.

Morehead City, New York, has paid old debts and ended the year with a surplus.

Birmingham, Michigan, has sold coal at cost.

Largo, Florida, is "well satisfied."

All the remaining cities would make as good a showing had we the space to enumerate the good things that have happened to them since they adopted the city manager type of government.

A word to the wise city is unnecessary.

# Straws in the Wind

(Continued from page 119)

for the common welfare. These readjustments promise the safest guarantee of the status quo.

The Republican party, by its championship of intensified nationalism and short-sighted isolation, is leading toward a rejuvenated Prussianism. Its bitterness against Article X betrays unwillingness to respect territorial integrity and bares the motive to imperialistic aggression.

The apparent success of the great Republican money "drives" is significant. Are those men of "Big Business" who donate so lavishly to resuscitate "normalcy" quite sure that the easiest way to crush Bolshevism is to enthrone special privilege and reaction?

WILLIAM Y. WARD, M. D.

*Ivanhoe, Texas*

Mr. Cox will receive my vote because he heads the party that out and instituted the Federal Reserve law that saved our country from panic and the civilized world from bankruptcy; because his party assembled and outfitted in incredible haste an army and navy that saved the world from despotism; and because his party will enact the best treaty of peace ever thought out, and that maintains Monroe Doctrine not only for America, but also for all other countries no matter how small or great.

CARRIE KENDALL EASTERLY.

*Bartlesville, Oklahoma*

And here is the unique reason for voting the Democratic ticket from a Kentucky farmer's wife:

I am a middle-aged farmer's wife and will cast my first vote this November. I intend to vote for the League and against Mr. Harding, because my husband champions the Republican combination.

I believe hundreds of farmers' wives will act on the same principle. Why? Because in most cases the farmer is an ignorant man and narrow—largely because he has not had the advantages of schools, clubs and libraries that broaden folks. Now, when a man lives to himself, or his tribe, he becomes selfish and *stingy*. Usually a farmer makes plenty of money—if he hasn't made money the last few years it's because he didn't stay on the farm. But does he split 50-50 with his wife? Does he have the rooms papered, or buy the victrola the children have been mad for, or have a sink put in the kitchen? Indeed, he does not. The pump is convenient to the barn rather than the dwelling; a farm tractor with latest improvements is indulged in.

Editor, do you see what I mean? Ask any farmer's wife—I am not speaking of the landed gentry—and they'll tell you mine is no exceptional case.

## Harding and the G. O. P.

The Cox vote is a pro-League vote, but the Harding vote is not an anti-League vote. Not a single correspondent seems to occupy the position that he will support the Republican ticket just because it opposes the League of Nations. Some, on the contrary, believe that the Covenant is ultimately as safe in Republican hands as in Democratic and that Cox has raised a false issue. Some hold that other questions are of paramount importance. Particular emphasis is laid by nearly all our Harding voters on the party question; the alleged inefficiency

of Democratic administration in general or during the last four years in particular, and the superior ability of the Republicans to find able men for office. Directly reversing the order of emphasis among the Cox voters, the Harding supporters place the party first, the candidate second and the issues last.

Here is a lucid statement of the average Republican position on the League:

Dr. Williams has given the true basic facts and his arguments cannot be met. I do not, however, share his apprehension as to the fate of the League. We are going into it in due time, but with our nationality fully protected and all doubtful points made clear. Senator Harding's statement has opened the way to full readjustment, and with Mr. Root at hand to advise, the results will satisfy the nation.

WM. HOYT COLEMAN.

*Narberth, Pa.*

A native of Ohio, tho now resident in another state, testifies from personal knowledge as to the fine quality of the Republican candidate:

Harding was once defeated for governor because he stood for prohibition and for a rigid enforcement of the local option law then in force in the State of Ohio. Senator Harding's paper, *The Marion Star*, is clean of all sensational stuff, absolutely safe for the reading of any boy or girl in any home. He, who makes his newspaper and his community morally sound and safe for the protection of the thousands of homes in Marion, Ohio, him can I trust with the safety of the millions of homes in our great American republic.

THE "COUNTRY PARSON."

A "small town" vote:

As an independent Republican I am supporting Mr. Harding as against Mr. Cox because of his evident broader grasp of the vital matters which confront our country. Someone has called Mr. Harding a small town politician. He may be, but his small town training enables him to see thru the maze of conflicting conditions which surround us and propose a true remedy.

J. J. JEWETT.

*Riverton, Wyoming*

Cox and Harding contrasted:

Approved by, and, on the League at least "at one" with Woodrow Wilson, the election of Cox means nothing less than a third term for the Cambridge school teacher. Nominated by Tammany of New York and the Taggarts of Indiana, his election cannot mean a thrill for the mothers and fathers who would live under a stainless liquorless flag.

Always eager for the advice of his fellows; cautious as to radical moves or measures but proven in his ability to fight for his principles to the last, Harding will win in November by the greatest plurality the nation has ever sent a patriot to pilot the Ship of State thru a trying sea of national turbulence and international chaos.

HAL CROUCH.

*Muskogee, Oklahoma*

But it is the contrast between the Republican and Democratic parties which is the burden of the majority of the Harding letters:

History shows that the Republican party can command the confidence of the country

the better. Even with his disappointing platform, yet with a great running-mate, an accordant senate, and swayed by public opinion, and influenced by the visioned men of his party, will not our chances be better with Harding?

EDMUND A. FREEMAN.

*Hinckley, Maine*

I am going to vote the Republican ticket because nothing but rebellion and civil war could be worse than the Democratic administration. They have squandered one-tenth of the wealth of the country, and are still bidding for loans at six per cent. interest, while the industries of the country are crippled by lack of funds and high interest. Predatory wealth and predatory labor have both been turned loose to prey on the public, in the fond hope that they would remember the favor and keep the Democratic party in power.

Practically everything that the farmer has to sell is on the free list, while everything that he has to buy is protected by a tariff.

The Adamson law, which turned the railroads over to the labor unions, put a premium on laziness and inefficiency which is costing the country millions of dollars every year.

The civil service law has been largely nullified by the Democratic administration.

The Democratic party has been weighed in the balance and found wanting, the Republican party is still on trial.

WM. C. COLEMAN.

*Peculiar, Mo.*

I shall vote the Republican ticket on November 2nd, 1920, because:

1st. I have greater confidence in the statesmanship of the Republican party to formulate the terms upon which the United States may enter a League of Nations. I feel that such men as Elihu Root and Wm. H. Taft, to name only two, should have the opportunity to help directly to work out this great problem; a problem second, but only second, to that of our own national existence and welfare.

2nd. I have greater confidence in the financial policies of the Republican party.

3rd. I believe the Republican party represents evolutionary, as against cataclysmic, progress. . . .

WALDO H. DUNN.

*Wooster, Ohio*

Mr. Williams's reference to the negro question in the South called forth several letters on both sides. Here is the reason why Cox cannot count on any large fraction of the Afro-American vote:

I cannot understand the Democratic state of mind, so well exemplified in the present administration, that keeps on regarding the Negro as a negligible quantity in our political and economic life. No race respecting Negro can vote to continue such a political party in power. Here the Negro may well rest his case against the Democratic party whose entire history, with one exception—Grover Cleveland whose administration was repudiated by his party—has been unfriendly to him. However liberal he may be, Cox will find it impossible to break thru the anti-Negro blockade that his party has thrown around the White House. And he does not seem to be the type of man that is going to make any very serious effort to do so.

NATHAN B. YOUNG.

*Tallahassee, Florida*

This general summary of the merits of Republicanism may fitly conclude our examination of the case for Harding:

The Republican party will be victorious in November, because both its candidates and platform are superior to those of any of its opponents. The great industries—farming, mining, shipping, and manufacturing—will vote for the party that will protect their products. The laboring men will vote for the party, that will guarantee employment, fair wages, and fair laws. The women will vote for the party, which has already ratified the amendment in over twenty-five states. The former soldiers will support the party, which backed them up in the war. These important forces in America (all American) will decide the election in favor of Republican law enforcement, economy, and efficiency rather than Democratic extravagance and breakdown. The nation desires a party of deeds—not creeds; a party of action—not promises.

LAURENCE R. CAMPBELL.  
Los Gatos, California

### Outside the Big Parties

Mr. Watkins, the third Ohio candidate, finds a champion from his own state:

The debate between Messrs. Hapgood and Williams greatly interested me. But they failed to declare the whole truth. They brought into their discussion, along with that of other vital questions, the workings of the Fifteenth Amendment, but had not a word to say concerning the Eighteenth. In view of the fact that there are attempts, both by evasion and by legislation, to nullify this last named amendment, as well as the other, their silence in that respect seems more than significant. It was nothing more nor less than an effort to shield their candidates whose records on that question will not bear inspection. The political party that ignores that question is cowardly and reactionary, and not progressive, whatever may be its claims in that regard.

O. F. GEIGER.

Mendon, Ohio

A young college graduate will cast a protest vote for the Socialists:

I am not a Socialist; neither am I a Democrat nor a Republican. But because my state compels party affiliation in order to cast the ballot, I am registered under the last-named party. This fall I shall cast my first ballot for President of the United States, and I frankly admit that it will be for Debs. Why? Well—

In the first place, I have nothing to say against the candidates of the two so-called major parties. They apparently are taking care of that themselves. But I do say that they were nominated, not because they were the choice of the people, but because they were the choice of none-too-honest politicians.

Now regarding Mr. Debs. Certainly he is not the type one would vote for President of the United States under normal conditions. He has done many things which I think he should not have done; but he apparently believed they were right. And that is why I admire him as a man—he has the courage of his convictions.

Another reason why I shall vote for Mr. Debs is that a large Presidential vote for the Socialist candidate at the present time will be a stinging rebuke to the Democratic and Republican parties and will probably bring them to their senses before the next national conventions.

G. STEWARD WYCKOFF.  
State College, Pennsylvania

**J**UST as one instance of Monroe's supremacy—the Bethlehem Steel Co. has increased its figuring equipment from 2 Monroes four years ago to 126 Monroes today.

Not only Bethlehem, but thousands of other businesses large and small—Standard Oil Co. with 94 Monroes, Du Pont with 62 Monroes—are extending Monroe equipment throughout their offices, proving that once you put the Monroe on the job in a single department, your own business judgment will prompt you to adopt it for every department where figure-work is done.

For you will learn, as these offices have learned, that the Monroe is *first* on accuracy, *first* on speed, *first* on adaptability to your figuring needs.

Monroe does not confine its figuring service to big industry alone; it is serving and saving as well in over 14,000 smaller offices every business day.

*The Monroe makes figuring as easy as turning a crank.* Let a Monroe demonstrator show you how the Monroe will clean up the figure-work in your office—mail the coupon today.

*Even a single re-order is a strong endorsement. Here is the way 15 of the biggest concerns in the country have increased their equipment of Monroe Calculating Machines:*

## Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

**Dr. Esenwein**

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

## The Farmer's Right-Hand Man

(Continued from page 121)

The campaign covered forty-nine counties and lasted six weeks. Every day some two or three thousand farmers and business men were addressed.

What was the net cash result? The chairman of the Profitable Farming Bureau of the Little Rock Chamber of Commerce says: "The Profitable Farming campaign added \$30,744,150 to the value of the agricultural products of Arkansas. This is proven by government statistics."

Almost everybody knows that the reaper was invented by Cyrus Hall McCormick; that the McCormick Works is the largest of the world's great farm machine factories, and that the International Harvester Company is under the leadership of the McCormick family. But there are hundreds of interesting facts relating to the feeding of America and the world that the McCormicks can supply, and that everybody should know. How much of a farm can the average farmer and his family cultivate with hand tools? About two acres. How much with machine tools? At least 150 acres. Who has done the most to increase the American farm by 148 acres? I would give that honor to the inventor of the reaper—to McCormick, the young Virginian, whose first clumsy machine was the forerunner of all our mechanical husbandry; who, in truth, planted nearly ninety years ago the seed that has found fruition in the Harvester Company, now making fifty-four distinct classifications of farm implements and with a present manufacturing capacity in its score or more of factories of about 2,000,000 machines.

These manufacturers never make a sale until assured by personal investigation that the article sold will be of permanent benefit to the customer. If he wants to buy a larger and more costly machine than his needs require, they won't let him. They frequently advise the purchaser to spend less money than he planned to. How many dealers do you know like that?

Consultation precedes sale, and service follows. This rule is invariable. A mere sale, apart from the education of the buyer and the coöperation of the dealer, is never tolerated. Furthermore, should it need adjustment when put in field service, the company sends a competent machinist to do the work free of charge.

Honesty is *not* the best policy—honesty is a principle, not a policy. But if honesty were the best policy, the proof would be right here, in the loyalty and support of the customers, dealers, and employes of the company who recognize the honesty above described, and respond with a moral fealty that money could not buy.

Another example even more unusual. When Government officials conceived an idea that the Harvester Company was violating the Sherman Law and getting to be an ungodly Trust, it brought suit. Then it wished it hadn't

—not a single farmer witness was called to testify against the company! And the court listened to 1,200 farmers and dealers who served as witnesses for the company. Ruling on the evidence, the judges declared that, while the company had the *power* of a monopoly, the conduct of the business had been fair and honorable.

The reason for an original \$120,000,000 capitalization was not to collect huge profits, but to confer huge benefits. All-year production and selling, ample extension of credit to customers and dealers, and the development of international trade, were the objectives; all of which required vast money resources. By manufacturing a large assortment of time-saving, man-saving, money-saving machines that the farmer could use to advantage all the year, the Harvester Company lessened the cost of seasonal production and storage, then reduced prices on machines. In the early days, by offering generous terms of payment and "carrying" the dealer or customer for long periods, they put machines on thousands of farms whose owners could not have paid cash. By risking large sums of capital in opening up new countries for trade in agricultural implements, they not only helped the farmers of the world to adopt American ways of reaping larger, better crops, they also helped the manufacturers and merchants of the United States to increase foreign trade by \$40,000,000 in the first ten years of this century.

The Illinois State Law for Workmen's Compensation and Employers' Liability was modeled chiefly on the practice of the Harvester Company, adopted a year or two prior to enactment of the State law. The aim of the company has always been to anticipate such legal statutes as really conserve the welfare of employes or the character of the product. If other states have better laws, the company takes these for a pattern; if no states have good enough laws, the company makes its own.

Now that we have regarded the moral size of the company, let us observe the material size. Properties include four mines, capacity 1,400,000 tons iron per annum; two coal and coke mines and plants, capacity 1,000,000 tons coal and 550,000 tons coke; blast furnaces and steel mills, capacity 450,000 tons pig iron and 350,000 tons steel bars; timber lands of 80,000 acres and sawmills of 20,000,000 feet capacity per annum; twenty-seven factories and mills in America, Russia, France, Germany, Sweden, total capacity about 1,975,000 farm machines and 160,000 tons of binder twine. There are 93 branch and transfer houses in the United States, and 17 in Canada.

The McCormick Works in Chicago, that we visited, occupies 229 acres of ground and a floor space of about 3,500,000 square feet. The annual out-

put of this one plant includes figures like these: 200,000 mower wheels, 500,000 steel wheels, 800,000 gallons of paint, 60,000,000 castings, 73,000,000 chain links. Every day 100,000 knife sections are made, 200,000 cotter pins, and almost 1,000,000 bolts and nuts. The total annual shipment of machines, repairs and twine fills about 75,000 railroad cars.

Parts of machines twenty-five years old are kept in stock, that any farmer who needs repairs or replacements on early models may be served quickly and effectively. You do not have to buy a new, late model in order to get proper attention and consideration.

Judging by the personnel of other great factories, we expected to find here 15,000 to 20,000 employees. There are only about 6000. The company uses automatic machines to manufacture automatic machines, and thus not only practices what it preaches but also reduces the payroll and the prices.

During the past six years wages have been raised repeatedly in the Harvester factories in order to help employees keep up with increased costs of living. In a space of three years over \$400,000 has been expended on welfare, safety appliances, ventilating systems and the safety educational campaign; the result being that industrial accidents have been reduced over 60 per cent. The McCormick family has donated a hospital to the employees of the McCormick Works.

Pensions for long and faithful service, ranging from \$360 to \$2,500 a year, go to employees at 65 years of age, with twenty years' service; at 60 with twenty-five years' service, and at 55 with thirty years' service. At the end of 1919 more than 24,000 employees in the various plants were subscribers for certificates totalling more than \$8,000,000 under a Savings and Profit Sharing Plan, whose liberal terms and special provisions make the employee shareholders personally interested in the successful operation of every machine they help to manufacture. More than 4,000 employees had become stockholders under this plan.

In order that relations of the employees and the company might be established upon a definite and durable basis of mutual understanding and confidence, the Harvester Industrial Council Plan of employee representation was put into effect on March, 1919, and has been heartily approved by the workers.

The latest step taken by the Harvester people toward their ideal of industrial coöperation is a long one; it is the adoption of an "Extra Compensation and Stock Ownership Plan."

Under this plan the employees will receive each year 60 per cent. of the earnings above 7 per cent. return on the invested capital; 20 per cent to be distributed in the discretion of the directors to those having managerial or executive duties and 40 per cent to be divided among workers in the non-managerial group according to the proportion of the individual employee's

earnings during the year to the aggregate earnings of his group. As nearly as possible this extra compensation will be paid half in the company's stock and half in cash, non-managerial employees to receive preferred stock and the others common stock.

As a climax and crown to the visit, I had the privilege of talking with the president of the company, Mr. Harold F. McCormick.

The president of the company gave his first rule of life. "Keep your conscience clear as a bell."

"If I do anybody a wrong, or am tempted to, something within me rings out like a bell and warns me of danger. The danger is to me, not to the other fellow.

"The sense of doing right is the greatest power you can have in life. The rule of right is not just moral in application, it is mental, physical, social, financial, industrial, professional. Whatever you do is right, or it is not. The judgment you pronounce on the quality of each act, based on the vision of intelligence and the voice of conscience, will determine the character of your future and the scope of your destiny."

I had a query. "What is right, and how do you make sure of it?"

The president replied: "Whatever is right is for the common good, and whatever is for the common good is right. If what you do helps you and everybody else, it is right; if it harms you or anybody else, it is wrong. Making this matter clear and keeping it straight is one of our largest responsibilities to our customers, our employees and ourselves."

Chicago

## We Need a Newly Consecrated Americanism

(Continued from page 116)

evils of profiteering and exploitation, whether of nature's or of humanity's resources; and it will be found on the human side of every effort at improvement. Its support will be given to every proposal for wise and workable coöperation, whether in the factory, the market-place, or the broad development of the social-economic order. It will stand, as always, for exact justice, for the fullness and fairness of equal opportunity and preparedness to embrace it; but always with the reservation that the measure of realization must somewhat depend on the measure of deserving. Craft and cunning and acquisitiveness may safely be curbed, in order that character and the truly deserving may gain full participation in the widest benefits that the community is able to confer on its members.

In very brief, this is the aim and ideal of the Republican party; this is its program of this year 1920. Conscience of our sincerity, confident in our purpose, we submit our case to the American people.

## One Saving Grace of War

(Continued from page 117)

War Savings Securities sold since the beginning of the movement in 1917 is about \$1,168,559,000. Of this amount some \$360,356,000 have been redeemed, leaving about \$805,203,000 worth still in the hands of savers. The percentage of redemptions has grown less with each issue, proving that the value of these securities for a permanent investment is dawning upon the American people.

The Savings Division is stressing its activities in the schools and the industrial plants of the country and is doing an intensive rather than an extensive work, going upon the theory that to create one permanent saver and investor in Government Securities is sounder economic practice than to sell a thousand stamps by "drive" methods.

If savings and the creation of capital are to become universal habits in America the public schools must instill sound practical financial thought in the minds of the boys and girls. The biggest lack in our system of education has been a department which teaches the value of the dollar. If more of our youth had been taught that lesson, had learned the value of an hour's time, the dignity of labor, the joy of a workmanlike job, American industry would not now be crying for steady, intelligent and ambitious employees and Ponzis would be operating in barren fields.

Some regular system of saving is a vital part of the child's education. Thru it he is taught the cumulative value of money, simple interest, compound interest, the a b c's of finance. If the saving is accomplished by means of Government securities he learns in addition something of Government finance and loyalty to the Government in which he is a shareholder. The Savings Division is coöperating with the leading educators of the United States in making the theory and practice of sound economic principles a permanent part of the school curriculum. The National Educational Association has appointed a committee of seven State Superintendents to work this plan out in detail with the Savings Division. The principles of saving are being taught and Thrift Stamps and War Savings Stamps are being sold in a large majority of the schools thruout the country today.

Incomplete reports show that at least 130,000 pupils in the schools of New England out of the total registration of 510,000 invested \$1,150,000 in Thrift and War Savings Stamps during the school year 1919-1920. Since the beginning of savings teaching in the schools of Texas, the children of that state have invested enough in Thrift Stamps and War Savings Stamps to pay for the State Capitol at Austin six times over. The school children in Ohio invested during the last school year an average of \$7.00 each in War Savings Stamps and Thrift Stamps. In Leavenworth, Kansas, during the past year children were graded in

# See These Results

## Learn what clean teeth mean

See the results of the new way of teeth cleaning. They are quick and decisive. You will know at once that they mean a lifetime of cleaner, safer teeth.

Millions of people employ it. And the glistening teeth seen everywhere show what it means. See what it means to you:

### A film combatant

Most tooth troubles are now traced to film—to that viscous coat you feel. Film clings to teeth, enters crevices and stays.

The ordinary tooth paste does not end film. So the film remains—much of it—and may do a ceaseless damage. Nearly all people suffer from it, more or less.

It is the film-coat that discolors, not the teeth. Film is the basis of

tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So, despite the tooth brush, all these troubles have been constantly increasing.

### New methods now

Dental science, after years of searching, has found new ways to fight film. All have been proved by many clinical tests. They are so efficient that leading dentists everywhere advise them.

These methods are combined now in a dentifrice called Pepsodent. It has brought a new era in teeth cleaning. This is the tooth paste we urge you to try.

### Watch the new effects

The use of Pepsodent at once reveals many new effects.

One ingredient is pepsin. One multiplies the starch digestant in the saliva, to digest starch deposits that cling. One multiplies the alkalinity of the saliva, to neutralize mouth acids.

Two factors directly attack the film. One of them keeps the teeth so highly polished that film cannot easily cling.

Pepsodent is the new-day tooth paste, complying with all modern re-

quirements. It does what never before was done. You should learn its benefits at once.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. Watch the teeth whiten as the film-coat disappears.

Every one in your family needs Pepsodent daily, and a week will prove this to you. Cut out the coupon now.

**MORE COMPANY, Dept. 350 St. Louis, Mo.**

thrift on the practical basis of economy in paper and other materials, in the care of books and clothing. That those fine habits of saving which are now being instilled have not been instinctive in American youth is demonstrated by the fact that in a middle western city of moderate size the money paid out by pupils during the school year for movies and other amusements and for candies and sweets exceeded the total salaries paid to the teachers of that community by \$4,000. No better instrument could have been devised to stop extravagance and to encourage steady saving than the 25 cent Thrift Stamp.

Several State Departments of Education have included chapters on the question of savings and investment in their state courses of study. Many new editions of school text books now contain material on Government Securities and the practice of sound investment. Side by side are given examples of sound investment and fake schemes.

Next to the schools, the most effective group to inspire with the idea of universal savings is that which turns the wheels of industry. Someone has estimated that at least \$35,000,000,000 of our total annual income is paid in wages. With the wage earner, therefore, lies the possibility for the creation of much needed capital in the United States. If the first dollar out of the pay envelopes of America should go into savings instead of being spent for more or less unnecessary articles, great reservoirs of capital would soon be created, normal prices would be restored, inability to meet financial obligations would be eliminated.

Likewise, a deeper patriotism would be created. The Secretary of a Savings Society in a great shipbuilding company states: "In the plate and angle shop, a department of about 500 men and containing many foreigners, a canvass was made to find out the men desiring citizenship papers. Of all those who wished first papers everyone was saving money by buying War Savings Stamps, while everyone who refused was not buying War Savings Stamps." It is clearly evident that no foreigner will be 100 per cent American as long as he sends his earnings home. With an American bank account, he will have a stake in his community and with the Government Securities, he will feel his partnership in his adopted country.

Each month in the factories thruout the United States, there is placed on the bulletin board a poster bearing a calendar and a bit of sound financial advice. This poster is furnished by the Treasury Department and is one of its means of approach to the American workmen. The February poster said: "WHAT ARE YOU DOING NOW TO MAKE YOUR FUTURE SAFE? It is what you save, not what you earn, that insures your prosperity and happiness in the years to come. Save regularly and make your savings loss-proof by buying War Savings Stamps." In March the poster read: "WHERE DO YOU GET OFF IF YOU RIDE A MERRY-GO-ROUND? The man on the wooden horse is like the man who works week after week without saving

money. He gets nowhere." In April the worker was advised: "SPRING SEEDS FILL FALL NEEDS. To Harvest then, plant now. The man who plants his savings in War Savings Stamps and Treasury Savings Certificates grows a crop of interest that nothing can hurt."

Following up this publicity and the material which is furnished regularly to the labor press, Government Savings Associations are organized thruout a plant. The secretary furnishes the employees stamps as they work, so that they are not put to an inconvenience in investing their savings. By this method, savings are constantly growing in well-organized plants.

One plant in Providence, Rhode Island, which has 200 small savings groups, reported the sale of Stamps in April, 1920, aggregating \$15,545.

Twenty-two plants in the Philadelphia Federal Reserve District, where savings societies have recently been organized, now have 17,742 savers who put aside War Savings Stamps from January 1st to March 31st, 1920, aggregating \$114,783.

At the Rock Island Arsenal in Illinois, the monthly savings rose from \$4,532 in February to \$12,712 in May, 1920.

In a certain industrial plant where during the war 90 per cent of the employees were regular buyers of War Savings Stamps, the influenza epidemic was met with a minimum of suffering, the men had the funds available for doctors, medicine and proper food. They met their bills promptly and did not embarrass the merchants of the community. As a result of the lesson then learned, they are now buying twice the number of Stamps they did during the war, and it would be difficult indeed to get any of them to abandon the thrift habits which the Government taught them.

So obvious are the benefits brought by this small Savings System that numerous labor organizations have recently passed resolutions presenting to their membership the advantages of War Savings Securities.

Not only is the Savings Movement taking a place in schools and industries but its influence is felt in national women's organizations and in fraternal and religious circles.

That this Government activity in industry, in the schools and in various other groups is beneficial to the whole financial system is shown by the added savings banks accounts, purchase of homes, and development of life insurance business in communities where the Savings Organization has worked most effectively. The time is ripe for all legitimate savings organizations to work for the financial emancipation of American citizens.

Financial freedom for all—this is the slogan of the Savings Movement, this the reason why a war activity has been carried on as an enduring peace-time program. Quietly, systematically, surely, the Treasury Savings Movement is working its way into every corner of American activity.

Washington, D. C.

## The Unpuritanic Puritans

(Continued from page 122)

that charge. The only punishment given her was a recommendation to dance no more.

The Pilgrim costume we think of as being plain and somber. It was not always so, for good old Elder Brewster, one of the leaders of the "Mayflower" company, had a wardrobe that included a blue coat, a violet colored coat, and a green waistcoat!

People in Plymouth did not all observe Sunday as we think the Pilgrims always did. The records show that many broke the Sabbath day. Friends and relatives met together to gossip, and others openly ridiculed the preacher.

Nor were all the Pilgrims steadfast. Some, even in Holland before the sailing of the "Mayflower," became discouraged and went back to England to take up the old life. Others on the very eve of departure for the voyage, declined going to a new land. Still others who actually started from Holland, gave up when they learned something of what lay before them.

Like other people, the Pilgrims were obliged to work, and could by no means give all their time to religion. They were not only obliged to clear a wilderness, build houses, and try to make a rather barren soil productive; they were some six thousand pounds in debt to their creditors in England, and were obliged to spend much of their time hunting and trapping beavers, whose skins they sent over to England in place of money.

Nor did the Pilgrims work harder or more faithfully than people of today. They blundered into a communistic plan of ownership, and so, lacking the stimulus of individual profit, no one would work more than his allotted share. All this prolonged their period of debt, and hindered development. It was twenty years before they settled their financial affairs in London.

All these facts—and more—shown by the old records of Plymouth, bring the Pilgrims before us in a very real way. Such facts make the Pilgrims seem human. They no longer appear as saintly beings quite different from ourselves.

Courtship, marriage, birth, death, the vigor of health that finds happiness even in a wilderness, gossip, amusement, envy, faith, great love, laughter, sorrow, and the palsy of old age—all were in old Plymouth just as they are with us today.

We ought to think more of the humanity of the Pilgrims; when we do we shall all the more appreciate the great things they did, for over and beyond all the littlenesses, all the faults and frailties that they had, in common with us, was a spirit that has lived. The things of earth have dropped away and have left only the pure soul—the spirit of liberty, of firm-set faith, of strong endeavor. It is comforting, for in that sense, we too, can be somewhat like the Pilgrim Fathers.

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

English, Literature and Composition

History, Civics and Economics

### I. One Saving Grace of War.

1. Make a short speech in which you summarize Mr. Lewis' article and make an appeal suitable to inaugurate a thrift campaign in your school.
2. "In the true Democracy, every worker is a capitalist." Write an editorial for a daily newspaper, using this as the opening sentence.
3. Write a short story that could be used as propaganda material to sell Thrift and War Savings Stamps.

### II. Straws in the Wind.

1. If possible the teacher should hold a forum on the Presidential election, appointing one pupil to present the claims of each party and candidate. (Messages from all except the Farmer-Labor party have already been published in The Independent; and that one will appear in the next issue.) After these speeches there should be an opportunity for questions and open debate. Then each pupil should write a letter similar to these published in The Independent supporting his choice and giving reasons. Urge any pupils who have the necessary ability to draw cartoons illustrating their political preferences.
2. Which seems to you the most convincing argument in these letters? Why? Which letter is best from a literary standpoint? Why?
3. "A large Presidential vote for the Socialist candidate at the present time will be a stinging rebuke to the Democratic and Republican parties and will probably bring them to their senses before the next national conventions." Do you think that this position is a sound one or not? Defend or attack it in a letter written for publication in a daily paper.
4. Define the following words: integrity, lucid, cataclysmic, perforce, predatory, turbulence, paramount, "status quo," negligible, nullify, pernicious, evasive.

### III. We Need a Newly Consecrated Americanism.

1. Which seems to you the most effective sentence in Senator Harding's message? Why?
2. Make a very short political speech urging Senator Harding's election. Choose one of the following audiences to whom to adapt your speech: (a) a crowd of passers-by at a street corner, (b) a theater audience between the acts, (c) an afternoon tea at which women are gathered to glean wisdom in casting their first vote.
3. Write in from 100 to 500 words your definition of "Americanism."

### IV. The Story of the Week.

1. Give a brief talk suitable for a current events club on the news of the week in the United States.
2. Write a letter to a friend in the Middle West defending or criticizing Premier Lloyd George's Irish policy.
3. Write a short story or a poem based on the recent raids of "night riders" in the South.
4. Write an editorial for a Southern newspaper condemning the "night-riders" activities and showing that they must ultimately do the cotton farmers more harm than good.
5. Explain orally the offer that the Soviet government has made to China.

### V. The Unpuritanic Puritans.

1. After reading Mr. Law's article, write a character sketch of any one of the Pilgrims.
2. Write a humorous poem narrating an incident that happened during the Pilgrims' first years in America.
3. Write a story of the Pilgrims' landing—as if you had been one of them.
4. What is Mr. Law's purpose in destroying some of the popular beliefs about the Puritans? Does he offer something more important in their place?

### VI. The Farmer's Right Hand Man.

1. Why is the International Harvester Company, called "The Farmer's Right Hand Man"? Summarize briefly the story of what it has contributed to the progress of farming in the United States.
2. Write a story of one farm implement from the time it left the factory till it was worn out.

### I. Republican Policy—We Need a Newly Consecrated Americanism. Harding's Foreign Policy. Parsons Bolts G. O. P. The Successful League of Nations.

1. Why does Senator Harding so strongly emphasize party responsibility?
2. What criticisms does he make of the Wilson administration?
3. Restate in your own words a part of Senator Harding's article under the heading "Democratic Unpreparedness for War and for Peace."
4. How do you interpret the significance of Senator Harding's speech at Des Moines? What does Mr. Parsons have to say about it? What does Mr. Holt have to say?
5. What accomplishments of the League of Nations are listed by Mr. Holt?
6. What features of the existing League of Nations would, in your opinion, be probably retained in Senator Harding's projected "association" of nations? Which would be "scrapped"?

### II. Eastern Europe—A Ghostly Conference. China and Russia. Poles Seize Vilna. Polish-Russian Truce.

1. On what terms is the Polish-Russian war being settled? What terms would the Russians have exacted if peace had been made a few weeks earlier? What ambitions have the Poles renounced by the Treaty? Explain how the military situation in eastern Europe resulted in a compromise peace.
2. What promises do the Soviet authorities make to the Chinese Republic?

### III. National Thrift—One Saving Grace of War. The Suffering Public Wakes Up.

1. Give as many reasons as you can think of why the American public, as contrasted with some peoples of Europe, values a speculative chance above security in making investments.
2. How does Mr. Lewis use the phrase "capitalist" in saying "In the true Democracy, every worker is a capitalist"?
3. Why are securities of the United States Government generally considered a particularly safe investment? Can you reconcile this with the fact that some issues of Liberty bonds are still selling somewhat below par? What factors determine the sales value of public bonds in the market at any given time?
4. Can you think of any ways in which the schools can combat the prevalent "economic illiteracy" of which Mr. Lewis speaks?

### IV. Public Opinion on the Election—Straws in the Wind.

After reading over these letters, write about 100 words embodying your own opinion on the election. If you belong to a class in school or to a debating society or any other organization that might be interested in the matter take an "opinion straw vote"; that is, not only the votes for President but in each case a brief statement of reasons for the vote (the ballot papers need not, however, be signed by the voter). Then classify the votes according to the issues emphasized and briefly summarize the results. You will find that an "opinion straw vote" which shows why people are supporting a particular ticket is more instructive as to political tendencies than a plain straw vote which only shows how people will vote. If you wish you can carry out a similar plan as to the issues of your state campaign or any other electoral contest in which you and your friends are interested.

### V. American History—Unpuritanic Puritans.

1. Who were the "Puritans" and why were they so called? Did they all leave England for the new world?
2. How, in Mr. Law's opinion, does the slighting epithet "puritanic" misrepresent the historical Puritans?

### VI. The Census—Uncle Sam's Boys and Girls.

1. Why did the population of the United States increase more slowly from 1910 to 1920 than from 1900 to 1910?
2. Why is the city population increasing more rapidly than the country population? What is the significance of this with reference to the cost of living?

FOUNDED 1848

## Bud to Dad

Dear Dad:

If I'm not the most normal and regular person in the world when I grow up, it won't be your fault, Dad. It beats all how you sense the dangers that I am heading for and warn me off. The Independent is going to keep me off a lot of rocks for which I am sure I would have steered if you had not sent it.

I think that the greatest thing that a publication like The Independent does is to make the questions and issues of the day real and personal. I notice that it puts these things up to us readers as judge and jury and it makes even a freshman realize that he has other responsibilities beside maintaining his status as a student.

The Remarkable Remarks feature of The Independent is a dandy. It is amusing to see people's eyes open when I repeat some of them. In fact, my Independent thunder is gaining me the very flattering reputation of being wonderfully well informed.

You have put me on to a lot of good things, Dad, but The Independent is the best yet. I nail at least one new truth each week by reading it. Most publications might be called *table d'hôte* mental meals, because you know about what is going to be set before you; this *à la carte* service of a news item from India and a discussion of why the Jap is advancing so rapidly and the other interesting surprises that are dished up in The Independent make it something to look forward to.

Yours,

BUD.

## Opening Nights

*Parlora* has brought back to America a new repertoire which adds to the luster of her fame as the world's *première danseuse*. And she still dances the incomparable "Swan." (Manhattan Opera House.)

*Mecca* achieves a climax in the realm of light opera. It has all the colorful splendor and finished artistry of its predecessor, "Chu Chin Chow," and surpasses it in melody, magnificence of pageantry, beauty of ballet, and interest of plot. (Century Theater.)

*The Outrageous Mrs. Palmer*, by Harry Wagstaff Gribble. Pseudo-dramatic play to show off Mary Young as impossible and repellant stage heroine whose "mother love" in the last act saves son's life by blood transfusion. Hollow, theatrical and impossible. (Thirty-ninth Street Theater.)

Louise Darclee, who has just finished a tour of Mexico, South America and Cuba, made her triumphal debut in the United States as Maliella in the San Carlo Opera Company's production of *The Jewels of the Madonna*. She is that rare operatic combination, a singer who can act. (Manhattan Opera House.)

*The Mob*, John Galsworthy's dramatized plea for the right of free speech in wartime, is effectively staged and adequately presented. The play is one of Galsworthy's best: brief, swift in movement, and with no relaxation of the almost painful emotional stress from the first word to the last. (The Neighborhood Playhouse.)

## Remarkable Remarks

SENATOR HARDING—The women won their own victory.

MISS BESSIE E. RICCI—I believe in getting married for money only.

MARY PICKFORD FAIRBANKS—Doug is always bringing people home to dinner.

JOSEPH JUDSON TAYLOR, D.D.—The Bible is against the League of Nations.

G. K. CHESTERTON—My country right or wrong? Yes, my Mother drunk or sober.

SIR F. BANBURY—All of us sometimes commit acts of indiscretion, especially if we are smoking or something of that sort.

SIR E. BRABROOK—As a rule governments do little with prices except to raise them or with production except to hinder it.

HERBERT HOOVER—The whole nation spends at least a million dollars a day in superfluous eating at hotels and restaurants.

DR. CHARLES M. SHELTON—It does not pay to go to church in the morning if we are planning to go to the devil in the evening.

EMILE UTARD—Woman, if she is familiar with the best social usage, uses perfume as a hint not as an overpowering declaration.

VISCOUNTESS ASTOR, M.P.—I believe that the spirit of the League of Nations is in the heart of every right-thinking man and woman.

W. BOURKE COCKRAN—A loftier idealism is embodied in President Wilson's fourteen points than in Abraham Lincoln's emancipation proclamation.

DR. J. B. CRANFILL—The League of Nations plank in the Republican National platform is a shuffling fragment of a colorless and puny political nonentity.

SENATOR HARDING—The Senate has saved to the country the inheritance for which heroes perished and for which the supreme sacrifices of the Republic were made.

RAYMOND G. FULLER—The primary object of child labor legislation is to help establish the democracy of childhood—fairness of opportunity in terms of health, play and schooling.

CORRA HARRIS—No one knows why, but it is a fact that a man distinguishes instantly and unerringly between a temporary widow and a widow indeed, whatever her age or condition may be.

GOVERNOR COX—I am determined to secure the earliest possible entrance into the League of Nations with the least possible delay and with the least possible reservations needed to accomplish that result.

ED. HOWE—A man in California claims that whale's milk is richer and more palatable than cow's milk. Now let Congress appropriate a sum large enough to catch whales, milk them, and see if there is anything in this new talk.

© Pirie Macdonald

### Theodore Roosevelt

*Whose birthday we celebrated on the 27th of this month, wrote not long before his death the following message which is of especial timeliness in our present day problems:*

We recognize, and are bound to war against, the evils of today. The remedies are partly economic and partly spiritual, partly to be obtained by laws, and in greater part to be obtained by individual and associated effort; for character is the vital matter, and character cannot be created by law. These remedies include a religious and moral teaching which shall increase the spirit of human brotherhood; an educational system which shall train men for every form of useful service—and which shall train us to prize common sense no less than morality; such a division of the profits of industry as shall tend to encourage intelligent and thrifty tool-users to become tool-owners; and a Government so strong, just, wise, and democratic that, neither lagging too far behind nor pushing heedlessly in advance, it may do its full share in promoting these ends.—From *"The Foes of Our Own Household."*

## Go Forward from Economic Serfdom

A Message from the Candidate of the Farmer-Labor Party

By Parley Parker Christensen

**T**HE Farmer-Labor Party is not in reality a third party. To call it that would be to imply that the Republican and Democratic groups represent two diverse cleavages of opinions, contrasting attitudes toward the issues confronting the country, which is not true. They are plainly and simply rival factions of the same party—the party of reaction, of Bourbonism and of economic privilege. They recall the well-known couple depicted in the newspaper cartoon—“Mike and Ike—They look alike.” But the resemblance of the Democrats and Republicans is deeper than looks. They are both the protégés of Wall Street; the one may draw a few million less from the group of exploiting barons entrenched in downtown New York than the other, but the two are fed from the same bin and the feeding is not apportioned out of any motive of charity but for value received or to be received if elected.

Opposing this party of Toryism—this party which lifts its eyes to the Hills, Rockefellers and their like, stands the Farmer-Labor party, which lifts its eyes to the hills too, but to hills of different geological formation. The great tide of unrest sweeping over the country called it into being. But whence this unrest? We Americans are not naturally grumblers. Optimism with us closely approaches to a religion. How then is it that the spirit of protest has become epidemic?

Again, what means the sudden stirrings in the world of Labor, the solidifying of their aims and tactics, the rapid rise of the Labor press, the development of the coöperative movement, the activity of farmers' organizations in politics, the Non-Partizan League victories. In North Dakota the state has gone over so completely to the Farmer-

© Underwood & Underwood

“The platform of the Farmer-Labor party demands the restoration of civil liberties, including free speech, free press and free assemblage, the right of asylum; return of the Department of Justice to the functions for which it was created; amnesty for all political prisoners; repeal of espionage, sedition laws, protection of the rights of the worker to strike,” says Parley Parker Christensen

face of tremendous obstacles, the enemy fighting every move in the courts. Only recently was the last legal obstacle removed by the Supreme Court decision holding the North Dakota enterprizes constitutional.

Yes, you say, but what has this to do with the National Farmer-Labor party? Everything. In a large measure, the men who battled for the Farmer-Labor program under Non-Partizan League auspices are

back of the new Farmer-Labor party. They are kin in their programs for reconstruction. Many of those who did yeoman work, like Duncan McDonald, in touring the western states for the League program are now [Continued on page 170]

# Sizing Up Senators

Some Significant Facts for Voters About the Men Up for Election This Fall

By Susan Brown Bristol

**T**HE record made by the United States Senate, particularly during the last two years, naturally causes the voters of the country no little anxiety as to the personnel of the Sixty-seventh Congress.

Thirty-four candidates are asking us on November 2 to vote them seats in the Senate of the United States for the next six years. Representing the people of the United States in Congress is, or should be, pretty serious business.

Who are the men who come before us asking our votes, that they, in turn, may "save our country" for, and to, us? Do their records justify us in placing our proxies in their hands? Have they vision on the important issues which today face us? Do they feel the necessity of throwing their strength with those who are trying to make impossible a repetition of the last four unspeakably awful years? Are they men who appreciate that peace is the world's first need? And are they willing to accept as a basis for peace the plans so far proposed, modifying these as may be found necessary to attain the end sought by a world weary of war and war's aftermath? Or are they men satisfied to float into office upon any craft which is warranted surely to land them at the door of the United States Senate? Are they

© Western Newspaper

Miss Anne Martin, suffragist, ran for Senator from Nevada at the last election and is a candidate again this year

more than content to leave, for the present, serious consideration of this supreme issue, as they intimate that later (and how much later one cannot help wondering) this troublesome question might be relegated to Senator Harding's "Association of Nations," even tho, to date, this is, to be sure, of extremely cobwebby structure? Are they men who realize that the present high cost of living is a question which should be dealt with by the Congress of the United States? And, equally important, are they willing to deal with it? Are they men who believe that the issue of prohibition, in its various ramifications, is one of vital importance to the nation? Or, do they oppose prohibition and its enforcement with the slogan, "The liberty of the people must be preserved"? Are they men who have favored "special privilege" to interests as against the

welfare of the people? Are they men who will stand for progressive measures? Or are they men who may be counted upon to spend their energies, and our money, in pointing out to us the glories of the past?

Thirty-three States will elect thirty-four Senators. Alabama will elect two, on account of the regular expiration of the term of Senator Oscar W. Underwood, and the expiration of the term of Senator B. B. Comer, who was appointed to succeed the late Senator Bankhead. Another *ad interim* term which expires is that of Senator Carter Glass of Virginia, appointed to succeed Senator Martin. For this vacancy Senator Glass is himself a candidate.

Aside from Senator Harding, the following four members of the present Senate have voluntarily retired:

Senators Gay of Louisiana, Thomas of Colorado, Johnson of South Dakota, and Sherman of Illinois.

The following four *were* retired, thru defeat in the primaries: Senators Gore of Oklahoma, Gronna of North Dakota, Kirby of Arkansas, and Hoke Smith of Georgia.

Twenty-three Senators have been renominated: Senators Benham of Kentucky, Brandegee of Connecticut, Chamberlain of Oregon, Cummins of Iowa, Curtis of Kansas, Dillingham of Vermont, Fletcher of Florida, Henderson of Nevada, Jones of Washington, Lenroot of Wisconsin, Moses of New Hampshire, Nugent of Idaho, Overman of North Carolina, Penrose of Pennsylvania, Phelan of California, Ellison D. Smith of South Carolina, John Walter Smith of Maryland, Marcus A. Smith of Arizona, Smoot of Utah, Spencer of Missouri, Underwood of Alabama, Wadsworth of New York, and Watson of Indiana.

The table at the end of this article gives by states the entire list of candidates for election to the Senate this fall.

Both parties are making a hard fight for Senate control. In several States the smoke of battle is thick, and for reason. For at last we are beginning to realize that when our representatives have betrayed our trust, just retribution may be meted out—to be sure, by only one means,

Senator Cummins of Iowa is finding that organized labor refuses to support the reelection of the sponsor of the Esch-Cummins railroad bill

© Underwood

Senator Boies Penrose from Pennsylvania has been reelected regularly for a quarter of a century. Why worry now?

© Underwood & Underwood

Tom Watson, anti-League, anti-war, anti-Wilson, is Georgia's new Democratic candidate

but that a most effective one—the polls.

One of the liveliest battles at present being waged by any Senatorial candidate is that of Senator James W. Wadsworth, Jr., of New York, whose record at present is under heavy fire. Even the former Senator Chauncey M. Depew has “known Mr. Wadsworth from boyhood,” has “watched his career with great interest,” and feels that “with his admirable equipment and demonstrated ability New York will honor herself and do a valuable service to the country by again electing,” etc., etc.; even the former President Jacob Gould Schurman of Cornell University pleads, “For what he is and

© Keystone View

The “dry” forces and the suffragists in New York are supporting a woman candidate, Mrs. Ella Boole, for Senator in opposition to Senator Wadsworth

stands for, for what he has done in his first term in the Senate and will do if returned in the second, let us give Senator Wadsworth the indorsement of an overwhelming majority”; even the Ex-Senator Elihu Root cabled from Europe greetings congratulating both Senator Wadsworth and the United States upon the Senator’s success in the primaries, in the minds of many citizens of the State of New York there still remain grave doubts as to the desirability of aiding Senator Wadsworth in his plans to return to the Senate. And the reason for doubt on the part of these persons is Senator Wadsworth’s previous record, both in the New York State Legislature and in the United States Senate. When a man in this day and age votes against enfranchising half of the citizens of the country; when on all phases of the question of prohibition his recorded votes are “wet”; when on the Senate floor he explains that he voted against the prohibition amendment because he “believed that such a proposal had no place in the Constitution, and . . . because . . . the people in great communities of this country were competent to decide that matter for themselves”; when upon twenty-seven measures of interest to labor, he is recorded as having voted favorably five times, unfavorably fifteen times, and as failing to vote seven times; when the records, both in Albany and in Washington, show him to have cast his vote for “special privileges” in the interest of the few at the expense of the many—these counts, even leaving out of consideration his attitude on the question of world peace, and his championship of compulsory military training, have caused others than the Non-Partisan Senatorial Committee, from whom the slogan is quoted, to feel that “Mr. Wadsworth’s place is in the home.”

In connection with the New York situation, it is of interest to note that the “dry” forces are supporting a woman, Mrs. Ella A. Boole, for the Senate.

Paul Thompson

Senator Brandegee from Connecticut asks for reelection on a record of opposition to the League, to prohibition and to woman suffrage

© Unrecorded

The Republicans of Utah are expected to reelect Senator Smoot for his fourth term, and keep the G. O. P. triumvirate unbroken

A statement such as this causes the eyes of the uninitiated to roll wide open with astonishment. The innocent asks: “What can the record of Senator Penrose have been that a majority of such proportions is foreseen for him?”

Upon consulting the *Congressional Record* one finds that Senator Penrose has always been an opponent of suffrage; that once he voted favorably upon ratification of the treaty with the Lodge reservations, while at the second vote he was paired unfavorably with Senator Harding; that he favored the Esch-Cummins railroad bill, by many regarded as “the most pronounced special interest legislation that ever came out of Congress”; that he voted unfavorably upon the Federal Child Labor bill; that upon fifty-nine labor measures he voted, or was paired, favorably, fourteen times; unfavorably, nineteen times; and upon twenty-six measures he is recorded as not voting.

But these facts do not answer the innocent’s question with entire satisfaction, and the innocent is left in bewilderment.

In Connecticut, Senator Frank B. Brandegee, a “regular,” renominated by the Republi- [Continued on page 169]

# The Battle of Blanc Mont

## The First Complete Story of Our Combat Operations

By Captain Joseph Mills Hanson

IN tracing the martial career of America's forces in Europe we have now seen those forces fight their earliest battles in the spring of 1918 by scattered divisions flung into the line to avert a crisis in Allied affairs and have followed them as a united army from their first swift victory at St. Mihiel thru the long and exhausting phases of the battle of the Meuse-Argonne. There remains only to recount the work of the divisions which, removed from the main body of the American army, fought under French or British command in distant sectors of the battle front during the last stages of the war. Because they were, in a sense, out of the focus of public attention, which was focussed upon the main armies under the direction of General Pershing, the soldierly achievements of the men of these divisions sometimes seem to have been overlooked, tho they were, in fact, deserving of as much commendation from their countrymen as were those of our troops on any field.

While the struggle of America's main armies was at its high in the Meuse Argonne sector, the roar of battle was thundering crescendo along the whole length of the line from the Argonne to the Channel. One after another the French and British and Belgian armies, responding to the will of the Allied supreme commander, attacked and drove the enemy back thru line after line of his elaborately prepared defenses. To maintain without relaxation the final supreme effort, so that the enemy might have no moment's opportunity of recovery, no chance to avert his approaching complete overthrow, the crying need of every Allied army and army group commander was for men; men to replace the wastage of the terrific battle and to maintain the decisive superiority of numbers.

The great reservoir of Allied man power in the last summer and autumn of the war was America; indeed, as has already been pointed out, it was only the incoming divisions of United States troops, arriving in the last months of the war at the rate of approximately 300,000 men per month, which had first produced and later was able to maintain the superiority of numbers essential to a continuous offensive. Moreover, the quality attained by the American troops after they had experienced sufficient front line service to be familiar with the exactions of battle, was so high that French and British commanders were importunate for American divisions to serve in their armies, not merely for the sake of added numbers, but for the heartening effect of the unwearied American spirit upon their own troops. Altho General Pershing was always opposed to a general policy of employing American troops except in American armies, he was never deaf to requests for aid when it was evident that American strength could be spared from his own army and effectively used for advancing the Allied armies on other fronts. This was particularly easy on the British front, behind which, in accordance with the policy of the spring

of 1918 when the British were sorely in need of reinforcements, a number of American divisions had taken up their training. On the French front the problem was not quite so simple since to be used here American troops had to be taken from the zone of the American armies themselves.

It will be remembered that on the morning of September 26, when the First American Army attacked between the Meuse and the Argonne with nine divisions in line, the Fourth French Army, under General Gouraud, with twelve divisions in line, also attacked on the portion of the Champagne front extending from the Argonne to the Suippe River, a distance of about thirty-five kilometers. The mission of General Gouraud's army was twofold: to assist the First American Army in "pinching out" the enemy from the Argonne Forest and, on the opposite end of the line, to outflank the strong German positions in front of Rheims and force the enemy to fall back from the vicinity of that long beleaguered and piteously devastated city. In the latter task General Gouraud was ably seconded by General Guillaumat's Fifth French Army on the Chemin des Dames, northwest of Rheims.

The Fourth Army began its hard task with distinguished success, driving the Germans back thru their successive trench systems in the naked Champagne plains to depths of from six to twelve kilometers during the first week of the continuous attack and capturing such formidable positions, famous in the fighting of previous years, as Navarin Farm, Souain, the Buttes of Tahure, Mesnil and Somme-Py. But the French reserves at the disposal of the Fourth Army were limited and as the divisions in line, at the beginning of October, approached that state of exhaustion described as "expended," there still remained ahead of them some unconquered positions of great strength. Among the most powerful of these were the heights of Blanc Mont and the strongholds on its flanks at Medeah Farm and St. Etienne-a-Arnes. The importance of Blanc Mont resided in the fact that it was the dominating crest of the ridge of high ground lying between the Py River on the south and the Arnes on the north. So long as the enemy retained it he could maintain his position before Rheims; when it should be lost, he would be compelled to fall back to the Aisne River on this entire section of his front.

In these circumstances the French high command called upon General Pershing for reinforcements and he responded by loaning to General Gouraud, especially for the conquest of Blanc Mont, the 2nd Division of

regulars, which since the St. Mihiel operation had been in rest south of Chalons-sur-Marne, and the 36th Division, of Texas and Oklahoma National Guard troops, which came directly from the Bar-sur-Aube training area, having never been in action before. The troops of the 2nd Division advanced thru the ruined village of Somme-Py on the night of October 1-2

This is the eighth of a series of articles in which Captain Hanson tells the complete story of what the American troops did on the battle line in France—a series written from a thoro study of the official records and with the background of actual experience overseas. "Up the Line from Cantigny" was published in *The Independent* of March 27, "Those Desperate Days at Chateau-Thierry" in the April 24 number, "Zero Hour Along the Marne" May 29, "One Day's Work at St. Mihiel" June 19-26, "Covered with Mud and Glory" July 24-31, "Getting on to Berlin" August 28, and "Our Greatest Victory" September 25

and relieved the French 61st Division in a line of captured German trenches less than a kilometer north of the village. General Lejeune established his headquarters in Somme-Py and the rear elements of his division, supported still further back by General William R. Smith's troops of the 36th Division, took up positions in the vicinity of that place in such shelter as already existed or could be created against the searching German artillery fire in the open and thoroughly devastated country.

Anyone who has not actually seen it would find it difficult to visualize the forbidding aspect in wartime of the Champagne battle zone. Always the most sterile and thinly populated portion of France, the country then, under the continual lashing of shells and the burrowing shovels and picks of contending armies, assumed the aspect of an inferno. The barren hills, rolling in gradual slopes up to low but vastly spreading summits, were seamed everywhere with the zigzag gashes of trench lines, each one marked by the yellowish white chalk thrown up from beneath the thin coating of surface soil. Interspersed with broad mats of rusty wire entanglements, the trench lines stretched away in every direction as far as the eye could see, scarcely concealed anywhere by the sparse growth of pine trees which, set in long, narrow "plantations" on the slopes to check the soil erosion, seem almost the only useful vegetation that the land will support. Dug-outs and abris and dumps dotted every slightly sheltered spot back from the front lines; every shell hole of the countless thousands was a gaping, chalk-encircled wound in the earth, often littered with the bones of some man or horse upheaved by the explosion. And over the whole vast panorama of desolation the ghastly ruins of the widely scattered villages were visible for miles across the unbroken waste. In such a land as this it was that the 2nd and 36th American Divisions were called upon in October, 1918, to exert all the strength that was in them for the conquest of one of those huge, bare hilltops which dominated the country about it; Blanc Mont.

The Essen Trench, in which the advance elements of the 2nd Division relieved the French, was a part of the intermediate German defensive line in this sector. It had just been taken by the French in hard fighting and reorganized to face north instead of south. Immediately to the left of the 2nd Division, which had now become the left element of the French 24th Corps, a powerful segment of the intermediate position, known as the hook of the Essen Trench, had not yet been taken by the French 21st Division, which was attacking it and this fact produced infinite difficulties for the Americans when they commenced their advance against the German lines on Blanc Mont. The crest of Blanc

The Blanc Mont sector in the fall of 1918 was among the strongest enemy positions still to be conquered. Its importance lay in the fact that it was the dominating crest of a ridge of high ground lying between the Py River on the south and the Arnes on the north and so long as the enemy retained it, he could maintain his position before Rheims

Mont, covered with the trenches of the enemy constituting his last completed defensive zone, lay nearly three kilometers northwest of the 2nd Division's front up gradually swelling slopes broken at frequent intervals by narrow plantations of small pines. Between the hill crest and the American front were many lines of wire guarding the slopes and lacing the plantations of pines, while innumerable machine gun nests were cunningly hidden among the thickets, over which the distant German artillery was able to throw its protecting curtains of shells.

The consolidation of its positions and local fighting to drive out detachments of Germans who still clung stubbornly to parts of the Essen Trench, particularly near "the hook," occupied General Lejeune's men during their first day in the sector. Early on the morning

of the 3rd, however, everything was in readiness to attack. The 9th Infantry was in front line on the right, supported by the 23rd Infantry and the 6th Marines were on the left. In the center the 5th Marines were to await the advance of the flank regiments past a small but strongly organized bit of woods called the Bois de la Vipere and then to follow in support after the inner companies of the attack regiments should have mopped up the wood and united their front beyond it. All the divisions on that part of the line were to attack simultaneously, the 21st, to the left of the Americans, clearing the hook of the Essen Trench and then attacking St. Etienne, while on the right the 67th Division was to conquer the strong positions on the ridge at Medeah Farm. The general direction of attack of all divisions was northwestward.

Following a violent artillery preparation of five minutes duration delivered by the guns of the 2nd Field Artillery Brigade, the American infantry and marines moved forward at about daybreak, the artillery preparation changing to a barrage as they started. Two battalions of French tanks, the 2nd and 3rd, which accompanied the attacking troops, behaved very gallantly and rendered most valuable assistance. The Germans met the advance with intense fire, their infantry and machine gunners holding to their positions with determination. But the attack, nevertheless, forged ahead and before noon the Americans had cleared the open slopes and the group of plantations called the Grand Bois de Somme-Py, piercing the enemy's double line of trenches and gaining the crest of Blanc Mont. On the right the 67th similarly gained its first objective at Medeah Farm. But on the left the 21st Division was unable, despite gallant efforts, to capture the hook of Essen Trench and from its deep hill-slope excavations the marines, who had now advanced far beyond it, were exposed to decimating fire in flank and rear. In the afternoon a [Continued on page 173

# Rheumatism? There's No Such Disease!

By William Brady, M. D.

PROFESSOR Chittenden, the eminent authority on nutrition, had suffered for a long time with persistent "rheumatism" of the knee joint. In the course of his studies in nutrition he personally adopted a regimen in which

not only the protein content but the fuel value of all elements was reduced considerably below the amounts usually deemed essential. In the first eight months on this meager diet Professor Chittenden lost nearly twenty pounds in body weight. He was taking less than forty grams (about one and one-third ounces) of protein daily, whereas the average adult consumes over one hundred grams of protein daily. Two months of this time he spent at a fishing resort and often rowed his boat eight or ten miles a day, without any breakfast, and "with much greater freedom from fatigue and muscular soreness than in previous years on a fuller dietary." The "rheumatism" disappeared, as did "bilious attacks" and sick headaches to which he had long been subject.

It requires considerable courage to fast or to reduce the ration far below the customary allowance, if you do not understand nutrition. Knowledge, however, tends to dispel this fear, as knowledge dispels most fears.

It would be childish to imagine that the cure for rheumatism is a restriction of the daily allowance of protein to one-third of the customary amount. This assumption would be perfectly sound if there were such a disease as rheumatism. But there is no such disease.

One source of the much advertised uric acid is the protein of the food. How simple, therefore, to do away with all the manifold evils of uric acid by just eschewing all protein. But, alas, another source of uric acid is muscular activity. Still, it is conceivable that one might abolish muscular activity and thus be freed of rheumatism. Alas once more, there is no reason to suppose that uric acid ever causes rheumatism, supposing for a moment there is such a disease as rheumatism. There is no evidence that uric acid is a cause of any disease of man. This is a mean thing to say in the face of positive patent medicine assurance to the contrary, but it is no meaner than what has already been said about rheumatism. Protein, alas for the third and last time, is moreover an indispensable element in nutrition. If we delete it entirely from the ration we cannot live, at least not happily; conceivably one might vegetate on a protein-free diet for many months.

A good many years ago we doctors started out to prove to the world that there is no remedy or combination of remedies in the mineral, vegetable or animal kingdoms which may be considered good for rheumatism. It looked feasible enough at first. We really thought that in time we would arrive at a satisfactory conclusion, but little did we dream of the interminable changes which were to be rung on the title of rheumatism, and less did we imagine the incalculable number of drug combinations, baths, diets,

## "I TAKE MY OWN MEDICINE!"

*Says Dr. Brady, and he might have added that thousands of other people all over the United States and Canada are taking it, too. For Dr. Brady has lectured widely thruout the United States and Canada, he has written numerous instruction pamphlets issued by the state health departments; he is the author of several books—including "Unromantic Etiology" and "The High Cost of Sickness," and he conducts the "health departments" of two hundred or so daily newspapers.*

mechanical procedures, thought waves, tidal waves of plausibility and essences of rattle-snake and polecat to be coped with. So we gave up trying to prove that there is no cure for rheumatism and compromised on the verdict that there is actually no such

condition or disease as rheumatism.

Since arriving at this judgment we have been just as popular with victims of the disease as ever we were when we had certain formulas which we "let on" were good for the rheumatism.

Nowadays a good share of a doctor's income is earned by undoing things which the medical fathers were paid a good share of their income for doing. It will at once occur to the more or less dull-witted reader that this is merely a clumsy way of saying that the popular health delusions of the day are the exploded medical fallacies of a generation ago. Every time a medical myth explodes the eager laity gathers up the fragments and preserves them as souvenirs. Thus some people are still taking medicines and mineral waters to clear uric acid from the system; and others are still eating white meat only; and yet others are still partial to flannel of a scarlet hue.

Science, not I, says there is no such disease as rheumatism; medical science, not Christian. If you happen to have rheumatism please don't be annoyed with medical science, for she is doing the best she can with a vexed subject. Vexed subjects are hard to deal with. They are prone to be pessimistic. Now one of the essentials in clearing up what masquerades as rheumatism is optimism. The optimists have a fair chance to get well; the pessimists are practically wedded for life to their infirmities.

An optimist is a patient who, having sacrificed some of his proudest teeth, two tonsils and his gall-sac without apparent benefit to his lameness, submits to an exploration of his maxillary sinus in the hope that there, at last, the doctors may find that elusive *septic focus* which is at the bottom of the whole trouble. A pessimist is a one-best-bet kind of valetudinarian. He hangs on to his rheumatism, and calls it rheumatism, and takes or tries everything Tom, Dick or Harry recommends for the rheumatism for ten years or so, then grudgingly gives up those four old infected tooth roots which have troubled him off and on right along, and, not experiencing the expected rejuvenation, devotes the remainder of his years to knocking the medical profession, pills, potions, dentists, the x-ray, and all that sort of thing.

Chronic rheumatism is a vulgar way of saying confirmed pessimism. The victim of chronic rheumatism is a one-test rheumatic. He gives the focal infection theory a single test—provided it doesn't cost more than four old teeth or a pair of thoroly disreputable tonsils—and if the rheumatism fails to react positively the short-sighted fellow concludes that the focal infection theory is all bosh, without [Continued on page 172]

# Republicans Who Will Vote for Cox

*This manifesto is signed by 150 men and women who have in the past been associated with the Republican or the National Progressive parties. Among them are fifteen of the twenty Republican officers of the League to Enforce Peace, who have put themselves on record during the present campaign. The Presidents of Vassar, Smith, Mount Holyoke and Bryn Mawr, the leading colleges for women, are included. Clergymen of every leading denomination have added their names to the list. A number of veterans of the Great War have left their party to work for the League of Peace. Several of the signers, including Theodore Marburg, ex-Minister to Belgium; Herbert Parsons, former member of Congress; George C. Holt, United States Judge (retired); and W. H. Nichols, former Progressive National Committeeman from Vermont, have held office within the Republican or Progressive organizations or have represented their party in public positions. Four of the signers are Republicans of The Independent staff: Hamilton Holt, Edwin E. Slosson, Preston Slosson and J. Stuart Hamilton.*

**W**E, the undersigned, who have usually supported the Republican or National Progressive tickets, have been trained in political traditions emphasizing the international responsibilities of America. From Lincoln to Roosevelt and Taft, each successive Republican administration has labored for a closer understanding among the nations of the world.

The present Republican leadership, which has nominated Senator Warren G. Harding for the Presidency, has repudiated these traditions. This leadership has permitted the Republican party to become a "little America" party, drifting toward national isolation and the relinquishment of any real responsibility for the general peace of the nations.

We hold no brief for the present Administration or the details of its foreign or domestic policies. We do not insist on any particular wording of reservations to any articles of the Treaty. We have been tolerant of much hostility on the part of Republican Senators to some features of the Treaty, hoping that in the end they would agree to a reasonable compromise and that the Treaty could be ratified with the patriotic agreement of a majority of both great American parties. We did not desire that a cause which should have served to unite all parties in the same spirit of common service which won the Great War should be made a basis of party difference in the present campaign.

We regret the issue. But we cannot avoid it. "National isolation" has never been a Republican watchword. It shall not be ours.

Such Republican statesmen as Andrew D. White, Joseph H. Choate and Elihu Root labored for the development of international law and for the organization of the world thru the two Hague conferences. We would continue in the path they indicated.

We cannot forget the interest of President McKinley and Secretary Hay in establishing peace with justice in the distant realm of China.

Theodore Roosevelt as President intervened to halt the Russo-Japanese war. In his latter days he labored unto death to bring home to the American people the meaning of the great conflict in Europe.

President Taft honored his party by his magnificent work for international arbitration and afterwards for the League of Nations.

Justice Hughes left the Supreme Court bench to enter a campaign of protest against what he thought at that time was the indifference of the Administration to our international responsibilities.

We hailed as a triumph of Republican principle President Wilson's abandonment of his party's historic policy

of narrow nationalism to advocate a League of Nations. True Republican statesmanship would have welcomed and supported the Covenant. It would have sought to strengthen, rather than to weaken, its effective guarantees against aggression. It would have insisted on our need of the League as the one possible means of reducing armaments and the crushing burden of taxation they cause. It would have seen in the League the one practicable means of restoring and increasing the authority of international law and its agencies designed ultimately to supplant war.

War is the worst evil that exists on earth. The last war was the worst that has ever happened. The next, if permitted, will be far more horrible. During the late war everyone agreed that it was imperative to adopt some measures to prevent its recurrence. The question confronting America is whether we shall accept the existing League or insist upon a new international agreement having the same object.

It is now too late to talk of a new "Association of Nations," to be created under Republican auspices. The proposal to ask forty-three member nations to "scrap" the existing League, enter another Peace Conference, and agree on some undefined experiment, can no longer be taken seriously.

Already the Council of the League has held nine important sessions.

The full Assembly of forty-three member nations meets this November.

The plan of the International Court has been formulated, with the active participation of the Republican statesman and jurist, Elihu Root.

Commissions on disarmament, financial and economic matters of the highest importance to America are at work.

The Labor Conference has met

and the International Labor Office is organized and active.

Such important regions as Danzig and the Saar Valley are under the responsible authority of the League.

Two serious international conflicts—Poland versus Lithuania; Sweden versus Finland—have been averted by the mediation of the Council of the League.

All this and much more has been done. It should not and cannot be undone. To say that the League of Nations must be abandoned because it is already a failure, is to assert what is not true. With American participation the League will become even more effective.

We want our country to stand first in the councils of nations. We want our country to share fully in the great decisions which are shaping the future of the world. We cannot endorse Senator Harding's policy of "America last."

In the absence of definite assurances that the Republi-

Marcus in New York Times.

Taft: The little darling! He doesn't mean it

can candidates will use their full influence to bring the United States into the League with such reservations as may be acceptable to the American people, we urge all Republicans and Progressives who put patriotism above

party, to join with us in working and voting for James M. Cox and Franklin D. Roosevelt, and for those Senatorial candidates who stand honestly and frankly for ratification of the Treaty and adherence to the League.

# Why Vote for Harding

By Talcott Williams

**N**OT in ten Presidential elections have so many men on both sides been in doubt as to their vote. A distinguished member of a great but not old University flatly refused to vote for either candidates because neither is fit to be President. But the two men now running match many men who have had a chance to be President.

Forty men have "run for President" before this year, either in the first or second place. Three are indisputably great: Washington, Jefferson, Lincoln. Six are known to all the American public, but with three exceptions, not much abroad: Jackson, Grant, Cleveland, McKinley, Roosevelt, Wilson. Nine in all, thirty-one left: Adams, Adams, Blaine, Bryan, Buchanan, Burr, Cass, Clay, Clinton, Douglas, Frémont, Garfield, Greeley, Hancock, Harrison, Harrison, Hayes, Hughes, King, McClellan, Madison, Monroe, Parker, Pierce, Pinckney, Polk, Scott, Seymour, Taft, Taylor, Van Buren.

Among these how many do you know the first name of or what year he ran for President and had just the chance which Harding and Cox have today?

Any American citizen can vote with a good heart for either candidate. A vote for Harding or a vote for Cox does not rest exclusively on either man's merit, but also on the parties and current issues. Neither organization is free from men in its leadership who ought not to be its leaders.

The great mass will vote as they always have voted. I know counties and places which have gone on for sixty years in New England and Pennsylvania, voting substantially the same. Estimating election night, you can unhesitatingly put down the majority on one side or the other feeling certain that when counted, the official count would not differ 10 per cent. Our elections are decided, not by the great party mass, but by voters who shift from one side to the other in Connecticut, New Jersey, New York, Ohio, and in lesser degree, Illinois and other western states. In the last ten elections, five went against official predictions. Hayes looked beaten and was seated by just one electoral vote and the Electoral Commission. Blaine looked certain in 1884 and was beaten in the last week in New York by 1,149 in a total vote of 1,167,169. Harrison and the Republican organization and newspapers thought him sure in 1892, but he was beaten by the labor vote, as Harding may be. The Roosevelt Republican split elected Wilson in 1912, when a Republican majority was certain in May. Hughes was believed to have won in 1916 even on the morning after election by every New York paper and Wilson secured the presidency by 3,773 votes in California in a total vote in the state of 999,762.

Senator Harding's friends tried in September to get the College Presidents and the intellectuals to come out for him. They refused. Senator Harding's Des Moines speech nearly started a land slide of independent brain tissue. Mr. Root, Mr. Wickersham, Mr. Cravath, with others, drew a statement, but before that could gather signatures, Senator Harding had to come out with the definite pledge published October 11th. The Senator knows as well as anyone else—he said so early, that Johnson and Borah have nowhere to go. The Independents have Cox to go to and enough may go to make Senator Harding most anxious in regard to New York, New Jersey, Ohio and Illinois, perhaps Connecticut and Wisconsin, Oregon and California.

Both parties are pledged to some League; but if you want to make sure it is a good League, *Defeat Anti-League Republican or Democratic Senators.*

Vote against Moses in New Hampshire, Brandegee in Connecticut and above all, Wadsworth in New York. The defeat of these three men will give a League Senate. If any woman voter in many of these states votes for any of these three, men who have scoffed at her vote, her rights and her reform, she has the kindest, the most forgiving, the most turn-the-other-cheek-to-the-smiter heart that ever beat in a human bosom.

Now that both parties are ready to compromise on a "League, agreement or association," the best result may be secured, if the President and Senate belong to different parties.

**T**HESE are the issues over which the two parties face each other:—

*League.* Some international League is certain. The only issue is which party and which plan is the better able to do the work. No one, in either party, looks on the Covenant of a year ago as men did in July, 1919, in the enthusiasm of victory. On lesser issues, the League at Geneva is doing extremely well. The Aland Islands dispute between Sweden and Finland, colonies, organizing different bureaux and conferences on labor, finance, etc., have been admirably done. Unanimity was easy to secure over these. Without unanimity, the Council cannot act. On Poland, Russia, Latvia and Esthonia, Albania, Constantinople, the division of Turkey, unanimity could not be regained. The Council is deadlocked. Its powers are great; it cannot, under the unanimous vote required, exercise them. The agreement war brought, peace cannot secure. Many feel that negotiation leading to a court, whose decision is to be enforced by general action, is better than an executive Council since no great power will accept a majority or two-thirds and unanimity proves ineffective.

Which will do this work best—a *Republican or Democratic administration*? It is 52 years since Grant was elected, 1868. For 16 years the Democratic Secretaries of State have been Bayard, Gresham, Olney, Bryan, Lansing, Colby. For 38 years the Republican Secretaries of State have been Fish, Evarts, Blaine, Frelinghuysen, Foster, Sherman, Hay, Root, Bacon, Knox. Which party has had the better list to do this big world reorganization? Which has it now?

*Labor.* "The nation proposes to be master in its own house," said Lloyd George when a general railroad strike tried to dictate to England. This is the spirit of the Republican platform and Senator Harding's policy. The "open shop," order preserved, law supreme over all, this is the Republican platform. Governor Cox refused to send the National Guard to keep order at strikes, and pledges himself to use no Federal troops to keep order in strikes. He opposes injunctions. This is a clear-cut issue. Law and order are better than men, however good.

*Legislation on Social Issues.* Governor Cox proposes "progressive" legislation to form new institutions, give labor larger organic power and State functions more power and more powers. Senator Harding proposes sanitation, hygiene, training and aid for coming mothers, wide ex-

tension of education. Their two plans overlap, but on the whole, I believe in fewer deaths, more births and babies, more and better schools for the people, than new plans, institutions, powers and organization for labor.

The same broad line runs thru all the other issues. The Democratic party has issued bonds wholesale to build ships; but objects to giving American tonnage 5 per cent advantage on imports. Credits have been multiplied (\$300,000,000 for farm loans, \$1,500,000,000 advanced to railroad and other companies by the Finance corporation); while the Republican party urges the development of farm education, new methods, pedigree seeds and, as in the Esch-Cummins Railroad law, responsibility placed on railroad owners. Republicans criticize currency inflation by banks, and ask the repeal of excess profits taxes; the Democrats defend the taxes and a Republican Comptroller of the Currency, J. S. Williams, attacks the steps by which the Federal Reserve Banks brought deflation by higher interest rate.

## Why Vote for Cox

### By Norman Hapgood

IT has been to me an interesting experience to address the American voter this season thru the columns of *The Independent*. The circumstances, to be sure, have been severe. Mental fatigue, impatience with ideas, desire to be rid of everything except "business," do not compose a stimulating atmosphere, and I fear it is the atmosphere at present prevailing in this country. As a text let me quote from a letter to me from one of the soundest political observers in the country:

The appeal to reason and the higher nature of Americans presupposes a moral state of mind which is non-existent at this time in this country. It is a terrible thing to admit; but I believe it to be true. We are going down into deep water. No kind of political action is going to save us, and none of the social machinery we have been so long tinkering with; but only a revolt of the soul.

President Eliot issued a splendid call to a higher standpoint; a few other writers in the campaign have been worthy of the things at stake. Some distinguished Republicans, like Mr. Parsons, have shown independence in a great emergency; but dishearteningly large has been the number of able and outstanding citizens who have lent their countenance to "back to normalcy"; to the running away from principles that require energy and elevation and purpose; to the slump back toward the most materialistic and least interesting period in American history.

Three years ago who in the United States would have ventured the opinion that by 1920 the country would be in such a state as seriously to consider electing to the Presidency the man who in those days, along from 1915 to 1917, was more often than any other selected by observers as the perfect example of an obedient, dull, and unimportant reactionary?

The standpatter can do us nothing but harm in this present world, and above all the foolish, pliant tool of a standpatter. "With such creatures as the codfish," says John Fiske, "the turtle, or the fly-catcher . . . the sphere of education is extremely limited. They get their education before they are born." In savages the same stand-patism is found. "During the past three thousand years," Fiske says, "much has been done to weaken this conservatism."

Yes, much. But the end is not yet. Nobody knows what will happen on November 2. It may be that we shall keep ahead like rational beings. It may be, on the other hand, that we shall go "back to normalcy." Let us take together one last look at the issues involved.

What are the outstanding reasons for voting for Cox? For purposes of final summary and simplicity they can be

A broad principle ran thru their differences, the Republicans trusting to an international court, and the Democrats to an international council which adds to the powers of the President; Republican policy looking to law and order, Democratic to labor, privilege for labor organization, the one turning to health, sanitation and education, the other to new government machinery, one to bond issues and more currency, the other to a greater product, internal developments, to a preference for American tonnage, and self controlled railroads, less taxation on capital and more capital for investment.

It is this return to sober development, solid credits, a reliance on producing more rather than issuing more bonds, more health and strength rather than more grants and aids to "labor," which leads Governor Cox and my dear friend and most effective protagonist, Mr. Norman Hapgood, to call Senator Harding and the Republican party "Reactionary."

reduced to three. The order in which I would name those three is not the usual order. They would be: (1) Mexico. (2) The League of Nations. (3) Harding's stand-patism, or rather more than stand-patism: his desire not to stand pat but to go as far back as he can get. The codfish at least stays where he is.

Why do I put Mexico first? Far too little attention has been given to this issue. It ought in itself to be enough to decide. What is the explanation of the extraordinary interest that certain politicians have taken in Article X? They know too much to believe that Article X makes us appreciably more likely to get into war than we should be if we joined the League of Nations without that section. They know that Section X (as any reader of the *Independent* can see for himself by reading it) comes into effect at the end of a war. Other sections provide for the methods of prevention. This Section provides that if one country pounces on another country and defeats it, this "external aggression" shall not benefit the aggressor. There shall be no alienation of territory. There shall be no loss of political independence. Here it is:

The members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League. In case of any such aggression or in case of any threat or danger of such aggression the council shall advise upon the means by which this obligation shall be fulfilled.

Now read that Section with Mexico in your mind. There is another Section that specifically makes a favorite of us by endorsing the Monroe doctrine. The Monroe doctrine, as we now interpret it, makes us advocate, judge, and jury in all disputes in the Western Hemisphere. In this modern interpretation we could pick a fight with Mexico on any pretext and give her a good drubbing, and the League of Nations would be powerless under the Covenant. When we got thru with our glorious victory, however, it must be admitted Article X would apply. We should be bound not to draw a new boundary for Mexico that would mean the annexation of her richest resources to the United States. Senator Fall knows that. He has not been the unpaid representative of the oil interests for nothing. His friend Lodge, who has been doing so much anti-Mexican fire-eating, knows it also. The group of Senators whose hearts beat warm and strong for the special interests know it well. Penrose knows it, and Smoot, and Brandegee, and Reed, and that Senator who took under his special protection armor-plate and the profiteering cause in general, Warren G. Harding of Ohio—he knows it also. Is his heart

less tender for oil than for armor-plate? Away with the thought. If he is elected, American enterprise in Mexico will be protected. If the Mexicans do not give us all the money-making privileges we demand we shall, if Harding and Fall and Lodge come into power, know how to handle them. There will be no Wilsonesque molly-coddling. First the ground will be prepared. The newspapers will be filled with outrages. The State Department will feed out crimes and other essays to the assembled correspondents. An expedition will be sent in to rescue or protect some American citizens. There will be fighting. Full accounts will come out of treachery by Mexicans, murder, mutilation, starvation, dictatorship, nationalization of women, nationalization of children, rape, arson, and the desire of all Mexicans except seven or thereabouts to have the United States straighten out their affairs. More and more soldiers will be sent down. A good many will die of disease, and some will be killed. When the time comes for a settlement the question will come up: Shall our boys have died in vain? Shall all our sacrifices be for nothing? You can give the answer as well as I can. If you know the geography of Northern Mexico, and the location of the resources, you can come very close to drawing the new boundary line.

That is my reason number one for preferring Cox to Harding. Cox believes that the Republican leaders have made up their minds to this program and he has spoken his own mind with satisfactory emphasis against the supposed obligation of this noble country to go to war to back up the money adventures of a handful of men who would like to get rich and have the ordinary taxpayer and the average mother stand the cost. As Senator Lodge puts it, "the time has come to put an end to this Mexican situation." I think we may fairly say of Lodge and Harding what the League of Free Nations Association says of Fall: "No American oil company could have expected its paid attorney to ask for more." As Mr. Taft once said: "The law of the League . . . forbids the violation of the international commandment, 'Thou shalt not steal by force.'"

So much for the plot to get us into a war with Mexico and get away with the loot without interference from Article X. There remains the question of the rest of the Covenant. The attacks on other clauses have almost entirely ceased. It is either rejected altogether, as by Johnson and Borah (and by Harding on Wednesdays and alternate Fridays after eleven), or the assault is concentrated on Article X, which I have sufficiently discussed. It is possible that the treaty will be resubmitted to the present Senate, and I hope President Wilson will take that step, leaving full responsibility on the Senate for its action. It will then have had the advantage of the "solemn referendum." Of course I most deeply hope the answer will be made firm and unmistakable by the election of Cox. Even if, however, the answer is made uncertain and halting by the election of Harding, it will be better to give the present Senate an opportunity to get the subject out of the way. By accepting membership in the League, with or without silly and timid amendments, the Senate would incidentally save Harding the embarrassment of deciding whether he meant to betray Johnson and Borah or Lodge and Root. President Wilson, if Harding were elected, could scarcely refuse to sign the treaty with Senate reservations, since he would have had his referendum.

There remains the general question of reaction: of "back to normalcy"; or as it is put in the language of the street, back to Hanna. I don't blame reactionaries, who wish to hand the tariff back to the trusts, and give back to Wall Street full control of our credit, for voting for Harding.

Such are the leading considerations. What helps Harding most is that after trying years the unthinking majority always tends to vote against the party in power. What ought to help Cox most is that on all the issues he is right.

## Knocking the 'Bottom Out of British Business

By Edwin E. Slosson

IF the coal miners of England succeed in carrying on their strike they will accomplish what the German submarines could never do, the suppression of British shipping. It is quite as effective to cut off the motive power of a steamer as to sink her. England is an island and must feed her people from oversea. England is a manufacturing center and must keep up her commerce or perish. England's unprecedented prosperity for the past hundred years has been built upon her black diamonds. By these she has become the mistress of all the seas and of one-quarter of the land. Her ships went out laden with coal and manufactured goods. They came back carrying food and raw materials. In this way all the world contributed to England's greatness and no other nation could compete with her in commerce. But this fortunate cycle of trade is now broken. England is exporting less than half as much coal as she did before the war and coal that cost \$1.54 a ton to raise in 1913 costs \$5.52 in 1920. A hundred thousand more men are employed in coal mining than before the war, but they turn out 47,000,000 tons a year less than in 1913. Before the war men in the collieries were getting on the average \$1.72 for eight hours' work. During the past year they have been getting \$4.44 for seven hours' work and now they are demanding \$150,000,000 more. The fundamental question is not whether they deserve higher wages or not, but whether they are not charging more than the traffic will bear. Whether they can get more depends ultimately upon whether they produce more and their present policy is to produce less so as to increase the number employed. British industries and homes are provided with coal at less than cost, the loss being borne by the export trade. But the export of coal is being cut down and British ships often have to go out empty. This cuts off the profit of half the voyage and doubles the freight on food and raw materials. This in turn reduces production and increases the cost of living, forcing the workmen to demand still higher wages. Thus the vicious circle continues to run and England becomes increasingly incapable of meeting her competitors and of recovering her enormous loans to other nations. The British sovereign—once "sterling" the world over—has dropped in value from \$4.84 to \$3.46. So long as the strike lasts British ships will coal abroad and France and Italy will look to America for their fuel.

Realizing that England's commercial and financial power depends upon her coal supply, Government commissions have been at work calculating how long the coal can last and what can be done to make it last longer. It is estimated that considerable economies can be effected by consuming the coal in large central plants near the pits and conveying the power to the separate establishments by electricity. It is even suggested that British shipping resort to the free power of the air and use sails instead of steam so far as possible for carrying freight.

British statesmen, realizing that the future of the country depends upon its fuel supply, are already looking elsewhere for coal. The old saying about the futility of "carrying coal to Newcastle" has ceased to be a joke. In fact it is figured out that coal can be shipped from China to Great Britain and sold there below the present market price. The miners' union suspects the Government of a scheme to import 3,000,000 tons of Chinese coal to Newcastle, but they look to the seamen's union to prevent this.

Whether coal mining would be more economically and efficiently carried on under national or soviet management than it is at present under private ownership and govern-

Below: OUR SEAT AT THE CONFERENCE

The British public has felt itself rather the battlefield in the negotiations between the Government and the miners who finally voted for a general strike in spite of the inducements held out to them to continue work

mental control is an open question—which if the miners win may be put to the test of experiment. But a more serious question is behind this. At present coal is being sold at less than cost for domestic use and if the price is reduced as the miners demand many of the coal fields will be worked at a loss. The loss on the internal consumption is borne by the profit on the export trade, but every ton of coal shipped abroad hastens the day when the beds will be exhausted and England lose her commercial advantage. That is the difficult dilemma of the British Government.

### A Danger Signal

TWO recent incidents show how little respect is paid by either radicals or conservatives to the right of free speech in this country. In consecutive issues of the New York press the casual reader could learn, first, that a distinguished American publisher was howled down by a mob on the ground that he was alleged to have been too friendly in his remarks on another occasion towards a nation associated with us in the Great War, and, second, that two clergymen were arrested at Mount Vernon, after being roughly handled by the crowd, because the town authorities had refused to issue any permits to speakers representing the Socialist Party. The first mob was composed of Sinn Fein sympathizers who no doubt speak much of the "freedom" of Ireland but whose own ideas of freedom of speech seem rather inadequate. The second mob was composed of anti-Socialists who would "defend the American constitution" by violating one of its provisions. The police stood neutral in the first case and sided with the mob in the second. In neither case had the victims said a word to offend the audience. Major Putnam was not permitted even to finish his first sentence. The Reverend John H. Holmes was reading from the American Constitution when arrested. That is a bad record for a free country, especially during a national campaign when particular indulgence is usually accorded to the expression of unpopular opinions, even if they are favorable towards collectivism—or towards England!

### The Wildest Libel Yet

THE unscrupulousness and ignorance of some opponents of the League of Nations discloses depth below depth. Just as one thinks the very nadir of absurdity has been reached a new abyss opens. But we do not think that anyone will be able to surpass the amazing discovery that the Covenant "not only recognizes and ratifies but legalizes traffic in women and children." This strange charge is based on Paragraph C of Article 23 of the Covenant, designed to secure international coöperation for the *suppression* of the very evils which it is alleged to sanction.

Article 23, perhaps the noblest article in the entire Treaty of Peace, provides that the League of Nations shall work for the destruction of certain evils which the nations, acting singly and often not in harmony, have proved unable to control. Thus Paragraph A pledges the nations to "maintain the necessary international organizations" necessary to secure "humane conditions of labor for men, women and children." The whole Labor Charter, forming Part XIII of the Treaty with Germany, is summarized in that sentence. Paragraph B makes the League the champion of the rights of native peoples in colonies of the League nations. Paragraph C gives the League supervision over international agreements designed to prohibit "the traffic in women and children, and the traffic in opium and other dangerous drugs." The later paragraphs in Article 23 are in a similar spirit directed against other evils of international scope; Paragraph D against the sale of weapons to native peoples; Paragraph E against inequitable discriminations against the trade of League mem-

bers; Paragraph F against contagious disease. The whole of Article 23 was conceived in the loftiest spirit of humanitarianism and we should thank the opponents of the Treaty for calling the public attention to it even from hostile motives.

If there is any lingering doubt remaining as to the actual meaning of Paragraph C of Article 23 we suggest that the doubter turn to Article 295 of the Treaty with Germany, which pledges all the Powers signing the Treaty to agree to and to bring into force the Opium Convention signed at The Hague in 1912. This article means the death warrant of the international opium traffic. It directly carries out the intention of Article 23 of the Covenant.

### The Sword of Brennus

THE habit of throwing the sword into the scales of justice is quickly acquired and slow to eradicate. In the effort to apply President Wilson's principle of self-determination the Peace Conference arranged for plebiscites in certain districts of mixed population. But where the hopes of the expansionists have been disappointed there has been a resort to force. Istria and a large part of Dalmatia was awarded to Italy without asking the consent of the inhabitants but when Fiume was left outside the Italian boundary it was seized by Italian forces under the command of Captain D'Annunzio and is still held by them with the tacit approval or at least assent of the Italian Government. Vilna, the capital of Lithuania, is a hundred miles beyond the line drawn by the Supreme Council as the ethnic limit of Poland. But General Zellgouski, in command of a division of the Polish army, telephoned his resignation to headquarters and then occupied the city which he still holds in defiance of the League of Nations. A third case of the same sort occurred in Klagenfurt, where Serbian troops were sent in to occupy the district after it had voted to unite with Austria instead of Yugoslavia. The Treaty of Versailles left it to the people of the Eupen and Malmedy districts whether they would adopt Belgian or German citizenship, but the administration of the territory was placed in the hands of the Belgians and the League of Nations has received a big bundle of affidavits from the Germans in the disputed territory testifying that the Belgian officials had brow-beaten, threatened, discriminated against, discharged from employment or otherwise prevented or hindered them from registering their free choice.

These plebiscites do not always turn out as anticipated. It was generally expected by the Allies that every people who had the chance would gladly shake off their connection with Germany and Austria. It would be greatly to their interest, for thereby they would escape not only the tyranny under which they were supposed to have suffered but also the overwhelming financial burdens imposed upon the defeated nations. We had heard all our lives that Schleswig-Holstein had been longing to rejoin Denmark, from which they had been severed in 1866. But when the question was put to vote only one of the three proposed zones went to Denmark, most of the rest of the disputed territory preferred to remain German. In Klagenfurt even the Slavic districts voted for the Austrian connection. And Austria is about to vote to unite with Germany against the direct orders of the Peace Conference.

Possibly some of the Silesian and Prussian districts where plebiscites are still to be taken may not find themselves so anxious to leave Germany and join Poland as the Poles have led the world to believe. The Italians and the French were wise in refusing to allow a vote to be taken in the regions they have annexed. Undoubtedly parts of Dalmatia and Trentino would have declined to unite with Italy and probably parts of Alsace-Lorraine would have preferred to remain German if the people had had a chance to express their desires.

# The Story of the Week

## The Paramount Issue

EVERY day the campaign turns more and more on the League of Nations issue to the subordination of other questions which were more prominent in the early days of the campaign. Governor Cox has forced the fighting on this point, realizing that his principal strength lay with the pro-League Independents and Republicans who could only be won to the Democratic cause on this issue. President Wilson and members of his cabinet have been actively backing the Democratic candidate ever since he made the League the "talking point" of his campaign. Secretary Colby accuses the Republicans in their anti-League campaign of appealing to nationalist prejudices among the "hyphenated" sections of the electorate:

It is a horrible thing to contemplate a future in which Italian nationalism, combining with Bulgarian jealousy of Greece, and, in turn, linking up with the German smart under deserved defeat, and backed by the Irish distrust of England, should constitute a voting bloc in our electorate, by means of which the streams of our American life can be deflected from their normal courses . . . yet that is precisely the point to which we are tending, and rapidly tending, when a great party like the Republican party seeks to annex and appropriate for its own political purposes all the racial frictions, disappointments, grievances and instincts that it can locate and identify amid our great population.

Senator Harding in a speech at Indianapolis somewhat modified the drastic anti-League speech which he made at Des Moines, or at least strove to modify the impression which that speech had created that he had gone over altogether to the "irreconcilable" wing of his party. He declared that "There is no issue drawn between the President's League and no league or association" and asserted that Europe would be perfectly willing for us to propose "a plan for proper association." At St. Louis he amplified this statement by intimating that France was already "informally" sounding him as to the basis of a new associa-

Westminster Gazette

A BRITISH COMMENT ON OUR REPUBLICAN DECISION  
TO "CUT LOOSE FROM THE LEAGUE"

U. S. A. Republican Party: Guess I ain't "mortgaged" to that old European party on the other side!

[Senator Harding is reported to have said recently that America is not mortgaged to Europe.]

© 1920 New York Tribune

Somebody's got to stay and see that the fox doesn't swallow the goose

tion of nations to be constructed under American leadership.

Mr. Root, in an address at New York, expressed the opinion that the United States would enter the existing League of Nations if Article X were eliminated from the Covenant. He said:

If Mr. Harding is elected, he will be bound to say to the foreign governments who are already in the League: "Here are certain objections to certain provisions of the League Covenant which stand in the way of America's entering the League. I would be glad to have the provisions of the agreement changed so as to obviate these objections."

Senator Borah, on the other hand, declares that the policy of the Republican party "is against

any political alliance, copartnership or league with Europe or the Old World." He asserted that all Senator Harding intended by his references to a new association of nations was "the amplification and codification of international law and the creation of a great judicial tribunal to try international questions of a justiciable nature." This view of Senator Harding's position was "based wholly upon his public speeches." Ex-President Taft, at the opposite pole of Republican opinion from Senator Borah, admits to having "given up all hopes of having the League adopted in its present form," but he believed that "Mr. Root's recent visit to Europe will lay the foundation for a new agreement among nations for the prevention of war." It is evident that Senator Harding's position is still diversely interpreted within the ranks of the Republican party.

## The G. O. P. and the League

THIRTY-ONE prominent Republican advocates of the League of Nations have issued a manifesto giving their reasons for supporting Senator Harding. Among them are President Butler of Columbia University, President Lowell of Harvard, President Schurman of Cornell, President Hibben of Princeton, Herbert Hoover, Ex-Justice Hughes, Elihu Root, Oscar Straus, George Wickersham and William Allen White. Ex-President Taft was not among the signers, though his personal position seems to be identical with that of the thirty-one. The manifesto declares in part:

The question between the candidates is not whether our country shall join in such an association. It is whether we shall join under an agreement containing the exact provisions negotiated by President Wilson at Paris, or under an agreement which omits or modifies some of those provisions that are very objectionable to great numbers of the American people.

We have reached the conclusion that the true course to bring America into an effective league to preserve peace is not by insisting with Mr. Cox upon the acceptance of such a provision as Article X, thus prolonging the unfortunate situation created by Mr. Wilson's insistence upon that article, but by frankly calling upon the other nations to agree to changes in the proposed agreement which will obviate this vital objection and other objections less the subject of dispute.

For this course we can look only to the Republican party and

its candidate; the Democratic party and Mr. Cox are bound not to follow it. The Republican party is bound by every consideration of good faith to pursue such a course until the declared object is attained.

Mr. Frederick Coudert, a former Democrat, has come out for Harding and issued a statement very similar to that of the thirty-one Republicans, saying in part:

A Democratic or Republican League would be futile. As the situation stands today, no national action could, or should, be taken which does not command the assent of the American people by a very dominant and irresistible majority. This, it is quite evident, the present form of Covenant does not do.

On the other hand 150 prominent Republicans in all parts of the United States have joined in a manifesto declaring that so long as Senator Harding and the dominant leadership of the Republican party remains hostile to the League of Nations they must give their support to the Democratic ticket. The text of this manifesto is printed in our editorial pages. It represents the most formidable open "bolt" which has appeared during the entire campaign.

#### WHO SAID WOMEN WOULDN'T SERVE ON JURY?

New Jersey has tried the experiment of having a jury composed altogether of women sit on a case which called specifically for women's judgment. In this instance the question involved was that of a pattern company's suit against a woman proprietor of a dry goods store

## Wilson Asks a Question

WHEN President Wilson learned that Senator Harding claimed to have assurances from France that the French were willing for the United States to construct a new association of nations he promptly inquired whether the Senator implied that these assurances came in the name of the French Government:

I need not point out to you the grave and extraordinary inferences to be drawn from such a statement, namely, that the Government of France, which is a member of the League of Nations, approached a private citizen of a nation which is not a member of the League with a request "that the United States lead the way to a world fraternity."

The Department of State has always found the Government of France most honorably mindful of its international obligations and punctiliously careful to observe all the proprieties of international intercourse. I hesitate, therefore, to draw the inferences to which I have referred unless I am assured by you that you actually made the statement.

To this Senator Harding replied that the assurances of which he had spoken did not come from the French Government but from private citizens of France:

I am sure that my words could not be construed to say that the French Government has sent anybody to me. The thought I was trying to convey was that there had come to me those who spoke a sentiment which they represented to be very manifest among the French people, but nothing could suggest the French Government having violated the proprieties of international relations. Official France would never seek to go over your high office as our Chief Executive to appeal to the American people or any portion thereof

I can see no impropriety in private citizens of France, or in Americans deeply friendly to France, expressing to me their understanding of sentiment in that friendly republic.

It is not important enough to discuss, perhaps, but I very respectfully urge that an informal expression to me is rather more than that to a private citizen. I hold a place as a member of the Foreign Relations Committee of the United States Senate, which is charged with certain constitutional authority in dealing with foreign relations, and I am necessarily conscious that I

am the nominee of the Republican party for President of our Republic.

## Free Speech at Mount Vernon

AN important test case on the interpretation of the constitutional guarantees of free speech and the right of peaceable assembly was decided when Justice Keogh of the New York State Supreme Court declared illegal a municipal ordinance of the city of Mount Vernon. This ordinance gave the mayor absolute power to refuse to issue permits for street meetings, whether they interfered with traffic or did not. The intention was to bar Socialist mass meetings from the streets and public places of the town. Three Socialist speakers were arrested for holding a street meeting without a license. The American Civil Liberties Union took up the case and applied for a permit to hold another street meeting. This was refused, but two radical ministers, the Reverend John Haynes Holmes and the Reverend Norman Thomas, and the Farmer-Labor party nominee for Senator, Miss Schneiderman, went to Mount Vernon and held a meeting in despite of the ordinance. They were promptly arrested. After Justice Keogh's decision the prisoners were released. Similar ordinances, enacted during the war or during the "red" panic of last year, exist in many places and the Mount Vernon case is chiefly important as a precedent. The issue involved was stated by the Civil Liberties Union in the following terms:

Our revolutionary forefathers did not fight for the right to hire a hall, which often, in the case of minority parties, is no right at all. That is to say, assemblage and free speech involves the right to speak in the open.

## Have We Misgoverned Haiti?

THE relationship between the United States and the Republic of Haiti is somewhat peculiar; similar in many respects to that between Great Britain and Persia. In the eyes of international law Haiti is a "sovereign and independent" nation on entire diplomatic equality with ourselves; it was our associate during the Great War and is a Member State of the League of Nations. But the long continued disorders in the turbulent little negro republic of the Caribbean, amounting at times to anarchy, forced the United States to intervene as it has done in the neighboring republics of Cuba and Santo Domingo. By special treaty agreements, which in form carefully preserved the political independence of Haiti but in substance established what might almost be termed an American protectorate, the United States undertook to straighten out the finances of the country and to maintain order in the meantime by American forces and by establishing a native constabulary. Ever since 1915 a considerable force of American marines has upheld law and order in Haiti.

Had the United States not undertaken its virtual protectorate in Haiti there is little doubt that the European Powers would have intervened, at least as soon as the end of the Great War made it possible to devote attention to the safety of their nationals in that anarchic country. The general results of American intervention have been good. Banditry has been wiped out; the finances of the country have been placed on a sounder basis; roads, telegraphs and harbor works have been constructed. But much criticism has been made of the details of our administration. It is alleged that American officials virtually set aside the native administration, refusing to pay the salaries of the Haitian officials from the treasury funds in their charge; that a bank monopoly was established for the benefit of a New York bank; that the natives were forced to labor by military coercion; that the marines had indulged in reckless slaughter of the natives under the pretext of suppressing bandits, and that a rigid censorship kept the world in general and the American public in par-

ticular in ignorance of what was going on under cover of our ostensibly benevolent and disinterested intervention.

The report and correspondence of General Barnett bears out some of these charges. The system of forced labor on the roads existed under Haitian law and was continued during American occupation into 1919, since when it has been abolished. Some natives were shot after being made prisoners of war or on mere suspicion of being rebels. In one of his letters, denouncing this practice, General Barnett said that court martial evidence "showed me that practically indiscriminate killing of natives has gone on for some time." The total number of Haitians known to have been killed by either the American marines or the native constabulary is placed at 3,250. But more than half of this number, 1,763 to be exact, were killed in repulsing a single rebel raid on the city of Port au Prince and most of the other killings were also in the course of ordinary military operations. Only in isolated instances were any natives killed except in the repression of armed rebellion and banditry, but that these instances should have occurred at all has profoundly disquieted military circles where the good name of the American marines has always been held beyond question. It is an interesting point that in more than five years of military occupation the American marines lost only one officer and twelve men killed in action; certainly a very sharp contrast to the estimated Haitian losses.

Secretary Daniels of the Navy Department has ordered a thoro investigation of the alleged maladministration in Hayti. The Board of Inquiry to conduct the investigation will consist of Rear Admirals Henry T. Mayo and J. H. Oliver and Brigadier General Pendleton. General Barnett will be asked to coöperate with the Board. Secretary Daniels announces in advance that he will show "no toleration or mercy to men who disgrace the uniform."

## The Cuban Sugar Crisis

THE recent drop in the price of sugar, bringing so much relief to the American housewife, has not been viewed with equal pleasure by the citizen of Cuba. The fall in raw sugar prices from July 1 to September 15 resulted, it is estimated, in a loss of \$250,000,000 to the Cuban sugar growers and the subsequent decline may have increased this loss by \$100,000,000 more. The International Bank of Cuba, with its head office at Havana and many branches in the interior of the island, was forced to suspend payments temporarily because of a shortage of funds. The bank had loaned heavily to sugar growers when prices were at a higher level.

Some time before this failure, President Merchant of the Cuban National Bank had warned the Cuban public that prices could not be expected to rise in the near future. He said that there was on hand in Cuba about 330,000 tons of raw sugar, of which 60,000 or 70,000 tons had been sold but not shipped. The largest refiners in the United States "have large stocks of refined sugar on hand, which, altho sold under contract, are not being taken by buyers owing to the big drop in prices." He estimated that the sugar surplus in the United States would reach 200,000 tons by the end of December; an amount approximately equal to the excess of this year's American beet sugar crop over that of last year. The European beet sugar crop has also greatly increased over that of 1919. He predicted that Cuba's next crop would be sold at an average price of nine or ten cents a pound. He recommended that holders of sugar gradually dispose of their stocks on hand "without forcing the market" and that planters "practice every possible economy from now until the beginning of the new crop."

## A Million British Miners Strike

THE great strike that for the last three months has threatened the suspension of England's fundamental industry took effect at noon on October 16 when a million coal miners left their work. The pump men will be allowed to keep on for two weeks to prevent the mines from filling with water. The railroad and transport unions, which form with the Miners' Federation the formidable "Triple Alliance" of British labor, have approved of the strike and will also go out if necessary. Other industries will soon be shut down for lack of fuel for most of them have no more coal than is necessary to run them for more than a week or two.

Already London begins to look as it did in the midst of war. The streets as dark as tho an air raid were expected. All electric signs are turned off. The race trains have been taken off. The sugar ration has been cut down by half. Bread went up one-third the first day.

The strike necessarily assumes a revolutionary character since the fight is not with the mine owners but with the Government, which ever since the war began has controlled wages and prices. Besides this the radical wing of the miners is aiming to gain possession of the mines and they regard the strike as the first step in that direction.

A year ago the miners gained by threat of a strike an advance of 30 per cent of the pre-war wage and now they demand that this be raised to 40 per cent on the ground that their increased compensation does not

© Underwood & Underwood  
© Keystone View

Major General Barnett, former commander of the United States Marine Corps, has made some startling accusations concerning the American military occu-

pation of Haiti. "Practically indiscriminate killing of natives" is one of the serious charges in his report, which also says that the Americans used undue influence in the Haitian elections, set aside the native administration, forced the natives to labor by military coercion. The photographs above show United States Marines on a sight-seeing party and on duty in Port au Prince, the chief city of Haiti

keep pace with the higher cost of living. They claim that the cost of living has increased more than 165 per cent over 1913, while their wages have only increased 155 per cent. According to the statement of the miners' case the coal mining industry as a whole was showing a monthly surplus of 6,000,000 pounds, of which, under the law, the Government would get nine-tenths, while the other tenth would go to the owners, who have already a guaranteed profit of 26,000,000 pounds. The miners demanded instead that this surplus be devoted in part to raising their wages and in part to reducing the price of domestic coal. Their proposal was that the Government should remit the increase of 14s. 2d. per ton that was added to the price of coal last May by the Government and the wages of the miners be increased by 2s. for men, 1s. for youths and 9d. for boys. This would add 2,250,000 pounds a month to the wage fund and reduce the cost of domestic coal by 3,070,000 pounds, so disposing of most of the surplus. This would, according to the miners' estimate, reduce the expenses of poor families by four pounds and a half per annum and so cut down the high cost of living in general.

But Keynes and other economists argued that neither of the proposed measures would have that effect because, as they said:

Prices have risen so enormously because purchasing power has been vastly increased by the expansion of currency and credit, while there is on the other side a comparative scarcity of the things the public can purchase. The cost of living in general, therefore, can only be reduced either by a reduction in the public's purchasing power, i. e., a contraction in currency and credit, or by an increase in the supply of the commodities the public want. But the miners do not propose to do either of these things.

To concede their two claims would not increase the supply either of coal or of other things, whereas it would, by reducing the price of coal, actually increase the power of the public to purchase those other things. All that would happen, therefore, would be that, owing to the increased demand for them, those other things would rise in price proportionately to the fall in the price of coal. The community as a whole would be no better off than before.

The Government held that the Exchequer needed the money and that domestic coal was already being sold at less than cost at the expense of the export trade. It was further pointed

out that while the coal business as a whole showed a surplus, many districts were not paying at present prices and that the output was continually decreasing. The Government, which is seriously alarmed over the curtailment in production, proposed to leave the question of wages and prices to arbitration on the principle that an increase in wages should be dependent upon a minimum output. This proposition was put to

International

Typical of the younger, more radical element of the million British miners on strike are these boys; some of them take the strike as rather a lark, others see in it the opening wedge to ownership of the mines and a soviet management

referendum and was rejected by the miners with a vote of 635,098 against 181,428 for. Consequently the leaders had to call the strike, altho it was contrary to their judgment.

A demonstration of the unemployed in London ended with rioting, in which fifty people were injured. As the procession of unemployed led by the mayors of fifteen London boroughs tried to force its way into Downing Street, the narrow *cul-de-sac* containing the residence of the Premier, they were stopped by the police, but the mob took revenge by smashing 150 windows in the War Office and neighboring buildings in Whitehall.

## The Premier's Message

PREMIER Lloyd George, who began his political career as a champion of labor and has done more for the improvement of labor than any other British states-

Kadel & Herbert

LEADER OF THE MINERS' STRIKE "Bob" Smillie has been called "the most powerful man in England." As chairman of the executive committee of the Miners' Federation he heads the union of a million workers whose recent decision to strike not only shut down a large per cent of British industries but threatens revolutionary resistance to the Government's control

man, now finds himself fighting the most formidable of labor's forces in the most vital of England's industries. Lloyd George has been distinguished by his willingness to confer and compromise with his opponents, but whenever he thinks he has given way as far as he ought he has always been ready to challenge his adversaries to a show-down. He evidently considers that he has reached that point in regard to both the Irish and the coal miners and the two conflicts have come to a crisis simultaneously. He met the transportation strike a year ago by an appeal to the people to stand by the Government against labor dictation and revolutionary threats, and he is meeting the miners' strike by the same means. We quote entire his manifesto to the nation:

The nation is confronted with a coal strike. The Government has made every effort consistent with its duty as trustee for the people to avert this calamity. The proposals of the Government have been supported by many of the most responsible leaders of the Miners' Federation. They have been regarded by all sections of

the people as fair and reasonable.

The Government offered to submit the miners' claim for an increase in wages to an impartial tribunal and to abide by the result. This offer the miners refused. The Government offered to give the increase asked for if the miners would restore the present low production of coal to the figures of the early part of the present year.

This, too, the miners refused against the advice of their most experienced leaders. They are attempting now to gain their ends by force. The nation must and will resist such an attack with all its strength, and there can be no doubt as to the issue.

The citizens must help each other to lessen the inconvenience and suffering which the miners' strike will cause. The supplies of coal for the public services are sufficient. The Government will insure fair distribution of the available supplies of coal. Every householder can help by saving coal. Every manufacturer can help his workmen by making his supplies of coal last as

long as possible. There should be no cessation of employment until that misfortune cannot longer be avoided, and, above all, the people should remain calm and deal with emergencies as they arise.

No one need underrate the damage which this strike will do, but no one will be dismayed. We have been thru much more difficult times. With steady purpose and determination to do justice, the nation will overcome all its difficulties.

## Irish Disorders

**T**HE west end of the City Hall of Cork was demolished by bombs early Saturday morning; the resulting fire destroyed departmental records running back fifty years.

A body of over 200 Sinn Feiners stormed the police barracks at Schull in West Cork. The garrison of fifteen constables held out for four hours but finally surrendered. The assailants then burned the building and carried off several machine guns and large store of ammunition. A similar raid was carried out with similar success against the police barracks at Skibbereen.

A military lorry driving into Barrack street, Cork, was stopped by a wagon drawn across the road and four bombs were thrown at it by men concealed in the demolished houses on the street. One of the bombs exploded in the midst of the vehicle, killing one soldier and wounding three. In the consequent fusillade five civilians were wounded.

Two lorries carrying a military patrol of twenty-three were ambushed near Newcestown in the night. The captain was killed and several of the party wounded.

A party of 150 armed with machine guns attacked a military lorry in the Mallow district of Cork, killing the driver and wounding three soldiers.

Warder Griffin of Cork Prison has been kidnapped. Two magistrates of West Meath have also been carried off by Sinn Feiners.

Father Flanagan, Vice-President of the Sinn Fein, was arrested at Ballinasloe by a military patrol, but subsequently released.

Major George Smyth, who had earned the Military Cross and Distinguished Service Order in the Great War, was killed in a night raid at Drumcondra. His brother, a commissioner of constabulary, was shot in a club house last summer.

In Tipperary two Sinn Feiners, sons of a farmer named O'Dwyer, were taken from their home at midnight by the Black and Tan police and shot in the presence of their mother and sisters.

Terence McSwiney, the Lord Mayor of Cork, in Brixton Prison, London, is still alive on the sixty-ninth day of his fast. But Michael Fitzgerald, who with ten other Sinn Feiners was on a hunger strike in Cork prison, died from

### DIRECTORS' MEETING, SOVIET STYLE

These workmen made themselves the directors of the Fiat automobile factory at Turin, Italy, in their strike for Soviet control. The man seated at the left with a pen in his hand is Lugio Parodi, the new head of the works

starvation on the sixty-eighth day. He was arrested on charge of having murdered Private Jones at Fermoy, September 7, 1919, but had never been tried.

## Italian Turmoil

**T**HE great strike of the Italian metal workers was settled by a compromise and the main question, whether the factories should be managed by the owners or the employees, was referred to a joint commission to work out a plan of control. The labor members of the commission have prepared their demands, which are that the shop soviet or workmen's council must control the purchase of raw materials; supervise the sale and fix the price of finished products; superintend the grading of wages; decide what task each workman is better able to accomplish; control the general expenses; limit the compensation of proprietors and directors; decide when new machinery is necessary; and supervise sanitary conditions. This plan if agreed to would leave little for the "employers" to do or to receive.

The success of the metal workers has encouraged others to take what they want. Nearly all the uncultivated estates in Sicily have been seized by the peasants. The miners of Elba have organized to manage the state mines.

The Anarchists, infuriated at this tame ending of the strike which they hoped would lead to a complete social revolution, are resorting to riots and bombs. A bomb was thrown into the vestibule of the Hotel Cavour at Milan, where were lodging the British delegates to the League of Nations conference. A large infernal machine set off by a time fuse forty feet long exploded in the street ten minutes later. The Prefect of Milan has apologized to the British delegates for the outrage.

The Anarchists and Socialists declared a two-hour strike on October 14 as a demonstration in favor of Soviet Russia, but an association of ex-service men undertook to break up their public meetings. The result was rioting in various cities, causing the killing of fifty persons and the wounding of two hundred more.

In Trieste, the city that was transferred from Austria to Italy by the Paris Peace Conference, an organized mob of young Italians, known as the Fascisti, nearly killed American Consul Haven and an American correspondent, Lincoln Eyre, who happened to be in the office of the labor paper, *Il Lavoratore*, when it was raided by the Fascisti. The building was bombed and then burned and the two Americans who were escaping over the rear wall were fired upon.

The Fascisti are endeavoring to suppress by violence not only the Italian Socialists but also the Slavic in-

### MISPLACED SYMPATHY?

Oh, just Heaven! How monstrous of the Government to allow a poor fellow-creature to commit suicide!

Dear me! Another policeman shot dead for doing his duty. Well, it's no business of mine

habitants of the territory annexed by Italy on the eastern side of the Adriatic. Mr. Eyre writes to the *New York World*:

Wherever I went in the Trieste region and elsewhere in Istria I found incoherent inefficiency, seconded by dictatorial arrogance, which was vainly seeking to "Italianize" an embittered population of which only a small fraction is of Italian origin.

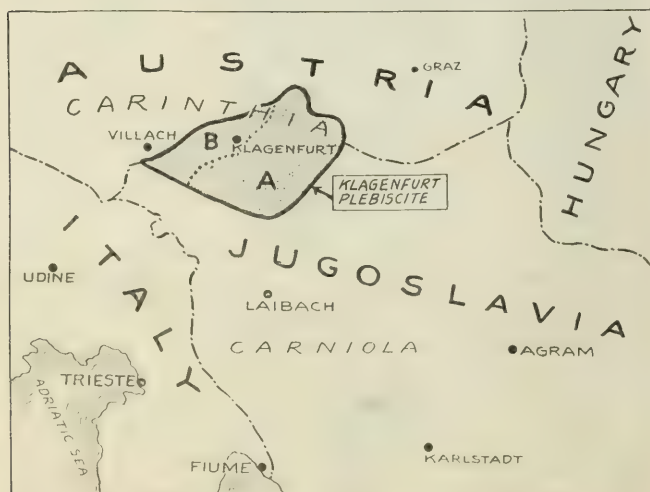

I have seen armies of occupation in operation on the Rhine, on the eastern frontier of Germany and in the Baltic states. Never have I beheld anything approaching the oppressive stupidity with which the Italian militarists are stifling individual liberty, popular aspirations and economic restoration along the Adriatic littoral.

By the treaty of St. Germain, which gives this territory to Italy, the rights of racial minorities are fully guaranteed, but the Italian military watch without interference the attacks on the person and property of the subjected Slavs.

## German Socialists Split

THE Independent Socialist party of Germany has divided on the question of joining the Bolsheviks. The Independent Socialists are those who under Liebknecht seceded when the majority of the Social Democrat party supported the Imperial Government in the war. They represent the extreme Left of German Socialism and have several times participated in revolts against the present republican Government which is controlled by the majority Socialists, but which has done little towards carrying out the Socialist program since it has been in power.

The old organization of the labor and socialist parties of the world known as the Second International was broken to pieces in the war and efforts among the Allies to re-establish it in Switzerland have not been successful. A counter movement was started in Moscow, where the Bolsheviks with the coöperation of a few radical representatives from other countries have set up what they call the "Third International" which claims the allegiance of Socialists the world over. But the conditions prescribed by the Bolshevik leaders for admission to the Third International are so stringent that the majority of the Socialists in all countries have refused to accede to them, tho this has in many cases caused the radical faction to secede. Thus in the United States a Communist party has been formed by bolters from the Socialist party. In Italy the Communists control the executive committee of the Socialist party and under orders from Moscow are expelling the moderates.

THE KLAGENFURT REFERENDUM

The disputed district about the city of Klagenfurt was left by the Austrian treaty to be settled by a referendum of the inhabitants. Zone A, where the farming population is mostly Slavic, has voted for annexation with Austria instead of Yugoslavia, so it will not be necessary to take a vote in Zone B, which is predominantly Austrian. The Yugoslav Government is unwilling to accept the decision of the people and has sent troops into the Klagenfurt district

In Germany the contest came in the recent convention of the Independent Socialists at Halle. This party polled nearly 6,000,000 votes in the last election and secured eighty-one seats in the Reichstag. The Third International was represented at the Halle convention by G. S. Zinoviev, chairman of its executive committee, who in a speech of four hours denounced the moderates and urged the German Socialists to join with the Russian Communists in carrying the proletarian revolution thruout the world. He was opposed by Crispian and Dittmann, who, having visited Russia, could speak with authority of the ruin wrought by the Soviet régime and the murderous methods employed by the Bolsheviks to sustain it. Herr Crispian asserted that the German militarists and imperialists were using the German Reds to overthrow the Treaty of Versailles and take revenge on France. He concluded by declaring that

The German proletariat will beat back the madness of Moscow; it will not let itself be insulted by Moscow, or duped by Moscow trickery. Moscow wants of Germany only tools to carry out Russian tactics here.

But at the end of the debate the convention voted to join the Third International of Moscow by 237 to 156. The minority led by Crispian and Ledebour thereupon left the hall and organized as a separate party. The German Government has deported Linoviev to Russia.

The Swiss Socialists have refused to join the Third International by a vote of 47 to 12 in the executive committee.

## The Decision of Klagenfurt

WHEN the Treaty of St. Germain was drawn up it was found very difficult to draw a definite boundary line between the new kingdom of the Croats, Serbs and Slovenes and what was left of the old Austria. All along the border the Teutonic and Slavic population was intermingled. A peculiarly delicate problem was presented by Klagenfurt, the capital of the ancient duchy of Carinthia, where the Austrians were in the majority in the city, but the adjacent country on the southeast was mostly Slovene. The peace conference accordingly decided to leave the question of Klagenfurt to a referendum of its inhabitants. According to the Treaty of St. Germain the plebiscite was to be taken in two sections. Zone A, comprizing the larger part of the disputed area, the farming land populated by a Slavic peasantry, was to vote first and if that voted for union with Yugoslavia then a vote was to be taken three weeks later in Zone B, which was the northwestern corner of the district, including the city of Klagenfurt. But if Zone A, the Slavic countryside, voted for union with Austria then no vote was required in Zone B, the Teutonic metropolis.

The plebiscite of Zone A was held on Sunday, October 10, and resulted in a majority for the Austrian connection. Motives are more or less a matter of surmise, but it is said that the fact that Austria was by the treaty deprived of her army while Yugoslavia has compulsory military service had a great deal of influence, especially among the women voters. There was, too, an economic motive since the farm lands depend for their market upon the city of Klagenfurt and this would be largely lost if a boundary intervened.

The Yugoslavs were disappointed and incensed at the result of the balloting. Mr. Janovic, the Yugoslav member of the International Plebiscite Commission, resigned rather than sign the certificate of election, claiming that it was carried by force and fraud. Serbian troops were sent in to occupy the southern part of the Klagenfurt district, ostensibly "for the protection of Serbian nationals against possible violence, excesses and provocations," altho the region is policed under authority of the Supreme Council by Italian and other Allied forces. The Supreme Council of Ambassadors has called the Yugoslav Government to account for this forcible infraction of its rules.

## Making Seaports in the Middle West

By Katherine Louise Smith

The West nowadays is intensely interested in the Great Lakes to the Sea project outlined on the accompanying map. At the last meeting of the National Rivers and Harbors Congress in Washington it was a subject of much debate, and a joint commission is to consider a plan in which Canada and the United States can unite in bringing sea-going vessels to the head of the Great Lakes, and so solve one important transportation problem.

The proposition is to devise some way of avoiding the St. Lawrence rapids, so that ocean vessels can go from Montreal to all Great Lakes ports, and United States products can be shipped via the lakes directly to the Atlantic. We already have deep channels thru the "Soo," the connecting river and the Detroit river and St. Clair flats. Canada is constructing a new Welland Canal which will admit vessels of deep draft and overcome the Niagara barrier. This canal will cost about seventy-five million dollars, will have a twenty-five foot channel and permanent construction for thirty feet at the locks. There remains only the work of preparing the St. Lawrence to carry boats to Montreal and the sea.

The chain of Great Lakes now extends about one thousand miles. Ontario and the Upper St. Lawrence add 250 miles, and the Lower St. Lawrence is ready. The main obstacle to the sea—the rapids—may be done away with, engineers say, by dams extending from Galop Rapids to Montreal to make the river a series of pools, or by canals to side-pass the rapids, or a combination

of both. Aside from the great possibilities as regards shipping, engineers who helped draft a form of reference for Canada and the United States say that four million horsepower is awaiting development and this would more than pay the entire cost of the project.

Canada has for some time desired to get her grain from Fort William and Port Arthur direct to the seaboard. Our western and northwestern states—our surplus food producing area—are hampered by remoteness from market and transportation facilities. To make ocean ports of Buffalo, Ogdensburg, Rochester, Erie, Cleveland, Detroit, Toledo, Milwaukee, Chicago, Duluth, Superior and other Great Lakes ports seems a splendid vision which if carried out will give our vast inland sections access to all American and European ports.

## Girls "Stick"; Boys Don't

Within a year after they were legally permitted to go to work, one child out of every four in Connecticut left school for that purpose, according to the report on Industrial Instability of Child Workers made public by the Children's Bureau of the United States Department of Labor. This does not include the large number of newsboys and those engaged in agriculture and domestic service. Three-fourths of the children went to factories, the largest number of boys going to the metal industries and girls to textile and clothing factories.

Following the work histories of nearly 2500 boys and girls whose records covered twenty-one to twenty-four months, the report brings out the fact that girls showed the greater tendency to remain in the first positions they took, one-third of them remaining with

their first employer twenty-one months or longer. Of the boys, 18 per cent left the first job within a month, and more than one-half shifted work before six months. The greatest amount of shifting for both girls and boys occurred in the clothing industry and the least in the textile industry.

The greater restlessness of boys is attributed to several causes. Frequently their occupations are different from the occupations of men and their work does not lead definitely to better paid positions. In some cases the work involved is too heavy, also boys have a greater variety of work open to them than girls. As a rule, the occupations of girls do not differ so widely from those of the women, and for this reason the girls are less likely to become restless and dissatisfied.

Most of the work in which children are employed is temporary or seasonal. In the first month after starting to work 10 per cent of the boys and 8 per cent of the girls were out of jobs for at least one week. The proportion of unemployment became less as the children became used to industry. Thruout their work the boys showed a greater tendency to unemployment than the girls.

## Have You Ears to Fly?

What promises to revolutionize present methods of selecting aviators for Government work is a test advocated by Dr. Charles M. Robertson, a Chicago ear specialist. Dr. Robertson has long been of the opinion that a great many falls from airplanes are the result of inability of the operators to withstand the different atmospheric pressures encountered in actual flying. He points to the effects of mountain climbing on a great many people as proof of his contention. While some show little change from the normal, others suffer from nausea, dizziness and even partial paralysis. And it must be remembered that, in the case of persons who ascend to

By means of this cabinet a would-be aviator finds out exactly how he would react to altitude flying

aminer to subject the would-be aviator to different pressures and to watch him closely for any unfavorable symptoms.

The cabinet used by Dr. Robertson is about five feet high and three feet square, with a heavy plate glass window in the front through which the subject being tested may be seen. Attached to the cabinet is a powerful vacuum pump for removing air, and a mercury scale, or altograph, which shows the degree of rarefaction created within, and therefore the altitude attained.

The man to be tested enters the cabinet, the door is locked, making the compartment air-tight, and the pump set to work. The air is removed in determined quantities, so that the man's "ascent" is made at the same rate usually employed by aviators. By letting air into the cabinet he may be made to "descend" at any rate desired. Usually

This altograph registers the height at which the man in the cabinet is "flying." By letting air in or out he meets exactly the atmospheric conditions undergone in piloting a plane to an altitude of 6000 feet

the subject remains in the cabinet for five or six minutes, during which period he is sent up and down a number of times, closing his flight with a drop from an altitude of 6000 feet to the earth's surface in thirty seconds. He is then removed from the cabinet and tested as to his blood pressure, muscle tone and the labyrinth tests of the ear.

The changes in the physical condition of many of the men tested by Dr. Robertson has been very great. Some showed evidences of great shock and in a few instances lost consciousness. Out of a series of 100 men tested about 35 per cent showed symptoms which, in Dr. Robertson's opinion, would disqualify them for air work, notwithstanding that they passed all the physical tests employed by medical examiners in selecting aviators for the War Department. It was determined from experienced aviators who were tried in the cabinet that the sensations they felt were exactly the same as those they had when actually flying.

Dr. Robertson has now examined men in sufficient numbers to enable him to formulate laws which he believes to be constant and which give the true guide to the character of the man to be taught to fly. While of course, he says, a novice attains a certain amount of skill from experience in the subjugation of fright, a man can never be edu-

# A NEW World You Have Never Seen!

*Are You Out of Touch with the New World of Today? Are You Keeping Pace with the World's Affairs? Read Here About a Wonderful New Idea—and How it Serves You!*

Have you seen the world as it looks today? The old world no longer exists—vast changes have taken place in every quarter of the globe. Today we are living in a NEW world!

The greatest war in history, and the Peace Treaty, and its resultant tremendous social, economic and other changes, have practically turned the whole world upside down. They have wiped out our former maps—altered the face of continents, changed the status of territories everywhere—upset the entire world situation.

Besides these forces, there have been other epoch-making forces at work revising the map of the world. Recent explorations, unprecedented expansion in commerce and industry, political upheavals—all have left their marks in every part of the globe.

Do you know what has been added to our geographical knowl-

edge of the world by the explorations of Stefansson, Stuck, and McMillan in the Arctic, of Smuts in Africa, of Rondo in Brazil?

Do you know how commerce has opened new routes of communication, built great new railroads in Alaska, Australia, Africa, Asia, South America?

Do you know how many new industrial cities have sprung up in the United States?

Do you know the new Europe that has come out of the war—with all the changes in boundaries, the new nations that have been born, the internationalized cities, the territories that are under plebiscites?

And now, through a wonderful New Kind of Atlas, has come to you the opportunity to keep pace with the world's changes.

## A Wonderful New Kind of Atlas

If the world never changed, no atlas would ever grow out-of-date. But with the rapid march of current events even new atlases must soon become obsolete. The NEW WORLD Loose-Leaf Atlas is the only atlas that keeps pace with the world, because we made it—

### Loose-Leaf!

The New World Loose-Leaf Atlas represents a distinct advance in the science of atlas production. Never before has an atlas been made that could be kept up-to-date. Never before has the loose-leaf principle been applied to an atlas.

It is the only method by which atlases can be kept permanently abreast of developments, of changes, political and economic, of advances in commerce, of new discoveries and explorations.

### Keep Pace With the World

The NEW WORLD Loose-Leaf ATLAS brings you a wealth of new information about every place in the world—it shows in detail every country of the earth—every political division. And in addition it gives a vast fund of interesting facts dealing with such features as climate, vegetation, natural resources, trade routes, races, population, history. Here are four hundred big pages of maps (13½ inches by 19½ inches) and index, four hundred pages of timely, authentic, comprehensive knowledge about the world of today.

You need this wonderful new kind of Atlas now—to keep in touch with the big world issues—to understand international affairs—to read your newspaper intelligently—to carry on

### Always Up-to-Date

conversation with well-informed people. You need it to broaden your business outlook—to follow the course of trade at home and abroad. Children need it to visualize history and the great war—to learn about the new world of today. And you will need this Atlas in the future to keep you informed of the world changes everywhere which will be recorded by the Up-to-Date Map Service.

### Map Service Free for Two Years

For every change that is made, a new map will be furnished, and for two years we will furnish these maps without charge.

Twice yearly, as the publishers have made new maps to conform to new conditions, they will be sent to those who own the New World Loose-Leaf Atlas. All that is necessary to bring the atlas up-to-date is to put the new maps in the binder. Think what this will mean to you! As Mr. O. P. Austin, Statistician of the National City Bank of New York, says, "Sel-

dom a day passes that I do not use this Atlas in my office work, and these particular (new) maps I have found very useful, and must have them to keep the copy which is in my office down to date. I am a great believer in the 'Loose-Leaf' system."

After the first two-year period, New World Loose-Leaf Atlas owners can purchase this always up-to-date map service for a very nominal sum, thus insuring permanence to their atlas.

Here is the atlas you have been waiting for—the atlas that shows the new order that has been reconstructed out of the chaos of war. You need no longer be without an up-to-date atlas, and you need not wait until additional settlements have been made in the map, for this big New Kind of Atlas keeps pace with the world—shows changes in the map whenever and wherever they occur.

### A Permanent Investment in Knowledge

You will never have to throw this atlas away. It can always be kept up-to-date. It keeps you constantly informed of what is going on in the world. It enables you to interpret current events—it gives you a timely grasp of the national and international issues of the day—it enables you to talk intelligently about the present situation in foreign lands.

No home should be without the NEW WORLD Loose-Leaf ATLAS—it is a wonderful help to everyone who wants to keep informed of what is going on in the world. Let us tell you ALL about this wonderful, large-sized Atlas.

## Mail Coupon for Interesting Booklet

Space here is far too limited to give an adequate idea of what the NEW WORLD Loose-Leaf ATLAS is and all that it contains, of the valuable special features it offers to everyone wishing to keep pace with the world—in history, economics, business and trade and international expansion. But a handsome booklet has been prepared which tells the whole fascinating story. It is profusely illustrated and is full of interesting facts, and you will find it one of the most attractive booklets you have ever seen or read.

We will gladly send you a copy of "Keeping Pace with the World" without any cost or obligation on your part. Simply send the coupon

below, and you will receive the booklet by return mail. Let us suggest that you do this now, while the matter is before you, as you do not want to overlook the opportunity of learning about this wonderful New Kind of Atlas, and how only \$1 puts it into your home and small monthly payments quickly make it yours. Send no money. Just mail coupon now for this valuable booklet.

#### FISHING FROM A BALLOON

They won't bite? Go up in a blimp and fish as did these pilots hovering over San Pedro Harbor, near San Diego, California. One ran the engine and the other brought in the fish, which was sighted with a school of barracuda in 15 feet of water while the fishermen were 40 feet in the air. This is probably the first time men actually were "up in the air" when they landed a finny fellow

### Do Animals Have Cemeteries?

It is related by a well-known South American writer and traveler that the small camels, the llamas and guanacos, so important in the life of the Peruvian Indians, in their old age or when they are sick and feel death ap-

proaching seek out a place in which to breathe their last; a place used by the animals for this purpose. Here one may find countless skeletons of the creatures who during many decades have sought out, in their weakness, the "dying-place," which they had hitherto avoided. Similar customs are related of other animals, and it is thought that we may account in this way for the occurrence of extinct animals in peculiar situations.

A noted Austrian paleontologist has suggested that the old cave-bears, so closely associated in our minds with our rancestors, the cave-men, did not use the caves for a place of residence but sought out these isolated spots to pass their last hours. In this manner Schlosser accounts for the great numbers of skeletons of cave-bears, often found by the thousands in the old caves of Europe. Great numbers of young bears are also found in the cave deposits, representing the weaker ones of the litters brought forth in the caves. The caverns then which have told us so much of ancient man, became veritable charnel houses for the ancient bears, and they recall the isolated spots, sheltered by trees, bushes and rocks, sought out by the South American camels.

The manner in which the numerous skeletons of a small fossil camel occur in the base of a hill in Sioux County, western Nebraska, suggests that the camels at the beginning of their race

International

During the recent earthquake which rocked the northern part of Italy, completely destroying five towns in Tuscany, the Leaning Tower of Pisa swayed so violently that the clock in its tower stopped

had a similar custom. Here in this ancient camel cemetery have been preserved since early Miocene times the remains of many small, delicate-limbed camels which tell an interesting story. From this hill, located in the bleak, desolate bad-lands of the west, museum parties have secured entire or almost entire skeletons of this graceful camel in such numbers and beauty of preservation that we are impressed with the idea that the base of this hill, millions of years ago, was a sandy spot on the Miocene plain, a "dying-place" for the camels.

The attitude of the body is such that the animals could not have been moved after death, and we realize that while the animal lay on the plain the wind drifted sand to cover the creatures, and thus preserve them in their soft sandstone bed for our edification. Their leg bones are as delicate as rods of glass, and are usually entire, except

where broken by the frost. Particularly impressive is the attitude of the head and neck, which often assume the position of a backward-bent-neck, a position often seen today in certain diseases affecting the brain or spinal cord, in man and animals. At times two camels are found close together, with the legs outstretched, the head thrown slightly back, in an attitude suggesting a last sleep. We witness them, ages later, where they sought out their "dying-place" which has become a true fossil cemetery.

© Associated Press

Joy riders and speed maniacs near Los Angeles, beware! Keeping one eye out for the cop while you scorch the highway won't do you any good, for the cop has a new trick worth any two of yours: a periscope at the end of a long tunnel and a stop watch at the near end of the periscope. He knows the exact length of the tunnel and the minimum time, to the fraction of a second, in which the distance can be traveled legally. As a machine approaches, the cop starts his watch the second the car enters the tunnel and by the time the motorist is abreast of him he knows whether or not he is speeding. If the verdict is guilty, two policemen with motorcycles stand ready to follow and make the arrest

## Sizing Up Senators

(Continued from page 149)

can State Convention, is having a lively skirmish to reseat himself. His recent appeal to the Connecticut Legislature to ratify the Federal suffrage amendment apparently has not caused many of the Connecticut voters to forget that he has always staunchly opposed woman suffrage.

Some, also, are not unmindful of Senator Brandegee's attitude on the League of Nations. They remember that on November 19, 1919, with other "irreconcilables," he voted against ratification with the Lodge reservations, and that on March 19, 1920, when the second attempt at ratification with "mild" reservations was made, his vote was again recorded as "nay." They even remember his recorded speech on the Senate floor on September 26, 1919:

"My chief criticism of the whole covenant and the treaty is," he said, "that the United States does not seem to get anything out of it at all except an obligation. . . .

"I should like to have us get out of Europe and have our army taken out of Europe for the purpose of keeping out of the infinity of obligations and embroilments and entanglements that are now going on in Europe. Why, the map of Europe looks like a kaleidoscope today. . . . We did not enter this war to form any league of nations."

Others of his constituents have consulted the records and find that upon fifty-nine labor measures Senator Brandegee voted favorably fourteen times, unfavorably thirty times, paired favorably once and unfavorably once, while upon the thirteen remaining measures he is recorded as not voting. Still others of the Connecticut electorate by studying the records on prohibition have learned that Senator Brandegee voted against the national prohibition amendment, the Volstead prohibition enforcement bill, and the measure providing for prohibition for the District of Columbia.

In New Hampshire, Senator Moses, another "bitter-ender" on the League, is waging a hard battle to retain his Senatorial seat. His record as an opponent of woman suffrage he is finding it difficult to justify.

In Illinois Governor Lowden's candidate, Representative William B. McKinley, is having a "neck and neck" race with the Democratic candidate, Mr. Peter A. Waller.

In Indiana the prohibition issue has enlivened the campaigns of the present incumbent, Senator James E. Watson, and his Democratic opponent, Mr. Thomas Taggart. The latter has recently openly declared himself in favor of the Volstead Act.

Maryland is another State in which the contest is close. Here again prohibition is an important issue between the present Democratic Senator, John Walter Smith, who is backed by the "dry" forces, and his Republican opponent, Mr. Ovington E. Weller.

In Georgia, Senator Hoke Smith, the

## McCutcheon's Sweaters, Scarfs and Hats of Camel's Hair

Reg. Trade Mark

**L**IGHT as a thistle, cozily warm, softly brown as frost-tinged oak leaves, Camel's Hair becomes a part of autumn itself—most essential to the correct fall wardrobe.

### Sweater Sets

The woman who desires a truly effective sports costume will be delighted with the new Camel's Hair Sweater Sets, including Sweater, Scarf and Hat; the one emphasizing the smartness of the other. As a suggestion, a most acceptable gift.

### Scarfs—a Chic Flare of Color for Suit or Frock

In Wool, Silk, or Camel's Hair the Scarf may be selected to harmonize or to flaunt a vivid color note against a dark costume.

### Sport Hats

Out-of-door smartness characterizes these new Hats. For wear with Sweaters of Wool and street costumes, there are a number of models—all exclusive with McCutcheon's.

*Send for the New Catalogue No. 35 today. It will solve many shopping problems. Mailed, free of course, at your request.*

**James McCutcheon & Co.**  
Fifth Avenue, 34th and 33d Streets, New York

present Democratic incumbent, and Governor Hugh M. Dorsey, the League of Nations candidate, were defeated by Mr. Thomas E. Watson, at one time Populist nominee for the presidency, known to be anti-Wilson, anti-war, and anti-treaty. Mr. Watson's success is regarded as a victory over the advocates of the League.

Organized labor, in Iowa, is causing Senator Cummins to realize that politically, at least, there may be drawbacks to sponsoring legislation such as that covered by the Esch-Cummins railroad reorganization act.

In Missouri, Assistant Secretary of State Breckinridge Long is giving Senator Spencer, the present Republican incumbent, a hard fight.

In North Dakota, Senator Gronna was defeated in the Republican primaries by Mr. E. F. Ladd of the Non-Partisan League, who is said to have pledged his support to defeat the League of Nations.

In Wisconsin, largely on account of the breach between Senator La Follette and Senator Lenroot, Dr. Paul S. Reinsch, the Democratic candidate, is said to have a fairly good chance of success. The situation is somewhat complicated by the entrance into the arena of Mr. James Thompson as a "La Follette Progressive." Senator Lenroot, a League reservationist, is said not to be finding it easy to live down the reputation earned by his record "as a conservative, a militarist, and an accomplice in the Esch-Cummins railroad act."

In Utah, Senator Smoot is leaving no stone unturned to convince the voters of the State that he is the man best qualified to represent them for the next six years in the United States Senate. Even tho he voted favorably upon woman suffrage, the records show him twice voting in favor of ratification of the Treaty with the Lodge reservations, and as favoring the Esch-Cummins railroad bill as well as the Shields water power bill, another

"special privilege" measure. Upon fifty-nine measures of interest to labor he voted favorably twenty times, and unfavorably thirty-four, while upon five measures he cast no vote.

Nevada is also regarded as a doubtful State, with Senator Charles B. Henderson, the present Democratic incumbent, opposing Mr. T. L. Oddie. Miss Anne Martin is running as an Independent Republican.

In California, Mr. Samuel M. Shortridge, a "regular," said to be backed by Senator Hiram Johnson, is giving Senator Phelan, the Democratic incumbent, a lively race, altho the latter enjoys a certain popularity in the State. While both candidates are anti-Japanese, the question of the Japanese in California looms particularly large in Senator Phelan's candidacy.

As to the results of the campaign on various battlegrounds, to be sure, at present we can only take the advice of the fortune-teller who said:

"The glass says, 'Only time can tell.'"

Some optimistic souls there are who really believe that the day will come when neither a Tammany nor a Lodge-Penrose-Smoot "Big Three" can say who the people's candidates shall be. Whether or not there is ground for such hope in the results to be known on November 2 remains to be seen. One thing, however, is possible. There is yet time for us, as voters, to acquaint ourselves with the records of our candidates that we may intelligently cast our votes for the more desirable. Or, in some cases, because of our lack of insistence that the best type of men be placed in nomination, is one forced to say "the less objectionable"?

### The Candidates for the Senate

The following is a list of Senatorial candidates as given out by the National Republican Headquarters in New York City:

Republican	Democratic
L. H. Reynolds	Alabama Sen. O. W. Underwood J. Thomas Heflin

Ralph H. Cameron	Arizona Sen. Marcus A. Smith
Charles F. Cole	Arkansas T. H. Caraway
Samuel M. Shortridge	California Sen. Jas. D. Phelan
Samuel D. Nicholson	Colorado W. D. Collicotte
Sen. F. B. Brandegee	Connecticut Augustine Lonergan
	Florida Sen. D. U. Fletcher
G. H. Williams	Georgia Thomas L. Watson
Frank R. Gooding	Idaho Sen. John F. Nugent
William B. McKinley	Illinois Peter A. Waller
Sen. Jas. E. Watson	Indiana Thomas Taggart
Sen. A. B. Cummins	Iowa Claude R. Porter
Sen. Charles Curtis	Kansas George H. Hodge
Richard P. Ernst	Kentucky Sen. J. C. W. Beckham
	Louisiana Jared Y. Sanders
Ovington E. Weller	Maryland Sen. John W. Smith
Sen. S. P. Spencer	Missouri Breckinridge Long
T. L. Oddie (Miss Anne Martin, Ind. Republican)	Nevada Sen. C. B. Henderson
Sen. Geo. H. Moses	New Hampshire Raymond B. Stevens
Sen. J. W. Wadsworth	New York Harry C. Walker
A. E. Holton	North Carolina Sen. Lee S. Overman
E. F. Ladd	North Dakota H. H. Perry
Frank B. Willis	Ohio W. A. Julian
James W. Harrell	Oklahoma Scott Ferris
Robert V. Stansfield	Oregon Sen. G. E. Chamberlain
Sen. Boies Penrose	Pennsylvania Johnson A. Farrell
	South Carolina Sen. Ellison D. Smith
Peter Norbeck	South Dakota U. S. G. Cherry
Senator Reed Smoot	Utah A. J. Manning
Sen. W. P. Dillingham	Vermont Howard E. Shaw
Sen. Wesley L. Jones	Washington George L. Cotterill
Sen. Irvine L. Lenroot	Wisconsin Paul S. Reinsch
	New York City

## Go Forward from Economic Serfdom

(Continued from page 147)

identified with the new Farmer-Labor party. I might mention as other significant happenings the recent tremendous victory of the Farmer-Labor ticket in Montana, the capture of the state legislature by the same group in Minnesota, the triumph in Colorado and elsewhere. The farmers are once more embattled and joining hands with them are the forces of labor.

The causes that gave birth to these state and local movements are the same that are responsible for the coming into being of the Farmer-Labor party. They may be summed up by saying that the Democrats and Republicans are sold out lock, stock and barrel to the interests of plutocracy and this truth is beginning to dawn on the consciousness of the masses.

The preamble of the Farmer-Labor party platform declares in part "that

the power of government has been stolen from the people . . . has been seized by a few men who control the wealth of the nation . . . and the people as a result of this usurpation have been reduced to economic and industrial servitude. Having thus robbed the people first of their power and then of their wealth, the wielders of financial power, seeking new fields of exploitation, have committed the government of the United States against the will of the people to imperialistic policies . . . to such a length that our nation today stands in danger of becoming an empire instead of a republic."

The Farmer-Labor platform unequivocally opposes any war with Mexico to make that country safe for American oil monopolists and land grabbers. It comes out straightfor-

wardly for the recognition of the Irish republic and the government established by the Russian people. It declares for the right of labor to an increasing share in the management of industry, for the government ownership of natural resources and public utilities, for easy credit facilities to farmers, for a tax system that would force idle land into use and exempt improvements from taxation. These are some of the planks representative of the new political creed.

It will be seen that here is presented a platform that is not a mere string of words. There is no straddling of issues, no dodging, no evasion, no pointing with pride to conditions at which we should point with chagrin and sorrow, but a definite constructive scheme of social engineering is presented, the putting into force of which would

evoke an Americanism so sturdy and so loyal that it would be unnecessary to travel to and fro over the land, telling the people what Americanism should mean. The conditions prevailing would do all the talking necessary.

The Democratic party, true to the apothegm, in the last seven years having had a sufficiency of rope has proceeded to hang itself, succeeding admirably at the job. The hopes of the Republicans for victory is based on the belief that the people en masse are so tired of Democratic misrule that they will flock to their standard now, to escape from the present national mess. But in the alternative presented by Mr. Harding and his platform, there is the proverbial alternative of the fire to the frying pan. The progressive who votes for the G. O. P. ticket, averring as an excuse that he believes in working thru the old parties, is merely deceiving himself. If the men of '56 and '61 had said that, no Lincoln and no loosening of the shackles of human bondage would have taken place.

It will be up to the next president to appoint four Supreme Court justices. He or she who votes for the G. O. P. nominee is thus not only voting for president but must admit partial responsibility for the four reactionary Supreme Court justices whom Mr. Harding would doubtless select. Thus a vote for the Republican nominee is not only a vote to commit the country to the mercies of standpatism for the next four years, but for the life of the members of the supreme bench who would be appointed by him. Packing the Supreme Court with Bourbons, capable of crippling any progressive legislation that may hereafter be enacted, is the one condition in which a progressive can have no hand. Such a court would spell nothing short of despair to those who hope for peaceful reconstruction of society politically.

The Farmer-Labor party is here to stay. Eventually it must win. It is certain that it would win now if all of those who are sympathetic with its aims would vote its ticket. You recall the story of how the Fiji islanders determined on a test to find out whether there is a man in the moon. They decided that at a specified hour on a certain day, all would emit a yell. The tumult, they conjectured, would arouse the man in the moon to some action if there were indeed a man in the moon. But at the appointed time, only a single man, who happened to be deaf, voiced a shout—all of the rest remaining silent to see what the noise would sound like. The same difficulty confronts the forces of progressivism.

"Why criest thou to me. Lift up thy rod . . . and go forward," Scripture tells us were the instructions to Moses when the children of Israel were in distress from the pursuing Egyptians.

The economic serfs of our present day can profit too from these words of admonition to the great Hebrew labor leader and emancipator. Possessing larger numbers, they can win, if they but go forward—if they but vote as they believe.

# W. L. Douglas

THE SHOE THAT HOLDS ITS SHAPE

## \$7.00 \$8.00 \$9.00 & \$10.00 SHOES

### FOR MEN AND WOMEN

#### YOU CAN SAVE MONEY BY WEARING W. L. DOUGLAS SHOES

"THE STAMPED PRICE IS W. L. DOUGLAS PERSONAL GUARANTEE THAT THE SHOES ARE ALWAYS WORTH THE PRICE PAID FOR THEM"

The best known shoes in the world. They are sold in 107 W. L. Douglas stores, direct from the factory to you at only one profit, which guarantees to you the best shoes that can be produced, at the lowest possible cost. W. L. Douglas name and the retail price are stamped on the bottom of all shoes before they leave the factory, which is your protection against unreasonable profits.

W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. They are made of the best and finest leathers that money can buy. They combine quality, style, workmanship and wearing qualities equal to other makes selling at higher prices. They are the leaders in the fashion centers of America. The stamped price is W. L. Douglas personal guarantee that the shoes are always worth the price paid for them. The prices are the same everywhere; they cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are made by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from factory. Send for booklet telling how to order shoes by mail, postage free.

**CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. Be careful to see that it has not been changed or mutilated.**

## Rheumatism? There's No Such Disease!

(Continued from page 152)

even having his appendix out or his antrum opened to see if perchance the focus be hidden there.

Like the deplorably elastic term "colds" the popular conception of "rheumatism" is extraordinarily broad, so broad that it covers any ache or pain in the limbs or in the vicinity of a joint. I once cured a case of chronic rheumatism. I make the bald assertion unqualifiedly. I accomplished the cure in a few seconds. It was a very obstinate case—the man had consulted many doctors, visited many health resorts and mineral springs, taken all the patent medicines of the day, had adjustments, massage, electricity. The arm was always lame, often acutely painful. In grasping the arm I felt some abnormal hardness in the muscle, worked it between my fingers, and out popped a whole sewing needle. The rheumatism passed away *instantly* and never recurred.

The various painful and disabling diseases which escape specific diagnosis by masquerading as rheumatism are less prevalent today than ever before and will be much less prevalent tomorrow than they are today, for the best of reasons. Most of these diseases are specific bacterial infections, and the bacteria reach the joints or the tissues about the joints thru the blood stream, to which they gain entrance from some distant focus of infection, perhaps a trifling recognized condition, perhaps an unrecognized infection, sometimes a severe infection. And the prevention and treatment of these primary septic foci is more thoro than it was in the past, and will be even more carefully attended to in the future because health intelligence is rapidly increasing among the people.

Dental surgery in America has made tremendous strides toward scientific perfection in the past ten years. The dentist of the better type is curing rheumatism every day and preventing untold suffering and disability from joint infections in the future.

The regular general practitioner of medicine, not to mention the specialist, knows something today of the frequency and dangers of sinus infections, infections in the several bony air-spaces which communicate with the nasal chambers; and by attending to these common troubles—formerly mistaken for "neuralgia," "hay fever," "chronic catarrh," "headache," "eye trouble," "toothache," and ineffectively treated as such—the family doctor is contributing his mite toward the cure and prevention of joint diseases.

In his seemingly unseemly eagerness to "explore" the abdomen and remove chronically diseased gall-sacs, appendixes, and other more or less damaged appendages, the modern surgeon prevents and cures a great deal of joint disease.

We do not know all there is to know about this class of disease conditions

as yet. But we are bold enough to believe that we have solved the riddle of rheumatism and that the answer is, as I have already said, that there is no such disease as rheumatism. And we are optimistic enough to predict that if

the present rate of scientific progress and popular enlightenment in health matters is maintained there will be no diseases to masquerade as rheumatism a century hence.

Elmira, N. Y.

## The Battle of Blanc Mont

(Continued from page 151)

detachment of the supporting regiment on the left, the 5th Marines, assisted the French in a second attack which was successful in taking the hook. Soon after, however, the Germans recaptured it in a counter-attack and fighting continued at this point until far into the night before the French finally succeeded in holding it.

Without heeding the exposure of their flank to the fire from the hook, the American attack was resumed at 4 o'clock p. m. The morning advance had already cost casualties amounting to 15 per cent of the troops in the front line regiments, but 1,600 prisoners and many machine guns had been taken and General Lejeune's men were still full of fire and energy. The renewed advance pushed forward toward the road extending from Orfeuill westward to St. Etienne and it gained a kilometer and a half before it was brought to a stop, mainly because the Americans were driving a salient into the German lines owing to the failure of the flank divisions to progress beyond Medeah Farm and the Essen Trench. The progress of the afternoon, furthermore, developed a new and terribly effective German machine gun center lying in the western edge of the Blanc Mont woods, within the unconquered sector of the 21st Division. The heavy fire opened from this center of resistance upon the flank of the 6th Marines made it exceedingly difficult for them to hold and consolidate the ground they had gained. But they and the 9th Infantry on their right did hold it thru a long night of firing.

The 2nd Division continued to fight thru the darkness, not only with foes in front but with German machine gunners, who infiltrated into the American lines at many points. These, however, were invariably disposed of and at daylight of the 4th the American position was firmly established. At 1 o'clock in the afternoon they attempted to resume the advance but gained only about 500 meters under the flank fire from the Blanc Mont woods. The 21st Division on the left had now been relieved by the 22nd, but neither they nor General Lejeune's men could get forward until the strong point should have been overcome. Accordingly an attack was coordinated between the 3rd Battalion of the 6th Marines and the 17th Regiment of French infantry. It went off at 6:15 o'clock on the morning of the 5th, after an hour's artillery preparation and was so swift and irresistible that no casualties were suffered, while 209 prisoners and 75 machine guns were taken out of hand.

This important success immediately enabled the 22nd Division to advance

several kilometers to St. Pierre-a-Arnes and to the southern edge of St. Etienne, the Marines, likewise, in their own sector pushing up to within 500 meters of the latter village, where they encountered another trench line, unfinished but defended by many machine guns. It was too late in the evening to organize a new assault but at 4:30 o'clock next morning the Allied artillery began another preparation fire and an hour later the 6th Marines and the 23rd Infantry, which had relieved the 9th Infantry on the right, attacked and carried the German trenches and reached the edge of St. Etienne.

The defenders of St. Etienne fought so fiercely that it was nearly noon before the patrols of the Marines succeeded in infiltrating into the streets, where they at once came under sweeping machine gun fire from the walled cemetery in the northeastern edge of the village. The enemy, backed by the strong point of the cemetery, then counter-attacked and drove the Americans out. Thruout the afternoon desperate street fighting continued, first one side and then the other penetrating into the village under cover of a barrage only to be hurled from it again by a counter-barrage covering the return of the opposing infantry.

The 2nd Division, by the night of October 6-7, was so nearly expended that it was deemed unwise to keep it in action another day. But, in view of the total lack of experience of the 36th Division, which was to take its place, its relief was effected in an unusual way. Instead of throwing General Smith's Texans and Oklahomans immediately and alone into this intensely savage battle, the advance regiments of the 71st Infantry Brigade, under General Pegram Whitworth, were placed by battalions alternately between the battalions of the 2nd Division's advance regiments, Colonel W. E. Jackson's 141st Infantry thus coming on line with the 23rd Infantry, on the right, while Colonel A. W. Bloor's 142nd Infantry, on the left, alternated similarly by battalions with the 6th Marines. The support regiments of both divisions were in rear, battalions of the 2nd Division continuing to maintain combat liaison with the flank divisions, while the artillery brigade and all the machine gun and trench artillery units of the Marines and regulars continued in action, the 36th Division having none of these weapons of its own.

The entire next day was passed in organizing the front and accustoming General Smith's men to their novel situation. At 5:15 o'clock on the morning of the 8th, General Whitworth's bri-

**75 COPIES a minute**

Here's a machine that prints good, clean, sharp form letters. It is easy to operate—your office boy or stenographer can do the work.

**ROTSPEED**  
STENCIL DUPLICATOR

prints anything that can be type-written, handwritten, drawn or ruled. Simply write the form on a stencil paper, attach to the machine and turn the handle.

**It Will Pay for Itself in 10 Days**

The Rotospeed is used by manufacturers, merchants, churches, schools, banks, lodges and the United States Government. It saves 92% of the cost of form letters. It is simple in construction and easy to operate. It prints on any size or kind of paper, from a 3x5 inch card to an 8x16 inch sheet.

**Only One Model, \$43.50 Complete**

There are no accessories and no higher priced models. The original cost includes full equipment and sufficient supplies for printing 24 different jobs. The saving on this much work alone will more than pay the cost of the Rotospeed.

**Free Trial at Our Risk**

We don't employ salesmen nor expert demonstrators. We offer to place the Rotospeed in your own office on trial. The machine *must* sell itself. Let us show you how others in your line of business are increasing profits, saving time and saving expense in the Rotospeed way. Just sign and mail the coupon, or pin it to your letter-head.

### 30 Days' Trial BE WELL AND KEEP WELL 30 Days' Trial THE ROCHE ELECTRIC HYGIENIC MACHINE

HELPS NATURE IN HER FIGHT AGAINST DISEASES AND PAIN

It increases blood circulation, strengthens and soothes the nerves, brings sleep to the sleepless.  
The Vigorous Man or Woman is Leader of All— Don't be a Dead One at 50

Your Sanitarium at Home

You cannot realize the benefits derived from this machine except you try it. One treatment will convince you of its extraordinary qualities. If you are suffering from paralysis, locomotor ataxia, vertigo, apoplexy, neuritis, rheumatism, lumbago, gout, hardening of the arteries or high blood pressure, be sure to investigate this machine. A perfect circulation wards off and overcomes such ailments. Takes the place of exercise and hand manipulation. Gives your muscles firm elasticity. Be neither fat nor thin.

#### NORMALIZE YOUR WEIGHT

Do you realize what this machine means to one wanting in vital strength, or suffering from general weakness, nervous debility, insomnia, constipation, headaches or pains through the back and limbs? It is the only treatment for prostatic gland trouble, varicose veins or a goltre.

Remember our machines are not vibrators, but a genuine health-helping, life-prolonging apparatus. As electrical manufacturers we build high-frequency machines of special design, including our new combination machine "High-Ray" or, in other words, "Violet Ray," which is operated from direct or alternating current, and two No. 6 dry cells furnish the pulsating and atomical vibration. We know that we have overcome the possibility of accidents through short circuit which so commonly happens in cheap and inferior machines.

Invented and patented  
by Prof. J. B. Roche

Our machine should be in every home. Write for our free trial offer and testimonials. It is for men and women who want to become healthy, vigorous and efficient. Address

gade, leaving their comrades of the 2nd Division on the line of departure to act as supports, jumped forward in their first attack, accompanied by the 2nd and 3rd Battalions of French tanks. If fear was entertained in any quarter that the Southwesterners might lose their nerve, it was speedily dissipated. Like veterans Colonel Bloor's men swept forward thru the shattered village of St. Etienne, engulfed the cemetery, taking 208 prisoners, and drove onward to the edge of the Arnes River, here a mere brook, beyond which a line of trenches finally brought them to a halt, at about 10:30 o'clock in the morning. The Marines, following them and the French, to their left, mopped up St. Etienne and organized it for resistance. Further to the right Colonel Jackson's troops made a good advance but were halted short of the line attained by the 142nd. The latter was thus left in an advanced salient, of which fact the enemy took advantage late in the afternoon. Launching a counter-attack upon its front and at the same instant opening a violent fire on its exposed flank, the Germans succeeded in driving Colonel Bloor's men back upon their supports of the 2nd Division. In the confusion it seemed for a short time that St. Etienne might again be lost, but order was restored in the ranks of the 142nd before they had fallen back as far as the village. The enemy was repulsed and during the night Colonel Bloor's troops relieved the holding detachments of Marines in the village in spite of the fact that in learning its first hard lesson of warfare the 142nd had lost already 125 officers and enlisted men killed and 566 wounded out of an effective total of 58 officers and 1,715 enlisted men.

The heights upon which the Germans had depended for maintaining the flank of their lines before Rheims were now definitely lost to them. Evidence of their actual retirement, however, did not develop until the 10th, and meantime the 36th Division completed the relief of General Lejeune's men, the regiments of General John A. Halen's 72nd Infantry Brigade taking over the support positions. When, on the 10th, it retired to a rest area near Somme-Suippe to reorganize preparatory to reëntering the line in the Meuse-Argonne for the break-thru of November 1st, the 2nd Division could point proudly to the record of another whirlwind battle added to the list of its achievements: a battle in which it had gained seven kilometers of ground in four days of actual attack and broken the back of the German Champagne front by the capture of Blanc Mont, thus rendering the relief of Rheims inevitable. In accomplishing this result the division had made prisoners 48 German officers and 1,915 men besides taking scores of machine guns and much artillery. As was inevitable, its own losses had been severe; 4,771 officers and enlisted men were casualties.

Altho the 36th Division vigorously sounded the enemy's front, which was thought to be retiring, on the morning of the 10th, severe resistance was still

found. That afternoon, however, the French 73rd Division, now on the right, pushed forward thru Orfeuil directed upon Bemont Chateau. General Smith's men therefore took up the advance toward Machault. The regiments of the 72nd Brigade, Colonel John S. Hoover's 143rd Infantry on the right and Colonel William K. Wright's 144th Infantry on the left, relieved the 71st Brigade during the following night, while advancing. The difficult maneuver, performed under constant enemy fire, again caused confusion and mixing of units but in spite of difficulties there was no halt in the forward movement and by the evening of the next day, against steady resistance the division front had progressed about five kilometers, to a point beyond Machault. Information had been received that the enemy had abandoned his Rheims front.

The Americans, deflecting the direction of their advance slightly to the northeast, pushed forward steadily during the 12th toward the Aisne River between Givry and Attigny, distant about 15 kilometers from Machault. A certain amount of German artillery fire was in progress along the whole wide front as Americans and French moved across the open, level country but the enemy's batteries retired steadily and at dusk the front of the 36th Division was north of Vaux-Champagne with the Aisne River and the Ardennes Canal, paralleling it, in plain view ahead. American patrols reached the river bank during the night and a line of resistance was established about five kilometers to the south. Thus the front lay without offensive movement until October 27, when General Gouraud commenced active operations for forcing the passage of the Aisne. To the Texans and Oklahomans of General Smith's division was assigned the task of clearing the bend of the river and canal surrounding Forest Farm and the hamlet of Rilly-aux-Oies.

The 3rd Battalion of Colonel Bloor's regiment and the 1st Battalion of Colonel Jackson's, at 4 o'clock in the afternoon made an attack in headlong style upon Forest Farm and carried the place and the trenches in front of it in less than half an hour. Promptly organizing the position, the American battalions then pushed out strong patrols which, by evening, had cleared the intervening ground up to the hamlet of Rilly.

When this brilliant piece of work was performed, General Halen's brigade had already been relieved on the left of the sector by the adjoining French division, the 61st. During the succeeding night General Whitworth's brigade was similarly relieved on the right by the French 22nd Division, and the 36th Division retired to a rest area near Bar-le-Duc, in the sector of the 1st American Army. In achieving its fine record in its one and only battle the division had suffered 2,651 casualties but it had worthily completed the work begun by the 2nd Division by making an advance of 21 kilometers against resistance and capturing 813 prisoners, 26 cannon and 277 machine guns.

## The United States Life Insurance Company

in the City of New York

Organized 1850. Non-Participating Policies only. Over Forty-five Million Dollars Paid to Policyholders.

JOHN P. MUNN, M. D., President.

Good territory open for high class, personal producers, under direct contracts with the Company. Address Home Office, 277 Broadway, New York City.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

### English, Literature and Composition

#### I. Why Vote for Harding, Why Vote for Cox. Republicans Who Will Vote for Cox. The Paramount Issue. The G. O. P. and the League. Wilson Asks a Question.

1. Write a brief for debate on whichever side you favor of the question: Resolved, that the Republican candidate for President of the United States should be elected.
2. What seems to you the most important issue of the Presidential campaign? Explain in a five minute speech the reasons for your choice.
3. Attend a political meeting for voters in your town or city and write either (a) a newspaper account of it about one thousand words long, or (b) a descriptive essay on American political campaign methods.
4. Write a poem inspired by some incident of the Presidential campaign, perhaps a torchlight parade, or a street meeting, or an effective poster, or a woman wearing a "Vote for the League and prevent war" button.
5. Write an enthusiastic letter from an American woman casting her first vote to her sister who lives in one of the states where women have always been enfranchised. And write a reply from the sister who has always taken her vote for granted.
6. Define the following words and phrases: stand-patism, back to normalcy, mollycoddling, have done with wiggle and wobble, a "little America" party.
7. Explain as if in conversation or in a long letter to a Republican friend of yours the stand taken by the 150 Republicans who have come out in favor of Cox. Note in connection with their manifesto the two cartoons of Mr. Taft on pages 153 and 159.
8. Write an article called "If I Were President," in which you point out what seem to you the most important things to be done in the next administration.

#### II. Go Forward from Economic Serfdom.

1. Summarize Mr. Christensen's article in outline form.
2. Show half a dozen instances of its effective use of literary "tricks of the trade."
3. State the chief planks in the Farmer-Labor party's platform.
4. Plan a campaign poster for the Farmer-Labor party from the material in Mr. Christensen's article.

#### III. Sizing Up Senators.

1. Write a newspaper editorial describing the qualifications and record that a Senator should present if he deserves reelection.
2. If your state is electing a U. S. Senator this fall make a short "stump" speech in favor of the candidate who you think should be elected.

#### IV. A Little of Everything.

1. Give a short talk on any one of the articles in this department.
2. Write an imaginative description of an aviator's first flight test in the cabient invented by Dr. Robertson.
3. Let the teacher read aloud Ernest Thompson Seton's story of "Wahb" from "Wild Animals I Have Known," and then ask each pupil to write a similar story based on the article, "Do Animals Have Cemetaries?"
4. Give several instances of the mention of the Leaning Tower of Pisa in famous literature.

#### V. A Million British Miners' Strike. The Premier's Message. Knocking the Bottom Out of British Business. Cold Comfort for a Million Miners.

1. Make a short speech of argument in support of either (a) the British miners' decision to strike, or (b) the Government's refusal to concede their claims.
2. Write a vivid description, as if for a newspaper "feature story" of the changes brought about in London by the coal shortage due to the miners' strike.

#### VI. Theodore Roosevelt.

1. Memorize a suitable poem or paragraph to give as part of the school exercises in honor of Roosevelt Day.
2. Write an essay on "Theodore Roosevelt's Americanism."
3. Rewrite the message from Theodore Roosevelt published under his portrait on page 146 in as simple form as possible.

### History, Civics and Economics

#### I. The Farmer-Labor Party—Go Forward from Economic Serfdom.

1. What is the relation between the Farmer-Labor Party and the Farmers' Non-Partisan League? Is a member of either one necessarily a member of the other?
2. What points of likeness and of difference do you note between the Farmer-Labor Party and the other radical third parties of recent times, Populist, Socialist and Progressive?
3. What seem to be the chief "planks" of the platform on which Mr. Christensen stands?

#### II. The Campaign—Sizing Up Senators. Republicans Who Will Vote for Cox. Why Vote for Harding. Why Vote for Cox. The Paramount Issue. The G. O. P. and the League. Wilson Asks a Question.

1. Why is the control of the Senate of unusual interest and importance at present?
2. Which Republican and Democratic candidates for the Senate this year would you rank as irreconcilably hostile to the League of Nations?
3. Do you think direct election of Senators has changed the Senate for the better or for the worse?
4. Summarize the issues emphasized by Mr. Williams as planks for a Republican platform.
5. Look over the list given by Mr. Williams of the forty men who have run for President (excluding third parties) in American history. What can you tell about each? For your own amusement and instruction divide these names into two classes, "real statesmen" and "mere politicians," and give reasons for your choice in each case.
6. What relation does Mr. Hagood discover between Mexico and Article X. Do you think that there is danger of war with Mexico if Mr. Harding is elected? Why or why not?
7. Mr. Hagood regards the issue as largely one between liberalism and progressivism on the one hand and conservatism and reaction on the other. In what sense does he use these terms? In most European countries the two chief parties (apart from Socialist and Labor groups) bear the names "Conservative" and "Liberal," or some equivalent terms. Why has this fundamental political division not been so clearly evident in our party names and platforms? In which elections since 1860 would you say that the Republican party was the more radical? In which the Democratic?
8. Compare the manifesto of the pro-League Republicans who are supporting Harding (The G. O. P. and the League) with the manifesto of the pro-League Republicans who are supporting Cox. What is the line of argument in each case? Which seems to you the more logical position?

#### III. The British Coal Strike—A Million Miners Strike in Great Britain. The Premier's Message. Knocking the Bottom Out of British Business.

1. Compare the causes and probable effects of the British coal strike with recent coal strikes in the United States.
2. What are the chief coal mining regions of the world? Why is British coal so important a factor in British foreign trade and general prosperity?
3. What reasons does Premier Lloyd George give for not yielding to the demands of the miners?

#### IV. The Klagenfurt Plebiscite—The Decision of Klagenfurt. The Sword of Brennus.

1. What is a "plebiscite"? What plebiscites are provided for in the treaties with Germany and Austria? Which have already been taken?
2. Do you think the plebiscite a satisfactory way of determining the national allegiance of a disputed territory? What drawbacks has it? Can you think of any other way of determining popular sentiment on a question of nationality?

#### V. Latin America—Have We Misgoverned Haiti?

1. Locate Haiti on the map. Of what race are its inhabitants? What language do they speak? What is their form of government?
2. Do you think that we are justified, under the Monroe Doctrine, in policing misgoverned or turbulent Latin American nations?

## Just a Word

During the school year we sacrifice the last page of our limited space to our Lesson Plans, based on the contents of the current number of *The Independent*. Of course our primary reason for so doing is to increase the value of the magazine to the thousands of classes in school and college which use it as a textbook. A good teacher may prefer to formulate his own questions but may none the less profit by such hints as we are able to supply. It has never been our intention to make of the Lesson Plans a stereotyped examination sheet but rather to make them a fertile field of suggestion in which teachers of every grade from the elementary school to the graduate department of the university should find something which could be adapted to their needs.

The college instructor and the school-ma'am are not the only readers, however, who should study the Lesson Plans. There are many who read *The Independent* for instruction, to keep abreast of what is doing in the world and what is being thought about it all. They will find that the lessons are designed to bring together different departments of the magazine so that contributed articles, current events items and editorial comment relating to a common theme may be considered together. They will find that many questions, tho always based on the material in *The Independent*, are a guide to outside reading and wider study. Anyone who reads *The Independent* carefully according to the method of the Lesson Plans is virtually giving himself a home Chautauqua or university extension course which is not inferior to the formal college courses in many a famous institution of learning.

Others, again, will read *The Independent* for interest and pleasure rather than for information or for training in literary expression. These readers, too, will be repaid for occasional attention to the Lesson Plans. They will find in the questions asked on that page a compact summary of what *The Independent* is giving in return for their subscription and a vivid proof of the variety of human interests with which *The Independent* is in constant touch. They will also find that the questions are not so much a cross-examination on the articles and editorials as a stimulus for independent thought about them. Our pages introduce the discussion on the subjects which seem to us of greatest interest and importance. But then on our last page we make our bow and throw the discussion open to you.

## Opening Nights

*The First Year*. Frank Craven is both author and star of this "comic-tragedy of married life"—one of the funniest and humanest plays that ever kept an audience chuckling thru three acts. (Little Theater.)

One, by Edward Knoblock, gives Frances Starr the interesting and difficult dual rôle of two sisters whose spiritual affinity is so great that they know each other's thoughts. There are some tense situations, well played, and a startling *denouement*. (Belasco Theater.)

## Remarkable Remarks

EX-KING CONSTANTINE—Sufficient unto the day is the evil thereof.

CALVIN COOLIDGE—Men do not make laws, they do but discover them.

ENRICO CARUSO—I don't believe I ever heard Babe Ruth sing. What is her voice?

MARY PICKFORD FAIRBANKS—You know there are both masculine and feminine perfumes.

MRS. VINCENT ASTOR—I do not go to dressmakers that require more than one fitting.

MRS. WARREN G. HARDING—Why even I do not agree with everything Warren believes.

W. L. GEORGE—Obviously you can't talk four hours after dinner without a mild stimulus.

REV. CORTLAND MEYERS—The Peace Treaty and League of Nations document were atheistic.

WINSTON CHURCHILL—It is no longer the strength but the weakness of Germany which we fear.

"UNCLE JOE" CANNON—Four years more of Democratic Administration and we would be in hell.

SENATOR HARDING—The Senate has never failed the country in an hour of great importance.

SAMUEL GOMPERS—No matter what my enemies may say about me they have never written me down as a d— fool.

MARGUERITE M. MARSHALL—A woman's heart is a bureau drawer filled with perfumed sachets of sentimental memories.

J. H. OLMSTEAD—If Uncle Sam is going to use my letters for a bulletin board he ought at least to pay the postage on them.

REV. JESSE HOLMES—The function of the church has shrunk to that of the social club of middle class people of comfortable incomes.

ED. HOWE—It would be much better if the Sons of Gideon would use their hotel Bible fund to construct and maintain a piece of good road.

SENATOR PENROSE—It would be cheap for the country if \$100,000,000 were expended to get rid of Wilson and the Democratic Administration.

ANATOLE FRANCE—At this moment the working class holds in its hands the well-being of France, the well-being of Europe, the well-being of the world.

HERBERT HOOVER—The certainty is that the next war will be a war not against soldiers so much as against civilian populations, more terrible than anything we have witnessed.

CORRA HARRIS—Brokerage houses undoubtedly read death notices, because your husband's funeral will scarcely be over before you will begin to receive lists of bonds and stocks from these companies.

DR. HENRIK SHIPSTEAD—We expect to make this fight so hot that the iron heel of the Steel Trust, now on the necks of the people, will be melted and made into steel pens with which the people of Minnesota can write a new declaration of independence.

## Why We Want the League of Nations

A Message from the British Nation to the American People

By the Rt. Hon. C. A. McCurdy, K. C., M. P.

Food Controller of Great Britain

**T**WO years before the end of the war the German Chancellor von Bethmann Hollweg, prophesied and said:

When on and after the conclusion of the war the world for the first time becomes fully conscious of the terrible devastation of property and loss of blood, an outcry will go up from the whole human race for peaceful settlements and agreements, which shall, so far as it lies in human power, prevent the recurrence of so monstrous a catastrophe. This outcry will be so urgent and so authoritative that it must lead to a result.

In making that prediction he was voicing the views of the whole civilized world, or at any rate of that vast proportion of civilized humanity who know nothing of international law, nothing of the history of past schemes for the promotion of Holy Alliances or Leagues of Peace, but who felt instinctively that for the evils and horrors of the war in which Europe was then engaged some remedy must be found. Plain men and women felt in their hearts that war was hell. The inarticulate mass of humanity was dumbly resolved that somehow or other means must be found to save their children from the evils of those days, and the proposal which President Wilson then made for some attempt to guarantee peace after the war found a ready echo in the hearts of mankind.

If at any time during the last two years of the war a general election had been held in any European country in which men and women had been asked to vote upon the issue of a League of Nations, expressed, as all issues must necessarily be expressed in an appeal to a democratic electorate, in plain and simple terms, whether they desired that henceforth the statesmen of the world should, in President Wilson's words, plan for peace, as in the past they have planned for war—if the peoples had been asked to pass judgment upon a proposal that all the nations of the world should league together in an organization having for its sole purpose the prevention of future wars, the friendly and dispassionate discussion of the causes of friction arising between peoples the world over, and the substitution of methods of peaceful settlement for the arbitrament of war, Europe would have pronounced with one voice for the policy of the League.

"When the devil was sick the devil a monk would be." The German Chancellor's prophecy of November, 1916, was most completely falsified by events. The mood of spiritual exaltation which grew out of the sufferings and sacrifices of the war did not long survive in an atmosphere of peace. The British people today are not so

much concerned about the prevention of future and, it is to be hoped, far distant wars of the kind thru which we have just passed, as they are anxious to forget war altogether, to stamp out the still smoldering embers of the late war in Eastern Europe, and get back to peacetime conditions. That paramount desire of British statesmanship is clearly demonstrated by the completeness and rapidity with which seven million men and millions of war workers have been demobilized and the British army once more reduced to a scale comparable with that of Belgium.

This is a very natural attitude on the part of a people who are sick of the very name of war, but it does not alter the fact that war has been a scourge of humanity thruout all recorded history, and that unless some change is instituted in the relations of mankind for making war more difficult the future history of mankind will probably be just as full of bloody and disastrous wars as the past. And we must not forget the great development in the science of destruction which took place during the last years of the war. No one knows what terrible developments would have taken place in the science of human slaughter if the war had lasted only another six months. Only a very few know what terrible discoveries were already on the point of completion by the scientists at the time of the armistice. Perhaps if the war had lasted a little longer the prophecy of Bethmann Hollweg would have been fulfilled to the letter and means would already have been found to give effect in some simple manner understandable by all people "for peaceful settlements and agreements which should, so far as it lies in human power, prevent the recurrence of so monstrous a catastrophe." What happened was something very different. The problem of providing machinery for preventing future wars was passed over to the diplomats and the lawyers at Versailles, who did their utmost, and not without some measure of success, to frame a scheme for regular concert and conference between the powers for the future settlement of disputes likely to lead to war. In the meantime the peoples of Europe were turning their attention to other and more urgent matters, to an endeavor to find some means of bearing the intolerable economic burdens which lay upon them.

I see that the Socialist party in the United States takes a somewhat unfavorable view of the labors of the Versailles diplomatists in establishing a framework for a League of Nations. In their platform for the presidential elections they demand that the Government of the United States should initiate a movement

"to dissolve the mischievous organization called a League of Nations and create an International Parliament composed of democratically elected representatives of all nations of the world." I do not know in what respect the existing League of Nations is supposed to be mischievous. It is, of course, imperfect and must remain imperfect until it is completed, whether in the near or in the distant future by the adhesion of all civilized states, but if it is difficult to complete the comparatively modest framework commenced at Versailles it would, as everyone knows, be an infinitely more difficult task to create an International Parliament such as is suggested.

There is a French saying that "the better is the enemy of the good." It is extremely apt as applied to the League of Nations ideal. In its simple form as understood by the common people of all countries—an agreement between all governments to create a permanent machinery for conference and discussion, with a view to joint action for the prevention of future wars—it is certainly capable of being brought into existence without any threat to the sovereignty, integrity or independence of any of the associated powers. The proposal for an International Parliament raises difficulties of every kind.

I observe that in the platform of the Republican party the belief is expressed that an agreement among nations to preserve the peace of the world can be effected without the compromise of national independence. I believe so too. The words "A League of Nations" in my judgment mean nothing more than that. A League of Nations must be a treaty or agreement in which every sovereign state limits its independence by undertaking to perform any treaty to which it becomes a party, exactly as a free man limits his independence when he makes a contract. No one has yet suggested that the Roman slave was more independent than the Roman free man because the free man could bind himself by contracts while the slave could not be so bound.

The essential idea of the League of Nations is perhaps most easily understood if we recall the circumstances of July, 1914, and consider what sort of an agreement or treaty between the great civilized powers of the world would in all human probability have been sufficient to prevent the world tragedy of the last few years. A dispute arose between Austria and Serbia which for reasons which are now ancient history was obviously likely to involve a great part of Europe in war. We know now, and indeed everyone realized at the time, that such a war if it came must involve injury to the interests of peoples far distant from Europe, and indeed to the economic interests of the whole world. For one frenzied fortnight the cables and telegraph wires of Europe were filled with the hasty attempts of the diplomatists to secure at least a breathing space for consideration and discussion—to see if some means could not be found to avert the impending catastrophe. Looking back with all the knowledge which we now possess it seems at least probable that if delay had been secured, if the German people could have had time to realize how vast were the dangers into which they were being led, that

the war of 1914 might have been prevented. The prime purpose of the League of Nations is to provide just that machinery, just that measure of agreement, to make it improbable if not impossible that the peoples of the world will ever again find themselves rushed into a war of such magnitude without opportunity for counsel and reflection.

Looked at from this point of view the League of Nations may be regarded as merely an improvement in diplomatic machinery. It ought clearly to be possible for all governments to come to some agreement of this kind. But the League of Nations stands for something more than that. It symbolizes to the world what we hope may be the dawn of a new era in the relations of peoples. The deep and underlying cause of war in the history of mankind is the fact that we have not yet traveled sufficiently far up the slope of civilization to reach the stage at which peoples are prepared to apply to these periodic battues of humanity the same canons which they apply to individual homicides. In municipal law the deliberate taking of human life except as a matter of pure self defense is universally recognized by all civilized peoples as contrary to the most elementary principles of morality. The wholesale homicide of war is judged by wholly different standards. The canons of international law regard the right to make war in the last resort, not merely in self defense but for the protection of any material interest or for the expansion of territory, as a matter with which moral-

ity is not concerned, as an attribute of every sovereign state, as the criterion indeed by which the international lawyer must determine whether a body politic is a sovereign state or not. When the Hohenzollerns invaded Belgium they committed, it is true, a crime against the conscience of humanity, but few international lawyers would, I think, venture to maintain that they were not exercising a function of a sovereign state which, from the point of view of international law, they were entitled in the sole discretion of the German rulers to exercise if in their view the material interests of the German empire rendered war necessary or desirable.

The League of Nations should be an agreement on the part of sovereign states to create a machinery which may be of the simplest possible character for mutual counsel and, when necessary,

for mutual action for the prevention of future wars. Such a League might be formed, and ought to be formed, if only upon the ground of convenience and expediency. The material interests of every people demand it. The economic life of the world is too closely inter-dependent to make it possible for any people to view without concern an eruption of war in any part of the world. If for no other reason than this, we ought, as Viscount Grey has said, to rush to stamp out the first outbreak of war in any country, however distant, as men would rush to put out a forest fire.

But the agreement should be something more than this; it could stand as a simple symbol of the advance of humanity to a new stage in morality in which war-like operations not conducted in pure self-defense shall be definitely reprobated by the common conscience of humanity, as crimes com-

I had stood to watch the long, straight ranks swing out for the great adventure

# Remembering

By William E. Brooks

**N**OW that the summer had come, I was free to do what I had long wanted to do, visit again the old camp where I had lived in those days of war, those Homeric days, now seemingly so far away. I thought that there, at least, things would be different from what they were everywhere else in America, that those fields and skies which had witnessed the eager living of the land's young manhood as it shaped itself for the struggle, would somehow have about them the spirit of those vital days, its ideals, its enthusiasms, and that I could go back again to my job believing that there was one place in the land where the gods of the market-place were not supreme. But as I passed thru the big gates, where so often at midnight I had stood to watch the brown lines swing out for the great adventure, it seemed as tho my dreams were not to be realized, that my hopes were to issue forth in fresh disappointments.

Ours was a little camp. Before the great days came it had been a fair grounds devoted for a week of the year to horse races and prize pigs, and the rest of the year to silence. Then in the summer of '17 the buildings had been cleared of booths and the cattle sheds painted and fumigated, and boys from all over the land had filled them, lured by the certain assurance of the wise ones in Washington that in six weeks they would be driving ambulances in France. They did not get there in six weeks, but they did get there finally and mighty tales of great adventure are told of them and hundreds of decorations prove the worth of the tales. Thru that long, hot summer they had drilled here until every blade of grass was worn away by their feet, and the thousands of other feet that followed them in '18. But as I passed in thru the gates I saw that every brown worn space was green again, that every sign of their tenantry had vanished. Over on the track a horse was speeding behind a sulky, and the sheds were once more ready for the prize pigs. The camp was the fair grounds again and its men and the things they stood for were forgotten, as everywhere else in America, where pork and its products were for the while mightier than ideals.

Thru the long afternoon I prowled around the place, remembering. Here under these trees stood the tents of the medical staff where they shot us full of vaccines and viruses and made us sore physically and mentally—particularly mentally. There were the horse-stalls and the tale came back that they told about the rookie that wandered in late one night still in "cits," with his new issue of blankets and folding cot under his arm. "Where am I?" he asked of a group about a candle. And when they paused in their game long enough to answer, they got the startling reply, "Then I'm in the

wrong place, I was ordered to the pig-pens." Here was the big mess hall under the grandstand, where we first formed that acquaintance which ripened into intimate fellowship, with "tinned Willy" and beans. And over yonder the big recreation hall, crowded o' nights, when the boxing bouts were held. I don't think I shall ever forget that last big night before the Italian contingent sailed and two thousand howled themselves hoarse about the padded ring in the center. The ground within the track had been the parade, and as I leaned over the fence I could see again the clouds of dust and the lines swinging by as the old C. O. reviewed them for the last time. He was a bully old C. O., with a lot of plain American common sense, and he knew the value of using it as he turned these American boys into fighting men.

It was just about the time when they used to sound retreat when I got back to the big flagstaff beside headquarters. To me retreat had always been the most solemn hour in the camp day, that hour when the slow bugle blew, and the colors began to fall. There was a song the band used to play as the bunting fluttered down (how was it I had not heard that song for months?), while everywhere over the camp men stopped as they were, faced toward headquarters and stood at attention. The K. P.'s peeling potatoes at the doors of the mess hall, the prisoners digging ditches or working on the coal pile, the guards walking their posts, the officers with their ladies over under the trees, every man of the camp, buck private, shave-tail and the big chaps with the eagles on their shoulders, stood stiff and steady during those proud imperious moments. Even the Q. M.'s forgot their lordly grandeur, and ceased scorning the humble crew on whom they had just thrust blouses that did not fit, as they listened to that call. It was a moment when one remembered why he was there, why men were dying on the other side of the world, and ideas like liberty and freedom and right possessed our souls. And as the band crashed out the final chords, their echoes rang thru our hearts with a high resolve that

The Star Spangled Banner in triumph shall wave,  
O'er the land of the free and the home of the brave.

I think that scene night after night repeated helped to keep the men steady thru those long slow days of training, thru the weary monotony of drills, thru the horrors of the hours when we learned to use the gas-masks, thru the cold and the heat, the snow and the dust, and sent every man, with a strong heart, ready for action over the seas. It came to me as a great relief that among the thousands I had helped send off I did not remember but one who did not want to go, however he may have felt when he came [Continued on page 209

# Have Our Cities Grown Too Fast?

A Message from the United States Government to the American People

By Asbury F. Lever

Member of the Federal Farm Loan Board.

In the headlines of a prominent daily paper published in the city of Washington there recently appeared this statement:

## POPULATION TIDE SWINGS TO CITIES

Census indicates majority of Nation's people are urban dwellers.

In 1910, the rural population was greater by 7,000,000 people than that of the cities. The figures of 1920 indicate that the city population has not only reduced this lead of rural population in 1910, but has overcome and passed it to the extent of more than 4,000,000 people. It is estimated that urban population, including towns of 2500 population and over, has increased during the past ten years at the rate of 25  $\frac{2}{10}$  per cent, while in strictly farm territory the increase is only 3  $\frac{2}{10}$  per cent. The largest increase is shown to be in the largest cities and the smallest increase in strictly agricultural territory and small villages.

For the first time in the history of our country urban population is larger than rural population. This tendency has been going on for several decades, but shows its greatest increase during the present decade.

When in a country like ours with its broad expanse of territory, its millions of acres of untouched agricultural lands and its other millions of acres producing far below their maximum capacity of yields, a tendency arises and moves forward with increasing force which carries population from country to town in such numbers as to create a situation where there are more mouths to be fed and more bodies to be clothed than there are hands to produce food and clothing. It must be evident to the thinking man and woman that the line of danger has not only been reached but actually crossed and that the time has come when every agency of government and thought must be put to work to find the reason and apply the remedy for such a condition.

Just one hundred years ago more than 87 per cent of the population of the country was classed as rural. A century is only a short span in the life of a nation. What happens during that time makes only a fairly safe basis from which to project our thinking into the future and to reach conclusions thereto that may be regarded as reasonably sound. To put the matter in another way, just one hundred years ago the energies of more than four families were engaged in producing a sufficient surplus above their own needs to adequately satisfy the needs of one family in city or town. With the comparatively virgin soil of great productiveness and with this ratio of people engaged in production as against those engaged in consumption, the question of the production of things to eat and wear was not such a pressingly vital problem to those who must eat and be clothed. Production in those days outran consumption. Surpluses were common. The situation has now changed, for instead of four families being engaged in the work of producing for themselves and one other family in town or city, we find that less than one family is being called upon not only to provide necessities for itself but for an additional family in town or city.

Of course, the change in the old ratio of rural to city

population may be more or less the outgrowth of our economic development, but that fact does not minimize the danger of the ever increasing tendency of population to move in the direction of the cities and towns, nor is it any compliment to our national managerial ability to permit tens of thousands of immigrants, many of them the highest types of intensive farmers, to squat in our great cities, to compete with native born labor, while the broad acres of the West and South are itching for hands to scratch them.

The problem arising out of these circumstances, it is true, is important to the producer of food and clothing, but it is vastly more vital to the consumer thereof. It cannot be too strongly emphasized that the matter of food and clothing production is more and more becoming the problem of the city dweller rather than of the rural inhabitant, for the city dweller gets from the table, as it were, only what is left over after the farm family has had its own helping.

The late incomparable Joe Jefferson said that he was twenty-one years old before he knew a chicken had anything in its anatomy except drum-sticks and necks. If the tendency of our people to quit the farm for town and city life is not checked by the application of common sense and broad justice in the solution of farm difficulties, our city friends will find themselves, in fact they are now almost, in the same predicament as the maker of "Rip Van Winkle."

AND yet what an inconceivably few of our city population seem to have the least conception of what is taking place or of what consequence this may be to them in their everyday living. The millions of hurrying, scurrying people who jam the streets of our great cities on business or pleasure bent seem to give not the slightest thought to the fact that they have a vital concern in the struggle of the Kansas wheat grower or the Texas cotton farmer in his gamble against diseases and pests, fluctuating markets, disorganized transportation facilities, weather, high interest rates and commissions, inadequate credits, and under capitalization, and yet it is the triumphs of this self-same Kansas wheat producer and Texas cotton raiser over all of these adverse elements that furnish the biscuit on the breakfast table and the mercerized cotton from which is made the beautiful imitation silk shirt of the young fellow who pushes his way thru the crowds upon Broadway.

It is a common thing for metropolitan newspapers to boast of the increase in the populations of their respective cities without giving heed for one moment as to the source from which the gain is made and whether from a national point of view the apparent gain has not been, in fact, a national loss; for when city population increases at the expense of rural population in a country like ours, there cannot be much doubt but that there has been a genuine economic loss to the country.

It is equally strange that those who buy at market place or over counter rarely take thought of the factors which contribute to the prices demanded. If prices are high the buyer contents himself with complaining without ever making inquiry as to whether economic adjustments are of such a nature as to result in the high-

est yields of raw material at the least expense and with greatest profit to the producers thereof.

If young men and young women of the farm, if farm families are moving into cities and towns, it must be due to some social or economic condition, for it is safe to assume that with few exceptions changes are not made unless in an effort to better conditions and to satisfy natural wants. If our city populations are increasing at the expense of rural populations, it must be due to some fundamental reason.

Those who have undertaken to study the problem, to analyze the factors, are in agreement that the drift of population cityward is traceable directly to the fact that the same investment of brain and brawn in the city brings a larger return in money, attractions, conveniences and pleasures, as well as in opportunities for development than a like investment will bring in rural communities, and in this suggestion is found the reason for the necessity of newspapers having to print the headlines with which this story begins.

Is there any reason why the same amount of energy and intelligence should not produce as much in profits and conveniences in the country as they will in the city? Agriculture should be the most profitable of all occupations for it not only engages more people but it

Perry in the Portland Oregonian

It begins to look as tho somebody would have to go hungry before very long!

is the prime fundamental industry without which the human family could not exist except in the most primitive state. Those who think that \$2.50 wheat and 40 cent per pound cotton are excessive are thinking beside themselves and without any knowledge of the costs which enter into the production of wheat and cotton or the profits which the producers may reasonably expect from their investments.

The examination of the reasons for the low profits of agriculture and the high prices of agricultural products to consumers discloses that the high cost of production must be figured as one of the chief elements in the equation. One of the most striking advances in modern agricultural methods is found in the larger use of labor saving methods for farm purposes. A writer in *The Breeder's Gazette* of September 2 points out that "With hand methods of production it required thirty-nine hours of man labor to produce one acre of corn, 168 man-hours for one acre of cotton, and sixty-four man-hours for one acre of small grain. Today one acre of corn can be produced with eighteen man-hours, one acre of cotton with seventy-nine man-hours, and one acre of small grain with ten man-hours. Similar reductions have been effected for other crops." The comparison made by the writer relates the present time with a period of several years ago. In a study by the Office of Farm Management of the Department of Agriculture of the man labor requirement in growing cotton in Ellis County, Texas, for the year 1918, shows a requirement of sixty-three hours, whereas in Greene County, Georgia, the man labor requirement is 150 man-hours per acre. The difference in requirement for the two counties is accounted for in the fact that in Ellis County the extensive method of production is used as against the more intensive method in Greene. The studies thus far made of the comparative output of the hand method versus the labor saving machine method of production indicate that the time requirement for producing an acre of cotton, corn or small grain is cut more than in half, thus to a large extent reducing the cost of production.

Notwithstanding this fact, except in the purely wheat belt, the fact remains that the use of labor saving machinery upon the farm is in its infancy. The farm tractor which will do successfully the work of many men is just beginning its introduction to the American farmer, while a rough guess would show that 90 per cent of the cotton of the country [Continued on page 207]

## Lizzie Likes Her Job

By Professor John R. Commons of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcom Sharp, Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

**I**N a great, well-lighted structure, nimble fingers are guiding hundreds of garments under the needles of power-driven sewing machines. A quick turn, a break of the thread, a toss to the left while picking up another garment at the right, and each girl bends forward again as the cloth speeds thru the machine.

In rapid succession girl after girl arises from her place, carries the bundle of garments she has sewed over to a nearby table, walks to the control board in the center of her division, has her work recorded and receives another batch of garments to work on.

They work hard, these girls, and they work steadily. The garments literally flow thru the shop in an unbroken stream. One gains the impression that some omniscient being has arranged all the machinery, so delicately adjusting its parts that everything operates in perfect coördination and balance with every other part.

For this group of six hundred workers, most of whom are women and girls, the turnover for employees, after the probation period of five days, has averaged about 5 per cent per month over a period of six years, the range being between 33.5 per cent and 67.02 per cent per year. The absentees average about 2 per cent per day, and many of the women are married and have their own homes. More than two-thirds of the entire group have been employed here more than a year, while over 15 per cent have served ten years or longer. The workers are healthy, their appearance is neat and business-like. There are no strikes, production has steadily mounted, and wages have increased more than

the increase in labor costs. The factory runs with the full force the year around.

Joseph & Feiss understood the art of designing clothes and measuring cloth to fit the pattern so as to utilize most of the cloth. Likewise, they designed the kind of an operative force they needed for their business and proceeded to measure the human beings to fit the design.

They needed work done in large quan-

ties. It had to be well done. It had to meet competition. It had to be produced at low costs. They needed to produce garments which would sell.

If the factory could be kept running without layoffs one great source of loss could be overcome; it would mean less waste of overhead expense and smaller turnover of labor. But it was difficult to accomplish this so long as dealers bought goods in season and so long as changes of style made over-production an ever-present menace.

They proceeded to educate their salesmen and their trade. First their materials and later their styles were standardized to meet a certain extensive conservative demand, principally for the more serviceable and everyday man's clothing. These models change very little, standardization lowers the cost, and it becomes feasible to manufacture the garments before they are actually sold rather than wait for orders. They develop their market to absorb a year-round production and make possible the economies of continuous production.

Fitting the operative force to the production design meant a measurement of human motives. How can you induce Lizzie Meyers to fit herself in with a scheme of scientific production, appear for work on time every morning and work steadily for the entire day? How can you get her to keep the quality up and the stream of production unimpeded, at the same time keeping her happy and loyal, willing to remain in your employ even when another employer tries to attract her to his company?

Lizzie is a bundle of motives and if you appeal to the proper motives with just the requisite appeal you win; if not you lose.

But you cannot measure motives with a yard stick as you can cloth. Incentives, motives, human willingness to do things, all grow out of mental states. It was discovered, however, that you can measure motives in terms of dollars and cents. For money makes possible the gratification of most desires and provides a measure of the attitude of human beings to each other. [Continued on page 202]

Mr. Feiss has made his factory "the greatest experimental laboratory of industrial psychology"

Miss Mary Gilson has a keystone position as head of the service department of Joseph & Feiss

# The Town Meeting Talks Back

Illustrations by W. C. Morris

**W**HEN our esteemed contributor, Chester T. Crowell, described why he did not like the Texas village and why he thought the eastern village only one degree better he was doubtless aware that he had issued a challenge to the public and that it would not be long before some reader picked up his gauntlet. In our issue of September 4 we invited those who wished "to talk back" and promised to print some of the replies in a general "town meeting" in our columns. You have responded generously, so generously that we cannot print all the letters which we have received and must condense many of those that we do publish.

While many admitted that Mr. Crowell's indictment was valid in part, few would accept it as the whole truth and most of our correspondents were distinctly critical. Of the minority who fully endorse Mr. Crowell's point of view the following letter is typical:

Regarding Mr. Crowell's estimate of the small villages that make the mighty map, do I want to talk back? I certainly do. I want to agree with every word he says and add some. I lived in a Texas village, one containing three grocery, two dry goods and a racket store; also a barber shop, bank, drug store and doctor's office combined and four churches. There was one railroad thru this small burg. Every person in this place knew who got on and off of the trains, where they had been, what they had bought, whether it was paid for entirely or bought on the instalment plan. People residing in this village were people of wealth, owning big and beautiful farms. They were amply able to travel, to broaden, to live, not merely exist, yet they were content to congregate around the barber shop and gossip. If there was a woman in the community who dressed in a manner befitting any intelligent person, all the other women, also the men, criticized her bitterly. If a woman went alone thirty miles to a nearby city to do some shopping that was absolutely necessary all the villagites got together in a group and whispered, "she ain't goin' fer no good." And when she returned bundle-laden and tired not a smile of welcome greeted her. Only looks of suspicion

"She ain't goin' fer no good"

We teach the young to save pennies to educate the depraved in the slums of the large cities

mingled with curiosity. Sunday all the church bells were ringing and everybody hustling to get a front seat and enjoy their religion or a clean shirt, I don't know which. The last sermon I listened to was a violent denunciation of persons playing games of croquet on Sunday afternoons. Yet this class of people have as their motto, "Do others before they do you," and so I could go on with different characters that go to make up the small town, the petty bickering and narrow minds. What a crying shame such an atmosphere exists in this enlightened world, when there are such wonderful opportunities for uplift, for the attainment of education, culture and refinement in this big, beautiful and progressive world of ours.

MRS. E. C. LIMBOCKER

Dallas, Texas

But others who can see the faults of the village clearly enough can see also another side:

What Mr. Crowell says about villages is true. But he sees only one side, and that from the viewpoint of a young business man. I know another side. For many years I lived in the largest city in Texas, then I moved to one of the villages. At first I saw all the faults he saw, and saw them the more plainly for the contrast with the characteristics of the city I had left. But as the years went by and I came to know the people and to make friends I saw another side that far outweighed these faults. Serious misfortune overtook me—accident, long illness, bereavement. At such a time one needs friends, for few people really want to "die unnoticed by neighbors." Then it was that I realized that for genuine brotherly love, whole-hearted kindness, and true friendship in time of trouble there are no people on earth like those of the Texas village.

MRS. JAMES NEWCOMB

Suffolk, Virginia

This point, that the village is the home of neighbors and neighborly aid, is stressed by many correspondents:

Mr. Crowell, did you ever have the "flu"? I hope so, for then you can better appreciate my viewpoint. Last winter, while I was undergoing a siege of this popular malady, with only my small son in attendance, my neighbors voluntarily brought me nourishing food, straightened my house and gave me the attention I required. We were neither too poor nor too stingy to hire help, but it was not to be had at that time. Now, can you imagine me preferring to live in "two or three square holes in a mountain of brick on Manhattan" for the happy privi-

# Is the Constitution Efficient?

By Preston Slosson

AT the hour of election it is fitting that the American people should not only take thought as to the men to be chosen, the policies to be approved and the parties to be entrusted with power, but also as to the machinery of government with which we work. Is it working with perfect smoothness? Is the public will passing into law with the least possible waste of energy? Could it be improved by the adoption of any of the new political devices which have been patented in one country or another since 1787?

So great has been the success of the American constitution that many resent criticism even of details. Every other nation in the whole world has passed thru revolutionary changes of its political institutions since the American constitution was adopted; our Government alone stands structurally unaltered. The present French constitution dates only from the Assembly which met at the close of the Franco-Prussian war and is but the latest of a dozen constitutional experiments since the revolution of 1789. Great Britain has changed from a narrow oligarchy into a democracy; from a joint rule by King, Lords and Commons (the "commons" in the days of George III being chiefly a small class of merchants and country squires) into a virtually unchecked rule by a House of Commons based on adult suffrage. Germany, Italy, Belgium and many other nations of today did not even exist as united and independent nations until well along in the nineteenth century. Russia was an absolute despotism until the war with Japan. Few constitutions of the lesser Powers of Europe date back of 1848; many of them are no older than last year or are still under discussion. The whole development of constitutional government in Asia, in Latin America and in the British Dominions is many decades younger than our constitution.

The constitution of the United States has stood the test of time better than any other political institution of the modern world. But this very fact renders it probable that it needs many changes to bring it up to date. If you live in a house built in the eighteenth century the fact is an excellent testimony to the fundamental strength and soundness of the walls, but it is probable that the arrangement of the rooms will not be so convenient or the labor-saving devices so numerous as in your neighbor's house, whose paint is still wet from the brush. If your automobile is older than your friend's it may be because your friend's last automobile was smashed up and he had to buy a new one while yours is a safe machine. So far you are to be congratulated. Nevertheless his new machine will have some features worth copying in yours.

It is true that there have been nineteen amendments to the American constitution, some of which are of great historical importance. But most of these deal with individual rights, such as the guarantee of free speech or the prohibition of slavery. A slight change in the method of counting ballots in the electoral college, a change in the method of electing Senators and the extension of the franchise without discrimination of race or sex comprize practically the only changes ever enacted in the structure of the constitution itself. More important changes in our political life have come about owing to the slow changes of custom and habits of thought or the development of the party system; but these changes are not embodied in the constitution and are the very reason why provisions which worked well enough in the eighteenth century are not adequate to our needs today.

Take, for example, the electoral college. It was originally designed to be a council of the chosen statesmen of each

state for the selection of a President "above party." It has come to be merely a clumsy and roundabout method of registering the popular victory of one party ticket over the other. It makes permanently possible the election of a minority President and, what is a more practically serious evil, it virtually confines a political campaign and the selection of political candidates to a narrow belt of "doubtful states," since no practical politician bothers to pile up useless majorities of the popular vote in a state whose electoral vote is in any case secure. Yet so great is the reverence for the very letter of the constitution that there is no agitation for the removal of this vermiform appendix of our political system.

Then there is the four months' delay before a new President takes office and the thirteen months' delay in the regular meeting of a newly elected Congress. The whole modern democratic theory, that an election is the obtaining of a "mandate" from the people, is made ridiculous by the fact that no matter what may happen to a President and a Congress at the polls they can go on governing as they like for four months after the people's verdict is known.

But the electoral college and the prolonged delay between an election and a change of administration are minor defects in our constitutional system. Its one fundamental difficulty is lack of coöperation between the legislative and executive branches. The President, the House and the Senate can act as "checks" on each other, they can very effectively prevent each other from doing much harm. But when it is a question of getting some positive work accomplished the result is very different. If one of these three departments of government is captured by a party hostile to the one controlling the other two constructive work stops and a two years' war begins. A hostile House of Representatives can cut down appropriations till it starves the President's administration into inefficiency. A hostile Senate can reject all treaties and turn down all appointments. A hostile President, who is supported by one-third of either House, can absolutely block all legislation. When party feeling is not high a compromise can be arranged and ordinary public business transacted, tho no very fundamental or controversial reforms can be carried thru unless one party wins a sweeping victory in both branches of Congress and carries the electoral college besides. But when party feeling is strong and power is divided between a President and a Congress of different parties, as happened in 1910 and again in 1918, each branch of government does what it can to make the other impotent and ridiculous.

IT is easier to indicate the disease than to find the best remedy. The system now existing in all European governments is to secure harmony by making the Cabinet or Ministry the real government and the King or President a mere figurehead, and by making the Cabinet dependent for its existence on the command of a majority in Parliament. It is thus impossible for a French or British or German Prime Minister to work long at cross-purposes with the legislative power. But there may be other and better ways of solving the difficulty. Perhaps a question important enough to create a real deadlock between the President and Congress could be placed before the people by referendum. Perhaps the President might be given the power to dissolve Congress and hold a special election for the whole of the House and the Senate, with the understanding that he would himself resign if a hostile Congress were elected. Perhaps the people might be given the power to recall their representatives in the House and Senate without waiting

for the election at the end of their terms. Perhaps a party leader might be selected in the House of Representatives and made responsible for framing the budget and adopting a definite legislative program, while the President would be limited to purely executive duties. The important thing is not what method is chosen of breaking a deadlock between the different organs of government but the recognition of the fact that some reform for this purpose is necessary.

For two years we have lived in a nightmare. A Democratic President of obstinate temperament and a Republican Congress of bitterly partizan temper have so effectively acted as "check and balance" on each other that we are still at war tho everyone desires peace, we are still outside the League of Nations which we did so much to create, we are subject to outworn war legislation and administrative regulation, we have no responsible budget, we have no legislative program of reconstruction. It is the deadlock of trench warfare. Any system of government which has this possibility needs drastic amendment and reform. The constitution of 1787 is not adequate for 1920.

### Cassandra

**C**ASSANDRA, says Greek fable, was gifted with the power to read the future and the curse of never being believed. Think of all the money she could have made betting on elections!

### Election Day Motto

Blessed is he that expecteth nothing for he will not be disappointed.

### Infant Mortality of Issues

**W**HAT has become of the great anti-Prohibition movement of this spring? Also the Bonus, Universal Military Training, the anti-Red campaign, the Overall movement and everything else that was exciting the press on one side or the other six months ago? The American public seems to have a short memory for issues. Probably six months from now people will ask dreamily, "Who Was Article Ten?"

### Remember the Red Cross

**I**T is now two years since the armistice closed the greatest period of activity that the Red Cross has ever known. But even peace has much need for its services. Not only has the Red Cross done its share in the reconstruction of Europe, such as caring for the eleven million war orphans of the continent and combatting the typhus epidemic, it has had its hands full of work in the United States.

During the last year the American Red Cross was called on for rescue work in seventy-three public disasters: towns wrecked by tornadoes or devastated by storms and floods, communities visited by fire or earthquake, ships wrecked on the coast or train collisions. By these disasters 850 persons were killed, 1500 injured and 13,000 left homeless and destitute, and property destroyed to the value of \$85,000,000. In every case first aid came from the Red Cross, which is building up a special \$5,000,000 fund for preparedness against such emergencies.

It is impossible for an army of relief to disband. When the last soldier has been demobilized and the last warship sent to the scrap heap there will still be fire and flood, shipwreck and storm, industrial accident and epidemic disease. If individually we escape these dangers—of which no one has any assurance—we still owe it to our country as a patriotic duty to support the organization which makes America safe against the recurrent perils of peace. A contribution to the Red Cross has never yet been generosity misplaced.

## Shall We Make the Chinese Drunkards?

By Shailer Mathews

**O**N October 10 the Chinese Republic celebrated its ninth anniversary. No one who has been in contact with the fine men and women constituting the Chinese student body in America can doubt the high ideals which they are attempting to shape the future of the nation. In all history there is nothing more dramatic or inspiring than the transformation of the ancient empire into a republic under the leadership of men trained in a different civilization whose ideals are those of a religion.

But the Chinese Republic, like all new states, faces difficulties which will require not only ideals but common sense and courage. China has been for a century at the mercy of nations purporting to be composed of Christians, whose foreign policy has not always been consciously Christianized. In particular, has China suffered thru the enforcement of the opium trade by Great Britain. This trade the Republic has now stopped, and since 1909 an International Opium Commission has assisted in the prohibition of the importation of the drug. In January, 1919, approximately one thousand chests of opium, supposedly all that was left in the Republic, were destroyed by order of the President.

But it appears that China is not yet free from purveyors of drugs. Since the adoption of the eighteenth amendment there is said to have been a decided movement on the part of American brewers to set up business in China. China has never been cursed by alcoholism, and ought to be delivered from any prospects of such curse. The brewers are introducing beer with great publicity as a "sure cure for opium." In other words, the liquor interests are about to develop investments in China, after having been outlawed in the United States.

Of course in the last analysis, prohibition is a matter which China herself must establish, but in this, as in so many other instances, the assistance of American public spirit is needed.

The Chinese students in America have organized a Prohibition League, which is presenting its pleadings in pamphlets to well-disposed Americans. The League is also endeavoring to cooperate with welfare organizations. But such efforts will undoubtedly fail of large results unless they are earnestly supported by men and women of international interests, who believe that a nation ought to be given moral support as it endeavors to protect itself from evils which other nations have repudiated. Just what America can do by way of direct legislation is a little difficult to see, but we can at least understand and approve any prohibitory legislation which the Chinese Republic may pass. It has been too much the practice to let the East suffer from the evils of Western civilization, and then defend the authors of the evil from local legislation.

There should be an International Commission on the extension of alcoholism into uncontaminated or little contaminated regions. What is dangerous to America is certain to be dangerous elsewhere. The League of Nations may very well take the production of alcohol under its supervision, as it has other activities warranted to do injury to human personality.

Just at the moment when the Chinese are flushed with their sacrificial idealism, and have begun to realize the possible significance of their republic to the world at large, it is scandalous that Western civilization should not recognize the opportunity to cooperate in the building up of a new Asia, which will be one of the great factors in the new world. It is unendurable that we should handicap Chinese progress by permitting a few soul-hardened capitalists to

*Underwood & Underwood*

## Beauty vs. Power at Niagara

These two contrasting views of Niagara point the question that is being much discussed nowadays: whether the beauty of the falls should be sacrificed to the increased need of the electric power they can be made to furnish? The photograph at the top of the page was taken by Major Maxwell, of the Royal Flying Corps, from a height of about 700 feet over the falls. It gives an unsurpassed view of the immensity and grandeur of Niagara. At the left is an artist's drawing of how Niagara will look if the utilitarians have their way and divert the water to make power, leaving bare rocks and dribbling rivulets in place of the thunderous magnificence of the natural falls. A plan to please both factions has been suggested by Col. J. G. Warren, of the United States Army Corps of Engineers. He proposes by a submerged dam in the center of the rapids above the crest of Horseshoe Falls to divert enough water to develop 800,000 horse power and at the same time leave the appearance of the falls unchanged, since "more than 80 per cent of the flow over the central curve of the falls plunges down over the cliff behind a thick cloud of mist"

debauch an entire nation. If we exclude the Chinese from America we ought to welcome the exclusion of American booze-makers from China.

## Essential Industries

TWO hundred years ago a great coal strike would have bothered the English people very little and a railroad strike would have been impossible. The great industries on which present prosperity depends and which are essential to the very existence of the modern state were either non-existent or conducted on a very tiny scale. Perhaps two hundred years from now industry will flow in such different channels that coal and railroad strikes will be of no more importance than a strike of armorers and hand-loom weavers would be today. Some new social peril will have come instead; perhaps the danger of a general strike of aviators or radium miners.

## The Unveiling of Victoria

By Edwin E. Slosson

TO those of us who were brought up on the legend of the great and good Queen the sixth and final volume of Monypenny and Buckle's "Life of Disraeli," just published by Macmillan, comes as a sad shock. We were taught in our innocent youth to believe that the Queen could do no wrong tho—strangely enough—she did a great deal of good; that she knew her place in the British constitution and never overstepped it; that she favored freedom and sympathized with the oppressed of all nations; that she always worked for peace and used her sweet womanly influence to soothe the wrath of man; and that her serene dignity and feminine intuition overawed her councillors.

But her portrait as portrayed by her self in her secret letters is quite the contrary to this ideal sketch. No wonder British critics question whether it was wise of Mr. Buckle to publish them now when monarchy is getting into such ill repute the world over. Her correspondence with her prime minister puts her in almost as bad a light as that cast upon the late Czarina of Russia by the recent publication of her letters to the Czar.

The wily Beaconsfield was able to wheedle her into backing him in any of his schemes by his gross flattery. He said to Matthew Arnold shortly before his death: "You have heard me called a flatterer and it is true. Everyone likes flattery and when you come to royalty you should lay it on with the trowel." Here is a sample of his skilful trowel-work from a letter to his sovereign on her birthday, written like all of his in the third person:

He can only think of the strangeness of his destiny, that it has come to pass, that he should be the servant of one so great, and whose infinite kindness, the brightness of whose intelligence and the firmness of whose will have enabled him to undertake labors, to which he otherwise would be quite unequal, and supported him in all things by a condescending sympathy, which in the hour of difficulty alike charms and inspires.

And this was written at the time, May 24, 1879, when she was scolding him daily by telegraph for not prosecuting the war against the Boers more relentlessly!

Beaconsfield writes to the Queen from the Congress of Berlin about how he rebuked Bismarck, who asserted that all princes were untrustworthy, by saying "that served one who was the soul of candor and justice and whom all her ministers loved." But possibly Bismarck was merely quoting Psalms, 146, 3.

He likens Victoria to Titania and commonly refers to her as "the Faery" altho to look at her portrait the resemblance is not striking. He gave Lord Esher his simple rule for getting on with the Queen: "I never deny; I never contradict; I sometimes forget."

Gladstone, who was not so sycophantic, never got on well

with the Queen. When finally she was forced to receive him as her prime minister she took it as a personal insult and arranged to correspond in cipher with the ex-prime minister so as to get his counsel on great public questions in preference to her constitutional advisers. By this private channel she informs Beaconsfield of what is going on in the Privy Council and what policies his successor and rival, Gladstone, proposes to adopt. At the same time that she is giving away the secrets of the Government to the leader of the Opposition she was warning Gladstone against doing this. She wrote to Beaconsfield on May 4, 1880, about her instructions to her new Premier: "I enjoined the all importance of secrecy in the Cabinet and instanced the mischief which had been done formerly by the reverse."

Queen Victoria's hatred of Gladstone surpasses even Beaconsfield's. She was furious against him for championing the cause of the Christians who were being massacred by the Turks and for opposing her anti-Russian policy. Her tender heart was touched by the danger threatening the Turks "our poor Allies whom we so cruelly abandon to a shameful and detestable enemy and invader!" But the sufferings of the Christians under Turkish rule left her comparatively unmoved for she regarded them as "quite as cruel as the Turks." The Gladstone crusade against the Turkish atrocities aroused Victoria to hot indignation. "She thinks the Attorney-General ought to be set at these men: it can't be constitutional."

This was the time when the music halls resounded with the song that gave a new word to the language:

We don't want to fight,  
But, by Jingo, if we do,  
We've got the ships, we've got the men,  
We've got the money, too.  
We've fought the bear before,  
And we'll fight the bear again,  
And the Russians shall not have Constantinople.

Victoria was a jingo queen and the song was simply her sentiments set to music. A few fragments from her letters in 1877 will show her determination to force the country into intervention in defense of Turkey even tho it might mean war with Russia:

Pray for God's sake, *lose no time* and be *prepared* to act tho we may never have to do so. But to threaten, and intend to do nothing, will never do. Make any use of this letter, only take care not to let Lord Derby see what the Queen says of him. [June 1.] Surely Lord Derby cannot be indifferent to the dangers . . . Warning after warning arrives and he seems to take it all without saying a word!! Such a Foreign Minister the Queen really remembers! [June 25.]

And the language—the insulting language—used by the Russians against us! It makes the Queen's blood boil!

Lord Beaconsfield . . . told her on Tuesday that in three days 5000 could be sent to increase the garrisons and that every effort should be made to be prepared even for Gallipoli if the Russians did not make a dash at Constantinople. But she hears of no troops moving or going and becomes more and more alarmed.

A decisive answer must be given, Gallipoli must be occupied. You will be fearfully blamed if you let Constantinople be taken . . . You should bring this at once before the Cabinet. [July 28.]

The Queen regrets to hear from Lord Derby, that it is now too late to undertake the Gallipoli expedition.

The Gallipoli expedition was undertaken forty years later—but for the purpose of giving Constantinople to the Russians instead of keeping them out. If Gladstone's policy had been followed the Turk would have been turned out of Europe "bag and baggage" at that time and the Balkan wars and their sequel, the Great War, might have been avoided. As Lord Salisbury, Beaconsfield's aid, afterwards confess England "put her money on the wrong horse" when she saved Turkey from Russia.

The Queen repeatedly threatens to resign unless the British army and navy are sent to stop the Russian advance on Constantinople:

Russia is advancing and will be before Constantinople in no time. Then the Government will be fearfully blamed and the

Queen so humiliated that she thinks she would abdicate at once. Be bold! [June 27, 1877.]

The Queen feels more and more anxious lest we should be found powerless and receive a slap in the face from these false Russians and wishes the Cabinet to consider seriously what measures we should take to show that we are not going to follow Mr. Gladstone's view of giving up all to the beneficent and tender mercies of Russia.

To him [Beaconsfield] she will say (and he may make use of it) that if England is to kiss Russia's feet, she will not be a party to the humiliation of England and would lay down her crown.

It is not a question of upholding Turkey: it is a question of Russian or British supremacy in the world! This mawkish sentimentality for people who hardly deserve the name of real Christians, as if they were more God's creatures and our fellow-creatures than every other nation abroad, and forgetting the great interests of this great country—is really incomprehensible. Only say if the Queen can do anything.

The militant spirit of Victoria led her to wish that she were a man so she could herself take part in the fighting like a second Jenne d'Arc. Thus she writes to her Prime Minister:

She feels she cannot, as she before said, remain the Sovereign of a country that is letting itself down to kiss the feet of the great barbarians, the retarders of all liberty and civilization that exists. Her son feels more strongly than herself even. She is utterly ashamed of the Cabinet . . . Oh, if the Queen were a man, she would like to go and give those Russians, whose word one cannot believe, such a beating! We shall never be friends again till we have it out. This the Queen feels sure of.

This reference to her son is funny in view of the fact that the first thing Edward did when he became King was to reverse his mother's policy and to make friends with "the great barbarians" even at the cost of giving them the major portion of Persia and later a promise of Constantinople. Yet Nicholas II, with whom this bargain was struck, was by no means so good a man as Alexander II, the great "Czar Liberator," who had set free 24,000,000 serfs and was engaged in trying to free the Balkan peoples from Ottoman oppression when Great Britain, at the urgent instigation of Queen Victoria, thwarted his efforts by force.

Probably Beaconsfield was more amused than moved by the hysterical letters of his Fairy Queen. He politely put her off until the Russians were within sight of the minarets of Constantinople, then he quickly took an action that startled all Europe and set the stage for the Great War. He called on Asia to fight Europe. The despatch of 3000 Sepoys to Malta in the Mediterranean in March, 1878, marks a new epoch in the world's history for it meant that England had a reserve force of 300,000,000 to draw upon. Russia had her Siberia, but England had her India. It was a game two could play at and England could play it best. Beaconsfield's purpose, as he explained to the Cabinet, was to "show that from England also we can send forth our hosts." He had placed his pieces in advance for this great game as he confesses (page 155). It was not mere vain-glory and Oriental love of display, as his enemies charged, that led him to add the unprecedented title of "Empress" to the ancient and honorable title of "Queen." He writes to his sovereign, "that troops should be sent to the Persian Gulf and that the Empress of India should order her armies to clear Central Asia of the Muscovites and drive them into the Caspian." The world was quick to learn the lesson. France set out immediately to extend her holdings in Africa and Asia and by the time the Great War came she was able to bring into Europe a Black Army and Asiatic laborers amounting to a million men. Germany soon after tried to acquire a colonial empire but was not able to make use of it. The British Government, following the plan of campaign outlined by Beaconsfield forty years before in this letter to the Queen, sent Indian troops to the Persian Gulf—tho this time to fight the Turks instead of to defend them.

If we hear again the old fiction that in Great Britain "the king reigns but does not govern" we can refer to Beaconsfield's letter to Queen Victoria, dated February 27,

1877, in which he compliments her on getting legislation thru Parliament in spite of the Cabinet:

It shows how great is the power of the Sovereign in this country—if firm and faithfully served: for the Act would never have passed, nay, would never have been introduced, had it not been for your Majesty. The Titles Act the same. Both bills, certainly the first, were passed without the support of the Cabinet. And yet both are great Acts and most efficacious.

But the wisdom of both these acts is now seriously called in question. The Public Worship Act, designed to crush out the ritualists by putting the discipline of the Established Church under the control of the state, has not effected its purpose, for ritualism has grown ever since and the High Church party are now demanding freedom from state control under threat of going over to Rome. The Titles Act, which made the Queen of England Empress of India is proving something of an embarrassment now when many Britishers, especially those of the oversea dominions, are coming to dislike the term "empire" and prefer to speak of the "British Commonwealths."

But Beaconsfield was not only a shrewd courtier, he was a far-sighted statesman. His cynical foreign policy has on the whole proved much more sound and successful than those of the sentimental Gladstone. It was fortunate for his country that his sovereign was a woman whom he could usually flatter into acquiescing in what he had determined to do. But these letters leave little of the Victoria legend.

## Dr. Scorpion

THE scorpion is one of those things that nobody has had any use for. But from a report on the British expedition into the interior of Abyssinia presented at the recent meeting of the British Association for the Advancement of Science, it appears that even the tip of a scorpion's tail may have its place in the economy of nature. While at Lake Rudolf Major Darley was suffering from a severe attack of dysentery when he was stung by a scorpion. This added misfortune proved a blessing in disguise for a rapid and complete cure started from that moment. Rheumatic patients have been known to subject their aching limbs to the sting of bees, but then a rheumatic will do anything to get relief—or diversion. We may expect soon that the doctors will be carrying around live scorpions and that their patients will get stung for ten dollars.

## The Paper Shortage

(MISS. found written on a piece of bark, A. D. 2200). The last newspaper ceased publication nearly one hundred years ago. For some time previous to this it had been printed in so fine a type on such tiny sheets that it was necessary to supply subscribers with microscopes in order to make the text legible. A few years later the publishing of school books was suspended and illiteracy began to plunge civilization once more into the darkness of medieval times. The final blow came in 2160 when even the *Congressional Record* went under. All the old libraries had long since been repulped to get it out, so there was not a book left in the world, save a few museum specimens. Such traces of culture as remain are maintained only by the phonograph and the moving picture. I, alone, remember how to write and now I die! After me the deluge!

## Bring Your Own Lunch

THE "bring your own lunch" movement among business men who are away from home at noon may bring down restaurant prices if persisted in; otherwise it will simply raise the price of lunch boxes. The overalls movement only a few months old and already almost forgotten is a warning. It seems to be the American habit to start a reform and then leave it alone to carry on unaided, which is like hitting a golf ball once and then expecting it to travel around the course and home again without further attention.

## BETTER SCHOOLS

The Soviet recruits are given "book learning" as well as rifle drill. In the group at the right are several just beginning to read and write

# The Story of the Week

## The Root of the Matter

THE personal views of Mr. Elihu Root, veteran Republican statesman, have loomed large in the closing days of the campaign. Mr. Root has served with distinction in the Cabinet and in the Senate, he was the chief rival of Justice Hughes for the Republican nomination in 1916, and he has recently returned from Europe with a triumphant record of service in organizing the International Court on behalf of the League of Nations. His address on October 19 in New York attracted widespread attention and provoked attack from two quarters: the Democrats, who insisted that he was wrong in his statement of Governor Cox's position, and the irreconcilable Republicans, who objected to his interpretation of the position of Senator Harding.

Governor Cox quoted from Mr. Root's address the remark, "Mr. Cox declared that he will insist upon the Treaty just as Mr. Wilson negotiated it," and declared this statement "not in keeping with the facts." In his telegram to Mr. Root he said:

I have invariably stated in my addresses, and restate here, my wholehearted desire to make the United States a member of the League of Nations, and that to secure that consummation of the purpose of America when she entered the war I will accept reservations that will clarify, that will be helpful, that will reassure the American people; and that as a matter of good faith will clearly state to our associates in the League that Congress and Congress alone has the right to declare war, and that our Constitution sets up limits in legislation or treaty making beyond which we cannot go.

I have stated further that I will accept reservations from any source which are offered in sincerity and with a desire to be helpful. I have also stated that if I am elected President my election can be construed only as a mandate of the American people, and that to secure ratification of the Treaty and the League I would sit down with the members of the United States Senate; I would confer with Mr. Wilson, and with you, Mr. Root, as well as with Judge Taft and all others who have a sincere purpose and whose service in the past equips them especially as advisers in this work.

To this Mr. Root replied that Governor Cox's assurances were too vague and did not imply an acceptance of substantial reservations. He said that nothing less than the Lodge reservation would make Article X harmless and that if

Governor Cox sincerely favored assurances which would safeguard American freedom of action he would have agreed to the Lodge reservation. Failing this, "both what you say and what you refrain from saying confirm the understanding I expressed in my speech that your position and purpose are to impose upon the United States the Covenant negotiated at Paris without any real change whatever."

Secretary of State Colby answered Mr. Root's attack on Article X, saying in part:

The idea of an international court of justice, to which Mr. Root has just contributed his enthusiastic labors, has admittedly been a lifeless thing, hopelessly beyond realization, conceded by its sponsors to be impotent and impracticable until the success of the League of Nations effected a political organization of the world powers, which for the first time gave the court a background and a promise that its decrees will be effective. If there is one thing which the war has taught the nations of the world, it is that the projects discussed at the two Hague conferences for restraining war, and the peaceful regulation of international conduct, were utterly valueless and illusory.

It is Article X which for the first time has given vitality and significance to the project of a League of Nations. It is this underlying and ultimate sanction of a joint force, susceptible of being invoked in the final analysis by the nations charged with the preservation of world peace, that makes the League a real thing instead of an academic theme.

On the other hand, the irreconcilables were offended not by Mr. Root's attitude toward Article X, but because he accepted the other provisions of the Covenant. Senator Johnson quoted Senator Harding's own words against those of Mr. Root and added:

Some gentlemen supporting Mr. Harding say that notwithstanding this plain declaration he will take the United States into the League. Between these gentlemen and men of my belief there can be no unity of purpose, no agreement upon the League issue. I stand with Senator Harding. I accept as conclusive his emphatic declaration. His words upon the issue, not the words of those who are for the League, are all controlling.

## League of Nations at Work

THE Council of the League of Nations, now in session at Brussels, is having a busy time disposing of the important business that has been brought before it. The machinery provided by the Covenant is working smoothly on the whole, but various amendments and improvements have been suggested by members of the League and doubtless some of them will be adopted.

The plan for the World Court of the League, prepared by an international committee of jurists meeting at The Hague, was adopted by the Council in general, but with reservation of certain points where the plan went beyond the scope of the Covenant. According to the Covenant both parties to a dispute must consent in advance to submit the case to the court, but The Hague jurists proposed to go farther and make international arbitration compulsory. The Council will not include the compulsory clause in recommending the plan to the Assembly. Those parts of the World Court plan that are supposed to have been the work of Elihu Root, former American Secretary of State, were adopted by the Council of the League without question.

The League of Nations has been in actual operation since May 5, 1919, and has accomplished a large amount of work at comparatively little expense. Its total expenditure to the end of the present year, that is twenty months, will be about \$3,000,000, and this is a small price to pay for all the League has done in the way of repatriat-

#### THE LEAGUE OF NATIONS IN ITS PERMANENT HEADQUARTERS

November, 1920, marks the establishment of the executive offices of the League of Nations in its administration building, formerly the Hotel National, in Geneva, Switzerland

ing prisoners, stabilizing international finance, investigating labor problems, administering disputed territories and preventing armed conflicts.

The most serious question before the Council at Brussels was the seizure of Vilna, the capital of Lithuania, by a Polish force under General Zellgouski. Poland was represented before the Council by Professor Askenazi of Warsaw in place of Paderewski, while the Lithuanian case was argued by Augustine Waldemar. The Council is expected to recommend that the question be decided by a plebiscite.

The League of Nations has hitherto maintained headquarters in a building on the corner of Piccadilly and Downing Street, London, but will hereafter be located at Geneva as the Covenant provides. The Secretary General, Sir Eric Drummond, has established himself with his staff in the Hotel National, Geneva. Here the Assembly of the League will be called to meet for the first time on November 15. The Covenant provides that President Wilson shall summon the first session of the Assembly and he was expected to open it in person, but his physical condition will of course prohibit this.

## Cardinal Gibbons Favors League

**A**MONG the more than 15,000 American clergymen of various denominations who have publicly endorsed the League of Nations one of the most distinguished and influential names is that of Cardinal Gibbons. The Cardinal began his statement by citing Pope Benedict's words that "it is much to be desired that all states, putting aside mutual suspicions, should unite in one league." He then commended the detailed arrangements of the Covenant as wisely framed and concluded:

Sitting as a council of brethren, with the shadow of the great catastrophe still upon us, we should, and I have no doubt we will, draw nearer to one another and take up, in a fraternal spirit, seriatim, those vexed questions that still remain and which are a grave menace to the fellowship of the forward-looking, God-fearing, God-loving nations. These questions still threaten the peace of the world—that peace whose blessing we are just beginning to enjoy again.

Delay is dangerous and it means continued cumulative suffering. I know that we will, at an early day, accept our evident responsibilities in the world situation, and at the same time make perfectly clear what they are. Once our responsibility is clearly manifest, the American people will not sidestep. We will do our duty. We always have.

## Cox Tours the East

**G**OVERNOR Cox, after making one of the widest tours of the western states ever undertaken by a candidate, turned his attention to the Atlantic seaboard. Many political experts regarded this as in some sense an invasion of the "enemy's country" since the Democratic campaign had been languishing in the eastern states and the Republicans were predicting old-time McKinley pluralities for

Harding. Nothing daunted, he carried the campaign not only into the doubtful regions of New Jersey and New York City, but made numerous brief speeches in rural New York and New England, which are strongly Republican. He denounced Senator Lodge's "conspiracy" against the Treaty to the voters of Massachusetts and welcomed the heckling of anti-League Irishmen in Newark and New York.

Two new points were brought out in Cox's eastern campaign. One was a definite declaration against intervention in Mexico: "If I am elected President of the United States I will not take the blood of a single American boy and turn it into gold for any investor in Mexico." The other was the promise that he would make almost any concession necessary to win the support of the Senate to immediate entrance into the existing League of Nations. In New York he said with regard to Article X he "would willingly accept a reservation stating explicitly that the United States assumes no obligation to defend or assist any other member of the League, unless approved and authorized by Congress in each case." He promised to "consult with all members of the Senate" and with leaders of both parties who have "given intensive thought to that question."

In West Virginia he went even further in his desire to conciliate opposition. He promised to "sit down with the Senate and make an agreement" as to reservations to the Covenant and added that "the sort of agreement which I shall be enabled to obtain will be determined by the Senatorial elections." He declared that talk of a new association to replace the existing League of Nations was "but an idle phrase" and that the one great evil to be averted at all costs was to remain excluded from the League "until another election could be held." In order to get into the League he was prepared to compromise on reservations because "if too much has to be given in compromise now in order to insure our entrance into the League, the people themselves will have an opportunity to modify and correct later."

## Senator Reed Bolts

**O**N October 21 Senator James Reed of Missouri announced to a Kansas City audience that he could no longer give his support to the national Democratic ticket. Senator Reed's own term does not expire this year and therefore he does not figure in the campaign as a candidate, but he has a personal following and undoubtedly his stand cost Governor Cox as nominee for President and Breckinridge Long as Democratic nominee for the Senate thousands of Missouri votes.

Senator Reed has not, however, left the Democratic party for "keeps", nor joined with the Republicans even for this campaign. His purpose is to be a lonely crusader

against the League of Nations, attacking all candidates of either party that favor "any kind of alliance, league or association with Europe." He denied that he had turned against the Democratic Administration because of a quarrel over patronage and held that until the League of Nations issue arose he had supported the majority of party measures which came before the Senate. He declared that not one man or woman in a thousand wanted the League as it was originally presented, but that those who thought that the evils of the Covenant could be cured by reservations or amendments were deluding themselves:

The majority of the Senate wanted fourteen amendments. Taft's League to Enforce Peace wants amendments. Root wants amendments—only Root and the Lord know how many. Bryan wants amendments. Professor Lowell wants amendments. Wilson says he will accept amendments. Hitchcock wants amendments. Twenty-six Democratic Senators voted for the treaty with all of the Lodge amendments. The other twenty Senators voted for something like a dozen similar amendments. Everybody wants amendments, except those who had the foresight to understand from the first that the entire instrument was un-American and rotten to the core. They want the accursed thing totally rejected.

He condemned Cox and said that in the event of his election "I fear the influence of Woodrow Wilson." But he was not much kinder to the Republican nominee:

The Republican candidate for President is for an association of nations, but asserts he does not know what it will be. If he is elected I shudder at the influence of Elihu Root and the international bankers.

Senator Reed does not give his support to either Harding or Cox, but he indorsed Senator La Follette's independent nominee for the Wisconsin senatorship, James Thompson, against both the Republican and Democratic candidates. In every state he hoped that the candidate most hostile to "the infamous doctrine of internationalism" would be returned, whether Republican, Democrat or Independent.

## Harding on Efficiency

IN an appeal issued from the "front porch" to the American people a week before election Senator Harding shifted the emphasis of his campaign somewhat from the League of Nations to the issue of Democratic inefficiency. He referred to the League incidentally, but somewhat vaguely, declaring against "the proposal to approve our membership in the League of Nations as our opponents insist that it shall be written," but favoring "a wise association of nations." But his main appeal was for "a reorganization of administrative government so that it shall become a source of pride to the American spirit of efficiency." He attacked the Democratic record:

Underwood & Underwood

IS THE KU KLUX BACK AGAIN?

It is being rumored that the "Invisible Empire" is again spreading consternation among negroes south of the Mason and Dixon line. "They say" that now its members burn the cotton gins and terrorize cotton growers to keep up the price of cotton. How did the photographer snap this during the weird ceremony of the Ku Klux Klan on the top of Stone Mountain near Atlanta without being hanged?

I call upon the Democratic party to answer the charge that its management of domestic affairs had brought us to the brink of an industrial crisis in 1914 from which only the World War saved us, and is even now leading us toward another precipice.

There has been no answer to the well known fact that they have cost America untold billions of dollars and the precious lives of our sons by unpreparedness for war persisted in for political expediency.

They have made no answer to the charge that they were equally unprepared for peace and reconstruction.

They have made no answer to the charge that their experiment with the American railways, their industrial policy and their maintaining in the Federal Government hundreds of thousands of unnecessary employees have cost the taxpayers of this country a fearful financial burden which our men and women, and even their children, will have to pay.

They have made no answer to the charge that their rule has been one of grotesque inefficiency.

The Republican party wound up its campaign with exceptional confidence, tho this confidence was stronger as to the election of Harding and Coolidge than as to control of the Senate or victories on local tickets. General straw votes taken by newspapers, magazines, drug stores, moving picture houses, colleges and other agencies pointed in the main to a Republican landslide. Chairman Hays claimed for Harding every electoral vote outside the "solid south" of the old Confederate States. The Democrats were far less confident, but Chairman White estimated that Cox could count with certainty on 256 electoral votes and Harding on only 164, leaving 111 doubtful votes to determine the balance of power. Betting on the eve of election favored the Republicans, tho the odds varied widely at different times and places.

## The Cotton Crisis

THE prevailing low prices of cotton have not only called forth lawless attempts to restrict output, but have called into action the more legitimate intervention of the public authorities. Governor Parker of Louisiana has appealed to the cotton ginneries of the southern states to close down for thirty days. This appeal was telegraphed to the Governors of other cotton growing states. Governor Parker said in part:

The one great agricultural crop in which the South has almost a monopoly is cotton, and with a number of short crops in succession and the certainty the world urgently needs cotton, it is almost criminal to force this crop on the market at prices far below actual cost, bringing ruin to farmers and thereby ultimately disaster to the spinners and actual suffering to those needing cotton goods.

The present emergency requires the attention and coöperation of all classes of citizens in justifying the request for all gins to shut down for at least thirty days, or longer if necessary, in order that the producers may receive living prices for their products and the great cotton industry not be crippled or destroyed.

Night riders have raided plantations or destroyed gins in Texas, Alabama, Arkansas, South Carolina, Tennessee and other states within the past few days. Everywhere the authorities have issued proclamations denouncing lawless methods of upholding prices and in several states rewards have been offered for the detection of the lawbreakers. The declared policy of the raiders is to prevent ginning or sale of cotton until the price reaches forty cents a pound.

## New Men for Shipping Board

UNDER the Merchant Marine Act the President is required to make seven appointments to the Shipping Board, of whom only four may belong to the same political party; two of whom must be named from the Atlantic coast, two from the Pacific, one from the Gulf region, one from the Great Lakes region and one from the interior. The members of the Board must divest themselves of private shipping interests and devote all of their time to their work as shipping commissioners, in return for a compensation of \$12,000 a year.

President Wilson reappointed Admiral William S. Benson, chief of naval operations during the war, as chairman of the Shipping Board. The other four members appointed at the same time were Theodore Marburg of Baltimore, former Republican Ambassador to Belgium; Gavin McNab, a San Francisco attorney, who was a member of President Wilson's first industrial conference; Martin J. Gillen, an attorney of Wisconsin and an assistant to former Chairman Payne of the Shipping Board, and Frederick I. Thompson, publisher of the Mobile (Alabama) *Register*. One appointee from the Pacific coast and one from the interior must still be named, and both must be Republicans since four of the five already appointed are Democrats. A substitute must also be found for Mr. Marburg, who did not accept his appointment.

Admiral Benson, in an address before the Boston Chamber of Commerce, expounded his views of the function of the Shipping Board, which he believed would ultimately be to private shipping what the Interstate Commerce Commission is to the railroads. He considers "that it is absolutely necessary for the success of our merchant marine that the vessels be owned and operated by private parties." He supported the St. Lawrence River canal project as promising the best relief to the coal shortage in New England, and even contended that, if necessary, the Government should issue bonds to finance it. He urged American shippers to give preference to American-owned vessels.

## Mayor McSwiney Dies

**T**ERENCE MacSwiney, Lord Mayor of Cork, died on October 25 in Brixton prison, London, from self-imposed starvation. He had fasted ever since his arrest in Cork on August 12, seventy-three days before. His brother, John MacSwiney, and his chaplain, Father Dominic, were with him when he died early in the morning. He had been unconscious for thirty-six hours before. Such a lengthy fast is unprecedented. In 1880 Dr. Tanner created a sensation by fasting forty days and this record was beaten by S. Nucci, an Italian professional faster, who went without food for forty-five days in 1890. So far as known MacSwiney received nothing in the form of food up to a few days ago, when the prison physicians, taking advantage of his state of coma, administered some fruit juice to counteract the scurvy from which he was suffering. His relatives and friends who had access to him every day might have fed him secretly, but deny having done so. His sister and Archbishop Mannix believe that the prolongation of his life was a miracle due to the prayers offered in his behalf in various parts of the world.

Joseph Murphy, one of the eleven hunger strikers in the Cork jail, died on the same night after having fasted sev-

Wide World

The new Lord Mayor of Cork is Donald Ellachain, who took the office when the late Lord Mayor McSwiney was sentenced to imprisonment for supporting violence in the cause of the Irish Republic

Underwood & Underwood

On the seventy-fourth day of his self-imposed fast in protest against the British domination of Ireland, Terence MacSwiney, Lord Mayor of Cork and a leader of the Sinn Fein movement, died in Brixton Prison. His suicide made him a martyr in the eyes of Irish Republicans and reprisals for his death were threatened in England as well as in Ireland

enty-five days. Michael Fitzgerald, another of the Cork hunger strikers, died last week.

Terence MacSwiney (pronounced Sweeney) was born in Cork in 1879, the son of a tobacco manufacturer. He was educated at the Christian Brothers School of Cork and the Royal University of Dublin. He became absorbed in the study of Irish history and used Gaelic instead of English on every possible occasion. He took an active part in the Sinn Fein movement as a writer and editor during its literary phase and as an officer in the republican army during its later militant phase. Since the Sinn Fein rebellion of Easter, 1916, he has been repeatedly arrested and has spent a total of thirty months in prison. He was elected to the House of Commons in 1918, but refused to take his seat.

When Thomas MacCurtain, the Sinn Fein Lord Mayor of Cork was murdered on March 20, MacSwiney was elected to succeed him. He declared on his inauguration that his allegiance was not due to the British crown but to the Dail Eireann, the Parliament of the Irish Republic. He was arrested while holding an illicit republican court and tried by court martial. Copies of the cipher telegrams despatched by the police the preceding day were found concealed in the wall and a key to the cipher in his desk. He was found guilty of sedition and sentenced to two years' imprisonment. He refused to acknowledge the authority of the court and declared that since he would take no food he would be free, dead or alive, within a month.

The British Government took the ground that every prisoner could obtain his freedom by voluntary fasting if that were accepted as a reason for release. Premier Lloyd George said:

A law which is a respecter of persons is no law. If the Cabinet departed from its decision, a complete breakdown of the whole machinery of law and government in Ireland inevitably would follow. The release some weeks ago of hunger strikers in Ireland was followed by an outburst of cruel murder and outrage.

The King was appealed to for pardon, but refused to violate the constitution by acting against the advice of his ministers.

MacSwiney's death is regarded by one party as murder

and by the other as suicide. But even those who held that the Government could not surrender to a hunger strike felt sympathy for MacSwiney in recognizing that he was dying for an ideal. The long drawn suspense has greatly acerbated the bitterness of both sides and enhanced the difficulty of bringing about a peaceful solution of the Irish question. It has also entered into the presidential conflict of the United States. Professor Kelly of Fordham University demands the impeachment of President Wilson because he did not intervene in MacSwiney's behalf.

## Great British Coal Strike

FOR ten days the coal miners of Great Britain have been idle. The men say that they must have higher wages. The Government says that they must produce a higher output. Every week the contest lasts the miners lose more in wages than they would gain in five weeks if they got the increase they demand and every week the Government loses nearly as much as it would gain in six months by the increase placed on the price of coal by the Government. Whichever side wins the net result must be a decrease in the foreign trade and a rise in the cost of living. To the million miners who left their jobs must be added those in dependent industries which had to close down on account of lack of fuel and also a large army of previously unemployed, altogether making about a million more men out of work at the end of the first week. If the strike continues British industry and finance, hardly recovering from the war, will suffer a severe setback.

The National Union of Railwaymen declared their intention to go out at the end of the first week in a sympathetic strike. This action was taken spontaneously by a majority of only ten out of sixty delegates and in opposition to their leader, J. H. Thomas. But the majority argued that within a few days 300,000 railwaymen would be laid off anyway on account of the closing of the mines and that a "lightning strike" that would tie up all the traffic of the country would force an immediate decision in the miners' favor. But the railwaymen's strike was held off at the request of the executive of the miners' union when the Government consented to open conversations with them.

The third big union concerned in the strike is the Transport Workers' Federation, which comprizes the dockers, longshoremen, bus and train drivers and the like. If they should go on strike as they threaten to it would stop all shipping and shut off the food supply. To prevent this calamity the Government is enrolling citizens who can aid in driving motor trucks, operating railroad trains and otherwise keeping the cities from starvation. Over ten thousand men and women of all classes have volunteered for national service of this sort. This has aroused the indignation of the transport men, who consider them strike breakers and, as Robert Williams, General Secretary of the Transport union, says:

look upon the danger of the enrollment of volunteers, especially from the middle class and white guards of the community, as of more provocation than the use of troops.

The Parliamentary Committee of the Trades Union Congress voted to "request" Premier Lloyd George to reopen negotiations with the miners' executive before Friday noon or they would call together the executive committees of all the big trade unions to consider a general strike.

Under pressure of these threats or because he saw a chance to effect a compromise the Premier sent an invitation to the leaders of the miners, Robert Smilie, Frank

International

The death of King Alexander of Greece, who was poisoned by a monkey bite, may precipitate a crisis in Greek national affairs. His father, the former King Constantine, was deposed and exiled during the war for his pro-German sympathies. Premier Venizelos, the real head of the Government, is reported to have said that at the time of Alexander's accession to the throne that it was the last experiment Greece would ever make with a king

ceptional powers exercised by the Government during the war. In spite of heated opposition the House of Commons passed the Emergency Powers bill on second reading by a vote of 267 to 55.

## King Killed by a Monkey Bite

KING Alexander of Greece, namesake and successor of Alexander the Great, died on October 25 from blood poisoning caused by the bite of a pet monkey. Tatos, the monkey, was supposed to be tame and was allowed to wander at will about the palace park. But one day early in October, when the young King was playing with him, he bit the King's foot viciously. The wound was not thought serious at first, but symptoms of acute blood poisoning set in and developed into congestion of the lungs. Dr. Georges Vidal, a French specialist on animal bites, and Professor Delbet, a surgeon, were brought from Paris, but were unable to effect a cure. It was rumored in Rome that the monkey had been inoculated with hydrophobia as a means of getting rid of the King, but this is officially denied.

King Alexander was born in 1893 and was educated at Oxford. He was placed upon the throne in 1917 when his father, Constantine, was deposed and exiled by the British because of his pro-German proclivities. Constantine was married to Princess Sophia of Prussia, sister to Kaiser Wilhelm of Germany, and her influence, it is believed, made him averse to bringing Greece into the war on the side of the Allies or allowing it to be used as a base of operations against the Bulgars and Austrians. His eldest son, Crown Prince George, was also suspected of anti-Ally leanings so the British made Alexander, his second son, King of the Greeks.

Alexander refused to contract the customary royal alliance and insisted upon his right to marry for love. Accordingly in November, 1919, he secretly married Anastasia Manos, the pretty daughter of his stableman or Royal Equerry. When the news came out last May thru the visit of the young couple to Paris the Greeks were shocked at

Hodges and Herbert Smith, to come to his official residence, No. 10 Downing Street, and talk over the questions in dispute with the members of the Cabinet. Since then daily conferences have been held, but no agreement has yet been arrived at. The Government is said to be willing to grant the two shillings a day increase in wages demanded by the miners, but insists in return on some guarantee of increase of productivity. As the hours have been reduced and the wages raised the output of coal per man per hour has continually fallen off until it has reached a point where it threatens to undermine England's commercial supremacy of the world.

In order to meet the emergency of a general strike or revolutionary movement the Premier has asked Parliament to restore temporarily the ex-

the idea of a morganatic marriage and declared that they would never receive the low-born lady as their Queen. But Alexander declared, "Well, if she can't be Queen I won't be King, that's all."

Prince Paul, the younger brother of Alexander, is likely to succeed him unless the Greeks seize the opportunity to throw off altogether the rule of foreign monarchs that has been imposed upon them by the powers ever since 1832. The exiled King Constantine has never abdicated and still signs himself "Rex" in messages from his residence at Lucerne. His supporters will doubtless endeavor to bring him back to Athens. Premier Venizelos, however, will block the return of his old enemy Constantine and probably the Allies would not permit it anyhow. A few months ago an attempt was made by the royalists to assassinate Venizelos, but he recovered from his gunshot wounds.

## Wrangel's Campaign

THE latest of the efforts to conquer Soviet Russia is that led by Baron Wrangel. He was one of Denikin's ablest generals in the anti-Bolshevik campaign of a year ago last summer, but broke with his chief because Denikin did not restrain his troops from outrages on the Ukrainian population whom he was supposed to deliver from oppression. In consequence of this protest Wrangel fell into disfavor with Denikin and his British backers and was exiled from Russia. But after Denikin's defeat he was recalled to take charge of the remnants of the army which had been driven down into the Crimean peninsula. The Bolsheviks would have followed and annihilated the routed troops but were prevented by the British battleships, whose guns ranged across the narrow neck of the isthmus. Here at Sevastopol, the old Russian naval base which British, French and Turks besieged for a year in the Crimean war, Wrangel reorganized the army and refitted it with British arms and uniforms in preparation for another invasion of Soviet Russia in the summer of 1920. But by the time the weather became warm enough for fighting the British Government was engaged in negotiations with Soviet representatives at London for opening up trade with Russia. The Soviet Government insisted as a preliminary condition that the British cease giving aid and encouragement to attacks on Soviet Russia. Accordingly the British Government warned the Poles that if they should overstep their ethnographic limits and Wrangel that if he should undertake an offensive campaign they need not expect British sympathy and support.

But the French adhered to the opposite policy and gave both the Poles and Wrangel all possible assistance in their campaigns against Soviet Russia. It was thought that if Russia were attacked simultaneously by the Poles from the west and by Wrangel's army from the south the two forces could conjoin near Kiev and that the Soviet, weakened by internal dissensions and economic distress, would speedily collapse.

But the effect was quite the opposite of that anticipated. As the Polish armies advanced into the heart of Russia far beyond their racial frontier and even beyond the eastern boundary of the old Kingdom of Poland, all the ancient animosity of the Russians for the Poles became inflamed and the officers of the Czar's army volunteered for service under the Soviet to repel the invader. Under their guidance the Soviet armies rallied and recovered their ground. But not content with driving the Poles back within their national boundaries the Bolsheviks continued to advance, believing that they could capture Warsaw and dictate peace

to Poland in her own capital. This they might have done for in early August their guns could already be heard in Warsaw and the Polish troops were badly demoralized. But in the nick of time the French General Weygand arrived at Warsaw with a large staff of French officers and quickly turned the tide. The Bolsheviks were driven out of Poland with heavy losses and the Soviet was forced to sign an armistice at Riga that surrendered to Poland a large strip of Russian territory.

Wrangel's fortune waxed and waned according to the attention that the Soviet could spare him from the Polish war. In the fall when the most serviceable of the Red troops were withdrawn to the Polish front he made rapid inroads into Southern Russia. Reports of victories in which he captured five, ten or even twenty thousand Soviet troops came in frequently during September and early October. He gained the whole province of Taurida that lies between the Dnieper River and the Sea of Azov. The further advance of Wrangel's forces toward the northeast would have put him in possession of the Donetz coal region and deprived the Bolsheviks of their fuel supply for the winter. On the other wing the Wrangel cavalry had crossed the Dnieper at two points and threatened to envelop Odessa.

But by the middle of October when the armistice with Poland was concluded at Riga, the Soviet was free to throw its forces against Wrangel and quickly changed the situation in the south. The Wrangel forces were driven out of Mariupol, Nikopol and Oriekhov and forced to withdraw from the western side of the Dnieper. In these defeats the Wrangel armies lost heavily both in men and munitions.

The Russo-Polish armistice forbids the use of the territory of either party as a base for military expeditions against the other. Consequently the Russian volunteers under General Balakovich, who have been fighting Soviet Russia in coöperation with the Poles, will now have to leave Poland and join Wrangel in south Russia. General Dubenny, the dashing Bolshevik cavalry leader who recently was fighting fiercely against the Poles, has changed sides and is now attacking Soviet Russia in the direction of Kiev. General Weygand, the savior of Warsaw, has sailed for Sevastopol to help Wrangel as he helped Pilsudski in Poland. A number of ex-German officers from the Baltic provinces have volunteered for service under Wrangel. Major General Townshend, the British officer who defended Kut-el-Amara on the Tigris during five months' siege by the Turks, has resigned from the British army to serve under Wrangel. The French have loaned Wrangel a million dollars for shoes, overcoats and blankets for a winter campaign.

THE SCENE OF WRANGEL'S CAMPAIGN

Baron Wrangel has been conducting a campaign from the Crimea against Soviet Russia in coöperation with the Polish attack from the west. His troops had gained control of the Taurida province but have been expelled

# A Little of Everything

## How to See Sound

By Robert H. Moulton

The man who has had his troubles photographing an automobile traveling at the rate of 100 miles an hour, or about 140 feet per second, will best appreciate the difficulties that confronted Prof. Albert J. Foley, of the University of Indiana, when he attempted to take the picture of a sound wave, which travels ten times faster than the fastest motor car. Yet the feat was successfully accomplished, as accompanying photographs show.

The simplest and most obvious type of wave motion is that which we observe in the ripple in a teacup, a surface-tension effect, or in the mighty

billow rolling on under the action of gravitation. Such waves are essentially two-dimensional. A typical wave front in this case, such as that produced by a stone falling into a pond, is circular in form.

Diffraction pattern produced by a cylindrical grating with eight apertures. Time .00024 of a second after spark

Other waves, and a very important class, are three-dimensional, the typical form being spherical, each wave starting out from a source point, and spreading out as a sphere with that point as its center. Light waves are of this character, as well as the waves used in wireless telegraphy. In fact, the two are propagated with the same velocity thru vacuum, which is of the order of one fifty-thousandth of an inch in the case of light, and of the order of several thousands of feet in the case of electric waves commonly used in wireless telegraphy.

It is only by special means that spherical waves can be rendered visible. Light waves are themselves, of course, invisible. But there is another kind of spherical waves—sound waves—which, tho ordinarily quite as invisible as waves of light or electro-magnet waves, can nevertheless be rendered

observable to the sense of sight and photographed. The difficulties of photographing an invisible sound wave in an invisible gas, the wave itself being merely a series of condensations and rarefactions in this invisible gas, are such

that it was only after years of experimenting that Professor Foley succeeded in securing perfectly definite sound wave pictures, pictures which show the waves traveling in all directions from the source, which show them in the process of being reflected from plane and curved mirrors, being brought to a focus by convex lenses and made divergent by concave lenses, doing everything in fact demanded by the wave theory.

Professor Foley's method of photographing sound waves is simple in its fundamental principle. All of us, looking out over a field on a hot, bright day, have seen what is commonly called "the heat rising from the ground." We have also seen stars "twinkle." The heat rising from the ground is simply the confusion of the waves which reach the observer's eye after passing thru air of varying density due to varying temperature. The same thing causes the twinkling of the stars, while in reality the light from the stars is absolutely constant.

In a sense, Professor Foley has put the twinkling to a practical use. According to his own statement, the argument which first led him to undertake the experiment was as follows:

Sound waves in air are waves of con-

A sound wave taken .0002 of a second after the spark. It is growing in circumference as it travels

densation and refraction, that is, series of regions of varying air density. Light from a star or any point or source of light will be bent from its straight line path when it passes thru such region. Therefore, sound waves produced between a point source and a photographic plate should cast shadows on that plate. Just photograph the shadow and the work is done.

At first this seems simple and easy, but not when it is explained that, owing to the great speed of a sound wave, the light of the source or star could not last longer than the millionth part of a second, or the shadow would be blurred. Further, if the light lasts only the millionth part of a second, while it does last the light must be a thousand times as strong as the light which a camera uses when taking a picture in one thousandth of a second to give good images on the plate. Still further, one must be able to turn on that light at exactly the right time, or the sound wave will not be in the correct position with reference to the photographic plate and other apparatus.

To a large electric machine capable of giving a perfect torrent of electric sparks a foot or more in length, Professor Foley connects some Leyden jars, which act as a reservoir for the storage of electrical charges. The number of sparks produced by the machine is reduced, because the jars must be charged before a spark will pass. But when a spark does occur, the entire system is discharged, resulting in a spark of great energy, the crack of which sounds like the report of a gun. This spark is discharged thru a circuit containing two spark gaps, that is,

A sound wave reflected by an elliptical reflector. Taken .00007 of a second after spark

The same wave a little later. The original and reflected waves are symmetrical; divergent and convergent

two breaks in the circuit across which the current must pass.

One of these gaps, the one nearest the electric machine, is placed just in front of a photographic plate and when the spark passes it, generates a sound wave in front of the plate. The current then passed under the second gap, arriving there later than at the first gap. When the spark occurs at the second gap it throws on the photographic plate a shadow of the second wave that had been produced a moment before at the first gap. Thus the time interval between the sound and the light that is to photograph it is due to the time that it takes the electric current to pass from the first gap to the second gap, and can be regulated by changing the current.

## What Wilson Told the Navy

We have got to throw tradition to the wind.

Do not stop to think about what is prudent for a moment.

The amateur knows so little about it that he is fool enough to try the right thing.

The Germans not only have no more brains than we have, but they have a different and less serviceable kind of brains.

I despair of hunting for hornets all over the sea when I know where the nest is and know that the nest is breeding hornets as fast as I can find them.

ANOTHER GREAT CARMEN

Alice Gentle has been classed by Frederic Dean, the critic, as the fifth Carmen—such is the excellence of her interpretation of the colorful daughter of Romany. "Before her," says Mr. Dean, "only four singers have proved worthy to take the 'Carmen' role: Minnie Hauck, who introduced the part to New York; Emma Calvé, the universally admired; Camille Bresler-Gianoli, the Carmen who approached nearest to the ideals of Merimée and Bizet; and Esther Ferrabini, the beautiful—and now the San Carlo Grand Opera Company has given us Miss Gentle. She brings to the part all that her predecessors did, besides her own distinctive, bizarre portrayal of the wilful, tragic gypsy

Underwood & Underwood

In less than ten years your guest to New York will, perhaps, arrive at the First Union Air Depot instead of the Grand Central or the Penn. A Brooklyn architect sketched this projected great airplane landing, which would be 150 feet above the highest points of the McAlpin and Waldorf-Astoria hotels. A floor would be utilized for hangars and parking space, and would be reached by elevators. Already the Aero Limited Company operates a successful air line passenger service with headquarters at these hotels

## The Origin of Races

By Benjamin Harrow

Darwin told us how man was evolved from the monkey, or rather, how man and monkey were evolved from one common ancestor; but Darwin offered no explanation how different races of men evolved; how, say, the types known as the European, the Chinese, and the negro developed. We have usually satisfied ourselves with such phrases as "the influence of environment," "natural selection," or "the inheritance of slowly-acquired characters." Environmental influences are important, as a moment's consideration shows. Take the Jew, who hails from Asia Minor, and who is now spread over the five continents. The Polish Jew, who has lived in Poland for three or four generations, is as unlike the English or American Jew, who has lived in these more western countries for the same period, as can well be imagined. Similarly it can be shown that natural selection and the inheritance of slowly-acquired characteristics are of importance.

Arthur Keith, a famous Scottish anthropologist, now advances a new theory to account for the negro, the Mongolic, the American and the Caucasian. Says he, men have developed into different races because their internal secretions have developed differently.

Internal secretions? you say; what new fad of the scientist may they represent?

"Internal secretions" is no fad. We know today, what we did not know so very long ago, that there are body-coördinators. The various organs of the body do not act independently, but harmoniously. The heart, the spleen, the liver, the kidney, etc., may be likened to army corps in a great army: they are parts of one great whole; and these parts are directed by generals

who in turn are in touch with one another.

The generals at the head of these army corps are five glands of internal secretion, of which the thyroid is perhaps the best known. These glands, these generals, have their staff officers who keep in touch with the other armies in the field. The scientist, ever fond of strange names, calls such subordinate officers *hormones*, which, when translated into our every-day tongue, mean *messengers*. The glands of internal secretion shape, by means of their hormones, the activities of the various organs of the body. Whether the organs fare well or otherwise, or whether they either do, or do not exhibit certain peculiarities, depends upon the skill or stupidity of the generals, the glands. Of course at the head of the entire army, the body, we have the commander-in-chief, the brain.

Professor Keith informs us that one of the five glands, the pituitary, regulates growth and is directly concerned in determining stature, cast of features, texture of skin and character of hair—all of which, as the anthropologist will tell you, are means used to classify races. And the professor reminds us that the pituitary is most prominent in the Caucasian race, where bulk of body and height of stature are noticeable.

Then we have the interstitial glands, made famous by Dr. Voronoff, of Paris, who claims, with the transplantation of these glands, to be able to renew youth. Professor Keith here again finds that these glands are most prominent in the Caucasian—more so than in the Mongol or negro type.

The suprarenal glands are active in removing much of the pigments of the skin—which explains why the Euro-

pean is so much fairer than his darker brothers from Africa.

But most important of all, in combining many of the properties of the other glands, is the thyroid, which, according to Professor Keith, influences growth and several racial characteristics—hair, skin, skull, jaws, cheekbone, nose, eyes, stature, speech and temperament.

We may add that not only do these glands probably play the part Professor Keith assigns to them, but that much of our general well-being is dependent upon their normal behavior. If for any reason one or more of these glands get out of gear a variety of diseases, all marked by decided physical disfigurement, make their appearance. Depending upon the gland that misbehaves, our physician may call the disease such awful names as acromegaly, gigantism, dwarfism, cretinism, myxedema, and so on.

#### A FALSE ALARM

"It's nothing but knitting, smartie," says the girl stenographer to the United States Coast Guardsman protecting the New York Customs House from a bomb explosion that didn't explode

## A Woman's Parliament

Most woman suffragists are not really woman suffragists at all. They are just *human* suffragists and support women's right to vote "along with the rest," not on the ground that women are women but simply on the ground that they are citizens and taxpayers. But Alice Heyman, a Belgian suffrage leader, has another idea. She says that when women vote they usually vote for men so that the peculiar feminine point of view gets very little representation in legislative bodies. She insists that "The only logical and just method for women to acquire equal representation and authority is to split the present parliaments into two houses, one composed of men representatives and the

other of women. Every measure would have to be passed by both houses in order to become effective."

If this rule were applied in the United States, instead of a House of Representatives and a Senate, there would be a House of Men Legislators and a House of Women Legislators. How the President would be divided up it is hard to see, unless we adopted the Roman device and had two consuls for our chief executive. But that difficulty does not exist in countries like England and Belgium where the Ministry is chosen from the houses of Parliament and could be so selected as to represent both, and where the supreme head of the state is a King whose Queen shares his rank and dignity and something of his authority. In fact, anyone who plays chess or cards knows that a Queen is not safely ignorable.

## Hors d'Oeuvre

Edison subscribes for fifty-two technical and commercial magazines.

\*\*\*

Delaware has the lowest average elevation of any state in the Union.

\*\*\*

Arkansas produces nine-tenths of the aluminum ore (bauxite) mined in the United States.

\*\*\*

Mount Mitchell, in North Carolina, is the highest point of land in the United States east of the Rockies.

\*\*\*

The Supreme Court of Maine has decided that a woman need not tell her age to be a voter, so long as she is "over 21."

\*\*\*

During the war the Government bought 945,000 army saddles for 104,000 cavalry horses. How long does a saddle last your horse?

\*\*\*

Eight new military airplanes have been formally "blessed" by the ecclesiastical authorities at the aerodrome of Zeluan, in Spanish Africa.

\*\*\*

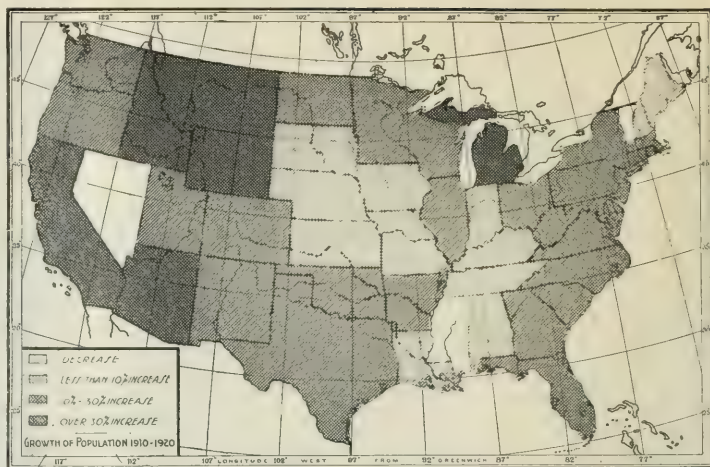

There are 4700 miles of streets in New York City. In other words a stroll from New York to Petrograd would be no longer than a walk thru all the city streets.

\*\*\*

There are in New York City five buildings more than 500 feet high, the Woolworth Building, 791 feet; the Metropolitan Life, 700 feet; the Singer, 612 feet; the Municipal, 560 feet, and the Bankers Trust, 539 feet.

\*\*\*

London is still the largest city in the world, since her population was 6,276,753 in 1917, while that of New York was 5,621,151 in January last, but should the metropolitan district population, 7,700,000, be considered. New York would lead.

## How the States Stand

The 1920 census does not change the rank of the first six states; they still rank in this order: New York, Pennsylvania, Illinois, Ohio, Texas and Massachusetts. But Michigan has displaced Missouri as the seventh state and California, which ranked twelfth in 1910, now comes in the eighth place, followed by Missouri and New Jersey. These ten states contain more than half the population of the entire forty-eight.

But perhaps the rate of increase of population during the last decade is of greater interest than the absolute population of the states. The accompanying map shows this rate. There appears a general tendency towards rapid increase in the Far West balanced by another concentration around the great cities of the Atlantic seaboard and the Great Lakes, with a sort of "low pressure area" over the agricultural region of the Mississippi Valley. The Pacific and Rocky Mountain states grew more gradually than in some past decades, but all of them with the single and striking exception of Nevada (which shows an actual decrease of population since 1910) had a population increase of more than one-tenth. The banner state of the Union was Arizona with an increase of 63.1 per cent, or not far short of two-thirds. In the east only Michigan and the District of Columbia increased by more than thirty per cent; the phenomenal industrial expansion of Detroit accounting for the one and the enlargement of Federal activities during the war for the other. But Ohio, New Jersey and Connecticut passed the twenty per cent mark. All of the southeastern states, with Florida in the lead, showed a fair rate of increase, but the lower Mississippi valley made a poor record and the state of Mississippi showed a falling off. Northern New England contrasted strongly with the growth of the industrial centers of southern New England. Maine and New Hampshire were almost stationary and Vermont failed to maintain the population of 1910. Summing up, there is no general rush to east, west, north or south; but everywhere a rush from country to city with the growth of each state practically dependent on the growth of its cities.

## The Metals of the Future

In Edwin Eckel's interesting book on industrial mineralogy, *Coal, Iron and War*, there is a comparative table of the common commercial metals to show the relation of present output to the real abundance of these metals in available ores, according to the estimate of geologists. In each case gold is taken as the unit of comparison, because gold is the rarest and costliest of the principal commercial metals (tho not so rare and expensive as some recently discovered metallic elements which have a limited or specialized use in industry):

Metal	Natural abundance	Annual output	Cheapness
Gold .....	1	1	1
Silver .....	20	12	34
Lead .....	4,000	1,700	6,700
Zinc .....	8,000	1,460	5,400
Copper .....	15,000	1,470	2,000
Nickel .....	46,000	49	750
Iron .....	8,800,000	115,000	40,000
Aluminum ..	15,680,000	117	1,500

It will be noticed that there exists a rough parallelism between the annual output of a metal and its cheapness in the market. This is to be expected, since the rarity of a metal in its finished form is one of the chief determining causes of its value; if gold, for instance, were as abundantly produced as iron it would be as cheap, perhaps even cheaper since iron is more essential to industry. On the other hand the output of the commercial metals differs very widely from their estimated natural abundance.

This may be due to any of several causes. The natural abundance of the metals is, after all, a matter of guesswork to some extent and the figures in this column cannot be considered as

accurate as the statistics for annual output and cost. In the second place, some metals, such as gold and silver, are so highly valued that they are eagerly sought after and their annual production is thus much greater than their natural abundance would warrant. In the third place some very common metals, such as aluminum, occur mainly in ores from which it is a difficult and costly process to extract the metal. Lead, on the other hand, is easily obtained as a by-product in the mining or refining of other metals such as silver and zinc. Its output therefore ranks next to that of iron and it is very cheap even in relation to output, altho not so abundant in nature as several other metals.

But even when allowance is made for all these considerations, it is evident that nickel and aluminum have a great future before them. New applications are being discovered for them every year and there is no danger of their ores "running short," as is the case of

some metals now prominent in industry. Copper is already costly and may in the future become so much more costly than aluminum that the latter metal will be substituted for the former in electric wiring. Aluminum may also replace tin for kitchenware and even for the "tin" (tinned iron) can. Altho Eckel does not include tin in his comparative table, he puts it among the naturally scarce metals and predicts that its price will soon rise very sharply owing to the exhaustion of the chief sources of supply. When the most "popular" metals are used up in modern industry substitutes will be brought in to play and these will be the metals most widely distributed in nature.

REPAIRING LIVE WIRES BARE-HANDED

The apparatus above has been developed to safeguard the lives of those working on repair jobs on high voltage circuits. The other advantages are obvious; doing away with clumsy, heavy tools and maintaining constant electric service for homes and factories

## Handling Live Wires

One of the bugaboos of the lineman's daily work has always been the great danger attending repair work on high voltage circuits which are hot or in which the current is still running. For maintaining a line of wires serving homes, farms and industries in a high state of efficiency every precaution must be taken to safeguard the lives of those working on repair jobs as well as to maintain a constant service. Service is reduced appreciably if it is found that every time a repair job is necessary on high voltage circuits the only thing to do is to shut off the power

for a length of time. Factories will find their machinery unproductive, household duties will be unaccomplished during such intervals and in many ways losses of production and waste of money may be traced to inadequacy of equipment for repairs.

But now an apparatus has been developed so that repair work on hot lines may be performed with bare hands in safety and the long cumbersome insulated tools of yesterday are a thing of the past. The safety staging used with this apparatus is made from carefully selected hard wood which is submitted to a special drying and impregnating process. After the staging has been properly placed the man enters it and by doing so has placed between himself and the pole or steel tower an insulating medium which is capable of withstanding several hundred thousand volts. Guards for preventing any possibility of accidental contact with a grounded arm, guy wire or other phase of the circuit are provided. The man is free to touch the hot line at any time now. Other than a slight "zip" similar to a static discharge there is no discomfort to the worker in grasping the line. As the staging is about 90 per cent wood it has no capacity with the result that as soon as the man's body takes its charge there is no further sensation.

It is claimed that satisfactory results may be obtained up to 110,000 volts and the manufacturers expect to extend this limit with further improvements in the methods of drying and impregnating the wood used in the staging.

Insulators may be changed and tested and the entire pole top may be rebuilt in perfect safety by using this apparatus. Any job which has ever been done on a 2500 volt line can be done on higher voltage lines.

© Brown & Danson

Built on a rocky plateau in the dry hill country of southern Palestine, Jerusalem, "City of Peace," depends for its shade not upon trees but upon deep limestone recesses which hold what little moisture there is in the air and offer sanctuary from the blinding heat of the main thoroughfare. In ancient times a brook flowed down the Valley of Kidron, which separates Jerusalem from the ridge of the Mount of Olives, but today there is only one known spring within the city limits, that of the "Fountain of the Virgin" on the western side of the Kidron valley

# Lizzie Likes Her Job

(Continued from page 184)

The management of Joseph & Feiss found that inequalities in pay among their workers rankled even more than the fact of larger pay elsewhere. The girls who felt that they were discriminated against lost interest in their work; they talked, and the dissatisfaction which resulted lowered the morale of the shop.

Justice, then, is one of the motives which needs to be measured. Instead of leaving the hiring, firing and promotion to forty different foremen with forty different standards and all manner of prejudices and favoritisms, a single department, the Employment and Service Department, with a single standard for all workers, supervises relationship between the company and its employees. An open channel to the manager thru their own elected representative provides the machinery for hearing complaints. With the removal of all signs of inequality and discrimination, providing the same measure of rewards for all employees, the dissatisfaction of Miss Lizzie Meyers and her kind disappears.

It was recognized that work must be paid for in accordance with the difficulty involved, the skill required, the degree of agreeableness or disagreeableness and the importance. The management further recognized that the basic amount to be paid was a question for bargaining, since judgment as to difficulty or disagreeableness or importance varies with the individual. So they arrived thru investigation and discussion at what was believed to be a fair wage per hour for each kind of work. In 1914, the average for men—excepting cutters, markers and trimmers—was \$13.35 per week. In 1918 the average was \$24.37. In 1919, it was \$28.09. Women's average earnings were \$9.28 in 1914, \$15.90 in 1918, and \$18.25 in 1919. These are actual earnings determined by dividing the total annual earnings by fifty-two; and so include vacation week, sickness, and any shutdown or lay-off. The earnings for markers, cutters and trimmers are appreciably higher.

Suppose we say that a coat baster should receive 60 cents per hour. But on the amount of work to be done to earn the 60 cents, the firm was not willing to bargain. This was not a matter of judgment or higgling; it was a matter for measurement. An actual test showed how many operations could be performed in an hour. Allowance is made for interruptions, personal needs and the like, and a standard performance determined. Thus while Miss Lizzie Meyers might have produced fourteen basted coats in an hour, due allowance would lower the amount set as a standard, let us say to ten. The rate of pay then becomes six cents per garment, and the standard worker, producing her ten garments per hour, earns the agreed-upon sixty cents.

The worker who actually meets the

standard, however, is given additional compensation in the shape of a 20 per cent "production bonus," and she would earn seventy-two cents instead of sixty cents. The company states that at the present time over 70 per cent of the workers are making the production bonus regularly.

There is also a "quality bonus." For each kind of work there is determined a maximum number of rejections to be allowed the worker, the number depending upon the speed and kind of operation. If the worker exceeds this schedule, that is, falls below the standard of quality required, she is paid no quality bonus. If she reaches or passes the standard she is paid a bonus up to 10 per cent of her earnings for perfect performance. She need not maintain the standard continuously to earn a bonus, but is paid a bonus for the aggregate of the hours for which she attains or exceeds the standard.

In order to keep the workers interested in pursuing the prize the management helps them to qualify in skill, or to find the kind of work for which their natural aptitude will fit them. A business-like young woman, who has the position of supervisor of production, keeps in close touch with the workers all day, encouraging, helping where she can.

College trained women fill many of the executive positions. The management has learned that the higher type of executive, with the necessary ability and the mind trained to gauge human motives, is often developed more easily from the product of the college classroom than from the ranks of experienced operatives in the industry. Given the same opportunity, and possessing the perseverance essential to acquiring practical experience, the college-trained aspirant is likely to win out.

**T**HE worker during the first weeks of employment is likely to become discouraged, and if paid by the piece would not earn enough to pay her board for several weeks. To meet this discouragement, the management divides the pay of the worker into two parts, called the "Retainer" and the "Expectancy." Suppose a girl is put on an operation worth fifty cents per hour. Being a beginner she is not expected to produce the amount of work which would entitle her to the pay, but she is expected to earn part of it. So they pay her, let us say, thirty cents per hour for a "retainer" and expect her to earn twenty cents at the piece rate for that operation. The twenty cents is called "expectancy," and is earned in whole or part as the worker measures up to the learning standard. As the worker progresses the "retainer" goes down and the "expectancy" increases, that is, the guaranteed rate decreases and the standard of performance is raised.

The same method is used when a girl is taught a new operation. For,

mind you, the management is bent upon having every worker familiar with several operations, so that the absence of a worker does not prevent her operation from being performed. This scheme makes possible the balancing of all departments so that the flow of work is continuous and regular in quantity: which would not be the case if department A were fully manned while department B had only one-half its force at work.

The worker, while being taught this new operation, is not penalized for loss of production, but is given a "retainer" to compensate for the possible loss. Again, increasing familiarity with the operation reduces the "retainer" and increases the "expectancy." This "retainer" is in effect an instruction bonus.

An "attendance bonus" invokes regularity and helps to keep the productive machinery balanced. For each unbroken consecutive day of work the worker gets a bonus of fifty cents. For each absence, she fails to make the fifty cents attendance bonus for the first day following the absence. Thus, if Lizzie Meyers worked on Monday, Tuesday and Wednesday, she received fifty cents bonus for each day. But if she is absent on Thursday, works on Friday and also on Saturday, she loses her Thursday bonus, by reason of being absent on that day, and loses also her Friday bonus, the first day of her attendance, but earns her bonus on Saturday.

There is additional inducement offered in the "excuse bonus." It may be that Lizzie was sick on Thursday and called up the firm before nine in the morning; or she may have had to stay home and help with the washing, or wanted to go to a funeral, and knowing this, secured an excuse from her foreman and the Service Department. Or she may have gone home without completing the day's work, but secured an excuse for her absence. In any of these cases half of her attendance bonus is given her on Friday, that is, the "excuse bonus" nets her twenty-five cents.

Economic superiority, especially if it is earned, provides basis for social standing in the group. The aristocrats of this body of workers are the people who have served many years, earn regularly the production bonus and quality bonus, and are able to perform a large number of operations. The badge of superiority in each instance is not a blue ribbon, or the listing of a name at the head of a typewritten sheet, but cold cash. It has its physical counterpart in clothes, hats, shoes; a higher standard of living.

What if these workers could be made to feel that every day in the service of Joseph & Feiss made more certain provision for their old age; if they could be convinced that long service with the company, instead of exploiting them of their youth and

## Convenience and Protection

Facility in selecting and obtaining the complete fixtures and other materials needed for any heating or sanitation system is not the only advantage afforded to owners, architects and contractors by the Crane line. Convenience is supplemented by the protection that results from one central source of supply, and one high standard of quality.

## Anything for Any Pipe-Line

is the justifiable and widely recognized key to Crane Service. From the roughed-in piping in the basement through the service piping concealed in walls and floors, to the immaculate plumbing furnishings of the bathroom and kitchen—the Crane line provides practically everything necessary for the heating and sanitary equipment of public and private buildings of any size or character.

Visit the nearest Crane exhibit room and make your selections from the broad variety of fixtures which are shown there.

*We are manufacturers of about 20,000 articles, including valves, pipe fittings and steam specialties, made of brass, iron, ferrosteel, cast steel and forged steel, in all sizes, for all pressures and all purposes, and are distributors of pipe, heating and plumbing materials.*

## CON-SER-TEX Canvas Roofing

Above all things you are interested in your home. You are always willing to add to its comfort and coziness—its security and charm.

Here's an opportunity to make your porch floors and roofs as up-to-date as the interior of your home. Your opportunity lies in the use of CON-SER-TEX, a scientifically treated canvas roofing.

When properly laid it lasts longer than tin or shingles. It is much easier and cheaper to lay. It is mildew proof. It deadens the noise of the rain and stops the rattle of the wind. It lessens work and the cost of repairs. The cold of the blizzards and the heat of midsummer do not affect it.

*It adds charm and neatness to your home because it lies flat, clings tight and does the work. Generous sample, price list and descriptive matter upon request. Write today.*

strength, leaving them worn out and useless in their old age, would guarantee provision against want and suffering?

The "service bonus" does it. For each year of service the worker gets a bonus of five cents per day, up to thirty years of service, beyond which time the rate does not increase, altho the payment continues. Lizzie Meyers has now been with the company for four years, and is getting a service bonus of twenty cents per day, paid every day, in addition to the other bonuses she earns.

But this bonus is not to be wasted, and the company reserves the right to deposit the bonus, agreeing to turn over the bank book when the employee leaves the service. It is intended to be educational towards thrift. In effect it is similar to a pension fund, but has the advantage of being actually seen to grow with each pay period out of the employee's own steadfastness, instead of mysteriously appearing out of the company's benevolence upon the incapacity or old age of the worker.

There is still another bonus. The management is not content with having measured economic desire, esteem, desire for justice, security of employment, power and dignity, pleasantness of work, congeniality of the group, merely for the sake of greater production and steadiness of service. It also utilizes these to forestall termination of service. If the worker has decided to leave she can secure her pay up to the minute that she quits. But if she gives notice of her intention to leave she gets a bonus of a day's pay for each week of notice up to six weeks' notice. Six weeks' notice would entitle her to an extra week's pay, when leaving, but it would give the firm that much time to adjust its organization, and to discover whether any solution may be found which will make it possible for the worker to remain. It is surprising how easily personal difficulties may be surmounted when an experienced person analyzes them.

But the very backbone of this whole system of measurement is the piece-rate system—the system which has probably received as general condemnation by organized labor as any one method of wage measurement. Under it have developed the evils of rate-cutting, speeding-up, the tenseness of application which so often exact heavy toll, physical and mental, of the worker. And here we have the piece-rate system probably as highly refined as it will be found anywhere in the country. There is not merely a simple measurement of wages by piece production, but additional measurement for bonus, quality, attendance, length of service, promptness and notice of resignation.

On the other hand the evils that usually accompany the piece-rate system are decidedly mitigated. The low rate of turnover shows it. The operatives are required to work only forty-four hours a week, as short a period as will be found for regular day work anywhere. The speeding-up which be-

comes really serious only for long work periods is thus ameliorated by the shortness of the working hours. If a division completes its task before the day is done the girls can go home; and many of them finish before 5 o'clock.

Systematic organization of their time, the avoidance of delays in getting work to the operatives, the occasional rising from a sitting posture to walking over and getting fresh batches of work, the manifest effort of the management to maintain exact justice—make for contentment and increased productivity and earning power.

They are paid well; the rates once made are not cut unless some mechanical improvement or change of task justifies the cut and causes the worker no loss. The company provides a lunch room with wholesome food at low cost, rest room, visiting nurse, a dispensary.

But the crowning stroke in the use of motive measurement and bonus incentives is the play hour. We watched them at play. The stout woman at the end of the line slipped the loop about her waist and strained her weight against the rope. Twenty other married women in front of her laid strong hands on the rope and dug their feet into the ground, while on the other half of the rope twenty-one unmarried women strained in the opposite direction. A signal from the umpire and the tug-of-war was on. Mixed in the crowd, hatless and coatless like the rest, cheering and laughing and finally wiping the beads of perspiration from his face, the manager of the factory could scarcely have been recognized as the same man who had talked to us on his philosophy of management for several hours the day before.

Today it was a tug-of-war, tomorrow it will be baseball, day after tomorrow something else; but every day it is something, and the management takes the opportunity to achieve a common footing with the rest of the organization. Nowhere else have we found either such minute measurement of motives in terms of pecuniary incentive, or such careful attention toward preventing any ill-effects that are often charged against it. The management is thoroughly convinced that motive measurement and bonus incentive, as applied in their organization, has the opposite of ill-effects. We figure the reason to be, that they do not leave it to operate itself like a machine once wound up and let go, but the whole management is always on the job attending every minute to the wear and tear of the system, and improving it at any point as soon as a defect appears. Little points which we found in August were not there the following March. Improvements made in March, 1920, were just beginning to be thought of the preceding August. Even yet, they tell us, much remains to be done. Theirs is, indeed, the greatest experimental laboratory of industrial psychology that we have found in America.

Madison, Wisconsin.

# Camel Cigarettes

—*their quality!*

IN long-continued experiments leading up to the perfecting of Camel cigarettes, the quality of the choice Turkish and choice Domestic leaf to be used in their manufacture was given first consideration.

Our ambition was not only to make Camels the most delightful cigarette *but the best cigarette* that money could buy!

It is our pleasure to refer you personally to the distinctive cigarette delights Camels supply so lavishly.

In points of exquisite mildness, mellow body and refreshing flavor Camels have never been equalled.

It is only fair to your own cigarette desires—and for your own satisfaction—to compare Camels with any cigarette in the world at any price!

R. J. REYNOLDS TOBACCO CO., Winston-Salem, N. C.

## CIGARETTES

# Mother: Keep a jar of Musterole handy

Sometimes, in the night, Pain comes to your house. Then is the time, most of all, when you rely on good old Musterole. No fuss, no bother, no worry—no messing about with plasters or waiting for water to heat.

Quickly you go to the Musterole jar. A bit of that clean white ointment on little Bobbie's chest, and lightly you rub it in. A gentle tingle of skin puts Doctor Nature to work, and soon a healing warmth reaches the congested spot. Then comes a soothing coolness, and Bobbie drowns off to sleep.

For coughs, congestions, bronchitis and croup, Musterole is uncommonly effective. It is good, too, to drive away the pains of rheumatism, lumbago and neuralgia.

Musterole relieves — *without discomfort.*

It is better than a mustard plaster, with all the virtues of the old-time plaster but none of its disadvantages.

Musterole does not blister. And it is easy to apply. Just rub it on. Rub it on—for little Bobbie's cold—for Sister's bronchitis—for Grandma's pains in chest or back. It's an old-fashioned remedy in a new-fashioned form.

Keep a jar handy.

Many doctors and nurses recommend Musterole. 35c and 65c jars—\$3.00 hospital size.

## BON-OPTO SHARPENS VISION

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

### English, Literature and Composition

#### I. Why We Want the League of Nations.

1. Write a "brief" or outline scheme for this article and show how the argument is developed.
2. How does the opening, with a quotation from an enemy statesman, add to the effectiveness of the article?
3. Using Mr. McCurdy's article as a basis write in narrative form, and as if it had actually happened, a short history of the organization of a League of Nations in 1913 and how it dealt with the Austrian-Serbian crisis the following year.

#### II. Remembering.

1. This article ought to inspire you to write a poem. Entitle it "The Old Camp" and make it such length and in such form as your muse requires of you. If you like the result, get a group of your friends (or a class of students) to do the same and then pass in their verses and have them read aloud without announcing the name of the writer so that the group or class will feel free to criticize.
2. This reflective, retrospective type of essay is a favorite with many writers. Try something like it on another subject, such as "The Deserted House," "The Old School," or "Revisiting My Home Town."

#### III. Lizzie Likes Her Job.

1. Write three letters from "Miss Lizzie Meyers" in the factory to a girl friend in another town. The first letter should be written as on the first day of her employment; the factory is new to her and she is not ready to believe all she hears about it. The second letter may be dated about a month later and the third four years later.
2. Condense and rewrite the article as a newspaper interview. You are the reporter and are summarizing what Professor Commons says about the factory he has just visited. Limit yourself in advance to a definite number of words and see if you can get all the important points within this limit. If so, you may have the makings of a journalist in you.

#### IV. The Town Meeting Talks Back. Have Our Cities Grown too Fast?

1. Write a short and sparkling essay on the advantages of country life and sign it the "Country Mouse"; or, if you prefer, write an essay on "Why Boys Leave the Farm" and sign it the "Town Mouse."
2. What qualities in the letters here published, do you think, led us to pick them out? Which seem the best to you? Notice how the personal, concrete touch and the element of human interest is prominent in most of these letters, as it was in Mr. Crowell's article.

#### V. The Unveiling of Victoria.

1. Write a short descriptive sketch of Queen Victoria based on the material in this article.
2. Who was "Titania"?
3. Define the following words: jingo, sycophantic, thwart, cynical, mawkish, wily, minaret.
4. Why does Dr. Slosson call the quotation from Lord Beaconsfield's letter to Queen Victoria on her birthday "skilful trowel-work"?
5. What is Matthew Arnold's place in English literature? Name some of his more important works.
6. What stories by Rudyard Kipling are based upon England's policy toward Russia during the reign of Queen Victoria?

#### VI. The Story of the Week.

1. Assign the chief subjects in the foreign news of the week to different speakers and let each one be prepared to talk four minutes on his theme.
2. Does it seem unusual to you that so many men of prominence have announced their decision to "bolt" their regular party at the election this year? Write a short article on the significance of this trend in our party politics.
3. Give a short talk for a Sunday School on the fact that the famous Centre College football team always prays together before going out on the field to play a game.

### History, Civics and Economics

#### I. The League of Nations Issue—Why We Want the League of Nations. The Root of the Matter. Cardinal Gibbons Favors League. Senator Reed Bolts. Cox Tours the East.

1. Mr. McCurdy expresses the opinion that the League of Nations might have prevented the Great War. Study the Covenant of the League in the light of the situation created by Austria's ultimatum to Serbia in 1914 and write a brief summary of the manner in which the situation could have been handled to prevent war. Suppose Germany and Austria had persisted in going to war in spite of the intervention of the League. What steps would the League nations have been obliged to take? In what ways might action thru the League have shortened the war?
2. Point out common elements in the arguments for the League by Mr. McCurdy and by Cardinal Gibbons. Why did the Pope give his sanction to the League?
3. What objection does Mr. Root have to the League as at present constituted? In what respects is he more favorable to the League than Senator Reed or Senator Johnson?
4. Both Senator Harding and Governor Cox promise to consult prominent men and women who have studied the question before they announce definitely what reservations must be made to the Covenant or how the League is to be remade into a new "association of nations." Suppose that you were elected President under such pledges. Name a committee of fifteen American citizens, including at least five members of the Senate, with whom you would consult.

#### II. The Cityward Movement of Population—Have Our Cities Grown Too Fast? How the States Stand. The Town Meeting Talks Back.

1. "For the first time in the history of our country urban population is larger than rural." What other important nations are mainly urban and industrial? Which are still mainly agricultural?
2. What causes have existed during the last ten years to intensify this movement to the cities in the United States?
3. What big towns or cities in your state have shown marked increases in population during the last ten years? Are you personally acquainted with a rural district which has "gone backward"?
4. What advantages of village and small town life are pointed out in the "town meeting" letters? How can these advantages be developed and emphasized to halt the cityward drift of population?

#### III. Factory Management—Lizzie Likes Her Job.

1. What kinds of bonus are granted in the Joseph & Feiss factory? What is the purpose of each?
2. Why does organized labor generally object to "piece rate" as a basis for wages payments? How are these objections met where "Lizzie" works?

#### IV. English History—The Unveiling of Victoria.

1. Why was British policy hostile to Russia during the nineteenth century? What caused the change in the relations between Russia and England which resulted in the "triple entente"?
2. Show by means of a map why Disraeli and Queen Victoria thought that Russian expansion in the Balkans and in central Asia endangered the security of India. Could modern Bolshevik Russia be a danger in the same way?
3. Why does a constitutional sovereign like Queen Victoria take more interest in foreign than in domestic politics and intervene more freely with regard to them?

#### V. The American Constitution—Is the Constitution Efficient?

1. Why did the makers of the American constitution emphasize so much the "checks and balances" of different departments of government on each other? What similar features does your state constitution show?
2. What is "parliamentary government"? How does it differ from the American system? Which form is followed by the Latin American republics and which by the recently established republics of central Europe?
3. Which of the remedies suggested to overcome deadlocks between the President and Congress appeals to you as the most practical? Why?

## Have Our Cities Grown Too Fast?

(Continued from page 183)

is raised thru the hand method of production. The tractor, the riding plow and the chopper are just beginning to be considered by the cotton farmer, while the cotton picker is still in the process of invention. While labor was plentiful and the industries held out little in the way of competition for it, the hand method of farming could be relied upon to produce enough for all the people of the country with a surplus for export, but with industries offering from five to ten dollars per day for ordinary labor, thus draining the farm of its best labor and unduly increasing the price of such as remains, it cannot be wondered at that even with wheat at \$2.50 per bushel and cotton at 40 cents per pound, the profits of the farm are not such as to bring the farmer within the excess profit taxpaying class of our people, nor is it to be wondered at either that the city consumer of these products should consider the price he pays as unwarranted.

If the agriculture of the country has been slow to adopt the use of labor saving machinery, it is equally true that in many sections of the country it has been as equally slow in the use of improved livestock, in the utilization of the most modern methods of soil preparation and conservation, in the utilization of commercial fertilizer and in the use of better seed and the better methods of cultivation, gathering and marketing, all of which must be reckoned with as prime factors in a lower cost of production.

If our method of farming has been slow to move away from a primitive state, the modernization of our rural surroundings has been equally slow and for the same reason. If only a fraction of a per cent of the farm homes of the country are blessed with fireless cookers, if less than 20 per cent of such homes have in them running water or artificial lights, if only a small per cent of the farm dwellings are painted or have within them anything approaching what might be called a library or paintings or carpets or music, if a majority of our farms are wanting either in drainage or irrigation to bring the maximum yields and if a majority of our farm boys and girls chafe under these conditions and vow solemnly at the first opportunity to quit them, we can always, as a rule, trace the condition to the same cause, namely: a lack either of sufficient capital or of adequate credit. The average farmer is not only sensible but thoughtful of his family. He will not, if he can help it, put in three days with his own hands if the same amount of work may be accomplished in one with labor saving machinery, nor will he force his helpmeet to work on an average during the summer months of 13.7 hours per day if these hours might be reduced by the installation of running water

or of modern conveniences in the kitchen. If such a condition exists it is due to the fact that he has not the money with which to provide these labor saving devices both for himself and for his wife, and your man of the city is vitally interested in these things because every family that leaves the farm and goes to the city reduces by one the productive forces of the country and increases by one the consumptive forces of the country, with a result which is inevitable always.

The greatest need of agriculture today is a larger and more accessible credit. This fact was not realized until within the last decade when students very suddenly awoke to it and then began the agitation for legislation which should recognize this as a fundamental fact. The agitation resulting from this discovery eventuated finally in the passage of the Farm Loan Act on July 17, 1916, which undertakes among other things to provide capital for agricultural purposes at low rates of interest and upon easy terms of repayment. This law has been in active operation approximately three years and within that time has loaned to about 126,000 farmers approximately \$360,000,000 at from 5 to 5½ per cent interest upon a thirty-four year basis of annual or semi-annual repayments. Thru the system when it was temporarily halted there was being loaned from twelve to fifteen million dollars per month upon these terms and while it is found that the first loans made thru the system were devoted largely to the purpose of liquidating existing indebtedness, it is encouraging to note that a larger per cent of the later loans are being devoted either to the purchase of labor saving machinery or for the improvement of the home or for purposes other than the liquidation of existing indebtedness. It is believed that this tendency will increase with time and that it should be of the utmost importance to the future of our rural life. It is as important, perhaps more so, that farm surroundings should be pleasant, that farm methods should be modern, as that the farm itself should be free of mortgage, and this is especially true when the mortgage is of the kind, such as we have in the Farm Loan system, that cannot be foreclosed so long as the mortgagor meets his interest and amortization payments when due. Under a system of this kind not only is it possible for the young man to buy a farm, but it is possible likewise for him to improve it and its surroundings without any thought that one disastrous crop may result in foreclosure. A farmer operating under such a system of credit can do the things already indicated which make for increased profits to himself as well as reduced costs to the consumer of his products.

The operation of the Farm Loan Act is conclusive of the fact that the problem of long term credit for agricultural purposes has been practically met and the future management of the system will concern itself largely with matters of expediting loans and

of bringing to public attention the advantages which the system offers to the farm borrowers.

The inauguration of a system of long term credits where the collateral consists of lands and insured buildings was not so difficult as will be the inauguration of processes thru which farmers will be enabled to have access to short term credits to carry them thru the growing as well as the marketing season of their crops. Perhaps the greatest loss which agriculture suffers, and this reflects itself in rural discontent, resulting in the diminution of rural population, resulting again in higher costs of the necessities of life to the city dweller, is to be found in the present disorderly method of crop marketing. It takes about nine months to grow and gather any of the staple crops such as cotton, corn and wheat. Of course, it takes longer to grow livestock, especially cattle. These same crops are largely marketed during a period of from three to four months. The natural consequence is a heavy strain upon the finances of the country, its transportation facilities, and its immediate consumptive power. The orderly method of marketing farm products over a period of nine months instead of three would of necessity inure largely to the benefit of the producer. Such an orderly system is impossible without an easy access upon the part of the farmer to credits extending over such a period. Section 13 of the Federal Reserve Act recognizes this necessity and provides that member banks may discount agricultural paper of a six months' maturity when such paper has back of it as collateral warehouse receipts issued by accredited warehouses. As a supplement to the provisions of Section 13, the Federal Warehouse Act was passed which provides for a system of licensed warehouses operating under Federal regulations and inspection for staple agricultural products. If there existed in this country an adequate system of elevators and warehouses for the cereals and cotton and if the farmers could be induced thru educational campaigns to store their products, taking warehouse receipts as collateral with which to obtain credits for the purpose of carrying the crops, the problem of short term credits would be measurably solved. Along with such a system of warehousing would of necessity go the formation of selling agencies managed by trained business men, together with the formation of export corporations which should serve the purpose of making a more direct contact between producers and the ultimate consumers of farm products. The building up of such agencies for the staple products should result in the creation of a system of marketing which should bring to the farmer the largest possible profits and at the same time carry to the consumer farm products at the lowest possible cost.

These problems, it must be repeated, are just as vital to the man of the city as they are to the man of the farm.

## Why We Want the League of Nations

(Continued from page 180)

mitted, not only against the people that is assailed, but against the whole community of nations. In this view it is just as much the duty of other nations to prevent the invasion or spoliation of a weak state as it is the duty of an individual citizen to interfere where a crime of violence is being committed.

In any case we are all quite agreed that the conduct of international relations which made possible if not inevitable the war of 1914 leaves much to be desired. Some coöperation to prevent future wars is clearly imperative. To that policy of coöperation the somewhat vague phrase "A League of Nations" has become attached. We have to construct such machinery as we can; we need the assistance of all powers to make it as satisfactory as is humanly possible.

London

## Remembering

(Continued from page 181)

first to the camp. That thrill, that enthusiasm, that lofty notion that the country was greater than the man, and that if it demanded all he was ready to give all; give it because it was his country and it asked; it was that that made the American soldier splendid, that made the American army magnificent. Was that not the thing which would save America and make her again, not the slave of her own desires, but the servant of the oppressed over all the world?

I do not believe in ghosts, but there are things in life which are not seen. And they came to me there beside the empty flagstaff, to assure me that those echoes had not wholly died, that the spirit that then made America great was not dead but sleeping. This camp and scores like it thru the land had been the breeding places of a spirit which we had laid aside for the moment as we had laid aside the khaki that then we wore, but which we had not forgotten. Here boys had come from great homes and simple homes, and endured hardships and toil when a great cause challenged. Here they had sweated and sworn under hot summer suns thru long hours of drill, here they had been wet and cold when the snow lay heavy on the camp and the north wind blew. And from this place they had swung out in long straight ranks fit and ready for their task, while the sleepy guards saluted and the midnight stars looked down. And over wide seas they had gone, peril infested seas, to do the deed whose worth only the years shall tell. And so I turned away content, and took my course back to the big gates. The gods of the market-place might hold America for awhile, but they could not hold it always. Not a land for which such boys had died, and in which as veterans they still lived.

The mark of a book written to meet a need

### What Is the Christian View of Work and Wealth?

A "Problem Discussion" series book.

As in the other books of this series, each chapter in the present volume presents a series of questions followed by up-to-date material representing various viewpoints, given without comment. The concluding devotional section will help to keep discussion on the highest possible plane. Paper, 85c.

### The Church and Industrial Reconstruction

Prepared under the direction of "The Committee on the War and the Religious Outlook."

No problem which the Church faces today is more challenging than its relation to modern industry. The book takes its point of departure definitely from the Christian religion and undertakes to discover what would be demanded by its thorough-going application to the industrial problems of today. Cloth, \$2.00.

### Community Programs for Cooperating Churches

ROY B. GUILD, Editor.

The reports of nine Commissions which met in Cleveland, Ohio, June 1 to 3, 1920, to deliberate upon a working program of cooperative effort among the churches. Cloth, \$1.90.

### The Christian Adventure

A. HERBERT GRAY.

Shows that Christianity "embodies the one summons to men and women that is adequate to their humanity, and offers the one hope of solving the problems of civilization."

Paper boards, \$1.25.

## The Town Meeting Talks Back

(Continued from page 185)

lege of "having permission to die without being noticed by my neighbors," rather than in my small town home surrounded by these dreadful neighbors?

MRS. JAMES R. POMEROY

Stuart, Florida

La' now Mr. Crowell! How you do lam-baste us millions o' "just folk" for not livin' in New York. It just made me think o' last fall when I was down with the flu'. What would I a' done in a city, with no Miz Simpson to run across to take keer o' me and no Miz Hughes to send over rich chicken broth and milk toast, to say nothin' o' Jack Martin a robbin' his ever bearin' patch, to fetch me a dish o' strawberries. Yes, maybe us small town folks does take a lot o' frin'ly interurst in one another, tho it may seem to you like pryin' into folks' business. Anyhow, nobody ever starves or freezes to death—we don't let 'em.

WILLA HARBERT CHATT

Tekamah, Nebraska

Most of our correspondents resent the implication that ethical standards in business and social life are lower in the country districts than in the city:

The villages in which I have lived always reminded me of a large half-grown family. There are the same petty quarrels and fusses, the same jealousy and nipping selfishness, the same "nosiness." Yet there is also the bonds of brotherhood, the mutual helpfulness, the kind sympathy. The former elements are upon the surface of village life, the latter lie deep and are therefore unnoticed by the casual observer. And as for the "shrewd skinflint whose piety is part of his stock in trade" he does not exist outside the active mind of Mr. Crowell and sundry other gentlemen who sometimes get their absurd scenarios accepted by motion picture concerns.

If Mr. Crowell knew his psychology better he would know why cities cheer and throw their hats away. Villages may be moved just as deeply but their nerves are steadier. Omaha, Nebraska, and Duluth, Minnesota, afford evidences of what happens when Mr. Cityman's hat-throwing proclivities get started in another direction. As for the "game" which the bankers and brokers play by juggling foodstuffs and other vital necessities, is it any wonder that some of us hicks out in the long grass think of them as equipped with horns, hoofs and spearhead tails?

ELIHU MEAD

Jeffers, Minnesota

Some readers, especially in the Eastern states, regard Mr. Crowell's Texas experience as insufficient to permit of broad generalizations as to country life in the nation at large:

The charm of Mr. Crowell's article on villages lies in its trait of youth which is a characteristic also of towns in newly developed states like Texas. It is natural that towns of the older East have acquired the beauties of maturity. Youth and maturity—both have their attractions, but are not to be found in the same unit.

JAMES RITCHIE

Pores Knob, North Carolina

The village people are not money mad and they want success and they have it. They have all kinds of societies and clubs for improvement, namely the Business Men's Club, the Young Men's Reading Rooms, Civics Clubs, Women's Equality and Political Club, Morning Musicales, Library Associations conducting traveling

WE are members of the F. T. D., an association of florists (1200 strong) which makes it possible for us to have flowers delivered in any part of the United States or Canada within two or three hours after your order is received.

## Journalism As An Aid To History Teaching

By EDWIN E. SLOSSON, Ph.D.

Literary Editor of The Independent

Associate in the School of Journalism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers.—Write to The Independent, 311 Sixth Avenue, New York.

libraries and circulating libraries provided by the state, Societies for the Relief of the Poor, and last but not least missionary classes to teach the young the need and the reason for saving pennies to educate the morally depraved in the slums of New York and other large cities that find the task of control and reform beyond their scope and their ability.

LULA E. BOWKER

Bedford Hills, New York

Crowell evidently knows Texas. We accept his description of Texas villages. We have been bored before by drawn out accounts of the wild and woolly West and Texas.

But when he paints a New York or New England village we protest. He looks thru Texas eyes and sees what he has eyes to see.

GEORGE L. GLEASON

Topsfield, Massachusetts

But there are western villages also which do not accept Mr. Crowell's description as having any application to themselves:

It seems to me that Mr. Crowell's interesting but cynical article in last week's Independent might have come from a man who has no real acquaintance with the cheerful home life, and kindly neighborliness, and the wholesome pleasures of the Western villagers. He seems not to have observed the owned-and-paid-for homes, the family car in the garage, the independent businesses, the pleasant flower gardens, the little fruit orchards, the home-grown vegetables, the strawberry bed, the good cream, fresh eggs and fried chicken; he has not seen the children rolling on the lawn, or heard the shouts of the school-boys from the baseball field.

W. C. PALMER

Jewell, Kansas

Even the hardships and limitations of village life may be blessings in disguise by making for a sturdier manhood:

The villager, lacking a variety of amusements, turns to pondering and discussing the issues of life and of the day and thus forms definite opinions. The city dweller, in his rush thru life, little heeds anything, usually taking his opinions ready made from the ubiquitous newspaper. His mode of life breeds a false content. But the villager is wanting in so many things that the villager early realizes that the world is big and holds many things not to be found in his village; hence he goes out, like Ulysses, "to strive, to seek, to find but not to yield." Tho often he does yield to the humdrum of city life.

R. A. D. MORTON

El Paso, Texas

Mr. Crowell is reminded that the great men of the cities come from the country:

No finer thing can be said for the village than that people who strive "to reach a goal" are drawn to the city, for the men of vision and character and power who make our splendid cities nearly all are produced by our villages.

O. E. TELL

Parker, South Dakota

We are very proud of our "country cousins" who have contributed their answers to Mr. Crowell and we think that the letters themselves are as good a testimonial to the intellectual benefits of country life as any of the arguments contained in them. But maybe Mr. Crowell's own wit and wisdom owes more than he suspects to the Texas village that bored him so.

# W. L. Douglas

THE SHOE THAT HOLDS ITS SHAPE

\$7.00 \$8.00 \$9.00 & \$10.00 SHOES

FOR MEN AND WOMEN

YOU CAN SAVE MONEY BY WEARING  
W. L. DOUGLAS SHOES

The best known shoes in the world. They are sold in 107 W. L. Douglas stores, direct from the factory to you at only one profit, which guarantees to you the best shoes that can be produced, at the lowest possible cost. W. L. Douglas name and the retail price are stamped on the bottom of all shoes before they leave the factory, which is your protection against unreasonable profits.

W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. They are made of the best and finest leathers that money can buy. They combine quality, style, workmanship and wearing qualities equal to other makes selling at higher prices. They are the leaders in the fashion centers of America. The stamped price is W. L. Douglas personal guarantee that the shoes are always worth the price paid for them. The prices are the same everywhere; they cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are made by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from factory. Send for booklet telling how to order shoes by mail, postage free.

CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. Be careful to see that it has not been changed or mutilated.

# The Meat Supply Continues Undisturbed

Day after day, week in, week out, the flow of meat goes steadily on from those who raise live animals on the land to those everywhere who need the food.

At a score and more of packing plants, scattered at strategic points, Swift & Company is a factor in providing a constant, open cash outlet to live stock raisers.

Ceaselessly, we turn live animals into clean, wholesome, appetizing meat and valuable by-products. Night and day our refrigerator cars go up and down the land, delivering this meat in perfect condition wherever it is needed.

The public suffers very little from car shortages in the meat industry. We see to it that the meat gets through to you, in spite of obstacles and difficulties. Last spring, for instance, during the railroad tie-up, when our refrigerator cars could not get into some big

eastern cities, we hauled hundreds of truck-loads from miles outside, working day and night, and kept our distributing houses supplied.

Our plants do not close down, leaving people clamoring for meats. No live animals go to waste in the fields where they are raised, as fruits and vegetables often do. The scope and completeness of our organization and our direct marketing system, prevent such a loss of life's necessities.

This uninterrupted service is performed by Swift & Company at the least possible expense to you. Competition takes care of that, compelling efficiency, cutting down costs, holding down profits. During 1919, for instance, Swift & Company's profits from all sources averaged only a fraction of a cent a pound, amounting to less than a nickel a week in the meat bill of the average family.

## Pebbles

No, Ichabod, if a man prof. married a lady prof. you would not call their children prophets.—*Sun Dial*.

She—Have you made up your mind to stay in?

Her—No, I've made up my face to go out.—*Juggler*.

Millie—How did Mr. Bonds get his eldest daughter off his hands?

Clarence—By putting the man she married on his feet.—*London Opinion*.

The Girl—You make me think of Venus de Milo.

The Boy—But I have arms.

The Girl—Oh, have you?—*Voo Doo*.

Sympathetic One—Yes, in a battle of tongues, your wife can always hold her own.

Well, then, why doesn't she?—*Purple Cow*.

Noah—Was Foolish in the university follies?

Zark—Yes, he had a leading part.

Noah—Oh! What did he do?

Zark—He was an usher.—*Nebraska Argonian*.

First—When the judge ruled that Jones had to pay alimony, how did he feel about it?

Second—Chagrined.

First—How did his wife feel about it?

Second—She grinned.—*Sun Dodger*.

An untraveled countryman once treated himself to a trip to London. There for the first time in his life he saw a schoolgirl go thru her gymnastic exercises for the amusement of the little ones with whom she was playing.

After gazing at her with looks of interest and compassion for some time, he asked a boy nearby if she had fits.

"No," replied the boy; "them's gymnastics."

"Ah! how sad!" said the man. "How long's she had 'em?"—*Tit-Bits*.

## Opening Nights

*Hitchy Koo—1920*. A Raymond Hitchcock phantasmagoria of tunes and costumes. Veritable side-splitting inanity. (New Amsterdam Theater.)

*Bab*. This charming sub-debutante is familiar to us from the novel of Mary Roberts Rinehart and Helen Hayes portrays her well upon the stage. A study of the psychology of adolescence, not appreciated by girls of sixteen, but enjoyed by their elders. (Park Theater.)

*The Skin Game*, by John Galsworthy, shows the English playwright at his tragic best. The rivalry between an old English county family and a self-made manufacturer deepens in bitterness until honorable men and women on both sides are horrified to realize the depths to which the contest has sunk. In showing how easily righteous indignation may degenerate into malicious hate Mr. Galsworthy perhaps implies a warning to nations as well as individuals, but, if so, he leaves the moral to the audience. (Bijou Theater.)

## Remarkable Remarks

WALTER CAMP—What means all this secret practice?

MRS. VINCENT ASTOR—I do not think clothes take much time

MRS. CALVIN COOLIDGE—We have two boys who are not spoiled.

MARY PICKFORD FAIRBANKS—I always like men who use perfume.

REV. E. S. SYNOTT—I once put a wedding ring on a lady's thumb.

NOVELIST JANE BURR—I believe in love, but it only lasts eight years.

SENATOR HARDING—Don't be distressed about the so-called Senate oligarchy.

PRESIDENT ARTHUR T. HADLEY—The hard road is the only one worth taking.

WOODROW WILSON—The country cannot afford to have a coward for President.

AMY LOWELL—Mr. Louis Untermeyer is the most versatile writer in America.

J. B. CRANFILL—Harding's hands are crimson with the blood of a suffering world.

ISABEL M. ROTH—New York girls are never bashful about meeting themselves in a mirror.

ROY K. MOULTON—I have much difficulty in saving enough of my salary to pay my income tax.

LORD ROBERT CECIL, M.P.—In my judgment state management is the principal evil of nationalization.

LEON BOURGEOIS—The obligation of settling international conflicts by peaceful means is the first law of mankind.

JAMES H. WILLIAMS—The paper that stands pat and gobbles the most lies without squirming gets the corporation advertising.

GOVERNOR COX—In many respects Lincoln was the strongest, the saddest, and the sweetest character in all history next to Christ himself.

ED. HOWE—When I was a boy parents found much fault with Beadle's dime novels. They were harmless compared with the present moving picture plays.

ELINOR GLYNN—As for the ballet scene on the staircase, it is at once the most daring and yet the most refined orgy I have ever witnessed on the stage.

NOVELIST BERTHA RUCK—I have seen hands of American men on which diamond rings glistened but on which the finger nails were edged with grimy black.

PRINCE PURACHATRA OF SIAM—The New York woman who rides every day in the subway is as brave as a lioness and as daring as a Red Cross nurse working under shell fire.

ANNE RITTENHOUSE—One feels like getting up and giving a rousing cheer for the very persistent individuals here and in Paris who have been so steadfastly trying to get grey into the limelight of fashion.

GEORGE BURTON HOTCHKISS—Consider these pairs: Damon and Pythias, Romeo and Juliet, Stratford and Shakespeare, Oyster Bay and Roosevelt, Boston and beans, thanksgiving and turkey, corn beef and cabbage, skittles and beer.

### Thanksgiving at Grandmother's

CHILDREN and grandchildren there to enjoy a good old fashioned feast which grandmother always knows just how to prepare—turkey, cranberry sauce, mince pie—delicious symbols of what Thanksgiving stands for in the traditions of history and happy home life. And *Silver*—useful, everlasting *Silver*—to complete the congenial picture of family warmth and companionship—to serve as a stimulating background to the enchanting spirit of family reunion—to enhance by its lustrous beauty, as *silver* always does, the enduring loveliness of any environment of which it is a part.

## What British Labor Wants

By The Rt. Hon. J. H. Thomas, M. P.

The head of the British Federation of Railwaymen begins here a series of three articles written to explain to the American people the significance of the present strike in England and the ultimate aim of the Triple Alliance which "makes possible a national strike by which the whole life of the country could be brought to a standstill." Mr. Thomas is one of the foremost leaders of the Labor Movement in Great Britain and he is a Labor Party member of the British Parliament

**T**HERE is a great tendency in different countries to attempt to demonstrate that the labor troubles of their neighbors are vastly different to their own; that they arise from different causes and are actuated by different objects and tend generally toward radically different ends. Each country would seem, indeed, to endeavor to make capital out of its neighbors' internal disputes with the result that its people are liable to gain a very hazy and erroneous knowledge of the progress made and the position held by their fellow workers in other lands.

Prior to twenty years ago British labor was contented in its efforts to ameliorate its lot by lobbying the House of Commons—a procedure which was attended by varying results. Then it decided to run its own show and today it forms the second party in the state; moreover, everyone is becoming reconciled to the formation of a labor government as the next party in power. Incidentally, people in America may be surprized to know that folk in England are not nearly so disturbed at the prospect of being governed by a labor cabinet as are people abroad.

The British trade union movement is both industrial and political and altho both sides of the movement work together, they are both independent. The movement is composed of six and a half million organized men and women.

There is also a coöperative movement in this country of three and a half million men and women. In its earlier days the men and women who made up its membership were contented just to purchase goods at the cheaper coöperative price, but the movement is now a huge concern with a revenue of about five hundred million dollars per annum. This movement is definitely allied to labor.

In order fully to appreciate the position of labor in

England today it is necessary to examine the various stages of its development, the social conditions out of which it grew and the legislation which, like milestones, has marked its progress.

The beginnings of trade unionism in England can be traced back to the early days of the eighteenth century when, on the one hand, employers of labor were making an ever increasing number of petitions to Parliament complaining of the existence of combinations of workmen, and the workers, on the other hand, were petitioning against the employers' cruel habit of beating down wages.

Parliament, after a good deal of wavering over the matter, at last came down on the employers' side of the fence and the workers, discovering the uselessness of making petitions to Parliament, found it more and more necessary to resort to strikes which, in themselves acts of desperation, were often accompanied by the still more desperate act of violence. The strikes frequently culminated in riots, and machine breaking, and if evidence be necessary to show how little the capitalist class were able or willing to read the true cause of the troubles it is to be found in a declaration made by Lancashire magistrates to the effect that "the sole cause of the riots was the new machines employed in cotton manufacture."

In 1824 a law forbidding the combination of workers was repealed, but the employers found it easy to circumvent any benefits which this greater freedom might bring. Furthermore, so prosperous had grown the manufacturers, and so plentiful had become the stocks which the workers had been able to produce with the aid of the new machines, that industry came almost to a standstill and all efforts to stem the general fall of wages, low enough in all conscience already, proved entirely ineffectual.

The condition of the lives of the workers at this

period was appalling and the power of the employers, despite the repeal of the combination laws, was, viewed in the light of today, altogether incredible.

Piece workers and day workers were so continually subjected to reduced prices and wages that they were never certain how much or how little they would receive at the end of each week, and George Jacob Holyoake, that ardent advocate of coöperation and social reform, has recorded how a Birmingham mill owner was one day astounded by the appearance of a new "hand" who turned up at his work in a well-fitting and handsome suit of clothes. This employer at once concluded that he had offered the man too high a wage and forthwith proposed that it should be reduced! And there was nothing remarkable about such a thing in those days. If a workman, by some miraculous means, succeeded in saving a little money, he was very much lacking in wisdom if he allowed it to become known; if he could afford to dress in clean and decent clothes, he was afraid to do so lest his wages should be reduced.

In these early days of the trade union movement capital held unrestrained sway and as a result the greater part of the country was reduced to a terrible position; not only were wages bad and housing conditions worse, but the women and children of the industrial centers were living in a state as bad as any suffered by slaves in the whole of recorded history. The wages of the men folk reduced to the lowest conceivable rate, it became essential that if a spark of life was to be kept in the workers' homes the women and children would have to share the burden of factory and coal mine life. It is recorded by the historians of the time that children of both sexes worked together in the mines, often for sixteen hours a day, and that women were employed underground, even while pregnant, and that they were back at work within a week of their children's birth. In some places women stood knee-deep in water throughout the day and women and children six years of age were employed drawing coal along the passages of the mines, crawling [Continued on page 250]

# A Penitential Office

By Marguerite Wilkinson

*Life Calls Out to the American People and They Answer*

*You, who have been called to be a great people,  
By the years I have given you, tell me your dreams!*

Our dreams are like fireflies flashing in darkness  
Where thieves work cunningly and none can see;  
Our dreams are brush-fires fading in the autumn  
That warm no poor man starving silently;  
Our dreams are wild lightning, shaken out of  
Heaven,

To show mad murder in the storm running free.

*By the years I have given you, these are your  
dreams!*

*But what are the dreams of a great people?*

They are full of glory as the towers of Manhattan

Shining thru the nights—

They are full of warmth as the sun upon the  
prairie

Quickening the earth—

They are full of wonder, stilling the spirit,  
Like the Northern Lights—

*You have known the dreams of a great people,*

*By the years I have given you, tell me your words!*

Our words are small coins, discolored and bent,  
Or counterfeits; the truth they seldom buy;  
Our words are keys that are broken or lost—  
Few know the doors they would unlock, and why;  
Our words are weapons in the hands of fools  
Or madmen who wound us, leaving us to die.

*You have known the deeds of a great people!*

*By the years I have given you, what will you do?*

We must have the dreams of a great people,  
We must have the words of a great people,  
We must have the deeds of a great people,—  
From our sins we must go free!

*By the years I have given you, so let it be!*

*By the years I have given you, these are your  
words!*

*But what are the words of a great people?*

Their words are swords in the hands of heroes  
Fighting a shame—

They are good tools in the hands of builders,  
Building tomorrow—

They are ploughs and harrows that will make  
fertile

The world that they reclaim—

*You have known the words of a great people.*

*By the years I have given you, tell me your deeds!*

Too many bodies burned and bent and broken,  
Gross bellies, sagging mouths, dim eyes, foul  
hands;

Too many minds grown sick that quake and  
tremble

When they must learn what nobody understands;

Too many spirits desperate and doubtful—

Those who should lead do what the day com-  
mands.

*By the years I have given you, these are your  
deeds!*

*But what are the deeds of a great people?*

Bodies strong and clean as the trees of the forest,  
Eyes full of light—

Minds quick and keen as winds upon the ocean,  
Blowing where they will—

Spirits triumphant leading all the rest

To love or fight—

The hall of the main temple measures over 10,000 square feet. The worshippers kneel on separate mats with their hands clasped, the index fingers stretched out and touching, the little finger of the left hand closed under, and the big finger of the left hand over the big finger of the right, while a chapter from the sacred book, O Fude Saki, is read to them

# The Birth of a New Religion

By Edwin E. Slosson

**S**UCH times as these are favorable to the growth of new forms of faith and we may expect the coming century to show many strange developments of the religious impulse. Asia, whence all the great religions have sprung, will probably prove still the most fertile soil, so it is not surprising to hear of the rise of a new religion in Japan that is since the war gaining ground rapidly in spite of the efforts of the Government to suppress it. It is called Omoto-Kyo, which may be translated as the Religion of the Great Foundation or the Fundamental Faith. Like many other religious movements, old and new, it owed its origin to a woman.

In the village of Ayabe, fifty miles from Kyoto, in the province of Tamba, there lived a poor ragpicker called O Nao Baasan, or Old Woman Nao. She was the widow of a drunken carpenter named Masagoro Debuchi, who had left her with no property but with eight children to support. All day long she wandered about the village gathering up scraps of rags and paper to get food for her family, but never failed to pray in the Shinto shrine morning and night. Her piety was at length rewarded, for on New Year's Day, 1892, she became imbued with the spirit of Kuni-toko-tachi, the Earth God of Shintoism. She straightway began to prophecy, shouting unintelligible warnings to people she passed on the street. Altho almost illiterate she scribbled her revelations on the walls of buildings and such bits of white paper as she could find. People called her crazy and paid no attention to her forebodings of fires and wars. She proclaimed to her neighbors that Ayabe was built upon holy ground and that unless they evacuated the village a mighty conflagration would sweep all their homes. This prophecy came true, but the skeptical police simply ar-

A street in the village community of the new sect of Omoto Kyo. The cultivation of flowers and trees is to them a form of worship

rested her for incendiarism on the supposition that she had furnished the fulfilment of her own prophecy. She was imprisoned for a time and later turned over to her relatives on condition that they keep her safely locked up. This they did and the room in which she lived until she died in 1918 is known as Zashiki Ro, the Parlor Prison, now a sacred shrine. To the end of her life she kept busily writing and her visions fill ten thousand volumes of manuscript, according to her followers, tho the critics of the cult say there were less than three thousand volumes originally. Much of the manuscript is illegible and much of what can be deciphered is incom- [Continued on page 240]

Photographs from Adachi Service

In the printing plant of the new Japanese sect women set type and make up the forms, a considerable departure from the old regime when women were not expected to learn to read

At the right is the interior of the Founder's Shrine. The present head of the cult, Deguchi, is kneeling in adoration before the picture of Nao, the prophetess

# President Harding

## A Forecast of the Policies and Personality That Will Determine the Next Administration

By Richard Boeckel

THE personification of the Republican party is what Senator Harding wants to be and will try to be every minute of his four years in the White House. He disbelieves in "one man government." It is not democracy—and besides the country is too big for it. He believes in party government. And having at the outset made that just as clear as he knew how, he is entitled to construe his election as a mandate to restore party government in the United States.

Similar frankness in dealing with every other issue was not to be expected from a candidate whose success, if he sat tight and made no serious mistakes, was a foregone conclusion. Senator Harding has been guilty of the usual number of campaign ambiguities, but it would be an error to draw from them the conclusion that he does not know how to be frank.

Nothing could have been more brutally candid than his speech the night the Senate acted on the declaration of war. He was not voting for war in the name of democracy. . . . "It is my deliberate judgment that it is none of our business what type of government any nation on this earth may choose to have." He was voting for war because American rights had been invaded, because American lives and property had been destroyed on the high seas and because Germany might triumph if the United States stayed out. These were ample reasons for going in. His plain spoken words are one of the few refreshing bits of that day's record.

And he knows how to be frank with himself—how

to see himself as he is seen. He has told himself, therefore, that it was not because he was Warren G. Harding, rather it was in spite of that fact, that he was elected President of the United States. It was because he represented the Republican party to the voters.

Senator Harding knows how to be grateful. On the basis of his record he had no legitimate right to expect the preferment that has come to him. He is grateful to his party, and to the people who elected him. He will give the country the best government he knows how . . . the kind of government

*Republican National Committee*

This photograph of Senator Harding was taken on his front porch in Marion while he was talking to a delegation of 20,000 Ohio voters

the people have said they want by voting for him. He will try to put the Republican party in the President's chair.

I think there will be no Mark Hanna during Harding's administration . . . unless it be Mrs. Harding. Mrs. Harding's influence will be very great. She had very much more to do with making Harding President than Boies Penrose. Penrose, as a matter of fact, had very little to do with it.

A newspaper man was introduced to Senator Harding, the candidate, in this fashion:

"Here is a man who believes you have Boies Penrose to thank for your nomination and that Penrose will be the next Mark Hanna."

The Senator smiled. His response was very deliberate.

"I know how difficult it is to disillusion folks of the things they believe. Only time will tell."

Putting the Republican party, the whole party, in the President's chair will not be an easy task. To personify that party, a conglomerate of conservatives, liberals, progressives and radicals, all artificially held together, would seem to call for a Lloyd George, rather than a Senator Harding. The President-elect had a foretaste of its difficulties during the campaign, but only a mild one.

Senator Harding is a conservative. The men at the top of the Republican party—the Senate cabal and the rest—are conservatives. When he looks at his party with half closed eyes, obliterating its detail, Senator Harding sees it as a wholly conservative organization. His victory is a victory for conservatism.

"I do not want to confess literally to being a standpatter," he has said. "I do not know what a standpatter is in public life. But if one who sometimes elects to go back to an old and efficient method and retain it is a standpatter, then I am going to choose to be one."

Party government is one of the "old and efficient methods" to which Senator Harding wishes to go back. Party government gets things done—so long as the party doing the governing remains undivided. But when the party splits, as the Republican party is likely again to split during the next four years, party government begins to look like a riot. How he meets this crisis, if it develops, will go a long way to determining the judgment of the future as to what kind of a President Harding has made.

The danger is that a revolt may spring up in Congress against the effort of the bosses, inevitably developed under party government, to translate the Administration's conservative policies into legislation. In the House the Republicans will have a large majority in the next Congress. Large majorities always are difficult to manage. Always there are men among them ready to yield to the constant temptation the system affords to "get off the reservation." A sufficient number can, of course, be held in line to prevent the butchering of the party's program in the House, but the

© Harris & Ewing

They say in Massachusetts that the Vice-Presidency of the United States will be more than a figure-head office when Calvin Coolidge fills it

spirit of revolt is likely to be transmitted to the country and reflected in the Senate. And it is in the Senate, narrowly held by the Republicans, that the principal danger will lie.

Senator Harding knows the psychology of Congress. Wilson does not. Neither did Taft or Roosevelt. Harding is the first Senator ever elected to the Presidency. His intimate knowledge of the workings of the senatorial mind should guide him safely past many pitfalls when the menace to his administration of progressive disaffection in the Senate arises.

A revolt without leaders can make little headway. Senators Borah and Johnson are the logical leaders for an insurgent movement in the Senate. Under the attempted leadership of such men as La Follette, France, Norris or Kenyon the movement would be comparatively ineffective. Senators Borah and Johnson, for the time being, are interested only in the League of Nations issue. It is clear that Senator Harding must go as far as he can toward satisfying them with his foreign policy, as a means of forestalling a movement in opposition to his domestic policies under their captaincy. And in doing so he will be following his own natural bent, for his opposition to the League of Nations Covenant is by no means feigned.

"My own instinct is to be with you," he confided to Senator Borah when the Treaty fight opened. "I am set against entangling alliances, but, of course, as you know, there is a great deal of sentiment for this League out in the country. I am getting shoals of letters from Ohio. . . . You and Johnson are going out to explain this League to the people, and work up sentiment against it. What about a few speeches in my state?"

The speeches were made, and as Ohio began to register its reaction, Senator Harding's outward attitude underwent a gradual change. At last he was classified

His clarifying statements have failed to make his purpose clear to the majority of the American people—and for a simple reason—because it is not exactly clear to Senator Harding, himself. He will "scrap" the Covenant, but he knows that he must thereafter retrieve many of its essential provisions. The conservatives, the dominant element of his party, the men who sent the Des Moines telegrams, down in their hearts are for the League—with the Lodge reservations, of course.

What Senator Harding wants is an entirely new deal—that is a new conference to revise the Covenant, making it the constitution of a "new association of nations" that better accords with the wishes expressed by the American people in the solemn referendum. Speculation as to just how much of the Wilson league he would retain cannot be more than guess work. But since Senator Harding himself has said he wants a "world court of justice, supplemented by a world association for conference," it can be inferred that the Root international court plan would come first in importance, if he had his way, and the association, stripped of all legislative powers, would become little more than a debating society.

The irreconcilables up till this time have expressed no serious objection to a world court, if it is given none except moral force to secure compliance with its decrees. Indeed, it would not be surprising to find them approving such a new international arrangement as Senator Harding would desire, in the end.

Searching for some means to bring about a new conference to revise the Covenant, Senator Harding will come across a provision in the naval appropriation bill of 1916 "authorizing and requesting the President to invite . . . all the great governments of the world to send representatives to a conference which shall be charged with the duty of formulating a plan for a court of arbitration or other tribunal to which disputed questions between nations shall be referred for adjudication and peaceful settlement." This authorization and request by Congress has never been acted upon. There seems good reason to believe, however, that Senator Harding may be saved the necessity of taking the initiative, by some action looking to a revision of the Covenant by France or Great Britain, shortly before, or immediately after he assumes the Presidency.

Pending the meeting of a new conference hold-over war legislation might be chalked off and a status of peace with Germany and Austria restored by the re-adoption of the Knox resolution, vetoed by President Wilson when first adopted at the last session of Congress. In any case, Senator [Continued on page 233

Mrs. Harding as "the First Lady of the Land" will need only to continue in the characteristics that she has shown as her husband's partner in business and in politics

Edmonston, from International

Perhaps playing in the village band when he was a boy got Warren Harding into the belief in teamwork that he now intends to practise in the administration of the United States, "putting the whole Republican party in the Presidential chair"

with the irreconcilables, tho he voted for ratification with the Lodge reservations. Count von Bernstorff, a discerning observer, analyzing Harding's questions addressed to the President at the White House conference August 19, 1919, saw him as "one of the keenest opponents of the League of Nations."

An incident that occurred during the campaign is interesting in this connection and also it throws a side-light on his character. In his Des Moines speech Senator Harding came out for "scrapping the Covenant." A group back East learned of the contents of the speech before it was delivered and didn't like it at all. Requests—nay, orders—went to Des Moines that the speech be changed. Senator Harding read the telegrams carefully, laid them aside, and delivered the speech as it had been written.

How then will Senator Harding deal with the treaty?

# Do You Want to Lose Your Parks?

A Message from the United States Government to the American People

By Stephen T. Mather

Director of the National Park Service

If the irrigation projects that threaten Yellowstone Park were carried out this famous "Thumb" of the lake would smear out the motor road, the hot springs at the left and the forest edge beyond

**T**HE national parks must be maintained in absolutely unimpaired form for the use of future generations as well as those of our own time."

This is the first, and the most important, of a set of three broad principles laid down by former Secretary of the Interior Franklin K. Lane at the outset to govern the work of the National Park Service, which has now been in existence three years.

The others of Secretary Lane's basic principles were: "Second, that they (the parks) are set apart for the use, observation, health and pleasure of the people; and third, that the national interest must dictate all decisions affecting public or private enterprises in the parks."

These latter principles were written for the present. Only the present generation would suffer, if they were neglected for a time, but let the first principle be forgotten for ever so short a space and injury may be done to the parks that a thousand years will not erase.

## No Trespassing!

By John Barton Payne  
Secretary of the Interior

No other country in the world has such wonderful national parks as our own. To persons who know the health, recreation and pleasure afforded to the people by these permanent breathing places, filled as they are with natural objects of the greatest interest and with wild animals, birds and flowers, it would seem that the American people should insist that they be permanently preserved, free from every form of commercialization.

To me it is perfectly plain that the wise course for the Government is to hold that when a national park is once set aside it shall remain the property of the whole people forever, and shall not be trespassed upon by any business or commercial use. Unless this policy is followed, encroachment will ultimately impair, if not destroy, our national parks.

The argument of utility should not be entertained. Indeed, it can nearly always be met by the plain statement that the water sought for reclamation and power purposes does not remain imprisoned in the parks but may be utilized after it flows from them. This is strikingly true in the case of the proposition to dam the Yellowstone River at the mouth of Yellowstone Lake, because the volume of water at the mouth of the lake is less than half the volume of the water outside the park, due to the fact that the Lamar River, Tower Creek and other streams empty into the river in the meantime.

The only other argument I have heard for placing this dam inside the park is that it would be less expensive to build it there than outside—an argument which in my view should not be considered for a moment.

Nine hundred and ninety-nine out of every thousand men and women in the United States will agree, and if necessary will fight for the principle that these, our national playgrounds, must be "maintained in absolutely unimpaired form for the use of future generations." However, it is their impression that the parks are secure against commercial intrusion, that they come very near to being hallowed ground. But are the national parks safe?

At this moment there are pending before the Federal Power Commission at Washington applications for leases to water power sites, which, if approved, would ruin many of their most beautiful waterfalls and calm forever the rushing rapids of their rivers. And more applications are on the way. Half a dozen projects for damming up the outlets of some of the loveliest of their lakes, for purposes of irrigation, are being vigorously pressed. Without the approval of Congress, of course, these projects cannot be carried out.

It has been the traditional policy of Congress, since the

first national park was created, half a century ago, to resist every encroachment upon these areas set aside for the enjoyment of future generations, and to give them the most watchful protection.

However, at the last session, a provision was incorporated in the water power bill, passed in the closing days, including the national parks in the public lands thrown open for power development under the act. It is provided that no license shall be issued that will "interfere or be inconsistent with the purpose for which such reservations (including parks) were created or acquired," but the finding is to be left, not to Congress, but to the Federal Power Commission, made up of three political appointees, subject to all kinds of political pressure.

On the assumption that it was not the real intention of Congress to withdraw the protection it has maintained over the parks for so many years, the present Federal Power Commission, including in its membership that staunch friend of the parks, John Barton Payne, has wisely decided to grant no applications for leases to power sites in the parks until Congress shall have had an opportunity at its next session either to repeal this destructive provision or, by refusing to do so, to reaffirm its previous action.

There is no real necessity for this desecration of public property for hydro-electric power development. It is proposed only because it is cheaper. The national parks are limited in area. The water does not remain in the parks. Indeed, it could be better utilized in most cases after it leaves the parks, because of its larger flow. The lower reaches of streams flowing from the parks should be utilized before it is proposed to destroy the beauty of the high mountain country. The Government itself has set a practical example by building the Yosemite power plant well below the beauty spots of the Yosemite valley.

It is clear that the power development proposals are put forward by private interests for their own private profit, but it is supposed that the irrigation projects, on the other hand, are put forward by dry land farmers whose lands cannot otherwise be made fertile. There is, therefore, more sympathy for the irrigation proposals than there would be if it were more clearly understood that they too are the schemes of promoters for their own gain.

It is Yellowstone, perhaps the most famous of our national parks, that is in the greatest danger. There it is proposed by the construction of dams not only to raise the waters of the beautiful Lake Yellowstone and Lewis, Shoshone and Heart Lakes, but also to flood the basins of the Falls and Bechler rivers in the southwestern corner, the cascade section of the park. Tunnels would be dug under the Continental Divide at two points to carry off the waters of Yellowstone Lake. The stored water would be used under various of the projects for irrigation purposes in Idaho, Montana and Wyoming.

Mr. Mather has been for five years in the Department of the Interior. But he has been a manufacturer, too, and he argues for the protection of our national parks with a full understanding of the commercial viewpoint as well

The execution of any one of these projects would do damage to make any lover of nature shudder. There can be no utilization of the lakes or of the Fall River basin for irrigation that will not bring with it destruction of the people's playground for the benefit of a few individuals or corporations. All the lakes are in heavily timbered districts. Great forests reach down to the very water's edge. In some parts of the park level tracts of land embracing thousands of acres lie at an elevation of only a few feet above these lake shores. Raising the level of these lakes would inundate beautiful islands, kill millions of feet of timber on the shores, wipe out miles of roads and trails and many bridges, and would create a scene of chaos and destruction that would be an eyesore for hundreds of years to come.

The water would be drawn off in the late summer, at the height of the tourist season, revealing unsightly borders of dead, water-soaked trees, rooted in ill-smelling slime, surrounding all our lakes. How long would the thousands of tourists who now visit the park annually continue to come to see such sights as these, with the addition of irrigation dams, reservoirs, flumes, tunnels and conduits on every hand?

I do not think the residents of the areas bordering the parks realize just what this ever increasing tide of pleasure seekers means to them, or they would not so readily give their support to projects for their commercialization. Of the 80,000 persons who visited the Yellowstone Park this summer 42,000, more than one-half the number, came in their own cars. On my recent tour of inspection of the parks in the west I came across one man, and there must be many like him, who admired the region surrounding the park so greatly when he saw it from his automobile that he bought a farm and settled down there.

Along one of the roads I saw half a dozen signs, "Melons For Sale," at as many places. I stopped at one farm to buy. The woman who sold me the melons told me that on the previous Sunday [Continued on page 238]

This heavy timber along Lewis Lake in the Yellowstone would be destroyed if the irrigation project were permitted to raise the level of the lake

# Harding's Election; Wilson's Defeat

By Talcott Williams

TWICE the Republican party has won a sweeping victory, comparable with Tuesday's election, President, Senate and House: in 1868 and 1872 when Grant was elected by majorities so large that Southern states were won, and in 1900 and 1904. The last two victories were followed by constructive legislation dealing with great issues, railroads, trusts, the meat supply, food, irrigation and rural posts were all put on a new basis and a multitude of lesser reforms were put in operation. The elections of 1868 and 1872 were followed by the worst corruption in our federal history and in the next five Presidential elections the Republicans were in a popular minority in two cases against three. No electorate is so merciless with corruption as the American. The United States has today left corruption far behind. Our administration, Federal, State and local, is better than that abroad. We are lavish. Corrupt, we are not.

The celerity with which in 1874 the country returned a House of Representatives Democratic by a heavy majority, shows how swiftly this country acts when corruption comes and for twenty years after the Republicans were never certain of a Presidential election. The Republican party will undoubtedly improve the administration of the Government. A man grossly ignorant of business needs and chiefly interested in advancing rural free delivery like the present Postmaster General will not be put in charge of our postal system. The whole Federal machine will be run better.

Senator Harding's Cabinet will be better and abler, more experienced and knowing better the work before them than the Cabinet Governor Cox could have named in the Democratic party.

But the policy and not administrative efficiency is the crying issue in the next four years.

Who will decide the policy of the next Administration? It will be like that of President Hayes (1877-1881), when Rutherford B. Hayes drew to his Cabinet William M. Everts, John Sherman, Charles Devens and Carl Schurz—four very strong men. President Hayes is chiefly remembered, by a Washington correspondent like myself, for being the first President who in summer in the White House wore a black sleazy alpaca coat and no waistcoat, instead of the American statesman's frock coat in which previous Presidents had perspired; as a man who banished booze from the national table because Mr. Hayes held the creed—now triumphant—of the W. C. T. U., yet showed a personal willingness to absorb the usual liquid army ration of the Civil War brigadier, and had a hand which always smelled of fresh castile soap. But his administration was not like that. It reconstructed the South, resumed gold payments, pacified our relations with Mexico, carried thru the fisheries arbitration, began our navy and commenced the modern winning of the West.

The Republican party is far stronger in the national legislature than it has been since the radical wing of the Republican party thought it could impeach and remove President Johnson. The Senate will try to own Harding; but it is a great deal easier to control a man when he wants to live in the Executive Mansion than after he deals out as President all that Senators want. They are a hungry lot. With Congress in Republican hands and able to do anything it pleases, it will have to do something. It cannot go on making "Americanism" its only issue. A Senator, distinguished, powerful, astute political leader with surpassing skill in political management, told me a year ago that Americanism was to be this year's issue. When I asked him what "Americanism" meant he said that he did

not know, but "it was a ——— good word with which to carry an election." It is, however, easier to get majorities than wisely to use them. Legislation is perilous to any party. It is rarely a monument; it is often a tombstone.

Adversity will do for President Wilson what it did for President Grant—restore his personal popularity. No passing defeat, headlong as this has been and self-caused, as most hold, can permanently change the national position of the greatest figure of our day. He will be the one great outstanding figure of his period as is Cromwell, tho Cromwell was in his last years hated, solitary, powerful, praised and admired in the high tide of his success abroad, but weak at home, worried over national finances, lied about in his personal life, slandered by foes, deserted by friends, jeered at by the governing group, ill, sad and lonely, with a positive gift for estranging and irritating his closest friends. All this has passed like the mists of even when the few large stars jewel the autumn sky. As Luther began religious freedom, Jefferson human equality, Washington killed the King myth, once for all, and Lincoln ended an institution older than civilization, so Wilson has made visible the rights of the lesser and weaker lands to independence and a free, independent, individual freedom.

This great principle will not leave great states in peace or smaller states willing to be subject. The one way devised to keep the peace both of great and of small, Article X, the American people are at present clearly and overwhelmingly against. The voters were with Lodge and his reservations. They were willing in the war to help neighbors in distress. They were not willing to go into a partnership in which the neighbors furnished the liabilities and the United States the assets.

This was as clear to some of us for the League, in October, 1919, as it is today. Wilson thought differently and he has paid for his error, almost with his life. The transatlantic people whose members cross the ocean every year or two know much of European affairs and share the opinion of the advantaged and of the college group on the North Atlantic coast, thought the country was for the League and Article X. They were wrong. Exactly as this country refused Yucatan when its people begged us to take them in, would not keep Mexico seventy years ago and is opposed today to military interference in that country, was in doubt about taking Alaska, let horrible misgovernment go on in Cuba for fifty years, rejects today with general unanimity any responsibility under a mandate in the Ottoman Empire and is ready to get rid of the Philippines, so it refuses to let any President or his representatives sitting on a world Council decide that the United States should protect any boundary abroad. Presidents have twice made war inevitable by their acts. This country does not want wars or foreign responsibilities or any agreement that pledges it to any definite armed action abroad. This has always been true. It remains true. For the next forty years it will be generally impossible to get the American people to send an army overseas. Europe must learn to live at peace, as we do, by shunning covetous desires for its neighbor, or take the consequences.

This cuts out Article X and probably all the ways except a court under which, thru the Covenant, any country can be asked to act with other lands by the use of force. The colonial "mandates" Europe must accept and pass upon. We will none of them. I very much fear that the small capitalist, from store, shop or factory, and the farmers will none of the international agreement as to labor provided for by the Covenant. They will certainly refuse to have our international representatives in this labor conference

chosen by "labor" organizations. Tuesday's vote decides for four years, perhaps longer, that any international agreement or periodical conference on labor shall be carried on by the United States Government and not by representatives chosen by labor unions. I regret this. I think the labor clauses in the Covenant the best it has. They will not be accepted. Uncle Sam prefers to speak for himself. He will not put a blank labor proxy even into the hands of a man as able, wise and patriotic as Samuel Gompers.

Better results would, I think, be secured by Mr. Gompers. He and Mr. Fursueth, the leader of the Seamen's Union, have made possible the presence of our flag on the high seas at a profit by raising the wages of seamen under foreign flags to our own seamen's wages. But Uncle Sam is of a different view. The advance in the cost of passenger and freight transportation, in part so as to secure high wages for railroad unions, the conduct and policy of the English labor organizations and the record of the "proletariat" in Russia, have all thru the United States solidified small capitalists against organized labor. Uncle Sam of the whimsical shrewd face in this election has fallen back on the one motto out of several he has, which he likes best of all:

If you want to know who is boss here:  
Start something.

All the attempts to give the covenant means by which international action should be gained not by governments but thru labor unions, a League bureau of colonies, an international military commission on armaments and so on will lose the present place they have in the Covenant—to the loss of humanity. Over fifty treaties for common action on many subjects, the white slave trade, social diseases, prisons and many philanthropic subjects will continue, helped and strengthened by the League.

The League itself has, however, already made the entrance of the United States hard by deciding last week not to give the new court a compulsory jurisdiction, as provided by the plan drawn by Mr. Elihu Root. This is the cleavage line between Europe and America. Europe does not believe in courts. The American people do. European governments want a world executive committee, such as the Council is, a sort of ministry. Americans believe in a court, such as the Supreme Court has been in our system. It is strongly probable, but not certain, that public opinion here will approve a court before which nations would be compelled to appear. At all events, this is the utmost that can be secured. Even this will be difficult. It would be wise to exclude regions under "regional agreements," like the Monroe Doctrine. This would cover the issues raised in English and French colonies and in Latin-America from coming before the court except by consent. After a century of protection, willingly accepted, relieving Latin-America of military and naval burdens, this reservation would remove some objections. Embargoes and blockades would be enough to protect and enforce the compulsory jurisdiction of an international tribunal.

Some agreement is certain. It will have a permanent court. Appearance before the court should be compulsory. The Senate may oppose, because every arbitration sets the Senate aside. Even Senator Sumner tried to kill the Geneva Arbitration. Senator Lodge has followed his example. The powers of the Senate must be proved before adequate advance is made. This time not only the Senate but the country has shown itself ready to reject any international executive in the shape of a council. The next best is a court. This is probable, and about it will grow an international tribunal. Its presence and working will develop a League with adequate powers.

The Republican party has as serious a responsibility in its pledges and those of President Harding on internal

affairs. State sanitation is poor. It needs Federal expenditure. National aid is needed for national education. The poorer Southern States have not the revenue to educate on a just and fit standard. The Land Bank needs rigorous investigation, but when that is over, its work and its powers must be widened to the purchase of homes, singly and on the cooperative apartment plan. Irrigation must be extended. A ship canal must cross north New York state to the Hudson. It would cost less than the Panama Canal and be worth more.

A strong navy is needed. Not a strong army. Federal expenditures cannot be diminished. They must be increased. Cumulative probate taxes on large fortunes will do this. Nothing could be better for the heirs of rich men than to work as hard as their fathers.

Above all, everyone who cares for a League and believes in it as the world's best hope, should unite in common action to make a Supreme Court of Nations which the American people can, by the historical habit of over a century, be brought to accept as the next step to protect the world, its lands, its institutions and its civilization.

## Why We Need the Puritan

By Preston Slosson

EVERY age considers itself decadent and invokes the spirit of its predecessors to redeem it from moral laxity. The Pilgrim tercentenary has called forth many comparisons, only partially justified, of the rigid ethical code of the Puritan age with the self-indulgent and worldly manners and morals of the twentieth century. It is true that we have introduced new fashions in dress, that we no longer experience the old dread of the theater, that we are less strict in attending church on Sunday, and that we devote more time and energy to "worldly amusements" than the Puritans would have approved. But in some respects we are more puritanic than the Puritans. We have, for example, placed an absolute ban on intoxicants, which the men of 1620 never dreamed of doing. We have shortened the sermon, but we have elaborated the church service. Our views on divorce are more conservative than those of Milton. If the modern world has accepted the theater and the novel it has at the same time made them vehicles for moralizing. The "problem plays" of Galsworthy and Shaw and the novels of Winston Churchill and Mrs. Ward are far more like seventeenth century sermons than they are like the plays and romances against which the Puritans protested. If America of 1920 has fallen off from the ideals of Plymouth Rock it is at least immeasurably more moral, in every reasonable meaning of the word, than was the England from which the Pilgrims fled.

But there is a sense in which the Puritan is needed now and needed very badly. The United States is no sink of iniquity; it is a community consisting mainly of very prosperous, well-behaved and kindly people. In the negative sense of the word we are as virtuous a commonwealth as has ever existed. But it cannot be denied that the moral overstrain of the Great War has left our national morale in a certain state of shell shock. Our stock of idealism has temporarily run low and a mood of cynicism has replaced the devoted enthusiasm of 1918. We wish harm to no people in the world, but we will not exert ourselves to help. Poland and Austria are as hungry today as Belgium was five years ago, but we are less concerned about it. The Turks are still killing Armenians, but it no longer keeps us awake nights. We are no longer willing to act the part of the Good Samaritan for the rest of the world; the rôle of Priest or Levite suits us well enough for the moment. In our domestic affairs the same moral slump is evident. The great moral wave of 1912 which created a political party overnight and introduced a new vision of social

PIGS IS PIGS  
Having emptied the trough, now he is cleaning out the whole bin

justice, is now at a low ebb. Mark Hannaism and the good old days of 1896 seem to satisfy the demand of the American soul.

Well, this is nothing to worry about in the long run. Nearly every great war or revolution causes a reaction, and this reaction always passes away when some new spurt of enthusiasm comes to urge civilization forward once more. The licentiousness of the Stuart restoration after the downfall of Cromwell's Commonwealth, the moral disintegration of Germany in the latter part of the Thirty Years' War, the corruption of the Directorate in France after the strenuous days of the Revolution, the scandals which marked the political life of the decade after the supreme effort of our own Civil War—all these historical phenomena are essentially the same thing that troubles us today.

We need a new school of prophets to restock our batteries of moral energy. We need the Puritans.

The Puritan was essentially the earnest man. The Greenwich Village legend that Puritanism is a lazy, comfortable, "bourgeois" way of taking life is glaringly the opposite of the truth. The Puritan's theology was not a traditional creed accepted from mere habit. He was a rebel against the traditional creeds; a persecuted exile because of this rebellion. His theology burned in him night and day like a consuming flame, and if it made him uncomfortable to himself, to his family and to his neighbors, it also enabled him to conquer a wilderness and to found a commonwealth. The spirit of creation dwelt in him; he felt he could not die until he had made the world other than he found it. So millions of contemporary Europeans worked and played away their lives and left no impress in history because they had no vital, original faith, while a few score Englishmen voyaging in the "Mayflower" made a new world.

It matters much what we believe; but it matters infinitely more how much we believe it. Whole generations of men regretted slavery, then came along a few fanatical abolitionists who would not let themselves or anyone else rest until it was abolished. Many a European nation grumbled at the misrule of its kings and nobles; grumbled and then turned its attention to the bull fight, the wool market or the village inn. But mighty empires were shaken to pieces when a few poor, hot-headed young students began to take seriously the new ideals of nationality and political democracy.

Even when the creed is an imperfect one it can work miracles if it wins the earnest conviction of determined men. Mormonism, with all its absurdities of doctrine and ecclesiastical discipline, succeeded in turning a desert into the prosperous and progressive commonwealth of Utah. Mohammed, in spite of his ignorance and errors, created a religion which spread from Spain to Java with the speed of a prairie fire. All the theoretical weaknesses of Marxian Socialism from the economic standpoint have not availed to check its spread, because the Socialists have been twice as energetic in spreading their propaganda as anyone else has been in counteracting it.

An indifferent America, content to plod in the beaten path and repeat the "maxims of the Fathers" with no living faith in their meaning, will make no more impression on the world than the teeming millions of China. We must again become what Jefferson and Lincoln and Roosevelt thought us—a chosen people, a people with a positive and creative faith in its institutions, the bearers of a message to the whole world. Without enthusiasm nothing worth while is ever done, and thus in the long run the idealist is the only practical man. The mood of cynicism, of indifference, of "don't care" is the mood of death; it is literally the work of Mephistopheles, the Spirit of Denial. We must lift it from America.

## The League of Nations

No question is ever settled until it is settled right.

## Minority Rights

ONE of the aims for which we entered the war was the defense of the rights of small nationalities. But we lost the war so far as that is concerned, for the natural consequence of dividing up Europe into small countries based upon unity of race, language, religion and national self-consciousness is to intensify sectional and sectarian sentiment. There is always a tendency to take revenge upon such unfortunate fragments of other nationalities as are caught within the new boundaries. The oppressed becomes in turn the oppressor and the net result is that there is less individual freedom than before the war. In a ramshackle monarchy like Austria-Hungary the numerous nationalities acquired a good deal of liberty. In fact it was the policy of the Hapsburgs to foster minor languages and factional movements in certain sections so as to prevent combination against their rule. The Germans being in a minority in Austria and the Magyars being in a minority in Hungary could not go too far in depriving the majority of educational and religious rights. A ruling minority is limited in power but there is nothing to restrain the ruthlessness of a majority.

The insistence of the Austro-Hungarian Government upon the use of German in army commands aroused furious resentment altho it would seem that a single language in military orders of a common army was not an unreasonable requirement. But whatever may be thought of that the little nations into which Austria-Hungary is split are showing themselves still more intolerant. Czecho-Slovakia contains nearly 4,000,000 Germans who by the treaty have the same rights as the 6,500,000 Czechs, yet German officers in the Czech army are severely punished if they even talk German in private conversations. A Czech captain who was overheard talking German to a lady was whipped by the Czech soldiers. The German and Polish miners are being excluded from work in the coal mines by the Czecho-Slovak miners' union. The Czech Minister of Education has closed up thirty-five German schools and 754 German classes in other schools, thus forcing over 50,000 German children to receive their education in the Bohemian language.

Under the old régime the Magyars did not treat the Rumanians fairly and now that the Rumanians are on top they are taking a terrible revenge. In Transylvania, which has been annexed by Rumania without consulting the population, the schools and churches other than Rumanian Orthodox have been suppressed, their funds confiscated, their buildings seized, their preachers and teachers imprisoned or flogged. The Calvinist, Roman Catholic and Unitarian bishops of Transylvania have joined in an appeal to Christendom for protection. The committee of the United Free Church of Scotland appointed to investigate the Rumanian atrocities in Hungary reported that one-third of the Reformed Church congregations in Transylvania "had been practically destroyed by Rumanian action in the course of the past year and that, unless the integrity and the freedom of the Church be secured, the Reformed Church in Transylvania will be extinct within a very few years. The whole future of Protestantism in Eastern Europe is at stake."

In antebellum days our hearts were wrung by the sufferings of the poor Polish children of Posen who were forbidden by their German rulers to recite or talk their native language in school. But now, that the Poles have been liberated they are treading down their subject nationalities with even greater severity than the Prussians showed. From the Lithuanians, the Jews, the White Russians, the Ruthenians and the Germans alike come complaints of

personal outrages, interference with religious freedom and suppression of languages by their Polish conquerors. Similar complaints are heard from the Slavic regions annexed by Italy, from Eupen and Malmedy annexed by Belgium, from Alsace-Lorraine annexed by France, from Smyrna annexed by Greece, Montenegro annexed by Serbia, Mesopotamia annexed by England and Shantung annexed by Japan. No matter how democratic or liberal a government may be there is always danger of overriding the rights of minorities. To afford them protection is the most necessary as well as the most difficult and delicate of the functions of the League of Nations.

## The Real British Monarch

The British public now understands the meaning of the rime about "Old King Coal."

## The Pink Republic

By Edwin E. Slosson

THE American mind, blindly following as usual the lead of Europe, has been devoting more attention to the border states of the Baltic than to the Siberian states, which are of vastly more importance to the world and of more vital interest to ourselves. Whether the boundary line of Lithuania shall be drawn a few miles this way or that does not matter much since Lithuania is at most a little country, but Siberia is as large as the United States and it makes a great deal of difference to us how it is carved up. Our interest in the fate of Fiume is purely altruistic, but the disposition of Vladivostok concerns us closely since it is next neighbor to our back door.

Asia is the mirror of America and in it all things are reversed. The Far East of Russia is the Far West of the United States, geographically and psychologically. Siberia is now in a state of development about like that of the western half of our country fifty years ago just after the Union Pacific railroad had been put across the continent. It is a vast expanse of unsettled territory with incalculable mineral wealth and agricultural possibilities, the population averaging about one to the square mile and largely concentrated in the cities that are strung along the railroad track. Vladivostok, the "Mistress of the East," faces San Francisco, the "Golden Gate," on the opposite shore of the Pacific.

The dividing line between east and west in the United States is not the Mississippi, for the land on both sides of the river is much the same. It is the eastern edge of the Rocky Mountains. The dividing line between east and west in Russia is not the Urals, for these mountains do not rise sharply from the plateau on both sides. It is Lake Baikal. This lake, whose surface is 1500 feet above sea level and whose bottom is 5000 feet below, stretches four hundred miles north and south and with the high mountains closely encompassing it forms an effective barrier which the Siberian railroad had difficulty in surpassing. This deep natural moat might easily be made a military frontier.

Here the Red wave from Russia came to a halt last year, not because it met with formidable opposition but because its momentum was exhausted. The Soviet was not strong enough to cover and control the fifteen hundred miles further to the sea. At Irkutsk, on the western side of Lake Baikal, the Bolsheviks overtook and killed the enemy they were after, Admiral Kolchak. To have gone beyond Baikal would have brought them into conflict with a more redoubtable foe, the Japanese, who held the Trans-Baikal region, or rather the railroad, with a force of more than a hundred thousand men. Siberian battlefields have only one dimension, that is along the transcontinental line, and the farther east the Bolsheviks went the longer would be the distance they would be from their base and the

shorter would be the distance of the Japanese from them.

It is commonly believed in China and Siberia that Soviet Russia and Japan concluded an agreement by which the Soviet consented not to penetrate Trans-Baikalia on condition that the Japanese protect them from any further attacks like Kolchak's on the Siberian side. Whether there was any formal treaty or not such an arrangement was obviously to the advantage of both parties so by common consent, if not by common agreement, a buffer state was set up between the Bolsheviks, who held western Siberia up to Lake Baikal, and the Japanese, who held Vladivostok and the Maritime Province. That is, there was a stretch of more than a thousand miles which neither party could effectively control, so it has been left in large measure to itself.

Last spring when the Bolsheviks and the Japanese came into contact it seemed that a conflict was inevitable. The Japanese put down the local government of Vladivostok by force and at Nikolaievsk the Reds massacred all the Japanese. But since then the Japanese and Soviet authorities have become increasingly friendly and the buffer state, in spite of its anomalous position, has gradually grown in definiteness if not in strength.

Under the skilful management of a Chicago lawyer, Mr. Krasnochev, the Far Eastern Republic, as it calls itself, has become an important factor in Asian affairs. His latest move has upset the calculations of French, Japanese and American diplomatists. He has sent an envoy, Mr. Yurin, to Peking with an offer of grain from Siberia to feed the starving millions of China. This may not amount to more than a generous gesture for, as Yurin confesses, the Siberian peasant has not much grain to spare, but it is bound to make a good impression since no other government has shown any such disposition to help in China's direst need. He also offers to return to China without compensation all the railroad and mining concessions and personal privileges that Imperial Russia had acquired and to remit the exorbitant indemnity which China had been compelled to pay for the Boxer outrages.

China is naturally disposed to accept all these favors without inquiring too closely into the authority of Yurin to speak for Russia. The American Government, regarding the Far Eastern Republic as a thinly disguised branch of the Moscow Soviet, has warned China against having anything to do with her northern neighbor bearing gifts. But the Chinese Government, after having sent a special mission to Siberia to study the situation, has sufficient confidence in Yurin to act upon his proposals by dismissing the Czar's envoy, Minister Kudashev, and taking over such Russian concessions and establishments as can be got hold of.

The Far Eastern Republic, with its headquarters in the unimportant railroad town of Verkhne Udinsk, seems to be gaining a certain authority over the local governments of the other Siberian cities, including even Vladivostok, altho this is still occupied by the Japanese. It claims to be independent of Soviet Russia, which formally recognized its independence six months ago. But it is semi-socialistic in character and is obviously operating in close concert with the Moscow Government if not under its complete control. The report that Washington Vanderlip and other California capitalists have secured by negotiations at Moscow the rights to exclusive mining concessions in 400,000 square miles in eastern Siberia adds to the puzzle of what is the position of the pink republic of Verkhne Udinsk. When General Graves returned last May with the American troops from Siberia he urged the sending of American representatives to Siberia for both political and commercial reasons. It is a pity his advice was not acted upon for our future relations with China, Japan and Russia are involved in the events that we dimly discern in the Siberian darkness.

# The Story of the Week

## The Greatest Landslide in History

ON March 4, 1921, Warren Gamaliel Harding will be President and Calvin Coolidge Vice-President of these United States. There will be a safe Republican majority in the Senate and a considerable increase in the Republican majority in the House of Representatives. In nearly every northern state the victory of the national Republican ticket carried with it the triumph of the state ticket, tho frequently by much smaller pluralities. The United States is now under single party rule and the entire responsibility for the conduct of affairs at home and abroad rests on the Republicans.

The popular plurality obtained by Senator Harding is about 6,000,000, which is greater than that won by any other President in American history. This is not wholly due, however, to the "landslide." The extension of woman suffrage to every state in the Union nearly doubled the electorate, and the exceptionally heavy registration of both men and women increased the total vote to unprecedented figures. Therefore a Republican plurality of twice the normal size might represent the same proportionate division of votes between the parties as in past elections. But even if due allowance is made for this factor, the dimensions of the Republican victory are astounding. The relation between the two major parties is again what it was after the victories of 1900, 1904 and 1908. The Democrats have once more been driven within the entrenchment lines of the "solid South." Even within these limits the heavy Republican vote in Tennessee and in some other states is an ominous sign that unless the Democratic party can regain the confidence of the nation it cannot count securely on any sectional support.

New York was the banner Republican state with respect to absolute size of the Republican plurality. Early reports placed Harding's plurality over Cox at more than a million votes. What is even more remarkable, New York City, the home of Tammany Hall and the center of Democratic sentiment in the eastern states, went for Harding in every borough and in nearly every Assembly district. Harding came down to the Bronx with a huge majority, but he could safely have rested his election on the verdict of the city alone, which gave him 440,000 plurality.

Illinois and Pennsylvania piled up Republican majorities only second to those in New York. Chicago went with the rest of the state. New England is solidly and securely Republican, Democratic hopes in Connecticut, New Hampshire and Massachusetts meeting with nothing but disappointment. Even Boston, which is normally Democratic, voted with the rest of Massachusetts. Indiana, which even Republican experts had counted as a doubtful state, went safely for Harding. Ohio, the home state of both candidates, was conceded to Harding from the earliest returns. New Jersey, Delaware, Maryland, West Virginia, states of traditional Democratic sentiment and doubtful in many past elections, all rallied to the Republican cause. President Wilson's home district in Princeton, New Jersey, went for Harding by a majority of about five to one.

But, after all, Harding's victories in the eastern and central states only repeated in a more decisive fashion the victories of Justice Hughes four years ago. The states bounded by the Ohio, the Missouri and the Atlantic have, with but few exceptions, been so steadfastly Republican ever since the end of President Cleveland's administration as almost to deserve the title of the "solid North." It is the part of the Union lying between the Missouri and the Pacific which

holds the balance in American politics. The West gave Bryan all his political power, became almost unitedly Republican under the influence of Roosevelt and gave strong support to him as nominee of the Progressives, elected President Wilson in 1916, and wrecked the chances of Governor Cox in 1920 by returning to the Republican party. Some important western states were, indeed, conceded to Harding by both parties in spite of their support of President Wilson in 1916; for example, California and Kansas. But the Democrats counted on victory in Missouri, Montana, Colorado, Oklahoma, New Mexico, Arizona, Nevada and Utah as an irreducible minimum, and many Republicans admitted that all of these states were doubtful. The Republican landslide, however, proved to be nation-wide. Outside the boundary of the old Confederacy, Governor Cox carried only Kentucky east of the Mississippi and west of it nothing with the possible exception of New Mexico.

## Election Topics

ALTHO the election of Harding and Coolidge much eclipsed in popular interest the Congressional, state and local elections there were some contests which attracted the attention of the nation at large. The "old guard" Senators, Wadsworth of New York, Brandegee of Connecticut and Moses of New Hampshire, were all reelected in spite of sharp opposition on the part of many progres-

Total electoral vote—531.  
Necessary to a choice—266

sive Republican voters. They did not keep step with Harding, but were swept into office in his train. Even Penrose ran behind his ticket, but of course his reelection was never in doubt. Senator Watson was victorious over Thomas Taggart in Indiana, Samuel Shortridge over Senator Phelan in California, Senator Spencer over Breckinridge Long in Missouri and Senator Smoot was reelected in Utah. These numerous triumphs for the conservative wing of the Republican party make it certain that the new Senate will be of the "stand pat" variety and little inclined to experiment and reform. Some radicals have been elected, however, such as Mr. Ladd in North Dakota, who has the endorsement of the Farmers' Non-Partizan League. Senator Cummins wins a personal triumph in Iowa, where union labor opposed him for his railroad policy, and Senator Lenroot of Wisconsin has to his credit a double victory over the Democratic candidate, Paul Reinsch, former Minister to China, and James Thompson, backed by Senator La Follette and the radically anti-League faction of the Republican party.

In New York state the most interesting feature of the local contest was the close race between Governor Alfred Smith and Judge Nathan L. Miller. New York City, which gave a plurality of 440,000 to Senator Harding, also gave a

plurality of about 320,000 to Governor Smith; a difference of three-fourths of a million votes between the national and state tickets. This amazing discrepancy was mainly due to the great personal popularity of the Governor of New York, tho it is also rumored that Tammany traded votes in order to secure the victory of the local ticket even at the expense of the national ticket. But the voters "up state" preferred Judge Miller and wiped out the New York City lead of Governor Smith, winning the election by a narrow margin. The Socialists managed to reelect two of the Assemblymen who had been twice expelled from the Legislature and also to win additional seats. The Socialists seem to have increased their vote heavily in many parts of the country and to be the "third party" of the nation, running ahead of the Farmer-Labor Party, the Prohibitionists and all other minor parties. Meyer London of New York was elected to Congress and will probably be the only third party man in the new House of Representatives. Victor Berger was defeated in Wisconsin.

The California law directed against Japanese ownership of land was successful on popular referendum. The law forbids any alien ineligible to citizenship from owning or leasing agricultural land. Japan may protest against the new law and take it up diplomatically.

Italicized names are of Senators elected this year.

The most sensational result in the Congressional elections was the defeat of Champ Clark of Missouri, former Democratic Speaker of the House of Representatives. The Republicans will have a majority of about 140 in the new House.

The only serious election disorder reported from any part of the country was a race riot in Orlando, Florida, in which two white men and six negroes lost their lives.

## Tumulty Describes Wilson

**P**RESIDENT Wilson's personal secretary, Mr. Tumulty, confirmed the statements of the pro-League Republican delegation that the President, while still as clear and sound as ever in mind, is completely broken in health by his arduous labors. Mr. Tumulty made an eloquent appeal, based on years of intimacy with the President, for greater appreciation of his sacrifices and services on behalf of his country. He said:

Two pictures are in my mind. First, the House of Representatives crowded from floor to gallery with expectant throngs. Presently it is announced that the President of the United States will address congress. There steps out to the Speaker's desk a straight, vigorous, slender man, active and alert. He is sixty years of age, but he looks not more than forty-five, so lithe of limb, so alert of bearing, so virile. It is Woodrow Wilson reading his great war message.

The other picture is only three and a half years later. There is a parade of veterans of the Great War. They are to be reviewed by the President on the east terrace of the White House. In the chair sits a man, your President, broken in health but still alert in mind. His hair is white, his shoulders bowed, his figure bent. He is sixty-three years old, but he looks older. It is Woodrow Wilson.

Presently, in the procession, there appears an ambulance laden with wounded soldiers, the maimed, the halt and the blind. As they pass they salute, slowly, reverently. The President's right hand goes up in answering salute. I glanced at him. There were tears in his eyes. The wounded is greeting the wounded; those in the ambulance, he in the chair, are alike casualties of the Great War.

I don't believe that in his heart President Wilson regrets his wounds. I fancy he realizes no man could die in a greater cause, but I do sometimes wonder if it ever seems to him strange that when a man has been seriously wounded in his country's service he should be met with sneers and calumnies from his countrymen.

Woodrow Wilson will have his monuments; the future generations will see him clear-eyed and unprejudiced as one of America's immortals; but I want him to live to realize that he has a place in the warm hearts of his countrymen while he lives. I want him to realize that wish which he expressed several years ago when he said: "I want people to love me." I want him to realize that he was modestly mistaken when he said: "They never will."

## Uncle Sam's Big Budget

**C**OMMISSIONER Williams of the Internal Revenue places the internal revenue collections for the fiscal year 1919-1920 at \$5,408,075,468 as compared with \$3,850,150,078 for the previous year. This increase was due mainly to the greater yield of the income and excess profits taxes which amounted during the year to the enormous figure of \$3,957,699,870, or more than the yield of all the internal revenue receipts in the previous year.

Owing to the coming into effect of prohibition the revenue derived from distilled and fermented liquors was much decreased and amounted to less than four per cent of the internal revenues. On the other hand, the yield of the tobacco tax was vastly increased. The American public consumed more than 8,200,000,000 cigars and 50,400,000,000 cigarets during the year; a vast increase over any previous year in both instances. Transportation taxes, luxury taxes, and the special corporation tax all yielded big revenues.

The cost of operating the internal revenue service was 55 cents on each \$100 collected. This was a slight relative increase over the figures for 1919, but this is fully accounted for by the extra expense involved in the enforcement of the prohibition law. Altho the new direct taxes which were the product of wartime necessity have thus shown themselves enormously productive, they are unpopular, and it is almost a foregone conclusion that the next Congress will greatly modify the excess profits tax as well as drop some of the special luxury taxes.

## President Wilson to America

**C**ONSCIOUS that the election of 1920 would close a chapter in his public career and that his administration would in a few days pass from politics to history, President Wilson made shortly before election a farewell statement to his fellow-countrymen. The occasion which called forth his address was the visit to Washington of a delegation of pro-League Republicans who are supporting the Democratic national ticket this year on the League issue. In his address the President reaffirmed his faith in the unamended Covenant, saying in part:

The League of Nations is the well-considered effort of the whole group of nations who were opposed to Germany to secure themselves and the rest of mankind against a repetition of the war. It will have back of it the watchfulness and material force of all these nations, and is such a guarantee of a peaceful future as no well-informed man can question who does not doubt the whole spirit with which the war was conducted against

International

Manuel C. Tellez, Mexico's new representative to the United States; he will take up many negotiations started by his predecessor—Fernando Calderon, who has returned to Mexico as Senator

THREE NEW AMBASSADORS TO THIS COUNTRY

The new Ambassador from China is Dr. Alfred Sze, formerly Chinese Minister to London. He is a graduate of Cornell and said to be unusually familiar with affairs in this country

Italy is sending as Ambassador to Washington Baron Aliotti. He is known well and favorably in official circles, having been connected with the embassy here some years ago

Germany. The great moral influence of the United States will be absolutely thrown away if we do not complete the task which our soldiers and sailors so heroically undertook to execute.

One thing ought to be said, and said very clearly, about Article X of the Covenant of the League of Nations. It is the specific pledge of the members of the League that they will unite to resist exactly the things which Germany attempted, no matter who attempts them in the future. It is as exact a definition as could be given in general terms of the outrage which Germany would have committed if it could.

Germany violated the territorial integrity of her neighbors and flouted their political independence in order to aggrandize herself, and almost every war in history has originated in such designs. It is significant that the nations of the world should have at last combined to define the general cause of war and to exercise such concert as may be necessary to prevent such methods. Article X, therefore, is the specific redemption of the pledge which the free governments of the world gave to their people when they entered the war. They promised their people not only that Germany would be prevented from carrying out her plot, but that the world would be safeguarded in the future from similar designs.

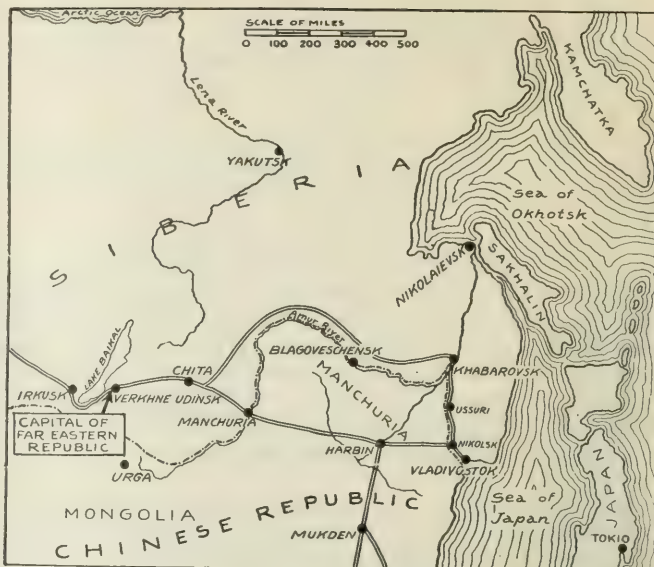

In his statement President Wilson did not directly mention the Democratic candidate, nor did he speak of such reservations to Article X as Governor Cox has announced his willingness to accept. This gave rise to the report that the President was not pleased with the way in which the Democratic national campaign was being conducted. To put an end to this rumor, President Wilson sent a personal telegram to Governor Cox, congratulating him on having "spoken truly and fearlessly about the great issues at stake" and signing the telegram "your gratified and loyal supporter."

## The Siberian Buffer State

THE fall of Admiral Kolchak left Siberia without even the semblance of authority. The American and Czechoslovak troops who had guarded the railroad were withdrawn. Only the Japanese remained in force and they were regarded by the mass of the Russians as invaders to be expelled. The armies of Soviet Russia did not advance beyond Irkutsk, just west of Lake Baikal. The best of these forces were later called back to Russia to meet the attack of the Poles, leaving only a rabble of Reds in western Siberia. Vladivostok and the Pacific end of the Trans-Siberian railroad remained in the possession of the Japanese. A section of the road in between at Chita was held by Semionov, a young Cossack chief, brutal, ambitious and reckless, supposed to be in the pay of the Japanese and at any rate playing into their hands. He has recently telegraphed to Sevastopol recognizing the authority of Baron Wrangel and asking him for orders. Armed bands of irregulars known as "Partizans" roamed over the country committing reprisals and preying upon the cities. Some of these were peasants rising against Cossack tyranny or Japanese rule. Some were fanatical Bolsheviks. Some were plain bandits. German, Austrian and Hungarian prisoners, released from internment and deprived of provisions, added to the confusion. Some of them joined the Red bands; others assisted in the restoration of order.

On the collapse of the Kolchak régime the Siberian cities set up their own government, several of which claimed but none of which would exert authority over all Siberia. These local governments ranged from Red and ruthless to mild and moderate. At Nikolaievsk, for one example, a band of young Bolsheviks massacred the Japanese and terrorized over the city. At Vladivostok on the contrary the new government comprized various factions and has shown itself fair even to its opponents.

The government that was set up at Verkhne Udinsk, the first railroad town east of Lake Baikal and therefore next to the Soviet frontier, is intermediate between these extremes. It is communistic in character and works in close coöperation with the Moscow Soviet. But it has avoided some of the mistakes of the Russian Bolsheviks and in particular has been more successful in conciliating the

MAP OF SIBERIAN CHAOS

The Soviet power reaches to Irkutsk. East of Lake Baikal there is no general government. Each city has its own, but that of Verkhne Udinsk is gaining a certain authority over the others and is now negotiating with Japan and China on equal terms. The Chinese Eastern Railroad which runs across Manchuria from Manchuria station to Vladivostok and which was formerly under Russian control, has been offered to China by the Soviet Government. Semionov's Cossacks control a stretch of the railroad about Chita. The Japanese hold Vladivostok, Harbin and Ussuri. It is rumored that Japan has been offered the island of Sakhalin and the peninsula of Kamchatka on condition of retiring from the mainland

peasantry. It has got along well with the Japanese. Apparently there is a secret treaty between Japan and the buffer state of Verkhne Udinsk, for both parties appeal to such a document in their recent controversy over Semionov. The Cossack commander is trying to thwart the efforts of the Verkhne Udinsk Government to effect a union of all Eastern Siberia and his lieutenant, Baron Ungern, has started a drive from the Mongolian border directed against Verkhne Udinsk. That Government has demanded that the Japanese suppress Semionov and claims that Japan had promised to prevent any such hostile movements.

It is rumored the Verkhne Udinsk Government has come to an agreement with Japan by which the Japanese shall withdraw from Siberia on condition of securing the cession of the whole island of Sakhalin and possibly also the peninsula of Kamchatka. The American Government has protested to Japan against the acquisition of Sakhalin on the ground that it is a violation of the Treaty of Portsmouth, which concluded the Russo-Japanese war and assigned the northern half of the island to Russia.

But, whether as a result of these negotiations or because of the anti-militarist movement at home, the Japanese forces are being drawn in from outlying points and concentrated about Vladivostok, the Japanese garrisons have been withdrawn from Nikolaievsk, Khabarovsk and Blagoveshchensk before winter sets in, when they would be isolated. These cities will now fall into Russian and more or less Soviet control. The Japanese troops continue to hold the important railroad junctions of Nikolsk, Harbin and Ussuri.

## Siberia and China

THE unknown Siberian town of Verkhne Udinsk, 15,000 population by the last census, 8000 by the census of 1897, has suddenly become of international importance for it has sent an envoy to the largest republic in the world making proposals that threaten to upset the relations of all the great powers with the four hundred million Chinese. The identity of the envoy is doubtful and his authority is

dubious, but it seems likely that he will make a breach in the blockade of Soviet Russia and give China a chance to recover some of her lost rights. According to the London *Times*, the name of Yurin, which the envoy bears, is an alias and that he really is Dzevaltovsky, a prominent official in the Kerensky Government and later head of the Department of Military Education under the Soviet.

Yurin entered China, September 3, by the back door, traveling with his staff across the Mongolian desert from Urga to Peking in two motor cars once belonging to French military mission to Kolchak, but captured by the Bolsheviki in Siberia. This is the old caravan route and may again become the connecting link between Asia and Europe as the automobile becomes the "ship of the desert" in place of the camel. Before the war the Imperial Government of Russia was dominant in Urga and rapidly displacing Chinese authority over Mongolia, which would probably have become a Russian province. But the Soviet Government of Russia, while ambitious to convert the world to its views, betrays no desire for territorial expansion. All its fighting so far has been within the limits of old Russia and it has acquiesced in liberal secessions on all frontiers. Last April the Soviet Government notified China that it renounced all the claims, concessions and privileges that Imperial Russia had wrested from China.

Yurin confirmed this in behalf of his Government, the Far Eastern Republic of Verkhne Udinsk, which professes to be independent of Soviet Russia. President Medvedev of the Provisional Government of Vladivostok, also professing independence, has likewise repudiated "in entirety the imperialistic aims of the former Czarist Government in the matter of the Chinese Eastern Railway." This assurance was given to the Special Commission of Advisers which the Chinese Government sent to Siberia to investigate the various governments in their relation to China. The commission returned convinced that it would be safe to enter into relations with these governments and to accept the concessions they offered.

This meant in the first place a saving of \$3,325,000 a year that China had been paying to Russia as indemnity for the Boxer riots. Russia claimed 29 per cent of the total Boxer indemnity, a larger amount than any other nation. The United States claimed only 7 per cent and had remitted half of that. During the past two years the other powers have let China off on these payments, but the Russian minister at Peking, Prince Kudachev, has insisted that the Russian share be paid over to him, altho since he had been appointed by the Czar he could hardly be considered a representative of Russia. Needless to say, none of this money went into Russia. It was used for paying the expenses of the representatives of the old régime in other countries, including Ambassador Bakhmetiev in the United States.

The Chinese Government notified Prince Kudachev and the Russian consuls that they were no longer accepted as Russian representatives. But Prince Kudachev refused to vacate the Russian ministry and since this building is situated in the Legation Quarter, which enjoys the privilege of extra-territoriality, he could not be evicted. But the Chinese Government shut off the delivery to him of code despatches. The Chinese lowered the Russian flags and hoisted their own over most of the former Russian building and concessions, but the Russo-Asiatic bank, which is the financial agent of the Chinese Eastern Railroad, dis-

played the French flag instead, claiming that 80 per cent of the capital is French and that the headquarters have been moved to Paris.

Russia formerly forced China to give her a preferential reduction of two-thirds of the tariff duties on Russian goods, but this privilege is now also renounced with the rest.

The American Government, consistent with its policy of denying the validity of any of the acts of revolutionary Russia, has warned China against accepting Russian favors and has asked the coöperation of the other powers in maintaining the *status quo ante*. But the Chinese, who see in the Soviet offer their only chance to regain their lost property and rights, are indignant at the United States for intervening and preventing them from taking advantage of the occasion.

## Defeat of Wrangel

THE appearance of Trotzky on the southern front with some of the best of the communist troops from the Polish front has turned the tide against Baron Wrangel. The Bolsheviki have now the advantage both in numbers and artillery, and by skilfully converging their forces they have practically regained Taurida within two weeks. This province lies between the Dnieper River on the west and the Sea of Azov on the east. The Soviet plan of attack was to smash in both wings and then drive at the center. This plan was carried. While one section of the Soviet army crossed the Dnieper from Kherson to Perekop, the other came down the railroad from Alexandrovsk to Melitopol and the Sea of Azov. Wrangel will now be forced to retire again into the Crimea. Here he may be protected by the French fleet, altho the British will not be so much inclined to come to his defense as formerly, since the British Government warned him against undertaking this drive into Soviet Russia. The French broke with the British on this question and Premier Millerand granted official recognition and support to the South Russia Government of General Wrangel without the knowledge and contrary to the wish of

Premier Lloyd George. The American Government has been approached by one of the powers, presumably France, to see if the United States would come to the aid of Wrangel by participating in a blockade of the Black Sea. Our Government has not yet complied, but the State Department still expresses confidence in Wrangel's victory and the speedy collapse of the Soviet power. John A. Embry, of the American consular service, has been ordered to go from Finland to Constantinople to investigate the situation in the Crimea, but he is not commissioned as plenipotentiary to the South Russian Government. The French, however, have a High Commissioner at Sevastopol.

What purports to be a treaty between France and Baron Wrangel has been published, according to which he agrees if victorious to pay all the debts due to France with compound interest, to renew the alliance between Russia and France, to restore compulsory military service, to grant France the surplus grain of southern Russia, two-thirds of the oil and one-

Wide World

General Mangin, who was Commander Foch's right hand man during the Great War, has been chosen to head a mission to South Russia in order to report to the French Government the exact situation in the war against the Bolsheviki. But these eight Mangin youngsters think it's more important that their father stay and play with them

fourth of the coal, and to hand over to France all the railroads in European Russia, and to put Frenchmen in the financial and commercial ministries. The correctness of this document has been officially denied, but M. Struve, Wrangel's representative at Paris, says: "We shall pledge as security for a loan the conquests, the booty and the quantity of grain that our offensive will allow us to capture."

Besides the aid received from France, the American Red Cross has spent more than two million dollars in relief work in the Crimea.

## Rumania Gets Bessarabia

BY a treaty signed in the French Foreign Office on the Quai d'Orsay, Paris, Great Britain, France, Italy and Japan cede to Rumania the Russian province of Bessarabia. Russia has nothing to say about this transfer of territory, either now or hereafter, since it is specially stipulated in the document that Russia may not raise the question of sovereignty, altho she may, after she has a government recognized by the Allies, bring other questions before the League of Nations. The treaty contains a clause for the protection of minorities in spite of the protest of Rumania against its insertion. It is, however, particularly necessary in the case of Rumania, for the Congress of Berlin, which in 1878 established the independence of Rumania, insisted upon the insertion of a clause in the constitution guaranteeing equal rights without regard to race or religion. Nevertheless, the Jews in Rumania have been discriminated against, deprived of political and financial rights and occasionally massacred.

The Jews, who constitute more than a third of the city population of Bessarabia, are naturally averse to coming under Rumanian rule. So

also are the Ukrainians (Little Russians), who form a still larger element in Bessarabia. In fact, the Rumanians (Moldavians) number less than half of the population, and it is by no means certain that all of them would vote for annexation to Rumania. Probably a plebiscite would result in a division of the country between Russia and Rumania, but the people are not to be consulted.

Bessarabia was taken from the Turks by the Russians in 1812, but after Russia was defeated in the Crimean War by the British, French and Turks, she was forced to relinquish most of Bessarabia. But by her victory over the Turks in 1878 she recovered the province. Bessarabia is about twice the size of Massachusetts and has a population of about 2,500,000.

## MacSwiney's Funeral

THE coroner's jury called in the case of the Lord Mayor of Cork, after hearing the testimony of the prison physician and the Lady Mayoress, returned a verdict of "death from heart failure due to refusal of food." In the similar case of Joseph Murphy, one of the hunger strikers in the Cork prison, the verdict was that "he feloniously killed himself by refusing all forms of nourishment."

The body of MacSwiney was dressed in the uniform of an officer of the Irish Republican army. A republican flag draped the coffin and the inscription on the lid read:

Traylor MacSwiney, Brigade Commandant, Cork First Brigade, Irish Republican Army, Lord Mayor of Cork, Member of Dail Eireann for mid-Cork, Murdered by the Foreigner in Brixton Prison, London, England, on the 25th October, 1920, the Fourth Year of the Republic, Aged 40 Years. God Have Mercy on His Soul. Requiescat in Pace.

The funeral took place at Cork. The procession that marched from the cathedral to the cemetery was headed by three archbishops, thirty bishops and nearly three hundred priests. Next came the members of the Irish Republican Parliament (Dail Eireann) with Arthur Griffith, Acting President of the Republic. Then followed fifteen hundred Sinn Fein volunteers and mourners. A squad of Irish Republican Volunteers fired a salute over the grave. The streets were lined with British soldiers, who saluted as the procession passed.

Memorial mass meetings attended by thousands were held in all the large American cities. In New York some 35,000 assembled on the Polo Grounds and were addressed by Eamonn de Valera, President of the Irish Republic, Governor Smith and other prominent citizens and clergymen. Hindu Nationalists took part in the anti-British demonstration. Resolutions were passed comparing the Irish martyrs to the American patriots of 1776 and demanding that the President recognize the Irish Republic.

Notwithstanding the great murders that have been committed in Ireland in the last four years very few of the murderers have been caught and none has hitherto been hanged. The first execution since the rebellion of Easter, 1916, was the hanging of Kevin Barry, a Dublin medical student of eighteen years, who was convicted of complicity in an attack upon a military raiding party last September in which a soldier was killed. A crowd of two thousand gathered outside the Mountjoy jail and knelt in prayer in the muddy road as the tolling bell announced the execution.

The Sunday following the death of MacSwiney was marked by unusually numerous outbreaks of violence.

The regent of Greece now is Admiral P. Coundouriotis, former Greek Minister of Marine. He was friendly to the Allies when the former King Constantine was dallying with his sympathy for the German side in the Great War

© Keystone View

PUZZLE PICTURE: FIND THE KING

Prince Paul (standing in the middle background between his two sisters) has been offered the throne of Greece left vacant by the death of his brother, King Alexander. But Paul refuses on the ground that the Greek throne belongs to his father, the former King Constantine (seated at the right of this photograph with his youngest daughter on his knee). King Constantine was deposed for intriguing with Germany when the Greek people wanted to join in the war on the side of the Allies. His eldest son, Prince George (seated at the left), was refused the throne at that time also because of German sympathies, and Prince Alexander, the second son, was made king. The cause of the Greek royalty's pro-Germanism lies in the fact that Constantine's wife, the former Queen Sophia (center) is a sister of the ex-Emperor of Germany.

## President Harding

(Continued from page 219)

Harding, as President, may be depended upon, in the interest of quick consideration for his domestic policies, to take every precaution against a new and protracted treaty wrangle in the Senate.

What his domestic policies will be, the voters would have had better material upon which to judge had Senator Harding responded to the suggestion that he give out in advance of the election the names of the men he will appoint to his cabinet. The kind of administration Harding will give will depend in no inconsiderable degree upon the kind of men he appoints to Cabinet places, for Cabinet meetings during the next four years are to be more than "mere formalities." The President will be prepared to accept as his own the judgment of his Cabinet members, plus that of his Republican friends in the Senate, when the two groups are in approximate agreement.

Only a very self-effacing man, a man by no means a partizan of his own opinions when they are in conflict with those of his party, could have said what Senator Harding, the President-elect, said on a great public question as Senator:

"Believing as I do in political parties and government thru political parties, I had much rather that the party to which I belong should, in its conferences, make a declaration, than to assume a leadership or take an individual position on the question."

Senator Harding has told the country that he will surround himself with the ablest men he can find in the Republican party—and his press agents, who cannot possibly know, have added that they will be "young men," that is, men with the ideas of young men, whatever their age in years. Uncle Warren, himself, is not a young man, tho the birthday he celebrated on the day of his election was only his fifty-fifth.

He long has known the type of man he wants for each Cabinet place. Soon he will be sending out the formal invitations to be members of his official family to the men he has selected, tho it is said on his behalf that the lists have not yet closed. He began drawing up his Cabinet specifications at a time when Johnson and Wood and Lowden were piling up strength in the preferential primaries and he was being left far in the rear.

"That . . ." he used to say to those who traveled with him in the pre-convention campaign, when pointing out some distinguished citizen, ". . . that is the kind of man I want for Secretary of — in my Cabinet." He said it many times, but always he said "that is the kind of man" and never "that is the man." Marion may know the names of some of the men who will sit in the Harding Cabinet, but Washington still is in the dark. Washington feels, nevertheless, under the necessity of pretending to know the full list.

# Even among the rich children are starving

*Dr. Wm. R. P. Emerson says: "A careful study of children in private schools and the families of the rich shows almost equal prevalence of malnutrition with the families of the poor." One child in every three is undernourished.*

**G**HAT one child in every three here in America, the world's greatest food-producing nation, should be underfed, undernourished, seems almost unbelievable.

Yet experts in nutrition have made that statement after study of thousands of American boys and girls of all classes.

It is not that our children get too little to eat. Children of the well-to-do and of the rich, Dr. Emerson says, show undeniable evidence of malnutrition.

The condition, in most cases, is traced rather to lack of food of the right kind, to an insufficient supply of certain food elements.

## Food Essentials

The body requires sixteen food elements if it is to attain its full development and carry on its natural functions in health.

Each of these elements is essential to life; we must have them all.

In the whole wheat grain Nature provides the sixteen vital food elements in more nearly the proper proportion than in any other food, save possibly milk.

But man, in the modern methods of wheat preparation, removes and rejects the six outer layers of the wheat kernels, commonly called the bran. Many of these vital elements are found almost wholly in those outer layers. They're thrown away.

In the whole wheat grain all of them can be secured.

## Nature provides flavor

In Nature's larder health and energy are not separate from delightful tastes and flavors.

Thousands have found this to be so—in Pettijohn's, a whole wheat breakfast food of rich and gratifying taste.

Served with cream and a little sugar, if you wish, it makes a vital energy ration that old and young delight to eat.

Look at the table shown here. If your child is below his or her normal weight—try Pettijohn's.

If the child is irritable, nervous, pale-checked and generally tired, don't just say "it's his nature." Those are signs of malnutrition. Give him Pettijohn's.

If you yourself are feeling below par, lacking in energy and vim—try this whole wheat

health food. Many grown-ups who suffer from congestion of the intestinal tract need only its natural bran laxative to set them right.

Your grocer has Pettijohn's—or will gladly get it for you. Make tomorrow's breakfast of this appetizing, sixteen-vital-elements food.

Made by the Quaker Oats Co., 1625N Railway Exchange Bldg., Chicago, U. S. A.

Are your children under the weight shown by this standard table? If so they need more of the 16-vital elements food

These latter heights and weights are with indoor clothes but without shoes. Table of weights furnished by Dr. Wm. R. P. Emerson.

ate of Annapolis, for Secretary of the Navy—that appointment Washington will tell you is a certainty. For Secretary of State, Senator Harding naturally wants a man who will be in agreement with him on foreign policy and will have prestige abroad. He agrees with much that David Jayne Hill has written on the Treaty, therefore David Jayne Hill for Secretary of State, if Elihu Root will not accept. Neither Leonard Wood nor General Pershing will be Secretary of War. For this office Senator Harding will select a man who has had large experience as an organizer and administrator, not a military man but a civilian, one who will be able to translate the civilian mind for his military advisers. Make your own selection.

For Secretary of the Treasury, such a man as Frank A. Vanderlip, and for Commerce, a former president of the United States Chamber of Commerce, probably Harry A. Wheeler. These, at least, are Washington's guesses. The Post Office Department has been a point of especial weakness in the Wilson administration. For Postmaster General, then, a big business man, one who knows what the Post Office Department is for and will be able to put it on its feet again. A merchant, John Wanamaker, was one of the best postmasters the country ever had. What about Julius Rosenwald, the head of the largest mail order house in the world?

And so it goes on down thru the list as Washington, with due regard for geography and political debts that should be paid, makes up its speculative Cabinet for the new President. Herbert Hoover, Republican, California? Hoover should have something. He would look well in a super-Cabinet. Herbert Hoover for Secretary of the Interior, that department later to be converted into a Department of Public Works, with jurisdiction over all the engineering and developmental activities of the Government.

Senator Harding heartily approves the Department of Public Works project, and its sister project for a Department of Public Welfare, tho the necessity for the latter is not quite so pressing. When it is created, if it is created, this department would take over all the Government's present educational and health activities. Senator Harding would oppose giving it any additional work to do. He stands for deflation of the Government. It is already carrying on too many activities in fields that should be left to the states.

Would Senator Harding feel moved to appoint a woman to be Secretary of Public Welfare? He has hinted that he might, but upon further reflection he probably would not. Women will have other responsible positions in the Government, certainly, but they have not yet had the experience necessary to qualify them for Cabinet appointment. They do not know the technique of public life. They have not much more than begun their apprenticeship. The time will come when such recognition will be possible, Senator Harding will

feel, but not during his administration.

The Harding Cabinet will be a well oiled machine, with every bearing adjusted, ready to be set in motion the minute the Senate turns on the power with its confirmations. It will work as a team. The entire Government will work as a team. Every bureau chief will be taught to feel that he is an important part of the Government—and of the party doing the governing—and will be held responsible for producing the results desired.

No decision on major policy will be made by Senator Harding without consulting his Cabinet, and the men who later will become known as the "bosses" in the House and Senate. He will want all the facts and all the opinions he can get so that the announced result will approximate what the Republican party as a whole would have done in the circumstances.

He has the newspaperman's thirst for information. Facts, facts, facts, he demanded of the witnesses appearing before the Senate committees of which he was a member. His speeches were infrequent. Usually the information he secured was reflected only in his votes in the Senate—which were always "regular."

SENATOR Harding is slow to make up his mind. He finds it hard work. He would rather do nothing at all than take an action of whose soundness he was not thoroly convinced. It may happen many times during his administration that before he has made up his mind on a particular subject, the necessity for doing so will have passed.

But once having made a decision he will stick to it. Only one form of argument will move him—the very persuasive argument of an adverse public reaction. Widespread disapproval of his policies he will seek to avoid by taking the public more or less into his confidence before making an unalterable decision on any question. He will take added counsel from the comment of the press when it learns how his mind is running. He will be tolerant of the opposing opinion of minorities, thereafter, but having made his decision and convinced himself he is right, he will stick.

The latch string will be out at the White House, particularly to members of Congress—and the President's room at the Capitol will see more use than it has for many a session. Calvin Coolidge, as Vice-President, will sit in at all Cabinet meetings. He will be the Senate's direct representative at the White House, and the President's personal representative at the Senate. Two members of the Cabinet will probably be selected from the membership of the House.

These are some of the means by which Senator Harding hopes to be able to establish that coöperation with the legislative branch that is essential to the success of party government. Real coöperation with Congress, if he gets it on a wide scale, will add to the force of the contrast his administra-

# Coal

## Don't Waste It!

COAL will be higher than ever this winter. You'll have to use less of it if you want to keep the coal bill down to anywhere near normal.

Coal *can be saved*, and without sacrificing comfort either. Make every lump of coal give full value. Equip your heating plant with

**The "MINNEAPOLIS"  
HEAT REGULATOR**

"The Heart of the Heating Plant"

It prevents the costly, wasteful "ups and downs" of your furnace fire and maintains an even heat thruout the house by automatically operating the dampers. Your fire can not go on a rampage, neither can it get so low as to require forced fire to bring it up again. No fuel is wasted. Not a pound of coal is burned unnecessarily.

Those who have used a Minneapolis Heat Regulator for years tell us they save on the average three shovelfuls of coal a day thruout the winter.

The "Minneapolis" has been used successfully for 35 years on any type of heating plant burning coal, gas or oil—lasts a lifetime.

*Write us for complete information—illustrated booklet and name of nearest dealer.*

## There was once a substance called coal

It doesn't take a Jules Verne to imagine the time when our present-day fuel will be gone.

But there is nothing frightful in the prospect. Already the world's engineering brains have cast ahead and discovered a new fuel in rain drops and dew fall—water power.

Nor is this source of power a hazy dream of the future. It's here.

In California, for example, 942,000 hydro-electric horsepower are right now turning wheels, lighting cities and harvesting crops.

In the United States as a whole there are 9,000,000 hydro-electric horsepower actually at work—and this is but fifteen per cent of our available supply.

It is to the other eighty-five per cent we must look against the day when coal and oil are museum curiosities.

Just how soon hydro-electric development will come to any community must depend on local conditions—such as how long the coal supply there can advantageously compete with water power.

But in the many places where coal is scarcely to be had, sane common-sense thinking about the relative economy of water power will hasten its coming—to the common good.

We should all understand that water power is not the interest of any particular business—that it is not a political issue, but a great economic one which affects us all.

So its support must come from the people, whose money will be needed to finance it. And rightly so.

Conservation of our national resources is one of the first benefits of water power development. The preservation of forests, the avoidance of floods, the irrigation of arid lands are part and parcel of this program.

Truly, unharnessed water is a national possession which goes to waste as long as we do not use it—and in this day of inadequate production and the high cost of living, any waste is an economic crime.

tion will provide with that of President Wilson.

Whether it likes his policies or not, the country is going to like Harding personally. Everyone who knows him likes him as a person. He will go into the White House with fewer real enemies than any previous President. He has been called the perfect example of the professional spell-binding politician, but he is something more than that. He has been a politician for twenty-one years. For sixteen years before he ever thought of becoming one, he was a business man, engaged in the business of publishing the *Marion Daily Star*. He has remained in business since. The average successful American business man is apt to see in the new President a great deal of himself. The thing in Marion in which the Senator takes the greatest pride is not the success of his newspaper, but the success of the Marion Steam Shovel Company!

He thinks he knows the needs of American business—and additional regulation is not one of them. His principal mission he will believe to be to make conditions right for material prosperity in the United States—and his program for doing so probably will look very much like that of McKinley.

The country will get its first real glimpse of his policies in the message he will deliver—now that Wilson has set the precedent—to the special session of the Sixty-seventh Congress, to be summoned shortly after he assumes the Presidency. His first recommendation probably will be for the repeal of the excess profits taxes and the substitution of a flat tax of some kind, perhaps a sales tax, that will not be pyramided as it is passed on to the consumer. The amount of revenue to be returned by taxation cannot be materially reduced, but a sales tax would produce so large a yield as to permit the dropping of the bothersome taxes on soda water, theater tickets, club dues and luxuries.

Inevitably he will sooner or later recommend an upward revision of the tariff for protection of others besides those new industries set up during the war from the competition of bankrupt Europe. A tariff on lemons he pledged during the campaign.

For the high cost of living he will have no legislative remedies to suggest, except, of course, the repeal of the excess profits taxes. With the practice of thrift by the people, following the example of the Government, this problem will eventually work itself out—if the Government keeps its hands off and quits badgering business. The Federal Trade Commission will be plainly told that its function is not to persecute and investigate business, but to advise business what it may and may not do under the anti-trust laws.

Senator Harding hopes not to be compelled to deal harshly with labor, but the Government has the duty of protecting the public against the suffering occasioned by general strikes in essential industries and should a new

epidemic of such strikes develop he would feel compelled seriously to consider recommending to Congress the creation of a Federal board for industrial arbitration, whose awards would be binding upon both capital and labor.

He has made up his mind about the Esch-Cummins railroad act. It is a beneficent piece of legislation. Appeals to him to recommend changes in its labor sections are not likely to prove fruitful. He will, however, recommend that the sections governing railroad consolidations be liberalized to permit consolidations of smaller units, thus assisting in the restoration of railroad credits.

Senator Harding is a firm believer in military preparedness. He will not recommend a standing army larger than the present one. The country cannot afford it. But there may be another way. "I am a believer," he said in 1917, "in universal and compulsory military service, oftentimes alluded to as conscription." He believes also in a strong navy, but is against having the Government manufacture its own munitions on a wider scale than at present. This can well be left to private enterprise. The industrial preparedness project of the Council of National Defense is not likely to receive much encouragement as a substitute for military preparedness.

Senator Harding firmly believes in the right of every people, with the exception of the Filipinos, to determine for themselves what sort of government they will have. This applies to Haiti and Santo Domingo as well as to Mexico and Russia. What his Mexican policy will be depends upon what action the present administration takes on pending requests for recognition from the present Government of that republic, and the nature of his Russian policy depends upon whether the Bolshevik government falls this winter. He might not recognize the Soviet government, but neither would he blockade it.

He hopes it will be possible early in his administration to come to a clear understanding with the Government of Mexico. He would have Mexico understand that the United States does not question the right of the Mexican people to adopt any sort of constitution they please for the government of their internal affairs, but it does seriously question their right thru the adoption of new constitutions to confiscate property lawfully acquired by foreigners under previous constitutions. He does not want intervention, but would let Mexico understand that appropriate measures would be taken by the United States should that country fail to live up to an agreement once an agreement had been reached.

Four members of the United States Supreme Court have passed the age of retirement. Senator Harding is likely, therefore, to have the appointment of four supreme court justices during his administration. In making his selections for the bench and for places in the diplomatic corps, he will choose only such men as the Republican party as a whole might appoint.

Photo Snapped in the offices of the Minneapolis Journal, immediately after the election returns had been tabulated

## FIRST !!!

### On Election Returns— Thanks to the **MONROE**

A news beat bordering on the sensational was scored by the Minneapolis Journal in hustling out the returns in a recent Primary Election.

45 minutes before the Journal's nearest competitor was on the streets, the people of Minneapolis were reading the returns in the Journal. How did the Journal do it? Let Mr. George H. Adams, Managing Editor of the Journal, tell you himself. He writes:

"The speed and accuracy with which the returns were handled on the Monroe Calculating Machine enabled us to get the Journal extras on the street well ahead of the other dailies. We split the lower dial, using each half for the name of a candidate. As

the returns came in they were given to the operators and registered. Each operator handled two machines. The totals were always in plain sight of the reporters, who lost no time in transcribing them."

Your figure-work may not race against time to quite the same extent, but you do demand—every business day—accurate, speedy figuring—of invoices, estimates, inventories, payrolls, chain discounts, and even the most complicated engineering formulae. **All figuring on the Monroe is as easy as turning a crank**—turn the Monroe crank forward to multiply or add; backward to divide or subtract.

# W. L. Douglas

THE SHOE THAT HOLDS ITS SHAPE

\$7.00 \$8.00 \$9.00 & \$10.00 SHOES

FOR MEN AND WOMEN

YOU CAN SAVE MONEY BY WEARING  
W. L. DOUGLAS SHOES

**U**he best known shoes in the world. They are sold in 107 W. L. Douglas stores, direct from the factory to you at only one profit, which guarantees to you the best shoes that can be produced, at the lowest possible cost. W. L. Douglas name and the retail price are stamped on the bottom of all shoes before they leave the factory, which is your protection against unreasonable profits.

W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. They are made of the best and finest leathers that money can buy. They combine quality, style, workmanship and wearing qualities equal to other makes selling at higher prices. They are the leaders in the fashion centers of America. The stamped price is W. L. Douglas personal guarantee that the shoes are always worth the price paid for them. The prices are the same everywhere; they cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are made by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from factory. Send for booklet telling how to order shoes by mail, postage free.

**CAUTION.**—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. Be careful to see that it has not been changed or mutilated.

Senator Harding will not enter the White House with his eye on a second term. It was his intention, had he failed to secure the Republican nomination, to retire from public life. "I'll buy a big farm back in Ohio," he told his friends. "And I'll do some of the things I've always wanted to do. I'll get out between crops and see something of the world."

If it all works out as he desires, and he is able to maintain party government unimpaired during the next four years, the overshadowing issue of the campaign of 1924 will not be "Hardingism." The question will be what kind of government has the Republican party given, not what sort of President has Warren Harding made.

Washington, D. C.

## Do You Want to Lose Your Parks?

(Continued from page 221)

she had sold \$85 worth of the fruit to tourists going to the park. This represented only one day's transactions at one place. And yet this woman strongly favored one of these irrigation projects, without seeing the effect it would have on the very profitable business she conducted at the roadside as a side line.

In the case of the Falls river project in the southwestern corner of the Yellowstone Park, a vast area of forested parks and meadow lands would be flooded, thus ruining what is probably the best range for moose in the park. Approximately 600 moose thrive in this region at the present time. It is not to be supposed that the wild life that now abounds in the park, and is so great an attraction to tourists, would remain there in the midst of the engineering activity that would attend the execution of any one of these projects.

Is there not some place in this great nation of ours where lakes can be preserved in their natural state; where we and all generations to follow us can enjoy the beauty and charm of mountain waters in the midst of primeval forests? The country is large enough to spare a few such lakes and beauty spots. The nation has wisely set apart a few national parks where a state of nature is to be preserved. Their total area, 10,859 square miles, is less than three-tenths of 1 per cent of the total area of the United States, including Alaska and the Hawaiian Islands, where there are national parks. If the lakes and forests of these parks cannot be spared from the hand of commercialism, what hope can we entertain for the preservation of any scenic features of the mountains in the interest of posterity?

If in the years to come it is necessary for the continued welfare of the nation and its people to permit the destruction of the beauty spots of our national parks, after other sources of power and other sources of water for irrigation have been exhausted, it will be time then to consider it, but the time is not yet.

ROCHESTER, N.Y.

Let us first develop the power sites outside the parks. There are thousands of them as yet untouched and capable of developing enough hydro-electric power to satisfy the needs of the nation for many years to come. And if the nation needs additional supplies of food, let the work of irrigation go on in the regions where it will afford the highest returns. Let us first irrigate those rich lands of the southwest that will, with a little water, yield us figs and dates and raisins and great varieties of other food products, rather than those of the north where only a few important food products can be grown, during short seasons. The valley of the lower Colorado is a potential valley of the Nile, the exploitation of which is so enormous and so rich a project as to engage the attention of all our promoters and all our irrigation engineers for many years to come.

The purchase of private lands outside the parks for irrigation projects in the north would add only a few cents an acre to the cost of the completed project. Why then destroy the beauties of the limited areas that have been set aside as places in which our children's children may see the America our fathers' fathers saw, merely to give a few corporations and individuals a few additional pennies of profit?

Yellowstone Park has been established for nearly half a century. Every plan to exploit it for private gain has failed to receive the consideration of Congress. Mighty railroad projects have gone down to everlasting defeat. Must all the victories of the past become hollow memories by the granting of reservoir rights that will desecrate its biggest and most beautiful lakes and form the precedent for commercial exploitation of all its scenic resources—its waterfalls, its forests, its herds of wild animals, its mineral waters? I believe every lover of nature will join with me in hoping that the projects now being developed will meet the fate of the others that have come before Congress in the past.

Washington, D. C.

A man tells of an editor who started poor twenty years ago and has retired with the comfortable fortune of \$50,000. This money was acquired thru industry, economy, conscientious efforts to give full value, indomitable perseverance, and the death of an uncle who left the editor \$49,999.50.—*Rotary Magazine*.

[The two first signatures to a letter calling for funds to finance "The Liberty League" are those of Sir H. Rider Haggard and Mr. Rudyard Kipling.]

"Every Bolsh is a blackguard,"

Said Kipling to Haggard.

—"And given to tipling,"

Said Haggard to Kipling.

"And a blooming outsider,"

Said Rudyard to Rider.

—"Their domain is a blood-yard,"

Said Rider to Rudyard.

"That's just what I say,"

Said the author of "They."

—"I agree; I agree,"

Said the author of "She."

—*London Herald*.

## That's True

in a million homes

Suppose you read that breakfasts had dropped 85 per cent. Think what good news that would be in these high-cost times.

In countless homes breakfasts have come down. In late years millions of new users have adopted Quaker Oats. Those homes do save 85 per cent as compared with meat, eggs, fish, etc.

### To save \$125 a year

Quaker Oats costs one cent per large dish. It costs 6½¢ per 1,000 calories, the energy measure of nutriment.

It costs 12 times as much to serve one chop—9 times as much to serve two eggs. A bite of meat costs as much as a dish of oats.

In a family of five Quaker Oats breakfasts served in place of meat breakfasts saves some \$125 per year.

The oat is the food of foods. It supplies 16 elements needed for energy, repair and growth. For young folks it is almost the ideal food. As vim-food it has age-old fame. Each pound yields 1,810 calories of nutriment.

It is wise to start the day on oats, regardless of the cost. Yet it costs a trifle as compared with meat.

These figures are based on prices at this writing. Note them carefully.

They do not mean that one should live on Quaker Oats alone. But this premier food should be your basic breakfast. Serve the costlier foods at dinner.

### Cost Per Serving

Dish Quaker Oats	. . .	1c
4 ounces meat	. . .	8c
One chop	. . .	12c
Serving fish	. . .	8c
Bacon and eggs	. . .	15c

# Quaker Oats

For the children's sake

This brand is flaked from queen grains only—just the rich, plump, flavory oats. We get but ten pounds from a bushel.

These delicious flakes cost you no extra price. Get them for the children's sake. They make the dish doubly delightful.

Packed in Sealed Round Packages with Removable Cover

## Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

For many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

## The Birth of a New Religion

(Continued from page 217)

prehensile, but her disciples read into it or out of it messages of marvelous import. The writings of the Mother Founder form the bible of the new faith, and are known as O Fude Saki or the "Flourish of the Honorable Brush." In these she is said to have prophesied the wars of Japan with China in 1895, with Russia in 1905 and with Germany in 1914. But the Kyoto police claim that they compelled Deguchi, the high priest of the cult, to confess on cross-examination that most of the manuscript was written after these events instead of before.

It takes two persons of different type to launch a new sect successfully, one with a mystical mind and one with a business head, a seer and an overseer. Joseph Smith, the Prophet, would never have established Mormonism without the organizing genius of Brigham Young. Old Widow Baasan found her business manager in Wani-saburo Deguchi, a horse driver, who married her second daughter. He had in earlier life taken a short course in Shintoism at Kyoto and even entered the lower ranks of the priesthood. It is due to his ability in practical affairs that the socialistic colony has been a success. He has bought up real estate at a bargain and made it profitable and he knows how to use the power of the press in propaganda.

A third type of mind is essential to the starting of a cult, that is the theologian. Since the visions of a prophet are apt to be left in a disordered and impractical form they must be taken in hand by a man of education and scientific mentality, who can bring them into a logical system and connect them with the current thought of the times. This function is performed by Dr. Asano, who was formerly instructor in English at the Naval Engineering School at Yokosuka and is said to have then professed Christianity. He had a sick child whose case was given up as hopeless by the doctors, but Mrs. Asano, without the knowledge of her husband, took the child to a faith healer who cured it. Mr. Asano, convinced by this miracle, threw up his position to devote his life to the new cult, of which he is now the head. His brother, Vice Admiral Asano, has joined him in the colony and brought with him many retired naval and military men.

The customary characteristics of a new religion are (1) faith healing, (2) speaking with tongues, (3) communism, (4) millenarianism, (5) perfectionism, (6) equality of women, (7) abstemious life, (8) simplicity of service, (9) mysticism. Some or all of these have appeared at the beginning of most religious great movements, though in the course of years they are likely to be largely eliminated. Judged by this standard Omoto Kyo starts out under most favorable auspices for it has all these qualifications and if the Japanese Government will only persecute it long enough to solidify the new sect in

common defense it may become a power in the world. Japan is ripe for a new religion. Two recent Shinto sects, Tenri and Remmon, both founded by women, are getting ahead of the older branches of the national faith. The Tenri Kyo, started by Omiki, a woman of humble origin and distinguished by its prayer cures and communism, has grown in a few decades to 4,000,000 members.

The newest of the offshoots of Shintoism, the Omoto cult, regards money as the root of all evil and denies the right of private property. Like the early Christians they hold all things in common. Land is divided up between the families somewhat as was done by the Mormons at Salt Lake. The villages are neatly kept and the hills are adorned with tasteful temples surrounded by trees and flowers that promise to make Ayabe a rival in beauty to the theosophical community of the Purple Mother at Point Loma. Every day is Friday for the followers of Omoto Kyo, since they never eat flesh, but only fish. Prayer is substituted for medicine. Disease is believed to be caused by evil spirits in the form of animals, generally a fox, a serpent or a dog, but the malignant obsession may be expelled by divine power.

Like the early Christians, the Millerites and the Mormons, the disciples of Omoto Kyo believe the day of Judgment is at hand. The world has grown so evil that it cannot long endure and soon a great catastrophe will sweep away this wicked generation and clear the way to a new era of universal peace and good will, such as is described so eloquently in the pre-Christian Book of Enoch. This cosmic cataclysm, according to the Honorable Brush of O Nao, is due in 1922, but probably she, like all previous millenarian prophets, has made a mistake in fixing such an early date. But whenever the Great Day comes only the rock that supports the sacred district of Tamba shall stand secure and the chosen remnant who have gathered in this city of refuge will repopulate and regenerate the world. Since these will presumably be all Japanese this doctrine connects the new cult with the parental Shintoism, which is essentially a religion of patriotism. Omoto Kyo then appears as an imperialistic socialism and as such appeals both to the soldier and the workman. The Japanese Government is much alarmed over the spread of these doctrines in the army and is taking stringent measures to suppress the propaganda. General Nagasaka, commander of the military police, says: "It appears true that the number is growing among both the men and the officers, mostly those upon the reserve list, who are becoming tainted with the hideous doctrine of the Omoto Kyo."

No part of the sacred books, O Fude Saki, has, so far as I know, been yet translated into English, but piecing to-

gether such fragments of the teaching as I have been able to find, its doctrine is something like this:

The world is on the eve of blossoming like the plum-flower. One of the great gods shall soon appear in person, welcomed by blooming flowers and evergreen pines, and he shall reign over the whole earth and bring it peace. Japan is a divine country and must be divinely ruled. Foreign countries are under the control of beastly devils in human form. Even Japan has now become a land of beasts. This dirty world must be cleansed and made fit to be the abode of the gods. Occidental civilization is based upon individualism, that is to say, selfishness. All its literature and moral codes are inspired by selfishness. It has stolen society and stolen the state and would steal the world and the universe itself. All this must be destroyed by the abolition of individualism. The people of the world are clamoring for reform but their reform is only the reform of formality. Such reform is like a house built on the sand. The reform designed by our gods is the reform of man himself.

Like the Perfectionists of the Oneida Community the disciples of Omoto Kyo hold that one may attain to a sinless state even in this life and like mystics of all faiths they believe that those who are sufficiently pure and devout may in a state of trance gain the power to see and hear divine beings. The gods reveal themselves to the seers of Omoto Kyo in the grotesque form with which they have been clothed by the oriental imagination. These are the Gods of the Dragon because they are nearest to the earth of all the gods. The dragon gods are five thousand feet long, horned and flexible as rubber, and they dive with incredible swiftness from highest heaven to the depths of the ocean.

The new sect is making effective use of printing. Besides books and its monthly religious organ, *Omoto Jiho*, the publication department issues in Osaka an evening paper, the *Taisho Nichi Nichi*, which, if it keeps to its promise, will rival the *Christian Science Monitor* in the extent and completeness of its news. Three hundred thousand dollars was paid for the plant for this daily, which aims to become "a model of journalism" and "a mirror of the world," giving the spiritual interpretation of current events, bringing the best thought of the age to bear upon the darkest problems of the day, furnishing the latest financial news and making it all suitable for family reading. These quotations from its prospectus indicate that the new religion has also one of the most important qualifications for success in the modern world, a good press agent.

A bashful curate found the young ladies in the parish too helpful. At last it became so embarrassing that he left.

Not long afterwards he met the curate who had succeeded him.

"Well," he asked, "how do you get on with the ladies?"

"Oh, very well, indeed," said the other "There is safety in numbers, you know."

"Ah!" was the instant reply. "I only found it in Exodus."—*London Opinion*.

# Are You Physically Fit for Life Insurance?

## Do You FEAR Being Turned Down?

Is your heart right? Is your blood pressure normal? Are your kidneys functioning? Are you rheumatic? Are you prematurely old? Ask yourself these questions before you submit yourself for inspection to the insurance company's medical examiner.

Don't risk rejections. If you are turned down by one company, others are suspicious of you and you may never be able to get insurance. You can put yourself in condition to pass the insurance examination by taking, a little while in advance, my Course for the strengthening and upbuilding of the human body. My system works wonders in men who have become shattered in body and weakened in mental force and vital energy. Men well advanced in age, like those who have aged before their time from one cause or another, have restored themselves to vigorous manhood by adopting my Course and in a remarkably short period of time fitted themselves to pass the medical examination with flying colors—gaining in health and happiness themselves, at the same time gaining protection for their families through life insurance.

Strongfort—the Perfect Man

## Dope Won't Fool the Examiner

Surely every man of ordinary intelligence can grasp the importance of being physically fit before he applies for life insurance. Certainly he must realize he cannot dope himself to fool the examiner. Dope will not restore good heart action. Dope won't relieve blood pressure. Dope won't regulate kidney and bladder. Only through a course of treatment, by purely natural means, such as I provide, can the system be so attuned and harmonized that it will function properly and become a first-class risk for the insurance company for any amount you wish to insure your life.

## My Free Book Is A Revelation

This wonderful book contains a wealth of valuable information of vital importance to every man and woman. It points the way to health and strength.

"Promotion and Conservation of Health, Strength, and Mental Energy" is the title of this book, which will be sent free on receipt of a 10c. piece (one dime) for postage, etc.

Send for your copy right away—get an insight into Strongfortism—before you send for the life insurance examiner.

# Here Are Books—and Books

1620-1920

It was very foresighted of the Pilgrims to land on Plymouth Rock—or wherever they did land—in 1620, because this, their tercentenary, is the exact psychological moment for the re-writing of our history books. The rising generation shall no longer think of England as the brutal oppressor of the little colonies, but as the mother who gave us our most cherished ideals of freedom. That is the dominant note in the celebrations of the anniversary and the dominant note in the books which are being written about and because of it. Most of them are written for young people.

*The Argonauts of Faith*, by Basil Mathews, puts the story in dramatic form, focusing it about exciting and interesting incidents of the persecutions in England, the life in Holland, the "Mayflower" voyage and the dangers and hardships in America. It is a very readable account and the impression it leaves is an accurate one.

William Elliot Griffis' *Young People's History of the Pilgrims* is packed with interesting information, not only facts and events but the sort of things about manners and customs, clothes and games and cooking utensils, which delight the youthful, not to mention the adult, mind and give a vivid picture of the life of the past. The author has, however, an annoyingly priggish manner and he tends to paint the Pilgrims as rather unpleasantly noble, compared to the rest of mankind in the seventeenth century.

*The Founding of a Nation*, by Frank M. Gregg, tells the tale in the form of an historical novel, its hero and narrator a cavalier who stows away on the "Mayflower" and falls in love with a Pilgrim maiden. At fifteen, especially if feminine, one is apt to be partial to history in this form.

*Old Cape Cod, the Land, the Men, the Sea*, by Mary Rogers Bangs, takes a more scholarly viewpoint toward the Pilgrims and tells with historical ac-

curacy and in charmingly informal style of their adventures in settling the New World. It is a book well worth reading even if you have no predetermination to learn more about the Pilgrim colonists.

If you are going to make the pilgrimage to Plymouth this year you will find it worth while to read Agnes Edwards' *Old Coast Road, From Boston to Plymouth*, a pleasant, friendly guide book to Weymouth, Kingston, Duxbury and the other old towns along the route. It is charmingly illustrated with drawings by Louis H. Ruyl.

*The Argonauts of Faith*, by Basil Mathews. George H. Doran Co. *Young People's History of the Pilgrims*, by William Elliot Griffis. Houghton, Mifflin Co. *The Founding of a Nation*, by Frank M. Gregg. George H. Doran Co. *The Old Coast Road*, by Agnes Edwards. Houghton, Mifflin Co. *Old Cape Cod*, by Mary Rogers Bangs. Houghton, Mifflin Co.

## Traveling by Proxy

It requires a peculiarly exemplary character to read a book of travel with emotions of unmixed pleasure; the average mortal is bound to feel a certain gnawing envy of the writer. However, if it is a really good book of travel the pleasures of reading it outweigh the pains. The best thing a returned traveler can do is to give you not facts but atmosphere. Facts, when you start on the trip yourself, can be gathered from maps and timetables; what you want now is some of the sensations, feelings, emotions, of having been in Morocco or Bulgaria or China, as the case may be. Edith Wharton in *In Morocco* does this for you excellently well, partly because she is so impersonal, never intruding her own reactions, simply bringing up the scene around you with all its blinding sunlight, desert heat and vivid colors. There are facts enough, fascinating facts of history and art and architecture, but they are mingled with the atmosphere; not offered in place of it. Mrs. Wharton's trip was made in 1917 and as the guest of the French resident general and his wife she visited

places not always open to visitors, assisted at native ceremonies and had opportunities for coming into touch with the life of the country which do not fall to the lot of the casual tourist.

It is a curious fact that Americans who voyage to distant lands and write about them do it for the enlightenment of their fellow countrymen, but when a citizen of those distant lands comes to the United States and writes a book about us he expects to be read mainly by Americans. We have an insatiable curiosity concerning what other people think of us. One of the kindest of our recent critics is Philip Gibbs, whose *People of Destiny* might just as well be called, like its third chapter, "Things I Like in the United States." He writes delightfully of the adventure of life in New York, of different types of Americans, of England and America, of the American over seas. He looks determinedly on the bright side of the picture, but once in a while a sentence like this creeps in: "If I were a citizen of the United States I should be afraid—afraid lest my country should by passion, or by ignorance, or by sheer carelessness take the wrong way." It makes one wish that he would write a *Now It Can Be Told* about the United States.

*In Morocco*, by Edith Wharton. Charles Scribner's Sons. *People of Destiny*, by Philip Gibbs. Harper & Brothers.

## Talks with T. R.

John J. Leary, Jr., was a member of Roosevelt's "newspaper cabinet." For years he had opportunities of talking with Roosevelt intimately on every variety of subject, personal, political and international. For years he kept a series of notebooks in which he jotted down those conversations verbatim, with all their force and flavor and originality. Now, under the title *Talks With T. R.* he has published the contents of those notebooks. They are intensely interesting for the illuminating information they contain concerning Roosevelt's opinions on certain obscure or vexed topics, and particularly for their vivid picture of an extraordinary personality. Better than any photograph or any biography I know, they give you the feeling of having talked with the man in the flesh.

*Talks with T. R.*, by John J. Leary, Jr. Houghton, Mifflin Co.

## Another Ireland

The novelist is often more enlightening than the propagandist, chiefly for the reason that he isn't arguing, he's just telling you. No one at present is really enlightening on Ireland, but Patrick MacGill tells you more of what it is like than anyone we have met in a long time.

*Maureen* is the story of a peasant girl in Donegal, a terrible story in many ways and a curiously fascinating one. Mr. MacGill knows how to flash a scene so vividly before your mind that it haunts your visual memory for days

Underwood & Underwood

There is much of T. R.'s forceful personality in this sketch by Vincenzo Miserendino for a new statue of "the foremost American"

# Now As Never Before You Need THE ENCYCLOPÆDIA BRITANNICA

The ending of the great war brought a tremendous stimulus into every field of human thought and activity. In science—medicine, engineering, chemistry, physics, agriculture and aviation there have been epoch making discoveries and inventions. Art—painting, sculpture, music, literature and the drama have received their share of this new, vigorous interest. There has been a marked renaissance of reading. The industries have felt the stimulus in the demand for greater production, although business has had to contend with serious problems of labor and finance. There has come a new and intensified interest in social service, education and a new spirit in religion. People are taking a greater interest than ever before in athletics, in sports and games. As a direct result of the war and the participation of the United States in world affairs, there has been aroused a great incentive to the study of history and of foreign countries, their peoples, government, products, resources, customs and commerce. This tremendous quickening of thought and activity puts upon every man and woman a great responsibility to understand the meaning of the present day developments in science, art, industry, economics and politics. The necessity for authoritative, comprehensive and unprejudiced information has never been so great. The Encyclopædia Britannica, known for one hundred and fifty years as the standard authority and the greatest guide to accurate information among English speaking peoples, furnishes the foundation of knowledge most needed by the business man, the manufacturer, the worker in the industries, the scientist, exporter, importer, student of world affairs, the social worker and teacher.

Is America on the brink of a panic? Will under-production and lack of labor prevent a panic? Will the cost of living fall abruptly? Will wages continue high? Is the fall of the Bolshevik regime in Russia imminent? Will Germany fulfill its peace treaty obligations?

By means of the extraordinary articles in the Encyclopædia Britannica on economics, industries, politics, government, labor and capital you will be able to obtain a clear insight into the problems of today. The Britannica will aid you to understand the issues brought up in the political campaigns for President, on prohibition, on suffrage, on tariffs, on currency, waterways, transportation and on government ownership.

## A Treasure Chest of Knowledge

The Britannica is a complete library of knowledge on every subject. It discusses in a way that you can understand every branch of science, industry, literature, art, religion, inventions and engineering; history and race development; war and peace; architecture, astronomy, chemistry, sociology, education, steam, electricity, geology and geography, biography, law and physics. You and your family will find in the Britannica a liberal education. In answer to the hundred questions which every day come to your mind and to your wife's and children's minds, it will tell you more about everything than you can get from any other source.

## The Britannica in Women's Affairs

The Encyclopædia Britannica gives to the woman fundamental information on politics, on economics, child welfare, domestic science, on foods and their relative values, on hygiene, sanitation, home decorations, furniture, rugs and furnishings. As an educational influence the Encyclopædia Britannica is supreme. As an aid to children in school it is indispensable to supplement, interpret and broaden their knowledge on the subjects which they are studying.

## Printed on the Famous India Paper

These sets are printed on the genuine India paper—the beautiful, light, strong, thin but opaque sheet, which has proved an ideal medium on which to print the Encyclopædia Britannica, because it makes this great work more compact, much more convenient to handle and more inviting to read.

## MAIL COUPON TODAY

Mail to us today the attached coupon with your name and address and we will send you, postpaid, our 128-page illustrated booklet, which will give you full information about the Britannica and what it will mean to you and yours to have such a great work in your home; also, how we are able to sell it to you at so low a price on such liberal terms of payment.

Orders accepted from any point within the United States.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—Please send me, postpaid, your illustrated book, No. 17K, giving full information about the new Encyclopædia Britannica. Also tell me what I will have to pay for a set of the Handy Volume issue of the Britannica printed on genuine India paper.

The University of Chicago Press

5751 Ellis Avenue - Chicago, Illinois

afterward in something the manner of a dramatic bit of stage setting, and yet it is difficult to point to individual phrases and say, it is this and this that make the picture.

Another recent Irish novel, *The Wasted Island*, by Eimar O'Duffy, is less effective propaganda on two counts. In the first place it is not nearly so well written as *Maureen*, which is worth reading for its own sake even if you had never heard of Ireland; and in the second place it is definitely an argument, its characters indulging in much discussion and its action centers round the various Irish rebellions during and after the war. It is one-sided and its heroes are not very attractive characters, but it is interesting and informing.

Another Ireland altogether is Lady Gregory's, an Ireland of banshees and fairies, of charms and herbs and hidden treasure. "There's no doubt at all but that there's the same sort of things in other countries; but you hear more about them in these parts because the Irish do be more familiar in talking of them." Lady Gregory has talked with the people and collected a wealth of information on these strange and fascinating subjects. In *Visions and Beliefs in the West of Ireland* she has set it down in interesting, and alarmingly convincing fashion, most of it in the very words of the tellers.

Compounded of the same ingredients but very differently mixed is her latest play, *The Dragon*, an original combination of the very ancient with the very modern, of nonsense with allegory. It is highly entertaining and actable, readable too.

*Maureen*, by Patrick MacGill. Robert M. McBride & Co. *The Wasted Island*, by Eimar O'Duffy. Dodd, Mead & Co. *Visions and Beliefs in the West of Ireland* (First and Second Series) by Lady Gregory. G. P. Putnam's Sons. *The Dragon*, by Lady Gregory. G. P. Putnam's Sons.

## Between the Diplomats and the Deep Sea

Mrs. Norman de R. Whitehouse's account of her *Year as a Government Agent* is good reading for a number of different reasons. If you are a suffragist or a feminist, or just feminine enough to like to see a woman getting away with a man's job, then it will please you. If you like to watch any one, man or woman, successfully tackle a difficult proposition, then it will please you. If you are always glad of one more reason for "cussing the administration," then it will please you.

Mrs. Whitehouse was appointed Director for Switzerland of the Committee on Public Information in the winter of 1917-18 with comprehensive instructions to explain to the Swiss why America was in the war and what she was doing about it. The Director had to struggle with German spies and American diplomats, with a superfluity of languages and a shortage of gasoline, with suspicion and ridicule and hopelessly bad cable connections. She writes of important international work from an agreeably personal angle. The book has

the combined interest and charm that attaches to letters home written "without a thought of publication."

*A Year as a Government Agent*, by Vira B. Whitehouse. Harper Bros.

## In Darkest Mexico

Blasco Ibañez, whatever one may think of his novels, is certainly one of the greatest popular journalists alive. His shrewd, quick-glancing political insight, his wit, his sense of the picturesque, his fundamental common sense views of life, and the smooth, even flow of his style are all illustrated at their best in his little book on *Mexico in Revolution*. He is unsparing in his criticisms and has greatly offended many Latin-Americans by his remarks on Mexico; but, as he himself puts it, "Latin America is one thing. But the crowd of gunmen which is exploiting and dishonoring the poor people of Mexico is quite another." The fundamental trouble with Mexico is militarism, of a type just opposite to that of the late German monarchy:

"German militarism was based on tradition, on hierarchy, on order, and besides, it originated in the victories of 1871 and in the conquests of territory those victories resulted in. Mexican militarism is based on disorder, on the sudden attack boldly conceived, on the insurrection considered as a means of advancement.

This amateurish, swaggering, almost boyish militarism is well summarized in one descriptive sentence: "This time it is a pistol taking a general out to walk!"

There are vivid personal touches in the descriptions of Carranza, Obregon and other "liberators" whom Ibañez chanced to meet. Here, for example, is an anecdote which General Obregon tells against himself:

"You know I lost my arm in battle. After giving me the first treatments, my men set out to find my arm on the ground. They looked about in all directions, but couldn't find it anywhere. 'I'll find it for you,' said one of my aids, 'It will come back of itself. Watch me!'"

He took out of his purse a ten-dollar gold piece, an aztec, as we call it, and raised it above his head. At once a sort of bird, with five wings rose from the ground. It was my missing hand, which had not been able to resist the temptation to fly from its hiding place and seize a gold coin.

*Mexico in Revolution*, by Blasco Ibañez. Dutton Co.

## Swords Into Ploughshares

We heard much during the war, chiefly from the men serving as chaplains with the troops in France, about the necessity for a change in the attitude and methods of the Church if it is to appeal to the fighting man when he returns to civil life. We have had very few attempts, in book form, to put those principles into practise, which makes Thomas Tiplady's *Social Christianity in the New Era* particularly interesting. The author served for three years as a chaplain with the British forces in France. "I know," he says, "to some extent what the returning soldiers expect of the Church and the State. In the light of the New Testa-

ment and the revelations made by the war, I have tried to show what the attitude of the Church ought to be toward the social problems of our time and appeal to the Church to give a message to the community as well as to the individual." He discusses a league of churches, the Church and industry, the Church and the children. Here is the type of thought the book contains:

The Church will never bring peace to the industrial world by meddling with rates and wages and hours of labor. This is merely lopping off the branches. It must strike at the root of the evil. It must take away gold as the main objective of masters and men and put in its place an ideal. It must give business men a nobler target to fire at, and the rifle will be adjusted by those who use it. An artist needs money as much as a business man, but he would be ruined if he made it his chief aim. It must ever be to him a by-product.

You may not agree with the writer; you may consider him impractical and a dreamer; you may think his method of attack wrong, but if you are interested at all in the problem which faces the Church today you cannot but be interested in the fact that this is a man attacking the problem with some very definite suggestions for its solution.

*Social Christianity in the New Era*, by Chaplain Thomas Tiplady. F. H. Revell Co.

### Good Enough to Be Better

There is nothing in *The Explorer*, except the title page, to indicate that it is "by the author of *The Moon and Sixpence*." There are pages of rapid, clever dialog which are obviously the work of Somerset Maugham, writer of successful comedies, and which would be even more entertaining on the stage than they are in print; there are plenty of dramatic situations, some of them well carried thru; but the spaces between are arid, crossing them is heavy work. On the whole, the book gives the impression of an early effort hauled hopefully from the bottom of a desk drawer. Despite its faults it is an interesting story, tho the moral is quite unsound. You may possibly begin a marriage on the "I cannot explain, but you must have faith in me" basis, but can you carry it thru?

*The Explorer*, by W. Somerset Maugham. George H. Doran Co.

### Lest We Forget

It is not unlikely that future generations, looking back on the world war, will fix on Cardinal Mercier as the greatest of its dominant figures. Brand Whitlock in his *Belgium* has drawn a portrait which should last for all time, and now to supplement it comes a volume of letters under the title *Cardinal Mercier's Own Story*. The Archbishop's correspondence with German governors and officials from 1914 to 1918 makes, with very brief explanatory notes by Professor Mayence, of Louvain, a comprehensive history of the occupation, for there was no phase of his people's suffering which the cardinal did not feel it his business to alleviate if possi-

## READ A GOOD BOOK TONIGHT

### THE AGE OF INNOCENCE

By Edith Wharton

A brilliant picture of New York society in its heyday—the original "Four Hundred" in all its glory; its gala nights at the opera, its dinners, dances, fetes; its foibles, frailties, whims and virtues portrayed with unerring fidelity and sympathetic understanding. William Lyon Phelps says in the *New York Times*: "Edith Wharton is a writer who brings glory on the name America . . . the style is a thing of beauty from first page to last. 'The Age of Innocence' is one of the best novels of the twentieth century." \$2.00 net.

### MEMOIRS of the EMPRESS EUGENIE

By Comte Fleury

The intimate life story of one of the most romantic figures of the nineteenth century, compiled from statements, private documents and personal letters of the Empress and from letters and papers of illustrious members of the Court of the Second Empire. The *Atlantic Monthly* says: "It is for that world army of readers who can appreciate a thoroughly human story. It is a fair guess that no book will be more widely read or more earnestly discussed." Two vols. 1050 pages. \$7.50 per set.

### The New World

By Frank Comerford

A book all patriotic Americans should read. The author made a searching investigation of Bolshevism in Europe. He points out the perils that confront civilization from this source and offers a solution of the menace of world-wide revolution. \$2.00 net.

### The United States in the World War

By John Bach McMaster

The whole story of the great conflict told in vivid phrases. The *New York Tribune* says: "A masterpiece of selection and compression . . . will ultimately be accepted as a standard reference work on America's participation in the war." Two vols. Per vol. \$3.00 net.

### Morale

By G. Stanley Hall

A volume of genuine inspirational value, written by one of our deepest thinkers and most noted writers, who defines morale as the supreme standard of life and conduct. \$3.00 net.

### The Adventurous Lady

By J. C. Snaith

The rather startling adventures of a young lady of title who changes places with a governess. "Witty, amusing, as light and sparkling as sun-flecked foam. Mr. Snaith has the gift of making his people seem real."—*New York Times*. \$2.00 net.

### Lucinda

By Anthony Hope

A novel that will win many new readers for this distinguished author. The story of a stolen bride who passes through many hazards of fate and fortune. \$2.00 net.

### Pengard Awake

By Ralph Straus

The strange story of a man with two distinct personalities. A psychic mystery novel that takes rank with Stevenson's "Dr. Jekyll and Mr. Hyde." \$2.00 net.

### God's Smile

By Julius Magnussen

Amazing and startling revelations of supernatural influences that entered into the life of a noted playwright who is a skeptic and unbeliever. A book that has created a furor in Europe and which is being widely discussed in this country. \$1.75 net.

### The College and New America

By Jay William Hudson

A careful, comprehensive survey and appraisal of our college system, with a new and definite program for reconstruction of our methods of education. \$2.00 net.

### How to Reduce

By Antoinette Donnelly

A thoroughly practical book that tells stout people, or those who are gaining weight too rapidly how to get thin. \$1.00 net.

### Miss Lulu Bett

By Zona Gale

This powerful story of the upheaval in the placid life of a small-town old-maid has been hailed by critics everywhere as the literary event of the year. "Miss Lulu Bett" is without flaw. The book is eloquent with condensation."—*Atlantic Monthly*. \$1.75 net.

### John Seneschal's Margaret

By Agnes and Egerton Castle

Unquestionably the finest novel the Castles have written in years. The story of a man, who, losing his identity, is accepted as the son and heir of an old conservative family, and who finds himself confronted with strange problems of love and duty. \$2.00 net.

### Uncle Remus

By Joel Chandler Harris

Here are the original "Tar Baby" stories in de luxe form. Pictures in color by Kemble and Frost. Introduction by Thomas Nelson Page. A beautiful gift edition, bound in green silk cloth, stamped in gold. In a box. \$5.00 net.

ble, and there was no subject on which he feared to speak. It is the sheer courage of the letters more than anything else which makes them impressive, but they have also a dignity, a sobriety and a definite knowledge of facts which makes them peculiarly valuable at a moment when reparations and indemnities are under discussion.

*Cardinal Mercier's Own Story*, by His Eminence, D. J. Cardinal Mercier. George H. Doran Co.

## Poems of Many Moods

When Alfred Noyes reads aloud *The Elfyn Artist* and the other poems in his last volume he may make them beautiful for he has a magic voice, but in cold print they are dull and singularly unoriginal with only occasional flashes of charm. Their redeeming features are Mr. Noyes' ability to handle metre and the very evident pleasure he takes in writing. That pleasure is a quality quite lacking in many modern poets who write far better than Mr. Noyes. Take Edwin Arlington Robinson, for instance; he writes from deep thought about life, not from joy in it. He is not melancholy, he is too clear-sighted and vigorous, but he is more eager to express ideas than he is to express himself. Each one of the poems in *The Three Taverns* insists that you stop and think about it, tho its power lies not in the matter alone:

Along the path tall dusky dahlias grew.  
Any shadowy hydrangeas reached and swung  
Ferociously; and over me, among  
The moths and mysteries, a blurred bat  
flew.

Clement Wood, likewise, did not write his long dramatic poem *Jehovah* for the pure joy of it, in fact it is a little difficult to know just why he did write it. It deals with a dispute in David's time, between the Israelites and Kenites, as to which of them worshiped the true Jehovah, and it has, curiously, a flavor of *Beowulf* rather than of the Hebrew poets and prophets. It is written in a variety of verse forms, many of them interesting.

To change the subject abruptly:

I would make a list against the evil days  
Of lovely things to hold in memory:  
First, I set down my lady's lovely face.  
For earth has no such lovely thing as she;  
And next I add, to bear her company,  
The great-eyed virgin star that morning  
brings;  
Then the wild-rose upon its little tree—  
So runs my catalog of lovely things.

That is Richard Le Gallienne who tosses off ballades as easily and sweetly as if no one had ever invented free verse. Of course it is wrong to quote a single verse of a ballade, but this single verse cries for quotation because it epitomizes so well the poet's shining gifts, his joy, his tenderness, his love of beauty, and his ability to create beauty. It does not express, tho, that other quality which makes the poems in *The Junkman* such a delight to read, his sense of humor.

Witter Bynner is a poet of so many modes and shapes that it is well nigh impossible to hold and classify him. *The Canticle of Pan*, which gives the

title to his latest collection of poems, is an exquisite, fanciful communion between Pan and the Christ Child in the manger. Then there is "The Canticle of Praise," which was presented in the Greek theater at Berkley to celebrate the ending of the war. There are lyrics, there are dramatic dialogs, there are songs and there are strange, fascinating little things like this "Japanese Note":

This night last year,  
An old woman dusted the paper shutter  
Very carefully  
That the shadow of the pine-tree  
Might be quite perfect.

*The Elin Artist*, by Alfred Noyes. Frederick A. Stokes Co. *The Three Taverns*, by Edwin Arlington Robinson. Macmillan Co. *Jehovah*, by Clement Wood. E. P. Dutton & Co. *The Junkman*, by Richard Le Gallienne. Doubleday, Page & Co. *The Canticle of Pan*, by Witter Bynner. Alfred A. Knopf.

## For Those Who Write

**MAKING ADVERTISEMENTS AND MAKING THEM PAY**, by Roy S. Durstine (Charles Scribner's Sons). A somewhat sketchy but enlightening book on the principles of advertising writing, well illustrated by facsimile reproductions of successful advertisements. Mr. Durstine, himself formerly with the New York Sun, is now associated with Bruce Barton, formerly of Collier's, in an agency known as Barton, Durstine & Osborn, Inc.

**THE LURE OF THE PEN**, by Flora Klickmann (Putnam). A book of sound and shrewd advice for literary aspirants by a journalist who is weary of rejecting manuscripts on account of avoidable faults.

**IF YOU DON'T WRITE FICTION**, by Charles P. Cushing. (McBride Co.) This is a practical guide book to the writing of "news stories" for the newspapers and magazines. It is so practical that it not only tells you how to write but how to market your product.

## Stories

**SHORT STORIES FROM THE BALKANS**, translated by Edna Underwood (Marshall Jones Co.), is the misleading title of a collection of peasant tales from several countries of eastern Europe, including Bohemia and Hungary, as well as the Balkan States properly so called. These stories are for the most part characterized by the same utter simplicity of style, the same grim, and often unpleasant realism and the same mordant irony typical of the Russian novel. The Slav of the south is literary brother of the Slav of the north.

**THE GORGEOUS GIRL**, by Nalbro Bartley (Doubleday, Page & Co.). A good story for a lazy day. The old plot of a man's choice between tinsel feminine frills and sterling simplicity is entertainingly worked out.

**FURTHER CHRONICLES OF AVONLEA**, by L. M. Montgomery (Page Co.). Stories of the Avonlea folks first made famous in "Anne of Green Gables." They are likable, true-to-life people and the stories are good reading, tho the sentiment is sometimes laid on a bit thick.

**HUNKINS**, by Samuel G. Blythe (George H. Doran Co.). A good story, somewhat obviously moral but entertaining just the same. It tells how an ex-soldier tried to put into practice in civil life the ideals of citizenship he learned in the army and how he ran for mayor and made a fight for clean politics against the ring that controlled his home town.

## France

**GOVERNMENT AND POLITICS OF FRANCE**, by Edward M. Sait (World Book Co.). The one best brief manual in the English language on the French constitution in form and practice. Its political data is up to date; covering the election of 1919. An indispensable work of reference for the college library.

**THE SEVENTEENTH CENTURY**, by Jacques Boulanger (Putnam Sons). The third volume in "The National History of France" covers the important period of Richelieu and Louis XIV in both thoro and readable style. The chronicle of events, tho carefully presented, is subordinated to the character development of the two very different men who dominated their time.

## England

**PARLIAMENT AND REVOLUTION**, by J. Ramsay Macdonald (Scott and Seltzer). The English

BOOKS**

## For Those Who Read Good Books

### THE AUTOBIOGRAPHY OF MARGOT ASQUITH

These memoirs of Margot Asquith will fulfill the keen expectations aroused on both sides of the Atlantic. Written with the dash and candor that characterize the brilliant wife of the ex-Prime Minister, the book has not a dull moment. Illustrated. 2 Volumes. Boxed.

### THE LAST DAYS OF THE ROMANOV

**George G. Telberg and Robert Wilton**

The tragic story of the fate of the Royal Family as revealed in the official statements of witnesses; powerfully supplemented by the thrilling account of Mr. Wilton, for sixteen years Russian correspondent for the London Times, who helped find the bodies and who escaped finally from Siberia in disguise with one of the three court records. Illustrated.

### THE ROMANCE OF MADAME TUSSAUD'S

**With an Introductory Essay by Hilaire Belloc John T. Tussaud**

These colorful memoirs of "history made visible in wax" spread out the picturesque panorama of social, political and literary life since the French Revolution. Illustrated.

### INTIMATE PAGES OF MEXICAN HISTORY

**Edith O'Shaughnessy**

The intimate knowledge contained in this book, written from long residence in that revolution-ridden land, may lead us out of the straits to which our diplomacy has brought us.

### MEN AND BOOKS AND CITIES

**Robert Cortes Holliday**

The genial philosopher of WALKING-STICK PAPERS takes a fruitful jaunt to points west, and returns with much literary loot.

### A GARDEN OF PEACE: A Medley in Quietude

**By the author of "The Jessamy Bride" F. Frankfort Moore**

An old-world garden within whose ancient walls the mellow talk ranges easily from bees and briar-roses to literature, drama and art. Illustrated.

### OUR WOMEN: Chapters on the Sex Discord

**Arnold Bennet**

A volume of very provocative comment and shrewd observation on the most delightful, if the most exasperating, thing in existence.

### ADVENTURES AND ENTHUSIASMS

**Author of "The Vermilion Box"**

A Chicago critic writes, "E. V. Lucas, bless him! has the magic gift of endowing everything he writes about with charm and fascination."

Illustrated.

### THE ABANDONED FARMERS

**Irvin S. Cobb**

**His Humorous Account of a Retreat from the City to the Farm**

Deliciously amusing—and tragic—tales of one who returns to the soil to "enjoy the pleasures of a landed proprietor's lot."

### SOUTH SEA FOAM

**A. Safroni-Middleton**

"Mr. Safroni-Middleton is an adept at conveying the witchery of the moonlight nights, the lure of the weird music and the loveliness of the damsels of far-off isles."—New York Times.

### A POOR WISE MAN

**Mary Roberts Rinehart**

A drama of the struggle of the new spirit in America against the fetters of older generations. Written in the style of DANGEROUS DAYS.

### NIGHT AND DAY

**Virginia Woolf**

A novel of great maturity and depth, a worthy successor to THE VOYAGE OUT, its theme the potentialities in love of five young persons.

### WOUNDED SOULS

**Philip Gibbs**

Into this, his first novel since the Peace, the famous war correspondent pours the vivid spirit which makes all his works so tremendously alive.

### THE CAPTIVES

**Hugh Walpole**

The author of "The Secret City" and "Jeremy" calls this his most important work. It deals with London life and is the study of a girl and two men—particularly of Maggie Cardinal.

Read "The Bookman"—a magazine for everybody who likes books.

**GEORGE H. DORAN COMPANY Publishers New York**

# ABINGDON

## BOOKS *that Count*

### THE MAN WHO DARES

And Other Inspirational Messages for Young People

By Leon C. Prince

"Professor Prince, who holds the chair of History in Dickinson College, well known for faultless English and brilliant thinking, publishes several addresses to young people that are full of helpfulness. The first gives the title to the volume; Square Pegs in Round Holes, the Short Cut, the Quest of Wisdom, and the American Soldier are the other subjects."—The Methodist. Net, \$1.00, postpaid.

### A REEL OF RAINBOW

By F. W. Boreham

Another Boreham book. Original, epigrammatic, challenging. Fully maintains the author's wide reputation as a thinker and writer of unusual versatility and power. Net, \$1.75, postpaid.

### THE BRIDE OF MISSION SAN JOSE

A Tale of Early California

By John Augustine Cull

A love story of early Spanish days. At once there is a vision of pale gray walls, chiming bells, scarlet bloom—and romance. And here they all are, woven into a charming love story, together with interesting light on the strife between England and America over California. Net, \$2.00, postpaid.

### BERGSON AND REALISM

By Ralph Tyler Flewelling

This new volume by Professor Flewelling is, first, a critique of Bergson, showing his deficiencies on the side of Philosophy and Religion; second, a constructive discussion of Personal Realism, aiming to show that Personality is the supreme metaphysical and spiritual reality. Net, \$2.00, postpaid.

### MY NEIGHBOR THE WORKING MAN

By James Roscoe Day

Chancellor of Syracuse University

"A vigorous, straight from the shoulder book, written by one who was himself a working man. Americanism of the old, individualistic, successful type, whose message is not yet outgrown. A fearless exposure of the sinister forces underlying certain forms of social unrest. Labor unions are offered much wholesome advice."—The Expositor, Cleveland. Net, \$2.50, postpaid.

### SOME ASPECTS OF INTERNATIONAL CHRISTIANITY

Mendenhall Lectures, Fifth Series, Delivered at DePauw University

By John Kelman

"John Kelman correlates the problems of modern Christianity with the need of constructive statesmanship in international relations. Kelman points out that the Christian ideal of the brotherhood of man is of necessity an international ideal; he also shows how this sense of universal brotherhood is not inimical to patriotism, any more than love of country is inconsistent with the narrower devotion to one's immediate family."—San Francisco Chronicle. Net, \$1.00, postpaid.

Prices are subject to change without notice

## Book Talks

IN view of the ever increasing number of books that, in spite of the paper shortage, make their appearance with each new season, the problem of "what books to buy" becomes more and more acute. Economy and common sense suggest that only such books as have an element of permanence are worthy of a place on the shelves of the average home. The public and circulating libraries can be depended upon for such transitory matter as, once read, is put aside. But for constant reference; for the mental stimulus that is required by the man or woman of culture, there is demand for the books that really count.

To meet this demand the Abingdon Press presents an extensive list of books that, from the point of interest and breadth of view more than fulfill these requirements. The fact that it bears the Abingdon imprint is guarantee that a book is worth while. On the right, selected from our lists, are a few titles that should have permanent place in your library.

## THE ABINGDON PRESS

NEW YORK

CINCINNATI

## English Marble, Mantel and Hob Grate

## Marble and Wood Mantels and Fireplace Fixtures

Labor Party and pacifist leader criticizes with keenness, moderation and good temper the Soviet system of Government. He believes that representative institutions of the Parliamentary type are superior to representation on a basis of occupation only. He is unwilling to be severe on the Russian Bolsheviks, but he says that even if history justifies them "it certainly will not their copyers" in England.

ENGLAND AFTER THE WAR, by Frank Dillrot (Doubleday, Page Co.). A thoughtful and interesting study of the labor problem, the Irish problem, the political situation and the personality of the dominant figures in British politics. The whole kaleidoscope of English life from international policy to sport and journalism is passed in review and an average common sense English judgment passed on all persons and institutions.

## Finance

TAXATION IN THE NEW STATES, by John A. Hobson (Harcourt, Brace & Howe). The leading British economist of the day gives advice to his countrymen on the best way of meeting the financial burdens of the post-war period. Favors graduated direct taxation and is not averse to a special capital levy, but argues strongly against taxes on consumption and indirect methods of raising revenue. Worth the attention of all students of economics, legislators and taxpayers in the United States as well as in Great Britain.

THE ABOLITION OF INHERITANCE, by Harlan Eugene Read. (Macmillan Co.) The case against inherited wealth, written for the general reader. The ethical and economic arguments are convincingly given and an eloquent plea for a change in our inheritance system is made.

THE FLOW OF VALUE by Logan Grant McPherson (Century). An analysis of the meaning and significance of value, cost, price, capital and similar word-counters of economic thought.

## America Today

THE NON-PARTIZAN LEAGUE, by Herbert E. Gaston (Harcourt, Brace & Howe). A clear, temperate, well-informed statement of the policy, history and organization of the Non-Partizan League by one of its leaders. Defends the League very plausibly against the charge of unpatriotic conduct during the war and exposes many popular errors as to its domestic policies. An indispensable book for the study of Middle Western politics.

THE NEW CIVICS, by Roscoe Lewis Ashley (Macmillan). The ideal school textbook for a general study of modern political problems in America, rather than for "civics" in the limited sense of constitutional structure.

AMERICA AND THE NEW ERA, edited by Elisha M. Friedman (E. P. Dutton & Co.) A comprehensive symposium by leading Americans on the problems of social reconstruction. The significance of the war, the future of immigration, women in industry, new demands in education, social hygiene, are some of the topics discussed by experts in such a way as to stimulate the average man's thought and interest.

THE FOREIGN TRADE OF THE UNITED STATES, by Thomas F. Ford and L. Cummings Ford (Scribners). A broad survey of the problems which confront the American exporter and importer. Should be of value not only to the student of economics but to the practical business man who hopes to enter a foreign market.

## Poetry and Art

COLLECTOR'S LUCK, by Alice Van Leer Carrick (Atlantic Monthly Press). A charmingly illustrated and delightfully written little guide to the world of colonial furniture—stenciled trays, glassware, counterpanes, andirons and all the rest of it.

THE KINDS OF POETRY, by John Erskine (Duffield). A readable little book of essays on standards of poetic criticism, by a professor who is himself a true poet.

SELECTIONS FROM SWINBURNE, edited by Edmund Gosse and Thomas J. Wise (Doran). If you like any of the Swinburnes: the sensuous lover, the alliterationist, the revolutionist, the exuberant patriot, the sweet singer of the sea and of childhood, you will find something in this collection to your taste.

SKETCHES OF GREAT PAINTERS, by Edwin Watts Chubb (Stewart and Kidd). Raphael, Michael Angelo, Rembrandt, Titian, Corot, Millet, Whistler, and many others of the famous painters, ancient and modern, are presented in these essays so that the reader absorbs real information concealed in a sugar coating of charming literary style. There are a score of excellent illustrations.

WM. H. JACKSON COMPANY 2 West 47th Street, New York

746 S. MICHIGAN BLVD., CHICAGO

# LIPPINCOTT BOOKS

"The Book has Dash, Fire and Romance."—*The Outlook*.

## No Defence

GILBERT PARKER'S Great Romance. "Has dramatic situations and incidents; vivid pictures of West Indian forest and plantation life, and an appealing love tale."—*THE OUTLOOK*. The Irish and English temperaments are contrasted in many dramatic scenes. In "NO DEFENCE" Gilbert Parker has gone one step higher in his literary career. 4 illustrations, \$2.00.

## Seeing the Far West

By JOHN T. FARIS. A remarkable panorama of the Wonderland of America, revealing the scenic glories of the states from the Rockies to the Pacific in the text and with the 113 illustrations and two maps. The most complete and comprehensive volume on the territory covered. Handsome octavo, \$6.00.

## The Book of Job

By MORRIS JASTROW, JR., Ph.D., LL.D. "A noble book—all men's book," wrote Carlyle, yet the soul, the beauty and the living fire of it hidden beyond a veil of conflicting interpretations. It has been for Dr. Jastrow with his rare insight and charm to give us this grandly conceived new interpretation of the original masterpiece. Frontispiece. Ornamental cloth, \$4.00.

## The Orient in Bible Times

By ELDER GRANT. The biblical gift book of the year for Bible readers of every denomination. It makes the Bible more intensely human and interesting. 30 illustrations, \$2.50.

## In Old Pennsylvania Towns

By ANNE HOLLINGSWORTH WHARTON. The picturesque, the historic, the social, and human have been gathered and woven into this entertaining chronicle. A valuable addition to the literature of earlier days, replete with entertaining information for the traveller as well. 32 illustrations, handsome octavo, \$5.00.

## Cloudy Jewel

By GRACE LIVINGSTON HILL (Mrs. Lutz). The story of Julia Cloud, family drudge, and her rejuvenation, results in an exquisite romance and a cheerful story as heart-satisfying as a fresh-blown rose. Frontispiece, \$1.90.

## Happy House

By JANE ABBOTT goes steadily on its way to greater and greater success. It is proving one of the most popular stories of the season. Frontispiece, \$1.75.

## Anne

By OLGA HARTLEY, is a comedy with just that touch of sadness that brings laughter near to tears. \$1.90.

## New Books Entertaining and Useful

**BOOK PLATES**, by FRANK BRANGWYN, is a collection of 70 book plates, every one a little masterpiece in line and tone, splendid examples of Brangwyn's art. Decorative cloth, \$12.50. **A BOOK ON ANGLING**, by FRANCIS FRANCIS, will quicken the pulse of every fisherman, angling from every angle, with many illustrations, \$4.50. **TRAINING FOR LIBRARIANSHIP**, by J. A. FREIDEL; this new volume in the **TRAINING SERIES** will introduce many to a profession which offers great possibilities at the present time. Illustrated, \$1.50. **THE RABBIT BOOK**, by PROFESSOR WASHBURN; a complete, practical manual on the care and breeding of all kinds of meat-and-fur-producing rabbits. 61 illustrations, \$2.00. The new sixth edition of **PENNELL'S "LIFE OF WHISTLER"**, just published, comes as practically a new book. It has been revised and contains new material and new illustrations. Profusely illustrated, octavo, \$6.50. **"MRS. WILSON'S COOK BOOK"** suits every purse. Menus of the simplest to the most elaborate can be prepared from the hundreds of new recipes. Women will appreciate the author's new method of presenting them. \$2.50. **"THE CHARM OF FINE MANNERS"**, by MRS. STARRETT, will be a great boon to fathers and mothers. In a charming way the author writes about behavior, self-culture, habits, conversation, etc. \$1.00. **YOUR BOYS AND GIRLS SHOULD HAVE THE BEST**. We have a splendid selection of new LIPPINCOTT'S MERIT BOOKS FOR BOYS AND GIRLS. Write for circulars.

PUBLISHERS PHILADELPHIA

## America Yesterday

IN THE DAYS OF THE PILGRIM FATHERS, by Mary Caroline Crawford (Little, Brown & Co.). An oft-told story well retold. An account of the social conditions and common life of the first New England settlers, emphasizing the distinction between the Plymouth "Pilgrims" and the Puritans in general.

THE FRONTIER IN AMERICAN HISTORY, by Frederick J. Turner (Holt). Altho a Harvard professor, no man has better caught the spirit of the west and its distinctive contributions to the American tradition. He shows how the living fire of individualism, democracy and courageous adventure burned along the frontier decade after decade; whether the frontier ran thru western Massachusetts, Pennsylvania, Ohio, Kansas or Colorado.

CONSTITUTIONAL HISTORY OF THE LOUISIANA PURCHASE, by Everett Somerville Brown (University of California Press). This account of the constitutional procedure of the organization of the Louisiana territory is especially interesting for the light it throws on the attempt to exclude slavery from the country west of the Mississippi after the purchase.

## Letters and Essays

IT'S A GOOD OLD WORLD, by Bruce Barton (Century). And so it is a good world, if you have the same rich appreciation of life, the same whimsical humor and the same ripened, sunny common sense as the writer of these jolly essays.

NUOVA, OR THE NEW BEE, by Vernon Kellogg (Houghton, Mifflin Co.). A romance of life in a beehive—with skillful comparison to our life in the world-hive—which will entertain children from five to fifty. The illustrations by Milo Winter are distinctive.

WHEN JOHNNY COMES MARCHING HOME, by Mildred Aldrich (Small, Maynard & Co.). Letters from the Hilltop on the Marne written just before the armistice and while the Peace Conference was sitting at Versailles. They give the reaction to peace of the French countryside, a thing which it is well for us to know.

LE PETIT NORD, by Anne Grenfell and Katie Spalding (Houghton, Mifflin Co.). Informal and entertaining letters from the wife of the Labrador Doctor, describing the job of mothering an orphan asylum in Newfoundland. There is no picture of the work of the Labrador Mission as a whole, but the book is delightful reading and adds interesting sidelights to her husband's accounts.

THE COLLEGE GATEWAY, by Charles F. Thwing (The Pilgrim Press). Baccalaureate addresses by the President of Western Reserve University, who knows how to speak to young men and women, how to make them aware of their privileges, how to hold up before them ideals and opportunities in a guise that makes them infinitely desirable.

## Plays

**SALOME AND OTHER PLAYS**, by Oscar Wilde. A MODERN BOOK OF CRITICISMS, edited by Ludwig Lewisohn (Boni & Liveright). The latest additions to the admirable Modern Library, which is putting more and more worth while books into inexpensive pocket form. The first volume contains, beside "Salomé," "The Importance of Being Earnest" and "Lady Windermere's Fan"; the second, selections from French, German, English and American critics, a diverse group ranging from Francis Hackett to Anatole France.

THE CRAFT OF THE TORTOISE, by Algernon Tassin (Boni & Liveright). An ingenious and sometimes witty satire in the form of a play in four acts with the same characters; the first act set in prehistoric times, the second in the patriarchal period, the third in medieval times and the fourth in the present. The theme of all of them is how the woman with the aid of the priest circumvents the man; the triumph of shrewdness over strength, of femininity over masculinity.

## Sport

WINNING FOOTBALL, by William W. Roper (Dodd, Mead). A readable unusually valuable book for anyone who is coaching football, from varsity material to the gang in the backyard. Mr. Roper has been football player, fan and coach for twenty-five years; it was he who turned out Princeton's winning team in 1919.

FOOTBALL WITHOUT A COACH, by Walter Camp (D. Appleton & Co.). Practical advice that tells boys who want to play football how to get in training, to organize the team, to practice effectively, to work up important plays, to take proper care of themselves, to win the game. The book comes as near to taking the place of an expert coach as printed words can.

For Chilly  
Autumn Mornings

**USALYTE**  
A TWIST OF THE WRIST

USALYTE, the extraordinary heater, robs the Fall and Winter morning of its sting and makes early rising a pleasure.

Your room is flooded with heat almost instantly by a mere twist of the wrist!

Usalyle is an absolutely new, safe, quick and cheap means of using gas for heating purposes. It will pay for itself a dozen times over, the first season, by the coal it saves.

In two styles: for heating only or, with the new and exclusive in-built mantle, for heating and lighting.

For heating only, \$1.75

For heating and lighting

## A NEW DICTIONARY ON A NEW PLAN

"For compactness, clarity and simplicity I believe it has no equal."—Frank P. Graves, Dean of the School of Education, Univ. of Pa.

THE  
**WINSTON**  
**SIMPLIFIED**  
**DICTIONARY**

Defines Every Word so that its Use and Meaning can be Instantly Understood

Edited by WILLIAM DODGE LEWIS, A.M., Ph.D., Deputy Superintendent of Public Instruction, State of Pennsylvania, and EDGAR A. SINGER, Ph.D., University of Pennsylvania

## Unlike Any Other Dictionary

A new and original work, not an abridgment or an adaptation from a larger work.

Contains a carefully selected vocabulary of all the words in common use, with correct pronunciation.

Includes new words such as estaminet, teleferica, Bolsheviki, blimp, Blighty, jazz, soviet, Menshevik and hundreds of similar new words that have recently come into use.

Every entry is made clear. No words are defined in terms of themselves or more difficult words, but every word is explained in such simple language that only a single reference is needed.

### Typical Endorsements

S. H. Clark, University of Chicago: "Its superiority over other dictionaries is very evident."  
F. A. Hathaway, Supt. Public Instruction, Jacksonville, Florida: "It is in a class by itself."

## What British Labor Wants

(Continued from page 216)

on all fours with a girdle around their waists and harnessed with a chain between their legs to the cart they drew.

Women and children were also employed in great numbers in the cotton mills; the children were "apprenticed"—that was the term with which this gross and cruel slavery was glossed over. Many of these little ones were collected from the workhouses of the country; the mill owners systematically kept in touch with the overseers of the poor. Boys and girls together, they were worked for sixteen hours a day, day shifts and night shifts; they were housed in pent-up buildings adjoining the factories and the beds in which they slept were said never to become cold, for as one batch of these tiny workers went to rest the other batch went to the looms and only half the requisite number of beds were used and as there was often no discrimination of the sexes, disease, misery and vice grew like a fungus.

Lord Shaftesbury, speaking in the House of Lords in 1873, recalled how in the earlier period of the factory movement he waited at the factory gates to see the children come out—a set of sad, dejected, cadaverous creatures. In Bradford, he said, "the proofs of long and cruel toil were most remarkable. The crippled and distorted forms might be numbered by hundreds, perhaps by thousands. They seemed to me, such were their crooked shapes, like a mass of crooked alphabets."

The Cotton Mills Act, passed in 1819, limited the age at which children might work in factories; the time of their labor was also limited—to seventy-two hours a week! Some years later these hours were reduced to sixty-nine per week and in 1833 a law was passed fixing a maximum of forty-eight hours for children and sixty-nine for young persons, whilst night work for children under eighteen was prohibited. Provision was made for daily school attendance.

In 1840 the first Mining Act prohibiting underground work by women and boys under ten years of age was passed and four years later child labor was restricted to six and a half hours a day. As a counterpoise to this half time system the employable age was reduced to eight and in 1847, after a bitter struggle, a Ten Hours Bill was passed restricting women and young persons to ten hours' work a day.

Between 1845 and 1861 industries allied to textile manufactures were brought within the scope of factory legislation, which was extended so that it applied to small workshops as well as the great mills. Not until the Factory and Workshops Acts of 1901 and 1907, however, was the age at which children could be employed as half-timers raised to twelve, and we had to wait until the great Education Act of 1918 before the employment of children under the age of fourteen was abolished.

## Improve Your Memory In One Evening

Thousands have improved their memory thru this big secret.  
You can, too.

THE easiest way for impressions to reach the brain is through the sense of sight. And pictures, whether actually seen—or seen only in the imagination—are most easily remembered. Just looking at names, faces or numbers is the hardest way to remember them. You don't create a vivid impression of them on your brain.

Let me prove to you how easy it is for you to improve your memory thru thinking in pictures. Let me send you—on approval—the seven lesson Roth Memory Course. Let me prove to you that my method will enable you to remember names, faces, dates, telephone numbers, events, appointments, in fact everything you want to remember.

### Send No Money

Merely mail the coupon and the complete Roth Memory Course will be sent you by return mail. Examine the course for five days free. Then, if it isn't more than you expected—if it doesn't improve your memory the first evening, send it back and you won't owe a cent. Pay only \$5 if completely satisfied. Mail coupon at once.

### INDEPENDENT CORPORATION

Dept. R 319 Sixth Ave., New York

You may send me the Roth Memory Course on approval. Within five days after receipt I will either remit it or send you \$5 in full payment.

## FOR THE BUSY EXECUTIVE BOOKS THAT TELL HOW, WHEN AND WHERE

Sent on 10 days' approval, ask for them on your letterhead

### Employees' Magazines

by Peter F. O'Shea, Organizer and Consulting Specialist on House Organs

Employees' house organs, properly conducted, can aid the management by promoting co-operation, by education, by improving morale and in other ways. Mr. O'Shea tells you the kind of articles that can be used most profitably and how to get them from the employees themselves, also practical hints about the editorial staff, scheduling of work, etc. Practical from cover to cover. \$1.80 postpaid.

### Standard Practice in Personnel Work

by Eugene J. Benge, of the Department of Industrial Relations, Atlantic Refining Company; formerly Fellow in Industrial Research, Carnegie Institute of Technology. Mr. Benge has the advantage of practical experience in industrial employment and Army Personnel Work, plus the results of intensive study and research of personnel problems—a rare combination. He presents the methods of selection, training and retention that have proved successful in practice. About 300 pages of workable suggestions. \$3.00 postpaid

### 2400 Business Books and Guide to Business Literature

An analytical list of books, directories, periodicals and other worth-while printed matter on every phase of business, in simple alphabetic arrangement. Tells you where to find the very book or perhaps only the chapter of a book that deals with the problem in hand. 456 pages. \$5.00 postpaid.

### Industrial Relations Series

3 volumes by Daniel Bloomfield, associate editor "Industrial Relations," partner of Bloomfield & Bloomfield, Boston; consultants in Employment Management and Industrial Relations.

### Employment Management

### Labor Problems

### Modern Industrial Movements

\$2.40 each  
postpaid

In these three compact volumes you find the most important pronouncements, by recognized authorities, on such questions as: Labor Maintenance; Supply of Labor; Cost of Labor; Turnover; Causes of Friction and Unrest; Labor Disputes and Adjustments; Limitation of Output; Co-operative Movements. Arranged in logical sequence for the busy executive who wants to get at the root of the matter quickly.

Any and all of these books will be sent on 10 days' approval if asked for on your letterhead

Write for specimen pages, prices, etc. and FREE Pocket Maps per IND.

These big strides were not made until labor had become a power in the land; let us go back for a moment and follow the progress of trade unionism from the repeal of the Combination Laws. This concession was succeeded by a mighty struggle. A movement under the title of The Grand National Consolidated Trades' Union was started by Robert Owen and in a few months had a membership of half a million, but this union was eventually disbanded in consequence of not only private employers but also the Government in its workshops compelling the workers to resign all connections with the unions and to sign the "document" to that effect. Trade unionists were prosecuted in great numbers under the Master and Servant Act and were often summarily arrested and condemned upon a mere complaint of misbehavior lodged by the employer. Strike riots were suppressed by the military and men were punished solely for having announced a strike or for having acted as a delegate to it.

Even up to 1869 the agreement to strike and the announcement of a strike by placards was frequently punished as intimidation, and the Master and Servant Act was not repealed until 1875 when peaceful picketing was permitted and "violence and intimidation" became a matter of common law.

Despite all these efforts to kill trade unionism, however, the unions steadily grew and by 1902 about one million five hundred thousand workers belonged to unions.

It was at the Trade Union Congress of 1899 that a resolution was first passed in favor of the establishment of a joint committee of trade union and Socialist bodies with the object of promoting direct representation in Parliament, but only two candidates out of fifteen who went to the polls—Keir Hardie and Richard Bell—were returned at the election of 1901. In that year, however, the House of Lords delivered a judgment in relation to a strike of miners at Taff Vale the preceding year and that judgment threw down the belief that an act of 1871 afforded absolute protection to trade unions in their collective capacity for a tortious act committed by any one of its officials or members, and this aroused so much indignation that the unions awoke to new political life with the result that in the election of 1908 no fewer than twenty-nine candidates of the Labor Representation Committee were returned to the House of Commons and in 1910, with the accession of the miners to the Labor party, the number of Labor members was increased to forty.

(To be continued)

The road was shady, the engine had stopped.

"Tell me," she said, gently taking her head from his necktie, "Why is it the moon always seems so much bigger in the summer than in the winter?"

"Because," he answered, "it has to be enlarged to take care of the rush on business."—*Pennsylvania Punch Bowl.*

## Tours and Cruises

### SOUTH AMERICA

A Cruise—Tour  
January 29th  
70 days—\$2200 up

Including the best there is to see in South America and the celebrated trip over the Andes. Down the west coast on the luxurious Pacific Line steamer, "Ebro"—up the East coast via the Lamport & Holt Line. Seventy days of pleasure on land and sea. An extended program of sight-seeing in all the principal cities of South America.

### WEST INDIES Cruises

23 days under  
Tropical skies  
\$450 up

January 15th, S. S. "Ulua"; February 19th, S. S. "Tolosa," of the Great White Fleet. These new steamers, built for cruising in the tropics, offer the comforts of an ocean liner. Visiting Havana, Santiago, Port Antonio, Kingston, Cristobal, Panama Canal, Port Limon, San Jose and Havana.

### Tours To the ORIENT

Honolulu, Japan, Manchuria, North and South China and the Philippine Islands. Sailing from Vancouver January 13; from San Francisco January 24, February 5 and 20, March 16, April 2 and 30, May 28 and June 25; from Seattle March 11. Small parties under personal escort. Write for details.

### CALIFORNIA and FLORIDA Tours

Conducted tours leaving each week from the middle of January throughout the winter to California and Florida. Stopover privilege enabling individuals to return independently or with a later tour. Write for details.

## Talk Convincingly— and the World Is At Your Feet

**W**HY can one man sell where another fails? Why can one man get the sought-after job when another, better qualified, is turned down? Why does everyone "believe in" one man and have no confidence in another, who really has as much ability? The thing that counts is not only what you say but how you say it.

If you are interested, write for free booklet called "The Secret of Being a Convincing Talker—How I Learned it in One Evening."

**THE INDEPENDENT**

311 Sixth Avenue New York

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

### English, Literature and Composition

### History, Civics and Economics

#### I. What British Labor Wants.

1. Mr. Thomas makes this first chapter all about British labor in the last century. Why does he give so much space to the past? Make a plan for a series of three chapters on American labor, beginning with an historical chapter, and then, when Mr. Thomas' other two chapters come out, see how nearly your outline parallels his.

#### II. Do You Want to Lose Your Parks?

1. If you have ever been in any great national park or playground, write something about it that allies you with Mr. Mather in defense of the parks. If you saw an instance of some one's being helped in any way by the park, make a story of it. Or, if you can, you might make a poem or a description that would show what you yourself got out of the experience.
2. Mr. Mather is talking mainly about the great western parks, remote from cities and city problems. Get up a debate of your own on the question of city parks. For instance: Resolved, that Central Park (or Lincoln Park, or Prospect Park, etc.) be retained as a city playground; or, Resolved, that the park be built up with model tenements, to relieve congestion and improve housing conditions thruout the city.

#### III. The Birth of a New Religion.

1. Get together all the material you can find about the people that have started religions; there are a number of things that you can do with it. Write a discussion based on Dr. Slosson's statement that many religious movements have owed their origin to women. Or write an essay that shall be a sympathetic study of a number of such originators.
2. There has been, since the war, a striking growth of belief in mystic creeds and claims. Write a comparative study of any recent religion you know about and this new Japanese cult, considering as many aspects as possible—origin, doctrine, method, etc.—as basis for comparison.

#### IV. A Penitential Office.

1. Read Miss Wilkinson's poem and understand it. Can you find, looking anywhere into our national life, some fact or incident to illustrate concretely the meaning of each stanza? Write a paraphrase of the poem, substituting for the symbolic verse your own prose fact.
2. Pick out five or six modern American poets who, like Miss Wilkinson, write of America, her national life and temper and ideals. For instance, there is Carl Sandburg, or Louis Untermeyer. Can you find a common attitude of mind among them, or a common mood? Write a discussion of them as socially-minded poets.
3. Choose two from your poets, one of whom you admire as a poet, the other as a reformer, and write a paper comparing them which will make clear your distinction.

#### V. Books—and Books.

1. Pick out and read one of the books reviewed in this number, and write your review of that book. In a separate paragraph, explain just as convincingly as possible why your review differs, however it does, from the one in The Independent.
2. "A novelist is often more enlightening than the propagandist, chiefly for the reason that he isn't arguing, he's telling you." What do you think about this statement? Expand it, bringing out its meaning, and then discuss it in an essay, or an oral debate.

#### VI. President Harding and Election Week.

1. Go carefully thru everything in this number that relates in any way to the coming administration. Then read "Why We Need the Puritan." Do you think that the Puritan spirit, as Mr. Slosson defines it, is going to find expression in government in these next four years? Write an essay on the subject, characterizing the new administration as fairly as you can.
2. Suppose that Debs, securely locked in prison, had accidentally been elected President. What would have happened? If the idea sets you wondering, humorously or not, write a sketch in which you imagine out some of the queer complications that would surely have resulted.
3. Think of all the election days that you can remember, and make some good description or narrative out of the day that excited you most.

#### I. The Election—President Harding, Harding's Election. The Greatest Landslide in History. Election Topics. President Wilson to America.

1. Explain Senator Harding's idea of party government as stated by Mr. Boeckel. What are the advantages and disadvantages of relying on the party organization to administer the affairs of the nation? Compare it with President Wilson's idea of personal leadership and responsibility.
2. Supposing that you were chosen President what men would you select to fill each cabinet post? Bear in mind that a President must not only find able men for a good cabinet but must consider whether the men chosen will work in harmony with each other and with the Administration generally, and also that a man very successful in one cabinet position might be a failure at the head of some other department.
3. In what way does Mr. Boeckel think that Senator Harding will handle the question of reorganizing the League of Nations so that America can enter it? What does Dr. Williams say on this point?
4. To what extent would the omission of Article X change the League of Nations? Under what provisions and in what ways could the League still enforce any of its decisions?
5. What is the cause of the "solid South"? Which states would you include in it? From about what year would you date it?
6. Can you suggest any reasons why the states west of the Missouri are more apt to change their political allegiance from one election to another than the eastern, central and southern states? Is this freedom from party tradition a good thing or not?
7. Why does a national "landslide" tend to affect state and local elections? Is it a good thing or not that party names and organizations in national politics are the same as those in state and city politics?

#### II. Russia—The Pink Republic. British Trade with Russia. The Siberian Buffer State. Siberia and China. The Defeat of Wrangel. Rumania Gets Bessarabia.

1. Compare Siberia and the United States with respect to (a) area, (b) population, (c) resources, (d) climate. Do you think that Siberia will become a prosperous country like Canada and our northwestern states?
2. Locate on the map the places mentioned in Dr. Slosson's article and in "The Siberian Buffer State." Show the approximate boundaries of the Far Eastern Republic. Discuss the importance of its geographical situation with reference to China and Japan.
3. Compare the Russian Empire of 1914 with the extent of Soviet Russia in 1920. What lands has Russia lost and to whom?

#### III. Labor Politics—What British Labor Wants.

1. What conditions brought about the rise of the Labor party in Great Britain? What are its present policies and aims?
2. Why has not a great Labor party arisen in the United States? Compare the British Labor party with the Socialist party, the Populist party and the Farmer-Labor party. What is the attitude of the American Federation of Labor to separate party organization?
3. Prepare a brief for either the affirmative or the negative on the question: Resolved, that the interests of American labor would be furthered by the organization of a Labor party to which the existing trades unions should pledge their support.

#### IV. Conservation—Do You Want to Lose Your Parks?

1. What is conservation? Do you think the term rightly applied to saving scenic beauty as well as saving timber and water power?
2. What are the economic advantages to a country of scenic conservation? How have such countries as Italy and Switzerland profited by preserving the natural beauties of the nation?
3. To what Department of the Federal Government is the care of the national parks entrusted?
4. Locate on a map of the United States the principal national parks. Have you ever visited one of them?

## The Cover

The photograph of an Indian mother with her papoose, published on the cover of The Independent this week, is from an exhibition by Lewis D. Hine which has been shown at the National Arts Club, the Civics Club, and the Y. W. C. A. Training School in New York, and is later to go to other cities in the United States. Mr. Hines is an artist who uses a camera instead of a pencil or brush; a majority of his photographs are portrait studies of American types—"an endeavor," he says, "to interpret the worker to himself and to the world."

## Opening Nights

*French Leave.* Humorous light comedy of the British army at the war front. Entertaining, heart-warming and well sustained. (Belmont Theater.)

*Kissing Time.* a musical comedy with a French plot, featuring Edith Taliaferro and William Norris. Smart costumes and fairly good music. (Lyric Theater.)

*The Prince and the Pauper.* Mark Twain's immortal story dramatized by Amelie Rives. Charming and touching play for old and young. Exquisitely staged. (Booth Theater.)

*Just Suppose.* by A. E. Thomas, supposes the Prince of Wales while touring America falls in love with a belle of old Virginia. A wholesome, pretty and romantic love story admirably staged and acted. (Henry Miller's Theater.)

## Remarkable Remarks

SAMUEL GOMPERS—We are not Bolsheviks.

W. J. BRYAN—President Wilson should resign.

REV. J. H. OLMSTEAD—The early bird catches the work.

MRS. WARREN G. HARDING—I pin my faith on the women of America.

JAMES H. WILLIAMS—The pig that keeps still sucks the most swill.

MRS. VINCENT ASTOR—I dislike very much to see a young girl smoking.

SENATOR HARDING—The Republican party is too big to trail any man.

ISHBEL M. ROTH—There isn't such a thing as an old lady in New York.

ED. HOWE—A doctor does as much guess work as does an automobile mechanic.

BISHOP OF SHEFFIELD—The Christian who is a killjoy is a caricature of Christianity.

ANNE RITTENHOUSE—The squirrel has done more to make gray fashionable than anything else.

AUGUSTUS L. MASON—Vote with the older and more experienced members of your own family.

REV. E. S. SYNOTT—With people of the new rich type a rector stands much on the level of a butler or head housemaid.

I really believe the rector is expected to use the tradesman's entrance.

JUDGE ROSALSKY—The Governor of this great state is the product of a fish market.

THOMAS W. LAMONT—I want no more honest person to deal with than the Japanese business man.

HERBERT HOOVER—The women of America are to a great extent the treasurers of the United States.

W. L. GEORGE—American women are not more beautiful than other women; they are merely better groomed.

MRS. CALVIN COOLIDGE—I think the best way any woman can help her husband is to make his home life pleasant.

NOVELIST BERTHA RUCK—American sleeping cars have given me man in an aspect new and altogether hideous.

MAGISTRATE SYMMONS—The last right that an Englishman or Englishwoman gives up is the right to be disagreeable.

*Old craftsmen* did fine work even with inadequate machinery. The modern Mimeograph insures the finest of work even when especial skill is wanting. Real evolution that! But always, care and neatness applied to the mimeographing process yield important rewards. In the hands of a careful workman, your Mimeograph will produce craftsmanlike results—and perhaps accomplish tasks that you did not dream it could do. A matter for thoughtful consideration now! With microscopic accuracy the Mimeograph reproduces hourly five thousand exact copies of a letter, bulletin, drawing, or kindred matter, at negligible cost. Our booklet “E-11” will show you some of the remarkable things the Mimeograph is doing for others—and perhaps suggest new and better ways. It costs only the effort of the asking. A. B. Dick Company, Chicago—and New York.

## *The Mayflower*

MDCXX-MCMXX

By Alfred Noyes

### I

When that tall fleet of plate-ships, homeward bound,  
Sighted the Mayflower plunging tow'rds the West,  
They signalled her; they learned her desperate quest;  
And then, O then, what cynic smiles went round!  
They watched the black hull dwindling, well-nigh drowned  
In flurries of foam, by each Atlantic crest.  
They made the poor fanatic fools their jest  
All the way home, from Fastnets to the Sound.

Little they dreamed that, while the blind seas roll,  
No ship more famed would tread the sunset way.  
Than this be-mocked and insignificant keel;  
That this was Freedom's winged and conquering soul,  
The seedling glory of our English May,  
Sailing to found earth's mightiest Commonweal.

### II

Is there no sail on darker seas tonight,  
No war-bewildered Mayflower, bruised and blind,  
Leaving all fond familiar shores behind  
In quest of some strange light beyond our light?  
Have we not seen her, with no land in sight,  
Seeking the land that none could ever find,  
Fraught with the secret hope of all mankind,  
Their prayers for justice, and their dreams of right.

You that have watched her, with the hard old scorn,  
Masked in new modes, and mocked the last sad gleams  
Of earth's most tragic hope—before it dies,  
Our new and better world shall yet be born;  
And there, confronted by your own lost dreams,  
How shall you bear the radiance of their eyes.

### III

It was the soul of England christened her,  
Touched her black bows with April dew and flame,  
And wrote in light the flower's undying name,  
Whose dying glories all our hedgerows wear;  
So that our ship should thru the sunset bear  
No record of the transient wrong and shame,  
And only fragrant memories wreath her fame  
With thoughts of English meadows, year by year.

She shall bring back our dreams. She shall not fail.  
God helping us, that insignificant keel  
Shall yet return like Spring to this bleak shore,  
With blossoming clouds and singing towers of sail,  
White as the dawn of earth's one Commonweal,  
That realm of God, where war shall be no more

# Myself and Me

By Chester T. Crowell

Illustrations by W. C. Morris

ONE way and another I get a lot of fun out of life, and about the most dependable source of amusement is myself. I think most of us are conscious of the fact that we are not one person but two. There is a Me, afflicted by habits, pestered by prejudices, moved by unsuspected biases. And then there is another Me, the Olympian, who stands aloof and smiles at the funny things the other Me does. Sometimes I try to tell myself that the Olympian is me and that the headstrong, blundering clown is not. But it is not true. The clown is Me and the Olympian is hindsight.

A few weeks ago I stopped in front of a show window and admired some silk shirts. They were very pretty, pure white. The price was nine dollars. I have never owned a silk shirt. Somehow it is fastened in my mind that the value of a shirt is about two dollars and fifty cents. Recently they have cost me about five dollars. I don't like it. I can remember when I could get a good shirt for one dollar, but it was harder to get the dollar than it is now to get the five dollars. Which recalls the story of the fellow who remembered when meat was ten cents a pound but that he didn't have the ten cents. I walked into the store and selected a shirt and then I tried to get nine dollars out of my pocket. It simply would not come out. Habit is a powerful thing. By the eternal gods and little fishes, the value of a shirt is not more than five dollars and so far as I am concerned it shall remain not more than five dollars. I will go to five dollars if I must to save myself from nakedness, but I cannot pay nine dollars for a shirt. My arm was paralyzed, my fingers nerveless, an angry lump gathered in my throat, I turned on my heel and strode from the place, leaving an utterly astonished clerk behind.

At Broadway and 42nd Street, where you can meet everybody in the world, I met a Texan. Immediately I invited him to dinner. I did not greatly wish to go to

dinner with him. Our acquaintance back home was casual; he means nothing to me. The fact of the matter is, the moment I invited him, I regretted it, because I recalled that his conversation bores me. But it seemed the thing to do. And I did it. The check was eight dollars and seventy

cents. Somehow I don't mind that. That seemed to be all right; but why didn't I get the shirt? The shirt was what I wanted. I still want that shirt. But every time I walk past that place I become hysterically angry. It is beginning to dawn on me that I am angry with myself instead of the purveyor of shirts.

A few nights ago I walked into a theater, having in mind the purchase of a ticket. In the lobby I hesitated. I have been reading a great deal on the subject of economy. I believe in economy. It is imperatively necessary for the welfare of the nation. I have been enjoying an orgy of theaters ever since I have been in New York, so I took myself by the back of the neck and led myself out of that theater lobby. "Economy!" I exclaimed. I was exuding virtue from every pore. I marched myself bravely down to the club. I sat myself down brusquely and addressing myself, I said: "See here, young man, here is a nice club, with congenial friends, you shall spend the evening here." And the congenial friends gathered and we started a foolish card game which is

played for one cent a point by way of adding a trifle of spice and I lost three dollars. But I didn't mind that. I might have won three dollars. So the loss of three dollars is all right. Still, thinking it over, when did I ever win three dollars? Never that I recall. And I don't care to play cards. What I wanted was the theater. What I

got was the cards. The cards cost exactly twenty-five cents more than the theater would have cost.

Early this summer I decided to play tennis. I am very fond of tennis. I went to buy a tennis racquet. I selected the kind I like. It is the same kind I used when I was in High School. The price then was three dollars. They cost twelve dollars now. I wrestled with myself trying to separate myself from twelve dollars. The twelve simply would not come loose. I cannot pay twelve dollars for a tennis racquet! I lack the moral stamina. If my immortal soul depended upon a twelve dollar tennis racquet, I would simply go to hell in a hanging basket. Twelve dollars for a tennis racquet is inconceivable. No, sir, I cannot pay twelve dollars for a tennis racquet! So I suffered thru the summer without my accustomed outdoor exercise. And it damaged me at least twelve times twelve dollars, not to mention the price of amusement substituted for tennis. There were days and days when I felt groggy and could not work. If I had been playing tennis I would have felt well on those days.

I decided to go swimming. But in New York, when you go swimming you travel five to thirty miles. I never

At Broadway and 42nd Street I met a Texan

I tried to get nine dollars out of my pocket. My arm was paralyzed

heard of any such thing before. According to my traditions, when you go swimming, you travel not over two miles at the most and the party should consist of not over ten or twelve, preferably three or four. I will not swim in any ocean polluted by thousands of swimmers. I must have approximately a private ocean. There is no sense in any such exclusiveness, but I must have it or I will not swim.

Recently, I was on the way to keep an important engagement, when I observed that my collar was wilted. I dropped into a store to buy another one. Thirty-five cents! It's too much! I cannot pay thirty-five cents for a collar. Collars should be fifteen cents. If I had eight million, nine hundred fifty dollars and sixty-two cents in my pocket and needed just one collar, in order to be suitably arrayed for my inauguration as president, and that collar cost thirty-five cents, this great nation would have to go thru the humiliating experience of inaugurating a collarless president. I walked down the street and presently I decided that I was thirsty, so I bought a drink. Twenty-five cents. But that was all right. I am used to paying twenty-five cents for a drink. I used to get a more substantial drink for twenty-five cents than I can buy now, still twenty-five cents for a drink seems to be about right, so I pranced on to my important engagement with my twenty-five cent drink tucked under my belt and my wilted collar around my neck.

I like to read. Everything I am or hope to be I owe to the hours I have spent with books and it is astonishing how much one can accomplish with perhaps not more than three hours a week spent in the company of books. If I were advising a young man or a young woman about rules for success, I should rank the expenditure of one hour a day with books as about the most important of all. If you can induce a young person to spend one hour a day with the greatest minds the world has produced, you need not bother about admonitions on the subject of honesty or morality or anything else for that matter. But it seems to me I can never find time to read. I thoroly realize that there is nothing more important, that there never has been anything so important, and that there never will be anything of equal importance. In spite of that, the most trifling incident of the day can use up the time that I should devote to reading.

My blessed mother taught me a great many valuable things, among others to be courteous. I shall never forgive her for that. She drilled that into me until it is a fixed habit of my life. As a consequence I permit the most stupid, fatuous, driveling, hopeless, stuffed-shirts to impose upon me. They come into my office and utter bromides with which I courteously agree or disagree. They drag me off to places where I do not wish to go. I thank them when they admire what I have written, altho as a matter of fact, I have no more respect for their mentality than I have for that of a grub worm. I endeavor to please them, simply because

I cannot help it. And all the while there is a suspicion in my mind that if my blessed, foolish mother had not taught me to be courteous I would hit these people on the head with an axe and be much happier.

I do not believe in giving money for other persons to spend for the benefit of humanity. I am convinced that in the course of a twelvemonth I will come face to face with the opportunity to give away all the money I ought to give. I am convinced that any movement, whose purposes and aims win my sympathy, should claim my time also. But in spite of these fixed convictions I do give money. After I have given it, I look myself in the eye and say: "You poor, vain, crawling, miserable, spineless jelly-fish. You gave that money because you didn't have the manhood to say NO." And that's the plain truth about it.

I wonder what fool invented the idea that Americans are materialistic dollar-chasers, money-worshippers. Anybody with half an idea or half of a half-baked imitation of an idea can organize an association in the United States to alleviate the sufferings of the peanut during the period of roasting and raise money. The American ideal seems to be to prevent all suffering, free all peoples; in brief, to purchase the millennium. We give away more money in the U. S. than even sanity can condone. We are the most confirmed uplifters who ever blundered and staggered along the Milky Way of Idealism.

I know a great many millionaires. Nearly all of them are more interested in the particular hobby on which they waste their money, than they are in the extremely interesting sources of it. I know only one man, who has what I consider a sane conception of constructive charity. He is George McQuaid, Staff Correspondent of the *Dallas News*. He and I were sitting in a restaurant one morning about two o'clock, after our day's work on a morning paper, when a pitiful derelict in soiled clothes shuffled in and whimpered his appeal for food. McQuaid looked at him, with the utmost contempt. He rose in a threatening manner; I thought he was going to throw the man out. "Here, take this, you bum," he said, as he handed the

man fifty cents. "Now get out and go to work, you ought to be ashamed of yourself." That was not my conception at the time of the right way to bestow charity. I said so.

"Sympathy," said McQuaid, "is poison. That fellow is already feeling sorry for himself. There is nothing more [Continued on page 287

There ought to be a sting with every fifty cents obtained as that man obtained it

I took myself by the back of the neck and led myself out of that theater

I will not swim in any ocean polluted by thousands of swimmers

# Your Watchdog in Washington

A Message from the United States Government to the American People

By Herbert D. Brown

Chief of the United States Bureau of Efficiency

**B**EFORE the United States went to war with Germany the contribution of its average citizen to the maintenance of the general government was small. Not only that, but the tax was collected from him indirectly so that he scarcely realized that he was required to make the contribution. It followed that his interest in the operations of the Federal Government was rather languid and he seldom thought of criticizing seriously the conduct of departmental affairs at Washington.

The war has changed all that. For the first time the citizen has had to give and lend directly to the Government from his private store, and to do so in generous measure—"until it hurt." Two years after the cessation of hostilities he is still paying heavily. The Government has slowly demobilized its fighting forces, it is true, and still more slowly relinquished its control of problems of production, supply, transportation and finance but the heavy cost of Government continues and the people naturally are asking why.

Thoughtful people everywhere are turning an inquiring and often critical gaze upon the agencies that make up the Government. Is the heavy taxation the result of wasteful mismanagement in Government offices? It is well that they should be thus concerned and should want to understand the business details of the Government they are required to support. It is their right to demand that the aggregate of their contributions be economically administered by the Government's agents.

I am glad, therefore, to tell the inquiring citizen what the Bureau of Efficiency is trying to do toward putting into practice in Washington the business methods that have made the commercial institutions of America preëminent and successful. This Bureau is the only office of the Government created for the exclusive purpose of saving the people's money; all others are engaged in spending it.

The earliest inquiry into the administrative methods of the executive departments was made by the Cockrell Commission in 1887. Its report suggested as "the most feasible and practical remedy" the creation in each department of a committee of "competent, industrious, painstaking officers . . . not wedded to the idea that the age of existing methods . . . made them the only correct and proper ones." The members of this commission, I have been told, actually went into the Government offices, sat down beside clerks and watched what they were doing. It has seemed to me that this commission had the right idea of how efficiency work should be done.

In 1893 a joint commission, of which Congressman Alex M. Dockery was chairman, was appointed to examine the status of the laws organizing the executive

departments and twelve years later, in 1905, President Roosevelt appointed the committee of which C. H. Keep, assistant Secretary of the Treasury, was chairman, to consider departmental methods. Five years later, President Taft appointed a "Commission on Economy and Efficiency" with Frederick A. Cleveland as chairman, to acquire a knowledge of the conditions of business in the departments with a view to instituting reforms.

The present Bureau of Efficiency began on March 4, 1913, as a division in the Civil Service Commission with an appropriation of \$12,000 for the first year. It became an independent establishment February 28, 1916, and this year has an appropriation of \$125,000.

I had the honor of being connected with both the Keep and the Cleveland commissions and having observed their efforts to improve the departmental service and studied their reports, I came to the conclusion that the Commission on Economy and Efficiency had fallen short of rendering the great services it might have rendered because its members had not perceived that only by personal investigation of the offices themselves, tact and patience in dealing with the workers in those offices and absolute willingness to surrender all credit for their service could their ends be attained. Only by

winning the good will and coöperation of the administrators and employees in offices in which the work is done is it possible to achieve permanent results. These reflections led me to adopt the following six principles as fundamental to a successful conduct of the Bureau of Efficiency:

1—Coöperation, not coercion. No officer of the Government is happy to have an outsider come in and assume to dictate how many clerks he should have, what he should pay them and how their work should be done.

2—No publicity. The measure of coöperation required is not to be expected from a bureau chief, the discovered delinquencies of whose office are proclaimed in the daily press.

3—Advice, not supervision.

4—Laboratory tests, not academic treatises. There never has been time nor inclination in the

Bureau of Efficiency to write lengthy reports, but there is always time for careful and prolonged tests of proposed operations.

5—Team work. By developing an *esprit de corps* in the Bureau we have in a measure offset the small salaries paid by the Government for this kind of work compared with those paid by private firms.

6—Non-partizanship. To an efficiency organization it should be a matter of indifference what party is in power. Good government should be its only interest.

Generally speaking, the Bureau of Efficiency does two classes of work. First we [Continued on page 283]

Harding in Brooklyn Daily Eagle

The greatest gold discovery of this century?

# What British Labor Wants

By The Rt. Hon. J. H. Thomas, M. P.

The head of the British Federation of Railwaymen presents here the second of a series of three articles written to explain to the American people the significance of the recent strikes in England and the ultimate aim of the Triple Alliance which "makes possible a national strike by which the whole life of the country could be brought to a standstill." Mr. Thomas is one of the foremost leaders of the Labor Movement in Great Britain and he is a Labor Party member of the British Parliament

FULLY to appreciate the progress and development of the British Labor Movement it is not sufficient to point to the fact that it has a membership of six and a half million organized men and women, nor does it suffice to demonstrate how its membership of the House of Commons has grown until its representatives have come to form the second party in the State altho, of course, each of these factors is highly important and significant.

The most significant evidence of the progress of the British Labor Movement is to be found on the legislation book—year by year as the strength of Labor has grown so has its growth been recorded in the laws of the land. To the superficial observer this progress may seem to have been somewhat slow, but it must be remembered that the workers have had to fight their way up from complete subjection and in the face of every conceivable obstacle.

Today, as the result of organization, the worker is on a level with the employer, but it must not be forgotten that there was a time when the worker was a slave possessing no vestige of political or economical status. Then, with the awakening consciousness of the workers, came labor problems which took the form of concern not for the improvement of the lot of the workers, but for their better discipline and for the protection of the ruling classes against revolt.

As the centuries passed the British people showed an ever increasing unsettlement, and a growing mercantile activity began to break down the restrictions which existed on the free movement of labor. What was the result? The capitalists were filled with consternation. As the employers of today are inclined to be aghast at the idea of a worker thinking himself entitled to a reasonable amount of leisure time for recreation and private pursuits, so these earlier employers viewed with amazement the desire of the men to go from one place to another according to their inclination and the Law of Settlement of 1661, under which a man might be forcibly sent back to the place of his birth lest he should become a charge upon the parish to which he had moved, was strictly enforced.

Thus it has been right down to the present time—always an inclination to fetter and obstruct, even when

© Keystone View Co., Inc.

These are the men in Parliament who are helping British labor to its extraordinary place in national affairs. This photograph, taken at the recent joint meeting at Caxton Hall, within "the sacred precincts of Westminster," of the Labor Party, the Parliamentary Party, and the Trade Union Congress, shows, from left to right, Mr. A. Henderson, M.P., Mr. William Brace, M.P., Hon. William Adamson, M.P. (chairman), Mr. Robert Hartsorn, M.P., and Mr. J. H. Thomas, M.P., the writer of our series of articles on British labor

it is demonstrated that to accede to the demands made would be to the advantage of all parties.

Fortunately for the people of this country it is not necessary to occupy a predominant position in the House of Commons before it is possible to exercise some influence, at any rate, upon legislation. Even when the Trade Union Movement was able only to send its representatives to buttonhole members of Parliament in the lobby of the House of Commons it succeeded by its influence in doing much toward speeding up legislation and but for its efforts there is no doubt that many measures for the amelioration of working life would not only have been indefinitely delayed, but would have

been very much more anemic than they were.

When, however, Labor at last got its foot within the sacred precincts of Westminster, progressive legislation was "speeded up" in a remarkable manner. As I stated in my last article, two Labor M. P.'s were elected in 1900. In 1906, twenty-nine Labor men were returned and what had hitherto been the Labor Representation Committee became the Labor Party. Three years later the Miners' Federation joined the Labor Party and at the General Elections of January and December, 1910, the number of successful Labor Candidates was forty and forty-two respectively. Let me now review the phenomenal industrial legislation of these five years.

In 1906 a Workmen's Compensation Act was passed which in many respects marked a considerable improvement upon earlier legislation of this character. Hitherto, accidents which did not happen on or near the employer's premises were ruled out and illness and death due to certain purely trade diseases were untouched by the old Acts; furthermore, the Act of 1906 made compensation payable in the case of death or serious and permanent disablement even when the accident could be attributed to the wilful and serious misconduct of the workman concerned.

Next came the Old Age Pensions Act of 1908 by which all men and women seventy years of age or over, and British subjects for at least twenty years, became entitled to a State allowance of from one to five shillings a week; the full sum of five shillings is allowed to all pensioners whose means do not exceed twenty-one pounds a year [Continued on page 278

# Master Workshops of America

A Series of Monthly Articles Written from a First Hand Survey of Big Business Enterprises That Have Given the United States the Name of the Foremost Industrial Nation of the World

## Beef and Bouquets

By Edward Earle Purinton

**T**HE president of the world's largest packing house comes to work with a flower in his buttonhole. Why not? Visitors do not look for bouquets in the Chicago stockyards. The sights, sounds and general atmosphere do not suggest flowers. All the more reason why the man who works there should take a flower with him, in a corner of his coat or his mind.

Every business, trade or profession has unpleasant features that go along with the day's routine, but our observation has been that a real man is made more genial by uncongenial duties or surroundings. He conquers the seemingly prosaic with a beautiful spirit. He bears his burdens better because he wears a flower. I presume that Mr. L. F. Swift, President of Swift & Company, would feel insulted if anybody called him a poet. Rightly enough—the fellow *called* a poet is generally not a poet but a *poseur*. If you have the heart of a poet, you should carefully hide it under the brain of a business man.

Most people would naturally doubt that the world's largest meat packer is a man of fine feeling, and that a wonderful humanitarian spirit pervades the organization under him. So many lies have been told about the big packers of Chicago, that I wish to nail a few in this article, beginning by hammering on the fact that a packer is not necessarily a butcher. He *may* be a poet, a reformer, a teacher, a statesman, a philanthropist.

The people of the United States require a great deal of meat—an average for each consumer of about half pound per day, or 180 pounds per year. We are not saying they should. They do; and so long as they do, the packer who conducts his business on sound principles of economy, hygiene, sanitation, education and service renders a large benefaction to the nation.

I had a preconceived notion about the appearance and character of L. F. Swift. The way not to know a man is to read what the newspapers say about him. I had been reading press criticisms of the leading packers, and expected to find Mr. Swift a cold, hard, selfish, mercenary, slave-driver sort of man, with probably a streak of brutality and a vein of cruelty. The

Mr. Louis F. Swift, president of Swift & Co., business man and humanitarian

moment I learned that he wore a carnation to his office in the stockyards, I humbly apologized inside—he was not only human, he was gentle, kind, artistic, idealistic, as a flower-lover is. Never judge a man by what he does for a living, judge him by what he does for the life of those about him.

Louis F. Swift is a fundamental humanitarian. He takes a deep interest in the welfare of his 50,000 employes, having originated many of the so-called welfare features years before they grew popular. One was the standard 45-hour minimum week for the workers on guaranteed pay for the whole year, whether busy or not. The company takes the risk during idle seasons, with an 8-hour basic day, time and a half for overtime, and double time for Sundays and holidays. Moreover, wages for common labor have been raised approximately 185 per cent in the last five years, which more than offsets higher living costs. A good share of this increase was granted voluntarily by Swift & Company in the early days of the war period. Other increases came thru arbitration proceedings before a federal mediator.

Mr. Swift makes a point of protecting the small shareholder in the corporation, before he protects the large—including himself. There are 23,000 employes who either own stock in the company or are purchasing stock on a partial payment plan, besides 17,000 customers, dealers and friends thruout the United States and in foreign countries, who are shareholders. Mr. Swift holds that the rich man can protect himself, but the poor man or woman having only a few hundred dollars to put into a business venture needs a rich man to look out for these small interests. He hasn't

Louis F. Swift, Jr., is learning the business in the manner of his father and his uncles before him—from the bottom up. He will, in the course of time, serve in all of the main departments

forgotten how poor the Swifts were when they founded the concern, and how much they needed some capitalist to fight for them.

He has the reformer's eagerness for improvement, but not the reformer's habit of orotund helplessness. He walks thru the stockyards regularly, on his way to the office, and where he notes anything to be made right he takes a hand in the performance, balancing the practical and the ideal. No limousine long-distance observations for him.

He is death on dirt. He reveals a passion for cleanliness. The old way of handling various meats in preparation was to let them drop in the dirt on the floor or pass thru soiled hands in a germ-laden atmosphere—then try to wash the products clean again. The Swift order is imperative and universal. *Keep everything off the floor and moving in fresh water.* Each hog, for example, gets a shower bath for an introduction to the plant; later, the different portions of the animal are subjected to process baths. Fountain brushes thru which clean water flows constantly are the tools for washing animals; with hygienic, automatic machines taking the place of hand labor in lifting, lowering and moving the meat. The walls, floors and ceilings of the plant are kept cleaner than the average home kitchen.

A firm policy of Mr. Swift is to hold the organization and working conditions to blame, rather than the men, where a certain department is found to be losing money. He does not "fire" the men, or hire more, or add to the burden of toil. He improves the system, and lightens the labor while enlarging the output.

A bit of educational advertising. The famous "Swift Dollar," that tells its own story

course has been taken by 5,000 foremen who wanted to become expert in the science of industrial management, a few of the topics being "The Foreman's Qualities," "The Handling of Men," "The Use of Organization," "Plants, Machinery and Materials," "Team Work," "Use of Records, Yields and Costs," "Modern Industrial Management."

A notable trait of Mr. Swift that every meat eater will approve is a fondness for low prices to the consumer—lower than in almost any other line of production. During the fiscal year preceding the writing of this article just after the war, with profiteering a national plague, Swift & Company made the smallest margin of profit in its history. The shipments were over 5,500,000,000 pounds, sales over \$1,200,000,000 net earnings only \$13,870,181.34. The profits were less than 1 1-6 cents on each dollar of sales, or a quarter of a cent on each pound shipped. The earnings hardly ever go above 2 cents on each dollar of sales. Ask your grocer, baker, iceman or milkman if he can do business on a 2 per cent margin of profit—then you will realize what a manufacturing and merchandizing feat of economy to the customer has been wrought by Swift & Company.

The average meat consumer, purchasing only from

Here is humane efficiency, in one of the main offices—with its double-face desks, overhead lighting, and modern scientific arrangement

Swift, buying 180 pounds a year, pays to Swift a profit of about a cent a week. Buying other foods of equal market value, he would pay the producer a profit of 10 cents to perhaps 30 cents a week. Swift thus affords on the family meat bill a saving of \$10 to \$50 a year, depending upon the number in the family and the kind of meat purchased.

How? By huge volume of sales, rapid turnover, scientific methods of buying, dressing, handling, shipping selling; and particularly the salvage of waste thruout the whole plant, of a hundred different departments.

Every working day, in the Chicago plant alone, 1,000 cattle are cut and refrigerated. Each hour of the day, 1,000 hogs and 800 sheep are prepared for market. If all the live stock for the daily output were driven up to the door each morning, they would form a line of animals twenty miles long. With 400 distributing houses in the United States and 70 more in Europe, Asia and Africa, Swift gets meat to the consumer in faster time and larger quantities than any other packer on earth. Swift freight cars make an average of over sixty miles per day, as against forty-two miles general average in the United States. Even the loading of the cars is done by the method proved quickest, safest and most economical.

A comparatively small capital of \$150,000,000 with a turnover six times a year produces good annual dividends, by rendering sixfold that small single profit of 1 or 2 cents on each dollar of sales. A small merchant who gets a complete turnover three or four times a year thinks he is doing mighty well. He must reap larger profits on fewer sales. The greatest concern usually handles the product both cheapest and best.

In the old days of the country "slaughter house," unsavory, unsightly and un- [Continued on page 280]

# What Did It

By Franklin H. Giddings

**E**XPLANATIONS of the Republican majorities that elected Mr. Harding have been offered morning and evening since November 2 and from time to time will be offered until 1924. The earliest ones were impressionistic and the scientific ones cannot be undertaken until complete returns are subjected to statistical analysis. Nevertheless, now that our minds are becoming used to the certainties that "Wilsonism" is repudiated, and that the Republican party will go into power with full control of every branch of the Government, it is worth while to examine tentatively two or three of the more probable theories of "what did it."

These presumably true theories were not given prominence in editorial columns on November 3. On the contrary, they were then referred to (if at all) only to be brushed aside as preposterous or inconsequential. For present purposes I choose three of them, namely: (1) that we have become, like the Athenians, a fickle people; (2) that the decision (whether it was a right and fortunate one or a wrong and unfortunate one) was psychologically a reflex action more than a judgment; and (3) that the vote was a repudiation by a large plurality and possibly by a majority of the American people of America's part in the European war, in so far as that part was more than self defense. In characterizing these hypotheses as probably true notwithstanding the cavalier way in which the newspapers promptly disposed of them, I mean that when all the facts supporting them are assembled they will amount nearly or quite to adequate proof.

Are we fickle? The Athenians crowned their heroes with chaplets of bay. The morning after they began to scold them. In a few months they began to revile them. In a year or two they turned them out of town. As nearly as possible that is what we did to Admiral Dewey. We all but did it to Abraham Lincoln. We did do it to General Grant, to Grover Cleveland, to Theodore Roosevelt, and to William Howard Taft. In New York City we did it to Mayor Mitchel. Now we have done it to Woodrow Wilson. If anybody prefers to call these performances collectively by some other name than fickleness I have no quarrel with him.

Was the voting an intellectual judgment? The campaign provoked discussions of high intellectual quality, but how many voters understood them. To ask this question is to smile. He would be a rash man who should contend that one-tenth of one per cent of the voters to whom President Wilson appealed in solemn referendum on the Covenant of the League of Nations could have given a more intelligible account of Article X than they could have given of the Institutes of Justinian or of the Constitution of Clarendon. A hundred and fifty intellectuals (more or less) voted for the League knowing what they were about. A hundred and

fifty other intellectuals (more or less) voted against the League knowing what they were about. Each lot quite sincerely thought the other lot preposterous or worse. The entire three hundred (more or less) apparently believed that they were making some kind of an impression upon their countrymen. "What a dust we do kick up, said the fly to the cart wheel." But it was not the Covenant of the League of Nations drawn at Versailles, or any substitute, amendment or reservation that interested those countrymen. Without wasting any precious energy in study or thought they believed what Lodge, Borah and Johnson said about the Covenant, or what Mr. Taft and Hamilton Holt said about it. Very few of them got so far, however, as to mention their belief. All they ever said was that Cabot Lodge made them "tired" or that Woodrow Wilson made them "tired." Then they went into the polling booth and "swatted" one gentleman or the other as they would have swatted a fly or a cootie. One tired lot voted against Cox; another tired lot voted against Harding. The only candidate that anyone voted "for" was Debs.

Did we repudiate our part in the war wholly or in part? An energetic minority of Americans from the first believed that we ought to get into the war. When we got into it these Americans threw themselves into our task unreservedly and tirelessly. To the present hour they have never wavered in their conviction and as long as they live they will insist that America should thru all coming time participate unselfishly and courageously in the enterprise of conserving civilization and preventing, as far as it is humanly possible to prevent, the recurrence of world war. But to insist or to pretend that these Americans are now or at any time have been a majority of our voting population is to pretend to deny what nobody does deny in fact.

President Wilson was reelected in 1916 because he had kept us out of war. We went into the war in 1917 because President Wilson and Congress had become convinced that we had to go in, in self-defense. It is possible that a majority of the people were convinced: that would be a more difficult thing to prove. There has never been any evidence

that a majority of the people has ever at any time believed that the United States went into the war or was under obligation to go into it "to make the world safe for democracy." A good many Americans believed that we were under moral obligation to go in and have since believed that we did go in to avenge Belgium and to save France. Perhaps half of the boys who went over seas felt that way about it; but when they came home what did they say? Nine hundred and ninety-nine out of every thousand of them said: "Never again. We have done our duty, we are glad we did it, but never again." That is what, for six months, they have been saying thruout the United States, never mind why. So far, then, as American participation in

## The Next Cabinet

President-elect Harding will spend the next four months picking a cabinet. Would you like to send us your opinions as to whom he should select? The Independent would be glad to receive and, so far as space permits, to publish, suggestions from its readers as to the best men and women for the existing cabinet positions, and also suggestions for cabinet offices which do not yet exist but should in your opinion be established. Your letter will count as a vote in any case, but it will be more apt to be published if it keeps within two hundred words. If you do not wish to fill the whole cabinet send in your vote anyhow for the particular positions in which you are most interested. Your letter must be received not later than January 10, 1921. Address it to "The Cabinet Contest," Editorial Department.

## GOVERNOR COOLIDGE'S SUCCESSOR

Lieut. Governor Channing Cox, Republican, was promoted to the governorship of Massachusetts by the election this fall. But small daughter counts on persuading him to continue to spare time from politics to go sliding with her

Left: The Senator who represents the Non-Partizan League, Prof. Edwin F. Ladd, of North Dakota. He is head of the Agricultural College at Fargo

the war was anything more or was believed to be anything more than an act of self-defense, a plurality of American voters has never "stood for it" and on November 2 a majority of them repudiated it.

American business wants to exploit Mexico and to trade with Germany. The entire American population is tired of standing at moral attention. We want to do our duty of course—when did we ever fail? But we must be practical, and idealism "is in wrong." "Us for normalcy!" That is what we said on November 2.

## We've Smashed Something; What Next?

G. K. Chesterton tells of a crowd that agreed to smash a lamp-post. They did so, effectively and triumphantly. But it turned out later that some wished to erect a new kind of street lamp, some wanted the post moved to another corner, some desired darkness because their deeds were evil, some hated the lamp-post because it stood for municipal ownership of the lighting plant, some simply wanted the elementary joy of smashing something. Then there was war in the darkness.

The electorate has smashed the Wilson Administration. No evading or explaining away the decisiveness of the verdict. But is it a verdict for reconstituting the League as Taft and Hoover say or for dropping the whole business as Johnson says? Is it a conservative victory against Gompers or a radical victory against Palmer? Did the anti-German New York *Tribune* or the anti-English Hearst papers contribute most to the result? Does it mean a bigger or smaller army and navy? Does it mean recognition of the Mexican Government or war with Mexico? Yes, there is a victory. But who owns it?

## A Socialist View of the Landslide

By John Spargo

IT is quite impossible for even the most moderate of radicals to view the election of Senator Harding and the Republican landslide with any satisfaction, or to resist the conviction that we have definitely entered upon a period of reaction such as this nation has rarely experienced. It is not so much that Senator Harding is himself ultra-conservative and pledged to domestic and foreign policies which are ultra-conservative, as the fact that the group of men who brought about his nomination, and by whom he is expected to be advised and guided when he assumes office, are utter reactionaries. These men are wholly out of sympathy with all liberal and progressive ideals, to say nothing of Socialism. They are defenders of the status quo, of vested interests, of privilege. They are bitter and implacable opponents of those liberalizing and socializing tendencies of our time which we are accustomed to sum up as progressive. Their minds hark back to the "good old days" before trade union action and humanitarian legislation presumed to limit the exploitation of public resources and social requirements for private gain.

It is not accidental and unimportant that almost before the composition of the Electoral College was known, the Republican Publicity Association, headed by ex-Senator Jonathan Bourne, Jr., began an open attack upon the American Federation of Labor, trade unionism, and all that these represent. This attack is simply a precursor of other attacks to come. It is an indication of the labor legislative program which those responsible for Senator Harding's selection as his party's standard-bearer hope and expect to carry thru.

Mr. Gompers had already spoken of "the terrible plunge toward reaction" shown by the election results. For the venerable head of the American Federation of Labor this must have been a mortifying admission. His support of the Democratic party, and the loudly and widely proclaimed

support of that party by the principal leaders of the Federation appear to have had about as much effect upon the actual result as would the support of the Browning Society, for example. Once more it has been demonstrated that the "labor vote" which Mr. Gompers or anybody else can deliver, or effectively influence to the support of either of the great capitalist parties, is a very negligible quantity. "Reward your friends and punish your enemies" sounds well as a slogan of opportunist politics, but in reality it is nothing more than a bit of rhetoric, a phrase which Mr. Gompers, who loves sonorous phrases, delights to repeat. A cursory examination of the Congressional elections furnishes an illuminating commentary upon the political policy designated by the phrase. If organized labor had any "friends" in Congress who deserved the reward of active and united support, surely Representatives Clark of Missouri, Sherwood and Cooper of Ohio, Casey and McLane of Pennsylvania, were of that number. The three last named are, I believe, members of trade unions. With the exception of Champ Clark, all of them represent constituencies in which organized labor is strong. Yet, all were defeated. On the other hand, such bitter "enemies" as Senators Wadsworth, Lenroot, Brandegee and Cummins were elected.

In truth, when the Sixty-seventh Congress assembles organized labor will be represented by fewer "friends" than it has had in several Congresses past. In my judgment, there is not, never has been, and cannot be any "labor vote" worth mentioning to be sought or feared by either of the two dominant parties. There cannot be any political solidarity of organized labor except in support of a genuine labor party, whatever its name may be. And up to the present the Socialist party, with all its faults and shortcomings, is the nearest approach to anything of the kind in our political life. For this reason, as well as on account of his previous record in Congress, the lone Socialist member, Meyer London, may fairly be called the only "labor" member elected to the next Congress.

As usual, it is practically impossible to get anything like a reliable estimate of the votes cast for the minor parties as yet. It seems to be quite certain, however, that the so-called Farmer-Labor party made about as little showing as I predicted in these pages at the time of its formation. Neither the farmers nor organized labor seemed to be aware of its existence. A "Farmer-Labor" party with Mr. Christensen as its national standard bearer, and Mr. Dudley Field Malone as its standard bearer in the great Empire State, could not be other than a joke. There was nothing in the platform and aims of this "party" which justified its promoters in setting themselves in competition with the Socialist party. If it lacked some of the good qualities of the Socialist party, the Farmer-Labor party faithfully adopted all that was mistaken and bad in the policy of the former.

I believe that the Socialist party, in this election, missed a great opportunity. Its foreign policy seemed to me shortsighted, reactionary and provocative of reaction and international strife. Believing as I did—and still do—in the League of Nations, as a notable advance toward that internationalism which rests upon secure nationalism, and as the greatest triumph over militarism ever brought within the scope of practical politics, it would have been impossible for me, as a Socialist, to give my endorsement to that mistaken and reactionary policy, even if there had been a Socialist ticket in Vermont—which happened not to be the case.

At the same time, as a Socialist, I am gladdened by such success as the Socialist party has secured in the face of the current of reaction. It may be that the optimism and faith in the future which have sustained my Socialist convictions, strengthening them year after year, thru every adverse circumstance, gilds for me even the future of the Socialist party. Be that how it may, it seems to me to be,

first of all, the most effective instrument for giving expression to sincere protest against fundamental social injustice and wrong; the most reliable and intelligent political exponent of social ideals worthy of twentieth century civilization. Profoundly as I have disagreed with my former comrades and colleagues upon the war and the issues arising out of the war, and disastrous as I believe the success of their policy in these matters would have been, I am still one of them and with them in the conviction that production for private profit can never give us a maximum of well-being, and that Socialism is the world's brightest hope. For these reasons, I am glad that the New York electorate returned several of the excluded Socialist representatives to the State Legislature. Their exclusion was an infamy; their reelection a splendid service to the cause of democracy in America. I am glad, too, that the Socialist vote appears from the early returns to have substantially increased. These things are so many evidences of the fact that faith in Socialism is not dead; that despite the mistakes of the party, war, Bolshevism, reactionary oppression, and every other discouragement, the Socialist ideal still lives in hearts and minds enough to make hope of its realization possible.

## The Crushing of Armenia

By Edwin E. Slosson

**I**NFANT Armenia is in danger of being squeezed to death between the upper millstone of the Russian Bolsheviks and the lower millstone of the Turkish Nationalists.

Last August when the first news came of their efforts to unite forces the Washington authorities expressed the view that there was no reason for alarm because the two elements were too incompatible to cooperate. But now when Turk and Tatar have met on Armenian soil the menace may seem not so remote even to Washington. The incoherent rhapsodies of the Koran, written on palm leaves and the shoulder blades of sheep, can be so combined and interpreted as to mean almost anything the emergency may demand and the ingenious Lenin has set up a missionary training school in Moscow where mollahs are taught to teach that the doctrines of Marx and Mohammed are essentially the same.

But whether the two allies have a common faith or not they have a common foe and unanimity in animosity often goes farther toward securing unity of action than similarity in doctrine. Whatever gaps there may be in the theological argument may easily be bridged or blinded by the hundredweight of gold which Nikolai Lenin has sent to his friend, Mustafa Kemal, and by the bales of cotton by which the southerner will return the compliments of his northern ally. The oil fields of Baku attract the Tatar proletariat as their Everlasting Fires did the Zoroastrians of old. But to the modern fire worshipers the liquid fuel suggests power rather than prayer. The Volga steamers lie idle by the banks and the locomotives puff along lazily for lack of oil.

The fanaticism of Bolshevism and Mohammedanism alike takes the form of hatred to Christianity and both Russia and Turkey are resisting dismemberment by the Allies. Lenin and Kemal dislike the League of Nations as much as do Borah and Johnson. The efforts of the Allies to dam up Bolshevism in one big red reservoir by means of a dike of buffer states stretching from the Baltic Sea to the Persian Gulf do not seem to be successful. It is hard on the buffer states and in spite of them Bolshevism seeps thru. North Persia is saturated with it and the Persian troops that were called to aid the Armenians in their fight against the Bolsheviks had to be withdrawn because their stamina had been undermined by Soviet propaganda. The Tatar republic of Azerbaijan is willy nilly Bolshevik again. The

Georgians alone of all the Caucasian peoples are holding out against Bolshevism. Their republic, they claim, is socialistic but not communistic. But such fine distinctions are not easy to maintain in such turbulent times. The steamer "Zenabe," flying the old flag minus the moon and star and bearing ammunition from Odessa to Trebizond, was blown up by a French destroyer. But even tho the French block the Black Sea the land route thru the Caucasus is now open.

Armenia, like Belgium, suffers the penalty of being a buffer state by suffering invasion from both sides. The Armenian families are driven from their farms and homes just as winter is coming on. In the south the Armenians are in still greater danger. The British turned over Cilicia to the French in accordance with the secret treaty of Sevres that has just been revealed. The French, believing it more important to gain Syria than to hold Cilicia, withdrew their troops from the interior, thus exposing the Armenians to massacre. The Armenians in Hadjiu, the center of the American relief work, defended the city from March till November, but the Nationalist Turks have now captured the place and, it is said, slaughtered ten thousand Armenians. It is hard to convince an Armenian that the French do not deliberately design their extermination in order that the Armenian claims to Cilicia may be extinguished. The Armenian General Antranik went to Paris to beg the French to let his people fight in their own defense. He did not ask help, but merely that the French and Italians stop providing the Turks with arms.

The mandate for Armenia was offered to America, but America is not in a mood to assume any responsibilities in the Old World. Our Government, however, sent a sharp note of protest on March 24 when the news first leaked out that France, England and Italy had carved up Turkey to suit themselves. But these powers held not unnaturally that the United States, having declined any duties in this region, could not claim any rights, so they proceeded to settle their spheres of influence in which the opportunities of outsiders are dubious. We declined to enter the door when it was opened for us so now the open door is closed. We are politely told that since we took part neither in the Turkish war nor Turkish peace we have no right to protest.

But the war in Turkey is not yet over. The enemy has simply moved his headquarters from Constantinople to Angora. The Greeks, to whom the job of cleaning out the Nationalists had been entrusted, have struck for higher pay, namely, the possession of Constantinople. The officially recognized Ottoman Government at Constantinople, after duly considering the peace terms dictated at Sevres—in the light of the Nationalist victories—has calmly notified the Allies that the time does not seem opportune for ratifying the treaty. Such is the situation just two years after Turkey capitulated and lay absolutely at the disposal of the Allies.

## Good Resolutions

**N**EW Year's Day ought to come about six weeks before Christmas, for nothing more requires good resolutions than Christmas shopping. We suggest the following:

Do your shopping early: early in the morning if possible as well as early in the season.

Do not get presents and then decide where to send them; first put yourself in the place of the person who is going to get the present and think what he or she would like to get.

The postal service is finding it hard to handle ordinary mail. Do not add to the burden by sending bulky presents or packages carelessly tied and directed.

Christmas is a holiday of joy; if you permit it to become a burden there is something wrong with you or your

## Seeing Red

This famous Bolshevik propaganda train has carried the doctrines of Lenin thruout Russia. On it travel the men and women chosen as missionaries of Bolshevism. The seeming camouflage painted on the train is a lurid poster of the power of the Red flag

© Kadel & Herbert

On the staff of Bolshevism's propaganda train was the American communist, John Reed, whose death in a Moscow typhus hospital has recently been reported. "Jack" Reed (marked by a cross in this group of the Bolshevik propagandists) was not so long ago a popular Harvard cheer-leader, whose radicalism took itself out in love of adventure. Later, as a newspaperman, he "adventured" over most of the world, coming more and more to believe in the necessity of social revolution. In the Bolshevik movement he found the nearest approach to his beliefs

International

The Soviet government in Petrograd solves the street cleaning problem by forcing former Russian nobility to hard labor under guard. It's a topsy-turvy world when street cleaners in New York act like Grand Dukes, and Grand Dukes in Petrograd become street cleaners

The Bolsheviki overthrew the old Imperial court only to set up instead a new proletariat pomp. The Soviet soldiers at the left, standing at attention with sabers drawn, are a part of Lenin's bodyguard on parade waiting for the entrance of the premier

At the right is a group of Red rulers in Petrograd. No. 1 is Zinoviev, a brilliant Jew who heads the Petrograd Soviet. Lunacharsky (No. 2), Commissioner of Education, plans to abolish illiteracy in Russia. Voskov (No. 8) was formerly an American labor leader. Lisovsky (No. 7 standing between 8 and 6) once published a Russian newspaper in Detroit, and is now publishing *Plamya* (Flame) in Petrograd. The other comrades are 5, Ionov; 6, Linina; 9, Ravin

presents or the people who expect them. Find out which it is.

Remember that many countries are still starving this winter; return for once to your wartime habit of dealing generously by the Red Cross, the Near East Relief and other relief organizations of tested honesty and competence.

## California's Anti-Japanese Laws

By Sidney L. Gulick

**T**HE chief surprise in California on November 2 was the strong opposition to the anti-Japanese referendum.

Telegraphic reports state that 163,731 voted against it, while those for it numbered 481,015. This is really amazing because both principal parties, papers and candidates were avowedly anti-Japanese and for the referendum. It shows that many Californians have kept level heads despite the vigorous campaign of falsehood and prejudice. Senator Phelan's defeat was doubtless due to the Republican landslide. Many must have voted for the referendum and against him.

While all the parties and candidates were for the referendum several important groups definitely opposed it. They issued leaflets and on the closing days of the campaign they placed their clear and powerful arguments as advertisements in most, if not all of the daily papers. Never before have so many Californians come out so openly and emphatically for the square deal for Asiatics. This is a new and hopeful sign.

The new law not only rigidly forbids aliens ineligible to become citizens (Japanese and Chinese) from purchasing agricultural land, but also from leasing it, even for a single year. It also forbids their purchase of stock in any company, association or corporation that is entitled to possess or acquire agricultural land. Minor American-born children are denied the right to have their own parents as guardians.

This drastic land law inaugurates a new period in American-Japanese relations. Serious irritation has of course developed in Japan. Many excited editors have denounced America as unjust, inhuman, hypocritical and un-Christian. As a rule, they have misunderstood the law, which is not strange. They have assumed that it proposes to be retroactive and to deprive of their "vested rights" those who now own or lease land. Such, of course, is not the case. A few Japanese editors have shown themselves well informed and well balanced. All, however, deeply resent the humiliation of differential race treatment.

What will happen next? First of all a test case will be set up to determine the validity of the law. Does the treaty, which gives Japanese the right to carry on commerce, include the right of agricultural production? Is the law in harmony with the Fourteenth Amendment which declares that no state shall "deny to any person within its jurisdiction the equal protection of the law"? Governor Stephens doubts the legal value of the law. Colonel Irish has promised to violate it in order to test it.

The chief result of the referendum will be found, I think, in its effect on Congress. Congress will regard it as a mandate for a positive act annulling the gentlemen's agreement and forbidding Japanese immigration.

In the light of our experience, it is clear that the time has come for Congress to take some appropriate action. But what should that action be? Three courses have been proposed.

1. Senator Phelan urges that the present general immigration law, which defines a geographical zone in the Pacific and Indian Oceans and in Southern and Central Asia from which no immigrants are allowed to come to America, shall be extended so as to include Japan, Korea and China.

2. Governor Stephens contends that our existing laws dealing with Chinese should be extended so as to apply to the Japanese.

3. The National Committee for Constructive Immigration Legislation proposes that a new method be adopted for regulating all immigration. Immigrants should be permitted from the various peoples only as we have reason to believe we can wholesomely assimilate, Americanize and employ them. These principles should be applied to the peoples of Europe as well as to those from Asia. The time has come for us ourselves to select the numbers and the character of those whom we will admit.

Of these three methods it is obvious that the first two will be bitterly resented by Japan, not because Japanese immigration will be stopped, but because of the discourteous way in which it is done and because of its humiliating implications.

The third method avoids these objects, yet will secure no less complete stoppage of immigration so long as such stoppage is wise.

Only the adoption by Congress of some such general law as this can really and fundamentally solve California's Asiatic problem and remove the disgrace and shame of dealing with the Chinese and Japanese by special laws that are essentially un-American.

Adoption of the proposals of the National Committee would not of course solve the deeper and more serious question of the conflicting economic interests of Americans and Japanese in China and the Far East generally. But they would help even there, if the California question can be amicably settled and that irritating influence be removed.

Japan's rising problems of feeding and satisfying her enormous and rapidly growing population of highly intelligent and extraordinarily active individuals, are terrifying to contemplate. Already she has 2688 people to every square mile of cultivatable land, and her people are increasing thru excess of births over deaths by about 700,000 yearly. The people have advanced their standards of living in the last sixty years amazingly, so that emigration except to America is not attractive to most of her workers. There is still uncultivated land in Hokkaido and quite a little in Korea. For many decades there will doubtless be unlimited opportunity for Japanese emigration to Manchuria and Siberia.

Japan may very likely run on as at present without much emigration for two or three decades. What will then happen? Beyond question when the pressure becomes sufficient either there will be emigration to Asia or the birthrate will fall.

But this should be clearly recognized both in Japan and in America. Japan's population and economic problems could not be solved by emigration to America unless it were enormous, say a million a year. And even so, an increased birthrate in Japan would in all probability immediately appear.

But the immigration to America of even 100,000 yearly would throw America into intolerable political, racial and economic chaos. This would have disastrous reactions on Japan. No, the solution of Japan's population problem cannot be solved by emigration to America. Japan must find in Asia her way to live. Americans should help, not thwart her legitimate expansion there.

On the other hand America must find a way to handle this question free from all humiliation or disgrace. Japanese (and Chinese) now in America should be given full courtesy of treatment. All our invidious laws against Asiatics should be repealed. Those Asiatics now lawfully here, if they and their families are going to stay on permanently, should be invited to qualify for citizenship and to take out naturalization papers.

# The Story of the Week

## Embers of Election

THE electoral vote on final returns remains as The Independent announced it in last week's issue. Later returns have changed the probability of Harding's victory in Oklahoma, Tennessee and New Mexico into certainty. Senator Beckham seems to have lost out to his Republican rival in Kentucky, Richard P. Ernst, which gives the Republicans fifty-nine votes in the Senate, or a majority of twenty-two. The new House of Representatives will be even more strongly Republican than appeared on the first returns. The Republicans have 307 Representatives, giving a majority of 179. The Republican control of both branches of Congress is so secure that the party caucus can carry out any legislative program it may decide upon in defiance both of the Democratic opposition and of any insurgent group which may arise within the party. Representative London of New York will be the only Socialist in the new Congress. One of the new Republican representatives is Miss Alice M. Robertson of Oklahoma, who was postmistress of Muskogee under President Roosevelt's administration. By the irony of fate, Miss Robertson, the only woman in the new Congress, was one of the anti-suffrage leaders of her state before the passage of the nineteenth amendment.

President Gompers of the American Federation of Labor claims that the results of the election justify the Federation in refusing to support an independent Labor party. He regretted the election of Senator Harding, but claimed that fifty Congressmen who had been "inconsiderate and hostile" toward labor were defeated at the polls. The Anti-Saloon League claims that a majority of the new Congress will oppose a repeal of the Volstead Enforcement Act. Mr. Christensen, nominee of the Farmer-Labor party for President, is not discouraged by the failure of the party to make any considerable showing in the present election. He predicts that the rout of the Democratic forces will make the Farmer-Labor party the real opposition to the triumphant Republicans and that it will carry the House of Representatives in 1922.

The Republican party spent on the national campaign \$6,250,000, of which \$1,500,000 is still to be raised to clear off the deficit. This is a large figure, but is much less than the estimates made by Governor Cox during the campaign. The Democratic National Committee had a campaign fund of \$878,835.24. The Farmer-Labor party reports a baby budget of only \$23,892.45. On the whole the

national election was not expensive, making allowance for the increased cost of printing, supplies and other campaign necessities. No such startling revelations of reckless expenditure have been revealed as in the Republican race to capture the party nomination this spring. The probable reason for this was the general feeling in financial circles that in 1920 the Republican nomination was equivalent to an election.

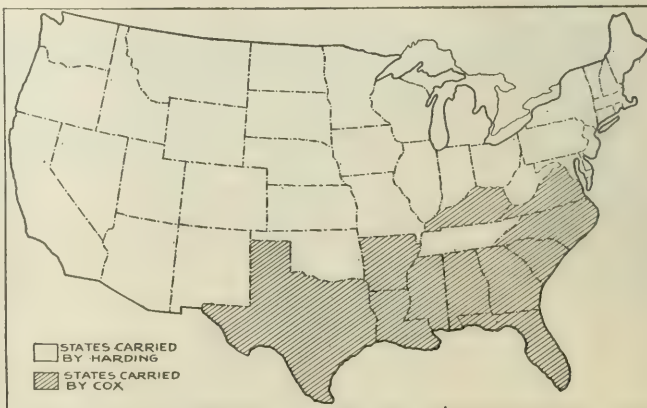

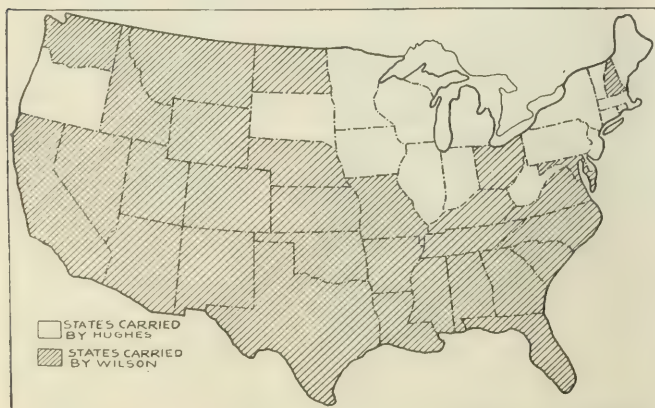

In several states there have been interesting referendum votes. The most important was the victory of the anti-alien land legislation in California, which threatens international complications with Japan. In New York the state bonus for veterans of the Great War was successful by an overwhelming majority in spite of the criticisms of the greater part of the press. Privates and officers below the rank of captain will receive ten dollars for each month of service. The total cost to the state is placed at \$45,000,000. In Michigan a proposition directed against private parochial schools was defeated by a heavy majority. In North Dakota several laws restricting the activities of the Bank of North Dakota were carried on referendum against the opposition of the Non-Partizan League. The Non-Partizan League reelected its candidate for Governor.

Perhaps the strangest result in the state elections was the Republican sweep of the New Jersey legislature. Altho in past times New Jersey has been the most Democratically

© Underwood & Underwood

When President Harding goes to the White House his secretary will still be the right-hand man and family friend who has been secretary to the Senator from Ohio since his election in 1915. George B. Christian, Jr., was in the limestone business in Ohio before he became Senator Harding's secretary. He helped form a political party in Marion known as the Harding Democrats, men who found in Harding's leadership enough to make them forsake their traditional politics. For in 1912 Mr. Christian had been so much a Democrat that he called the roll in the convention that nominated Woodrow Wilson

WHAT A DIFFERENCE FOUR YEARS MAKES

inclined of the northeastern states, the New Jersey House of Representatives next year will contain just one Democrat, Mayor Runyon of Belvidere. As the whole of the minority party he is entitled to representation on forty-nine committees, besides being the whole Democratic caucus, the minority leader and candidate for speaker, and the only representative in the lower house of the administration of the present Democratic Governor.

## What Bryan Thinks

**M**R. William Jennings Bryan, thrice unsuccessful Democratic nominee for the Presidency, has broken his long silence to explain the Republican landslide; probably feeling that his own experiences had made him an expert on the causes of a Democratic defeat. He voted with his party this year and even refused a nomination from the Prohibition Party, but his formal "regularity" covered a deep discontent with the policies of both President Wilson and Governor Cox. He said that "It was the first campaign in forty years in which I have not spoken, but my speeches would not fit into this campaign." He condemned President Wilson for insisting on the League of Nations Covenant without amendment or reservation and blamed Governor Cox for following the President's lead in this particular. Other grievances were the tacit alliance between Cox and the "wets" of the eastern states and the alleged influence of "Wall Street" in the San Francisco Convention.

The most interesting suggestion made by Mr. Bryan was that President Wilson should resign the Presidency to Senator Harding without waiting till next March. He indicated a way in which this could legally be done:

The President should resign at once and turn over his office to Vice-President Marshall on the condition that when Congress convenes Mr. Marshall appoint Mr. Harding Secretary of State and resign at once. This would give to Mr. Harding the duties of Chief Executive of the nation and would permit him to bring world peace. World peace is nearest to the President's heart. He could hardly refuse to hasten its coming with so small a sacrifice, if it can be called a sacrifice to escape a three months' combat with a hostile Congress.

This is a highly ingenious proposal and would make possible, without the necessity of a constitutional amendment, the elimination of the four months' overhang of one administration after the next one has been elected, which nearly all students of political science recognize as one of the defects of our national government. But Mr. Bryan did not consider the possibility that even if President Wil-

© Underwood & Underwood

No matter who is elected William Jennings Bryan stays in the limelight of our national politics. This latest photograph was taken just after his latest startling—and, many will contend, his common sense suggestion that President Wilson and Vice-President Marshall in turn resign and by appointing Senator Harding Secretary of State put him at once in Presidential power. Cutting the Gordian knot is one of Mr. Bryan's specialties, but the process leaves many loose ends

Wide World

These three dogs were brought from their native Alaska by airplane recently by Lieutenants Crunirine and Nelson, United States Army aviators, who made the first flight from Mineola to Nome and return

son did resign Vice-President Marshall might prefer to be President himself for the next four months instead of turning the office over to Senator Harding. It is even doubtful if Senator Harding himself is in a hurry to assume his new duties since he will wish time to consult the leaders of his party before selecting his cabinet and outlining his policies.

## Our Walking Delegate

**P**RESIDENT Wilson has commissioned Secretary of State Colby to visit South America, as did Secretary of State Elihu Root, in order to strengthen the friendships which bind together the nations of the American continent. In President Wilson's statement he spoke of the visits of courtesy paid to the United States in 1918 by Dr. Baltasar Brum, now President of Uruguay, and Dr. Epitacio Pessoa, now President of Brazil. He said that he had long desired to return these visits in person but had been prevented from doing so and could not "longer postpone the agreeable courtesy of their reciprocation."

I have, therefore, directed the Secretary of State, on my behalf and in my stead, to visit both Brazil and Uruguay and extend to the people of both those countries, thru their respective Governments, the most emphatic assurances of the esteem and friendship of the people of the United States, and of the desire felt in this country for a strengthening of every tie that binds our respective peoples in mutual good will and cordial intercourse.

After his visit to Brazil and Uruguay, Secretary Colby will make a short trip to Buenos Aires on the invitation of the Government of Argentina. A battleship will be placed at the Secretary's disposal for the trip and he will be accompanied by a large diplomatic staff. President Wilson's ill health is, of course, the reason why he cannot personally visit Latin America.

## Sunning Himself in Texas

**S**ENATOR Harding, President-elect of the United States, has decided to take a vacation from the cares of campaigning and to spend it in southernmost Texas, not far from the Mexican border. Altho half the nation is speculating as to his Cabinet appointments, foreign policy and other particulars of the incoming administration, the President-elect will postpone all political duties until December. He plans to visit the Panama Canal after a fortnight's rest in Texas, after which he will return to his home in Marion and consult with his party advisers.

Senator Harding's announced intention of visiting the canal zone gave rise to a pleasant little incident which does something to relieve the bitterness of the campaign. Secretary Daniels, at the instance of President Wilson, telegraphed Senator Harding that a warship would be placed at his disposal to take him down to Panama if he so desired. This courtesy was declined on the ground that arrangements had already been made for a preliminary visit

## COAL

Scranton, Pennsylvania, undermined itself in the scramble to get out all its available coal. The recent digging in the mines has led under the city and resulted in a dangerous widespread cave-in of streets and houses

to Texas, but the Senator appeared greatly pleased at the offer and expressed his appreciation in cordial terms.

Governor Cox has taken his defeat very philosophically and has asked the Democratic party not to be obstructive, but to coöperate with the new administration. He said:

For the first time in ten years the Republican party is in complete control of the legislative and executive branches of the national government, therefore policy as to statute and administration is with it. Its task is no longer that of the critic, but the constructor.

It is my hope and firm belief that the Democracy of the nation will not attempt political sabotage. The country has seen quite enough of that. We are in the midst of emergency and the nation's every resource should coöperate in behalf of the things that are helpful.

There is a distinct difference between defeat and surrender. The flag of Democracy still flies as the symbol of things more enduring than the passions and resentments that come with the aftermath of war.

It cannot be said that Senator Harding has yet given any definite idea as to what his policy will be. His speeches have been carefully confined to generalities. An announcement from the Harding headquarters points to a formulation of policy in December:

Senator Harding let it be known that he is sending out a number of requests for personal and very informal conferences with men and women who have been eminent in the discussion of our foreign relations. These conferences will take place upon his return to Marion in December, and will be individual and personal, with the main purpose of learning what policy may enlist united support.

The publication of a cablegram sent by Elihu Root to Chairman Hays during the campaign shows that many influential Republicans will resist any attempt to "scrap" the existing League of Nations and replace it by some imaginary "Association." Mr. Root declared:

In my opinion, a new deal here from the beginning by abandoning the Versailles Treaty is impossible. To attempt it would bring chaos and an entire loss of results of the war and general disaster involving the United States. The only possible course is to keep the treaty, modifying it to meet the requirements of the Senate reservations and the Chicago platform and probably in some other respects. . . . A separate declaration of peace was justified only by President Wilson's refusal to act. After March 4 that will no longer be justifiable, unless other powers refuse to consent to modifications, which I do not anticipate.

## The Cuban Election

JUST one day before the Presidential election in the United States there was one in our little sister republic of Cuba. President Menocal was not a candidate for reelection. Two tickets were in the field: a Coalition or National party, replacing the old Conservative party,

which nominated Dr. Alfredo Zayas for President and Francisco Carillo for Vice-President, and the Liberal party, supporting General Jose Miguel Gomez for President and Miguel Arango for Vice-President. The United States did not take sides in the campaign or find it necessary to intervene actively to keep the peace during the election. Eleven persons were killed and several wounded in election riots, but this is said to be far below the Cuban average and the election may therefore be counted by local standards as a "quiet" one.

Returns were much slower than is customarily the case in the United States and several days passed before most of the election precincts had reported. On the face of the returns the Coalition ticket has been elected and Dr. Zayas will succeed President Menocal. The Liberal leaders concede the victory of Zayas, but allege frauds and talk of appealing to the United States to cancel the election and order a new one. Havana went by more than 7000 plurality in favor of Gomez, but the vote from the provinces more than overcame that of the capital. The election law, designed to eliminate the frauds and disorders which have marked previous Cuban elections, was drafted by General Crowder of the United States.

## Dry Times in Canada

THE thirsty American must look southward rather than northward for relief. Except for Quebec, which still permits the sale of beer and wine, prohibition prevails generally thruout the provinces of the Dominion. But since the provinces were dry by local legislation it was still possible for liquor to be imported for private use from other provinces or from foreign countries until the Dominion Parliament passed a law permitting provinces to exclude the importation of intoxicants. The legislation left each province free to vote as it chose on the question.

A referendum on this point took place late in October in the three prairie provinces of Manitoba, Alberta and Saskatchewan and in the maritime province of Nova Scotia. In all four large majorities for prohibition were secured and they are henceforth not only "dry" but "bone dry." As frequently in the United States, the vote divided the urban from the rural districts, the big towns such as Halifax and Winnipeg giving majorities to the "wets." French-Canadian settlements and districts containing a large immigrant population also tended to favor the importation of liquor, but the English rural districts, strengthened by the women's vote gave heavy prohibitionist majorities and decided the election in all four provinces. Ontario will vote on the liquor exclusion law next April. It is believed that the results of the provincial referendums will greatly further the movement for Dominion-wide prohibition.

International

## COAL

Rations of coal were dealt out to the people of London during the shortage caused by the great British coal strike. But in spite of the authorities' effort to maintain a just distribution this crowd of left-over customers is fighting for the last bag of coal on the cart

## British Coal Strike Ended

THE great strike of the coal miners, which involved a million men and would, if longer continued, have brought British industry to a standstill, was concluded after more than two weeks of idleness at the mines. The outcome was a compromise. The miners secured the two shillings a day increase that they demanded, while on the other hand the Government succeeded in securing an agreement that the continuance of the higher wage should be dependent upon an increased output. Whether this agreement will be kept or if it is not whether the Government will dare reduce the wages of the miners to the former figure remains to be seen. The advance conceded is to remain in effect pending a decision of the proper amount by a new national wage board. The strikers by dropping their demands for a reduction in the price fixed by the Government for domestic coal lost the support of the public, which was not so much concerned over the wages of the miners as over the prospects of a chilly winter. When the question of accepting the compromise settlement was submitted to the miners it was voted down by a small majority. But since it requires a two-thirds vote to start or continue a strike the executive committee ordered the men to work.

## Irish Home Rule Bill

THE new bill for self-government in Ireland is passing thru the various stages in the House of Commons with large majorities, altho nobody seems to put much faith in its effectiveness. Its novel feature is that setting up two distinct parliaments, one for Ulster and the other for southern Ireland, and leaving their degree of coördination or combination in the future to be settled by mutual agreement. A new clause added by the Government provides that if less than half the membership of either parliament are elected or fail to qualify by taking the oath of allegiance within two weeks the King may dissolve such parliament and place the government in the hands of a committee. Ex-Premier Asquith criticized the clause on the ground that the Sinn Feiners would surely refuse to participate in the election and then southern Ireland, so far from having home rule, would be reduced to the condition of the most backward of the crown colonies.

The requirement that all candidates for the Irish parliaments must take the oath of allegiance before being nominated has been dropped from the bill because of Irish and Liberal opposition.

But while the British Parliament is planning for the future government of Ireland the war between the Sinn Fein and the Royal Irish constabulary continues with increasing violence. In Londonderry the policemen guarding the customs house were attacked and five of them shot. In retaliation two Sinn Fein shops were burned down and others wrecked. In riots about Ballindrae more than a million dollars worth of damage was done. On the Sunday night following the death of Mayor MacSwiney twelve policemen were shot in County Kerry and two were kidnaped. In revenge for this the police set fire to the town hall and half a dozen houses in Tralee at night. In a fight at the Causeway near Tralee seven republican volunteers were shot. Two young women have been shot in the recent riots.

## British Trade with Russia

IF the Soviet peace commissions at Riga succeed in making peace with Poland it is believed that Great Britain and Russia will immediately resume commercial relations. An agreement to that effect is said to have been definitely concluded between the Soviet envoys at London and the British Government. Secretary Klishko of the Soviet delegation in England announces that he has signed contracts with five British firms for the delivery of over \$5,000,000

worth of cloth within three months. One quarter of the purchase price is said to be on deposit at the Esthonian port of Reval ready for payment. Since the Soviet has concluded treaties with Esthonia and Latvia large amounts of goods have been imported into Russia, among them American-made machinery and other products altho our manufacturers are not allowed to ship to Russia.

Soviet Russia has been represented in London by two envoys, Leonid Krassin and Leo Kameneff, but the latter has been sent back to Russia because Premier Lloyd George charged him with carrying on Bolshevik propaganda which is contrary to the condition on which he was allowed to

Galloway

### COAL

If your own coal bin yawns discouragingly perhaps this mountain of coal in Alaska will be a cheering sight! It is part of an enormous storage vault of black diamonds—the estimated area of the Alaskan coal fields is 20,000 square miles, but the lack of transportation facilities prevents American mining companies from getting the coal to market

enter England. Lloyd George also accuses him of misrepresentation because in the advance copy of the peace terms which he presented to the Premier and which the British Government advised the Poles to accept, the Russian envoy did not specify that the Polish militia mentioned should be made up of workingmen.

Some weeks ago the British Government intercepted and translated some code message of the Soviet which told of spending money in propaganda in England especially in connection with the *Daily Herald* of London. The *Herald* is a radical labor and socialistic journal whose editor, George Lansbury, recently visited Moscow and returned with a roseate report of Russian conditions. Lansbury denied the accusation of being bought by Russian gold and asserted that he had received "not a penny, not a sou" from such a source. But he was later forced to admit that another member of the *Herald* staff had in his possession \$375,000 of money from the Soviet Government. Lansbury referred the question whether he should accept these funds for the support of the *Herald* to the trade unions which control the paper and they took the ground that the money should be returned.

Washington D. Vanderlip, who was sent to Russia by a group of California financiers to secure concessions in Siberia, has come out with the report that he has obtained from the Soviet the right to develop coal, oil and fisheries for sixty years in all northeastern Siberia east of the 160th meridian, including Kamchatka. He adds:

I am highly amused by stories contained in recent foreign papers about the rebellions in Russia. Moscow is as safe as any

© Keystone

Once roused to the necessity of military preparedness China is going in for it thoroly. The War College at Canton is as modern as the best military schools in the world. And the young idea is being trained early in military drill. Here are some of the youngest recruits trying to live up to their caps

city in the world. Reports of rebellions and street fighting are absolutely false, and are, I believe, foreign propaganda designed to prevent legitimate American business activity in this great Russian market.

## Between the Bolsheviki and the Putrid Sea

GENERAL Wrangel's army has been driven back into the Crimean peninsula, which is connected with the mainland by the isthmus of Perekop, only four miles across. If Wrangel's rear guard fails to hold this bridge the Red army will pour down into the peninsula and the world may see a second siege of Sevastopol as stirring as that described by Kinglake and Tolstoi. But if Wrangel is cornered in the Crimea he will not be able to hold out a year as the Russians did when that famous fortress was besieged by the British, French, Italians and Turks. For the Crimea consists largely of barren steppe and Wrangel's soldiers and the thousands of Russian refugees that have followed him to escape the Red fury would have to be fed thru the winter by the French and British ships in the Black Sea. Fabulous prices are being paid for any kind of accommodations on all sorts of vessels by the civilians who have fled before the Bolsheviki and want to get to Constantinople. The French warships are rushing supplies and ammunition to Sevastopol, but the French Government is not in a position to afford much military aid since it must keep an army on the Rhine and needs more troops

in Turkey and Morocco. The British are not disposed to come to the rescue of Wrangel since they warned him against undertaking an offensive against Soviet Russia.

The truth about Wrangel's defeat is now beginning to leak out. It seems that there was no foundation for the report recently circulated that General Dubenny, the Bolshevik cavalry leader, had turned against his former comrades and was making a drive on Kiev in cooperation with Baron Wrangel. On the contrary Dubenny was then on his way south to join the Soviet forces against Wrangel. On the nights of October 28-29 a sudden freeze set in and the Dnieper river was bridged with ice. On this Dubenny's cavalry corps and several infantry regiments crossed to the eastern side and attacked Wrangel's retreating army on its left flank. According to the Sevastopol report Wrangel gained a great victory and drove back Dubenny, wiping out two regiments and taking 10,000 prisoners and twenty-five guns. But, however that may be, the final result was that Wrangel continued his retreat and narrowly escaped being cut off before reaching the Crimea. The Red airplanes dropped bombs on the railroad trestle over which his army crossed over the Sivash or Putrid Sea into the Crimea. The Bolsheviki report that in this engagement "an American mission headed by General Morel fell into our hands." But the State Department knows nothing of such a mission or officer. It may have been a mission sent out by Admiral McCully, who is the American High Commissioner to the South Russian Government at Sevastopol. Captain Kilpatrick of the American Red Cross and two nurses were captured by the Bolsheviki and are said to have been killed.

The reports of massacres of the Jews in Taurida while this province was held by the Wrangel forces have been confirmed. A Sevastopol despatch says that when the Wrangel troops found that they had to retreat and could not take with them all their prisoners they sorted out and shot hundreds of Jewish Bolshevik commissaries as well as Hungarians, Rumanians, Chinese and Germans.

## When Turk and Tatar Join

THE advance guard of the Soviet forces from the Caucasus and of the Nationalist forces from Anatolia have met at Alexandropol in Armenia. Emissaries from Moscow have gone to Angora bearing to the Nationalist leader, Mustafa Kemal Pasha, their fraternal greetings and, what was still more welcome, a hundred pounds of gold.

Now that the Poles have made peace and Wrangel's army is imprisoned in the Crimea the Bolsheviki have troops to spare and can regain the ground in the Caucasus that they had to relinquish when hard beset last summer.

© Underwood &amp; Underwood

They want more money! These Honolulu laborers are striking for an increase over their present wages of 77 cents a day for working on the sugar plantations. The women, too, are dissatisfied—they claim they can't live on 47 cents a day!

They have reoccupied Baku, the Oil City of the East. Here last September was held a Communist Congress of Eastern Peoples, presided over by the Soviet leader, Zinoviev, alias Apfelbaum. As he unveiled a statue of Karl Marx he expressed the hope that similar ceremonies would soon be seen in Constantinople and even in London. Afterwards lifelike effigies of Millerand, Lloyd George and Wilson were placed upon the platform and condemned to death by a Communist court. Then the executioner poured over them a bottle of oil with the words, "Here's a taste of the Baku petroleum you were so anxious to grab," and set the dummies on fire. As the statue of the British premier burned up rolls of counterfeit English bank notes, made in Moscow, were shot out of the pockets and showered the crowd. Zinoviev in his opening address called upon the Turanian world to wage a Holy War against their oppressors, but warned his Moslem hearers that they could not expect the full support of the Russian Republic unless they swept away their Sultans and Caliphs and adopted the Soviet system.

Mustafa Kemal on his part addressed his fanatical followers at Angora on September 17 in such words as these:

The life and property of foreigners belong to you. Kill the Greeks, the Armenians, the French and the British. Do not fear anybody. Kill them ruthlessly. Butcher them. Burn and destroy everything. Allah is great and will forgive you.

In October the Tatar Bolsheviki from the Caucasus demanded free passage thru Armenia in order that they might join the Turks. But the Armenians, like the Belgians in 1914, refused and determined to maintain the inviolability of their territory. But again like Belgium their protest was disregarded and their country was overrun from east and west at once. When the commander of the Turks at Erzerum tried to force his way thru Armenia from the west the Armenians offered such opposition as they could, but were unable to stop the Turks. Defeated at the frontier the Armenians fell back on the fortress of Kars, which in the Crimean war made such a gallant stand against the Russians. But this time Kars was soon captured by the Turks, who pressed on toward Erivan.

## The Partition of Turkey

IT has now been divulged that on August 10, the same day that the Allies signed the treaty with Turkey at Sevres, three of these powers, France, Great Britain and Italy, concluded a secret agreement defining their "spheres of influence" in Asia Minor and promising mutual support in maintaining them. It was provided in the document that it shall be communicated to the Turkish Government and published at the same time the Turkish treaty went into effect. But that date is indefinitely distant because the Constantinople Government is powerless and Asiatic Turkey is mostly held by Nationalists who refuse to submit to the terms dictated by the Paris Peace Conference. So in order not to keep the country longer in suspense the tri-partite agreement has now been made public in advance of the designated date.

The publication of the agreement merely in the main confirms what has previously been surmized from the actions of the three powers as to their respective shares in the old Ottoman empire. France gets Syria, Cilicia and western Kurdistan. Italy gets the Adalia district and the Heraclea coal basin. The British sphere is undefined, but must be assumed to comprize at least Mesopotamia for France has relinquished the Mosul oil region which, under the secret treaty concluded during the war, fell into the

TURKEY CARVED UP

The secret treaty of Sevres, just published, completes the proposed partition of Turkey. The French "sphere of influence" is to embrace Cilicia and Syria from Beirut to Jezire-ibn-Omar. The region about Adalia is allotted to the Italians. The Smyrna enclave has been given to Greece. The British will dominate Mesopotamia, Arabia, Palestine, Egypt and Persia. Armenia is to be independent under a mandatory, preferably America. The Tatar republic of Azerbaijan is now under Bolshevik control. Georgia and Kurdistan also claim independence. Constantinople is to be governed by an international board with a British chairman. The Turkish Nationalists, under Mustafa Kemal Pasha, with headquarters at Angora, hold all central Anatolia and have now come into conjunction with the Bolsheviki at Alexandropol.

French sphere. The process of readjustment in accordance with this new agreement has been going on for some months. The British troops in Cilicia have been displaced by French. Prince Feisal, who set himself up as King of all Syria, has been expelled from Damascus by the French troops without protest from Great Britain, altho he was a British protégé. The Italians have already occupied southern Anatolia. The British have strengthened their hold on the Mesopotamian valley in spite of the opposition of the Arabs of that region and of the anti-expansions at home.

The preamble of the secret treaty of Sevres states its purpose as follows:

Being anxious to help Turkey develop her resources and to avoid the international rivalries which have obstructed these objects in the past, and being desirous to meet the request of the Turkish Government that it receive necessary assistance in the reorganization of justice, the finances, the gendarmerie and of the police, in the protection of religious, racial and linguistic minorities, and the economic development of the country; considering that the autonomy or eventual independence of Kurdistan has been recognized by them, and that it is desirable with a view to facilitating the development of that country and make provision for any assistance it may require in its administration and to avoid international rivalries in such matters; recognizing the respective special interests of Italy in southern Anatolia and of France in Cilicia and the western part of Kurdistan bordering on Syria, up to Jezire-ibn-Omar, as these areas are hereafter defined, the British, Italian and French governments have agreed upon the following: . . .

According to the treaty the three powers shall share equally in all international commissions, present and future, and shall contribute equal capital to the railroads running thru Turkey from Constantinople toward Bagdad. The mandatory powers for territories detached from Turkey shall likewise have equal rights. It is stipulated that non-signatory powers shall have free access to the various areas for commercial and economic territories.

It is further announced that France and Great Britain have agreed on various points involved in the Turkish treaty, especially in relation to Constantinople. The presidency of the international council for the government of Constantinople shall for the first two years be held by a British admiral. A Freshman will head the Financial Commission and an Italian will head the Railroad Commission.

# A Little of Everything

## Living Memorials to Our Dead

By Phillip Hettleman

Every small city in the United States faces the serious problem of providing wholesome recreation for the youth within its borders, if it desires them to become useful citizens. A Memorial Community Building, to be erected in the honor of its fallen heroes, is the way Goldsboro, N. C., and Wayne County intend to solve this problem.

In September, 1918, Harold S. Buttenheim, editor of the *American City*, conceived the idea of building community houses as a form of memorial to those who made the supreme sacrifice. Already over 300 cities have definitely decided to construct some building ranging from a hospital to a theater as some form of memorial. Of these, 248 are to be community buildings and the Bureau of Memorial Buildings reported recently that the plans of Wayne County's Memorial Building to be erected at Goldsboro are the best in the United States, that have so far come to its attention.

An experienced architect was early called on the scene. It was estimated that the cost of constructing the building would be \$200,000, while \$50,000 would be required to purchase the lot, making the total cost one-quarter of a million dollars.

The first recommendation was a memorial hall. On its walls the names of all the Wayne County boys who saw service were to be inscribed, and provisions were to be made for other records and trophies. This provision is a vital one because the building is essentially a memorial, and tributes to

the men in service should receive first consideration.

The Wayne County Memorial Building is to contain a large auditorium seating 1500 people, which will have a modern stage with proper equipment. It will have a public comfort room with suitable toilet facilities. This room is to be under the supervision of a nurse who is to take care of the small children while the mother is on her shopping tour. Such a room will serve in many ways, since many out of town people will be afforded a proper place to make their quarters while in the city.

In no section of the country is the need of books greater than in the South. The reading room provided for in the proposed building will prove a big factor in promoting the reading habit in the "moonlight school" students as well as among the young people. Another important feature of the memorial building is its up-to-date gymnasium and swimming pool. There are also rooms for games in the basement, and on one side of the gymnasium will be a bowling alley.

Social organizations had much to do with the winning of the war, and it is only right that they should receive proper consideration in a building which is much the result of their work. Also by having the community building serve as the meeting place for public spirited gatherings, all classes of citizens are attracted to its doors. The Wayne County memorial will be the future home of the Chamber of

Commerce, the Red Cross, and many civic and charitable organizations. Nor has the housewife been disregarded in the arrangements. In the basement there is to be a lunch room and kitchenette. Meals are to be served from time to time, and various organizations will have a suitable place to prepare their smokers and banquets.

### The Skin Game

The value of furs imported into the United States during 1920 will, it is estimated by the National City Bank of New York, amount to no less than \$125,000,000. This is just the cost to the importer; by the time the furs have passed thru all stages to the ul-

In this community building it is proposed to honor the soldiers and sailors of Goldsboro, North Carolina, who made the supreme sacrifice in the World War. Here will be incorporated an auditorium, reading room, gymnasium, swimming pool, Red Cross room and a nursery in which to leave the babies while busy mothers shop. A monument to the dead to give happiness to the living is a high-hearted aim worthy of note

timate consumer they will probably cost at least \$500,000,000. The American may complain of hard times and high prices, but he is evidently willing to invest a lot in luxuries. The average annual value of imported furs during the decade before the Great War was only about \$20,000,000, or less than one-sixth of what the importers are paying now.

This \$125,000,000 worth of furs was taken from about 175,000,000 animals from all parts of the world. London is the greatest of fur markets and sends us nearly a fourth of our fur imports, but we also get shipments directly from Canada, Australia, China, Japan and Siberia. Rabbit skins are the most numerous single type. In 1919 of 144,255,000 fur skins of all types no less than 114,819,000 were hare and rabbit skins, and this year the proportion will be much the same tho the total number will probably be greater. Next in value to the rabbit skin imports come, in order of importance, fox, squirrel, beaver, marten, muskrat and moleskins. But many other animals enter into the fur trade; even the common house cat furnishes about a million skins a year, chiefly from Russia and Holland.

Our Elastic Skulls

The average human skull is of greater elasticity than one would imagine to be possible. Indeed, we are assured by competent authorities, it may be compressed laterally in diameter by a blow or pressure applied at the center of area at right angles to the surface at that point by one and one-half centimeters, or about six-tenths of an inch, recovering its original diameter and form without any breakage.

The substance of which our bones are made is so highly resistant that a cylindrical piece of it only one square centimeter, or .00155 square inches in area, that is, only 1.128 millimeters, or .044 inches in diameter, shows a tensile strength of sixteen kilograms, or thirty-three pounds avoirdupois. This is calculating on the basis of about 21,300 pounds per square inch.

A similar example of hardwood tested in the same manner held only ten kilograms, from which circumstance it appears that bone possesses 50 per cent more tensile strength than wood does.

A single bone fiber is shown in an exhibition abroad supporting a weight of five kilograms, or eleven pounds avoirdupois, the weight of a healthy young baby.

NEW USES FOR GAS MASKS

Rate of Increase in Population of United States by Decades

Are We Reaching Our Growth

By William B. Bailey

Professor of Practical Philanthropy at Yale University

The Bureau of the Census estimated the population of the continent of the United States on January 21, 1920, as 105,683,108. This figure was based upon an actual count of 85 per cent of the population. The final figures probably will not be far different from those at present announced. The chart shows the rate of increase in the population of this country by decades from 1790 down to 1920. From 1790 to 1820 the immigration to this country was small and most of the growth was due to the natural increase of the population which seemed to have amounted to about 3 per cent per annum. From 1840 to 1850 there was a considerable increase in the rate of growth occasioned by the tremendous immigration from Ireland and Germany about the middle of this decade. This immigration continued to be quite large down to the

Civil War. The great drop in the decade 1860 to 1870 is due, of course to the Civil War with its accompanying mortality and stoppage of immigration for several years. The enumeration in 1870 was rather unsatisfactory and the decrease may have been somewhat exaggerated on this account. From 1870 to 1880 we get a rebound near to the point reached prior to 1860. From that period the rate of increase has steadily diminished with the exception of the decade 1900 to 1910, when there was a very slight increase.

Not only was the rate of increase from 1910 to 1920 lower than in any previous census period, but the actual increase in numbers of the population was smaller by over two millions than in the previous decade. These figures are brought out clearly in the accompanying table.

Census				
Year.	Population.	Increase.	Per Cent.	
1920	105,683,108	13,710,842	14.9	
1910	91,972,266	15,977,691	21.0	
1900	75,994,575	13,046,861	20.7	
1890	62,947,714	12,791,931	25.3	
1880	50,155,783	11,597,412	30.1	
1870	38,558,371	7,115,050	22.6	
1860	31,443,321	8,251,445	35.6	
1850	23,191,876	6,122,423	35.9	
1840	17,069,453	4,203,433	32.7	
1830	12,866,020	3,227,567	33.5	
1820	9,638,453	2,398,572	33.1	
1810	7,239,881	1,931,398	36.4	
1800	5,308,483	1,379,269	35.1	
1790	3,929,214	.....	.....	

The causes of the slow rate of increase during the past decade are not hard to see. Immigration practically ceased with 1914 and there was considerable emigration to the allied countries. The influenza epidemic was more fatal in total deaths than any other similar catastrophe in this country. In addition the loss of life due to the war must be considered. Of course the toll from battle in this country did not begin to approximate that in some European countries. Mr. C. Döring has estimated the loss of actual or potential lives from the world war at thirty-five millions. In France the birthrate declined from 18.3 per thousand population in our population caused by excess of births over deaths seems to be about 1 per cent. It is apparent that this annual rate of increase, therefore, is only

about a third as great as it was a century ago. It is unwise to try to look too far into the future, but it seems extremely unlikely that we can ever again expect an increase in the population of this country as rapid as that previous to the Civil War.

A New York paper estimates that in a year the average Bostonian eats two and five-sevenths times his height in baked beans, estimating the height of an average bean pot at ten inches and the height of the average Bostonian at five and a half feet.

\*\*\*

Within one month after the American Red Cross opened its milk distributing station for ailing babies at Elbassan, Albania, the workers in charge of the station found that 50 per cent of the "babies" served with the precious liquid were over twenty-one years of age.

### Smokeless Coal

A new smokeless preparation of coal has been invented, according to an announcement made at a convention of the American Chemical Society in Chicago.

Carbocoal, as the new fuel is called, is a bituminous coal which has been changed into a smokeless fuel resembling anthracite. It is prepared by crushing the soft coal and carbonizing

it at a relatively low temperature of 900 degrees Fahrenheit. The coal is carried out in a horizontal retort about seven feet in diameter and twenty feet long, lined with carborundum. The coal is continually stirred and moved slowly thru the retort by means of paddles mounted on two heavy steel shafts running lengthwise thru the retort. Each retort has a capacity of about a ton an hour, the Clinchfield plant being equipped with twenty-four of these retorts. Carbonization of the coal in this manner yields about twice as much tar as is obtained from the ordinary coking process, but the semi-coke obtained is quite soft and friable. It can be used directly under the boiler of a power plant or put into a gas producer, but is not in good shape to market as a general fuel for domestic and industrial use. In the "Carbocoal Process" the soft semi-coke is ground, briquetted with pitch, and the briquets then carbonized for about six hours at 1800 degrees Fahrenheit. The effect of this high temperature carbonization is to render the briquets hard, dense and smokeless—quite unlike any other fuel on the market. A further substantial yield of by-products is obtained during the second carbonization, so that the "Carbocoal Process" represents a very economical method of producing a smokeless fuel from bituminous coal. The high yield of oils obtained is also of great importance in view of the rapidly diminishing supplies of petroleum in the United States and the enormous growth of industries which use oil products such as gasoline, motor spirits, lubricating oils and fuel oil.

The first commercial plant manufacturing the new fuel was put into operation at Clinchfield, Virginia, in June, 1920, with a capacity of five hundred tons of coal a day from which 350 tons of the fuel are made. The process was developed by the International Coal Products Corporation of New York. After five years of experimental work at Irvington, New Jersey, the large scale commercial plant at Clinchfield was established.

# A New Kind of Atlas

## Loose Leaf—Always Up-to-Date

**I**S your old Atlas like last year's newspaper—hopelessly out-of-date? Does the world it shows no longer exist?

Today we are living in a NEW World! The whole map has been made over by the War and by other important developments everywhere.

But you need never again have an out-of-date Atlas—for here is a New Kind of Atlas—an Atlas that can be kept up-to-date—that keeps pace with the world—that need not get behind the times! Out of the chaos following the war comes the NEW WORLD Loose Leaf ATLAS, bringing before you the whole new world of today, showing the alterations on the map, the new nations that have been born, the new developments that have left their mark on the map everywhere.

### The New World Loose-Leaf Atlas

Here is the Atlas that is absolutely up-to-date now, and that will continue to be up-to-date. Here is the Atlas that every home needs in these times of progress and expansion.

If the world never changed, no atlas would ever grow out of date. But with events moving as rapidly and as suddenly as they are, new atlases soon must become obsolete. Even the New World Atlas would be far behind the times if no provision was made for keeping it always up-to-date. That is why we made it Loose Leaf.

It is the only method by which atlases can be kept permanently abreast of developments, of changes political and economic, of advances in commerce, of new discoveries and explorations.

The NEW WORLD Loose Leaf ATLAS brings you a wealth of new information about every place in the world—it shows in detail every country of the earth—every political division. And in addition it gives a vast fund of interesting facts dealing with such features as climate, vegetation, natural resources, trade routes, races, population, history. Here are four hundred

pages of maps and index, four hundred pages of timely, authentic, comprehensive knowledge about the world of today.

### Keep Pace With the World

You need this wonderful new kind of Atlas *now*—to keep in touch with the big world issues—to understand international affairs—to read your newspaper intelligently—to carry on conversation with well-informed people. You need it to broaden your business outlook—to follow the course of trade at home and abroad. Children need it to visualize history and the great war—to learn about the *new* world of today. And you will need this Atlas in the future to keep you informed of world changes everywhere which will be recorded by the Up-to-Date Map Service.

This Service (as explained above) you will receive for two years without charge. Think what this will mean to you! As Mr. O. P. Austin, Statistician of the National City Bank of New York, says, "Seldom a day passes that I do not use this Atlas in my office work, and these particular (new) maps I have found very useful, and must have them to keep the copy which is in my office down to date. I am a great believer in the 'Loose-Leaf' system."

### As Timely As Your Newspaper

Here is the Atlas you have been waiting for! You need not wait until additional settlements have been made in the map, for this big New Kind of Atlas keeps pace with the world—shows changes in the map whenever and wherever they occur. It enables you to interpret current events—it gives you a timely grasp of the national and international issues of the day—it enables you to talk intelligently about the present situation in foreign lands.

In this rapidly-moving day and age no home should be without the NEW WORLD Loose-Leaf ATLAS—it is a wonderful help to every one who wants to keep informed of what is going on in the world—to keep pace with the world's changes. Let us tell you ALL about this wonderful, large-sized Atlas.

## Mail Coupon for Interesting Booklet

Space here is far too limited to give an adequate idea of what the NEW WORLD Loose-Leaf ATLAS is and all that it contains, of the valuable special features it offers to every-one wishing to keep pace with the world—in history, economics, business and trade, and international expansion. But a handsome booklet has been prepared which tells the whole fascinating story. It is profusely illustrated and is full of interesting facts, and you will find it one of the most attractive booklets you have ever seen or read.

We will gladly send you a copy of "Keeping Pace with the World" without any cost or obligation on your

part. Simply send the coupon below, and you will receive the booklet by return mail. Let us suggest that you do this now, while the matter is before you, as you do not want to overlook the opportunity of learning about this wonderful New Kind of Atlas, and how only \$1 puts it into your home and small monthly payments quickly make it yours. Send no money. Just mail coupon NOW for this valuable and interesting booklet, "Keeping Pace with the World."

Chicago, Ill.

### A Few of the Great Features

Four hundred pages of maps and text, size of page 13¼ by 19½ inches. Maps of all the nations, territories and islands of the world revised to date. Detail maps of important cities and harbors. Physical maps of the world and of continents. Language map of Europe. Large-scale map of the Western Front. Large-scale map of the Italian Front. Sixteen pages of Historical Maps showing the development of all parts of the world from ancient times, with dates of wars and treaties.

Exploration maps of the North and South Poles. Two double-page maps of the United States. Economic map of U. S., showing forest preserves, mining fields, cattle-raising districts, etc. Key map of U. S., showing States, Parcel Post Units, Standard Time Zones. Shipbuilding Map of U. S., Oil and Gas Map of U. S. Separate Indexes to all maps, giving location of towns and latest population figures for the United States.

## CHAMBERLIN METAL WEATHER STRIPS "SINCE 1893- THE STANDARD"

# Don't Risk the Danger and Dis- comfort of a Draughty House

*Shoveling in the Coal  
Won't Make Comfort*

**F**ORCING the furnace is costly and of little benefit when icy currents of air are sifting in, and heat is being forced out through cracks around doors and windows.

The solution lies in the installation of the Chamberlin Metal Weather Strips. They effectively seal up these cracks and stop the draughts that make your home chilly and endanger the health of your family. They enable you to heat your house evenly and comfortably at a considerable saving of fuel. They shut out dampness, germ laden dust and dirt—your home stays clean longer. They even exclude noises.

Chamberlin Metal Weather Strips have been the standard for 27 years. Chamberlin has a permanent service organization with branches in principal cities where weather strip experts are stationed to give immediate installation and adjustment service.

It is to your advantage to know all the facts about this Chamberlin Weather Strip service before you install Weather Strips.

## What British Labor Wants

(Continued from page 259)

and this allowance has recently been added to to meet the increased cost of living due to the war. This Act, good as it was, by no means achieved what the Labor Party hoped for. Efforts were made to get the age reduced to sixty-five and to make the income limit higher; a great attempt was also made by Labor members of the House of Commons to obtain the removal of a particularly uncalled for clause disqualifying any person who had, even if only on one occasion, been in receipt of Poor Law relief; this unhappy blemish, I am glad to say, was removed three years later. It is a very notable fact that nearly a million veterans in the Labor Movement were enjoying free pensions to the amount of £11,000,000 per year, over nine in every ten being in receipt of the full pension of five shillings a week, before the Government's measure became law.

One of the most important movements towards the creation of a better state of affairs in Industrial England was the formation of a Royal Commission on Poor Laws and Relief of Distress, and as another evidence of the progress of the Labor Movement, it may be remarked incidentally that Labor was very well represented on the Commission.

Poverty is such a big social evil and the source of so many other big social evils that it is astounding it should have been so long allowed to drift under a relief administration that experience proved had nothing to recommend it and which utterly failed to solve the problem. For over eighty years the only important change made in the organization of Poor Law Relief was the absorption of the Poor Law Commissioners, in 1871, by the Local Government Board, thus bringing the system under the responsibility of the Government. The faults of this country's Poor Law administration were many; some of them were disgraceful, but the biggest criticism which can possibly be made against it is that it failed, miserably, to put an end to pauperism. Twenty years ago there were 735,388 paupers in England and Wales; ten years ago their number had grown to 916,377.

In England and Wales in 1911, 106,642 deaths were registered as having taken place in poor law institutions, workhouses, infirmaries, schools, hospitals and asylums, or 20.11 per cent of the total deaths; the proportion during the ten years immediately preceding averaged 17.88 per cent and of these 55,570 occurred in workhouses, 38,899 in hospitals, and 10,636 in lunatic asylums. In London, in 1911, four persons in every ten died in the workhouse, hospital or lunatic asylum.

The Commission to consider the Poor Laws was appointed in 1905 and its report, which did not appear until four years later, was a stupendous document. The Commissioners were in hearty agreement as to the necessity

of reform, but they were divided as to the best means of carrying it out and therefore two reports—the majority and the minority—were presented. Both reports emphatically condemned the methods hitherto adopted of dealing with the poor, and in particular they condemned the system of relief work. The Commission's investigation clearly showed the uselessness and folly of treating unemployment as an unforeseen emergency instead of a normal and recurring incident in industrial life. Of the recommendations made in the two reports, a couple have since been adopted—the formation of Labor Exchanges and the institution of insurance against unemployment.

Labor Bureaus have existed in this country for upwards of twenty years but for the most part their existence was in connection with the relief of distress. The Unemployed Workman Act of 1905 gave the power to establish Labor Exchanges but only one body in England, the Central (Unemployed) Body for London made any great use of it. This body established a system of Metropolitan Employment Exchanges and when the Labor Exchanges Act came into force it had a list of twenty offices and during the preceding twelve months had filled 30,580 vacancies for employment.

The Unemployed Workman Act expressly required that wherever a Distress Committee was not established the Council of every County and County Borough should appoint a special Committee to investigate the conditions of the labor market by means of Labor Exchanges and to establish or assist such Exchanges within its own area. As was pointed out in the minority Report of the Poor Law Commission, such a network of Labor Exchanges, covering the whole kingdom, would have afforded, as the experience of the metropolitan Exchanges demonstrated, valuable information both to unemployed workmen and to local authorities dealing with the problem. Unfortunately this provision of the Act was ignored by the local Government Boards and was, with the exception of London and three places in Scotland, not put into operation.

The Labor Exchanges Act was passed in 1909 and the Exchanges were established by the Board of Trade, the first being opened in 1910; two hundred and sixty-one were in operation by the end of the following year. The total volume of work performed by the Exchanges (the title of which was altered four years ago to Employment Exchanges) may be illustrated by the fact that in the year ended July 13th, 1917, the total number of registrations was 3,511,318 while the number of vacancies notified was 2,009,731, of which 1,578,497 were filled by the Exchanges from applicants upon their registers; of this last number 388,450 were found working in districts other than those in which they were living.

# The Knack of Talking Convincingly

**I**N nearly every group of men there is one good talker. He is always the leader. Convincing talkers are the dominating leaders of every business. Here's how you can learn the principle of convincing speech in one evening and rise quickly to leadership.

I wonder if you would have felt as elated as I did. A man whose name you would know instantly—a power in the financial world—had granted me an interview. I wanted him to tell me the secret of his great success. Put yourself in my place if you can, and imagine yourself seated before this multi-millionaire, chatting with him about his boyhood, his start in business and his meteoric rise.

He was the biggest man I had yet interviewed in the hope of getting a real "half-Nelson" on the illusive "secret of success." I had half expected to hear the same old story about "honesty, hard work and stick-to-itiveness." So you can imagine my surprise when he said that his success was due primarily to one thing. To use his own words:

"If you should ask me what advice I would give every young man in business, I would say, 'Learn to talk convincingly.' All success in business is built upon getting others to think and do as you wish—in getting the willing co-operation and loyal support of other men. And the only way this can be had is through becoming a convincing talker.

"There is no ability which will bring success to a man so quickly as the ability to talk convincingly."

And the more men I see who have made their marks in the world, the more I realize that he was right. They are all convincing talkers. With their mastery of words, their ability to talk convincingly, and with the dominating influence of their speech, they have swept away all barriers and have attained success. It is no figure of speech, but fact, to say that the great men have talked themselves to success.

Many a man who deserves success is being held back because he cannot express his thoughts and ideas in strong, convincing speech. Many of us deserve a greater salary than we are getting.

You may have a wonderful ability—a genius for your work—which is not being rewarded because you can't put your ideas into speech that convinces. Do not let this handicap hold you back another day from the success that is rightfully yours. When the time comes—and opportunity is always at hand—you can be ready to get up and put your thoughts into speech, the sheer force and conviction of which will mark you as a leader.

This knack of talking convincingly will do wonders for any man or woman. Most people are afraid to express their thoughts; they know the humiliation of talking to people and obtaining in answer a casual nod, or a curt "yes" or "no." But when you can talk convincingly, it's different. When you talk, people listen to you.

When you have acquired the knack of talking convincingly, it's easy to get people to do anything you want them to do. You can get special attention from anyone, from a hotel clerk up to a millionaire. You can make others see your point of view, think as you do, and carry out your slightest wish.

And again, it helps in social life. Interesting and convincing talk is the basis of social success. At social affairs you will always find that a convincing talker is the center of attraction and that people go out of their way to "make up" to him. Talk convincingly and no man—no matter who he is—will ever treat you with cold, unresponsive indifference. Instead, you will instantly "get under his skin." Talk convincingly and any man—even a stranger—will treat you like an old pal and will literally "take the shirt off his back" to please you.

You can get almost anything you want if you know how to talk convincingly enough. You've noticed that in business, ability alone does not always count. Many a man of real ability, who cannot express himself well, is outdistanced by a man of mediocre ability who knows how to talk convincingly. There's no getting away from it, to get ahead—to get what your ability entitles you to, you've got to know how to talk convincingly.

You have seen or read about scores of courses which claimed to teach convincing speaking. You have often thought you would like to take advantage of them and master this knack of powerful speech. Possibly you have investigated a few of them. But you have always found one of two things. Either the course in question dealt almost entirely with oratory—for which you have no use—or else you discovered that the price was entirely beyond what you wish to pay for such training.

But here at last is a wonderful new method of teaching the principles of convincing speech. It is not instruction in oratory or the use of high-sounding words. But it shows you in one evening the principles of talking your way to a better position, more salary and success. And the price—not twenty, thirty or forty dollars—but FIVE.

Not one cent in advance. You examine it free for five days. Then if you want to keep it, send five dollars. If you do not want it, send it back and you are not out a penny. We take all the risk. Send no money. Merely mail the coupon and the complete course goes to you at once.

This course was written by Dr. F. H. Law, for thirty years a lecturer, and an authority on speech. When you receive Dr. Law's course, it will be just the same as if you were in personal contact with Dr. Law, getting the benefit of his advice and instruction.

In one evening you will get the secret of talking convincingly. You will learn exactly how to secure complete attention to whatever you are saying; how to make your words forceful and convincing.

You will learn why talking has always seemed something to be dreaded whereas it is really the simplest thing in the world to get up and talk. You will learn, at once, the art of listening, the value of silence, and the power of brevity. You will quickly learn how and when to use humor with telling effect.

But perhaps the most wonderful thing about the lessons are the actual examples of what things to say and when to say them to meet every condition. You will find that there is a knack in making oral reports to your superiors; a right and a wrong way to present complaints, to give estimates, and to issue orders.

The course contains some wonderful pointers about how to give opinions, how to answer complaints, how to ask the bank for a loan, how to ask for extensions. Another thing that will strike you with force is that, instead of antagonizing people when you don't agree with them, you will learn how to bring them around to your way of thinking in the most pleasant sort of way. Then, of course, along with those lessons there are chapters on speaking before large audiences, how to find material for talking and speaking, how to talk to friends, how to talk to servants, and how to talk to children.

This wonderful training will so enlarge your vocabulary that you will be able to collect the exact words you want and use them with confidence at all times.

Many men have risen to leadership through the use of Dr. Law's wonderful course, "Mastery of Speech." It may be your "open sesame" to a big success. If you do not want it you cannot lose a cent. Don't send any money in advance. Just mail the coupon. The whole course goes to you at once. Remember what the multi-millionaire said:

"There is no ability which will bring success to a man so quickly as the ability to talk convincingly."

Strike out now with a strong determination for your success. Mail the coupon today.

BOSTON, MASS.

Malcolm A. Sundersdorf & W. Phila., Pa.

The number of separate individuals for whom employment was found was 1,351,406.

The organization of the Exchanges provides a ready means of bringing a demand for labor from any part of the United Kingdom into touch immediately with a supply in any other part. If vacancies cannot be filled locally, particulars are first sent to the group of neighboring Exchanges; if they still remain unfilled, particulars are sent to headquarters and then transmitted immediately in the form of a confidential daily "newspaper" to all Exchanges in the country.

The difficulty which workers would often experience in finding the railway fare to work at a distance is overcome by the issue of railway warrants to the Exchanges, subject to an undertaking by the workman or his prospective employer guaranteeing the return of the advance.

Boys and girls under the age of seventeen are dealt with in a special department and Juvenile Employment Committees have been set up in one hundred and fifty-three areas. Of the vacancies filled by men the largest numbers have proved to be in building, metals, engineering and ship-building, transport and general labor. For women the bulk of the vacancies are in domestic (outdoor) service, the preparation and sale of food and drink, textiles and dress.

It is highly worthy of record that these Employment Exchanges are national, voluntary, free and neutral as between employers and employed. Much should be done in course of time by these Establishments in the work of abolishing casual labor and in the guidance, in conjunction with local education authorities, of boys and girls in the choice of careers thus diverting the stream of juvenile labor away from overcrowded industries.

(To be continued)

## Beef and Bouquets

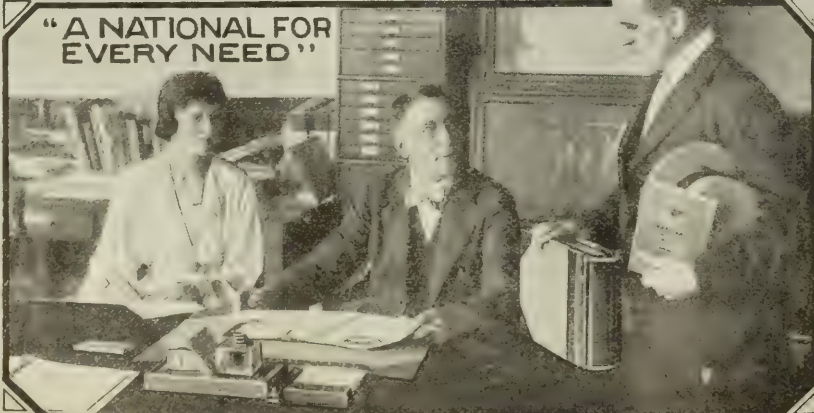

(Continued from page 261)

sanitary, nobody who purchased meat from a butcher shop could have any assurance that he was getting decent food at a fair price. United States Government inspection, to which all the packers doing an interstate business are now subject, stamps every pound of their meat sold as clean, safe and good.

A few illustrations of by-product salvage: Horns and hoofs go into buttons, combs, hairpins, knife or cane or umbrella handles. Dried blood is used as blood meal in stock food, as a plaster retardant in stucco, and as fertilizer on account of its high ammonia content. Hides are sold to tanners, hide fats rendered into tallow, hide trimmings made into glue. Hair and tails go to brushmakers and upholsterers. Hair screenings help to make mortar. Bone marrow is extracted and melted into an edible product. Thyroid, pituitary and suprarenal glands are saved on orders of the pharmaceutical trade. Lungs and heart valves are rendered

**NATIONAL BLANK BOOKS & LOOSE LEAF DEVICES**

"A NATIONAL FOR EVERY NEED"

Some accountants know exactly what their accounting systems demand in the way of recording forms, others have only a general idea of the proper rulings for their bookkeeping departments. In either case a brief examination of the National "Good Forms" pamphlet will quickly identify the proper items and locate them in the regular National Catalogs.

By sending for one of these National "Finding Lists" you will greatly conserve the time of yourself and your stationer. Keep this booklet in your desk drawer; select your requirements at your leisure and order by number from your local dealer. Every buyer of blank books and loose leaf devices should have a "Good Forms" folder in his possession.

Send for a free copy of "GOOD FORMS FOR RECORD MAKING" showing hundreds of ready ruled and printed forms for accounting.

**NATIONAL BLANK BOOK CO. 14 Riverside, Holyoke, Mass.**

into tallow. Ground bone is used in the case-hardening of steel. Fluid blood yields albumen for weather-proofing aeroplane wings.

The hearts and livers of hogs, when not sold to the trade, are used in sausage or rendered into grease. The skins are wanted by leather manufacturers, the stomach linings by pepsin makers, the bladders by users of sausage and lard containers. The gullets and pancreas glands are rendered for grease. The bristles are consigned to hair and bristle factories. The edible fats and trimmings become lard. The inedible pork scrap and fats go into fertilizer, lubricant or soap.

In this connection we begin to see why the packing house has branched out into many lines of business that may seem unrelated, but that are, in reality, offshoots of a parent industry.

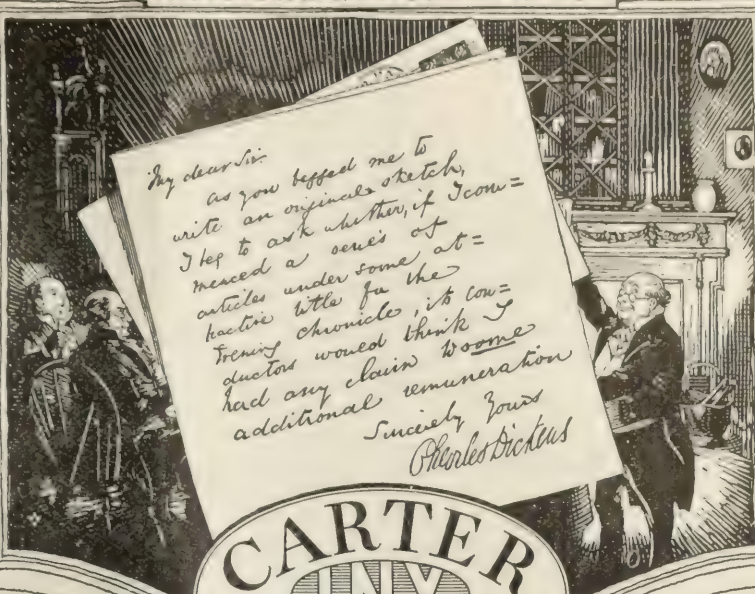

A few examples: The Swift woolhouse in Chicago is the largest in the world, handling about 7,000 skins daily, yielding ten tons of wool. The Swift glue factory has a capacity of 8,000,000 pounds a year, and serves the manufacturers of furniture, sandpaper, matches and dozens of other articles of commerce; the final content of dry bones is 18 per cent glue, and the amount can be imagined when we consider how much live stock every year Swift turns into dressed meat: 1,250,000 calves, 2,500,000 cattle, 4,000,000 sheep, 9,500,000 hogs. This great sea of glue formerly dribbled away. Now it has become a national asset, because the packers went into the glue business. Hides of cattle have, of course, always been saved, but there is a conservation of many million dollars a year from the scientific methods of treating hides that the packers originated, and that saved perhaps \$2 on each hide.

About forty-five pounds of "butter fats" derived from each beef animal go to make Swift butterine, which costs about a half less than butter, and is declared by chemical experts to be as wholesome and nutritious as butter.

A surprising fact is noted by the visitor. President Swift is a lover of animals. He hates to have them killed. But when the Government wires today for a million pounds of dressed beef tomorrow for the American army fighting in the great war, as the Government wired Swift, what are you going to do? Fill the order, as Swift did. The process of dispatching the animals takes but a few seconds, and is rendered as nearly painless as possible. A man who goes thru even a minor hospital operation suffers more than the animal does prior to becoming food for man. The pens for the cattle are paved, so they can be kept clean. The animals are treated humanely, fed and watered carefully, with a feeding trough and stream of running water in each pen. The sanitary conditions are superior to those of the average farm.

Cattle are examined frequently by Government inspectors, from the first unloading until the last particle of dressed meat is ready for shipment.

## HISTORICAL MANUSCRIPTS-NO.6

**CARTER  
INK  
PRODUCTS**

Excerpt from  
letter to  
George Hogarth  
from Charles Dickens

WE have shown you some interesting "historical manuscripts" this year. We have invariably found these manuscripts preserved in vaults, to protect the ink from light. It is sometimes difficult to obtain permission to photograph them, for each additional exposure again dims the already faded writing.

Are your "manuscripts"—your contracts, agreements, deeds and records—carefully preserved? If they were written with Carter's Writing Fluid you need have no apprehension. Carter's never fades. It is *permanent*. With its clear, rich blue, the use of Carter's is a pleasure in the present, a protection for the future.

# A Righteous Ruler

## The Christ of Prophecy

*Give the King thy judgments,  
O God,  
And thy righteousness unto the  
king's son.  
HE will judge thy people with  
righteousness,  
And thy poor with justice.  
The mountains shall bring peace  
to the people,  
And the hills, in righteousness.  
HE will judge the poor of the  
people,  
HE will save the children of  
the needy,  
And will break in pieces the  
oppressor.  
HE will come down like rain  
upon the mown grass,  
As showers that water the  
earth. . . . .  
And men shall be blessed in  
him;  
All nations shall call him  
blessed."*

effort to enthrone the Prince of  
Peace in every heart and in every  
nation the world around.

OUR LITERATURE IS FREE

**THE  
WITNESS COMMITTEE**

119 Federal St.      Pittsburg, Pa.

There are forty-eight inspectors, each a graduate veterinary surgeon. The hands, clothing and surroundings of employees are inspected also; hands must be washed at stated intervals, clothes changed when badly soiled, knives, cleavers, saws and other tools cleaned and disinfected in boiling water, with a bath when required in a solution of bichloride of mercury. A staff of highly trained chemists and bacteriologists keeps analyzing, testing, sampling all ingredients and products.

One of the best features of the work of Swift & Company is the free distribution of educational service literature, to help a thrifty housewife choose and use meats in a manner to conserve the family health and purse. A sample economy lesson: the price of beef remains high partly because Americans order steaks and chops as a regular habit, neglecting and scorning the cuts of meat that are just as good even if they do not sound so aristocratic. Now loins and ribs, that supply the steaks and chops, form only 26 per cent of the total meat content of the animal. The other 74 per cent, including the "round," the "chuck" and the "plate," would give as much nutriment if properly cooked, and would cost very much less.

The Swift educational advertising campaign is a decided improvement on the ordinary "publicity" arguments and appeals. The real function of advertising is not to advocate but to educate. The Swift newspaper advertisements do not waste eloquence on the superiority of Swift products or the bargains in Swift prices, but merely state facts and figures about the economical, serviceable, fair, clean, generous conduct of the business.

A delightful spirit of geniality and democracy animates the organization. There are few private offices—everybody plays an open game and is willing to be seen doing it. The president himself transacts a lot of business at a plain desk out in the general office. The whole Swift family—six sons and three grandsons of the founder of the company—started at the bottom and worked up; a refreshing sight, in these days of pampered youth, was that of L. F. Swift, Jr., in the rough work togs of the apprentice, going thru the toil and training of a common day laborer. A gentleman isn't looking for a gentleman's job—he makes it out of any job that comes along. The secretary, treasurer, office manager, all the vice-presidents, rose by sheer merit from the ranks of the workers, averaging twenty-five years each of loyal service. Note this, however. A department requiring a specially trained man for director is not put under an old employee thus promoted to fill a crucial need. The whole country is searched and the best authority to be found is engaged in advisory or supervisory capacity.

In the office building, a temperature of about 75 degrees can be maintained in the hottest part of the building and the year, when outside

temperature goes to 95 or more. And the windows need never be opened, winter or summer—the inside air is fresher than the outside! Germs, draughts and dust, dead air, smoke, unpleasant odors, all are eliminated.

The highest grade foods that Swift makes are served in the eating place, where prices are lowest. The chef was formerly chef at one of the most famous and expensive Chicago hotels. The menu card offered us presented a choice of seventy-five articles of food. A distinctive mode of checking items on the bill of fare enables fleshy folk to "eat and grow thin"; while, conversely, a milk-drinking party held between meals is a boon for thin girls who need to put on weight.

Passing to the main office room, the visitor notes first the absence of noise. Dozens of typewriters and scores of human voices would naturally produce a nerve-racking babel of sound. Wondering at the comparative stillness, we were told how a special padding devised for the ceiling stops reverberation, promotes concentration, relieves nerve-strain, prevents nerve disorders, aids cheerfulness, increases production. In the assembly room a sounding board for the speaker's desk, where instructions and notices are given, counteracts the silencing device.

A variety of unusual activities makes the welfare work most interesting. A new kind of corporation library furnishes reading matter for employees and provides research facilities needed in the development of the business. An organization of employees helps deserving families in times of trouble. A continuation school under the direction of the Chicago Board of Education gives office and messenger boys instruction each day, on company time. A summer camp is conducted for women employees.

Tellers of three banks come to the office on Saturday for deposits of employees, thus reminding the workers to save part of their salary as they get it, and providing a quick and easy way. Many doctors, with a staff of nurses, not only treat cases of illness or accident, but also visit the homes of employees and furnish health advice free.

The men have a spacious club room in the general office for noon-time recreation or speeches on timely topics. Among the organizations of and for employees are a baseball club, tennis club, golf club, bowling club, military club, male chorus, social club, French club, Spanish club, checker and chess club, dramatic club.

But the impulse that keeps organization alive is the personal touch. The last thing we noticed on leaving the main building was a great bouquet of choice flowers in the office near the room of President Swift. He had sent them from his own conservatory, that his employees and associates might enjoy their fragrance and beauty. A man who shares flowers with the people who work for him is a new kind of employer.

Chicago

## Your Watchdog in Washington

(Continued from page 258)

handle problems specifically assigned to us by Congress by statute or resolution or more or less informally by the various committees and individual members. The second general class of work we do is to assist heads of departments and bureaus in developing better methods and procedures for doing their work.

To summarize the work the Bureau has done at the request of Congress would require many magazine pages. The Bureau's report on the work of the sub-treasuries, which resulted in legislation abolishing them at the last session of Congress, is an example. This recommendation alone resulted in a saving of nearly a half a million dollars a year in administrative expenses and according to Assistant Secretary of the Treasury Leffingwell in a saving of about \$2,000,000 a year in interest on the public debt.

The work done at the request of heads of departments and bureaus is fully as important as that done at the request of Congress. The Bureau has worked in six departments and six independent establishments and up to this time has submitted about seventy separate reports. The reports cover office methods, filing and indexing, labor saving devices, cash accounting, pay systems, auditing methods, duplication of activities, organization, statistical, actuarial, employment methods, efficiency ratings and work reports.

While concentrating upon specific problems in the offices it has been directed or invited to enter, the Bureau of Efficiency has been working steadily at the larger problem of improving the administration of the Government as a whole.

The personnel troubles of the departments are generally due to two conditions peculiar to Government employment. In the first place, the important administrative positions are filled ordinarily by persons making no claim to administrative ability, persons selected primarily on grounds of political expediency; and, in the second place, the salaries of the technical and supervisory officials and employees are woefully inadequate. The second of these conditions, fortunately, is by far the most important as a factor contributing to inefficiency. I say fortunately, because it is possible to correct that condition, whereas, so long as we maintain a party form of government, politics will continue to dictate the appointment of the major executive officials of the Government. However, if we could pay large enough salaries to secure for the really important places in the public service (the technical, scientific and supervisory positions) the most competent people—people who would be satisfied in the public service and ambitious for the good of the service—political appointments to

# A CHALLENGE

The present situation in Paris is a real challenge to the American people. Big business is sending over thousands of employees to assist in the rebuilding of France, and in the Latin Quarter of Paris is a great body of American students pursuing special courses at the University and at the art and music studios.

The need of meeting places for social and religious purposes was never greater, but the provision is very inadequate.

## The American Church in Paris

is making a tremendous effort to meet these conditions and is challenging the people of America to stand back of its enlarged program.

An adequate Building and Endowment Fund must be raised immediately here in America, and this appeal to our Christian people is made that these young business men and students shall come under the most wholesome influences while in Paris. When they later return to America, they must come

### *Strong in Mind, Body and Spirit*

fitted to be constructive leaders in the finer life of our Nation.

Two million dollars will be needed for new sites and buildings and the carrying on of a broad and comprehensive social and religious program. Generous contributions and assurances already indicate that \$500,000 will be given by the various denominational boards of America, \$500,000 will be raised for Endowment by 500 churches. Many very generous contributions to the above have already been received. This one million dollars is payable over a period of three years, but *\$1,000,000 must immediately be pledged by individuals* to provide for present urgent needs.

## This Is Where You Can Help

We need large gifts but we also need small gifts. Complete information of the whole program gladly furnished on request. Send just as generous a check as you can to the Co-Pastor, REV. STANLEY ROSS FISHER, 14 Beacon Street, Boston.

Make checks payable to SAMUEL W. THURBER,  
Treasurer

The Enlarged Program of the American Church in Paris has the endorsement of the Federal Council of Churches of America and the support of the leading ministers and laymen of the various denominations.

BOSTON

the few places at the top would not be criticized. In fact, they are desirable in order to avoid the possible development of a hard and fast, tho of course highly efficient bureaucracy not responsive to the people's will.

If you went today into the Treasury Department, the Department of Agriculture, the Department of Commerce, or any other Government agency doing important technical or scientific work, they would tell you that their chief difficulty is to retain competent employees in the supervisory and technical positions. The turnover in these positions is abnormally high. Every day men leave to accept private employment at materially increased salaries, so that the departments are continuously going thru a process of selecting and training executives and technical employees—only to lose them as they become really valuable. The solution for this problem is a readjustment of salaries.

The second factor contributing to the present ineffectiveness of the Government as a business establishment is found in the improper organization of the executive branch of the Government for effective service. The Interior Department, for example, has jurisdiction over a great number of bureaus of a miscellaneous character that have nothing to do with each other or with the functions for the performance of which the Department was originally created. Many agencies have been located in the Treasury Department, the great fiscal department of the Government, which are purely non-fiscal in character, such as the Coast Guard, the Public Health Service, the Supervising Architect's Office and the Bureau of War Risk Insurance.

The great bulk of the civil public works of the Government are executed under the supervision of the War Department, altho the Bureau of Public Roads is located in the Department of Agriculture and the Reclamation Service in the Department of the Interior. Outside of the jurisdiction of any of the great executive departments, there are some forty odd boards, commissions, offices and bureaus, which, practically speaking, do their work without any supervision whatsoever. These are merely examples of a condition that would require volumes to describe fully, but it is generally known that the executive branch of the Government is, at the present time, illogically and uneconomically organized in many important particulars.

This is a condition the departments themselves are practically without power to remedy. The present details of organization have been prescribed by Congress and Congress only can take action to effect a proper alignment of the agencies of the Government and a proper distribution of work among those agencies. On this matter Congress is, I believe, ready to act. The Bureau of Efficiency has been asked to aid in the collection of the information upon which intelligent action can be taken. We are at this time engaged in making a complete analysis

### How to Use the Independent in the Teaching of English

This brochure, prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 311 Sixth Avenue, New York.

of the activities of each governmental agency and we shall submit in December a plan for the regrouping of services according to the nature of the work they perform.

Our theory is that all services operating in the same field should by law be placed under one general executive direction and that, conversely, the field of action of each executive department should, so far as possible, be restricted to a single class of closely related activities. As an illustration of the application of this theory, it seems likely that all the great public works establishments of the Government, including river and harbor work, the construction and maintenance of public buildings and grounds and of public roads, the reclamation service and the development of inland waterways and water power should be brought together in a new Department of Public Works. The educational and health activities now scattered among many establishments of the Government should also be brought together in a single department. Recommendations of this general character will be made to Congress, supported by the information necessary to enable Congress to come to proper conclusions in reorganizing the executive branch for more effective work.

It should be remembered, however, that even with an ideal personnel and a perfect organization, it is doubtful if the high degree of economy and efficiency that characterizes private business can ever be attained in the Government offices. This is so because economies made by Government officials are not transformed into dividends for themselves as they are in private business, and therefore there is naturally not the same personal incentive to extraordinary and self-sacrificing effort.

Will the work of the Bureau of Efficiency reduce the burden of taxation? The reader is entitled to ask this question, and my answer to him would be "Yes." But, frankly, I must add, the reduction will be so small as to be imperceptible in the tax bill of the individual. I will explain why.

The total amount appropriated for the maintenance of the Government for the fiscal year 1921 (exclusive of the Postal Service, which is almost self-supporting and exclusive of deficiencies on account of the fiscal year 1920) was \$4,175,820,089. Of this amount \$2,838,118,400, or about 68 per cent, was for the payment of obligations incurred on account of past wars, chiefly the war with Germany, such as compensation for death, disability, vocational training, hospital treatment, return of remains from France, pensions, interest on the public debt, sinking fund and Federal operation of railroads. Possibly one per cent of this \$2,838,118,400 will be used for salaries and other administrative expenses. Here it is quite possible that some little saving can be made. But it is obvious that no improvements in methods which the Bureau of Efficiency or any similar agency could devise would re-

duce the other 99 per cent of this amount by one penny, for these obligations will be regarded as debts of honor and must, of course, be paid.

Congress has added to these obligations of the past new ones for the future, also war accounts. The appropriations for national defense for the present fiscal year were \$855,956,962—a sum equal to the entire expenses of the Government in 1916 outside of the Postal Service.

Add together these two expenditures, \$2,838,118,400 for payments on past wars and \$855,956,963 for maintenance of the present military and naval establishments and you will find that the sum of them, \$3,694,075,363, represents over 88 per cent of the money appropriated for the conduct of the public business during the present fiscal year, exclusive of the 1920 deficiencies and the postal service. This means that less than 12 per cent (\$481,744,726) of that total of more than four billions is to be spent on the works of peace—on paying for the development of commerce, agriculture, science, research, education, public health and public works, salaries of the men and women in the Government departments and of the Federal courts and the salaries and expenses of Congress.

What proportion of this \$481,744,726 is to be spent for salaries and other administrative expenses I do not know, but I should say not more than one-half, which would be about 6 per cent of the total expenditures, outside of the Postal Service and the deficiencies.

The reader will readily see that if economies made by the Bureau of Efficiency affect only 6 per cent of our total bills, the savings that can be made for the individual taxpayers will not be very noticeable.

I do not wish to minimize the importance of eliminating all waste in the Government's civil establishments. I would do away with every scrap of duplication, every shadow of overlapping. I would reorganize the departmental service in accordance with the best business practices. I would have the people get full returns for every penny expended in running the Government. But what I should like to have the reader understand and understand clearly is that, whittle away as we may, we can only reduce the total public expenditures by perhaps a fraction of one per cent.

More than 88 per cent of the money spent by the Government during the next year will be on account of past and future wars. So long as we wish to maintain a military establishment of 300,000 officers and men, so long as we feel the necessity of building and maintaining a navy of the first rank, high taxes are inevitable.

The merits of the military and naval programs I am not discussing. All I wish to say is that if we want to make big reductions in appropriations, about the only place that it can be done is in the appropriations for our military and naval establishments.

Washington, D. C.

## Myself and Me

(Continued from page 257)

destructive of the vital spark that makes a man a man, than sympathy. Moreover, I don't want to give anyone the impression that begging is easy. We are too liberal in this country. There ought to be a sting with every fifty cents obtained as that man obtained it. He is so sorry for himself now that he would not feel the sting unless I gave it to him. I gave it to him for his own good. It is worth more to him than the fifty cents. The resentment I have stirred in that fellow may make him resolve that he doesn't want any more food, purchased with money obtained as he obtained that fifty cents."

But I started to let you into the vaudeville show in which I am the chief performer.

In the copy books and in the old fairy stories there are many references to wishes. There are admonitions against wishes, and then there are captivating stories about fairies who grant us our wishes. I have about reached the conclusion that all of us get our wishes. In fact, I am beginning to exercise a rather severe censorship over my wishes because it is dawning upon me that I get every confounded one of them. I am beginning to feel some alarm about my wishes. They come true with terrific certainty. I would advise every human to be good and soundly sure that the thing he wishes for will be good for him, because he can pretty certainly depend upon the fact that he is going to get it, if he really wishes for it. Of course, there are a lot of things we say we wish for, but we really don't. For instance, I used to tell myself that I wished for a phonograph with all of the best records there are and I used to wish for more life insurance, but I smoked enough cigars to pay for the phonograph and the records and the insurance. I knew it and I went on smoking the cigars. After a while I had a good long talk with myself on the subject of whether I loved music or tobacco best, and I decided that as between the two, I really loved the tobacco best. We delude ourselves quite a lot about the sources of our joys. I work year in and year out for things that I think I ought to be wanting. I dream of accomplishments that are supposed to be the source of great joy, but there is the other Me, the Olympian, who knows all the time what things mean happiness. Here is the verdict of the Olympian: My chiefest joys in life are a cold bath in the morning, splashing and singing in the bath tub and then walking in briskly to breakfast very hungry. And then smoking a cigar. The cigar is so good that my mouth waters when I bite the end off it. No matter what I do or what I achieve or where Destiny leads me, it is highly probable that I shall continue to find my chiefest joy in roaring out the Toreador song while I pile soap suds on top of my head, knowing that breakfast and that savory cigar are only half an hour distant.

New York

## Tours and Cruises

### SOUTH AMERICA

A Cruise—Tour  
January 29th  
70 days—\$2200 up

Including the best there is to see in South America and the celebrated trip over the Andes. Down the west coast on the luxurious Pacific Line steamer, "Ebro"—up the East coast via the Lamport & Holt Line. Seventy days of pleasure on land and sea. An extended program of sight-seeing in all the principal cities of South America.

### WEST INDIES Cruises

23 days under  
Tropical skies

## U.S. Tax Laws Open \$10,000 Jobs

Corporations and individuals overtaxed themselves millions of dollars last year because of ignorance of the new laws. Our students discovered a \$4,000,000 over payment by one corporation. As a result a tremendous opportunity is offered to men who will spend a few hours in study. Salaries of \$5,000 a year are ordinary. Consulting specialists have earned as high as \$1,000 a week. You can qualify in your own home during spare time.

Write Today for Free Book No obligations. The book is free. Opportunity is calling.

U.S. Tax Law Institute, 20 E. Jackson Blvd., Dept. 2378, CHICAGO

## How to Study This Number

## THE INDEPENDENT LESSON PLANS

## English, Literature and Composition

## I. Beef and Bouquets.

1. "The moment I learned that he wore a carnation to his office in the stockyards, I humbly apologized inside—he was not only human, he was gentle, kind, artistic, idealistic, as a flower lover is." Find this passage in its context, and discuss it. If there are people in the class who disagree with you, in discussion, write a persuasive essay on your side of the question.

2. Give as many reasons as you can think of why a man in the packing business is not necessarily brutal and cruel. Are there other businesses that you think of in this connection?

## II. Your Watchdog in Washington.

1. Mr. Brown's six principles, in the second column of his article, are part of the policy of the Bureau of Efficiency in Washington. Consider them in that connection; and then decide if they have more general bearing. If you think they have, write out a parallel set of principles for the relations of teacher and students in your classroom.

## III. What British Labor Wants.

1. Mr. Thomas' description of the English Poor Laws and the condition of the English poor is an old story. You will find it occurring at intervals in English literature from the present day back as far as you are willing to go. Of course Dickens is the stock example; see how many times he handles the subject. Then see how many other books on the subject, or involving it, you can find that are by other authors.

2. Choose the novel that you think will repay you best for your study, read it carefully, and write anything relevant that is inspired by it. Before you write, place your novel in its period and do enough extra reading about contemporary industrial conditions to give your book a background of fact. Look up *Alton Locke*, by Charles Kingsley, if you have not already read it.

## IV. What Did It?

1. Perhaps you don't believe that fickleness "did it" to all of the men Mr. Giddings mentions in his third paragraph. But very likely you think that was the case with one of them at least, and probably with more than one. Pick out one man, get up your facts about him, and write sympathetically his case against the American people.

## V. California's Anti-Japanese Laws.

1. Mr. Gulick's third paragraph contains the statement of three aspects of the recent anti-Japanese amendment. Choose one provision, conceding the other two, and debate it. In your argument, consider any or all of the three proposed courses of action which Mr. Gulick presents later in his article.

## VI. Myself and Me.

1. What is the point of the title? Keeping it in mind, read the article to see how well Mr. Crowell has lived up to his title's suggestion.

2. If you like Mr. Crowell's essay, it is probably because you know for yourself the experience of two minds, two selves, at one time. If this is true of you, confess just how it is true, not sparing yourself, in an intimate essay, or in rhyme, or in any form you like.

## VII. The Mayflower.

1. Explain the line,—"The seedling glory of our English May." What similar references can you find in the poem? What is the allusion to "that tall fleet of plate-ships"?

2. Discuss the poem critically. What sort of poetic effect is aimed for, and what achieved, as far as metric form, rhyme, diction are concerned? Read more poetry by Alfred Noyes, and discuss in writing the ways in which this poem is characteristic and the ways in which it is not.

3. Leaving out the question of poetic merit, do you think the idea of the poem is interesting, original? If you do not, do you think the treatment makes it so?

4. Think over the general question just implied: on what does the individuality and distinction of a piece of writing depend—on the general subject matter, the main idea,—or on the treatment? In the connection, think of Shakespeare's plays, Wordsworth's poetry, any other great literature that comes into your head. And be sure, first of all, that you know what you mean by "treatment," or any other word that you decide to substitute.

## History, Civics and Economics

## I. Efficient Administration—Your Watchdog in Washington. Beef and Bouquets.

1. In Mr. Brown's article he states that the Bureau of Efficiency is "putting into practice in Washington the business methods that have made the commercial institutions of America preëminent and successful." From Mr. Purinton's article what would you conclude were the points at which a successful private business is more efficient than the national Government?

2. "Every day men leave to accept private employment at materially increased salaries." Why is private business able to offer higher returns to an able administrator than the Federal Government? Can you suggest any remedy or offset for this disadvantage to the public services?

3. What argument does Mr. Brown make for the creation of a Department of Public Works? Would it require a constitutional amendment to establish a new cabinet position? Would it require Congressional legislation?

4. "More than 88 per cent of the money spent by the Government during the next year will be on account of past and future wars." Does this fact start any train of thought in your mind as to the League of Nations?

5. Summarize the labor policy in the Swift meat packing plants as discussed in Mr. Purinton's article.

6. What economies mentioned by Mr. Purinton are due to the great size of the packing establishments and the concentration of the industry in their hands? How do the packers make their large profits on so small a percentage of profit on each sale? To what extent are the private profits of the packing industry the cause of high prices?

7. After reading both articles prepare a brief either for the affirmative or the negative on the question: Resolved, that the Federal Government should own the meat packing plants.

## M. British Labor—What British Labor Wants.

1. What constructive social legislation has England adopted since the organization of the Labor party? What similar laws exist in the United States or in your state?

2. If a Labor party had been organized in the United States do you think that the United States would have adopted all the labor laws mentioned by Mr. Thomas, or are there other factors than the absence of a special Labor party which tend to make legislation less radical in this country than in England?

## III. Turkish Affairs—The Crushing of Armenia. When Turk and Tartar Join. The Partition of Turkey.

1. Indicate on a map as well as you can the division of Turkey into spheres of influence and locate the places mentioned in the Week items.

2. Why do you suppose the Bolsheviki are hostile to the Armenians? What parts of Armenia used to be Russian?

3. If the United States had taken a mandate in Armenia with what other nations would we come in contact? Show the relation of Armenia to Soviet Russia; the independent Caucasus states, such as Georgia; the British and French "spheres of influence"; what is left of independent Turkey. Which neighbors would probably have proved most troublesome?

## IV. The Election—What Did It? A Socialist's View of the Landslide. Embers of Election. Sunning Himself in Texas. What Bryan Thinks.

1. What is your own opinion of "what did it"? Write an editorial on the subject giving your own ideas as frankly and fully as possible.

2. How do Mr. Gompers and Mr. Spargo differ in their view of the policy of the American Federation of Labor in trying to deliver the labor vote to individual Congressmen friendly to labor?

3. What do you think of Mr. Bryan's plan for bringing the Harding administration into office at once?

## V. Oriental Immigration—California's Anti-Japanese Laws.

1. Why does Japanese labor desire to emigrate to America? What are the reasons why California is unwilling to receive Japanese immigrants?

2. What relation has the new land law to the problem of Japanese immigration?

3. What method in your opinion could be devised for restricting Oriental immigration?

# The Independent

FOUNDED 1848

## Pebbles

He—Let's kiss and make up.  
She—If you're careful I won't have to.  
—*Gargoyle.*

Bob—You look sweet enough to eat.  
Gert—I do eat. Where shall we go?  
—*Orange Peel.*

Jim—Tom! Lend me a dollar and I'll be eternally indebted to you.  
Tom—That's what I'm afraid of.—*Yale Record.*

Judge—Where were your supporters in this crime?

Prisoner—I had them on, Judge.—*Stanford Chaparral.*

Neighbor—How is your garden getting on, professor?

Professor—Horticulturally it's very poor; biologically it's a dream.—*London Mail.*

Wife—How nice it would be if all things in this world would work in harmony!

Hub—Wouldn't it, tho? For instance, if coal would go up and down with the thermometer!—*Boston Transcript.*

She is the greatest stickler for politeness. Why, she won't even have a compass in the house.

Why not?  
Because it points.—*Tar Baby.*

Teacher—Now, Tom, hold your head up and your shoulders back—you'd like to have a fine carriage when you're a man, wouldn't you?

Tom (doubtfully)—Well, I'd rather have an aeroplane.—*Sydney Bulletin.*

"How does your husband regard you," asked Mrs. A—, "as a necessity or a luxury?"

"Well," said Mrs. B—, "it all depends, my dear. When I am asking for a new dress, I am a luxury. When I'm cooking his dinner, I'm a necessity."—*Ladies' Home Journal.*

"The palmist has just told me that my wife would be married twice and that her second husband would be a very rich and handsome man."

"Well, that's nothing to worry about!" chaffed the other man. "After all, what happens after you're dead won't matter, will it?"

"That's not the point," sobbed Hadkins, as he wiped away a tear. "It's hurt me to my heart to think that Maria must have been married before and never said a word about it to me."—*New York Globe.*

Mrs. Killifer desired that the picture be hung to the right of the door; Mr. Killifer wanted it hung to the left. For once the husband proved to be the more insistent of the two, and Henry, the colored man, was summoned to hang the picture according to Mr. Killifer's order.

Henry drove in a nail on the left. This done, he also drove one in the wall on the right.

"Why are you driving that second nail?" asked Mr. Killifer.

"Why, boss, dat's to save me de trouble of bringin' de ladder tomorrow when you come round to de missus's way of thinkin'," said Henry.—*Harper's.*

## Remarkable Remarks

SENATOR HARDING—I am a nut about France.

MARY PICKFORD FAIRBANKS—I am not going to write a book.

"BUGS" BAER—The United States is dryer than an undertaker's eye.

REV. R. C. GILLIE—Our hymns are Victorian and our prayers Elizabethan.

MRS. VINCENT ASTOR—Whatever the "tyranny of clothes" may be, I do not know it.

JAMES J. CORBETT—No other man than Dempsey could have dethroned Jess Willard.

JAMES W. GERARD—Our attitude toward Germany should be one of charity, not revenge.

ISHBEL M. ROTH—The New York business man picks his stenographer chiefly for her appearance.

REV. JOHN ROACH STRATTON—The anathemas of High Heaven are rightfully launched against divorce.

REV. PERCY BEARMER—The clergy and church officers should take the lead in organizing Sunday games.

ED. HOWE—After a woman has looked at a man three or four times she notices something that should be changed.

ARTHUR ROBINSON—The football game between Yale and Princeton was the subject of much speculation in Wall Street yesterday.

REV. E. S. SYNOTT—I have seen the sorrowing men and women after a funeral gorging themselves as tho they were eating their Christmas dinner.

THE LORD BISHOP OF WORCESTER—I do not know whose future is darker, the country which would come into the League of Nations and cannot or the country which can come in and won't.

REV. FATHER J. H. MACMAHON—The Puritan doctrine of the separation of church and state is the logical preparation for Bolshevism. Our effort today is to undo the effect of the Puritan idea which has permeated the country.

## Opening Nights

*The Mandarin.* A paranoiac play imported from Vienna by Herman Bernstein. Ingenious but baffling. (Princess Theater.)

*Thy Name Is Woman.* Overlook title and occasional lurid moments, and you have a play of real power. Mary Nash and José Ruben do some fine acting as a beautiful Spanish girl and a dark and wily Spanish Don. (The Playhouse Theater.)

*Heartbreak House.* by Bernard Shaw. When this play was published by Brentano's last year readers enjoyed its wit but concluded that it would be impossible to stage. But the Theater Guild that gave such remarkable productions of "Jane Clegg" and "John Ferguson" has overcome the difficulties and proved that the new Shaw play contains real people as well as sharp satire. (Garrick Theater.)

# New Names in the Hall of Fame

PATRICK HENRY, 1736-1799

Generations of declaiming schoolboys will take care of the orator's memory. But the champion of the American ideal of free speech and thought deserves his niche in her Hall of Fame

ROGER WILLIAMS, 1604-1684

The true Pilgrim paradox—a stern, dogmatic apostle of liberty of conscience. When Massachusetts could stand no more of him, he founded Rhode Island, "a shelter for persons distressed of conscience"

"The Hall of Fame for Great Americans," at New York University, has as its purpose the commemoration of distinguished Americans from the beginning of our history until now. There are new elections every five years, by an electoral body of about a hundred prominent men and women. Sixty-three of the 150 tablets in the colonnade have been inscribed and dedicated

MARK TWAIN, 1835-1910

The ten years since his death make him just eligible for this year's election. He has his place by many rights—as a great humorist, a student and critic of life, a large and humane personality. His stories of the Mississippi will be looked back upon as possibly the most important single contribution to our American folk literature, though we are too young a nation now to think of ourselves as owning such a literature

AUGUSTUS  
ST. GAUDENS,  
1848-1907

The foremost American sculptor. Of the statues by which people know him best this rare thing is true—that they are at once public monuments and works of art

ALICE FREEMAN PALMER, 1855-1903

The only woman elected in 1920, and one of the six women elected since the beginning. Mrs. Palmer was best known as president of Wellesley College, a position she took in 1880, the year after she came to Wellesley as a teacher of history. Her husband was George Herbert Palmer, of Harvard, thru whom she came into connection with the Women's Educational Association of Boston.

JAMES B. EADS,  
1820-1887

A pioneer engineer. His greatest work was deepening the mouth of the Mississippi, and installing a system of jetties so arranged that the current could scour its own channel, carrying sand into deep water

WILLIAM MORTON,  
1819-1868

A dentist-surgeon who discovered the anesthetic properties of ether, using it first under the picturesque name of "letheon." He advanced the science of dentistry in other ways, by the discovery, for instance, of a new solder for attaching teeth

## Is This Good Business?

A Message from the United States Government to the American People

By Edwin F. Sweet

Assistant Secretary of Commerce and Vice-Chairman of the Federal Electric Railways Commission

Perhaps there is a poster similar to the one below in the street cars of your own town:

Bituminous coal cost the company \$3.25 per ton in 1916.

As a result of eleven consecutive increases the price is now \$8.43 per ton, an increase of 159 per cent.

This company and its subsidiaries burn 220,000 tons of coal annually.

The yearly coal bill has increased from \$371,683 to \$1,850,000.

These interesting facts are presented for the information of our patrons.

It means that the company wants you, the public, to listen to reason and probably, itself, is ready to listen to reason from you. If you live in New York, Buffalo, Denver, St. Louis, Pittsburgh, Des Moines, Spokane, the company, or one of them, is in the hands of a receiver because either it, or you, the public, has refused to be reasonable in the past.

The electric transportation industry has had hard sledding during the last five years. In 1919 its condition became so serious as to constitute a national problem, and the Federal Government was called upon to assist in finding a solution. Sixty-two companies were being operated under receiverships, many others were on the verge of insolvency. Hundreds of miles of trackage had been abandoned. The industry as a whole was virtually bankrupt.

The shrinkage in value of hundreds of millions of electric railway securities, largely held by banks and insurance companies and in trust funds for persons of small means, brought widespread distress and threatened seriously to embarrass the nation's financial operations. The withdrawal of the industry's buying power, ranking third in magnitude, seemed to place a serious obstacle in the way of orderly readjustment, unsettling other industries dependent upon it and threatening unemployment for hundreds of thousands of men.

The Federal Electric Railways Commission, appointed by the President in the emergency to investigate the condition of street car companies throughout

the land and recommend remedies, spent much time in searching out the causes of their troubles. The causes were numerous. Most of them could be traced back, however, to the fact that the street railways were started, not as public utilities devoted to the public service, but as private enterprises for private profit.

They were overcapitalized. Unearned dividends had been paid at the expense of ordinary maintenance. Pernicious manipulation had resulted in over-building into unprofitable territory for the promotion of suburban real estate speculations.

In the early days the promoters sought long term franchises providing for five cent fares. When they got them they congratulated themselves, believing such a rate of fare would be permanently profitable. These highly-prized franchises came later to be one of the principal sources of the traction companies present troubles.

It was as reasonable for the companies to set up the nickel as the standard fare all over the nation as it would be for a manufacturer to make shoes all of one size. In some cities the lines could be operated at a profit in normal times for less than a nickel, but in others, with high grades and scattered populations, the expense of operation would be nearly twice as great.

"We were all living in a fool's paradise in the street railway business," one executive told the commission,

"when we suddenly woke up—when the war woke us up—to find that no business which cannot increase its revenues under any conditions can live or is sound."

It was natural, since the companies had fought the effort of communities in normal times to lower the contract fare, that these same communities should vigorously oppose the movement of the companies for higher fares, even when it could be demonstrated that the rising cost of everything the companies had to buy would make continued service impossible if they

### Leaves

By Rose Henderson

*Pale lilac mist curls soft about the hills,  
The trees are altar fires of red and gold.  
A warm wind stirs the fretted sun-flower frills  
And gentian blooms grown old.  
The air is sweet with clover aftermath,  
The flocking blackbirds call.  
But down the crimson-lighted forest path  
The dead leaves fall.*

*My hearthside blooms with yellow candle light,  
Love bends above my hand with eager lips;  
Friends laugh and music thrills across the night,  
And beauty's magic-bringing finger-tips  
Caress my brow. Yet, withered and grown brown,  
The years drip down.*

*"The light here kindled hath  
shone to our whole nation."*—

*William Bradford*

# Our Pilgrim Legacy

By Frederick Houk Law

Head of the English Department of Stuyvesant  
High School, New York City

IT may be that a widow's hat had something to do with turning the Pilgrim Fathers on the way to Plymouth. In 1608 a number of people from Scrooby and Gainsborough in the east of England—"Separatists" who wished to be independent of the Church of England, found opportunity for religious freedom in Holland. Those whom we call "The Pilgrims" first settled in Amsterdam. One British congregation that had fled to Amsterdam was in much disorder. Its preacher was Francis Johnson—and Francis Johnson, some time before, like many another man, had fallen in love with a widow—in this case with a widow whose husband had been a hatter—and the preacher married the hatter's widow. At once the congregation had begun to complain. The lady wore a velvet hood! She also wore a hat that many thought "topish." When the matter was put to vote it was decided that the hat was not "topish," but the lady was asked to select more sober headwear. The congregation complained that "Many of ye saints were grieved," that the lady used perfume, that she wore gold rings, that she made her dresses stiff with whalebone and wood. The dusty old record says that when the minister's wife heard all these complaints she became "very peert and coppet." At any rate a great deal of trouble had resulted, and the trouble increased when the congregation moved to Holland. Possibly, among other reasons, church dissensions in Amsterdam led the Pilgrims to move to Leyden in 1609. Perhaps the fear that their children were becoming frivolous, "Getting ye raines off their neks, and departing from their parents," as the Bradford manuscript says, led them, eleven years later, in 1620, to plan the "Mayflower" voyage to a land where they would be free to form and to regulate their own lives and the lives of their children, and their children's children.

Everyone knows the story of how, under good Pastor John Robinson, a leader who never set foot on the new world, they planned to go either to Guiana or Virginia. Having obtained a patent to lands somewhere near the Hudson River, and having borrowed over £5,000, they sailed in the "Speedwell" from Delfshaven in July, 1620. After a stay in England they sailed again, on September 6, from Plymouth, on the "Mayflower," the "Speedwell" having become unseaworthy. Nearly three months later, November 21, after a stormy voyage, they arrived, not at the Hudson, but on the coast of Cape Cod. After a month of exploration they made the first landing on Plymouth Rock, December 21, 1620. It was several days later before the entire company disembarked.

They had no legal rights in Plymouth, for their patent was for another region. Therefore, since storm, and winter, and bad seamanship had driven them to a place where there was no law, they drew up on the "Mayflower," before they landed, one of the most important documents in human history, the famous "Mayflower Compact," the first written constitution. That

This statue by Augustus St. Gaudens is one of our most famous memorials to the Pilgrims

was a great moment in the stuffy cabin of the little, tossing "Mayflower," when forty-one of the 104 people on board signed the document that meant the beginning of American self-government. Some of the company were dangerously sick, servants had threatened to desert, the sailors were rough and unkind—and winter on a bleak, unknown coast was upon them. That old document of human rights is worth reading:

In the name of God, Amen. We whose names are underwritten, the loyall subjects of our dread Sovereigne Lord King James by the grace of God, of Great Britaine, Franc, and Ireland king, defender of the faith, etc. Having undertaken for the glorie of God, and advancement of the christian faith and honour of our king and cuntry, a voyage to plant the first colonie in the Northerne parts of Virginia, Doe by these presents solemnly and mutually in the presence of God, and one of another; couenant and combine ourselues together into a ciuill body politick; for our better ordering and preservation and furtherance of the ends aforesaid; and by vertue hearof to enacte, constitute, and frame shuch just and equall lawes, ordinances, Acts, constitutions, and offices, from time to time, as shall be thought most meete and conuenient for the generall good of the Colonie: Unto which we promise all due submission and obedience. In witnes whereof we haue hereunder subscribed our names at Cap Codd the 11 of Nouember [new style, November 21] in the year of the raigne of our soueraigne Lord King James of England, France, and Ireland the eighteenth and of Scotland the fiftie-fourth Anno Domini 1620.

A curiously wrong belief, a sort of legend, is current that the Pilgrims came to America to gain for themselves, and for everyone else who might come later, the right to do as one pleases. In fact, people laugh at the Pilgrims, saying: "They wanted freedom for them-

selves; they wouldn't give it to others." What was their definition of freedom, and what did they really establish in this second English colony in America? Their ideals were not different from those of Governor Winthrop of Massachusetts Bay, who wrote in 1645:

There is a two-fold liberty, natural...and civil or federal. The first is common to man with beasts and other creatures. . . . It is a liberty to evil as well as to good. . . . The exercise and maintaining of this liberty makes men grow more evil, and in time to be worse than brute beasts. . . . The other kind of liberty I call civil or federal. . . . This liberty is the proper end and object of authority and cannot subsist without it; and it is a liberty to that only which is good, just and honest. This liberty you are to stand for, with the hazard of your goods, but of your lives, if need be.

The liberty that the Pilgrims sought was not an absolute liberty in which men become "worse than brute beasts," but liberty under the law, a liberty that cannot subsist without authority, "a liberty to that only which is good, just and honest." How well it would be for the United States today if every immigrant could know to the full to what spirit of liberty this country was dedicated! Absolute freedom of speech and of action were as undreamed of by the Pilgrim Fathers as they are by all sane men today.

Again Governor Winthrop says that America is not a place of refuge for "civil and religious freedom" but a "place of cohabitation and consortship under a due form of government."

The very foundation of Pilgrim belief, whether civil or religious, was an orderly obedience to government, and on that foundation the United States has built all its greatness.

The first Freeman's Oath given by the Pilgrims, made the applicant say:

I do freely and sincerely acknowledge that I am justly and lawfully subject to the government of the Company, and do accordingly submit my person and estate to be protected, ordered and governed by the laws and constitutions thereof.

Someone has said that the two great benefits conferred by the Pilgrims may be summed up in the words: "The supremacy of the law, and the impartial administration of justice."

The Pilgrims built up a type of government founded primarily upon individual and local rights under the law. They determined the qualifications necessary for

franchise. They organized the first town meetings ever held in America, every town electing its own officers and carrying on its own affairs, subject to the laws of the colony as a whole. They drew the towns together in common interest, and in 1639 organized a representative assembly to which every town sent delegates—the germ of our present system of State government. In 1643 Plymouth Colony drew up with Massachusetts, Connecticut and New Haven the first federal union ever formed in America, uniting the New England colonies in a common bond, under the name "The United Colonies of New England," thus foreshadowing that union of States that has given the United States all the flexibility of individual rights, local freedom and local power, together with all the strength of a unified nation.

So, on the edge of the vast wilderness, in the first of the seventeenth century, with disease, savages, small numbers and all unknown terrors to daunt them, these men, whether inspired by the natural English love for freedom, by the example of the governments of Dutch cities, or forced by circumstances, prefigured all our present town, state and national government.

In other ways the Pilgrims foreshadowed our national greatness. They would allow no one to remain idle, and they set an example of the dignity of hard work. Their energy, their effort, their making the most common and homely work appear manly, with the example set by other colonists, led the way to a democratic country where idleness, class, rank, pride and ostentation are out of place.

The government that the people of Plymouth established was a good government. It was an honest government in the interest of the governed. They uniformly chose the best men for office, and they allowed no one to refuse to serve the common good. Pay for office holding, when it was given at all, was small; an office holder held his office because he had a sincere desire to serve the people. Their government gave justice to all, without fear or favor. In 1630 it meted out hanging to John Billington, one of the "Mayflower" passengers, and one of the forty-one signers of the famous "Mayflower Compact," because Billington had killed John Newcomer. Equality of rights and equality of responsibility marked every side of Pilgrim public life.

The Pilgrims felt the presence of God in every act of life. Waste, flippancy, [Continued on page 314]

When the Pilgrims went to church women and children were protected by the men, carrying blunderbusses for fear of Indians

# What British Labor Wants

By The Rt. Hon. J. H. Thomas, M. P.

The head of the British Federation of Railwaymen presents here the last of a series of three articles written to explain to the American People the significance of the recent strikes in England and the ultimate aim of the Triple Alliance which "makes possible a national strike by which the whole life of the country could be brought to a standstill." Mr. Thomas is one of the foremost leaders of the Labor Movement in Great Britain and he is a Labor Party member of the British Parliament

**I**N my previous articles I have shown how the labor movement in Great Britain has steadily grown until it can claim a membership of six and a half million workers, and I have indicated how, as its strength increased, so also has increased the legislation for the betterment of the life and labor of the people. There are two most important measures—health insurance and unemployment insurance—which I have not yet dealt with; but before turning to these I propose briefly to indicate the high degree of organization which marks the activities of the British labor movement at the present moment.

Twenty-one years ago a General Federation of Trade Unions was established with the object of combining the various separate unions into one army capable of concerted action and possessing a gigantic central fund which should be at the service of any individual union fighting to maintain its existence or to improve its condition. There are now over one hundred and thirteen different federations embracing over three thousand different unions. Among the largest of these federations are the General Federation of Trade Unions, the Miners' Federation of Great Britain, Railwaymen's Societies, the Transport Workers' Federation, and the Federation of Engineering and Shipbuilding Trades. The strength which labor gains in this way is obvious, but a still further advance in securing the solidarity of workers has been made by the formation of what is known as the Triple Alliance composed of Miners', Railwaymen's and Transport Workers' confederations. The existence of such a colossal organization as this makes possible a national strike by which the whole life of the country could be brought to a standstill. This is not a weapon which labor would lightly use, but the power to use it as a last resource is an invaluable lever in compelling every effort being made toward the settlements of disputes.

As an outcome of the big railway dispute in this country last year a special board, on which the railway workers have equal representation with the railway managers, was set up to deal with conditions of service. This arrangement made between the Government and the Railwaymen's unions marks the first step toward labor's control of industry. The constitution of the board is as follows: Five general managers, five men from the two big Railwaymen's unions with an independent chairman. In the event of this board of ten failing to agree upon any point the matters in dispute will be referred to a body of twelve composed of four members of the public. This board of ten will have plenary powers except in so far as the men's side is subject to their executive committee.

The recognition of labor's strength to

enforce its just claims is strikingly evidenced by the establishment a year or two ago of Joint Industrial Councils. These were the outcome of the recommendations of a committee appointed to make and consider suggestions for securing a permanent improvement in the relations between employers and workmen and to recommend means by which industrial conditions affecting the relations of employers and workmen might be systematically reviewed with the object of improving conditions in the future.

These councils are voluntary in character and can only be brought into existence with the agreement of the organizations of employers and work people in the particular industry, and each council is composed exclusively of persons nominated by the employers' associations and trade unions concerned. The councils are able, within very wide limits, to determine their own functions, machinery and methods of working and they are concerned with many matters other than wages. It is worthy of record that during the latter half of last year there were established three national councils on which the Government, as employers, is represented. The establishment of a Civil Service Council marked the emergence of this scheme in the non-industrial and professional spheres. By last December fifty-one councils had been set up and others have since been added to that number.

This brief survey of what has been achieved for and by labor would be incomplete without some reference to what has been done in the way of national insurance. The idea of national provident insurance has been

International

A rather different visit to Downing Street from the one of the opposite photograph. A crowd of ten thousand London unemployed formed in the Whitehall and from there made a riotous attempt to reach the Premier's residence, against the concerted opposition of the police force. Fists and clubs had their chance before order was restored

toyed with by many statesmen at different times, but it was not until 1908 that the matter was taken thoroly in hand. In 1909 Mr. Lloyd George, who was then Chancellor of the Exchequer, took the subject up with friendly societies and in 1911 an act was passed providing for the compulsory insurance against sickness of that portion of the population between the ages of sixteen and seventy, whose earnings were beneath the income tax line of £160 a year. The benefits included free medical attendance, sickness benefit, disablement or invalidity pension, maternity benefit and sanatorium benefit. The sickness benefit consists of ten shillings a week for men and 7/6d. a week for women for twenty-six weeks from the fourth day of sickness; this benefit is varied for persons over the age of fifty and under the age of twenty-one. The disablement pension provides for the payment of five shillings a week during the whole term of sickness. The maternity benefit provides for insured women, married or unmarried, and for the wives of insured men the payment of a sum of thirty shillings.

The contributions to meet this insurance are paid by the workers, the employers, and the Government, and today, ten years after the act came into operation, it is true to say that altho it met with violent opposition from the employers on its inception, every amendment which has since been proposed for extending it and improving it has in the main met with unanimous approval. No employer today would agree to the insurance being abandoned.

At the time of writing this article measures are being brought before the House of Commons for improving the sickness and maternity benefits and bringing within the scope of the act practically the whole of the industrial workers of the country.

Insurance against unemployment is provided for in the same act and it is estimated that about 2,500,000 work people were affected at the time it came into operation.

Compulsory insurance against unemployment has never before been the subject of legislation by any Government, and therefore it was to some extent an experiment and was applied only to certain trades which were recognized as being the most uncertain in the matter of employment in consequence of seasonal and other causes.

The rates of benefit both for men and women were originally seven shillings a week, but this sum was increased at the end of last year to eleven shillings. The funds out of which benefits are paid are provided by contributions from employers, workers and the state. The weekly contribution from employers and workers is 2½d. each, and the state adds one-third of the total amount of these contributions.

There is now, however, a bill before Parliament by which it is proposed to extend very considerably the scope of this branch of insurance. The scheme now submitted, if passed into law, will include practically the whole employed population between the ages of sixteen and seventy, who are included in the state scheme of health insurance, and the total number of workers to whom it will apply is estimated at about eleven and three-quarter millions. The contributions will range from three ha'pence to three pence a week, employer and worker paying equal contributions and the state, as heretofore, contributing a sum equal to one-third of the total paid by the worker and employer.

During the past year the hours of labor of 6,400,000 workers have been reduced by an average of 6.5 per week, and we have now among practically all classes of workers, excepting those engaged in agriculture, an eight hour day.

And now, what of tomorrow? The Coalition Government is crumbling to its ruin and there are a very considerable number of people who believe that it is now enjoying (or suffering, as the case may be) its last session. The Labor party, as I stated in my first article,

is the second in the state and there are but few who do not anticipate that it will be the next party in power. This idea would seem to have dawned upon the Government itself for Mr. Winston Churchill, the Secretary of State for War, recently wrote an article for a Sunday paper asking, "Can Labor Govern the Country?" My reply is, "Yes, it can," and whilst I admit that a labor government, being mortal, is not likely to be entirely free from error, I do assert most emphatically that it will not make such a mess of affairs as the present rules have made. Neither will it make the mistake of endeavoring to live on fair promise. The Coalition Government has made a brave show with its promises, but what the country thinks of its deeds is reflected in every by-election that takes place, and the one thing today that a Parliamentary candidate dreads is to receive its benediction. Mr. Lloyd George is known in this country as "The Little Wizard from Wales." He is a seer with a predilection for similes; he goes up onto the mountain top and sees green valleys and pastures new and tells us of a land fit for

© Underwood & Underwood

"Labor Knocks in Downing Street" might be its title—or "Tomorrow Knocks at the Door of Today." It is a photograph of Mr. Robert Smillie, leader of the Miners' Federation, calling at Lloyd George's house in London for conference on a hoped-for settlement of the British coal strike

heroes to live in. But these heroes home from the war and the heroes who did their share in the factories and workshops are not privileged to go onto the mountain top; they stay down in the valleys and look around in vain for any sign of the land becoming fit for heroes and all the time prices soar higher and higher and the outlook becomes more and more gloomy.

Labor does not propose to create a new heaven and a new earth and a labor government will not make the mistake of climbing to the mountain tops and predicting something which it knows it cannot produce.

It may be safely predicted, however, that among the reforms labor will set its hand to will be a revision of the country's taxation whereby the idle rich living upon inherited wealth will be taught that it is every man's duty to the state to serve to the best of his ability either with hand or brain.

Education will be thoroly revised so that every child shall have equal opportunities; a child's abilities cannot be measured by its parent's purse and it is unfair, not only to the child but also to the state, if full advantage is not taken of its gifts.

There will be legislation for the protection of the mothers of the race; it is unfair to the state, unfair to the children, and unfair to the women themselves that mothers should spend [Continued on page 319]

# Breaking the Hindenburg Line

## The First Complete Story of Our Combat Operations

By Captain Joseph Mills Hanson

**B**ULLDOG British tenacity" became a proverb many centuries ago. That stubborn heroism has been displayed thru the passing decades upon scores of battlefields, from Crecy and Agincourt to Waterloo and Spion Kop, but never so magnificently as during the years 1914 to 1918 upon that vast arena of conflict, the valley of the Somme. This territory, lost first in the slow retreat before superior numbers in 1914, was partly recovered in the battle of Picardy, following the First Battle of the Marne. Nearly two years later, in five months of the most relentless fighting, from July to November, 1916, the British forced back the Germans foot by foot for more than forty kilometers and with terrific losses recovered all the territory between Albert and St. Quentin.

Then, in March, 1918, came the mighty German thrust which in less than ten days wrested from Marshal Haig's armies all the gains so dearly bought a year and a half before, and a considerable amount of additional territory. Such a loss seemed irretrievable; but here it was that bulldog British tenacity reasserted itself. The British returned to the attack so soon as the reorganization of their shaken armies would permit. From the latter part of July, at which time the Marne counter-offensive finally gave the initiative to the Allies, the British pushed forward without pause, gaining here a little and there a little until by the middle of September they were at nearly every point back on the front from which they had been driven on March 21. Thus it happened that, coming into battle in the Somme sector at the beginning of the great final Allied attack of late September, the only two American divisions which found themselves operating directly with the British had the honor of proving the valor of American arms upon a field already sanctified by an unparalleled expenditure of English blood.

The 27th Division, of New York National Guard troops, and the 30th Division, of National Guard troops from North and South Carolina and Tennessee, arrived in the British area in those days of late May, 1918, during which eight American divisions assembled for training and, it was anticipated, for action with the British forces. By the first week in September, owing to the increase in British man power, all of these divisions excepting the 27th and the 30th had been removed to the American army sector. The two divisions remaining, after having served creditably with British troops in the stabilized trenches around Ypres and in the recapture of Voormezele, Vierstraat Ridge and the northern slopes of Mount Kemmel, were sent, early in September, to a training area near Peronne for a final course of instruction in offensive tactics, especially in conjunction with British tanks. Late in the month the American divisions were assembled under the staff of the 2nd United States Corps, Major General George W. Read, commanding, assigned to the 4th British Army, under General Rawlinson, and put in line of September 25 in front of the Hindenburg positions between St. Quentin and Cambrai, relieving the 18th and 75th British Divisions.

The plans of Marshal Foch were now complete for the great general attack along the Western front, to be launched on September 26 by the 1st American Army

and the 4th French Army between the Meuse and the Suippe Rivers and immediately thereafter to be extended by a series of hammer blows delivered one after the other between the Suippe and the English Channel. These blows were to be so coördinated as to make it impossible for the enemy to guess where the next one would fall or to reinforce the threatened portions of his front. Thus the British 1st and 3rd Armies were to attack on a thirteen mile front north of Cambrai on September 27 and on the 29th their attack was to be followed up by the 4th British and the 1st French Armies, extending the offensive to a point south of St. Quentin. In this movement General Rawlinson's 4th Army had a front of twelve miles to clear, from Vendhuille south to Holnon, going in with the 9th British Corps, Lieutenant General Sir A. Hamilton-Gordon, on the right, the 2nd American Corps in the center supported by the Australian Corps, Lieutenant General Sir J. Monash, and the 3rd British Corps, Lieutenant General R. H. K. Butler, on the left.

The corps sector now held by the Americans with the Australians in support had been occupied by the latter since August 8, when they had begun their operations by driving the Germans from Villers-Bretonneux, not ten miles from Amiens, and had continued their offensive until they had attained once more the front of the Hindenburg line or, as the Germans called it, the Siegfried Stellung. The capture of a section of this line 6000 yards in length under field orders already prepared by the Australian Corps was the mission of the American attack, the limits of their objective line being determined by the length of the Bellicourt Tunnel of the Scheldt Canal, approximately along the crest of which the German Stellung in this sector was constructed. The British divisions attacking on the flanks had the hard task of crossing the open canal at each end of the tunnel while defensive features of an almost unique character confronted the Americans. These features were described by Field Marshal Sir Douglas Haig in his report of December 21, 1918, to the British Secretary of State for War. He wrote:

The canal itself does not appear to have been organized as the enemy's main line of resistance, but rather as an integral part of a deep defensive system. . . .

The general configuration of the ground thru which this sector of the canal runs produces deep cuttings of a depth in places of some sixty feet, while between Bellicourt and the neighborhood of Vendhuille the canal passes thru a tunnel for a distance of 6000 yards. In the sides of the cuttings the enemy had constructed numerous tunneled dug-

This is the ninth of a series of articles in which Captain Hanson tells the complete story of what the American troops did on the battle line in France—a series written from a thoro study of the official records and with the background of actual experience overseas. "Up the Line from Cantigny" was published in *The Independent* of March 27, "Those Desperate Days at Chateau-Thierry" in the April 24 number, "Zero Hour Along the Marne" May 29, "One Day's Work at St. Mihiel" June 19-26, "Covered with Mud and Glory" July 24-31, "Getting on to Berlin" August 28, "Our Greatest Victory" September 25, and "The Battle of Blanc Mont" October 30.

outs and concrete shelters. Along the top edge of them he had concealed well-sited concrete or armored machine-gun emplacements. The tunnel itself was used to provide living accommodation for troops and was connected by shafts with the trenches above. . . .

. . . . Except in the tunnel sector the double line of trenches known as the Hindenburg line proper lies immediately east of the canal and is linked up by numerous communication trenches with the trench lines west of it.

Besides these main features, numerous other trench lines, switch trenches and communication trenches, for the most part heavily wired had been constructed at various points to meet local weaknesses or take advantage of local command of fire. At a distance of about 4000 behind the most easterly of these trench lines lies a second double row of trenches known as the Beurevoir-Fonsomme line, very thoroly wired and holding numerous concrete shelters and machine-gun emplacements. The whole series of defenses, with the numerous defended villages contained in it, formed a belt of country varying from 7000 to 10,000 yards in depth.

In storming the central portion of the defenses above described, the Americans were to be supported by the 3rd and 5th Australian Divisions, commanded respectively by Major Generals J. Gellibrand and Sir J. J. T. Hobbs. As General Read's divisions had no artillery, they were to be supported by the veteran artillery of the five Australian divisions, 438 guns in all. Likewise assigned to their support were the 3rd Australian Air Squadron, portions of the 3rd and 5th Tank Brigades and the 2nd United States Tank Brigade, which embraced two battalions of British tanks and the 301st American Tank Battalion, the only unit of heavy American tanks on the Western front. Other British troops brought these auxiliaries to a total of 22,000 men.

Altho the main attack was scheduled for September 29, General O'Ryan's New Yorkers had to make a preliminary attack on September 27 for the purpose of clearing the enemy from the portions of old British front line trenches about Guillemont and Quennemont Farms and the high ground called "The Knoll," which had not been recaptured by the British troops whom the 27th Division relieved. The work, however, had not been accomplished by the morning of September 29 and, as will be seen, General O'Ryan's men were much embarrassed in consequence.

In lieu of the brief but violent artillery preparation employed by the 1st American Army in the Meuse-Argonne sector, the British and Australians laid a preparation fire of forty-eight hours' duration on the Hindenburg positions of the St. Quentin-Cambrai front. Then, in a dense morning fog, and a rolling barrage of both high explosive and smoke shells, the infantry and tanks went over the top at 5:50 o'clock on the 29th. The 30th Division, under Major General E. M. Lewis, on the right flank, toward the village of Bellicourt, went forward with Colonel S. W. Minor's 120th Infantry on its right and Colonel J. V. B. Metts' 119th Infantry on its left and the 1st British Tank Battalion in front. Owing to the perfection of their entrenched systems, the depth and extent of their subterranean shelters and the number of their troops in sector, embracing their 79th Reserve and 185th Divisions, the Germans were able to make a powerful resistance in spite of the long British artillery preparation. Nevertheless, the Carolinians and Tennesseans, almost without a pause, went up the naked and fire-swept slopes toward the crest of the ridge over the canal, penetrated the smoking ruins of Bellicourt and engulfed the front German trench system just as the 46th (North Midland) British Division, on their right, crossed the open canal to the south with rafts and life belts. General Lewis' men then drove on into the second German trench system, penetrated Nauroy and Etricourt and

came to a halt squarely on their objective on the high, open ground beyond.

Every man of the gallant attack regiments fought bravely. Notable among them were Sergeant Joseph B. Adkinson of Company C, 119th Infantry, and Sergeant Milo Lemert, Company M, of the same regiment, both of whom won the Congressional Medal of Honor. The entire performance of the 30th Division was magnificent, netting 4200 yards of advance thru all but the last of the enemy's three entrenched zones.

Further to the left General O'Ryan's division, attacking toward Bony, Le Catelet and Gouy, had a harder time. The designated jumping-off line for the 108th

The drive of the Twenty-seventh and Thirtieth Divisions from the Scheldt to the Sambre

Infantry, Colonel E. S. Jennings, on the right, and the 107th Infantry, Colonel C. T. De Bevoise, on the left, was east of Guillemont and Quennemont Farms, but as the Germans still held numerous strong points west of those places, in effect the infantry began its attack a thousand yards or more west of the designated line and its right flank was that distance behind the left of the 30th Division at zero hour. On the other hand the forty tanks making up the three companies of the 301st American Tank Battalion, which preceded the New Yorkers, being immune to machine gun bullets, ploughed ahead thru the fog between the enemy's strong points, unconscious that the infantry was not following as planned. In fact, excepting on the right, a wide gap existed between the tanks and the infantry and the intervening ground was intersected not only by the enemy's trenches but by numerous ditches and sunken roads, cunningly camouflaged. In all such places lay the German machine gunners swathed in the fog.

To make matters worse, large numbers of Germans, perhaps two divisions, came up thru the subterranean passages from the canal tunnel after the forward assaulting waves had passed and, reinforcing the un-subdued machine gun detachments, resisted the American and Australian support troops. The fifteen tanks of Company A and the ten tanks of Company B, 301st Tank Battalion, ranging far ahead of the 107th Infantry, penetrated the Hindenburg trenches and confounded the Germans there by attacking from the rear. One tank, quite alone, got into Le Catelet well in advance of the infantry. But after the fog cleared away, at about 7 o'clock a. m., 75 per cent of the tanks were put out of action by the German [Continued on page 315]

# England's Sobering Strike

By John Spargo

THE abandonment of the British coal strike is an event of international interest and importance. Its significance can hardly be fully understood or appreciated for some time to come, but it is likely that future historians will regard it as one of the great outstanding and epoch-marking episodes in the history of British trade unionism.

I was in London the latter part of September and again during the second half of August, when England seemed to be headed for social revolution, via a general strike. In September I confidently predicted that there would be no strike; that the great majority of the miners would refuse to vote for such a trial of strength as a strike would involve under the conditions then prevailing. England's economic position seemed to me to be so critical and insecure that it must have a sobering and restraining influence upon the coal miners and upon the Triple Alliance. The rapidity with which England seems to be losing her principal markets, coupled with the overstrain to which her credit has been subjected, might well cause even the most rabid Communist to hesitate before plunging the nation into such a crisis as a coal strike must inevitably precipitate.

It was exceedingly difficult to get at the facts in any satisfactory way. Statistics were showered upon you when you approached either side, recalling the old adage about the indifference of statisticians to mere truth telling. The mine owners offered figures to prove that the coal miners were overpaid, or, at any rate, paid far more than any other body of wage workers; that they were living in unwonted luxury; that each advance in wages had been followed by a marked decline in gross and per capita output. On their side, the miners—whose statistical experts are quite as clever as those of the other side—offered figures to prove that their real or relative wages had declined to a very considerable extent, the increase in the cost of living, as measured by the prices of the common necessities of life, having outrun the increase in wages. Admitting that output had fallen very considerably and steadily, they claimed that this was due mainly to the failure of the mine owners to coöperate with them to maintain production.

At first, the British public appeared to sympathize with the miners' demand for increased pay. Thruout the long-drawn-out negotiations there was probably never a time when there would have been any very considerable number of people ready to protest or complain if the demand for an extra two shillings a shift, which was what the miners voted to strike for on August 16. Had there been no control of the coal industry by the Government it is quite probable that the mine owners would have granted the increase—and passed it on to the consumer, with a suitable and profitable addition. As it was, the miners had to deal with the British Government, which took the position that in view of the serious decline in production there was no apparent reason why the increase of two shillings should be granted. The Government proposed to submit the claim of the miners to an impartial tribunal, pledging itself to abide by the result if the miners would agree to do likewise. This the miners declined to do.

Whether they were right or wrong, wise or unwise, in rejecting this proposal, by their refusal the miners lost a large share of public sympathy. This was the second victory of the Lloyd George Government. In their original demands the miners had coupled together increased pay for themselves and a reduction of the price of coal to the domestic consumer. In the battle of statistics which ensued, they were so hard pressed that they dropped the latter demand entirely. When the Government's offer of arbitra-

tion was scornfully rejected, the miners were placed in an unfavorable position. For the second time the Government gained great strategic advantage.

Lloyd George proposed a plan which would give, immediately, the increase demanded by the men, provided they agreed to increase the output of coal to the per capita level of a year ago. The "datum line" policy, hastily conceived and crudely worked out, was probably not understood by half of the men who were called upon to vote for its acceptance or rejection. As a matter of fact, it was an eminently fair and liberal plan, and Robert Smillie quite wisely advised its adoption and trial. True, in its practical application there would have had to be some arrangement for distinguishing between mines of fair productiveness and mines which have become nearly exhausted, or which for other reasons are not capable of the normal per capita output. Had the plan been adopted, such adjustments could easily have been made. When the miners by an adverse vote of undreamed of magnitude rejected the "datum line" plan, the vote was interpreted as a vote in favor of striking. I was discussing the strike with a well-known trade union leader—today regarded as a "moderate," tho it seems but yesterday that his name was the symbol for the reddest radicalism—and suggested that we might be witnessing the prelude of a great social revolution. His reply, which rather startled me at the moment, seems, in the light of subsequent happenings, remarkable for its deep insight into British character and for its wisdom.

‘WE are witnessing the prelude of revolution, all right,” he said, “but not of the social revolution you have in mind. We are not headed toward Bolshevism. The revolution that is beginning is one within the working class movement itself. Smillie and his colleagues will not permit the strike to continue, if they can possibly avoid it. They would far rather suffer defeat (tho they will strain every nerve to effect a compromise which will not have that aspect) than permit the strike to become a political issue, a challenge to the state. That is why they are already discouraging all talk of sympathetic action by the railway workers—not publicly, of course, but very firmly. They know very well that the moment the strike passes out of the category of purely class conflict, upon economic issues, and becomes a political issue which involves the supremacy of the state itself, two things will inevitably happen: The first is that the leadership of the revolution—as it would at once become—will not remain with them, or with men like themselves, but will be taken out of their hands by men wholly lacking in constructive ability, men who are brilliant and clever in a way, but only as destructionists. The second is that the entire labor movement will be crushed, politically and economically. Lloyd George will appeal to the country, there will be a general election with the existence of the state as the issue. In such an election, not one of us would be returned to the House of Commons. The Labor party would be wiped out completely. Not only so, but already you can see the forces of this nation mobilizing to keep things going. The long lines of people there in Whitehall, all waiting to be enrolled to labor in the event of a general strike, tell their own story. England will not surrender to Bolsheviks or Spartacists. All this Smillie and the others see as clearly as anybody. They are frightened, as all of us are. So they are turning back to old trade union ways and ideals. That is the revolution you see beginning, unless I am much mistaken. British trade unionism is turning away from the narrow and selfish view that any powerfully organized body of workers can

get their own way, even at the expense of the mass of the people. It is the last attempt upon any considerable scale to set a section of the working class of England above all the rest of the nation and above the state. It is a revolution of social consciousness against selfish social revolutionary nonsense."

That any general strike attempted in England as a development of the coal miners' strike would have signally failed to accomplish its purpose of forcing the surrender of the Government, I am quite convinced. It was impossible to travel thru England and reach any other conclusion. As long as there was simply a struggle by the miners for a wage increase, whether it was two shillings a day or twice that, the British people would bear the hardship and suffering involved and, upon the whole, sympathize with the miners. Let that struggle broaden into a general strike with political aims, a struggle against the supremacy of the state, and quite another tale would have to be told. Recognition of that fact explains the abandonment of the coal strike.

### Building That "New" League

THE plans for the new League of Nations, which is to have no connection with the "Wilson League," remind us of the town council which passed three resolutions:

1. That a new courthouse be erected;
2. That it be built of the bricks of the old courthouse;
3. That the old courthouse be used until the new one is completed.

### Fallen Idols

THE modern Greeks do not seem to have inherited any of the democracy of their alleged ancestors. They are determined to have a king, preferably of the Teutonic type, and they prefer a Hohenzollern queen to one of their own blood. But in one respect they show themselves as democratic as in the days of Aristides and Themistocles. They ostracize their great statesmen in the same old way. If anybody deserved well of his country it was Venizelos. He came to the rescue of Greece when she was about to be crushed between the Great Powers and by his skillful diplomacy brought her in on the winning side and more than doubled her territory. As a reward for this he is beaten two to one in the first election after the war and driven into exile.

So they fall, the leaders of their countries in the Great War, victors and defeated alike. Clemenceau of France, Orlando of Italy, Wilson of the United States, Venizelos of Greece, and all the kings, premiers and ministers of Germany, Austria, Hungary, Bulgaria and Russia. It does not matter in the least whether their policy has been wise or unwise, conscientious or selfish, whether they have brought their country to ruin or raised it to unprecedented power, they are repudiated by the populace just the same. The

## The Tercentennial Thanksgiving

The season approaches when it behooves us to turn from the distractions and preoccupations of our daily life, that we may contemplate the mercies which have been vouchsafed to us and render heartfelt and unfeigned thanks unto God for His manifold goodness.

This is an old observance of the American people, deeply imbedded in our thought and habit. The burdens and the stresses of life have their own insistence.

We have abundant cause for thanksgiving. The lesions of the war are rapidly healing. The great army of free men, which America sent to the defense of liberty, returning to the grateful embrace of the nation, has resumed the useful pursuits of peace, as simply and as promptly as it rushed to arms in obedience to the country's call. The equal justice of our laws has received steady vindication in the support of a law-abiding people against various and sinister attacks, which have reflected only the baser agitations of war, now happily passing.

In plenty, security and peace, our virtuous and self-reliant people face the truth, its duties and its opportunities. May we have vision to discern our duties, the strength, both of hand and resolve, to discharge them, and the soundness of heart to realize that the truest opportunities are those of service.

In a spirit, then, of devotion and stewardship, we should give thanks in our hearts and dedicate ourselves to the service of God's merciful and loving purposes to His children.

Wherefore, I, Woodrow Wilson, President of the United States of America, do hereby designate Thursday, the 25th day of November, next as a day of thanksgiving and prayer, and I call upon my countrymen to cease from their ordinary tasks and avocations upon that day, giving it up to the remembrance of God and His blessings and their dutiful and grateful acknowledgment.

fact that a man has once been admired and trusted is sufficient reason in the eyes of the majority why he should be hated and cast down. The higher the pedestal the heavier the fall. The only certain thing about a mob is that it will change its mind—or to put it more correctly that it will reverse its action.

Only Lloyd George of all the war statesmen remains in power, for he more than any man knows how to trim his sails in a stormy sea. He, too, is despised and distrusted by the majority, but they do not know how to get along without him. So long as the people feel that they need a man they will idolize him, but they will seize the first opportunity to kick him out.

### Where Are the Masses?

IN the late election there were Republican, Democratic, Prohibitionist, Socialist, Farmer-Labor, Single Tax and Socialist Labor candidates. Of these the Republican candidate was avowedly the most conservative. He was overwhelmingly elected. The really radical candidates, all taken together, polled probably less than one-tenth of the total vote. We begin to suspect that the "proletariat," if one really exists in this country, is conservative almost to the point of reaction and that radicalism is a fad of the upper middle class. One is reminded of the Populist county chairman in 1896 who said in despair: "My county has gone for McKinley by 300. The people are in the minority!"

### Do Your Duty

HAVE you selected President Harding's Cabinet for him yet? That is the usual occupation of the American voter for the four months following a Presidential election.

### Tomato Juice as a Beverage

CAMPERS and trampers have long known that there is nothing more refreshing in fatigue than a good deep swig from a can of tomatoes. It is food and drink in one, stimulating and nutritious as well. The poets that used to sing so sweetly of the ruddy wine should, now that the eighteenth amendment is passed, turn their attention to this new beverage, the essence of the love apple, quite as colorful and much more healthful than the juice of the grape. A hundred years ago the tomato was thought to be poisonous and more dangerous to morality than alcohol. Today it is one of the most popular factors in our dietary and is especially recommended to infants. It has been found to contain in abundance all three of those mysterious substances, misnamed "vitamines," that are essential to our health, growth and resistance to disease. Dried tomato is as good as lime juice as a preventive of scurvy. The medical journals recommend an ounce of canned tomato juice a day for babies who have to be artificially fed and who suffer for lack of their natural ali-

ment. The forbidden fruit is at last in good repute both with the public and the doctors, a rare combination.

## Tennessee Republican

THE Solid South no longer exists. This is no matter for grieving, even for Democrats. Every party will benefit when sectionalism passes from American politics.

## The Promotion of Literature by Dynamite

By Edwin E. Slosson

ALFRED Nobel, the man who made the Great War possible—or to put it more exactly, the man who made the War possibly Great—was a pacifist and internationalist. In his dying days he seems to have become horrified at the idea of what man might do with dynamite so he devoted his entire fortune to the promotion of peace and the advancement of knowledge. In his will he bequeathed his nine million dollars to reward those who had contributed most to the healing art, had produced literature of the most idealistic type, had done most to put a stop to wars and had made the most important discoveries in physics and chemistry. The income of the foundation was to be divided into five equal parts and these given as prizes to those who "during the preceding year" had done the most important service for humanity in these five fields.

Nobel's idea was a good one, to put into the hands of a man who had just achieved something worth while, probably a young man, possibly poor, a sum of \$100,000 to use just as he pleased, in other words to discover and endow rising genius.

But the Nobel Foundation has paid little regard to the manifest intentions of its founder. In the first place it has absorbed so much of the income in administrative expenses that the prizes are reduced to about \$40,000. Secondly it regarded the bequest as retroactive and, instead of rewarding contemporary achievement, have bestowed their prizes in some cases upon old men, well known and long honored, who had done their best work many years before. Then, too, Nobel's fundamental principle was that national lines should be absolutely ignored, yet the Nobel judges have not escaped the accusation of near-sightedness.

For instance four out of the seventeen prizes in literature have been given to Swedish and Norwegian authors. Now it seems to be a fact that the Scandinavian race has produced more than its proportionate share of great men. Yet who would have supposed that a people forming only one-half of one per cent of the world's population should produce nearly 25 per cent of its best literature? To the three Scandinavian authors previously picked out, Björson, Lagerlöf and Heidenstam, has now been added Hamsun.

Knut Hamsun comes from the Lofoden Islands far beyond the Arctic Circle, another bit of evidence for Stefansson's theory that civilization travels northward. He also hails from Chicago, which may be cited in favor of Berkeley's theory that civilization travels westward. But he found

Chicago too cold for him, both socially and climatically. His sufferings in that city gave him the experiences that inspire his bitter denunciations of modern society and especially of America. The lot of a conductor running a horsecar in the winter time on Halstead Street thru the stockyards district is not a happy one, especially when the crowd is drunk and will not pay their fares. Nor was the old rattling jerking cable car on Cottage Grove Avenue a suitable environment for a dreamy foreigner with his pockets packed with Euripides, Aristotle or Thackeray. His mind was with his books and he forgot to call out the names of the streets. So he was fired and forced to fall back upon the profession of authorship that does not put so much of a strain upon the memory as running a Chicago street car. Hamsun must then be added to the growing list of famous men whom America has entertained unaware: Masefield, who was a Bowery bartender; Clemenceau, who was a Connecticut school-teacher; Stevenson, who was a California squatter; Sienkiewicz, who was a western rancher; Garibaldi, who ran a Staten Island candle-factory, and Trotzky, who was an East Side journalist.

The wording of Nobel's will, that the prize should be given for the greatest work of literature "in the idealistic sense," has caused considerable embarrassment to the Swedish Academy of Letters and much controversy in the outside world. In 1908 the prize was given to Rudolf Eucken, whose solid philosophical works are doubtless idealistic but doubtfully great literature. Of Hamsun on the other hand the literary quality of his work is not so much in question as its idealism. He is best known in America by his novel, "Hunger," just published by Knopf, which is a piece of morbid realism. The *American Scandinavian Review* of March, 1914, said of Hamsun's early work:

"Hunger" could not but rouse horror and repugnance, and the feeling against the author was still further inflamed by his next book, "Mysteries." The famine-crazed youth in "Hunger" hurled his blasphemies in the face of Providence; Nagel in "Mysteries" scoffed at everything that carried the general stamp of approval.

If three days' abstinence from food produces such "idealistic" literature what may we expect from the Cork hunger-strikers who, according to the prison records, fasted thirty times as long?

"Shallow Soil," published by Scribners in 1914, is a cutting caricature of the Greenwich Village of Christianity. And certainly it is to be hoped that no one will take his volume on "The Spiritual Life of Modern America" for an idealized picture. But these are early works. We may assume that fame, fortune and a full stomach have softened his youthful cynicism and that his later volumes, not yet opened to the English reader, contain the idealism that would warrant the awarding to him of the Nobel prize.

He is past sixty and the Nobel medal and purse will mean less to him than a handshake and a ten dollar bill would when he was starving and scribbling in Chicago. If he had received recognition and an independent fortune when he was thirty would he have written better in the latter half of his life—or worse—or would he have written nothing at all? Who can say?

# The Story of the Week

## Sevastopol Surrendered

WHEN Baron Wrangel retired into the Crimea it was expected that he would there be safe from the pursuit of the Bolsheviks, since the neck of the peninsula is an isthmus only a few miles wide and this had been well fortified in anticipation of such an emergency. But the Soviet troops attacked the defenses on the isthmus of Perekop in overwhelming force and, according to Premier Krivochin of the Wrangel Government, with great valor and military skill. They charged the trenches in mass formation, and altho the first three or four columns were annihilated fresh forces were constantly brought until finally after twenty-two such assaults the Bolsheviks broke thru. The Soviet losses in the battle of Perekop are admitted to be 30,000, and the Wrangel army suffered still more severely. The Bolsheviks made effective use of poison gas in this engagement. They were also aided by winter, for the shallow arm of the Putrid Sea that bounds the isthmus on its eastern side was frozen over so a detachment of Soviet troops was able to cross over to the Crimea on the ice and attack the defenders in the rear. The Wrangel troops gave way in disorder and fell back toward the fortress of Sevastopol, blowing up their military depots and burning up the food supplies whenever they had time to. But the Red cavalry followed so swiftly that many of the stores were taken. The booty of the Bolsheviks in the battle of Perekop included 12,000,000 cartridges, eighteen cannon, one tank, three armored trains and 10,000 shells.

This catastrophe is a great disappointment to the French, who had staked all their hopes of the recovery of their Russian loans as well as of a supply of food and fuel for the winter on the success of Baron Wrangel. They had officially recognized his "South Russian Government" contrary to British judgment and had supplied him abundantly with arms and ammunition. For the fortification of

the Perekop isthmus the French had furnished him with unlimited barbed wire and with much heavy artillery, including ten and twelve-inch guns. Only last week Baron Wrangel boasted to the French High Commissioner at Sevastopol that his army was three times as large and strong as when it left the Crimea five months ago for the invasion of the Taurida province. Now Wrangel is a fugitive.

The city of Sevastopol is swarming with Russian refugees. More than 80,000 men, women and children are clamoring to be carried away to Constantinople and all the available shipping on the Black Sea will not suffice for 40,000. The American cruiser "St. Louis" has been sent from Constantinople to aid in the work of rescue. The British have declared a blockade of the entire Russian Black Sea coast in order to prevent the Soviet from sending aid to the Turkish Nationalists who are making war on the Armenians and Georgians on the other side of the sea. Captain Kilpatrick and the other American Red Cross workers who were last week reported to have been brutally tortured and killed by the Bolsheviks when captured, are now known to be safe in a prison camp.

This ends another attempt to overthrow the Soviet régime with the aid of external forces. Kornilov and Kaledin, Denikin and Wrangel attacked from the southern front, Kolchak and Semenov with the Czechoslovaks and Japanese entered from the Siberian side, an Anglo-American expedition came down from the Arctic, while the Finns crossed the frontier toward Petrograd, and from the east came Yudenitch with the Estonians and later Pilsudski with the Poles. All these invading armies have found like Napoleon that Russia is too big to be readily conquered.

## The Treaty of Rapallo

THE representatives of the Kingdom of Italy and of the new Kingdom of the Serbs, Croats and Slovenes (otherwise known as Yugoslavia), meeting at the Villa Spinola in the city of Rapallo on the Italian Riviera, signed a treaty settling their Adriatic dispute on November 12. The peace conference was held off until after the American election so the Yugoslavs could know whether they would continue to have the powerful support of President Wilson for their claims. When they found that his party had been defeated they realized that they would be forced to make greater concessions, so when Premier Yesnitch of Yugoslavia and Foreign Minister Sforza of Italy met they were able to come to an agreement in a few days. The new territory acquired by Italy includes about half a million Slavs and the Yugoslavs also relinquish Fiume, which was promised to them by the Pact of London. On the other hand the Italians give up their claim upon the northern half of Dalmatia, which was also based upon the Pact of London. But the Dalmatian city of Zara with a six-mile enclave is to be ceded to Italy as are also the Dalmatian islands of Lagosta and Lissa. Italy further acquires the islands of Cherso, Lussin and Unie in the Gulf of Fiume.

Fiume is to be made a free city, belonging neither to Italy or Yugoslavia, but since Italy gets the islands in front of it, the railroad

THE ROUT OF WRANGEL

Baron Wrangel retired into the Crimea after his defeat on the Dnieper River and hoped to hold back the Bolsheviks by strong fortifications across the isthmus at Perekop. But the Bolsheviks broke thru and gained the whole Crimea, including the fortress of Sevastopol. This victory gives the Soviet Government clear control of Russia from the Arctic Ocean to the Transcaucasus and from Poland to Irkutsk in Siberia. The only enemy armies now remaining on Soviet soil are the bands of Maklakov and Petliura in western Ukraine. Bessarabia has been assigned by the Allies to Rumania

THE FIUME AGREEMENT

The Italian and Yugoslav delegates in conference at Rapallo arranged a compromise on the partition of the disputed territory on the east coast of the Adriatic that was taken from Austria-Hungary in the war. The boundary agreed upon follows generally in the northern part the line drawn by the Pact of London in 1915 but in the southern part Italy relinquishes her claim on the Dalmatian coast except the city of Zara. Italy gets the Istrian region between Trieste and Pola and both these ports, also the islands of Cherso, Lussin, Unie and Lissa. The Italian line extends along the coast clear to the city limit of Fiume, which is to be free and independent

leading to it and the coast connecting with it, and since the city is now Italian in population owing to the expulsion of most of the Slavs during the d'Annunzio régime, this virtually means that Fiume is to become Italian in every sense except possibly the political.

It was President Wilson's proposal that Fiume should be made a free city under the supervision of the League of Nations, but the Italians refused to concede any such control to the League, so there will be nothing to prevent the future annexation of Fiume by Italy except the fear of losing the trade of the hinterland and incurring the wrath of the Slavs. The relinquishment of the Dalmatian coast by Italy is in accordance with the stipulations of President Wilson, but the boundary agreed upon gives Italy a larger share of Slavic territory than the "Wilson line."

In his note of March 4 President Wilson says that he "would gladly approve a mutual agreement between the Italian and Yugoslav without prejudice to the territorial or other interests of any third nation, but Albanian questions should not be included in the proposed joint discussions." It was doubtless in compliance with this that the conference of Rapallo did not consider the conflicting claims of Italians and Yugoslavs in Albania. On the whole the compromise comes nearer to the Wilson plan of settlement than any hitherto proposed.

## Fiume Question Settled

THE dispute over the possession of the Adriatic port of Fiume, which has kept Italy and Yugoslavia on the verge of war for the past two years, has at last been brought to an end by direct negotiation between the rival claimants. The League of Nations, opening its first general session this week, will find its slate cleared of this controversy that nearly wrecked the Paris Peace Conference and might likewise have proved too difficult for the new-born League.

Before Italy could be induced to enter the war on the side of the Allies she insisted upon their promising her, in the event of victory, the Trentino, Istria and Trieste, a large part of the islands and coast land of Dalmatia, and extensive territory in Turkey and Africa. Since Dalmatia and Istria were chiefly inhabited by Slavs whom the Serbs were fighting to free it was necessary to keep this agreement, known as the Pact of London, secret from the Serbs as well as the rest of the world. Even President Wilson, as he testified to the Senate committee, was not told by the Allies of the existence of this and other secret treaties which provided in advance for the partition of the spoils of war among the victors, until after he went to Paris. Then finding that these agreements were incompatible with the Fourteen Points and the other peace aims to which the Allies had subscribed and upon which Germany had agreed to capitulate, the President threatened to withdraw unless they were regarded as abrogated by the mutual acceptance of the principles the Allies had ostensibly accepted. He went so far at one time as to order the "George Washington" sent for his return to America, but was induced to remain on the promise of certain concessions to his ideals.

The sharpest disagreement came over the question of the Adriatic, where two of the Fourteen Points, namely, those insisting upon drawing national boundaries on racial lines and upon giving each country an outlet to the sea, favored the Slavs and thwarted Italian ambitions. Fiume is the only suitable seaport for the southern Slavic hinterland and so the Pact of London had expressly conceded it to Croatia, while giving to Italy the port of Trieste to the north and the Dalmatian coast to the south of Fiume. But the Italians, finding their sacrifices in the war greater and their victory more complete than they had anticipated, demanded also Fiume. The population of the city was predominantly Italian before the war, but the suburbs and surrounding country is Slavic, and to have extended the Italian annexations to include Fiume would have involved bringing many thousands of Slavs under Italian rule. Mr. Wilson proposed a compromise line, following more closely the ethnographical frontier than the Pact of London line, and proposed to make Fiume a free city under the League of Nations. But Premier Orlando would not listen to any compromise and the Italian delegation withdrew from Paris in wrath. The British and French Premiers agreed with the President as to the merits of the case, but felt themselves bound to carry out the Pact of London if Italy insisted upon it, tho they were unwilling to go further and grant also Fiume to Italy.

Feeling that Orlando had failed at Paris the Italian people turned against him and he was replaced as premier by Nitti.

Classic dances interpretative of the ideals of the League of Nations celebrated the first meeting of the League Assembly at Geneva on Monday, November 15

He was a more moderate minded man and might have succeeded in coming to an agreement with the Yugoslavs if it had not been for Gabriele d'Annunzio, the dramatist aviator, who seized Fiume with a band of devoted followers and has held it for over a year. Altho this was plain mutiny and his capture of Adriatic shipping to maintain his food supply was plain piracy, the Italian Government was powerless to oust him, for he had the sympathy and secret support of the Italian army and navy. No other power was willing to intervene and the League of Nations has no force of its own. It is still uncertain whether d'Annunzio will accept the Rapallo agreement or hold the fort in spite of it.

## Venizelos Defeated

THE Greek election was fought over the personality and policy of Premier Venizelos. He is regarded by the outside world as one of the shrewdest of living statesmen and he has secured for Greece an immense increase of territory, altho the Greeks took little part in the war. But in carrying out this policy he has made many enemies, partly because he has ruled with a strong hand and partly because he found it necessary to depose King Constantine in order to bring Greece in on the side of the Allies. King Alexander, who was put in the place of Constantine, recently died from the bite of a pet monkey and since his unborn child is the legal heir to the throne, the friends of Constantine are hoping to call him back from exile. But probably Great Britain and France would never permit the restoration of Constantine.

The election returned anti-Venizelist members of parliament by more than two to one. The Premier and all but two of his ministers were defeated in their home districts. Consequently Venizelos has resigned and the Government will pass into the hands of George Rhallis, an octogenarian and ex-premier, a supporter of Constantine and a pro-German.

## League of Nations Launched

FORTY-ONE nations were represented at the first general assembly of the League of Nations at Geneva, November 15. There will probably be fifteen other applicants for membership, including Austria, Hungary and Bulgaria. If these are admitted there will be left outside the League for the present Germany, Soviet Russia, Mexico and the United States. The question of the admission of Germany may be brought up by Hjalmar Branting, the Socialist chairman of the Swedish delegation, but the

French opposition to such a proposal is too strong to be overcome. Dr. Müller, the German Foreign Minister, declares that he will not enter anyway until certain changes are made in the constitution of the League.

Various projects for the improvement of the League are under consideration and Premier Leygues of France has publicly expressed his hope that the Covenant may be modified. Three concrete amendments have already been moved by the Scandinavian representatives. One of these provides that the same state shall not be twice in succession represented on the Council of the League as one of the four councilmen elected by the Assembly. The second amendment would eliminate the word "generally" from Article 13 and so make all questions subject to arbitration. The third provides that no member of the League shall be obliged to join in the blockade of a recalcitrant nation if in danger of invasion by that nation. This last amendment will be opposed by the French on the ground that it would paralyze the only effective weapon the League possesses, the power of blockade.

The announcement that the Union of South Africa would be represented by Sir Robert Cecil aroused heated protests among the French, who insisted that the five British dominions should be represented by delegates of their own, not by Englishmen. But when Sir Robert Cecil presented his credentials they were accepted without objection, for it was the general feeling of the delegates, as expressed by Signor Tittoni, that a state had a right to send to the Assembly whomever it liked. The danger apprehended by the French that the South African representative would add to the British vote is not likely to be realized, for Lord Robert Cecil opposes Premier Lloyd George on some of the most important questions before the League.

## The Opening of the Assembly

THE city of Geneva, suddenly become the capital of the first world-wide organization of nations, is overcrowded with its guests. The official Japanese delegation alone numbers over a hundred and some of the others are almost as large, besides which there are thousands of journalists, lobbyists and tourists. The Hotel National has been taken over as headquarters of the League, but the sessions of the Assembly are being held in the spacious Hall of the Reformation, which was erected in honor of John Calvin.

In the voting for permanent president Hymans of Belgium received thirty-five votes, Motta of Switzerland four, Bourgeois of France one, and Ador of Switzerland one.

The first contest took place over the question of considering the applications of Austria, Bulgaria and Albania for admission to the League. These nations did not appeal for membership until after October 14, the date set by the Council as the limit for such applications to be considered at this session. For this reason President Hymans ruled them out, but Lord Robert Cecil took the ground that no nation should be shut out on a mere technicality and Signor Tittoni of Italy supported him. So the Assembly reversed the ruling of the President and referred the applications to the committee on membership. Thus early was it made evident that the Assembly is not to be altogether subservient to the Council, but that it is to have a mind of its own.

Among the most important topics on the League program are the question of mandates, the supervision of agreements as to traffic in women and opium, the establishment of sanitary control and the suppression of typhus, the plans for a permanent court of justice, the reduction of armament, the reorganization of commerce and finance and the apportionment of the budget.

## America and the League of Nations

ACCORDING to Article 1 of the Covenant the first Assembly of the League of Nations was to be opened by the President of the United States, but owing to the President's physical incapacity and the refusal of the Senate to ratify the Treaty of Versailles he could not fulfil that function and the United States is not represented at Geneva even by an observer.

But tho President Wilson is absent in person he is present in the minds of the members of the Assembly and their first act was to send him a message of greeting. President Motta in welcoming the Assembly in behalf of Switzerland proposed such a message and the suggestion was received with applause. M. Motta continued:

I would add to this message of thanks the hope, or rather the keenly felt desire, that the United States of North America should before long take her rightful place in the League. A country which is a world in itself, which is blessed with all the riches of the earth, a democracy which absorbs all the races of the world and has given them a common language and a common government, a people which is affected always by the highest ideals cannot abstain from concurrence in the great ideal and work which we are met here to forward.

America, which at the critical moment of the war hurled her weight, ideas, resources and armies into the scale and thus decided the fate of continents, and Europe in particular; the native land of George Washington, the father of liberty, and Abraham Lincoln, champion and martyr of the cause of brotherhood—this country cannot and surely does not intend to turn its face against the appeal made by the nations who, while retaining their independence and sovereign rights, intend to coöperate in the furtherance of the peace and prosperity of humanity.

Paul Hymans of Belgium, who was elected permanent president of the assembly, said in his reply to the welcome of the President of Switzerland:

We are far from believing that the institution set up by the covenant of Versailles is perfect and that time and experience cannot lead to a betterment of its working and efficiency. We are far from believing that we are going to change the world with a wave of a wand, for the world changes slowly, and most slowly men change.

Above all it is well to affirm once more that the League of Nations is not and will never be a superstate which will absorb sovereignties or seek to reduce them into tutelage. Our aim is to establish between independent states frequent and friendly contact and meetings from which affinities and sympathies will follow.

At the beginning of the session of the first afternoon

G. N. Barnes, the British labor leader, asked to have a telegram sent to President Wilson in the name of the Assembly, expressing hope for the recovery of his health and for the continuance of his work for the League of Nations idea. The proposal was adopted and President Hymans in approving it referred to President Wilson as "the spiritual father of the League."

## The Haiti Inquiry

THE Naval Board of Inquiry which is investigating the alleged misconduct of the American army of occupation in Haiti has held a number of meetings since it was constituted under the authority of Secretary Daniels in October. General Barnett testified that the charge of "indiscriminate killings" by the American marines was based on two cases of unlawful execution of natives. He said that 2250 Haitians had been killed by the Americans since the occupation of the island began in 1915 (the number first reported was 3250, but this appears to have been erroneous). Nearly all of these deaths took place during a single campaign in 1919. Major Turner testified that there had been 1132 rebels and bandits killed since October 1, 1919, in 298 battles, skirmishes or other encounters with the marines. He said that previous to that date no accurate statistics had been kept. He testified further that strictest orders had been issued to the American marines not to mistreat prisoners or native civilians.

President Dartiguenave of the Republic of Haiti also took part in the inquiry. His testimony blended praise and blame of the American régime. He admitted that the natives of Haiti "with a few exceptions" rejoiced at the American occupation and that he had no official knowledge of unlawful killings by American marines. On the other hand he blamed the continuation of the system of compulsory labor on the roads for much of the banditry which has disturbed the nation, and complained that the American Minister to Haiti and his financial adviser had usurped the functions of the native Government to a greater extent than was contemplated by the treaty between Haiti and the United States. He urged that there be a Congressional inquiry in addition to the investigation by the Naval Board.

## Mexico Tries to Be Good

ONCE more revolution has broken out in Mexico; this time in the guise of a radical labor

movement. The trouble is worst in Yucatan, a tropical district in the extreme south of the republic where socialism (in various shades of red) has been for years an important political factor. Yucatan is so distant from the center of government that national authority has been notoriously weak and it was easy for a revolutionary movement to gather head. It is reported that over 150 lives were lost in a clash between the Socialist and Liberal parties. The Government promptly sent six hundred troops to quell the outbreak. Probably the Yucatan uprising, like the recent revolt of Lower California, has only local significance.

Somewhat more serious, because nearer to the heart of Mexico, was the strike of dock workers at the port of Vera Cruz. The Communist Federation voted to call a general sympathetic strike in consequence. The Government of-

ferred its mediation between the dockmen and the shippers and immediate trouble was averted, but the occasion gave rise to much incendiary talk in Vera Cruz and Mexico City. The Government has also been forced to take over the coal mines temporarily in consequence of a wages dispute between the miners and the owners. Many of the mines, as well as many of the docks and factories of the Gulf ports, are owned by foreign capital and this places the Mexican Government in a very delicate position. If strikes occur and are followed by violence, as is apt to be the case in Mexico, valuable foreign properties will be in danger of destruction and there will be a cry for intervention to save foreign interests in Mexico from being swamped by anarchy. On the other hand when the Government takes over industries tied up by labor troubles it not only assumes dangerous responsibilities but runs the risk of being charged with confiscating private property.

To avert the danger of a hostile attitude abroad, President De la Huerta, President-elect Obregon and other leaders of the existing Government are taking a very moderate and conservative line with respect to economic policy. General Obregon has given out an interview assuring the world at large that he had no hostility to large industries and no intention to break them up by unfriendly legislation, that the Mexican Government recognized its duty to pay all just foreign claims and would welcome the creation of a commission to pass on their validity; and that Bolshevik propaganda would not be tolerated. He favored the introduction of new methods of agriculture and the creation of a class of small landowners, but opposed any premature attempt to break up large estates. President De la Huerta went so far as to say: "Our country opens its arms to foreigners in the same manner that it does to its own nationals, inviting them to come and share in our riches, to aid in the development of our natural resources, and favors all enterprises willing to recognize the great truth that the natural resources of a nation belong to the nation itself." As a part of the Mexican campaign of conciliating foreign opinion, Felix Palavicini was sent on a special mission to England, France, Belgium, Italy and Spain to sound out the opinion of European governments on the new régime in Mexico. He professed himself well satisfied with the results of his mission.

Roberto Pesqueira was sent on a similar mission to the United States. He bore with him a letter in which he stated that both the President and the President-elect were of the opinion that the new Mexican constitution adopted under Carranza "is not and must not be interpreted as

retroactive or violative of valid property rights." Mention was also made of "a joint arbitration commission to pass upon and adjudicate the claims presented by foreigners on account of damages occasioned during the revolution." Secretary of State Colby referred to this letter as "a very gratifying and reassuring statement of the attitude and purposes of the new Government of Mexico." He even ventured so far as to express the hope that "the Mexican question will soon cease to be a question at all."

Nor is the Mexican Government less anxious to win the good will of the incoming administration in the United States. When he learned that President-elect Harding would spend his vacation on the Texas border, President-elect Obregon announced that he would be glad to confer with him "in the event Senator Harding visits any of our cities." Even if the assurances and friendly overtures of the Mexican Government are due rather to a desire to secure recognition and foreign loans than to disinterested good will, it is none the less gratifying that the present Mexican Government has abandoned the hostility to the

United States which marked the régime of Huerta and Carranza. Never before has Mexico striven so anxiously to be "on its good behavior" in the eyes of foreign nations.

## Building Scandals in New York

WHY were rents so high in New York that the legislature was forced to intervene by drastic legislation against extortionate landlords? Why has building been so costly and so slow? Why has the city government been running so deeply in debt? A

very sinister answer to all three questions is now becoming apparent. Thanks to an investigation, facilitated by evidence published by the New York World and other metropolitan newspapers, a great conspiracy of fraudulent builders and grafting labor leaders has been uncovered. The purpose of this conspiracy "in restraint of trade" was to keep prices up and prevent any low bids for construction. A labor leader, Robert P. Brindell, is alleged to have taken advantage of the plot to feather his own nest, by threatening to call strikes unless duly paid his blackmail.

The most sensational turn to the new disclosures is the suggestion that the great Wall Street explosion may have been due to a labor war arising from the building conspiracy. The theory is that a house-wrecking operation was in progress in Wall Street under a contractor associated with Brindell and employing men from Brindell's union. A rival union, whose members had been forced out of employment by the conspirators, planted a bomb with the purpose of killing the house-wreckers. It should be added that the police discredit this theory and stick to their original hypothesis that the Wall Street explosion was the work of anarchists or other "reds."

It is known that the city authorities were hoodwinked and victimized by the building conspiracy into paying extravagant prices for construction. Mayor Hylan confessed that at the suggestion of John T. Hettrick, agent for the limestone building interests, he had urged the Board of

International

The President-elect took a vacation as strenuous as those of Rooseveltian tradition in the weeks after his election. With his host, R. B. Creager, of Point Isabel, Texas, he went tarpon fishing in the border wilderness and "stuck it out on this line" until he hooked a big one. But Mrs. Harding took the honors by catching the largest fish of all

Education to substitute limestone for terra cotta in public school contracts. Without any investigation whatever he took the assertions of Mr. Hettrick as his own and sent them over his own signature to the Board of Education. Under cross-examination the mayor candidly admitted "I was being fooled, all right." The exposure of the relations of the city administration to the building ring is the heaviest blow that even the Hylan administration has yet experienced and may result in the defeat of Tammany Hall in next year's municipal elections.

## Shipping Board Tangles

PRESIDENT Wilson has at last completed his list of appointments to the new Shipping Board. As previously announced, Admiral William S. Benson will be chairman. The other six appointees are Frederick I. Thompson of Alabama, Joseph N. Teal of Oregon, John A. Donald of New York, Chester H. Rowell of California, Guy D. Goff of Wisconsin and Charles Sutter of Missouri. Admiral Benson and Mr. Donald are members of the present Board. Mr. Teal is a lawyer and banker of Portland, Oregon, who has written extensively on transportation problems. Mr. Thompson is a newspaper publisher. These four appointees are all Democrats and, as the law permits only four members of the Board to be of the same political party, the other three members are taken from the Republican ranks. Mr. Rowell is a newspaper publisher, Mr. Goff is general counsel to the Shipping Board and Mr. Sutter a business man of St. Louis. The members of the Board, in compliance with the law, are distributed geographically as well as politically in such a way that two members represent the Pacific coast, two the Atlantic, one the Gulf states, one the Great Lakes region and one the interior.

Three men formerly appointed to the Board declined to serve and thus made necessary new appointments. They were Gavin McNab of California, Democrat; Martin J. Gillen of Wisconsin and Theodore Marburg of Maryland, Republicans. The Board will start to work at once, without waiting for confirmation by the Senate. Many Republicans have criticized the personnel of the new Board and the fact that the longer terms have been assigned to the Democratic members, so it is possible that some of the appointments may be delayed or rejected in the Senate. Admiral Benson outlined the immediate program of work before the Board. Action must be taken with respect to the discriminatory rates authorized by law but, according to President Wilson, forbidden by treaty. The much-discussed contracts between the Harriman line and the Hamburg-America line and between the North German Lloyd and the United States Mail Steamships company must be acted on. The case of the "Leviathan," the great German merchant vessel so long inactive in port, must be decided, and the disposition of the Hog Island shipyard determined.

While the new Board is making plans for the future the past of the Shipping Board is under investigation by a Congressional committee. Many charges are made of waste, inefficiency and "graft." Mr. Meehan of the division of investigation of the Board testified that 2400 cases of alleged corruption and petty dishonesty were being investigated and that many would result in criminal prosecutions. He even asserted that "practically all" of the private contractors who dealt with the Government were guilty of illegal and fraudulent practices. The charges are too manifold to make it possible to specify them all; they include the awarding of contracts to irresponsible firms, the sale of Government property at nominal prices, the em-

International

Baseball has declared for a one-man rule to build up the sport after the scandals and consequent upheavals of this fall. Judge Kenesaw Mountain Landis was unanimously chosen by the sixteen American and National League clubs to become head of the controlling board and he accepted the offer at a salary of \$42,500 a year with an additional \$10,000 for expenses. Judge Landis will keep his present position as a Federal jurist, in which capacity in 1914 he presided in the great legal battle of baseball, the Federal League's fight upon the National and American Leagues

employees in the shipyards was the inevitable consequence of the expansion of the shipbuilding force in nine months' time from 40,000 to 385,000 men under the stress of war conditions.

## The Crusade Against Home Brew

BIT by bit the net of prohibition is drawn tighter around Demon Rum. In the days of state-wide prohibition many found relief by importing liquor "in the original package" from license states or foreign countries, but Congressional legislation cut off this avenue of relief. Then came war-time prohibition, the eighteenth amendment and the Volstead Act. The Governors of New York and New Jersey pinned vain hopes to "liberal" state legislation which would permit the sale of wine and beer until the Supreme Court upheld the supremacy of federal law over local nullification. But one way of escape remained. The householder could make his own intoxicants. True, the home brewery was rarely a success with respect to the quality of the liquor, but there was a suspicious increase in the sale of hops, malt and other means to a well-understood end. Beverage manufacturers complained that their sales were decreasing, because they were compelled to keep within the alcoholic content limits of the law, whereas the home brewer got all the alcohol into his product that was possible.

The Bureau of Internal Revenue therefore issued a statement pointing out to tradesmen and the public that the Volstead Act prohibited the advertisement, manufacture and sale of "any utensil, contrivance, compound, substance, formula, direction or recipe" intended for use in the unlawful manufacture of intoxicating liquor. This provision, the statement made plain, does not affect the sale of hops and malt for any legitimate purpose, but only the advertising and sale of such materials, or of home brew apparatus, for the purpose of evading the prohibition law. In sum:

The so-called home-brewed beer manufactured in the home for beverage purposes, even tho for the sole use of the family and bona fide guests, is under the bureau's construction of the law illegal, and the sale of materials for the purpose of such manufacture is likewise illegal.

ployment of untrained and unfit workmen and officials, the careless keeping of accounts and audits, the padding of expense accounts, the approval of unseaworthy ships, the intimidation of honest inspectors, and the regular practice on the part of supply firms of giving gratuities to stewards and other ships' officers.

On the other hand Mr. Piez, former Director General of the Emergency Fleet Corporation, asserts that the Walsh investigation committee has been playing politics and exaggerating scandal to discredit the Shipping Board. He said no charges had implicated the members of the Board or the officials under them and that such incompetence and graft as did develop among the minor em-

A Little of Everything

By Jerome Lachenbruch

The reason for the need of a shutter at all lies in the method used to show the individual pictures in succession.

In the accompanying strip of film, showing a few inches of Will Rogers in the Goldwyn picture, "Almost a Husband," you will observe four little holes on each side. These fit over a sprocket wheel. Now, when the film is being shown, each frame (as the individual pictures are called) is pulled into position by an automatic claw that clutches the holes of the film and drags it down. During the dragging process, a blind wing of the shutter covers the light, and the audience is spared the streak impression that would otherwise be created. It must be remembered that motion pictures *do not move* in uninterrupted succession. Each picture is exposed for a fraction of a second, then pulled out of position by the mechanical claw, thus automatically bringing the next frame into place. This feature of motion picture projection is known as "intermittent feeding." No doubt, many devotees of the motion picture will be surprised to learn that each frame is actually stationary part of the time necessary to pass from one picture to the next. When the film actually moves, one of the opaque wings of the shutter hides the movement. We perceive, or think we perceive, the motion of the film itself only because our retinas have the power to retain a visual impression of the photograph in one particular frame until the next one appears. Were our sight sharper and the "persistence" of our vision reduced to zero, the motion picture would appear on the screen as a series of jerks.

London is troubled with acute congestion. The old low buildings are utterly inadequate as well as intolerably inconvenient for the needs of modern business and the narrow crooked streets are choked with motor vehicles. The city must expand either up into the air or roundabout. The proposal to erect steel skyscrapers on the American model meets with furious op-

A diagram of the shutter of a moving picture machine. The black segments are the blind portions of the shutter which cover the light while the film is in motion from one position to the next.

To my mind the Bush Building is the most perfect example of its class. It is lovely by day, lovelier by night, when its gem-like crown queens it over the proudest of the city's monuments. The structure and design of the tower, thru its long ascent of thirty stories, are of the simplest; a couple of courses of bricks relieves the monotony of surface and color, and a delicate tracery of windows and open stonework does the rest. It looks so light and is so solid, has dignity and strength, with a touch and suggestion of exquisite fragility. Having so lovely an ornament and so mighty a temple of business, London would never again rest content with the squat designs, the rococo ornament, the

"Radicalism" or Art? This "Little Lady of the Dew" has just been placed in St. Mark's churchyard, at East Tenth Street and Second Avenue, New York City, arousing much discussion thereby. Its sculptor is Solon Borglum, famous brother of the famous sculptor Cutzton Borglum. It was ordered by William Norman Guthrie, rector of St. Mark's, and placed in the old churchyard where Peter Stuyvesant is buried. Dr. Guthrie answers those who question a nude statue's position in a churchyard out of his conviction that art and religion are closely bound together, that for the sake of beauty, which includes both, one may "live, fight and die."

waste of priceless ground, which disfigure and nullify her architecture.

Another plan for the relief of London is to construct a series of satellite cities in concentric rings. Each would be limited to 100,000 or 200,000 inhabitants and so planned as to make overcrowding impossible. Each of the satellite cities would be sufficiently large to have its own social and business life and they would be connected together and with the main metropolis by swift subways and express trains. Around each city would be a belt of land that could never be built upon, but devoted to recreation, gardening and agriculture. Power would be provided from central plants and every factory would have direct railroad connection. Industries of the same class or interdependent would naturally concentrate in the same city.

## A Really Circulating Library

Having successfully solved the problem of furnishing meals for its citizens thru the medium of a community kitchen, Evanston, Illinois, is now en-

Not ice cream cones nor yet "hot dogs," but a library on wheels, with books for all tastes and ages. Evanston, Illinois, has this unique institution

gaged in the unique task of providing them with brain food in the form of books carried to their doors by an automobile truck. A library on wheels is not to be found in every town. The one at Evanston is a community effort, the truck having been donated by various women's clubs and civic organizations.

To people who live in the older sections of Evanston the public library has always been central enough. A walk of a few blocks at most is all that is necessary to put in their possession whatever books they wish for pleasure or study. It was realized, however, that to the people in the newer parts of the town, the distance to the library was so great as to discourage any general use of its facilities. Moreover, there was discovered in Evanston a situation which exists to a greater or less extent in numerous other towns thruout the country: there were many families in which there was complete ignorance of the fact that its members were entitled to the use of the books in the public library. These people, largely newcomers to America, had not lived in countries in which the benefits of

the public library were available to the whole people. They had grown accustomed to seeing all the good things of life appropriated by others more fortunately born, and saw nothing unusual in the provision of a library for the limited use of certain groups of people while its advantages were denied to others. Now thru the medium of the library on wheels they are being instructed not only in the use of books but in the principle of public institutions in America and their right to free partnership in all things that are bought with the public funds.

During the few weeks in which the Evanston traveling library has been in commission it has proved a wonderful success, books having been issued at the rate of one a minute during all stops. It covers different districts on different days of the week, usually between the hours of 3:30 and 8:30 p. m., and carries a complete stock of books on a variety of subjects, besides many books printed in foreign languages for such grown-ups as prefer reading in their own language.

As was to be expected, the greater part of the patronage of the traveling library came at first from the children of the districts served by it. But children carry an immense amount of information to their elders and there has been a distinct gain in this way. More recently, the entire family from mother to baby came out to welcome the arrival of the book automobile and its interesting cargo. No longer are the people shy of the "library lady" who is in charge of the distribution of books. The tired eyes of the women have a new light in them as they crowd round her, while the children greet her vociferously. Even the men-folk, who at first kept out of sight, now regard the occasion as a red-letter day.

As a contribution to the general Americanization movement the library on wheels should be a very valuable institution, not only because of the facility in the use of English that will be developed, but in the impression upon the minds of the people who have

not had quite so much access to the resources of a city as they might have had, of the facilities at their disposal. They will see that the principles of freedom and equality on which the American government is founded, apply to the use of public institutions of every sort.

## Nature Harnessed Again

The problem of perpetual motion still remains unsolved, despite the centuries of time and effort devoted to its solution. But J. H. Martin, of Spring-

The aged village sexton and the big bell in the church tower are things of the past. These Chicago University chimes, the largest and most complete set in the country, are a \$12,000 memorial, made possible by seven graduating classes and the United States School of Aeronautics, to whom one of the three largest bells is dedicated. The other two are dedicated one to President Emeritus Edward James, the other to the university. The chimes had their dedication on October 30, at the tenth annual "home-coming" of the institution, and played as their initial performance the college song. There are fifteen bells, weighing from 500 to 3000 pounds each, and covering a range of an octave and a half

field, Missouri, appears to have solved another problem, for many years regarded as fully as baffling, in the invention of a machine which can be operated by river current and made to produce actual power.

Mr. Martin's contrivance consists of a wooden framework about 16 feet long by 12 feet wide, which is floated on two buoys and is secured to the bank of the river by cables. Inside the framework are slung two sets of sprocket wheels attached to each other by chains. Attached to the chains, at equal intervals, are four big wooden paddles or vanes, 7 feet long and 2 feet wide, each giving a surface of 15 square feet. They are so placed that when two of them are above the water, the other two are underneath, furnishing resistance power for the river's current. The vanes are attached to two 100-gallon force pumps, and with a six-mile current, 5 feet deep, these pumps will force water thru a three-inch pipe to a height of 100 feet and at the same time operate a 4 K. W. dynamo to full capacity. The two pumps generate about fifteen horsepower.

It is easy enough to force a broad resisting surface along with a reasonably strong current of water, Mr. Martin explains. The problem comes when the paddle is lifted out of the water, at the same instant that the paddle at the other end of the framework is descending into the water. The resistance represented at one end will invariably

As long as rivers flow to the sea, Mr. Martin has here his own solution of the problem of perpetual motion

neutralize the movement at the other end, thus causing a cessation of movement altogether.

Here is where a knowledge of hydrostatics was necessary. Mr. Martin rigged up some auxiliary paddles on each of the main vanes, slung on hinges. Then by the addition of ratchet arrangements on the big vanes, he forced the latter to assume a perpendicular position while under the water, the vanes being automatically released at the instant the sprocket wheel begins to lift them out. Hence the double resistance was eliminated, and the problem of water current power solved.

A four-mile current is enough, according to Mr. Martin, to make a force of 100 gallons a minute, pumped a hundred feet above the surface of the river. A contrivance attached to the machine enables the operator to vary the depth at which the current will take effect, thus regulating the speed and consequently the strength of power.

The value of this invention lies in its ability to pump water with sufficient force to insure irrigation power for any farm or ranch in a dry section, and in the fact that it will work continuously so long as there is a river to run it. One of these machines will irrigate about forty acres, as in twenty-four hours it pumps 288,000 gallons of water.

Samples

The best reflector of all metals is brass.

There are fifty different religious denominations represented in North Carolina.

Over 200,000 Jews served in the American army and navy during the Great War.

Before the Great War the United States stood third in coal exports; now it stands first.

The Island of Manhattan is thirteen and one-half miles long and has an average breadth of one and three-fifth miles. In this small portion of the earth live 2,284,103 people.

The high air currents explored by the balloons sent up by the University of Wisconsin weather bureau show that a velo-

city is often maintained of over 140 miles an hour.

A man bought a mink-lined overcoat in 1915 for \$500; sold the lining in 1917 for \$1,000, and replaced it with nutria for \$150. In 1919 he sold the nutria lining for \$250 and substituted muskrat for \$55, and sold this in turn for \$300. He still has the overcoat and \$845 profit on his timely exchanges of the fur lining.

What It Used to Cost to Go to School

The small cost of a college education in America at about 1800 or before often supplies the fathers and mothers of today with a subject of most interesting comment. Just for itemized proof of expenses in Bowdoin College as short a time ago as 1845 glance thru the following term bill which is taken from a student's account:

To the President and Trustee of Bowdoin College, Dr.

To his first term bill, ending December 18, 1845.

Interest to be paid, if not discharged within one month after the commencement of the next term.

	Dollars.	Cents.
Tuition .....	8	..
Chamber rent .....	3	34
Repairs .....	..	10
Average of repairs .....	..	69
Sweeping and bed-making....	1	..
Library .....	..	50
Monitor .....	..	11
Catalogues, Order of Exercises, and Commencement Dinner ..	..	50
Books .....	..	50
Bell .....	1	20
Reciting room and lights....	..	85
Chemical lectures .....	..	25
Wood .....	..	..
Library fine .....	..	..

Commons .....	..	..
	16	68

The recipient of the bill apparently was a well-behaved youth, for neither fines nor assessments are charged against his name. But it is entirely possible that the modest charges for "repairs" and "average of repairs" are the only remaining evidence of some long forgotten story of undergraduate escapade.

The Swiss Family Robinson should have camped by the waters of Puget Sound. The seaweed that floats there not only looks well in a picture; it may be used for a fertilizer, braided for cord or fishlines, burned for the iodine and carbonate of soda in its ashes. And when the long fibrous leaves have all been put to some practical use, there still remains a central fleshy bulb which can be cooked up into a delicious candy

## Is This Good Business?

(Continued from page 291)

were held to their original contracts.

Fares were increased, in the face of public opposition, in over five hundred cities, but it was soon found that increased fares did not result in proportionate increases in revenue from a resentful public. Increased fares did not afford a solution.

The investigations of the Federal Electric Railways Commission covering more than a year have established that the two things needful for a permanent solution of the traction problem are credit and coöperation. Restored credit would permit the companies to rehabilitate themselves, to pay off their maturing obligations and to provide for normal replacements. Coöperation with labor would permit them to render continuous service, uninterrupted by strikes or lockouts, to effect operating economies and to bring into their treasuries the full amount of revenue collected from the street car riders.

Coöperation with labor is the first step toward coöperation with the public, bringing with it, as it does, courteous treatment of the public by the men on the cars who are the companies' direct representatives. Such coöperation is to be secured by giving employees a living wage—something they have not always had in the traction industry—and humane hours of labor and working conditions. The right to organize and to deal collectively with their employers should not be denied them. Collective bargaining, properly employed, will be found an effective strike preventative.

First class credit and the full coöperation of their employees, if properly utilized to better the service, would give the traction companies an almost impregnable position in their relations with the public and would be a powerful influence in overcoming the antagonism against them. The demand for public ownership would lose much of its force if capital and labor in the business of electric transportation performed their respective services freely and well.

The experience of the past few years has chastened the traction companies. They are willing now to listen to any plan the public may propose that will permit them to live. They cannot go on, they now realize, unless they are able to pay adequate wages to both labor and capital and at the same time to give progressively better service to the public.

How can it be done? It is all very well to say "restore credit and coöperation"—but how? I was invited recently to answer this question in detail before a meeting of the citizens of Grand Rapids. The franchise of the street railway company was about to expire. The question agitating the city was whether the franchise should be renewed, and if so, upon what terms. As a former mayor of Grand Rapids I have always had a keen interest in the city's problems. Its street car

School Prospectus upon application to Superintendent, White Plains, N. Y.

problem is essentially the same as that which confronts every other community in the United States.

The citizens of Grand Rapids were quick to agree that the street railway company, like every other utility, is entitled to a fair return on the value of all its property used in the public service. There is no question that any American city will cheerfully pay whatever rate of fare is necessary to maintain good service, if it is sure that it is paying only proper operating expenses, proper maintenance charges and a proper return on the capital actually invested. There is only one way to have assurance on these points. That is by having an honest valuation of the property made to start with, and thereafter maintaining strict public control of all new issues of capital and extraordinary expenditures, with public supervision over management, operation and service.

Street railways are analogous to a city water supply and other public utilities. The fares paid by the car riders, like the rates paid by the water consumers, should, as a matter of sound public policy, be as low as is consistent with good service. Special assessments against the companies for street sprinkling, paving and for the construction and maintenance of bridges should be eliminated so far as practicable. These are burdens that should be borne by the entire community, and not shifted from the automobile rider to the street car rider who is usually less able to bear them and whose personal use of the public highways is less.

If it is wrong, as it certainly is, to permit the operation of street railways for the profit of private corporations, it is equally wrong that their operations should be for the profit of the city in the sense that the funds collected from the street car riders in excess of legitimate taxes on the street railway properties, should be turned into the municipal treasury. If at a given rate of fare profit results, it should go neither to the private corporations nor to the city, but should be reflected back by the automatic reduction of the fare paid by the car rider.

One more point, before considering specific plans. Extensions of street car lines into new territory are expensive. Less than a mile of double track laid in Washington recently cost over \$230,000. Under the present system such extraordinary expenses are met by the flotation of new securities. The interest on these securities, constituting a permanent burden, must be paid by the car rider as a part of the fare. But who benefits from these extensions? Is it the whole body of those who use the cars, or is it only the property owners in the districts in which the extensions are made? An extension of the New York subway system, costing \$7,373,000, increased the value of property in the neighborhood by \$49,200,000, an amount upwards of seven times the cost of the improvement. It seems evident, there-

fore, that extensions should be paid for, not out of new capital, but from special taxes assessed against the owners of property, the value of which is enhanced by such extensions. This is no new principle. Property owners are accustomed to contributing to the cost of building streets and other improvements out of the increase in the value of their property. The principle is peculiarly applicable to electric transportation, because of the enormous increases in real estate values created thereby.

First secure a valuation of the property, this figure to serve as the basis of calculation should the city decide at some future time to purchase the lines, and then relieve the company (or more properly the car rider) of the burdens that should be borne on other shoulders. From this commonsense basis it is possible to go ahead with plans designed to secure street car service at cost.

Service-at-cost agreements have been entered into with electric railway companies by the cities of Cleveland, Cincinnati, Dallas, Montreal and a few others, and they seem to have worked well during the most difficult period in the history of the street car industry. The books of the companies are open and their operations are under the supervision of public officials in whom the people have confidence. The cards of the companies are face up on the table. These agreements are calculated to be successful in just the degree that the people as a whole understand the game.

The agreements vary in detail but their purpose in each instance is the same. It is to adjust fares quickly and automatically to the varying cost of service. There is set aside in the treasury of the company a special "barometer fund" of say \$100,000. Should increased operating expenses cut into this fund, fares would be increased a fraction of a cent, by raising the rate for tickets, to make up the deficiency. Should this fund, on the other hand, show an increase after all proper operating expenses, including a fair return on actual investment, had been paid, fares would be automatically lowered. The assurance of an automatic adjustment of fares to cost would go a long way toward restoring the confidence of the public in the company and the confidence of the investor in the company's securities.

With the value of the properties fixed there could be no further dispute as to capitalization or excessive profits, because the people would know exactly what they are paying for, and many of the causes of friction between the public and the companies would thus be removed. Under service-at-cost contracts the opportunity for municipal corruption is reduced to a minimum. The idea of speculative gain is put aside, and the companies are placed upon a commonsense business basis where the people pay the exact cost of the service they get and where the opportunity for private profits no longer exists, since economies and lower

## Puts Dollars into Your Company's Bank Book

**T**HE fact that the Monroe saves \$200.00 monthly for the Virginian Railroad is not unusual. The Monroe is making proportionate savings in over 15,000 other offices. It can save dollars in your office, whatever your figuring problems.

Not merely because the Monroe figures so swiftly—although, being first on speed, it does mean dollars to you in costly time saved.

Not simply because the Monroe figures so accurately—although the Monroe's visible proof feature does guarantee you the correct answer *every time*.

But also because the Monroe masters with equal dependability *all your figure-work*—masters it all without mental effort on your part; needing neither complements, reciprocals nor trained operators.

Invoices or inventories, cost-finding or foreign exchange, payrolls, percentages, estimates, etc.—*the Monroe makes all figuring as easy as turning a crank*. Just turn the Monroe crank forward to multiply or add; turn it backward to divide or subtract.

The Monroe "Book of Facts" shows how the Monroe has saved for others—how it can save for you.

## "The Royal Road to Knowledge"

When a little prince who afterward became a wise king complained of having to struggle through the brambly lanes of learning like any peasant boy, his teacher said:

"My lord, there is no royal road to knowledge."

This belief has stood for centuries. But today a real royal road to knowledge is open to you in—*The Life Story of the World*—

### "CIVILIZATION"

This wonderful story of human achievement sets before you basic things, carries you through the big sweep of events down the centuries to today.

The seven attractively bound volumes forming the set *CIVILIZATION* are written in simple style, printed in large type and filled with more than 400 rare gray-tone illustrations. These books contain all the elements of a wonderful tale of adventure: struggle, hope, fear, sorrow, joy—life and death. So entertaining and fascinating they are that you will forget very little that you read. Only those who understand this story can get the most out of life. Only they can confidently plan ahead.

### A Rare Opportunity

As the current edition of *CIVILIZATION* was printed before the cost of paper, ink and labor

went up, this valuable work may be had at a very low price for a short time only. We must emphasize that the edition is limited and that the volumes cannot be duplicated at the same price. The very easiest of monthly payments are allowed.

You cannot afford to ignore such an offer, especially in these days when knowledge is power.

operating costs are reflected in reduced fares.

Service at cost may not be the only solution of the traction problem. There may be other plans under which cooperation and credit can be restored. It is doubtful whether public ownership and operation would be successful under present conditions in most of the cities of the United States. It should be understood, nevertheless, that if no solution is made practicable under the present ownership and control, only one course will remain open—the transformation of the electric railway industry into a Government business.

Washington, D. C.

## Our Pilgrim Legacy

(Continued from page 293)

riotous pleasures, and the coarser sins were utterly abhorrent as seen from their spiritual point of view. They made every effort to keep their thinking on a high plane and to set before themselves and their children the noble ideals of religion. Therefore they held their ministers, their spiritual leaders, in the highest respect, and made the church the center of their social life. But even there they demanded that power come from the congregation and not from external authority. Their church must be a free, self-governed church. The light must shine truly from the souls of the people. They must lead their lives as if in the eyes of God. Such a religion gave them a calm, serene faith, and a deep trust in the final triumph of God's goodness, influenced their characters.

Duty to their fellows, conscience, and the thought of an over-shadowing Providence made the Pilgrims the most idealistic of all the early colonists of America—and their idealism influenced the development of the typically idealistic American spirit.

Courageous in every adversity the people of Plymouth always refused to flee before trouble. They were ready to sacrifice themselves for their ideals. It is no accident that Massachusetts gave the colonies great religious leaders; that the Massachusetts men gave spirit to the American Revolution; that her speakers opposed slavery; that, in the Civil War, practically every Massachusetts town sent more than its quota of troops, as did every Massachusetts town in the Spanish War.

Out of Puritan New England have come great names—idealistic poets, far-seeing and substantial statesmen, and a God-fearing people. President Taft said: "The purpose and spirit of the Pilgrims gave the United States the highest ideals of moral life and of political citizenship!"

William Bradford, the great leader of the Pilgrims, the strong man of old Plymouth, the Roosevelt of that day, a man whose like America needs at all times, wrote, as if in prophetic vision:

As one small candle may light a thousand, so the light here kindled hath shone to many, yea, in some sort, to our whole nation.

## Breaking the Hindenburg Line

(Continued from page 297)

artillery. In the neighborhood of one crippled tank it was that the trio of non-commissioned officers of the Machine Gun Company of the 107th Infantry, Eggers, Latham and O'Shea, performed the act which will keep their names bright thru future years.

In the confused fighting thru the Hindenburg system, one battalion of Colonel De Bevoise's regiment eventually forced its entrance to Le Catelet, but it was so far ahead of the rest of the division that it was entirely cut off for a long time. Another battalion, this of the 108th Infantry, established itself in the enemy's trenches south of Bony, where it had a desperate struggle to hold its position until joined by Australian troops. The support regiments, Colonel W. A. Taylor's 106th Infantry and Major C. W. Berry's 105th Infantry, were reinforced while mopping up by the 3rd Australian Division, which then advanced to the support of the forward American units and took over control of the sector during the following night. For four days thereafter the Australians waged a continuous battle before completing the occupation of Le Catelet and Gouy and the reduction of the Hindenburg works and the canal tunnel in the division sector, and during a large part of the struggle they were aided by about 1000 men of the 27th Division who remained with them. The 30th Division having been relieved on its objective by the 5th Australian Division, General Read's corps was withdrawn during the night of the 29th-30th to the Peronne area to refit, the 27th Division having lost about 5,500 men and the 30th Division very considerably less.

The accomplishment of the two American divisions had been very important. Before the attack the German high command had emphasized the value of this defensive zone in an order, a copy of which was captured, in which the troops were told that

"We must show the British, French and Americans that any further attacks on the Siegfried Line will be utterly broken and that that line is an impregnable rampart, with the result that the Entente Powers will condescend to consider the terms of peace which it is absolutely necessary for us to have before we can end the war."

Having nothing to bargain with in a peace parley excepting their lines on the Western front, the Germans naturally exerted every effort to hold them. On the other hand, the British Commander-in-Chief in his official report estimated the importance of the victory of the following language, written regarding the situation on October 5th, after the capture of the third and last German trench zone.

"The great and critical assaults in which during these nine days of battle the 1st, 3rd and 4th Armies stormed the line of the Canal du Nord and broke through the Hindenburg Line mark the close of the first phase of the British offensive.

# Tobacco Teeth

## See the change in ten days

Smokers' teeth discolor more than others, usually. But the stains lie in a film, and removing that film removes them.

There is now a way to combat this film. Millions of people employ it. Leading dentists everywhere advise it. See how teeth whiten when you use it a few days.

## Film ruins teeth

That film on teeth which makes them dingy causes most tooth troubles. It is viscous—you can feel it. It clings to teeth, enters crevices and stays.

The old ways of brushing did not end it, so millions found that well-brushed teeth discolored and decayed.

It is the film-coat that discolors, not the teeth. Film is the basis of tartar.

It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Very few people have escaped these troubles caused by film.

## Now we combat it

Now dental science has evolved ways to combat film day by day. Able authorities have amply proved their efficiency.

These methods are combined in a dentifrice called Pepsodent. Millions have adopted it, largely through dental advice. It opens, we believe, a new dental era. And, to let all know it, a 10-Day Tube is being sent to everyone who asks.

## See and feel it act

Pepsodent brings five desired effects. Some are instant, all are quick. A very short test will prove a revelation.

One ingredient is pepsin. Another multiplies the starch digestant in the saliva, to digest starch deposits that cling. It also multiplies the alkalinity of the saliva, to neutralize the acids which cause tooth decay.

Two factors directly attack the film. One of them keeps the teeth so highly

polished that film cannot easily adhere. With every application it combats the teeth's great enemies as nothing else has done.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coat disappears. Let this test show you, for your own sake, what clean teeth really mean.

**Pepsodent**

# 128 Wonderful Pages of Laughter, Thrills and Brain Food

Only \$1.00

Brann was an Iconoclast—an image smasher. He hated sham and pretense, fakes and frauds. He stripped the veil from life's false virtue, snatched away the purple cloak of hypocrisy, threw aside the mock mantle of modesty—and laid bare the burning, blinding nakedness of truth.

## SEND NO MONEY

With a boldness that struck terror to the hearts of the timid and blasted the lives of the guilty Brann revealed the shame of the great and mighty, the rich, the titled, the powerful. Wherever he discovered sham or pretense, falseness or deceit, injustice or oppression, there he unloosed the thunderbolts of his fury. He wove a pattern of words and it breathed with life, shone with beauty, scintillated with satire. At his touch cold type kindled into fire, glowed with the red heat of wrath, blinded with the white flare of passion.

Read this new "Scrap Book" of Brann's wonderful writings. See why he is acclaimed the wizard of words. Send no money now.

BRANN  
The Iconoclast

# Made the World Blush for Shame

He was truly a "wizard of words." His words leaped from the pages like tongues of fire and beauty. His vocabulary is conceded even by his bitterest critics to outrange that of any other American. As Elbert Hubbard said: "Brann took the English language by the tail and snapped its head off for his own delectation and joy of the onlooker." Thousands have been held beneath the spell of his amazing magic. Thousands have gasped at his daring, shuddered at his amazing attack, have felt their emotions shattered and shredded. And now you can have a choice selection of Brann's writings sent to you for

## 10 DAYS' TRIAL

Brann's Scrap Book, containing 128 pages of masterly articles by Brann the Iconoclast is now ready. Send no money. Just mail the coupon or write a letter and the Scrap Book will be mailed at once. Simply pay the postman one dollar and the postage, then read the book for 10 days. If not delighted with this taste of Brann's works, send the book back and your money will be refunded by return mail without question or quibble. If you are a lawyer, minister, business man, writer, public speaker, or banker; whatever your religion, whatever your ideals or ideas, whatever your position in life, you must know Brann the Iconoclast. If you want to improve your ability to talk and write tellingly, convincingly, clearly and forcefully, if you want an intellectual tonic that will start you thinking deeply, sincerely, you must read Brann. Mail the coupon or letter NOW before the present small edition is gone.

Name .....  
Street .....  
City ..... State .....

The enemy's defense in the last and strongest of his prepared positions had been shattered. The whole of the main Hindenburg defenses had passed into our possession and a wide gap had been driven through such rear trench systems as had existed behind them. The effect of the victory upon the subsequent course of the campaign was decisive."

Having had five days in rear area, General Read's corps again took over the fighting sector from the Australians on October 5th, with the 30th Division only in line. The Australians, since relieving General Lewis' and General O'Ryan's men around Nauroy and Le Catelet, had driven the front ahead some four miles, breaking the last German trench zone, the Beaurevoir-Fonsomme Line, and had come up to the eastern edge of Montbrechain, where the Americans again entered the battle. In this sector the enemy had now no more prepared positions into which to retire but there were numerous villages and farmsteads, also woodlands and marshy streams which offered good defensive positions for rear guard fighting in the generally open country, over which the Americans must now advance toward the Sambre River and canal at Catillon, 15 miles northeast of Montbrechain. St. Quentin having fallen to General Debeney's 1st French Army on October 1, the general object of the Allied attack in this region was now to master the remaining fragments of the Hindenburg Line, to capture Cambrai and Laon by outflanking them and to cut the enemy's lateral line of railroad communication from Metz by Mezieres to Lille, which, in the sector of General Rawlinson's army, passed west of Catillon and through Le Cateau—a small city and important junction 5 miles northwest of Catillon.

The actual attack did not begin until the morning of October 8, when the 1st French Army and the 3rd and 4th British Armies attacked together, the 2nd American Corps being the center one of the three corps of the 4th British Army. As had been the case on the 29th of September, a morning mist favored and the Americans, following the tanks and covered by a strong barrage, went forward with the 117th Infantry, Colonel C. F. Spence, on the right and the 118th Infantry, Colonel O. R. Wolfe, on the left. The first stubborn resistance of the Germans soon weakened and before evening General Lewis' men had gained about three miles, capturing the villages of Pre-mont and Brancourt, while similar progress was made by the British corps on the flanks.

Next day the attack was pressed vigorously all along the line, the British 6th Division, to the right of the Americans, taking the immense German depots at Bohain, while in front of General Lewis' troops the enemy was burning ammunition and supply dumps all over the open country. Four miles of progress was registered and the Americans crossed the enemy's lateral railroad line and occupied the villages of Busigny and Becquigny. The enemy fought with more determination as he approached

## Infection

would have been prevented if

Absorbine Jr. had been applied when this "little accident" happened and the wound would have healed promptly.

**Absorbine Jr.**  
THE ANTISEPTIC LINIMENT

It cools and soothes, takes out the pain and soreness and helps the injured tissues to heal. And being a positive germicide it makes any infection quite impossible.

Absorbine Jr. is especially good for all the little hurts the children are constantly getting, being made from herbs and essential oils and therefore perfectly safe.

for Coughs & Colds

the Selle River, on the hills east of which he had established a temporary line of resistance. On the 10th the Americans brought their front squarely up to the west bank of the Selle, clearing the towns of St. Souplet, Vaux-Andigny and St. Benin and the following night the 27th Division relieved the 30th on this line.

To the north, Cambrai had now fallen into British hands, while to the south the French took the St. Gobain Forest and entered the fortress city of Laon on October 13th. The New York Division, confronted, so it was estimated, by five entire German divisions and fragments of six others, held its position without offensive movement until the 16th, when the 30th Division returned to line and took over the right half of the sector. With only about 15,000 infantry left for duty in both divisions, the advance was resumed at 5:25 o'clock on the morning of the 17th, in fog and slow, cold rain. The Germans fought doggedly to hold the slippery river banks and, these lost, to cover the withdrawal of their artillery. But even vigorous infantry counter-attacks covered by barrages failed to check the American progress. The Germans were driven steadily eastward, the 27th Division clearing out the fortified Jonc de Mer and La Roux Farms and approaching the St. Maurice River and the 30th taking Ribeaupville after an obstinate struggle, while the British 13th Corps was gaining possession of Le Cateau.

The southern flank of the American front paused that evening within two miles of the Sambre River and, a little later, General Lewis' troops took Mazinghem in the moonlight, aided by a supporting attack on the part of the 27th Division. The next day patrols pushed forward all along the front, those of the New Yorkers reaching the west bank of the little St. Maurice River and those of General Lewis' division the ridge above the Sambre at Catillon. On this line the 30th Division was relieved by the 1st British Division on the night of the 20th, and the 27th by the 6th British on the next night, the Americans retiring to Amiens for rest. They were preparing to return to the pursuit when the armistice was signed on November 11.

Excepting five days, one or both of the divisions of the 2nd American Corps had been in action continuously since September 29th. They had taken 16 miles of ground, including that gained in breaking the Hindenburg Line, had captured nearly 90 field guns, more than 700 machine guns and 5,359 prisoners, while the 27th Division lost 8,137 officers and enlisted men in casualties and the 30th, 7,343 officers and enlisted men. The work of the American troops in the operations of Marshal Haig's armies, commended by their British commanders, contributed in no small degree to the succession of brilliant victories which forced the Germans back beyond the frontiers of Belgium on this portion of the front by the dawn of Armistice Day.

# How to Rid Yourself of Your Catarrh

## QUICKLY! PERMANENTLY!

Without Drugs or Medicine of any Kind

By R. L. ALSAKER, M. D.

**T**HE majority of the people in our country suffer from catarrh. Some have it from time to time, others have it all the time.

"Catarrh of the head is troublesome. Catarrh of the throat causes coughing and much annoying expectoration. When the catarrh goes into the chest it is called bronchitis. If it is allowed to continue it becomes chronic, and chronic bronchitis means farewell to health and comfort. It robs the sufferer of refreshing sleep and takes away his strength. It also weakens the lungs so that the individual easily falls a victim to pneumonia or consumption.

"Then there is catarrh of the stomach and small intestines, which always means indigestion. Catarrh of the large intestines often ends in inflammation of the lower bowel—colitis.

"Catarrh of the ear causes headache, ringing in the ear and general discomfort.

"Catarrh of the liver produces various diseases, such as jaundice and gallstones, and often ends in much suffering from liver colic.

"All who easily catch cold are in a catarrhal condition. Those who take one cold after another will in a short time suffer from chronic catarrh, which will in turn give rise to some other serious disease—as if catarrh itself isn't bad enough.

Either you personally suffer from catarrh, or some member of your family is afflicted. Isn't it time to give this serious danger a little attention, before it is too late, and solve the problem for yourself? You can do it. It's easy.

Catarrh can be conquered easily and permanently. It has been done in thousands of cases. You can cure yourself—and while you are losing your catarrh you will lose your other physical ills. That discolored tongue will clean up; that tired feeling will vanish; that bad taste in the mouth will disappear; that troublesome gas will stop forming in the stomach and bowels; and the pain will leave your back; headaches will take flight; rheumatism will say goodbye and those creaky joints will become pliant."

Realizing the great need of definite, practical information regarding this terrible disease, Dr. Alsaker has prepared a plain, simple instruction book on the cause, prevention and cure of catarrh, asthma, hay fever, coughs and colds. This book is entirely free from

R. L. ALSAKER, M. D.  
Founder of  
The Alsaker Way

fads, bunk and medical bombast. It sets forth a commonsense, proved-out PLAN, that is easy and pleasant to follow—a plan that teaches the sick how to get well and how to keep well. The name of this book is "Curing Catarrh, Coughs and Colds." It tells the true cause of these objectionable, health-destroying troubles, and it gives you a safe, simple, sure cure without drugs, medicines or apparatus of any kind. You apply this wonderfully successful treatment yourself, in your own home and without the expenditure of an additional penny. There is nothing difficult, technical or mysterious about this treatment. It is so easy to understand and so simple to follow that anyone, young or old, can reap the utmost benefit from it.

If you suffer from colds, coughs, or catarrh in any form, send only \$3 to the publishers of "THE ALSAKER WAY," THE LOWREY-MARDEN CORPORATION, Dept. 290, 1133 Broadway, New York, and get your copy of this valuable instruction book. Follow the instructions for thirty days; then if you are not delighted with the results—if you do not see a wonderful improvement in your health—if you are not satisfied that you have made the best \$3 investment you ever made—simply re-mail the book and your money will be promptly and cheerfully refunded.

Remember this: If you want to free yourself forever from catarrh, asthma, hay fever, coughs and colds you can do so. Dr. Alsaker's treatment is not experimental. It is proved-out and time-tested. And it includes no drugs or serums, sprays or salves. And it costs nothing to follow it, while doctor's bills, prescriptions, and so-called patent medicines that do not cure, soon eat a big hole in any man's income. Send for this book today. Follow it faithfully and you will experience the same splendid results that thousands of others are receiving.

## Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Dr. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

## Independent Opinions

We have received the following communication from Professor R. J. McKnight of the Theological Seminary of the Reformed Presbyterian Church of North Pittsburgh, Pa.

At the great International Congregational Council, held in Boston, June 29-July 6, Dr. Charles E. Jefferson, Lyman Beecher lecturer at Yale, made one of the principal addresses, on "The Broad Horizon in Missionary Work." He began by saying, "I wish to fly over technicalities, denominations, races and entanglements, carrying you high enough to see the world-work of the church in its full dimensions. Our work is God's work, and Christ's work—to bring a lost world back to God, to get the mind of God into the mind of mankind, to build the will of God into the common life of all nations." Then, further on, he said, "Life from top to bottom is one. We cannot be Christians in our homes and pagans in our politics. The Golden Rule is for all nations. The Great Commandment is for all people."

This is what millions of men are thinking if they can only get some one to say it for them. Dr. Jefferson touched bed rock. "Is Christ divided?" Why should a man think for a minute that he can serve Christ in his home and Apollyon in politics? Yet there are myriads of Christians who are right at heart but who have never been led to consider the inherent obligation which rests upon them to carry their religion to the finger tips of social and civic life. Howbeit, when the mind of God gets into the mind of mankind, it will irradiate, we may be sure, in every direction, and the will of God will find expression in the common life of every nation. We have been neglecting the moral and spiritual welfare of the great corporate personality called the state. We have been leaving that to politicians. But politicians, since they are at least wise enough to know that a "kingdom divided against itself is brought to desolation," have been satisfied to leave such delicate tasks as the extradition of demons to the tactics of Beelzebub. With what results we need not stop to say. But it is certainly high time that the spirit, the essence and the principles of genuine Christianity should be carried thru and past the individual, the home, and the church, right into the very heart of the state, so that the first purpose of both national and international assemblies of the world around shall be to honor Christ, and do His will "in earth as it is in heaven." "The Golden Rule is for all nations, the Great Commandment is for all people."

Nor is the other side of this vast problem being lost sight of. There is a movement on foot to get the teachings and love of our blessed Lord so thoroly ingrained in the hearts of men that they will not only carry the elements of righteousness into every phase of political activity, but go on to complete the process by writing the Name which is above every name into our fundamental law. And what a splendid consummation that would be—Christ in the hearts of our citizens, one and all, their "hope of glory," and then, as a consequence, a public profession of that stupendous fact in our Federal Constitution?

We of course desire like Professor McKnight to see American politics permeated by the spirit of Christ, but until such a transformation is completely accomplished it would be meaningless to insert a formal religious profession in the constitution.

## What British Labor Wants

(Continued from page 295)

strenuous hours in factories either too soon before or too soon after their children are born; but it is of no use simply to forbid them to work; it is no use making them a parsimonious grant for the period of their absence from the factory; they must be given an allowance which will be adequate for them to meet their extra expenses, to obtain ample nourishment, and to perform the most important task in the world with a mind entirely free from the anxieties of ways and means.

There is also the important question of housing—and the housing of the people has an untold influence upon the welfare of the nation. The nationalization of state industries such as mines and railways and land will also have to be dealt with.

There will be plenty for a labor government to do and no one knows better than labor that the tasks before it cannot be achieved by wizardry or the making of clever speeches. But the rulers of today need have no fear of the fitness and ability of the rulers of tomorrow. The employing classes have no monopoly of brains, and labor has not only brains but also experience—practical experience of the everyday work of the great mass of the population, and the great and inspiring task of the labor government will be to do its utmost toward making the country which was worth fighting for a country which is also worth living for.

London

## Pebbles

Money used to talk. Now it whispers.—*New York World.*

What is it you must keep after giving it to someone else?

Your word.—*Boys' Life.*

Quartermaster—Aye, aye, sir, we have their fleet bottled up.

Admiral—Corking, corking!—*Dirge.*

Prof. (in history class)—Togo, what great struggle occurred about 275?

Togo—Hon. prohibition, sir.—*Princeton Tiger.*

Parent—What is your reason for wishing to marry my daughter?

Young Man—I have no reason, sir: I am in love.—*London Opinion.*

"Look here, I ask you for the last time for that five dollar bill you owe me."

"Thank heavens, that is the end of that silly question."—*Leigh Burr.*

Sunday School Teacher—Now, Bobbie, who is it that tho we have never actually seen we know is always with us, because of the evidences of His work all around?

Smart Pupil—Please, miss—the profiteer.—*Sydney Bulletin.*

"Not long ago in a French restaurant I ordered a steak," said an American. "The waiter took the order, and just as he was about to go I cried as an after-thought, 'Well done, waiter.'"

"The young man, blushing with pleasure, drew himself up and saluted smartly."

"But you Americans, monsieur," he said, "you Americans also covered yourselves with glory at Chateau Thierry and Bois de Belleau."—*New York Globe.*

## The Duty of Credit

Every seed that is planted, every hour of labor that is expended on production of raw materials represents effort to increase the resources of the world. Between production and final application to mankind's needs of the fruits of this effort there may be an interval of months.

The highest duty of credit is to finance this element of time in the processes of production and distribution.

The great resources of the National Bank of Commerce in New York are utilized to provide credit for production, industry and commerce.

## The United States Life Insurance Company

in the City of New York

Organized 1850. Non-Participating Policies only. Over Forty-five Million Dollars Paid to Policyholders.

JOHN P. MUNN, M. D., President.

Good territory open for high class, personal producers, under direct contracts with the Company. Address Home Office, 277 Broadway, New York City.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem inseparable. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$823.60 absolutely beyond question of doubt. The Annuity Department METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

### DIVIDENDS

## American Telephone and Telegraph Company

A dividend of Two Dollars per share will be paid on Saturday, January 15, 1921, to stockholders of record at the close of business on Monday, December 20, 1920.

G. D. MILNE, Treasurer.

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Thirty-Year Five Per Cent. Collateral Trust Gold Bonds, due December 1, 1946

Coupons from these bonds, payable by their terms on December 1, 1920, at the office or agency of the Company in New York or in Boston, will be paid in New York at the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

### English, Literature and Composition

### History, Civics and Economics

#### I. The Hall of Fame.

1. Mark Twain. Write an essay on one of the following subjects: (a) Mark Twain as an American; (b) Mark Twain's friendship with William Dean Howells (don't do this until you are familiar with Howells' personality and writing); (c) Mark Twain in England; (d) Mark Twain as chronicler of life in the Mississippi valley. Or, if you like, take still another subject, one suggested by any of these or one that you think of yourself.
2. Roger Williams. Write a biographical sketch of him. Be sure to know thoroly Mr. Law's article in the connection.
3. Augustus St. Gaudens. If you haven't a St. Gaudens statue in your town, you must have seen one in the nearest big city. Write a description of the one you know best. If you don't know any, write either a description of some public monument, or a critical discussion of public monuments in general, using all the first hand material you have. Or, if you can, you might compare St. Gaudens' public statues with those by other sculptors.
4. Patrick Henry. Since we entered the war we have talked and heard a great deal, in different connections, about "free speech." Write an essay about Patrick Henry and Free Speech in the Revolution, bringing out as many connections as you can find with the present situation.

#### II. Our Pilgrim Legacy.

1. If you feel any sympathy with the hatter's widow of Mr. Law's essay, imagine yourself back in her day, in such difficulties as you would characteristically get into, and write a letter to a friend of your own age telling all about it.
2. Mr. Law refers to several outstanding Pilgrims. Get up a group program in which each member of the group talks for two minutes on one of those men as "One Type of Pilgrim."

#### III. Leaves.

1. Is this in form anything like a sonnet? In just what ways is it like or unlike? Consider not only rime and meter, but also the division of idea into the different parts of a typical sonnet.
2. What are two classic sonnet forms? Read Rupert Brooke's war sonnets for a study of their form.
3. Pick out the ten words in "Leaves" that seem to you most fitly and fully descriptive. And have your reasons for each choice.

#### IV. Breaking the Hindenburg Line.

1. If you have any personal knowledge of any part of Captain Hanson's story, write your own fuller account of that part.
2. Write a war story, either fact or based on fact, that happened not in battle or in exciting action, but quietly in your own town.
3. Captain Hanson's material could have been written into a dry campaign report, into highly impressionistic narrative, or into something happily between the two. What do you think Captain Hanson has done?

#### V. The Promotion of Literature by Dynamite.

1. Prepare an oral biographical sketch of Alfred Nobel.
2. Get hold of the writings of Knut Hamsun and decide for yourself his claims to the Nobel prize.
3. Read as much as you can of the writing of one other of the prize-winners. You will surely be interested if you choose Selma Lagerlöf; "The Girl from the Marsh Croft" is a good book to start on.
4. See if you can add any names to the list of "famous men whom America has entertained unawares."
5. Organize a group to report on this list of famous men with special emphasis on the obscure years spent in America.

#### VI. Fallen Idols—The Story of the Week.

1. Lloyd George "more than any man knows how to trim his sails in a stormy sea." As a class, pool all the information relative to this statement that you can find in newspapers and periodicals; then divide Lloyd George's career into sections, each of which includes some important crisis in which his "trimming" faculty displayed itself. Appoint a member of the class to report on each section.
2. (a) Find words synonymous with annihilation, booty, virtually, generally. Have they just the meanings of their synonyms?

#### I. Light Railways—Is This Good Business?

1. Is there a system of electric trolleys in your town? If so, is it publicly or privately owned? Is it in a prosperous condition or running into debt? Does it charge more or less than the typical five cent fare?
2. List all the causes mentioned by Mr. Sweet for the financial condition into which city transportation has fallen.
3. Prepare a brief for the affirmative or negative side of a debate on the question: Resolved, that the five cent fare be abandoned and new rates established in keeping with the increased cost of service.

#### II. British Labor—What British Labor Wants. England's Sobering Strike.

1. What is the "Triple Alliance"? Show how such a labor combination would "make possible a national strike by which the whole life of the country could be brought to a standstill."
2. What, in Mr. Spargo's opinion, were the causes which brought about the failure of the coal strike in England? Compare it with one of the recent great strikes in the United States.
3. What is the British system of national insurance? Should similar laws be adopted in the United States?
4. What program does Mr. Thomas think would be adopted by a labor government in Great Britain? Show how this program continues the reforms already achieved by labor which are mentioned in Mr. Thomas's articles.
5. Imagine a Labor party triumphant in the United States. Can you pick a cabinet of labor unionists which would be adequate to the duties of government? What policies, in your opinion, should such a party work for first?

#### III. American History—Our Pilgrim Legacy.

1. In what sense was the Mayflower Compact "the first written constitution"? Did England have a written constitution at the time? Has England one now?
2. What was Governor Winthrop's definition of liberty? Do you agree that this is a proper definition?
3. Point out the importance of emphasizing the principle of law and order in a frontier community, such as seventeenth century New England. What would have been the historical consequences if the men who came over in the "Mayflower" had been lawless or disorderly men such as have settled many other new countries?

#### IV. The League of Nations.—League of Nations Launched. The Opening of the Assembly. America and the League of Nations.

1. What is the Assembly of the League of Nations? What does the Covenant say about its powers and duties? How does it differ from the Council of the League?
2. Why do you suppose the French object to the admission of Germany into the League of Nations? Why is there less opposition to the admission of Austria, Hungary and Bulgaria?
3. Is the League of Nations "dead"?

#### V. Southeastern Europe—Venizelos Defeated. Fiume Question Settled. The Treaty of Rapallo. Sevastopol Surrendered.

1. Who is Venizelos and why is his defeat at the polls a matter of world-wide significance?
2. On what basis has the Adriatic question been settled? How does it differ from the Pact of London? From President Wilson's proposals?
3. What attempts have been made to overthrow Bolshevik rule by "counter-revolutionary" Russian armies? Can you account for their uniform failure?

#### VI. Latin America—Mexico Tries to Be Good. The Haiti Inquiry.

1. Why do labor troubles in Mexico endanger the international position of the country? What steps has the Mexican Government taken to conciliate foreign opinion?
2. Do you think non-intervention in Mexico or intervention in Haiti better represents the correct American policy in dealing with disorderly Latin American countries?

## Introducing a New Poet

The Independent has always been glad to notice the arrival of a new star in the brilliant galaxy of American poesy. A large number of the major and minor poets of the past three generations, both in America and England, have made their debut in our columns. The author of the poem which we herewith present to our readers has long been a figure in American journalism and has taken a commanding part in public affairs, but his poetic gifts have hitherto been overlooked by the general public. The medium of his message is, of course, *vers libre*: no one ventures to write anything else nowadays. A careless printer set it up as solid prose in the newspaper from which we have taken it; but the strongly marked rhythm, the cadenced phrases, the whole metrical plan, were so clearly evident that we were able without altering a single word to restore the original form of the text. To avoid the invasion of any copyright which the newspaper may have had, we have contented ourselves with reprinting only about one-fourth of the original poem as recited by the author at New Orleans on November 18, but we can assure our readers that the extract we have taken is quite typical of the whole.

While the reader cannot fail to be impressed by the normalcy of the thought, the patriotism of the theme, and its other merits, it is not to these qualities so much as to the stately, measured gravity of the meter and the sonorous orotundity of the style that we would call attention. It is much that a busy man of affairs should turn from the political problems which beset him to burn incense at the shrine of the Muses.—*The Editor.*

## Thrift and the Cosmic

### Harmonies

#### A Free Verse Lyric by the President-Elect

I believe the American people have come to realize  
That we must face momentous problems—  
World problems—  
But more particularly our own problems—  
And must face them with resolute courage  
and practical wisdom  
And patriotic determination.  
There must be no reason for pause,  
No excuse for despair,  
Nor place for pessimism . . .  
Inevitably there must be reconstruction.  
Unavoidably there will be readjustment . . .  
We may have to bend our backs to new burdens.  
Surely we are going to be called upon—  
Nationally, collectively and individually—  
To renounce extravagances

And learn anew  
The old lessons of thrift and providence . . .  
There is no substitute for the reward of merit—  
There can never be—  
But in the scales of justice  
We must see  
That reward balances evenly with merit.  
Then class will be banished with caste,  
Tho there will continue to be  
Varying degrees of inspiring success,  
And varied measurements of wealth,  
As there must be  
Unless inspiration is to die  
And the human procession is to halt  
In hopeless paralysis.  
No law can alter nature  
Or change her varying moods.  
We haven't yet learned to combat destructive weather,  
And the law of supply and demand is eternal,  
But we may soften their rigors  
And minimize their penalties . . .  
We want Southern factories to be attuned  
To the music of the mills of the North . . .  
There is no sectionalism in righteous American ambitions,  
I could heartily say  
East and West as North and South . . .

## Remarkable Remarks

J. FRANK DAVIS—If you can't laugh—grin!  
JAMES W. GERARD—Revenge is the mother of wars.  
REV. E. S. SYNOTT—Many of the men in my parish are women.  
EX-KING CONSTANTINE—I cannot help being related to the Kaiser.  
HAROLD MACGRATH—Her voice was like the G string of an old Strad.  
REV. JOHN ROACH STRATON—Divorce is essentially an immoral proceeding.  
FULLER BULL—I care not who makes the nation's laws so long as they are not enforced.  
W. H. TAFT—Had I been a Senator I would have voted for the Covenant just as submitted.

## Opening Nights

One of the most successful musical debuts this year was that of *Vasa Prihoda*, a Czech violinist, who has both perfection of technic and a youthful fire in his playing. His tricks and trills were exuberant, but balanced by a mellow depth and dignity at times. (Carnegie Hall.)

*The Half Moon*, a tuneful musical comedy. Joseph Cawthorn as the wealthy, unlettered father who achieves an education via the encyclopedia is funnier than ever, and he is ably seconded by Miss Oliver as the haughty widow who attempts to put him in his place. (Liberty Theater.)

*Jimmie*—a musical comedy to delight the T. B. M.! Frances White shines in some new "rompers" songs and proves her versatility by dancing a graceful ballet figure. But the dancing honors of the show are Rita Owin's. Ben Welch and Harry Delf furnish Hebrew humor. (Apollo Theater.)

# Victrola

REG. U. S. PAT. OFF.

## Will there be a Victrola in your home this Christmas?

If any one thing more than another can add to the joys of Christmas, it is music—and the Victrola can bring into your home, any music you may wish to hear.

The Victrola is the one instrument to which the greatest artists have entrusted their art—an unanswerable acknowledgment of its artistic achievements. Moreover, the Victrola is the only instrument specially made to play the records which these great artists have made.

Christmas day and any other day through all the years to come, the best or the newest of all the world's music may be yours to enjoy.

By all means get a Victrola this Christmas, but be sure it is a Victrola and not some other instrument made in imitation. \$25 to \$1500. Victor dealers everywhere.

## When Green and Orange Mix

A Message from the British Nation to the American People

By the Rt. Hon. C. A. McCurdy, K. C., M. P.

Food Controller of Great Britain

**I**T is probable that no British Parliament will ever find a solution for the Irish problem. For the last thirty-five years the most patient and persistent efforts have been made by British politicians to give Ireland the peace which thru all the centuries of her recorded history she never seems to have known. But, as a house divided against itself cannot stand, so peace can never come to Ireland by any act or statute of the British Parliament, but only by the healing of the feuds and hatreds which surge in the breasts of the Irish people themselves. Heaven knows that British statesmen of the last thirty-five years have done their best. Many millions of the British taxpayers' money have been expended in the attempt to make Ireland contented and happy. The country has been transformed and transfigured. Those thirty-five years, as the late Mr. John Redmond acknowledged when speaking at a banquet to Australians in Dublin in July, 1915, have brought about a social revolution in the conditions of the Irish people.

There is today no quarrel between the English people and the Irish. Go into any English workshop or factory; the Irishman enjoys a degree of friendship and popularity which no citizen of any other part of the British Empire receives. There never was, in fact, a quarrel between the English and the Irish people. Centuries ago, long before the English people had any share or part in the government of their own country, to say nothing of that of Ireland, Plantagenets and Tudors and other sovereigns and their courtiers undoubtedly committed crimes against the Irish people. But it is hardly fair to impute blame for what was then done to the sovereign British democracy of today. Even in those days the cruelty was not all on one side. When the great English poet, Edmund Spenser, was sent by Elizabeth as one of her Irish Governors the Sinn Feiners of those days were responsible for burning his little daughter alive.

But these sad, unhappy stories of a far distant past, tho never forgotten by the Irish people, whose capacity for remembrance is unique among the races of the world, have little relevance to the situation as it has existed in Ireland for the past

thirty-five years. The cardinal and essential difficulty in dealing with Ireland is the fact that Ireland is inhabited, not by one race, but by two, both of whom are in every sense entitled to be regarded and regard themselves as Irishmen. It was in the reign of James I, when the island of Great Britain was becoming too small for the English and Scotch peoples, that, a few years before the Pilgrim Fathers set sail for America, another band of emigrants made the Ulster Plantation in the north of Ireland, and founded the chief industrial center of the country, and formed that stock of sturdy Puritanism which has, thru all the centuries that have followed, kept itself distinct in tradition, religion and character from the southern Irish.

Perhaps they ought never to have gone; but the fact remains that they went, and four centuries of uninterrupted occupation of any part of the world's surface, whether in Ireland or America, must for practical purposes be regarded as giving settlers full and equal rights to the soil which they have inhabited side by side with the original inhabitants.

My first interest in politics was roused as a boy by

the emergence of the Irish problem in the Home Rule elections of 1885 and 1886. In those days the majority of the British people were all in favor of granting to Ireland the full measure of home rule which the Irish Nationalists demanded, and which Mr. Gladstone was willing to settle. The opposition came from two sources; from a section of English opinion which feared that home rule would inevitably lead to separation, and to the intolerable menace of an Irish army and an Irish navy, and to the possibility of the Irish ports being closed to this country, or even open to the enemies of this country in time of war. But it was not that fear which defeated the efforts of the great Liberal statesmen to give autonomy to Ireland.

Whitelaw in London Passing Show  
IT'S A PROBLEM

John Bull: "For heaven's sake, give that infant what he wants."

Nurse David: "I would if I only knew what it was!"

It was the ceaseless and effective opposition of the Ulstermen, whose political capacity is no less than that of the rest of Ireland, perhaps as high a compliment as may be paid to any body of politicians.

For twenty years, from 1885 to 1906, the Liberal party paid for their unflinching adhesion to the question of Irish home rule by complete exclusion from any share in the government of this country. In 1910 the Liberals again attempted to handle this thorny and difficult problem. By 1914 Mr. Asquith's Home Rule bill had passed thru all its stages in the House of Commons. By all the precedents of British history home rule for Ireland would within a brief space have become the law of the land.

At that stage the opposition of the Ulstermen assumed a new and surprising form. Unionists of the nine counties of Ulster declared by solemn covenant their intention to resist by force of arms the grant of autonomy to their own people. The words of Ulster's League of Covenant, signed as part of solemn religious services organized thruout Ulster and the three counties, Cavan, Donegal and Moneghan, were as follows:

Being convinced in our consciences that home rule would be disastrous to the material well-being of Ulster, as well as of the whole of Ireland, subversive of our civil and religious freedom, destructive of our citizenship and perilous to the unity of the Empire, we, *men of Ulster*, humbly relying on the God whom our fathers in days of stress and trial confidently trusted, *do hereby pledge ourselves in solemn covenant* thruout this our time of threatened calamity *to stand by one another* in defending for ourselves and our children our cherished position of equal citizenship in the United Kingdom, and in using all means which may be found necessary to defeat the present conspiracy to set up a Home Rule Parliament in Ireland. And in the event of such a Parliament being forced upon us we further solemnly and mutually pledge ourselves to refuse to recognize its authority. In sure confidence that God will defend the right.

It was followed, as everyone knows, by the importation into Ireland of large quantities of rifles and by other preparations for civil war. A situation of great peril was suddenly and unexpectedly interrupted by the outbreak of the great European war. All parties agreed that the Home Rule bill should remain in suspension until the national peril which threatened every part of the British Empire had been averted. Southern and northern Ireland alike forgot for the moment the political questions affecting their own country, and loyally came forward to assist in the defense of Europe.

In September, 1914, a month after the outbreak of war, a Suspensory bill was introduced which provided that the Home Rule bill should not be put into operation until we were thru with the war. In introducing this bill in the House of Commons on September 10, 1914, Mr. Asquith made a declaration of great importance. He declared in the first place that the Home Rule bill should not and could not come into operation until it had been so amended as to secure general con-

sent both in Ireland and in the United Kingdom. He declared in the second place the employment of any kind of force for the coercion of Ulster to be an absolutely unthinkable thing. Speaking for himself and his colleagues, he declared that the coercion of Ulster was a thing to which they would never give countenance or consent.

From the day when that declaration was made the attitude of the British people with regard to Ireland may be said to have been crystallized and definite. So far as the United Kingdom is concerned the English and Scottish people only ask that national unity shall be maintained; that there shall be no separation involving the possibility of rival armies or rival fleets confronting one another in the ports of the sister islands. Subject to that they have been willing, they are willing, to give the Irish people any measure of local self-government, of autonomy, of home rule, upon which the Irish people can themselves agree. Unfortunately the prospect of the Irish people agreeing in the near future upon any measure is not probable. Repeated efforts have been made to secure such agreement by discussion between all parties concerned. In 1917 Mr. Lloyd George offered to set up a convention of Irishmen charged with formulating a constitution for Ireland, and undertook that in the event of that convention coming to substantial agreement the Government would take steps to give legislative effect to that agreement. The convention assembled on July 25, 1917, and reported on April 8, 1918. An agreement was not reached.

At the general election of 1918 the present Government pledged itself to a settlement on the basis of self-government, ruling out only schemes which would involve the coercion of Ulster or the complete severance of Ireland from the British Empire. In that election the Home Rulers, the party of Butt and Parnell and Redmond, were hopelessly defeated at the polls. Ireland returned to the British Parliament a body of Ulster Unionists on the one hand and of Sinn Feiners on the other, whose aims, so far as I understand them, involve a break up of the United Kingdom, and with whose methods the whole civilized world is now unhappily familiar.

The present campaign of organized murder and outrage does not make the Irish problem any easier to solve. It does not render agreement between the Ulstermen and the other sections of Irish opinion at all probable. It makes it still more unthinkable

that the military forces of Great Britain should ever be called upon to dragoon Ulster into compliance with the demands of Mr. De Valera and the Sinn Fein chiefs, and on this point Mr. Asquith's solemn declaration, made on behalf of the British Government in September, 1914, still stands.

Mr. Asquith himself, it is true, appears to have forgotten that declaration. His recent proposal, which possibly has yet to receive further explanation and comment before its full purpose and meaning is revealed, proposes to grant to the [Continued on page 351

#### THE IRISH BABY

"Speak roughly to your little boy  
And beat him when he sneezes;  
He only does it to annoy  
Because he knows it teases"

Tenth article in The Independent's Industrial Series on the big plants that are finding a successful answer to the problems of labor unrest

The Industrial Court of the Rochester Clothing Industry in session. A "Shop Chairman," elected by the employees, is pleading for the reinstatement of a fellow-worker discharged for absenting himself from work without notifying his employer. At the left of the table are seated the union representatives and witnesses, at the right the labor manager and witnesses. Dr. William M. Leiserson, Chairman, Labor Adjustment Board, is at the desk

## To Their Mutual Advantage

By Professor John R. Commons of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcolm Sharp, Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

"COLLECTIVE bargaining is past; instead we have the beginning of joint control in industry." Thus Sidney Hillman, president of the Amalgamated Clothing Workers of America, voices the hopes of the union for the new labor agreement in the men's clothing industry. The hope of the employers is no less optimistic—"to substitute natural adjustment for constant friction," as one of the labor managers has put it.

While it is too much to say that the agreement signed in February a year ago between the Clothiers' Exchange of Rochester and the Amalgamated Clothing Workers has made a duarchy of industrial control, yet it has substituted for the old autocratic method of issuing orders to labor a joint conference of employers and union officials with power to draw up a general labor policy which shall apply to all factories belonging to members of the Exchange. There is to be no more changing of orders at the whim of superintendent or foreman; each separate decision must be in harmony with the agreement, and the employer guarantees to introduce no radical change in his factory organization without first bringing it up for discussion in the joint conference. In case there should arise a difference of opinion as to the interpretation of the agreement, the question comes before an impartial board, and the decision reached here is binding on both parties.

The agreement marked the beginning of a new stage in the development of the men's clothing industry—that of an organized labor market. Establishment government came in with the Hart, Schaffner & Marx agreement in 1910—the Rochester agreement applies the same principle to a larger sphere. It establishes first the right of employees to organize and the recognition of this

organization by the employers. The employers promise to deal collectively with their employees thru the agency of the union. But they do not bind themselves to employ only union members—the open shop is maintained. The employer retains also the right to discharge, but the employee receives the right to go to arbitration if he feels that his discharge is unfair.

It is specifically set for in the agreement that there shall be no strikes or lockouts in the industry. Each plant has its establishment organization for adjusting the complaints of employees. And when the representatives of firm and of workers cannot agree on an issue, there is further machinery in the market to handle differences between employers' interests and the union.

In brief, the policy is one of mutual dealing between the employer and employee, in the individual shop and in the market as a whole.

The execution of the policy is given over by the employers to a new functionary, the labor manager, the expert in adjustment trained not in the apprenticeship to the trade, but in the school of liberal arts, by a culture of mind and soul which develops a broad sympathy with humanity. And there should be something of the sociologist, of the philosopher, of the poet in that one of the firm's representatives who must see first the *man* in the employee, and so be able to guess at the human motives for the attitude he takes to his work and to his life. The new labor manager has brought into industry something vital which has been missing until this time.

The atmosphere of the adjuster's office is hardly that of the factory, it rather bears the marks of the professor's study. The bookcases are well filled, the periodicals on the side table are of [Continued on page 344

# The American Watch on the Rhine

By Hamilton Holt

**I**N President-elect Harding's famous Des Moines speech in which he turned his back upon the League of Nations, he said regarding our boys in Germany: "They haven't any business there, and just as soon as we declare formal peace we can be sure they will be coming home, as they ought to come."

I have met no one since I returned from Europe who seems to have any very distinct idea where, or why, our army is in Germany. Perhaps, therefore, it may interest the readers of *The Independent* if I explain the reasons why our boys are there and show what they are doing as I saw them on my visit to the American Rhineland sector, where the American flag flies on the highest point on the Rhine, and where 16,000 American troops are now stationed in compliance with the terms of the armistice.

One day last August I left Paris, with my two daughters, and, after an all night's journey, during which I was once or twice tempted to emulate the late President of France and jump out of the window—such are the abominations of travel since the war—we arrived at Coblenz at noon the next day.

This was my second trip to Coblenz in eighteen months. When I attended the Peace Conference a year ago last February, my wife and I visited the American army on the Rhine. It was only a few months after the armistice. No one knew how badly Germany had been beaten. The Allies were taking no chances. The Americans had several hundred thousand troops in the sector. They not only occupied Coblenz and the neighboring cities, but they were swarming in every little town and cross-roads village. I found at that time that there was considerable friction between our troops and the French, who held the adjoining sector centering at Mayence to the south. Our General in command was evidently more of a fighter than a diplomat. He did not have the reputation of being a Frankophile and there was considerable misunderstanding between the higher commands. Our men, moreover, had felt that the war had been brought to a victorious conclusion and they were impatient to get home. Peace was getting on their nerves.

I was delighted to find that since my former visit the situation had entirely changed. I found that the old American army of occupation, which had fought its way thru the Argonne to Sedan and then marched on

to Coblenz, had been sent home—almost every man of them—and a new set of recruits, specially enlisted for the purpose, had taken their places. Major-General Henry T. Allen, who commanded one of our fighting divisions during the final German retreat, had superseded General Dykman, and had an entirely new personnel under his command.

General Allen sent his aide to meet us at the station. It seemed like old times to get into a coffee-colored Cadillac limousine, with "U. S. A." painted in white letters on the side and the two red stars betokening the General's rank on the windshield. We were whisked away to the beautiful Coblenzer Hof, the finest hotel in the city, on the banks of the Rhine almost directly opposite Ehrenbreitstein. This hotel has been requisitioned by the American army, which, according to the usage of war, is privileged to take over any private or public building in the occupied territory. The hotel is reserved exclusively for army officers and official guests of the United States army. The bill is sent to the German Government afterwards.

My daughters and I were given two sumptuous rooms with a connecting bath and were charged 150 marks a day for them, which at the rate of exchange was less than \$1.50 per room. The price of meals, fixed by army regulation, was ridiculously low in dollars and cents. The Army of Occupation is in the rather happy situation of being entirely supported by Germany while in the occupied territory, and I may incidentally call the attention of the American taxpayers to the fact that they will have to foot the bill for their armies' upkeep if President Harding calls home the troops.

The first thing we did after we had removed our travel stains and had eaten luncheon was to inquire what was going on that afternoon. It seems we had arrived at the most opportune week of the season, for the great Horse Show was at that moment in progress. So my daughters and I hired a hack—there seemed to be no automobiles in the city except those owned by the American army—and rattled along the shore road until we arrived at the spacious athletic parade ground which the American engineers had constructed and where all the chief sports except polo are held. On almost every street corner, whether there appeared to be heavy traffic or not, stood either an American M. P. or a German policeman acting as a "traffic cop." The Americans

WHERE AMERICAN TROOPS KEEP THE WATCH ON THE RHINE

The most conspicuous object for miles around is Old Glory flying over Ehrenbreitstein, the fort which is the American headquarters. The pontoon bridge across the river is a masterly piece of the United States Engineering Corps' work. At the right is the famous statue of Kaiser Frederick which our soldiers amused themselves by shooting at from the fort on the other shore

© Schutz, from Underwood & Underwood

This band stand in front of the Royal Palace at Coblenz is now the center of doughboys' entertainment—concerts, boxing matches, movies and so on

have taught the Germans all their tricks of trade and the latter take their duties so super-seriously that it was fun to motor past them. They would stand rigidly facing the approaching vehicle and then swing both their hands horizontally with such a snap and a click toward the direction which the vehicle was required to take that I suspect even old Hindenburg himself would have been compelled to grunt approval. There was nothing to compare with these traffic police in either the French or English occupied territories.

The athletic grounds were beautified by numerous white flag poles, from which fluttered not only the American flags but the ensigns of our Allies. No German flags are allowed in this part of Germany except by special permission. We were driven up to what I supposed was the grandstand, and as I got out to inquire whether we could buy tickets to witness the events, a young officer came up and introduced himself and invited us into the General's private stand. General Allen is a tall, lithe, handsome and polished American officer. I shall never cease to be grateful for the Administration in letting General Pershing have an absolutely free hand in selecting his officers. Almost every American general I met in Europe was one of those thoroughbred West Pointers with stout legs and a strong stomach, a man who could hike and share hardships with the best of the doughboys. None of these old pot-bellied, bald-headed fellows who have been strutting about the Army and Navy Club at Washington for a decade before the war! It was evident that General Allen was not only a soldier but a statesman. After I came to know him better and had checked up my opinion of him from others, both Americans and Europeans, I came to the conclusion that he was just the right kind of "benevolent despot" for the place. He has reestablished the most cordial relations with the neighboring French and English armies and all that fault finding and criticism that was so prevalent when I was at Coblenz a year before had entirely disappeared and the good feeling between the Allied armies is as cordial as it was during the last days of the war.

I had no idea that a horse show so far away from Madison Square Garden could be really so fine. The chief event of that afternoon was the competition of artillery horses. The English, the French and the Belgians had sent their best teams to compete with ours and I never saw such thoroly scrubbed chamois polished carriages, such well groomed glistening chargers, and such immaculately garbed men sitting like ramrods

on the high horse of each pair or with folded arms on the gun caissons.

It took the judges a long time to make their decision, but when after much comparing and arguing and feeling of the horses' feet and rubbing their white gloved hands in the cannon's mouth, the blue ribbon was finally pinned on the great raw-boned, dappled gray team of the American army, there was a great cheer. When I visited the various Allied armies behind the fronts in the dark days of 1918, the American and French troops looked so sloppy as compared with the English that I did not believe that within two short years any army on earth could have taken a prize in smartness away from the English army. But General Allen told me that we had been winning about every competition we had gone into, so our British and French friends had no doubt learned to expect it and were not unduly disappointed.

Besides the horse show competitions, the American army goes into every conceivable kind of sport. It "pulls off" boxing bouts in the center of the public square every Thursday afternoon. It maintains a regular baseball league of teams representing the various sections of the army. The officers support several crack polo teams. The weekly boxing bouts are a sort of a free for all. Anyone who thinks he can box is permitted to try his luck and if he wins the count he must accept challenges of men of his class until he is beaten. The French and English armies send down their best boxers to fight with us, and a good, hard and sometimes bloody time they have of it, tho so far there have been no serious accidents. The officers tell me that boxing is a good thing for the men, and such an honest sporting spirit has been cultivated on the part of both fighters and spectators that no dirty work has taken place at all in the ring, nor would the audience permit it if attempted. The visiting French or English boxer is given just as much applause for a plucky fight as his American antagonist.

One afternoon we witnessed a competition in cavalry teams in a part of the athletic field especially constructed for the purpose. There were hurdles and sand pits and lakes and elevated plateaus, and every kind of "bunker" to test the grit and agility of a cavalry horse. It was very exciting to see the officers riding over these obstacles and jumping over ditches in pairs. A man runs a pretty good chance of breaking his neck if his horse slips, but the zest in which all the young officers enter this competition shows that danger is not one of the things prominently in the mind of an American army officer.

We also witnessed one afternoon an international polo match between England and America, and as usual America won. It was as fine polo playing as I have ever seen, and all non-German Coblenz [Continued on page 347]

Wide World

The Commander of the American Army of Occupation, Major General Henry T. Allen

# Our Share of Foreign Trade

A Message from the United States Government to the American People

By Joshua W. Alexander

United States Secretary of Commerce

**W**HY should the average American, the small business man, the wage worker, be interested in world trade? He has nothing to sell in foreign markets and they have little he needs to buy. What concern has he with import and export figures? Is foreign trade really any of his affair?

The subject is a new one to most Americans. Even the Government, until somewhat recently, had given it little thought. In the past we could afford to neglect the whole matter, but now we have come to a day when the measure of our foreign trade is of vital importance to all of us. The Government is taking an active interest in its promotion and our industrial leaders are giving the subject more attention than ever before. Why?

The reason is a simple one. The continued expansion of our industries has brought us to a point where they are turning out a considerable surplus, over and above our domestic requirements. In certain industries the output was multiplied many times during the war. Today we are producing machine tools, motor trucks and staple dyes, for instance, in quantities very much larger than we can use at home. For these, and hundreds of other excess products, we need an outlet. The obvious outlet is the foreign market.

American foreign trade was enormously expanded by the war. Whereas the value of American goods shipped abroad in the fiscal year 1914 was \$2,364,000,000, in the fiscal year 1920 it was \$8,111,000,000. How many men, how many factories, how many acres of land were employed to produce the goods and commodities this total represents? And what would happen to these men, factories and farms if this business were suddenly taken away?

Up to this time the average producer, big and little, has failed to appreciate the true relation of foreign trade to the welfare of the nation as a whole. He has not realized how he and his family and his work would be affected if the avenues of export should, for any reason, be closed.

The necessity for building up a large foreign trade, or rather of establishing upon a permanent basis that which the war gave us, comes at a time when we are better prepared to meet it than at any time in the past. We have ships, 16,000,000 gross tons of them, a fleet second only to that of Great Britain. Our system of delivery to foreign markets is already functioning. Before the war only 8 per cent of our goods sold abroad was delivered in our own bottoms. Now we are carrying 60 per cent of our commerce under the American flag.

© International

Secretary Alexander makes in this message the first announcement of plans for developing Manila as a great American commercial base in the struggle for Far Eastern trade

To maintain our splendid merchant marine we must have a large foreign trade. Shipping cannot thrive without cargoes to carry. Neither can it thrive carrying cargoes only one way. Our import trade must be developed along with our export trade. Our ships cannot go laden with goods and return in ballast. If they do freight rates will be doubled, and neither our trade nor our fleet will survive in competition with other nations. We cannot long continue to send goods abroad without receiving approximately equal amounts of goods or cash in return.

The important thing in the promotion of foreign trade is that it be developed systematically. American manufacturers must learn that they cannot get into foreign trade today and out tomorrow and in again the next day. Permanent selling organizations must be developed in foreign countries and these agencies must not be left unprovided with goods to sell.

To the industries that have asked it, my advice has been that they set aside a certain proportion of their annual production—the proportion that is in excess of the normal domestic demand—for export. If for any reason, or combination of reasons, the domestic demand shows an abnormal increase it should not be met by cutting into the export allotment, but by increasing production. A merchant in Buenos Ayres who orders American goods and does not receive them is not likely soon again to place his orders in the United States. We cannot build a permanent foreign trade by “dumping the surplus” abroad, and refusing shipments if there is no surplus to dump.

Foreign trade, after all, is not very different from domestic trade. The manufacturer confining his operations to the domestic market estimates in advance the demand for his product in the various sections of the country and makes up his schedule of production to meet these demands. If he fails to fill orders for his product in any section, a competitor gets the business. That principle is well understood, so far as it applies to the United States; what needs to be understood is that the application of this principle is world wide.

The United States is itself a vast empire, three thousand miles across. For the manufacturer shipping his product from Connecticut to California, Calcutta is only one step farther, and the principles involved in the trade are much the same. There are, of course, the complications of exchange and trade balances, but when these are understood, the American manufacturer should have very little more difficulty trading in foreign markets than at home.

The promotion of foreign trade [Cont'd on page 350]

# Deflation Not Panic

## The Gain and Risk of Cutting Prices and Profits, But Not Wages

By Talcott Williams

THE men "at the top" are today more anxious than at any time since August, 1914, as to credits and business of all orders—big banks and railroads, little stores and large, two- or three-man shops, factories, trusts. The Federal Reserve banking system, they all believe, will save a sudden smash.

The men below the top, far or near, are called, not to dread, but to saving, retrenchment, no buying not necessary, to meeting falling markets by thrifty purchases, above all to increased production so as to make up for falling prices, thereby keeping up the total receipts.

As they say on "No Admittance" signs—THIS MEANS YOU.

Apprehension as to the immediate future of business and credits exists chiefly at four points in the United States at present. Owing to the fall in cereals and the belief that delay in marketing would increase the quotations in wheat and corn, farmers have delayed shipping and they borrowed money from their banks upon elevator and warehouse receipts, bills of lading, etc., in the West, the practice having been carried further with the aid of sundry Chicago banks in Iowa than elsewhere. The cotton crop, with prices one-third of last June, is being held, to a large extent not fully known, over the South, particularly Texas, with the aid of bank accommodation. So large are this year's crops in proportion to the amount usually grown that this policy has interfered with the shipment of these staples to market. Wool has fallen over one-half since May and New England banks have advanced on mill purchases. Owing to the development of other sources of cereals, cotton and wool, the United States does not enjoy the position it once had, but on the other hand, the Russian supply, a large one so far as Europe's supply is concerned, is cut off. Fourth, automobile corporations have had to borrow heavily and one, General Motors, has changed hands.

The fall in a large number of staples and the probable decrease in iron and steel, with a heavy fall in copper, lead, tin, rubber and many staples, together with the reduction of retail orders due to the determination of the public not to accept high prices, have forced a large number of establishments to reduce their output, or to close altogether, employers laying off a large number of employees. This is true on the one hand of manufacturers, such as automobile manufacturers, who expected in 1920 the same large demand which came in 1919 and who made commitments in regard to the supply of iron, steel, copper, leather, rubber and long staple cotton used in tires when the range of prices was far higher than it is today. In the case of industries in cotton, wool, boots and shoes, other leather goods and articles of minor but general consumption, manufacturers have been forced to go thru a relative reduction in the general demand which existed thru most of 1919, and also to an artificial reduction in public demand owing to a determination this past year, on the part of every family and almost every individual, not to purchase until prices were lower.

The writer, in common with a very large number of men, managed to get thru the summer with a straw hat of the vintage of 1918, and wore a derby of the vintage of the same year until it was abruptly called in last month by his household superior because it was beginning "to show white on the brim." These economies will meet a smiling recognition in every reader. This is deflation in practice. In the streets, in the audiences and in travel, there

is a perceptible letting down of the spruce condition of masculine attire in the post-war boom, and the ratio of new overcoats which came with cold weather has perceptibly diminished. The jewelry trade is under pressure; alarm clock makers cannot fill their orders.

When a hundred million people, who consume more per capita than any other hundred million in the world, begin to economize on this scale, the results are world wide. They are apparent in the reduction of exports from European countries, including England, to this country and in the banking up of goods in Western Europe. Europe east of the Vistula is unable to manufacture anything because the blockade cuts it off from raw materials and customers. In all the countries in Europe our attack on prices has led, first, to a serious falling off of credits and the reduction of the value of the mark, franc and pound, and, second, in the inability of Central Europe to continue meeting reparation claims.

A change of this character, a reduction in prices, and a period in which manufacturers and retailers would be straitened, employment be diminished and credit strained, was inevitable and was sensed in advance by everyone. Retail stores in the United States, and particularly the great establishments in our cities, have prepared for this by sales at greatly reduced prices, sales which will grow in January. In addition, the congestion in the movement of freight which took place in the first half of the current year prevented the shipment of goods ordered in January and February for summer supply. They should have been delivered in March and April. They were not delivered until May and June or even July. Three results followed: Orders were cancelled on an unprecedented scale. Goods delivered came too late to be sold, and prices fell. Percales which were ordered by wholesalers in Chicago in January and February at 35 cents a yard, in many cases could not be delivered until too late to go into the summer trade. By that time these goods had dropped from 35 cents to 30 cents. They continued to drop and the same goods are now selling at 15 cents instead of 35 cents as ten months ago. So all around.

Now is the time to buy, as soon as prices come down, before they rise.

WHETHER these changes bring on a period of economy, frugality and a gradual readjustment without shock, whether only deflation comes or panic follows—bringing in the next four months a smash in business, in manufacturing, in transportation—depends wholly upon the intelligence, self restraint and self direction of the American people.

If a man in regular business borrowed money to the extent of his total outgo and plunged into a new unforeseen effort to save himself from losing all he had, he would have a brisk, lively time while he was spending that money. At the end of that time, he would find himself with an interest charge seriously changing his balance sheet and the necessity of retrenching.

He would have two courses before him. He could try to go on his old scale and old expenditure, buying an automobile every two or three years so as to be up with the last kink in machines, and doing all the other easy things he did in prosperous years. Or he could stop, cut down his personal expenses, put up with less at all points, taking every odd job he could get and gradually bring himself to the point where he was free from the sudden load he had

put upon his own shoulders. If he did not, his credit would be exhausted, his liabilities would be increased and he would go thru sudden and disastrous liquidation.

This is substantially the position of the United States. A whole year's income, very possibly more than this, a year and a half or two years' income was borrowed and suddenly spent. All of that \$40,000,000,000 to \$60,000,000,000 or even \$80,000,000,000 went to somebody. Considerably over one-half (I think two-thirds) went into the hands of labor. In some industries not one-half but three-quarters and upwards went to labor. Part of the whole spent in the war went into profits which were invested or spent. Part of it was burned up in the destruction of war and left behind it millions of tons of barbed wire and steel shells and all the rest of the debris of battle. Pretty nearly one-fifth of the world's shipping went to the bottom of the sea.

The bills are coming due. The people who had money to loan can loan no longer. The people who had money to invest from the dimes that go into savings banks to the big sums that go into big business, have in the case of the rich spent all they can invest after paying profits and income tax. The frugal below \$10,000 a year are buying bonds and shares now.

If everybody faces the situation and saves, the corner will be turned without any more serious burden than a period of abstinence. For one thing the United States is ahead about a billion dollars a year, a sum equivalent to the interest on its debt of \$25,000,000,000, because it passed the Eighteenth Amendment. The big gain is in the increased efficiency of labor; to a less extent in the stoppage of the wholly useless manufacture of 160,000,000 barrels of beer, 164,000,000 gallons of native spirits and 45,000,000 gallons of wine made no longer except in very small quantities; and, third, in the reduced cost of jails, poorhouses and illness. The fact that there were millions of people who were disabled once or twice a month and lost a day or two, perhaps fifteen or twenty days in the year, who are now on their regular jobs every day, is additional evidence that these things amount to, at least, a billion dollars saved a year, unconsciously paying off the interest on the war debt.

People of large means who spend less and most of all, people of moderate means who save waste and useless expenditure, bring down expenses. If working men are willing to do as the Baltimore carpenters wisely did a fortnight ago, when they voted down an increase of wages on the grounds that it was better to go on working at a lower wage than to be idle in the effort to get a higher one, labor will take the right course. Unemployment itself, for a season is better than a reduction in the scale of wages. That was the great victory of the war for the freedom and education of the family. Another unconscious victory of the war was a higher scale of living for families earning \$1,500 a year and less. Both the new scale and the new standard of living should be maintained. They are part of the new freedom. They can be maintained if taxes are shifted still more to profits, incomes over \$25,000, and estates over \$50,000 on probate.

Continue saving, let every one try in every possible way to reduce waste, to maintain efficiency and to work at any job which can be obtained until this hideous loss is in part made up, and the country will go through a period of abstinence, but in the end, as always in the past, emerge prosperous, the many and the few better off than ever.

## Translating English

THE most truthful of us do not say exactly what we mean; there are phrases and idioms which must be taken in a purely symbolical sense altho we use them so often as to be unconscious of this. Thus—

"Two or three" always means three and usually "at least three" or "three and upwards." "One or two" never means one, save by accident.

"In a minute" averages anywhere from five to fifty minutes.

"O, I beg your pardon" (in case of a collision on the sidewalk) means "I am too polite to ask you to beg my pardon for getting in my way."

"That reminds me of a story" means "Now will you keep quiet while I tell my joke?"

"I hold no brief for" means "I am now going to defend—."

"While I do not wish to appear critical" means "But I am going to have my say out anyhow."

"Of course, it's no business of mine" means "But I am simply devoured with curiosity."

"My conduct calls for no apology and needs no explanation" is the usual introduction for an explanation or apology.

"No one could possibly have mistaken my meaning" is what we begin with when it is evident that someone *has* mistaken it.

## An Important Step Toward Christian Union

By Charles E. Jefferson, D. D.,  
Pastor of Broadway Tabernacle, New York

ONE of the outstanding events of the year 1920 was the meeting of the Lambeth Conference in London last summer. It was the sixth meeting of the kind and because of the importance of its pronouncements seems sure to eclipse in the history of the church all its predecessors. The conference was composed of two hundred and fifty-two Anglican and Episcopal Bishops, two-fifths of them from the British Isles, two-fifths from the colonies, and one-fifth from the United States. The conference spoke many valuable words on a variety of topics, but what it said on the subject of church union will create most stir thruout the Christian world.

The Appeal is remarkable in several ways. Its temper is conciliatory and gentle, its tone is sympathetic and fraternal. There is not a trace of haughtiness, not a tinge of assumed superiority from the first sentence to the last. In spirit and intention it is thoroly and genuinely Christian. One feels on reading that the men who wrote it were undoubtedly moved by the Holy Ghost.

The Appeal is addressed "To all Christian People." There are four branches of the Christian church—the Greek Catholic, the Roman Catholic, the Anglo Catholic, and the Non-Episcopal churches. The first three have never hitherto been willing to recognize the Non-Episcopal churches as forming a part of the true church of Christ. The Anglican Bishops have at last surrendered that position. They admit that Non-Episcopal churches are members of the body of Christ. This is their language:

We acknowledge all those who believe in our Lord Jesus Christ, and have been baptized into the name of the Holy Trinity, as sharing with us membership in the universal church of Christ which is his Body.

The Bishops go on to say that it is their belief that God wills fellowship and that it is God's purpose that this fellowship should be manifest in a united society. This united fellowship is not visible in the world today. They express the hope that all the various communions of Christians may be led by the Spirit into the unity of the faith and of the knowledge of the Son of God.

Having said this, they proceed to say something else equally extraordinary. Too often in the past the Anglican Bishops have looked down upon Non-Episcopal churches

as schismatics and sectarians, wilful and headstrong sinners, chronic mischief makers and disturbers of the peace, while they themselves apparently felt free from all blame. But now a new note is struck—the note of penitence and humility. Self-will and ambition and lack of charity and blindness to the sin of disunion have been factors in creating the present situation, but the Bishops confess that the causes of division are not wholly blameworthy. The church which they represent has had something to do with the creation of the condition of broken fellowship, and they say, "We desire frankly to confess our share in the guilt of thus crippling the Body of Christ, and hindering the activity of His Spirit." This is indeed beautifully Christian. There have of course been wilfulness and factiousness and uncharitableness and impatience on both sides and on all sides, and the Anglican church now takes its place among the penitents who confess their transgressions, and who agree "to forget the things which are behind and to reach out toward the goal of a united Catholic church."

Up to this point there is nothing in the appeal which Non-Episcopal churches cannot accept and rejoice in. The recognition of the Non-Episcopal churches as parts of the true church of Christ is the greatest step toward church union which has been taken within the last four hundred years. The confession that the alleged schismatics have not been altogether in the wrong, and that wrong action on the part of the Anglican church is in part responsible for the present divided Christian world creates an atmosphere in which the heart becomes hospitable and sympathetic and the mind sees more clearly the things which make for peace. It is not till the Bishops suggest a practical way of bringing the separated communions together, that they strike an idea which must of necessity require a deal of consideration, and upon which good men cannot be expected just at present to agree. The Bishops say: "We believe that the visible unity of the church will be found to involve the whole-hearted acceptance of a ministry acknowledged by every part of the church as possessing not only the inward call of the Spirit, but also the commission of Christ and the authority of the whole body." At that point they venture to insert this question: "May we not reasonably claim that the Episcopate is the one means of providing such a ministry?" They realize that this is likely to be a bomb, and so they proceed to clarify their position by forestalling certain objections which they know will immediately arise. Is this the old historic Episcopate of a former Lambeth Conference appeal appearing in a new form? Does this mean that all Protestant ministers outside the Anglican and Episcopal churches must be reordained in order to give validity to their orders? Must we all become Episcopalians in order to obtain this visible manifestation of fellowship which millions of hearts desire? To these questions the Bishops give answers. They do not ask for reordination. They suggest *additional* ordination. They do not call in question the validity of the orders already possessed by Non-Episcopal clergymen. This is their language:

It is not that we call in question for a moment the spiritual reality of the ministries of these communions which do not possess the Episcopate. On the contrary we thankfully acknowledge that these ministries have been manifestly blessed and owned by the Holy Spirit as effective means of grace. God forbid that any man should repudiate a past experience rich in spiritual blessings for himself and others. We shall be publicly and formally seeking additional recognition by a new call to wider service in a reunited church. We do not ask that any one communion should consent to be absorbed in another. We do ask that all should unite in a new and great endeavor to recover and to manifest to the world the unity of the body of Christ for which he prayed.

Here then we have a request for Episcopal ordination on a new ground. In the past, Episcopal ordination has been insisted on as a means of authority and validity. Without the ordination there would be no valid or authorita-

tive ministry. But now Episcopal ordination is suggested solely as an instrument of unity, as a means of bringing all branches of the church together. Three of these branches are already Episcopal churches, and for the sake of satisfying the scruples of these three branches it is suggested that the ministers of the fourth branch accept Episcopal ordination not because they need it to be true servants of Christ or effective ministers of his grace, but in order to make possible that visible fellowship which the modern world craves and needs. What the Bishops advise others to do they confess themselves also willing to do. They cannot on a point of this character speak positively or finally, but they say they are persuaded that "the Bishops and clergy of their own communions would willingly accept from the authorities of other communions a form of commission or recognition which would commend their ministry to their congregations as having its place in the one family life." The Archbishop of York has already publicly stated:

I should esteem it a privilege and an added consecration and of course no repudiation of my orders, if our relations with the Presbyterian Church were such that I could now receive such ordination or commission from the church of my fathers (the Presbyterian Church of Scotland) as would enable me to minister in the Presbyterian Church and to administer the Lord's Supper to its people; and I should feel that no Presbyterian minister would repudiate his ministry if he should receive ordination at my hands, and while still remaining a minister of the Presbyterian Church be able to administer the Lord's Supper in the church of England.

The Roman Catholic Church thru Cardinal Bourne, the Archbishop of Westminster, has promptly turned the Anglican proposal down. The voices of the Non-Conformist ministers of Great Britain are divided. There are many things to be considered before a final conclusion can be reached. The appeal has already been discussed in many local assemblies, and it will be one of the chief subjects for discussion at all the Spring National Meetings. The Anglican Bishops have put forth an appeal sufficiently definite and reasonable and courteous and christian to merit and receive the earnest consideration of every branch of the Protestant church.

## An Invitation

Come ahead, Prosperity, the election is over.

## The First Assembly of the Nations

By Hayne Davis

LAST week witnessed the assembling of the representatives of forty-one nations at Geneva to participate in the first General Assembly of the League of Nations. When these delegates took their seats in the Hall of Reformation, there was visibly manifested to the onlooking world what has been dreamed of by poets and prophets in past ages, labored for during recent decades and actually produced thru the travail of the World War in a Union or Association or League of Nations, for the better establishment of international justice and the maintenance of world peace, in fact for achieving the good objects for which governments are instituted among men.

The eyes of practically the whole world were fixed upon this political child of the twentieth century when it was born on the fifteenth day of this November, eyes of expectation, of hope, of fear, even of hostility. Some there were who sought the young child's life; even declaring that it was dead just before it began to speak. It is a matter of supreme moment whether this child is to grow in wisdom and stature, and in favor with God and man, or whether, as an agency of evil it is to embroil the world in conflicts that would not otherwise have arisen, or whether it is just to pass away in impotent infancy, to be replaced by what international anarchy or a successor more worthy of be-

coming the political savior of the nations? Perhaps no more important political question has arisen since the day that the thirteen revolted colonies of Great Britain in America assembled at Philadelphia in 1787 and proposed the present Constitution of the United States of America.

That convention met six years after the British forces under Cornwallis had surrendered to the American power represented by Washington. Meeting at a period of profound peace (on this side of the waters at least), with ample time for deliberation, and with all the interested states represented or with ample opportunities to be represented (New Hampshire's delegate arrived near the end of the convention and Rhode Island sent no delegate), there was nothing to prevent the formation of as perfect a union of the states concerned as the intelligence then manifested in America could conceive. That convention deliberated a long time. So critical became the situation that Benjamin Franklin himself proposed the opening of the succeeding sessions with prayer. At last an agreement was reached, and a Constitution proposed to the states concerned for their judgment; I do not say approval, because it was recognized that each state had a right to *judge* the proposed Constitution, *i. e.*, to accept it, reject it, or to propose its amendment. Then began, in various states, a struggle somewhat like the one that was waged at Washington when the Covenant of the League of Nations was before the Senate, and throught the country during the campaign just closed.

Very honorable men opposed the adoption of the proposed Constitution; in Virginia, Patrick Henry was one of its opponents. Washington had been presiding officer of the Constitutional convention, and naturally became its proponent in Virginia, along with a great array of political stars of the first magnitude then visible in that part of the southern sky. Washington wrote to the North Carolinians, urging them to ratify the Constitution as an aid to the fight for its adoption in Virginia.

Nevertheless, North Carolina would not then approve the proposed Constitution, and did not enter the Union until after the election and national inauguration of Washington as its first President. It was New Hampshire's action on June 21, 1788, by a vote of 57 to 46, which gave life to the Constitution. Virginia ratified a few days later by the close vote of 89 to 79, New York the next month by a majority of only two votes.

Washington's inauguration occurred in New York on the thirtieth day of April, 1789, thus actually launching the Union. It was in November following that North Carolina approved the Constitution, and so became a member of the existing Union. On May 29, 1790, Rhode Island decided to accept, and also to give the guarantees embodied in the Constitution, and so the Union of all the Revolutionary colonies of Great Britain put out to sea upon the stormy waters of the eighteenth century political world.

The American Union as launched in 1789 was not considered by our forefathers who formed it as perfect by any means. In fact some of the states "at the time of their adoption of the Constitution, expressed a desire, in order to prevent misconstruction or abuse of its powers, that further *declarative and restrictive clauses* should be added." Accordingly the first Congress held under the Constitution proposed to the constituent states twelve amendments to the Constitution, some of which were of prime importance, and ten of which were approved by the legislatures of the required number of states (three-fourths) and were declared in force December 15, 1791. Eight additional and substantial alterations in the Constitution have since been made.

Comparing these facts with those surrounding the formation and launching of the League of Nations, we find that the latter was formed in haste, in the midst of danger, with echoes of the World War still sounding in the minds

of the delegates at Versailles and of the statesmen and people of all the belligerent nations, and in the absence of about two-thirds of the interested nations. How could a more perfect product issue from such a meeting than was evolved by the delegates to the Constitutional convention at Philadelphia? Manifestly, therefore, amendment of the Covenant is to be expected, when amendment of the Constitution was found necessary, and the first General Assembly of the League corresponds in fact to the first Congress of our Union under the Constitution which proposed amendments, ten of which were adopted.

The forces that operated to form and perfect and then preserve the American Union are now operating and with increased intensity, to form, perfect and preserve the international union. The objects of the two are the same, the main lines of the League structure are the same as those forming the fundamentals of our articles of confederation, and also of our present Constitution which superseded it. The nations have begun to deliberate, as members of an organic union, with due provision for periodical assemblies and for consideration and approval of proposed amendments of the organic law of their union. The wisdom now manifested in the whole world is at the service of the international union for its development and preservation. The inherent rights of man constitute the facts which must find adequate recognition in the form and also in the procedure of any union that can endure. The United States of America in its Constitution, in its course of conduct, even in its Civil War, gives the cue to what is needed to perfect the form and properly guide the action of this union of all nations, and now is the time for our people to recall and dwell upon these provisions of our own Union and these events in our political history, which show the way the world should go at this critical hour in human history.

There is no need for any American to be downcast who is for the League of Nations any more than there was for North Carolinians or Rhode Islanders to be discouraged when the Union was launched without their states being on board. The launching was itself a cause for great rejoicing. If the Constitution had been rejected that would have been a reason for renewed effort, not for surrender. But the Constitution was adopted then by the necessary number of states and so is the League Covenant now. The Union was launched then with some states left out. So it is now. Outsiders came in then. They will do so now. The Union as formed then was substantially changed. So will the Covenant be. Effort was made to destroy the Union. So may it be expected now. Righteousness, truth, justice, all the real values of the world have been greatly augmented, here in America, and elsewhere in the world, as a result of the struggle in America to give birth and increasing power and excellency to the United States of America. There will be a repetition of these benefits, effective throught the world, in the formation and in the perfecting of the international union.

### Too Polite

JOHN Bull—Sam, old top, won't you take charge of this Harmeria mandate? Hi would do hit myself only hit would seem too bally himperialistic to take on any more mandates than hi 'ave. Do oblige a chap!

Uncle Sam—I reckon not. You Europeans are welcome to these here Near East mandates for all me. I don't hanker after anything on the other side of the duckpond; just leave me out of the deal and go to it! Guess it's up to you, Frenchy.

Jacques Bonhomme—Messieurs, I am overpower' by your politeness. It ees too much honnair! I beg of you to accept thees mandate with all my heart.

Armenia—Gentlemen, while you are discussing which will have the honor of saving me I am dying.

## Hoover on Reconstruction

THE American equivalent for "Let George do it" seems to be "Let Hoover do it." As head of the Belgian relief work, Federal Food Administrator during the war, adviser on economic questions to the Paris Peace Conference, post-war director of relief work to half of Europe and large part of Asia, and member of the second Industrial Conference, his days have been crowded; to make no mention of his not altogether successful venture into politics. But new duties have been accumulating. The Federated American Engineering Society has chosen him president. The executive council of the American Federation of Labor has called him into conference as the one man, associated with "big business," who could give them advice at once practical and sympathetic as to how labor can retain its improved standard of living in the period of industrial depression which appears to confront the nation. The European Relief Council, a federation of eight of the largest relief organizations in the country, has made him chairman. Franklin K. Lane, former Secretary of the Interior, is treasurer. There is much talk of a cabinet appointment for Mr. Hoover, and tho there is a divergence of opinion as to which department he could most usefully head, there will be deep disappointment among the rank and file of the Republican party if President Harding does not in some capacity associate him with the incoming administration.

In his address before the American engineers, Mr. Hoover outlined a program of industrial reconstruction and discussed the problems of the day. He declared that both the Socialist solution of government ownership of industry and "the unrestricted capitalism of Adam Smith" had proved themselves bankrupt in practice. He said that economic control was passing into the hands of several

great types of voluntary organization such as the labor union, the associations of bankers and manufacturers, the farmers' associations. Unfortunately these groups were in frequent conflict, tho the whole well-being of the nation depended on their coöperation. The engineers, from their scientific and unprejudiced standpoint, could do much to reconcile the "great groups of special interests" to unite on the common task of production. "The American Federation of Labor," he said, "has publicly stated that it desires the support of the engineering skill of the United States in the development of methods for increasing production."

He declared that unemployment was the result of industrial maladjustment and instanced the bituminous coal industry in which there is an average employment of labor of only 180 days a year. The Government had the duty of greatly developing the system of Federal and local labor exchanges. Collective bargaining was now accepted in principle "by all sections of the community." Industrial disputes should be settled by arbitration and publicity, but compulsory arbitration was of doubtful utility. The best length of the working period will vary in different trades, but there was a technical limit to the extent to which the labor week could be decreased and it was a fallacy to expect that the shortening of labor time could give employment to more workers. On the other hand the seven day week and twelve hour day system was "inhumanity."

With respect to the determination of wages, Mr. Hoover said in part:

The suggestion I wish to put for your consideration is the possible use of another device in encouragement of individual interest and effort by creating two or three levels of wage in agreements for each trade, the position of each man in such scale to be based upon comparative skill and character. This plan should be developed upon the principle of extra compensation for added skill and performance by an agreed basic wage. In order to give confidence the classification under such scales must be passed upon by representatives of the workers in each shop or department. This plan is now being successfully experimented with.

We must take account of the tendencies of our present repetitive industries to eliminate the creative instinct in their workers, to narrow their field of craftsmanship, to discard entirely the contribution to industry that could be had from their minds as well as from their hands. Indeed, if we are to secure the development of our people we cannot permit the dulling of these sensibilities. Indeed, we cannot accomplish increased production without their stimulation.

## Congress and the Budget

ONE of the principal tasks which lies before the short session of Congress will be the enactment of a Federal budget law. Probably it will be on the lines of the Act described by Senator McCormick in *The Independent*, June 12, 1920. This Act passed both branches of Congress but was vetoed by President Wilson on the ground that it vested in Congress instead of the President the power to remove the Controller General and his assistant. It was then amended to meet the President's objection but Congress adjourned before the Senate had acted on it. This piece of unfinished business stands therefore near the top of the agenda of Congress. Little new business save the Budget Act and the regular appropriations measures will probably be undertaken by Congress, as the Republicans will prefer to await the coming of March 4 and a new Congress in which the party majority is very much greater before undertaking a comprehensive legislative program. Chairman Good of the Appropriations Committee promises

How times have changed!

© 1920, New York Tribune, Inc.

Horseback riding is great for reducing—but it's kinda hard on the horse

a vast reduction in appropriations and forecasts a wholesale dismissal of superfluous Federal employees.

The Appropriations Committee will be merged in the new Budget Committee of the House of Representatives. The new committee will contain the members of the old Appropriations Committee together with the chairman and ranking minority member of each of seven other committees. It alone will have the authority to report measures involving the expenditure of money. Hitherto the other committees have acted independently of the Appropriations Committee in passing bills containing appropriations so that there was no centering of responsibility for expenditures. The United States Treasury will no longer bear the motto "Help yourself"! It took the cost of a Great War to convince the nation that public expenditures required businesslike procedure, but the lesson has been learned.

## The Lower Cost of Living

THE nation appears to have passed the crest of the mountain of high prices, up whose precipitous slopes it has been toiling so painfully for many years. Figures collected by the National Industrial Conference Board show that the cost of living in the United States decreased by an average two per cent from October 1 to November 1 of the present year; since July, 1920, the month of highest prices, the decrease has been 5.2 per cent in all.

This decrease has been very unequally distributed. Fuel and light show an increase of 11.4 per cent since July; this is mainly due to the higher cost of coal which comes with the approach of winter, for the price of coal unhappily tends to vary inversely as the thermometer. The cost of shelter also shows a slight increase, reflecting the rise in rents in some of the great cities. The general decline in prices is due almost altogether to cheaper food and clothing. Food has decreased in price by 9.6 per cent, or nearly one tenth. As everyone knows the bottom has dropped out of the sugar barrel and other foodstuffs have begun, tho with more conservatism, to follow the example set by sugar. Clothing shows an average decrease in cost of 13.5 per cent. This decrease applies to practically all items. Many firms have cut clothing prices from twenty to fifty per cent in retail sales.

The downward tendency of retail prices is paralleled by the decline in values on the stock market. In a single day

on the New York stock exchange 115 stocks made new low records. Bonds also are selling at low rates. The country is passing into a period of liquidation and deflation which will bring much relief to the consumer but threatens hardship to many farmers and unemployment to many industrial workers. Some factories, in the automobile industry especially, have commenced laying off hands. Financial experts seem agreed that, while the downward trend of values is no more an unmixed benefit than was the upward trend of a few months ago, there is little danger of an acute panic or such "hard times" as the country experienced in the early 'nineties. The improved banking system established under the Federal Reserve Board will enable the country to pass safely thru the period of reaction from war-time inflation.

## Labor Versus Radicalism

IT is probable that the American Federation of Labor represents the most conservative body of organized labor in the world. One reason for this is the influence of President Gompers and other chiefs of the Federation who have set themselves firmly against the revolutionary tactics of the American I. W. W. and the French syndicalists and even against the more defensible policy of British labor in organizing as a political party. Another reason is that American labor is prosperous far beyond the European standard and the trades unions grouped in the Federation are prosperous even beyond the average of American labor.

One sign of this conservatism was the recent action of the executive council of the Federation in reorganizing the committee to unionize the steel workers. Two of the leaders of last year's strike, John J. Fitzpatrick and William Z. Foster, were dropt from the committee as too radical and replaced by M. F. Tighe and J. G. Browne, both recognized to be moderates. This step was taken to stop the "boring from within" process by which radicals have attempted to gain control of the regular trades unions. There is also, perhaps, a desire to "stand in well" with the public, which has been irritated by the numerous recent strikes, and with the new administration, which will probably be conservative in a very marked degree. There have been rumors that many manufacturers intend to start a nation-wide drive to restore the "open shop," and that some Republican politicians would follow the lead of ex-Senator Bourne in supporting such a movement. Naturally, the American Federation wishes to head off any such movement and win the good will of President Harding and his chief advisers.

Chapin in St. Louis Star

"I'm glad that feller has quit hanging 'round here for awhile! Now let's get busy!"

The Industrial Workers of the World have not yet made up their mind just how far to the left they wish to go. A referendum of the organization is now in progress to determine whether or not it shall affiliate with the Bolshevik Third International. Some 50,000 dues-paying members of the organization are taking part in the referendum.

## Telegraph Company Snubs Government

**D**IPLOMATIC relations between these United States of America and the Western Union Telegraph Company have been severely strained of late. The Western Union announced on November 16 that it would not transmit any more official messages unless they were prepaid. The company claims that the State Department has not paid for cable service since August, 1919. President Carlton, explaining the action of the Western Union, declared:

The dispute with the State Department over the payment of cable tolls is of long standing, and the Western Union Company has been forced to require that department to prepay its tolls on cable messages because of the arbitrary policy adopted by the department in dealing with the company's bills. To the company there seems no reason why the business fairness and justice that prevail in commercial life should not prevail in the State Department, and it is not the company's intention that the State Department shall arbitrarily decide what it shall pay and when it shall pay for the use of the company's facilities.

On the other hand, the State Department alleges another reason for the action of the Western Union. It is attributed to resentment at the refusal of the Government to permit the landing of a cable at Miami, Florida, to connect with a British cable from South America. The State Department also contends that it is entitled to a fifty per cent

such refunds because before they can be paid the Western Union Telegraph Company must adjust its accounts with connecting foreign administrations. Some time ago the company's attention was called to the apparently unwarranted delay on its part in making refunds and to the considerable amount of such funds due to the department. . . .

Obviously the United States could not be expected to allow the Western Union Company, an American corporation, to charge for its messages twice the rate charged, for example, to the British Government, nor to accede to a requirement that the ordinary practice of business with respect to periodical settlement of accounts . . . shall be set aside in dealings with our Government. The department has in a conciliatory spirit made clear its willingness to make prompt payment of any funds due to the company on receipt of assurances as to a reasonably prompt payment of the funds due by the company to the department.

Should the Western Union persist in refusing the fifty per cent rebate on official messages and continue to demand prepayments on cables the Government may resort to legal proceedings and other means of coercion. It is suggested that existing permits for landing cables might be revoked, and the Western Union thus be cut off from all cable facilities which lie within the power of the executive branch of the Federal Government to grant or withhold. It is probable that a settlement will be reached before such a step becomes necessary.

## Aid for Armenia

**A**LTHO some Americans profess to regard with contempt the Assembly of the League of Nations now in session it is evident that the leading powers of Europe and Asia take it very seriously. They have sent their best men to Geneva and they are discussing questions of highest importance. The debate over Armenia brought out on the one side ex-Premier Viviani of France, and on the other ex-Premier Balfour of England, while the question at issue involved the treaty of Sevres and possibly the future sovereignty over Ottoman Asia.

The question was raised by Lord Robert Cecil, whose appointment to represent South Africa—it will now be recalled with amusement—was objected to on the ground that he would be a mere echo of England. He proposed that a committee of six should be chosen to consider "what steps should be taken to end hostilities between Kemal and the Armenians." His motion was seconded by Henri La Fontaine of Belgium.

Balfour threw cold water upon the scheme, for the League, he said, was powerless. "Good intentions are the foundations of good politics, but they are useless unless there are means to carry them out." President Wilson had been asked to take the mandate for Armenia and to define its boundaries. He had not accepted the first and he had failed to accomplish the second.

Then Viviani arose, the most eloquent of French orators, who, when the United States entered the war, was sent over here with the French delegation to arouse American enthusiasm. His earnest appeal for immediate action overcame the effect of Balfour's cool caution and swept the Assembly into sympathy with his proposal that the League Council immediately select a power to undertake arbitration between the Armenians and Mustafa Pasha. "When a man is at death's door you call a doctor, not a commission." He blamed Wilson for the powerlessness of the League—quite disregarding the fact that the League was rejected in the American Senate chiefly because of the clauses authorizing the use of force. He told why the League had no military power:

The League has responsibilities without authority. The French peace delegation, headed by Senator Bourgeois, went to the Hotel Crillon during the Peace Conference and asked President Wilson that the League be given an army and a permanent general staff. If France's voice had been heard, the League would not be in a position of impotence today and could send an armed force to save Armenia.

Evidently the only power desirous to undertake inter-

The League of Nations Assembly at Geneva elected as its president the Hon. Paul Hymans, former Belgian Ambassador to England, and representative of Belgium at the Peace Conference. This photograph of the new president of the League shows him (left) at his home in conference with Dr. Charles S. Macfarland, secretary of the Federal Council of the Churches of Christ in America (right), and Chaplain Blommaert of the Belgian army (center)

refund on official messages over the Western Union lines. This customary rebate the Western Union refused to pay and the Government in consequence held up the payment of cable tolls due since August, 1919. A statement issued by the Department of State explains the question from the Government's point of view:

In 1916 the department drew the attention of the company to the fact that the department was not receiving the reduced rate on official messages sent from certain points abroad to the United States. The company thereupon notified the department that the rates on official cable messages were the same in both directions, and it suggested a method by which a refund might be obtained by the department whenever amounts paid to the company by its connecting administrations in foreign countries had been in excess of the established Government rates.

There is naturally some delay incident to the payment of

vention in Anatolia is France, but England suspects French designs in Turkey. So Balfour tried to turn the tide against Viviani by questioning the practicality of the French proposal:

The French proposal appears to be directed solely at saving Armenia, but we would like to know a little more about it. How do the French propose to conduct the negotiations? How are negotiations themselves possible with Mustapha Kemal, unless there is something to offer him? How can anything be offered him without preliminary consultation between the powers immediately concerned? How do we know what he will take? Let us suppose that money or territory is offered to him. Do we know that he will take either or, if not, what he will take? Negotiation is discussion between civilized powers, in which one offers something to the other in return for a concession to their mutual advantage. Can we treat Kemal as a civilized power?

Again Viviani took the floor and again won the Assembly when he declared:

You must fight Kemal or treat with him. There is no other choice. We cannot fight him, for where is the army and fleet with which to do it? If you shut the door against negotiations you may as well let the last Armenian be wiped from off the face of his native land and admit that the League of Nations can do naught to save him.

Mr. Balfour suggests that we are not dealing with a regular constituted state and that we are faced by an outlaw, indifferent to opinion or the economic pressure of the civilized world.

Is that a reason for us to stand aloof? Is it the first time that a civilized power has interfered between a savage and his victim?

You express doubts as to whether Kemal will listen to arbitration. I will take on myself the responsibility of saying that he will.

A storm of applause followed Viviani's speech. Balfour rose to reply, but thought better of it and resumed his seat. Viviani's motion was carried unanimously.

Since Balfour is also a member of the Supreme Council of the League and no action can be taken by the Council without unanimous vote, he will be able to veto any action on the part of the Council in accordance with the recommendations of the Assembly, but the public discussion and resolution of the Assembly in throwing responsibility on the Council may perhaps have a strong influence on the situation.

In the course of the debate the Serbian delegate, Spaleklovitch, recalled that Senator Harding had last May presented a resolution calling upon the President to send American marines to Batum in aid of the Armenians and that the resolution was adopted by the Senate.

## The Riga Conference

ON October 18 an armistice was concluded between Russia and Poland to allow for the negotiation of a permanent peace. In order to carry out this plan the delegates of the two republics met again at Riga to work out the terms of the treaty. But the conference was interrupted on November 21 by the declaration of Adolph Joffé, chairman of the Soviet delegation, that the deliberations could not proceed until Poland complied with the armistice by withdrawing her troops from the twenty-mile neutral strip and by ceasing to support military movements against the Soviet. He asserted that Colonel Ribak, head of the Polish section of the joint military commission, was aiding the Ukrainian army under General Petliura and the White Russian army under General Balakovitch which are operating behind the Russian boundary against the Soviet Government. The Polish delegation assured the Bolsheviks that orders would be given for the retirement of the Polish troops behind the armistice line. But the Poles believe this charge a pretext by the Bolsheviks for breaking up

be able or willing to grant them as much military aid as they did then since the Wrangel movement proved such a fiasco.

## Rioting in Bologna

THE recent municipal elections in Italy were anticipated with anxiety because they were regarded as a test of the strength of the new Socialist movement. The Socialist party of Italy is split into two factions. The extremists are determined to follow Lenin into communism and to bring on a revolution at once. The moderates stick to the step-by-step policy and favor political action. The Communist movement has gained strength thru the action of the employees in the northern industrial district, who seized the factories and ran them for a month. The plants were returned to their owners only on condition that the workmen shall be admitted to the management.

Opposed to the Socialists is a coalition of the Liberals and Nationalists, known as the constitutional bloc. A new and important factor in the field is the Catholic Popular party. After the King of Italy occupied Rome in 1870 the Vatican insisted that all good Catholics should abstain from voting, since this meant a recognition of the usurping government. This rule was nominally in effect though commonly disregarded until recently, when the alarming

SOMETHING ELSE AGAIN

Visitor: "Where's the boss?"

Workers: "We're boss now. Who are you?"

Visitor: "I am the tax-collector."

Workers: "Oh, you want to see the owner, the man in there."

spread of Socialism led to the organization of a definite Catholic political party.

In elections of November, 3425 communes (that is, town and county councils) were won by the constitutional parties, 1799 by the Socialists and 1264 by the Catholic Popular party. The Socialists won in Milan, Bologna, Leghorn and Cremona, but lost in Rome, Florence, Genoa, Naples, Venice and Turin.

The post-election demonstrations resulted in disorders at various places, often with fatalities. The most serious was at Bologna, the Socialistic center, where Guidi, a railway conductor, was elected mayor. A mob of Nationalists and ex-service men, incensed at his raising the red flag over the public buildings, invaded the chamber where the new city council was then in session.

In the ensuing fight three of the minority members of the council were shot by their Red colleagues. Several of the Bolsheviki in trying to escape from the chamber jumped from the balcony into the crowd below, killing five persons. Bombs and bullets flew freely and after the police had separated the fighting factions there were eight dead bodies left in the square, one of them a girl. The wounded numbered over a hundred.

## British Trade with Russia

LAST July an agreement for the resumption of trade had been drawn up between the commercial envoys of Soviet Russia at London and the British Government, but the negotiations were interrupted on the verge of completion by several happenings. One was the discovery that Kamenev, a leading member of the Soviet delegation, was secretly participating in propaganda work for Bolshevism contrary to the agreement and that a subsidy of \$375,000 had been offered by the Soviet to the *Daily Herald*, a radical labor paper of London. The other reason was that the Polish and Wrangel drives were starting, backed by France, and it would have been unseemly for Great Britain to have treated with an enemy of her Ally.

Central News

All England paid homage to the funeral of an "unknown warrior" whose body was brought from the battlefields of France to be buried in Westminster Abbey on Armistice Day. It was a ceremony of mourning, solemn and reverent. As the gun carriage with the coffin on it came down Whitehall to the cenotaph erected as an altar the great crowds stood in silent prayer, the army of the living making its pledge to carry on the ideals of the army of the dead.

International

Greece has solved temporarily the problem of what to do with its throne. The probable choices of ex-King, Prince, and Republic have all been put aside, and the Queen Mother Olga has assumed the regency

But now the Polish-Russian war has been brought to a halt by the Riga armistice and Baron Wrangel has been knocked out. So the way is cleared for the removal of the blockade that has been imposed upon Russia for the last three years. The French and American Governments are strongly opposed to any sort of dealings with Soviet Russia, but the British and Italian Governments have long favored recognition and restoration of trade. An Italian envoy resides in Moscow and the proposed commercial treaty between Great Britain and Soviet Russia will practically amount to diplomatic recognition.

Both parties agree to admit to residence the official and trade agents of the other nation and to grant them the privilege of free communication with home by code messages and sealed despatch bags. Ships and merchants will

enjoy the customary immunities and protection. Passports and similar documents will be mutually respected.

France has opposed the recognition of the Soviet chiefly because of the fear of losing the immense loans made to the Russian Government for military purposes before and during the war. The Soviet Government is disposed to repudiate all the obligations of the old régime, tho it has several times intimated that it would repay the French debts as the price of peace. France has further objected to allowing the Russia Soviet to ship out gold, securities or commodities to England or elsewhere in exchange for goods on the ground that such valuables were stolen property and should by right be turned over to France in partial payment of Russia's debt.

This difficulty is met so far as England is concerned by the provision in the new treaty that

The Russian Soviet Government hereby declares that it recognizes its liability to pay compensation to British subjects in respect of goods supplied or services rendered to it or to the former Government of Russia, or to Russian citizens, for which payment has not been made owing to the Russian revolution.

On the other hand the British Government agrees not to "take or encourage any steps with a view to attach" the money or valuables sent out from Russia in exchange for imports, on the ground of any claim against the citizens or government of Russia, past or present. Each Government pledges itself not to support "hostilities and propaganda directed against the institutions or interests of the other party."

There is great difference of opinion as to how much trade will result from raising the blockade. It is the view of the American Government that Russia is so impoverished by the Bolsheviki and that the railroads are in such a ruinous state that Russia will have little to sell for a long time. But the British Government takes the opposite view and is looking for a large trade. Contracts for millions of dollars of British textiles and machinery on the one hand and of Russian furs, timber and petroleum on the other have already been made. It is said that the Soviet Government, failing to get railroad material from the United States, has placed on locomotives in Germany to be paid for by \$150,000,000 in gold.

Washington D. Vanderlip, representing a California syndicate, claims to be returning to America with a concession of exclusive rights to the coal, oil and fisheries of 400,000 square miles in northeastern Siberia including Kamchatka and with authority to purchase \$500,000,000 worth of American goods for Soviet Russia to be shipped from Seattle on American vessels. But a consignment of \$2,000,000 in gold bars recently shipped to New York banks was refused by the United States Assay Office on the ground that "Government regulations are still in force which prevent transactions with Soviet Russia."

## Murder and Revenge in Dublin

OF late there has been a lull in the Sinn Fein assassinations. The Government report for the week ending November 15 read: "A gratifying feature is the reduction in the number of police casualties which fell from thirty-four killed and wounded to ten." Premier Lloyd George said in his address at the Lord Mayor's banquet: "Unless I am mistaken, by the steps we have taken, we have murder by the throat." The Government was known to be engaged in collecting evidence of Sinn Fein crimes in preparation for a great round-up of the leaders. But just before the net was drawn the officers and secret service men engaged in this work were shot in their beds at Dublin. The plan for the assassinations had been carefully laid and was thoroly carried out. Some two hundred men were engaged in the conspiracy. They gathered early in the morning of November 21 in bands of ten or twenty before the houses and hotels where their victims were lodging and shot them in their bedrooms or nearby. Captain Newberry was killed at his wife's feet. In this one night's raid fourteen officials of the crown were killed and five were wounded.

### THESE TROUBLED TIMES IN IRELAND

The old peasant at the right is typical of the victims of Irish raids and reprisals. Her home was burned to the ground; a cat and a kettle aren't much salvage for starting housekeeping again at eighty. Below is the "protest procession" of American Irish sympathizers outside the White House. A thousand people marched in the first day of the demonstration which for seventy-two days is to walk silently round and round the fountain in an endless line

© International

Four of the assassins were captured, one having been wounded. But most of them slipped away severally without molestation. The authorities suspecting that they had sought concealment in the crowd of several thousand collected in Croke Park to see the hurley match between Dublin and Tipperary, gave orders to have the spectators surrounded and searched.

Accordingly a large force of police and soldiers with armored cars and machine guns entered the park while the game was in progress with the object of holding the exits and examining each individual as he passed thru the turnstile. But the crowd became panic-stricken at sight of the soldiery and scattered in all directions. Some shots were fired, first by the Sinn Feiners according to the official account, and then the soldiers sent a volley into the mass.

Ten persons were killed and seventy were injured, either by gunshot or by being trampled under in the stampede. One woman was crushed in the melee. There was much shooting in the streets during the night and in this a boy of ten and a man of seventy were killed. Many revolvers were found on the persons searched or in the park where they had been dropt.

The Irish have been especially incensed by the discovery of the body of Father Griffin, buried in a bog with a bullet in his head. He was curate of Bushy Park, Galway, and had been kidnaped from his home a week before by three unknown men. It was supposed that he had been captured to be held as a hostage in reprisal for the kidnaping of P. W. Joyce, a Nationalist teacher, near Galway, shortly before. This is the first priest to fall a victim in the Irish disorders. His body was placed uncoffined before the high altar of his parish church. The priests officiating at the funeral begged the congregation to pray for the repose of the soul of the martyr but not to forget to pray also for his murderers.

# A Little of Everything

## Making Their Own Cigars

By William Leavitt Stoddard

One of the most interesting experiments which has been made in coöperative production is a cigar factory now in successful operation in Boston. It grew out of a strike, resulting in the removal of some manufacturers to set up anew in New Jersey, leaving their employees stranded. They decided to run a cigar factory for themselves. As one of the directors put it: "We started this factory not because we were coöperators: we weren't; we didn't know a thing about coöperation or competition or business management of any kind. We started in because the strike left us flat without jobs, and since we needed work we thought the best way was to supply it for ourselves."

The Boston Coöperative Cigar Factory is a regularly incorporated business with an authorized capitalization of \$100,000, divided into shares whose par value is \$50 each. At present they are sold only to members of the Cigarmakers' Union, but a second issue will be offered more generally. The laws of Massachusetts have long promoted the incorporation of coöperative organizations of all kinds, including banks and the well known, useful and thrifty credit unions. If there is anything revolutionary and radical in the idea of a labor union running its own business, the commonwealth of Massachusetts does not admit it. Rather, the

commonwealth of Massachusetts sanctions it, even to encouraging the creation of a special fund for educating other people in coöperation.

There is nothing particularly distinguishing about the cigars made by the coöperative. I have on my desk as I write a "ten pack" cardboard box of "hand made, union made" cigars turned out by these enterprising cigarmakers. They are very good cigars, good both in workmanship and quality, selling at retail for a trifle over ten cents each when bought by the box. The trademark of the coöperative is printed on the cover—a sun rising out of the ocean with the legend, "The Dawn of Coöperation."

According to the statement of the directors of the Boston Union Cigarmakers' Coöperative, this enterprise is now on its feet. It is said to be the third largest cigar factory in the city, turning out on the average 150,000 cigars a week, or approximately 6,000,000 a year. When the business was started, there were fifty employees. Today there are a hundred and thirty, of whom one hundred are skilled hand-cigarmakers, the rest being office force and girls who "strip" or prepare the tobacco for the skilled workers. Among the plans for the immediate future is the building of a box shop to supply the factory with boxes for packing and shipping.

In practically no respect does the business of the coöperative differ from the business of any regular factory. The general management and control is vested in a board of fifteen directors elected for one year by the shareholders.

BERTHA KRUPP'S GRAPES

These shrapnel bullets are being lifted by a great magnet in a Berlin munitions works and transported into a melting furnace. The mass will then be molded into necessary peace time implements. Why can't some old John Silver forsake his pirate trade, buy a magnet like the one above and drag the South Sea for buried treasure?

ers. The officers, who are at the same time directors, include a president, a treasurer and a clerk, but hereafter the president will be a paid official, not a member of the board. Five members of the board form an educational committee to promote the principles of coöperation.

The immediate operations in the factory are under the control of the foreman and superintendent, who are elected by the shareholders. The directors employ all the other officers and agents of the business. In short, the directors are active managers, resident on the job, who really direct. They receive each week the reports of the department heads, their appointees. If the services of the department heads are unsatisfactory, the directors may suspend them. However—and here is a bit of trade union democracy—a suspended man may appeal over the heads of the directors to the shareholders, that is, to the owners of the business, who must give him a hearing and who have the power to determine whether the discharge shall be final. A similar provision is made for the rank and file of the employees. The foreman or superintendent may suspend an employee at will. If the employee so desires, he may appeal im-

mediately to a committee of five, two named by himself, two named by the directors, and the last chosen by these four. The majority of this committee has final decision as to the discharge.

The cigarmakers' cooperative is strictly a business concern, 100 per cent trade union. This is literally true, for there is a rule that each employee must belong to a union provided a union exists for his or her particular trade or craft. The cooperative is a closed pro-union shop. The wages are set in accordance with the regular scale decreed by the union. Some day industrial unrest may enter even this shop; but so far all has been peace and quiet.

I asked Mr. Moreli, the chairman of the board of directors, to tell me in a word why he considered that the cooperative had succeeded. He said:

"In the first place, we own our own business and therefore our own jobs. In the second place, we have been in operation for a year and the business is growing and we have mastered the things that bothered us, particularly cost accounting. In the third place, all of us have learned that the working-man is very ignorant about business and that he must gain a great deal of knowledge if he is to play the proper part in the next years. Lastly—we are happy. The girls are always singing while they work."

There is no soviet in this establishment—in the sense of a grotesque plebscite of the workers determining intricate questions of marketing or credit.

The China Year Book estimates that for the adequate instruction of all the Chinese children it would be necessary to increase the present supply of 50,000 teachers to 1,500,000.

The Census Bureau estimates that the

city population of the United States is increasing seven times as fast as that of the rural districts.

During 1919 fewer persons were killed on American railroads than in any year since 1898 and fewer injured than in any year since 1910, in spite of enormously increased volume of traffic.

Of 210 colleges and universities in the United States only fourteen had fewer students in 1920 than in 1914. The total increase in attendance during those six years was from 187,000 to 294,000.

The lowest point of dry land in the world is on the shores of the Dead Sea in Palestine, 1200 feet below sea level. The lowest point in the United States is Death Valley, California, 276 feet below sea level.

## A Novel Entrance

Something unique has been accomplished in the completion of the entrance to the Southwest Museum in Los Angeles. The building is situated upon a high hill and up to the present year it has been necessary for pedestrians to make a long and laborious climb up the hill to reach the main entrance.

Now, however, the climb has been obviated by an artistic as well as practical improvement. A tunnel, two hundred twenty-four feet long, was bored

After more than four years' work Lorado Taft, the Chicago sculptor, has just completed the great "Fountain of Time," which is the first step in an ambitious scheme to transform the famous Midway of the World's Fair of 1893 into an artistic formal boulevard. The "Fountain of Time," composed of eighty-nine figures, typifies the human procession passing in review before the great immovable figure of Father Time. A warrior on horseback forms the center of the group, which fades off at the ends into creeping infancy and withered figures of old age. There is a suggestion of joyous onward movement in this procession and of the splendor and pageantry of life. The fountain stands at the west end of the Midway, a grassy strip a mile in length and 1000 feet wide, and Mr. Taft is now at work on a companion piece, "The Fountain of Creation," which is to adorn the east end. Between the two, in a depression in the middle of the boulevard, will be a canal connecting the lagoons of Jackson and Washington parks. Across this canal will be built three bridges, dedicated to the "Sciences," "Arts," and "Religions," while on either side, on the higher ground, will be statues of the world's greatest idealists.

© Kadel &amp; Herbert

Perhaps your grandfather rode in this very train—the first steam train in America, which is hereafter to be on permanent exhibition. The old-time engine and supply car—it carried a barrel of water and an armful of wood to “stoke up” with—and the three coaches are about the size of a present day engine

into the hill and ended in a large octagonal waiting room, on one side of which is a twelve passenger electric elevator of the automatic type. The elevator makes a climb of one hundred and eight feet, delivering the passengers directly into the main hall of the museum.

The architecture of the tunnel is also both unusual and attractive. The outer end of the bore is faced with a massive portal patterned and decorated in replica of the ancient Mayan art of Mexico, this instance being that of the facade of the Casa de Monjas, at Chichen Itza, Yucatan; a striking example of the wonderful development of the ancient peoples of Mexico. The interior of the tunnel will give a visual description of the habits and customs of the aborigines of North America, especially those of the Southwest. Fourteen niches will contain replicas of their institutions and customs, while a series of carved pilasters will illustrate with symbolic panels their drawings and inscriptions.

## The Stamp of Approval on Peace

At Madrid the Union Postale Universelle Congress is considering the plan of a St. Paul man, Mr. J. W. Hamilton, for a permanent peace stamp, of distinctive design, which will carry with all correspondence and at the option of the purchaser, a definite message of peace.

The stamps will be printed by each nation in one, two and five cent denominations, and will be good only when mailed within the boundaries of the issuing country, so that there can be no illicit speculation owing to any oscillation in the exchange. The figure of Justice is suggested for the one cent; the head of Hugo Grotius, the father of international law, for the two cent; while for the five cent, there is a very strong demand amongst the South American delegates for a picture of the statue of the Christ in the Andes.

For a motto—“Pax Per Legem.”

This plan will permit the people of every nation to vote for peace with the purchase of every stamp; and it is the only feasible method by which they can constantly voice their horror of war and their determination that, so far as their influence counts, it shall not be. The increasing percentage of peace postage purchased as compared to the

regular issues, both of which will be on sale concurrently, will influence all governments and all peoples, for the stamp will continually advertise peace, international arbitration, and the gen-

eral support of the League of Nations. Señora de Costa of Buenos Aires, the founder of the Association Sud American de Paz Universal, has arranged for the first stamp of this issue, portraying “The Christ in the Andes,” President Irigoyen having authorized.

Mr. Hamilton does not claim that World Peace Postage will prevent war. The Hague Tribunal, arbitration treaties and solemn covenants, have not done so, but if the shadow of the statue of Christ across the boundaries of two great nations should prevent but one war between Argentina and Chile, it would have justified the highest hopes of its authors, and if the influence of World Peace Postage will in the future prevent but one war, it will surely have justified itself.

## —Take an Inventory—

# Ten Tests of a Town—

*Questions that people ask about YOUR town before they decide to make it THEIR town.*

### 1. ATTRACTIVENESS

Shall I like the town—its “atmosphere”? Does it have the beauty of shaded streets and other beautiful features? Is it a quiet, roomy, airy, well lighted town? Does it have attractive public buildings and homes? Is it well paved? Is it clean in every sense?

### 2. HEALTHFULNESS

Will my family and I have a reasonable chance to keep well in that town? How about its water supply? Its sanitary system? Its methods of milk inspection? Its health department? Its hospitals? Is it without any congested district?

### 3. EDUCATION

Can I educate my family and myself in that town? How about its public schools—present and future? Its institutions of higher education or of business training? Its libraries? Its lecture and concert courses? Its newspapers? Its postal facilities?

### 4. PEOPLE

Shall I like the people of the town? Are they “home folks” without false exclusiveness? Are they neighborly and friendly? Is the town free from factionalism? Does it have strong religious, fraternal, and social organizations?

### 5. RECREATION

Can I have a good time in that town—I and my family? How about the theaters, museums, gymnasiums, parks, etc.? Are there active agencies for providing good entertainments, athletic contests, etc.? Are inviting opportunities for pleasure drives afforded by well paved streets?

### 6. LIVING

Can we live reasonably and well in that town? Are the best of modern conveniences available for its residents—electricity, gas, telephones, etc.? Are the housing and shopping conditions favorable? Rents, taxes, and prices fair? Hotels good? Home and truck gardens and dairy products plentiful?

### 7. ACCESSIBILITY

Can we go and come easily? Does the town have adequate railroad connections and train service? Street car lines? Interurban lines? Well marked automobile routes and hard-surfaced roads?

### 8. BUSINESS

Can I make good use of capital in that town? Are there good banking facilities? Manufacturing interests? Up-to-date stores? Good shipping facilities? Favorable labor conditions? A prosperous farming territory? Fair real estate values? Reasonably cheap power? Active coöperation among business interests?

### 9. EMPLOYMENT

Can I get a job in that town at fair pay and with good prospects for the future? Can I count on coöperation from organizations making it their business to help introduce and establish new commercial interests and to welcome new citizens?

### 10. PROGRESSIVENESS

Shall I find that I am in a live town having a progressive city government, active civic organizations, modern fire protection, and a pull-together spirit in everything—a town with a future?

*You can not control the climate, natural scenery nor historic associations of your town; but if, in other respects, it does not measure up to the standard that will be applied to it by intelligent town-buyers, get busy and HELP MAKE IT MEASURE UP. The first big job of a good town-salesman is to see to it that his “commodity” is right.*

# CRANE

Hospital  
Operating Room  
Installation

## Central Sources of Supply

The prospective builder, whether interested in a home, office building, apartment, hotel, factory, hospital or other public institution, can have his plumbing and heating requirements filled with uniform convenience and reliability at any of the sixty-one Crane branches located in principal cities.

Crane Service is broad not only in scope of products supplied, but also in the assistance it gives to buyers and the trade through easily accessible branches and showrooms.

We are manufacturers of about 20,000 articles, including valves, pipe fittings and steam specialties, made of brass, iron, ferrosteel, cast steel and forged steel, in all sizes, for all pressures and all purposes, and are distributors of pipe, heating and plumbing materials.

Crane Service is also at the call of industry. It covers special as well as all standard pipeline requirements, the accompanying photo of a motor-operated gate valve being indicative of Crane ability to meet unusual specifications.

# Why have Coughs?

**BROWN'S BRONCHIAL TROCHES** prevent or quickly relieve colds, sore throat, coughing, hoarseness, loss of voice, catarrhal and asthmatic conditions. At the slightest provocation of throat trouble or at a later stage, these lozenges are always effective.

Public speakers and singers, for over **SEVENTY YEARS**, have found them highly effective in promptly relieving hoarseness and irritation of the throat caused by vocal exertion. Unsurpassed for clearing the throat.

## BROWN'S BRONCHIAL TROCHES

Not a confection, but a genuine cough remedy. Contain no opiates or harmful ingredients—safe for children. Will not stain hands or gloves. Handy for carrying in pocket or purse—to be used as occasion requires.

## To Their Mutual Advantage

(Continued from page 325)

the literature which would interpret life—significant in the workroom of a human relations man. More often than not the labor manager is to be addressed as "Doctor." The labor manager is there to listen to grievances, to judge them with reference to the agreement and with reference to the causes behind them. His training disposes him to look for more than one possible cause for every phenomenon. His contribution to an understanding of the labor problem ought to be valuable.

The worker has access daily to the labor manager, to whom he may bring any complaint. The union member has also the recourse of carrying his grievance to his shop chairman, who may settle the trouble himself, or may report it to the union organizer. The organizer, in turn, may order the matter dropped, or he may take it up with the labor manager. Of course many of the "grievances" which come thru to the labor manager are requests for increased wages. As the scale of wages is fixed by the agreement for each class of workers, the trick is to prove that one belongs in a higher class than that to which the foreman has assigned one.

Another common grievance is of the man who has taken an unannounced vacation and who wishes to be reinstated with all former privileges. In such cases the advice of the union official is decisive. He may discipline the man in the interest of the agreement by compelling him to seek employment elsewhere.

Some workers have been impatient and unwilling to wait for the machinery to take care of their grievances. Sometimes a group walks out, but in such cases the union official has always ordered them back so that the grievance might have due process of law. Manufacturers and unions are coöperating in the attempt to prove the agreement a success—both sides prefer natural adjustment to constant friction. And both sides claim that the agreement has resulted in increased production.

Not only in the case of a grievance, but also for the building up of a general market policy labor managers and union officials meet in conference. For the attempt is being made to establish government where anarchy has reigned. It is a new thing for representatives of the different employers of the city to meet weekly for discussions leading to a common plan of labor management—and for each of the six labor managers to ask for the advice of his companions on the Board of Labor Managers. It is perhaps more unexpected to find union officials meeting with this board to coöperate in the development of such a plan. So all along the line, from a shop difficulty to a market policy, the two sides come together to effect a settlement.

There are, to be sure, matters on

which the labor manager and the union official cannot agree; then both go together to the impartial chairman for a decision. The impartial chairman, Dr. Leiserson, is employed jointly by the Clothiers' Exchange and the union. An equal division is made also of the rent and other expenses of the office. The office is well supplied with chairs for the witnesses which either side may call in. Here before Dr. Leiserson's desk the opposing parties argue at the bar. The procedure is for the labor manager and the union official each in turn to examine the witnesses. Smoking is permitted. The object is informality.

Neither of the advocates are lawyers, at times they anticipate the decision. For under the agreement they have been arriving at compromises, and it is becoming instinctive to each to see both views, to strive at a just settlement rather than at a victory in a trial of strength. And if the two sides come closer together before the judge is ready with his decision, surely he is just as well satisfied that it should be so. Indeed, the chairman is intended to be less of an arbitrator between opposing parties than an interpreter of the law inaugurated by agreement between these two parties, and responsible for application of this law to specific cases. Whenever questions come up before the chairman which do not seem to be covered by the provisions of the agreement, the chairman calls for a discussion between representatives of the two sides as to what they believe the law should be; his aim is to avoid judge-made laws.

This "impartial machinery" is for the union and the members of the Exchange. As it has nothing to do with the one clothing house outside the Exchange, so also it does not offer an advantage to the unorganized worker in the employ of a manufacturer who has signed the agreement. There may be such employees; for while the agreement recognizes the union, it does not abolish the open shop; union and non-union workers are employed indifferently. But only the union member votes for the shop chairman, since this officer is elected at a regular meeting in the union hall. There is no "shop union" in the sense of an *ipso facto* membership for each man employed; the agreement is not between the employer and his employees, but between him and the union which represents the majority of these employees. The unorganized worker has no representative; he may take his complaint personally to the labor manager, but if this official decides against him, his only chance for a revision is in joining the union.

Thus each factory has its own shop organization, made up of workers and the union official who represents them; and at the same time each factory is linked with the larger organizations on the outside, the Clothiers' Exchange,

# WHAT I THINK OF PELMANISM - By George Creel

**P**ELMANISM is the biggest thing that has come to the United States in many a year. With a record of 500,000 successes in England, this famous course in mind training has been Americanized at last, and is now operated by Americans in America.

Pelmanism is neither an experiment nor a theory. For twenty years it has been teaching people how to think; how to use fully the powers of which they are conscious; how to discover and to train the powers of which they have been unconscious. Pelmanism is merely the science of thinking; the science of putting right thought into successful action; the science of that mental team play that is the one true source of efficiency, the one master key that opens all doors to advancement.

I heard first of Pelmanism during a recent visit in London. "Are you a Pelmanist?" was a common question.

It was T. P. O'Connor who satisfied my curiosity and gave me facts. By 1918 there were 400,000 Pelmanists, figuring in every walk and condition of life. Lords and ladies of high degree, clerks and cooks, members of Parliament, laborers, clergymen and actors, farmers, lawyers, doctors, coal miners, soldiers and sailors, even generals and admirals were all Pelmanizing and heads of great business houses were actually enrolling their entire staffs in the interest of larger efficiency.

## Not a Mere Memory System

**T**HE famous General Sir F. Maurice, describing it as a "system of mind drill based on scientific principles," urged its adoption by the army. General Sir Robert Baden-Powell and Admiral Lord Beresford indorsed it. In France, Flanders and Italy over 100,000 soldiers of the empire were taking Pelmanism in order to fit themselves for return to civil life, and many members of the American Expeditionary Force were following this example.

Well-known writers like Jerome K. Jerome, Sir Arthur Quiller-Couch, Max Pemberton, the Baroness Orczy and E. F. Benson were writing columns in interpretation of Pelmanism. Great editors like Sir William Robertson Nicoll and educators such as Sir James Yoxall were going so far as to suggest its inclusion in the British educational system.

Pelmanism *can*, and *does*, develop and strengthen such qualities as will-power, concentration, ambition, self-reliance, judgment and memory.

GEORGE CREEL

Pelmanism *can*, and *does*, substitute "I will" for "I wish" by curing mind wandering and wool-gathering.

Pelmanism today is the one known course in applied psychology, the one course that builds mind as a physical instructor builds *muscle*. There is nothing really new in it. All of its truths are as old as the hills. But it reduces these truths to practical use. It puts them into harness for the doing of the day's work.

It teaches how to develop *personality*, how to build *character*, how to strengthen *individuality*. Instead of training memory alone, or will-power alone, or reasoning-power alone, it recognizes the absolute interdependency of these powers and trains them *together*.

It is not, however, an educational machine for grinding out standardized brains, for it realizes that there are wide differences in the minds and problems of men. It develops *individual* mentality to its highest power.

There is nothing arduous about the course, and it offers no great difficulties, but it does require *application*. *Pelmanism has got to be worked at.*

## The Science of "Get There"

**I**T is the science of Get There—getting there quickly, surely, finely!

Not for men alone, but for women as well. Women in commercial pursuits have the same problems to overcome as men. Women in the home are operating a business, a highly specialized complex business, requiring every ounce of judgment, energy, self-reliance and quick decision that it is possible to develop.

I say deliberately, and with the deepest conviction, that Pelmanism *will* do what it promises to do. Followed honestly, it *will* give greater power of self-realization and self-expression in word, thought and action. It *will* stop wool-gathering and mind-wandering. It *will* develop mind, character, personality, giving ambition, energy, concentration and self-reliance.

There are too many men who are "old at forty;" too many people who complain about their "luck" when they fail; too many people without ambition or who have "lost their nerve;" too many "job cowards" living under the daily fear of being "fired."

## Increased Incomes

**T**ALK of quick and large salary raises suggests quackery, but I saw bundles of letters telling how Pelmanism had increased earning capacities from 20 to 200 per cent. With my own ears I heard the testimony of employers to this effect. Why not? Increased efficiency is *worth* more money. Aroused ambition, heightened energies refuse to let a man rest content with "well enough." Business demands ever-increasing efficiency and employers are quick to recognize it and reward it.

But Pelmanism is bigger than that. There's more to it than the making of money. It makes for a richer and more wholesome and more interesting life.

The emphasis of Pelmanism is on a *complete* personality. It does away with lopsided developments. *It points the way to cultural values as well as to material success.*

GEORGE CREEL.

**NOTE:**—As Mr. Creel has pointed out, Pelmanism is neither an experiment nor a theory. It has stood the test of twenty years. Its students are in every country in the world. Its benefits are attested by hundreds of thousands of men and women in all walks and conditions of life.

Pelmanism is taught entirely by correspondence. There are twelve lessons—twelve "Little Gray Books." The course can be completed in three to twelve months, depending entirely upon the amount of time devoted to study. Half an hour daily will enable the student to finish in three months.

An ordinary school education is necessary, but of prime importance are sincerity of purpose and willingness to work.

## How to Become a Pelmanist

**"M**IND AND MEMORY" is the name of the booklet which describes Pelmanism down to the last detail. It is fascinating in itself with its wealth or original thought and incisive observation. It has benefits of its own that will make the reader keep it. Every reader of this page should send for "Mind and Memory"—*Now*.

It is free. Use the coupon or a post-card and send for it now—**TODAY**.

the union and the arbitration court of the impartial chairman.

Besides the constant calls upon his time in connection with the administration of the agreement, the labor manager has the supervision of the employment department and of such institutions as are a heritage from the era of "welfare." There is in each factory an employment executive, subordinate to the labor manager, but in a well established position of his own. In the various industries of Rochester there is a live group of employment managers who meet periodically at the Chamber of Commerce to talk over common problems and suggestions for a progressive policy. In the clothing industry the employment executives coöperate closely thru the agency of the Clothiers' Exchange. No clothing worker is employed until after he has been formally released from the firm which last employed him. Even in these days of pressing demand for labor, employment has been refused to good workers who have tried to slip out of their jobs without a release—with a consequent lessening of the labor turnover. At the office of the Clothiers' Exchange is kept a catalog of the payrolls of members, and a clerk at the telephone answers any question of an employment executive concerning an applicant's previous position or cause of separation.

This year, because of the acute shortage of skilled labor, it was felt to be necessary to establish training departments for beginners. Formerly the tailor learned his trade in the sweat-shop as "helper" to a home-worker; now that coats are made in the factories the training must be given there. Rosenberg Brothers took the lead among Rochester plants by opening at Fashion Park a vestibule school in a small cottage on the grounds.

In most of the factories there is a lunch room and a grocery store where provisions are sold at wholesale prices. But these things are felt to be rather expressions of the general spirit of coöperation than ends in themselves. There is also the first aid room, with a rest room for the girls.

The Rochester agreement was a step in advance. It was followed in May by the organization of the Chicago market. Labor managers and impartial chairmen began to function in Baltimore and in New York. But this was not the final step in the organization of industrial government in the clothing industry. The unprecedented demand for the product led to rivalry between markets to attract labor at any price. The result was steadily increasing labor costs which were becoming more and more embarrassing to the industry as a whole. The markets saw that they were working at cross purposes; they were ready to consider coöperation. The result has been a federation of the exchanges and boards of employers in the different markets which now includes all but three or four of the important firms in the country. The executive board of the

Perkins & Co., Lawrence, Kansas

national federation is made up of one manufacturer and one labor manager from the Rochester, New York, Chicago and Baltimore markets. Final and complete coöperation in labor matters is hoped for from a joint labor council consisting of the manufacturers on the one hand, represented by the officers of the national federation, and by a committee of the union on the other. This council plans to meet monthly to exercise supervision over the impartial machinery, to legislate amendments to the agreement, and to develop a general labor policy to be applied over the entire country. Rochester is represented on the council by an employer, Mr. Samuel Weil, and by Dr. Meyer Jacobstein, chairman of the local board of labor managers.

The national board is hailed by both sides as the logical outcome of collective bargaining, as the expression of democracy in industry. And the union sees it as the triumph of industrial unionism. President Hillman has pointed out to his constituents that so comprehensive an agreement could never have been accomplished by a craft organization. Perhaps there is more than one possibility before the One Big Union, after all.

Madison, Wisconsin

### The American Watch on the Rhine

(Continued from page 327)

was there. It was a very smart affair and tea was served in the clubhouse in regular English fashion at 4:30. A second match was played between two American teams, General Allen himself being one of the competitors, and he let none of the younger officers, I can testify, outstrip him. I was told that the General can muster a complete polo team from his own family that can hold its own with any average American or British team. His son and both his daughters play about as well as he does.

It was very evident that Coblenz was the one place on earth for an American officer and his wife to be at this moment. Army life at Coblenz has two great advantages over all other army posts within the jurisdiction of the United States. In the first place, it is not monotonous drill, drill, drill all the time and make-believe war, such as one would experience at Fort Leavenworth, or the Presidio. The army in Coblenz is on a real war footing and yet without the hardships, brutalities and agonies of war. And, second, the rate of exchange is so much in America's favor that the ordinary officer and his wife can live in Coblenz on a scale that \$10,000 or \$15,000 would afford in America. Even the lowest paid buck private can exchange his \$35 per month for 1800 marks, an amount three times the salary of the burgomaster of Coblenz before the war. No wonder every American officer's wife is moving heaven and earth to get her husband transferred to Germany, and no wonder that every

## An Ever-Cherished Christmas Gift

When Christmas candles shine; when children shout and shake the laden branches of the lighted tree, one Christmas gift most highly prized is something of lasting value that will be possessed and prized in after years

when he or she who gave it has passed away except in memory. Such a gift is a set of books that will instruct and interest from youth to age. And when it comes to such a set there is none more fitting than that superb 24-volume Reference Library.

## The New International Encyclopædia

24 Volumes

Second Edition Recently Completed

Revised, Rewritten, and Reset from A to Z

Printed Throughout from New Plates

Size of Page Enlarged. Number of Volumes Increased

80,000 Articles

Editors: Frank Moore Colby, A.M., Talcott Williams, LL.D., L.H.D., Litt.D.

The fortunate recipient of this useful and valuable gift finds it in youth, in middle age and all through life "a guide, philosopher and friend"; and there is no need to say that the donor will never be forgotten, for the volumes always stand a monument to good judgment in selection and generosity in giving. THE NEW INTERNATIONAL may indeed be truly designated as

### The One Superb Holiday Remembrance

With this you'll quite agree if you will have us send our 80-page Illustrated Book, showing specimen pages, Engravings, Photos in Color, Maps, etc., with information regarding the volume devoted to Courses of Reading and Study. To find out fully about the work

### Simply Send in the Coupon

We are confident you will agree with us that with THE NEW INTERNATIONAL as an ever-cherished gift to someone in whose welfare you are interested, you can and will make this coming Christmas indeed memorable.

## Novels of Distinction

### THE CAPTIVES

Hugh Walpole

Author of THE SECRET CITY, JEREMY, FORTITUDE, Etc. Mr. Walpole's most ambitious novel of English Life. \$2.00

### LADY LILITH

Stephen McKenna

A heroine fully as daring, as unconventional as SONIA. \$2.00

### A POOR WISE MAN

Mary Roberts Rinehart

Author of DANGEROUS DAYS. "Mrs. Rinehart dips her pen in magic."—Chicago News. \$2.00

### WOUNDED SOULS

Philip Gibbs

A great novel of men and women today by the famous war correspondent. \$2.00

### THE EVE OF PASCUA

Richard Dehan

"The work not only of a born story-teller, but of an artist."—Weekly Review. \$1.90

### A TALE THAT IS TOLD

Frederick Niven

To all those to whom Walpole, Galsworthy, Swinerton, Bennett and others of the realists appeal we strongly recommend this unusual novel. \$1.90

### THE SUMMONS

A. E. W. Mason

A romance by the author of THE FOUR FEATHERS. "Intricate and often dramatic in plot."—New York Times. \$2.00

### NIGHT AND DAY

Virginia Woolf

Author of THE VOYAGE OUT. "Has anyone ever given us such a psychology of love? One thinks of Meredith."—New Commonwealth. \$2.25

### ELI OF THE DOWNS

C. M. A. Peake

"A first book so good that many a seasoned novelist, no doubt, would be proud to be its author."—America. \$2.00

### RESPONSIBILITY

James E. Agate

An unusual and memorable novel. "A very rich book."—New York Tribune. \$2.00

### THE VOYAGE OUT

Virginia Woolf

"Thoroughly interesting, a distinctly unusual book."—Independent. \$2.25

### THE MASK

John Cournos

"Its author is not only fearless, but he cuts deeply into human character and can exhibit its beauty as well as its mechanisms."—Chicago Evening Post. \$1.90

### "QUEEN LUCIA"

E. F. Benson

"Distinguished among the novels of the season."—New York Evening Post. \$2.00

### INVINCIBLE MINNIE

Elizabeth Sanxay Holding

"She is as inevitable as fate; she is sublime and sordid; ugly and yet strangely beautiful. One of the most interesting books I have read in years."—Mary Roberts Rinehart. \$2.00

### MRS. CRADDOCK

W. Somerset Maugham

"A clever and intelligently cynical book, remarkably well done."—Baltimore News. "After you read the first forty pages you can't stop."—Life. \$1.90

### PAINTED MEADOWS

Sophie Kerr

"To many thousands of readers it offers a satisfaction scarcely achieved once a year."—Life. \$1.90

### VERENA IN THE MIDST

E. V. Lucas

"It is a typical Lucas novel, whimsical, happy as to characters and full of a subtle something which fascinates the reader quite out of himself."—Buffalo Courier. \$1.90

one of the 16,000 soldiers at Coblenz hope that Mr. Harding was talking for campaign purposes only when he said he would bring the boys home the first chance he got. Not only is our army happy in Coblenz, but the German population wants to keep them there indefinitely in their midst. And as for the young ladies of Coblenz, they are not in the least backward in pressing their various charms upon the flower of American youth. General Allen told me that fully a third of our boys had already married German girls, and that scarcely a day passes by that he does not get a pathetic letter from some fraulein, begging him to let her marry a soldier. Many unmarried German girls become mothers so that the military authorities cannot refuse to let them marry American husbands.

While the soldiers fraternize with the German population, especially the women, there is no social intercourse whatsoever between the officers and the upper classes of German society. But as there are over 300 American wives, sisters, cousins and aunts with the American army, one can imagine that there is no dearth of gayety and social whirl.

The small dancing parties are held almost every night in Coblenz, twice a week the officers give a grand ball in the Coblenz Club, which the Americans have taken over from the Germans. This is one of the finest clubs I have ever seen. Its beautiful ballroom is ornately decorated in white and gold, the full military band plays the latest American jazz and in the interludes the couples walk out in the moonlit garden, in the center of which a fountain plays while efflorescent lights are thrown upon it representing all the colors of the rainbow. I never saw such a gorgeous spectacle. With all the women wearing their prettiest gowns and all the men in their uniforms and decorations, it was a "scene of revelry by night" that doubtless could not be surpassed even in the olden days at Brussels which Byron described in his Waterloo poem.

From Coblenz we took several motor trips—one up the Rhine to Mayence and Wiesbaden and another down the Rhine to Cologne, thus giving me another opportunity to visit the French and English armies of occupation. There is probably no more beautiful motor road in the world than that which skirts the Rhine from Cologne to Bingen. It was fine to see again the old castles on the cliffs, to view the sunny mountain-sides beautiful in their serried rows of grape vines, and to pass the many pedestrians with knapsacks on their backs, evidently out for a week's holiday in the country. The country of Germany looked well cultivated. The crops are better this year than at any time during the war. The Rhine seemed to be almost choked up with barges and steamers filled with coal and other commodities plying up and down, but I was told that the traffic had fallen off considerably since pre-war days. We saw practically no cattle in the fields and very few horses

## U.S. Tax Laws Open \$10,000 Jobs

Corporations and individuals overtaxed themselves millions of dollars last year because of ignorance of the new laws. Our students discovered a \$1,000,000 over-payment by one corporation. As a result a tremendous opportunity is offered to men who will spend a few hours in study. Salaries of \$5,000 a year are ordinary. Consulting specialists have earned as high as \$1,000 a week. You can qualify in your own home during spare time.

Write Today for Free Book No obligations. The book is free. Opportunity is calling. 20 E. Jackson Blvd. U.S. Tax Law Institute, Dept. 2379, CHICAGO

## BE A BANKER

Prepare by mail in spare time for this attractive profession, in which there are great opportunities. Send for free book "How to Become a Banker."

EDGAR G. ALCOCK, President

American School of Banking, 23 McClellan Bldg., Columbus, O.

**SALESMEN:** Earn \$3,500 to \$10,000 a year. City or Traveling. Experience unnecessary. Quickly qualify through our amazing System. Free Employment Service to Members. Send for Salesmanship book, list of lines and full particulars. Nat. Salesmen's Tr. Ass'n, Dept. 160W, Chicago, Ill.

## Learn to Dance

You can learn Fox-Trot, One-Step, Two-Step, Waltz and latest "up-to-the-minute" society dances in your own home by the wonderful Peak System of Mail Instruction.

New Diagram Method. Easily learned; no music needed; thousands taught successfully; success absolutely guaranteed.

anywhere. We passed a rare automobile, usually military. Practically no one in Germany now can afford a machine except the "Grieber" or profiteer.

What interested me most in the activities of the American army in Germany is the fact that every soldier has the opportunity if he so desires to secure for himself an education. Most of our people know that every American soldier who is illiterate when he enters the army is compelled to attend school until he can read and write. But General Allen has gone beyond that. He has established a series of voluntary schools which will give men training that will fit them for definite occupation when they return to civil life or will enable them to enter West Point or any other American college. Each man in the army is obliged to state in writing whether he wants to take the course or not, and if he does he is required to study three hours a day, five days a week. There are three grades of schools:

- 1—Unit schools.
- 2—General and commercial school.
- 3—Service school.

The Unit schools correspond to the grammar school in civil life and the subjects taught in them are penmanship, English, arithmetic, geography, spelling, and United States history. This course is six months long. The General or Commercial school corresponds to a high school and the courses are divided into scientific, commercial and army. These all sub-divide into subjects that cover practically anything that an ordinary American soldier might want to take. General Young, who was in command of this whole educational project, states that a very large proportion of the men are thankful for the opportunity afforded them. Before he started out he did not believe it possible that such an interest would be shown as has manifested itself. In other words, the young American in the United States army in Coblenz is not only serving his country and getting that education that comes from mixing with a foreign people, but he is taking courses at the same time that will fit him to become a better American citizen and a larger wage earner when he returns home. It should be added that General Allen is not only solicitous for the common soldiers' education; he has required all his officers to study German.

According to the terms of the armistice Cologne is to be occupied for five years, Coblenz is to be occupied for ten, and Mayence for fifteen years. I wish that as an example of America's friendship for the Allies, and especially for France, we could keep our army on the Rhine for the next ten years. The English, the French and the Belgians would like to have us there, the German people would like to have us there, and the American doughboy would like to be there. Let us hope the new commander-in-chief of the army of the United States will not haul Old Glory down from the top of Ehrenbreitstein until all our obligations under the armistice are fulfilled.

INTERNATIONAL BANKING, SHIPPING, TRAVEL AND FOREIGN TRADE

## Our Share of Foreign Trade

(Continued from page 328)

is being somewhat hampered at present by conditions growing out of the world war. Europe needs our goods in inconceivably large quantities, but is not able to send us equal quantities of her own products in return. Until she is able to do so, she will buy from us only those things she cannot get along without. And many of these purchases must be made on a credit basis, for she has not the cash to send. Our trade with Europe, therefore, must be limited for a time to the ability of our producers to extend credit.

Europe has been our best customer in the past, but Europe is not the only foreign market for our goods. The South American and Oriental countries present a particularly attractive field. Our trade balance with these countries is adverse. They have been sending us more goods than we have been sending them. Effort expended in Latin America and the Far East will pay us.

In whatever direction we look, however, much of our foreign business must be done on a credit basis. South America was accustomed to getting from European producers before the war three, six, nine and even twelve months in which to pay. We must be prepared to extend the same credits.

And there are other things we must do to develop and fortify our trade with South America. Before the war fine passenger liners sailed between European and South American ports. The South American countries are looking now to the United States for such service. The vessels we built during the war were mostly troop ships and heavy cargo vessels. South America wants the service of fast mail and passenger liners, and packet freighters in addition. By putting such vessels into service we will foster closer relations with all the South American states.

At the same time we must look to the improvement of the cable facilities between the United States and the Orient as well as between the United States and the eastern coast of South America. Adequate communication facilities are one of the first essentials to the development of a permanent foreign trade. I think we can look to the International Communications Conference for some such improvements.

Another series of conferences, holding great promise for our foreign trade, are those between representatives of the War, Navy and Commerce Departments, looking to the development of the port of Manila in the Philippines as a base of operations for the expansion of American trade with the Far East. If the plans being formulated are carried out Manila will become a great clearing house and shipping base, for the exchange of American and Far Eastern commodities.

There will of course be competition between American business men and those of other nations, in their efforts to buy and sell outside their own borders, in their plans for carrying the products of international trade and in

the investment of surplus funds in foreign countries. This same sort of competition exists today thruout our own and every other industrial country. It is the essence of our commercial life. It is, I think, to be desired, because clean competition means that the consuming public will get the best service, and the best goods at the least cost. It means also that the efforts of competition will prevent stagnation and decay.

There will be international rivalries, but I hope and believe that the United States and all other nations are coming more and more to conceive of international trade as a constructive force, rather than a logical cause for dispute and dissension. There is at present less cause for animosity in connection with foreign trade extension than ever before. The terrific economic destruction of the war has produced an abnormal demand for goods the world over. Then, too, one of the most important factors in world trade during the next generation will certainly be the development of the newer countries with rich resources and sparse populations. Our gains, particularly in Latin America and the Far East, will not necessarily be made at the expense of any other nation. The natural expansion of these markets should provide for the export surplus of all the great industrial nations for many years to come.

Washington, D. C.

## When Green and Orange Mix

(Continued from page 324)

people of Ireland a control over naval and military forces which can serve no useful or necessary purpose, which in certain contingencies might involve great peril to the security of Great Britain, and to which it appears in the highest degree improbable that the Ulster Unionists would ever agree. Mr. Asquith's proposal appears therefore to be quite inconsistent with the undertaking which he himself has given—that the solution of the Irish problem must be one which meets with the general consent of the Irish people themselves.

The policy of the British Government, as embodied in their Bill for the Better Government of Ireland, is to endeavor to do for the warring and conflicting section of Irishmen what they are apparently unable or unwilling to do for themselves; it provides the most complete and immediate measure of self-government for the Irish people; it deals with the practical difficulties of the present situation in what appears to be the only practical and feasible way, by setting up in the first place not one but two parliaments for the two parts of the country; by providing a council in which the whole of Ireland finds representation as a nation, one and undivided, and provides the machinery by which so soon as the Irish people can settle their own domestic differences and so desire it, two parliaments may become one, and Ireland independent.

London

## A CRUISE de LUXE to the Mediterranean

on the Palatial Floating Hotel  
R.M.S. "Caronia" of the Cunard Line

A 49-day cruise visiting all points of interest along the Mediterranean shore.

Competent representatives of Thos. Cook & Son will accompany the cruise throughout. These, aided by the experienced permanent staffs at COOK'S offices in GIBRALTAR, ALGIERS, MONACO, NAPLES, ALEXANDRIA, CAIRO, LUXOR, ATHENS, etc., will be in charge of shore arrangements.

To permit of visits to CAIRO and UPPER EGYPT a full week's stay of the "Caronia" at ALEXANDRIA is provided for.

Passengers desirous of stopping over in Europe may leave the ship at NAPLES on the homeward trip and return to New York via CUNARD NORTH ATLANTIC SERVICE.

Fares vary according to staterooms selected. Minimum \$1450 inclusive. Reservations should be made immediately.

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

### English, Literature and Composition

- I. When Green and Orange Mix.
  1. Organize a debate between Orangemen and Ulstermen, on any aspect of the Irish situation, if possible one suggested by Mr. McCurdy's article. Consider the plan, outlined in his last paragraph, for two parliaments and a common council.
  2. Study the life of Edmund Spenser and his place in history, dwelling especially upon his years in Ireland.
  3. "There is today no quarrel between the English people and the Irish." What do you think Mr. McCurdy means by this statement? Do you think an Irishman or an Englishman would be the more likely to make it? Find everything that bears on it in The Story of the Week.
  4. Find as many names as you can of Irishmen who have been literary patriots as well as political patriots; Terence MacSwiney, for instance, wrote poetry in the Gaelic tongue in his younger years, and was always a writer. Look up W. B. Yeats, J. M. Synge, Lady Gregory, as many others as you can find for yourself. Choose one man, study his writings, and write a paper on him as an Irish patriot.
  5. Was the Sinn Fein movement originally political in its nature? Write a history of it, endeavoring to be impartial on the political side and as sympathetic as possible on the human side.

### II. To Their Mutual Advantage.

1. Write a "Big Business" article of your own, about some business concerning which you have first-hand information. Don't be merely descriptive; look up your facts. And be ready to be either favorably or unfavorably critical, whichever is warranted by the facts and your judgment of them.
2. Which article do you like best—Professor Commons' or Mr. Purinton's in The Independent of two weeks ago? What are your reasons?

### III. The American Watch on the Rhine.

1. Write three letters, each to some friend in America—one from an American officer stationed in Germany, one from an American soldier, and one from a German boy or girl or man or woman living near the American headquarters. If you like, they need have no connection; or they might be three points of view on the same thing; or, if you have enough to say, you might choose to write just one of the letters.

### IV. The First Assembly of the Nations.

1. Write the history of your different states of mind concerning the subject of a League of Nations, going back to the time when you first heard about a League to Enforce Peace. Show very clearly how and why your attitude has shifted—if it has—and make your present position plain.

### V. An Important Step Toward Christian Union.

1. "There are four branches of the Christian church—the Greek Catholic, the Roman Catholic, the Anglo-Catholic, and the Non-Episcopal churches." Arrange a program of short talks on the origin of the first three branches, and of several outstanding non-Episcopal sects.
2. What is the meaning of the following: episcopal, schismatic, catholic.

### VI. Translating English.

1. Add to the list as many examples as you can find of the things people say meaning something else.

### VII. A Little of Everything.

1. Write a description of your town, using "Ten Tests of Your Town" as an outline.
2. Make some suggestions for designs to be used on peace stamps in the United States.

### VIII. Free Verse.

1. If you saw "Thrift and the Cosmic Harmonies" without having read the Editor's note above, would you think it was funny? What is the difference between it and free verse by Walt Whitman or Carl Sandburg?
2. Write a poem in free verse that you seriously mean to be poetry, and write another that is a parody of current free verse. Without labeling them, give them to the class to decide which was your intention in each case.
3. Find some good anthology of modern poetry, such as Harriet Monroe's "New Poetry," and decide from it whether you think that the best modern poetry is, generally speaking, free verse or fixed verse.

### History, Civics and Economics

#### I. The Irish Question—When Green and Orange Mix. Murder and Revenge in Dublin. Fight in House of Commons.

1. How many Home Rule bills have been considered by the British Parliament, beginning with Gladstone's first measure? Have any actually been put into effect at any time?
2. Trace an outline map of Ireland from any geographical atlas. Color green that part of the country which desires national independence and orange the part which is opposed. How does "orange" Ireland differ from "green" Ireland in (a) national origin, (b) religion, (c) politics, (d) industrial development?
3. Can you think of another ease of a country with well-defined geographical limits which is divided, like Ireland, into two or more areas of dissimilar characteristics and traditions? Compare the divergence between "orange" and "green" Ireland with any one of the following with which you feel familiar: (a) North and South in the United States of 1860; (b) northern and southern Italy; (c) Prussia and south Germany; (d) German and Czech Bohemia; (e) Swedish and Finnish Finland; (f) Flemish and Walloon Belgium; (g) German, French and Italian Switzerland; (h) Catalonia and the rest of Spain; (i) French and English Canada; (j) Dutch and English South Africa.

#### II. The Labor Question—To Their Mutual Advantage. Hoover on Reconstruction. Labor versus Radicalism. Making Their Own Cigars.

1. "We have the beginning of joint control in industry." Show to what extent this assertion is justified by the Rochester plan of industrial conferences described by Professor Commons.
2. What is the function of the Labor Manager in the Rochester scheme?
3. Compare the Boston Coöperative Cigar Factory, described by Mr. Stoddard, with the Rochester clothing industry as discussed by Professor Commons. Under which system do you think the public and the worker would benefit more greatly? Is there anything which you would call "socialistic" about either?
4. For what reason in your opinion did the American Federation of Labor call Mr. Hoover into consultation? Do you agree with Mr. Hoover that the technical expert, the engineer, can do much to reconcile the interests of capital and labor?

#### III. League of Nations Assembly—First Assembly of the Nations. Aid for Armenia.

1. Compare the making of the American Constitution with the making of the Covenant of the League. Why did some American states hesitate about uniting with the new Federal Government?
2. What part does the Assembly play in the structure of the League of Nations? What opportunity does the meeting of the Assembly give to the smaller member nations? How many nations are represented in the Assembly?
3. Why was the Armenian question particularly urgent? What differences between British and French policy were evident at the meeting of the Assembly?

#### IV. American Administration in Germany—The American Watch on the Rhine.

1. Why are American troops in Germany? If we made peace now could American soldiers still be maintained on German soil?
2. What other nations have troops stationed in Germany? How long can they be maintained there under the terms of peace? (Hint—look up Articles 428-432 of the Treaty of Versailles).

#### V. Commerce—Our Share of Foreign Trade.

1. "Before the war only 8 per cent of our goods sold abroad was delivered in our own bottoms. Now we are carrying 60 per cent of our commerce under the American flag." What effect should this have on our commerce with Europe?

#### VI. National Finance—Congress and the Budget.

1. What is a "budget"? What reform of national finance is covered by the phrase "the budget system"?
2. Why is a Government or other public body so frequently slow to adopt the sound financial organization of successful private businesses?

## The Paragrapher's Sprightly Art

Collected from the American Press by L. N. Flint, Professor of Journalism in the University of Kansas

If they keep on establishing republics in the old country at the present rate, pretty soon there won't be any titles left except in American lodge rooms.

Licking war savings stamps leaves a pleasant taste in the mouth. Try it.

The man who got off that stuff about how womankind is advancing by great strides had evidently not seen the new hobble skirts.

We shall soon see whether marriage or drink is the cause of the divorce evil.

The story is that the original owners traded Manhattan Island for a bottle of firewater. If they had preserved the liquor they would now be in a position to make a very advantageous speculation in the same real estate.

These father-and-son banquets are a great improvement on the conferences the two used to have in the woodshed.

In place of rail splitting in American politics we now have hair splitting.

Hereafter political orators will be careful how they appeal to the "plain people." Women are a part of the voting population now.

To the victors belong the broils.

See America thirst.

There little brewery don't you cry, you'll grind sausages by and by.

We shall beat our swords into plowshares, and our corkscrews into buttonhooks.

Of course a cat may look at a king, but it will have to hurry.

Just what was the matter with the last Congress has puzzled the nation, but the fact that a majority looked on tooth paste as a luxury ought to throw some light on the subject.

A statesman is a politician you agree with.

If there's one thing that hurts more than having to pay an income tax it is not having to pay an income tax.

The trouble with the Irish question is that too many of the Irish people want what too many of the Irish people don't want.

Unless somebody is killed, the accident is generally unsatisfactory to the reading public.

What perfectly lovely husbands those returning soldiers who have learned to obey orders are going to make.

There is nearly as much "ire" as "land" in Ireland these days.

Let us confine the waving of the red flag to our railroad crossings.

German naval officers maintain that their fleet was never defeated. Neither was the Chinese fleet.

## Opening Nights

*Daddy Dimpkins*, by George Barr McCutcheon and Earl Carroll. All about an old bachelor and his seven adopted children. Delightful and wholesome comedy with much heartwarming humor and pathos. (Republic Theater.)

*When We Are Young*. Fair to middlin' conventional comedy featuring three so-called "stars." The story shows how the noble but happy-go-lucky spendthrift hero shovels snow and reforms for a cash register "Princess." (Broadhurst Theater.)

## Remarkable Remarks

BLASCO IBANEZ—When an American laughs, he laughs all over.

NOVELIST BERTHA RUCK—You Americans are not very gracious.

"BUGS" BAER—The price of food is rapidly dropping to abnormal.

DR. N. W. SANBORN—The big cold weather problem is the getting of eggs.

CORNELIUS VANDERBILT, JR.—Why is Los Angeles the largest city in the Far West?

SECRETARY DANIELS—If they put a few hazers in the penitentiary it would be a good example.

ROGER C. CRABTREE—Every American must be a statesman or he is likely to find himself a soldier.

JUDGE LEWIS, of Chicago—Women are like kittens. You have got to pet them to keep them happy.

HERBERT HOOVER—We have just passed thru a period of unparalleled speculation, extravagance and waste.

J. DENNIS BRADLEY—My views on any subject can be stated in five words: "I disagree with most people."

HELEN LOUISE JOHNSON—It would be far more artistic if the skirts went entirely to the knee, instead of half way.

JAMES G. HUNEKER—Considering the price of coal, where does all the money come from that is spent on grand opera?

BARITONE GEORGES BAKLANOFF—If one per cent of American men are virtuous, as the clergymen say, that is a large number.

FATHER JAMES CRONIN—If the employers refuse to grant what is right and fair, labor can and must use force to bring them to their senses.

ISHBEL M. ROTH—New York girls enjoy flipping their powder puffs under the masculine nose and using their lip-sticks without undue camouflage.

SENATOR LA FONTAINE—I consider the earth as a property unique in integrity from which humanity as a whole must derive full advantage in equal manner.

RABBI STEPHEN S. WISE—There are 50,000 Jewish families between 50th and 120th Streets, and I dare say that not 10 per cent are supporters of synagogues.

LORD ROBERT CECIL—It is a waste of time for Americans to think that this League could be scrapped and all nations go to America to form a new League.

Wide World

This is the first photograph of the formal opening of the League of Nations in the Hotel National at Geneva. Among the seated delegates are representatives of forty-three nations. The galleries are crowded with correspondents and newspapermen

Wide World

Half a dozen leaders in the League of Nations, photographed at the League's first session. From left to right around the table they are: De Leion of Spain, Tittoni of Italy, Bourgeois of France, Hymans of Belgium (president of the League Assembly), Drummond of England (secretary of the League), and Fisher of England

## Taking Banking Out of Politics

Some Inside Information on the Federal Reserve Board and Its Work

By Homer Joseph Dodge

"**T**HE Federal Reserve System is not a candidate."

A Democratic politician, seeking reelection, had just told W. P. G. Harding, Governor of the Federal Reserve Board, that unless the Board made credit conditions easier in his district he would be defeated.

"But the Federal Reserve System is not a candidate. What have we to do with the election?"

These crisp words of the Governor typify the policy of the existing American banking system. They emphasize the fact that for the first time since Andrew Jackson raised a national issue in his Bank of the United States, the monetary question is being kept out of politics to the best of the ability of its incumbent managers.

If the Federal Reserve Board can succeed in this effort, a long step will have been taken toward that emancipation of the money system from partisan wilfulness which Paul Warburg, first vice-governor of the Board, prophesied when the twelve Federal Reserve banks first opened their doors on November 16, 1914.

A bitter grapevine struggle is being carried on to determine this issue. On one side is ranged the Federal Reserve Board; on the other many politicians, some with great names, upon whom pressure has been brought to bear by business interests eager to see political control of money and commercial affairs intermingled. Tho lacking publicity, the struggle means settlement of a great popular issue, an issue between a scientific banking system, controlling rates of credit in accordance with the best interests of the whole people on the one hand, and a system of banks manipulated to serve immediate and selfish desires of particular and momentarily influential groups, on the other.

There has been scarcely a rise and fall of a kingdom in the old world or a political campaign and election in the new which was not closely intertwined with money interests. The 1920 issue should determine whether American politics and American finance are to be divorced or whether the latter is to be the plaything of the former.

To recite details of the incidents in the present con-

W. P. G. Harding, Governor of the Federal Reserve Board, stands for "a scientific banking system, controlling rates of credit in accordance with the best interests of the whole people"

test would involve assertions, recriminations, production of photostat copies of documentary evidence and other paraphernalia of the sort best acclimated to courts of law and rooms of investigating committees. Let it suffice that there is such a record, including messages of the greatest leaders of the Presidential campaign. Probably they are best hidden in the files for they represent a willingness on the one hand to bring to bear on the campaign the power of the Federal Reserve System over American business, and, on the other, the fixed determination of the incumbent official custodians of the system to stick to banking science and let the politicians whistle.

The system dominates American business. Its money theory is based on the volume of commercial credits arising from everyday business. Its currency is designed to expand only at the necessity of legitimate commerce. But the stress of war brought

the lesson that big business or grouped business can, like Napoleon, make circumstances. The Board has learned that, in addition to operating the system to meet legitimate needs, it also must guard against malevolent effects of artificial circumstances created by special groups or by engineered economic tendencies.

The war kept the credit regulating machinery of the Board dormant. Its exigencies dictated certain narrow limits of policy. The body must function purely for war purposes. How strong the pressure to restrict the Board's operation was has not heretofore—indeed could not have with propriety—been printed. But it will be recalled that as the bond issues were floated, the demon of inflation continued to bloat. Economists, bankers, business men, politicians and others who could spare time from winning the war, scathingly attacked the Board for not raising the bank rate, then down around 4½ per cent. The low rate encouraged speculation and increased living costs, it was claimed. The reasons why the Board remained silent under these attacks were two—one coöperative, one coercive.

Secretary of the Treasury McAdoo wanted to sell as many bonds as possible at low rates. It was not known how long the war would last and to raise the bank rate would mean the bond rate also must go up.

With this aspiration of the Treasury, the Board necessarily must be in sympathy. But if it had not been, if it had felt impelled to increase rates to stop speculation, the coercive reason would have become operative. For the Overman Act had been passed. This authorized the President to rearrange any agency of the Government. He could put the Bureau of Fisheries under the Director of the Mint or the Shipping Board under the Librarian of Congress, if he chose. By the same token he could put the Federal Reserve Board directly under the Secretary of the Treasury. This done, the bond-selling Secretary would have sole voice. The change was not made, but the fact that it *could* have been constituted the sufficient word to the wise. The rate stayed down.

After the armistice credit conditions altered slightly, there being from November to January a contraction, valuable in providing proof that Federal Reserve currency would contract. But, with the Victory loan and hundreds of millions in Treasury certificates yet to sell, the Treasury policy of war finance did not change, the bank rate stayed down and the spring boom of 1919 renewed the inflation. But in December, 1919, the Federal Reserve Board determined that the war was far enough behind to justify the banking system in throwing off the Treasury influence. In a speech at Boston that month, Governor Harding announced a declaration of independence of the Board. He gave notice that thenceforward the Board would function in accordance with the business dictates of the country.

Traders in Wall Street will recall the winter of 1919. The Federal Reserve bank rate went up a point and call money rose to 30 per cent. There was a cry that the Board would precipitate a panic by approving the rate increases of the Federal Reserve banks. A pronounced flurry did occur. But, drunk with the post-war boom, the traders could not believe in the earnestness of the Board and the bulling of securities soon began anew. Careless of the interests of speculators, the Federal Reserve banks of Boston, New York and Philadelphia put their rates up in answer and another flurry came. With the issue problematical, the Board got Congress to amend the Federal Reserve Act to provide a progressive discount rate system, whereby the more a man borrowed, the higher interest charges he would have to pay. Not content with the security liquidation

which had been forced, the Board soon shot rates up again, equalizing them for all sections so there could be no interdistrict rediscounting to advantage. Gradually, the traders learned the Board was in earnest. By its rate increases it had proved the system adequate to control business and not a mere note issuing facility. It had squeezed a billion dollars in speculative, inflated values out of Wall Street, this money going inland to enter productive business.

Spring brought the railroad switchmen's strike, tying up goods on which bank loans had been made. The burned speculators were crying discrimination, insisting that commodities also must feel the Board's rod. The goods were not being delivered, their price could not be remitted, the loans for which they were the security could not be paid. Particularly in the middle west acute stringency was felt. The Federal Reserve Bank of Kansas City put the new progressive discount system in effect, just at the panic stage and, under its terms, would-be borrowers were restricted to a minimum of accommodation.

The Board called a conference of bankers to meet at Washington, May 18, 1920. Rumor had it the body intended to class certain industries as essential and others not, and extend credit accordingly. Representatives of industries, particularly the automobile industry, took alarm and dashed to Washington to importune the big bankers not to let the Board put them out of business. A dolorous set of bankers and business men sat about hotel lobbies the night before the conference, talking panic in low tones.

The next night the hotel lobbies looked different.

By exercise of that curious influence which leaders who keep their heads and remain unafraid are able to exert over those less well-ordered, the Board had allayed the fears of the timorous. Its members made it clear there was no intention to classify essential and non-essential industry. They merely explained in plain words that speculation and credit expansion in the United States must cease. They pointed out that in previous periods of money stringency here, we could, in a pinch, recoup reserves by selling finance bills in London and Paris. Now, however, not only could no assistance be had from abroad; all the world was clamoring at our doors for assistance. Our banks must be [Continued on page 369]

# Can Air Be Too Free?

By Laurence La Tourette Driggs

The president of the American Flying Club suggests in the following article that it's time the American people woke up to the need for aviation legislation. At present it is lamentably legal for a foolhardy aviator to try his stunts just over the heads of innocent bystanders

**W**ITHIN the week two legal questions have been brought to lawyers for an opinion. The first was in the form of a telegram from Barre, Vermont, stating that an aviator was being sued in the local courts for damages arising out of an innocent flight over a farmer's field. The farmer happened to be plowing with a nervous horse, which bolted. Tho one did not see it, one can imagine the nervous horse kept both eyes glued on the roaring contraption overhead and quite forgot the proximity of a barb-wire fence which all his life had stood between his pasture and this plowed field. Thus with considerable contributory negligence on his part, he suffered from numerous abrasions, contusions, cuts, penetrations and shock, after his headlong plunge into the vicious fence.

The farmer, who believed in barb-wire fences, sought to recover damages for the horse's injuries, on the grounds of trespass over his private property where he had an undeniable right to plow with a nervous horse, and on the further grounds that the aeroplane comprizes a public nuisance.

The second request for information as to a citizen's private rights, which are injured by this new science of aviation, was of an entirely different character. On a quiet Sunday morning over a well known golf links near the Hudson River, a mad young aviator appeared just at the crowded time of day when strokes were being economized with due regard to the ball nassau forfeits. Without reverence for the high tension of the golfers' nerves, the pilot, secure in his limitless air,

amused himself with horrid dartings at the players on the green, pulling up on his aeroplane when but a few feet over their heads, and continuing these joyous capers until scores were forgotten and the last of the players rushed to the clubhouse for protection. Then, to show his ability to land on a small spot, the aviator cut off his motor and ran along the fairway, cutting a deep gash in the smooth turf with his tail skid, equal to wounds from a thousand niblicks. Only the confirmed golfer can estimate the depth of golfing anger stirred up by this prank. The following morning the president of the club paid a visit to the office of a lawyer.

It is of small satisfaction to learn that the United States has no laws on aviation; that not even licenses are sought nor granted; that the statute books are silent on remedies and court decisions are lacking on precedents. Can any irresponsible boy fly over our heads in a machine and perhaps cause irreparable injuries to our persons and our property without our having any rights of compensation or protection? If this is so, why isn't something done about it?

The fact is that fundamental laws, limiting the operation of aircraft, licensing air pilots and defining the rights of the public and the aviators, were drawn up by representatives of the several nations at the Paris conference, at the time the treaty with Germany was drawn. The nations of Europe are now operating their aircraft under these laws. But the United States, having discarded the treaty and all the interbound ties connecting it with the League of Nations, is still at war with Germany, and is still [Continued on page 374

Whether You Read It in Your Armchair by the Fire or See It from  
the Fifth Row Aisle

# The Play's the Thing

By Montrose J. Moses

Author of "The American Dramatist"

**I**N 1906, Henry Arthur Jones, the English playwright, made an earnest plea for the printing of plays. He overrode the objections of those who opposed the idea by claiming truly that a body of stage literature worthy in style of preservation in book form would help to purify and make sound the taste of a public which had not yet clearly determined in its mind the difference between "amusement" and "entertainment."

His brief was not written without some effect, for English dramas, one wanted to read after seeing, soon began to appear, and contagion spread to America, where, for so many years, the native efforts of our playwrights were buried in the manuscript-office of some theatrical agent or manager.

It may be said, with scarcely any reservations, that there is no play of any note—unfortunately there are many plays of hardly any worth at all—which cannot be easily obtainable for the library. One is able to examine at close range the charm of a stage story, the virility of its dialogue, the expertness of its structure, the cleverness of its increasing suspense, the truthfulness of its characterization, its acting opportunities, by giving it that close, slow attention on the printed

"Major Barbara," where I revelled in its social satire because I was prepared beforehand to parry the blows of its humor and understand its keen jibes at social condition—an intellectual depth which is wanting in Edward Sheldon's "Salvation Nell" (also published), tho the two plays deal with similar subjects, steeped in somewhat the same atmosphere. And the significant thing about this statement of mine is that you can check it up yourself, as a reader, because both plays are easily obtainable in print. It is possible for a critic to tell you that Shaw's "Widowers' Houses" is better social philosophy than Charles Klein's "Daughters of Men," and you are able to go even further than the statement—by turning to the plays themselves—in determining exactly how much better Shaw's deeply-grounded and intellectually-founded Fabianism is than Klein's snap-judgment in the reading of newspaper files. Such intellectual measuring-up of playwriting and the intellectual enjoyment of the theater is due to the printing of plays.

No advocate of the published play wishes to destroy expectancy when you go to the theater. If the whole value of a play lies in the situation, it is a thousand pities that you have to dispel that expectancy by having it told you, either in the reading before going to the theater, or in the printed review of it which appears in the current papers or magazines. But I claim, with Henry Arthur Jones, that a play so surface as to call for nothing but clever trickery of stagecraft is worthy neither of print nor of our golden evenings nor of a second consideration. For print, like indelible ink, brings out the strength and weakness of a drama, its shades and high-lights. There are many good acting plays, there are a multitude of actor-proof parts, which are threadbare in cold type, and dull in their ink-stained wording, because no spiritual meaning shines behind. "The Two Orphans" reads like mere romantic drivel, "The Lady of Lyons" like swashbuckling fustian. Literary value raises the whole quality of a story into something permanently told.

To read a play is much more difficult than to read a novel; there is more demand on visualization in the imagination; it is the shorthand technique of the novel, sparing of words, reticent in the choosing of heightened moments in the lives of its characters. It is the reader who must supply the hidden values, who must transcribe the dramatist's notes. If he is able to do it well, then he is able, by the reading of a drama, to convince himself that it will act effectively on the stage. But the theater surprises one by the tricks it plays. Sometimes you read a printed play, and you think it is bound to act well; when it is given it is a failure. Again you have doubts about the acting quality of a drama, tho you admire its literary excellencies. You begin to doubt, with some justice, whether the literary value of a drama is necessary in the theater at all. You have probably forgotten the fact that while the printed book appeals to you singly, and may appeal to a hundred thousand like you, individually, the acted play has to appeal collectively to the crowd.

For instance, I read John Drinkwater's "Lincoln"

White Studio

Josephine Victor and Herbert Lomas in one of the tightest moments of that relentless play, "The Skin Game," by John Galsworthy, now playing at the Bijou Theater

page which the theater never allows. We used to go and see Barrie's plays, joyful in their sweet spirit of quaint poetry, and we would come away wishing that at home we might have a closer experience with what we are right in calling "the flavor of Barrie." Well, it is possible for us now to read "What Every Woman Knows," "The Admirable Crichton" and "Quality Street." We got to know Bernard Shaw—if we will ever know him—from his "Plays Pleasant and Unpleasant" long before our managers were convinced—thru the daring plunge of an actor into "Candida" as an escape from musical comedy—of his commercial value; and there has not been a play of his since that we have not been able to examine for its wit before going to the theater to meet an enjoyment no whit the less in value because of our being thus forearmed. I recall my experience at

Henry Travers, appearing in the Theater Guild production of "Heartbreak House," now playing at the Garrick Theater. This play, being by Bernard Shaw, is not one to read before or after—you must read it both times

before I saw it, and tho, in my judgment, I had its phenomenal success in London to prompt me, there was much in it which could have upset me had I been willing to submit the play to a *Broadway* measurement. English plays, however excellent their readable values, do not always go on the American stage: the psychology of national temperament enters. But in Drinkwater's case—I did not measure it with the same rule that measures Mrs.

Stowe's "Uncle Tom's Cabin." I felt that the dignity of its poetry was the right clothing for the dignity of its central character. And I felt that the unity of the soul in Abraham Lincoln would bind together, in a heart-consuming interest, the episodic incidents selected by the Englishman with the same purpose as the old English chronicle play. I brushed aside Drinkwater's historical inconsistencies—Shakespeare is full of such, if we need a higher authority; I brushed aside my doubt as to whether an actor could be found sufficiently trained in the music of verse to read his interludes properly; I read them silently and knew that, like music of the noble kind, they would bear repetition on the stage, and then again in the library. The average American manager dodged the play, and he still can't explain why the play was a success, and why it is likely to be a success for many years to come on the road. Read this play before or after you see it, or before *and* after. No repetition can kill the value of its sincerity, or the sincerity of its style.

The opposers of the printed play are now in the minority; today, I can tell you what dramas to read, and if you read them, you will be following the drama as it is at present in New York, even tho you may never see them as played in New York. This shows that in the insurgency of the theater—away from the theatrically-cut play to the drama of substance, of fine material—the managers are going to the book for the play which has been on the shelf for many years. For

example, John Galsworthy has not had an easy path in the theater. We know how his "Justice" knocked on many a manager's door in vain, and yet we know also that when it was finally given we flocked to the theater to see it with our interest no less tense—because of reading it—for the tragedy. The pity is that often such plays remain so long unnoticed on the shelf that, when taken down and presented, they are a little out of date by reason of the fact that, while the drama in the theater is a reflection of life, life has a way of suddenly changing, especially in these revolutionary days of new social adjustments. The war has altered our standards, has torn down most of our social barriers—until now there are plays by Pinero and Jones and St. John Hankin—all obtainable in print—that sound as impossible as some of the Restoration comedies.

Galsworthy's "The Mob," which has been in book form for several years, was purchased by an actor who saw himself in the part of the stoical idealist defying the imperialism of his government. But the poor actor could not find a manager, and so he perforce relinquished his rights to an insurgent group in New York, The Neighborhood Playhouse—an organization helping to do, to some extent, for New York, what Miss Horniman's Players did for Birmingham, England: establish some semblance of a repertory. It was they who started the Dunsany fad. The fact that the war is over makes "The Mob," just given, come with an effect of anti-climax: a war-play after the war is over. Managers may have argued in refusing to present it that such dramas are now out of fashion. But the poignancy of the theme in "The Mob"—written with that cold, judicial, non-partizan attitude Galsworthy maintains so consistently, and sometimes so irritatingly in his plays—appealed to me with added force when I saw it on the stage, because it dealt with the spiritual hardships of a man who is willing to die for a conviction, much in the same way that a certain American has recently been battling for an ideal, born of the war—battling in the face of political opposition that has crushed him physically and repudiated him spiritually. I could describe the beauty and economic reticence with which the play is given by the Neighborhood Playhouse in an out-of-the-way New York street, far removed from the glare of Broadway. While you may never have the opportunity of seeing it as given, you will be able to follow my comment, because you probably have "The Mob" on your library shelf.

Galsworthy's "The Skin Game" was issued in book form before it was presented on the stage. William A. Brady, the theatrical manager, has just produced it. I heard some comment that because of its theatric interest—and when Galsworthy becomes theatric he seems to push into his play a situation which is artificial in comparison with his [Continued on page 372

A scene in the terrible last act of "The Mob," by John Galsworthy, recently given at the Neighborhood Playhouse. A reading of the play could not give you the expressiveness of this mob, unique among stage mobs. But only by reading can you get the whole force of the stern and poignant lines

# Freezing Out Uncle Sam

By Edwin E. Slosson

THE United States and Germany, the two leading nations left out of the League, have both protested to the League against the way the mandates are being assigned and administered.

The mandate plan was a compromise. When the Allied and Associated Powers came into conference at Paris they found that they had at their disposal territories larger than Europe or the United States. Never since the flood had there been so much land in liquidation. Four great empires had been broken up, the German, the Austrian, the Ottoman and the Russian. What should be done with the fragments? The historic rule was "to the victors belong the spoil," but history showed the victors were very apt to fall out over the partition of the spoil.

This partition had been in part provided for by a set of secret treaties among the Allies, which earmarked in advance certain territories for particular powers. These treaties, President Wilson says, were not made known to him when the aid of America was sought and when he did learn of them after his arrival in Paris he declined to be bound by them on the ground that they were inconsistent with the war aims which the Allies, at his request, had publicly professed and with the armistice terms under which Germany had surrendered. The secret treaties were anyhow antiquated, inconsistent and inadequate. The sacrifices of the Allies had been greater and their victory more sweeping than they had anticipated.

There were two opposing views at Paris as to the disposition of the dependencies that had been detached from the empires in dissolution. One was simply to divide them up among the victorious powers in the customary way. But a new and higher ideal had been born of the war, that the undeveloped resources of the world should not be monopolized by any nation but should be held by an international organization for the equal benefit of all and with special reference to the welfare of the natives. This was the plan advocated by the President for the disposal of the conquered dependencies. The British Labor party in their program went farther and urged that all tropical and undeveloped lands, whatever their present ownership, should be placed under international control.

But there were certain practical difficulties to this idealistic plan. Where joint control had been tried, as in the case of government of the Samoan Islands by Germany, England and the United States, or of the New Hebrides by England and France, it has never worked well. The protecting powers have quarreled among themselves, the natives have suffered and the country has not been so well developed as it would have been under any one of its guardians. The League of Nations was a new and untried institution. It had no army of its own, no corps of trained administrators, no traditions and no prestige. Could the infant League, hampered as it was by a Council where every member had the veto power, manage an empire as big perhaps as Australia or Europe and largely composed of unruly and antagonistic peoples?

To reconcile these two opposing plans General Smuts of South Africa came forward with the proposal that the liberated territories, in so far as they could not stand alone, should be assigned in severalty to such of the powers as are best fitted to aid them under a mandate from the League to insure that they should be administered with due regard to the interests of the inhabitants and so as to "secure equal opportunities for the trade and commerce of other members of the League."

The mandate plan seemed to be the best solution of the

difficulty so it was incorporated in the Covenant. Since this document formed the bone of contention in the recent election it is fair to assume that every voter has a copy of it. So it is unnecessary to quote here Article 22 that describes the mandatory system. But attention should be specially directed toward the sentence already quoted just above which shows that equal trade opportunities are insured only to the "other members of the League." Now the United States, like Germany, is not in the League and might, if the members of the League were so selfish and unwise as to declare a boycott, be shut out from any trade with the whole of Africa, South America and the Pacific Islands and with the most important part of Asia, as well as Canada and the Caribbean.

If the present League were a League of All Nations, as it was intended to be on its inception, there would be no difficulty about confining to its members the privilege of equal access to the raw materials of the mandated territory. But any nation remaining outside is at a commercial disadvantage which may become serious if the territory contains some product essential to civilization.

Among such essentials are fertilizers and oils, mineral and vegetable. Now the little island of Nauru in the Pacific is capped by a bed of phosphate. But Great Britain has been given the exclusive right of working the bed and selling the phosphate. Fortunately the United States has an abundance of phosphate so we need not worry about this.

Palm oil is necessary for making tin plate. It largely comes from the Gold Coast of Africa and the trade used to be in the hands of the Germans. During the war the British, needing all available fats for food, soap and nitroglycerine, made palm oil a Government monopoly and shut off its export to the United States. This threatened to ruin our tin plate industry and we had to beg the British to let us have a little. The British Government was obliged to consent because if we could not get palm oil we could not make tin cans and if we could not make tin cans we could not supply the British army in France with canned beef. In this case too we might be independent if we wanted to, for so long as we hold on to the Philippines and Caribbean Islands we could grow our own palm oil.

A third case is more important, that of petroleum. Here again the United States has been liberally endowed by nature, but we have been very wasteful. If we divide the estimated amount of oil remaining in the ground in all known fields by the amount consumed last year we get fifteen as a quotient. That does not mean that at midnight on December 31, 1935, there will not be a drop of gasoline to be had, but it does show that petroleum will from now on get rapidly scarcer and dearer until ultimately it ceases to be a common commodity and some more or less inferior substitute like alcohol takes its place. The commercial and naval power of the future will be in the hands of the nation that possesses the largest oil supply. A merchantman run by Diesel or other internal engines fed with petroleum can go round the world without recourse to a coaling station. An oil fleet can chase a coal fleet anywhere on the high seas.

Now America, having oil to burn, has shared it generously with her needy neighbors—at a generous price. She has fed the million lamps of China and India and filled the tanks of friendly fleets and rival traders. Soon she will, like a foolish virgin, be begging sister nations for the loan of a little oil. In the year 1918 the United States exported over 2,700,000,000 gallons of mineral oils.

Capricious nature had denied the greatest naval and maritime power in the world an adequate supply of oil. The territory over which the British flag waved, amounting to about a quarter of the habitable earth, was not originally picked out on its petroleum prospects. But the war gave the British Government a chance to remedy this deficiency so it has insisted upon retaining possession of the oil fields in Persia and the Mesopotamian valley. The latter claim was disputed by France, which had been granted the Mosul district, on the upper Tigris, by England in the Sykes-Picot treaty. But France was conciliated by a promise of a share in the oil of Mosul and a free hand in Syria.

This agreement, by which Great Britain obtained the exclusive control of the Mesopotamian oil, was reached at a private conference between British and French representatives held at San Remo, Italy, last summer. But the United States promptly and repeatedly protested that such a private arrangement and monopolization was contrary to the principles on which the League of Nations was based. Secretary Colby's latest note has been made public and is printed in part in our Story of the Week. Its logic is incontrovertible, but its effect is negligible. France and England can afford to disregard such paper protests and doubtless will do what they like. The pitiful thing about it is that the United States must beg and plead for her rights, whereas if she had taken her seat in the Council of the League of Nations she would have had the veto power against any such discrimination. We cannot blame the nations which are in the League for making the most of the advantages that they have gained thru our refusal to coöperate with them.

## Flag Burning

**I**RISH mobs in New York City have on several recent occasions amused themselves by tearing down and burning British flags. Public theaters and private clubs have alike been victims of their fury. If such rioting amuses Sinn Fein sympathizers who are safe on this side of the Atlantic we suppose that they are the best judges of their own fun; but if they are in serious earnest about helping Ireland they should reflect that a million torn British banners would not make Ireland independent and that a few more riots may seriously alienate American sympathy. The public will grow tired in time of broken windows.

## Wells on the World

By Edwin E. Slosson

**T**HERE is no bigger writer than Wells. There is no bigger subject than the world. So when the one tackles the other a literary sensation is bound to result. Wells began his literary career by cruising to and fro along the fourth dimension in his "Time Machine." Since then he has spent more time in the future than in the past, but prospective history is more difficult to write than retrospective history, so there is no reason why he should not succeed at the easier task. To be sure his schooling was in biology instead of history, but this is not altogether a disadvantage since all human history is merely a branch of biology. If historians had used their microscopes on the microbes of malaria rather than on the minuscules of the manuscripts they would have known more about the cause of the decline of Greece and Rome than they did.

Knickerbocker began his "History of New York" with Adam. Wells, being a biologist, gets a better running start for his "Outline of History" by beginning with the protozoa several hundred million years earlier than the date Archbishop Usher put at the top of the first page of the Bible. It takes Wells two hundred pages to get down to what used to be called "historic times," but this space

is not wasted for it gives the necessary perspective to the story of man and his planet. As Wells reminds us: "Half the duration of human civilization and the keys to all its chief institutions are to be found *before* Sargon I," and Sargon ruled over Mesopotamia in 2750 B. C.

Besides reminding us of our poor relation, the pithecanthropus, Wells has called attention to certain parts of the world commonly ignored. He regards Asia as more than a mere annex to Europe, to be alluded to only when Asiatics happened to come into conflict with Europeans. He devotes ten pages to Jenghis Khan and five to Akbar, while he disposes of Louis XV and Frederick the Great in half a page apiece. He gives fifteen lines to Victor Emmanuel and a full page to denunciation of Kipling's "Stalky and Company" as typifying the defects of British education and administration. He gives three pages to the mournful mummies of Charles V after he retired to the monastery and seven lines to the battle of Waterloo. This distribution of space may be criticized, but it is a refreshing departure from the conventional

Twenty years ago in his "Anticipations," Wells suggested the advisability of publishing books with footnotes by antagonistic critics. He expressed a desire that somebody should treat his books that way and since nobody has taken up his project he has now had it done himself. His "Outline of History" has been subjected to scrutiny of four competent critics, Ernest Barker, Sir H. H. Johnston, Sir E. Ray Lankester and Professor Gilbert Murray, who freely disagree with the author's opinions and sometimes flatly deny his statements in their footnotes. This adds greatly to the interest besides giving a needful corrective of another point of view. When Wells says that Gladstone, despite his classical training, was "a grossly ignorant man," Professor Murray takes him up—or calls him down—and a lively debate follows in the footnotes for two pages.

There has been, so far as I know, only one history of the world worthy of the name and that was Helmolt's. This is really a history of the *world*, not merely of a few favored countries with incidental mention of the rest. It covers Asia, Africa and the Pacific as conscientiously as Europe, so I find it more useful than any other as a reference work, for a journalist can never tell where the lightning—or the limelight—is going to strike next, except that it will strike some new place. For instance, when the peace treaty with Germany was first cabled from Paris it was found that one of the demands made by England upon Germany was for "the return of the skull of the Sultan Mkwawa." The librarians were driven distracted by telephone inquiries about the missing bonehead, concerning which hitherto the public had manifested no curiosity whatsoever. But when I turned to Helmolt there was the genealogy of the African potentate worked out with the same care as the ancestry of the Bourbons. But Helmolt fills eight very large volumes and is a composite work, written by a corps of specialists of various countries.

Wells' "Outline of History," tho necessarily inferior to Helmolt in comprehensiveness and scholarship, has the great advantage of readableness and unity of style and viewpoint. It is all Wells and Wells alone in spite of its extensive quotations and corps of collaborators. His idiosyncrasies and mental bias give zest to the narrative. He writes with the freshness and interest of one who has freshly discovered interesting things. He explains things clearly to the reader because he has just had to explain them to himself. He looks on Assyria and China with the sensitive retina of a tourist.

The work appeared in England in the form that most of our modern literature takes, the periodical, in fortnightly parts. Macmillan has put out the American edition in two handsome volumes of 1300 pages in all at twice the price of the English edition. Unfortunately the colored

plates and halftone illustrations of the English form have been left behind. The maps and diagrams should have been redrawn to suit American taste. The English do not know how to draw maps, except Bartholemew, and he is a Scotchman. The illegible lettering and obsolete shading spoil the effects of the ingenious designs.

Wells has one of the most alert minds of our generation. He has an intuition for discerning the trend of "the mind of the race" as Lloyd George has for feeling the political signs of the times. He perceived the religious significance of the Great War when most people were blind to it. He now sees and makes plain that the new era into which we are now entering demands a new sort of history, a history of the world as a whole, and that this is different from a collection of the histories of all the separate countries.

### Pricking the Bubble

THE case against the Japanese in California presented to Secretary of State Colby by Governor Stephens thru the report of his State Board of Control, is greatly weakened by the discovery that the census figures just issued show the increase of Japanese population in California to have been overestimated by 60 per cent. The Board of Control's estimates, based on arrivals at the port of San Francisco and birth statistics, indicated an increase of 45,923 in ten years. The census shows an addition of 28,840. There is no evidence, as charged, that the Japanese sought to evade the census, for the estimates given out by their own papers are in excess of the census figures. The Board of Control overlooked the important fact that Japanese are migrant. Thousands of them have moved on into Utah, Idaho, Wyoming and Colorado. Thousands of others have returned home. The percentage of Japanese land holdings in California was also exaggerated by comparing the total acreage leased and owned by them with the irrigated acreage only. The report of the California Board of Control was widely circulated three months before election. Census reports come out two weeks after.

## Our War Reaction to Religion

By Shailer Mathews

IT would be a miraculous exception if religion did not share in the psychology of the present moment. There seems to be a pretty definite law that the aftermath of any tragedy is division of opinion and consolidation of spiritual antagonisms. The progressive grows more progressive, and the conservative grows reactionary.

This is the mood of religion in America. On the one side is the idealism represented by the Interchurch World Movement, and similar undertakings seeking to extend Christian principles to all spheres of life. Never was there a more magnificent vision. The fact that as yet it lacks capable administrators proves nothing to the contrary.

But on the other side there is an organized group of Christian workers, opposed to pretty nearly every aim, except individual evangelism, which forward-looking men cherish. Instead of Christianizing society, they hold that the business of the church is to rescue individuals from a world which is growing worse. Instead of expecting or desiring to be shown moral progress in society, they welcome evidence of evil and degeneracy. So far from helping Christian history to project itself into the future, they hope and pray that history will come to an end, that Jesus Christ will emerge from heaven, and the unseen, gather Christian people suddenly and without the knowledge of the rest of the world, into the rapture of a meeting in the sky. They expect days of tribulation—to be followed by the appearance of Jesus to establish his reign on earth, with his capitol at Jerusalem, where the ancient sacrifices of the Jews will be established in a rebuilt temple.

Such expectation they make the central meaning of Christianity, and it is pessimism rather than hope.

Notwithstanding this type of theory has been condemned by great orthodox bodies, it is having serious influences on the churches. At least one denomination in the Dominion of Canada has practically surrendered to this view, and has made it almost impossible for ministers holding any other opinions to obtain a pastorate there. Its representatives are exerting every effort to get control of church life in the United States, notably that of the Baptist and Presbyterian. In at least one case, they are deliberately undertaking to divide the denomination, and remove and ostracize teachers and preachers who do not assent to their methods of Bible study.

Such a movement in Christianity threatens the very existence of the church as a factor in the establishment of a better social order. The sincerity of its leadership does not mitigate the danger already resulting from its partial success. Therefore the country churches are divided, denominational plans of advance are thwarted, leaders formerly trusted misrepresented and attacked, and any form of social gospel bitterly condemned. Even in the midst of the war, the adherents of this view issued an appeal that human schemes of reconstruction should be subsidiary to the second coming of Christ.

All this is an aspect of war-time psychology generally, but not even in the sixteenth century did such a movement so threaten the efficiency of the Christian church. With large sums of money for propaganda, unlimited appeal to prejudice, with what appears to be small ethical restraint in misrepresentation and personal attacks, and working with the avowed determination to transform the Christian church from a channel of moral and religious power for social as well as individual good, into a group of those who expect the end of the world in a few years, this movement may well cause anxiety to those who believe in the true meaning of the church. It cannot wholly undo the progress of the last few years, but it can check the progress of Christian social forces, weaken denominational organizations, sow the seeds of dissension and decay in local churches, and place the church in the hands of those out of sympathy with the modern world. Those who believe in a Christ abiding with those who keep his words, rather than the mistaken hopes of early Jewish Christians, may well feel called upon to preach His gospel, for the real issue concerns the essence of Christianity and the mission of the church.

And if history shows anything it shows that the gospel works thru social forces as truly as thru individuals.

### *Sposin'*

*The children of Israel had told Moses that they were forced to turn their backs on the "Sinai Ten Commandments" because they were of foreign origin and make another set of ten at Jerusalem—*

*King John had informed the Barons that he was quite ready to sign a Magna Charta, he objected only to the Magna Charta—*

*George the Third had assured the colonists that a declaration of Independence would be all right but that he could never accept the "Jefferson Declaration"—*

*The colonial legislatures had announced that the "Hamilton Constitution" must be scrapped to make possible a real "association of States"—*

*Congress had assured President Lincoln that while it was devoted to the principle of emancipation it could not approve any particular Proclamation.*

## Hunting a Cave

By Preston Slosson

WHEN Adam and Eve were evicted from Eden Villa and started the first house hunt in history they started at the same time a precedent which has hardly been broken from that time to this. Indeed the great outdoor sport of trying to find an indoors to live in was never more earnestly practised than by ourselves. What is it that the world is lacking most in these after-war days? Food? Yes, in particular places like Armenia and Vienna, but hardly in the United States. Americans mostly manage to make the pay check cover the lunch check in spite of higher prices. Clothing? Well we have worn last year's until prices started downward, and now it is at last possible to buy a shirt or a pair of shoes for something less than Manhattan Island was priced at when bought from the Indians. Shelter? There you have the answer! While all other prices are sliding downward, rents are going up.

The war hit a double blow to the world's housing. It knocked over thousands of houses in the war zone and it disorganized the building industry everywhere else. Labor leaked away from the home building trades to the munitions works and the battlefield, and what labor remained demanded triple wages. The contractor did not pay these prices; he passed them on to the landlord and the tenant.

Gone are the simple days of the caveman, when house-hunting simply involved the eviction of a mountain lion or grizzly bear from his ready-made flat. Today we must construct our own caves of steel and brick along the mighty cañon streets of the great city. If economic conditions only permitted our greatest metropolis to be located in the Mammoth Caves of Kentucky how convenient it would be! Or if we could pitch our tents like the Arabs and as silently steal away on rent day, as the poet sings. This would be suited to our nomadic habits, for the modern American who flits from job to job in every corner of the continent has little taste for ancestral mansions. But the American climate is not as the Arabian. Those who have lived in wigwams in the winter time complain that they miss the furnace and the radiator. We cannot take our houses with us like the turtle and the Tartar. We must build or rent them anew wherever we migrate. And often we find them not.

To the New York City dweller the raise-your-rent-day means anxious scanning of the papers for new opportunities. Disregarding the apartment hotel, built only for the very wealthy who could afford real houses if they wanted to, we find two types of things in the paper:

The Paradise Apartments. Two rooms and a bath. Also a hall which can be passed thru by anyone of moderate circumference. Room for a folding bed, a folding table, three folding chairs, two folding bureaus and one folding stove. Other furniture may be stored in any storage warehouse. Occasional elevator service to the eighteenth floor. \$250 a month and upward.

Happycrest Villa. Rambling old Colonial mansion built in 1913 (the last house built in Mosquitohurst). Strictly modern in price and other features. Within three hours of the city if proper trolley connections are made. \$14,000 down; \$38,000 on mortgage.

This does not make the citizen very happy. He does not like to spend his life in a pigeonhole desk of an apartment, like a memorandum on file. Neither does he want to spend his life alternating between the suburban train and a rambling old mansion that may ramble as far as twenty feet from the front door to the back and fifteen from right to left. Nor does he want to stay where he is with the rent jumping like a kangaroo. He gets cross and begins to talk about Bolshevism; unwisely, since a Bolshevik régime would be more apt to wreck the houses we have than build the ones we need.

Cannot necessity stimulate invention? Perhaps those of

us who live near the water will take to a new and improved style of houseboat and proudly address our letters, "Off Pier 47, Lake Ontario." Those who live inland may evolve an omnibus automobile; a true house on wheels. Our cities will be vast camping spaces, and Chicago may at any moment take to the road and move bodily to Los Angeles or Orlando, Florida. Perhaps the standardized stucco house, which has already done a little to cut suburban costs, will be taken in hand by Mr. Ford and a complex machine will squirt out a hundred complete houses an hour. As some of our readers may recall, The Independent has given space to two devices; one of a builder who would make little round boxes so that we could live without corners and carpenters, another a vast centipedal "Stringtown" with the houses threaded in a row on thousands of miles of continuous road. Will science find an answer or must we camp in the open under the inadequate shelter of our rubber plant?

## Coolidge

CALVIN Coolidge declares that the election was not a verdict against the League of Nations and that it is wrong to speak of the League as dead. Our next Vice-President has a habit of telling the truth, which is none too common in politics, and will acutely embarrass some politicians.

## The Census of 1930

THE census of 1920 is a disappointment. It matters little that the total population has increased less from 1910 to 1920 than it did in the preceding decade, but it matters much that this increase is badly distributed. The great agricultural commonwealths where living costs are most reasonable, social conditions most satisfactory and the need for labor and immigration greatest have barely held their own in numbers. The Mississippi and Missouri valley regions could have five times their present population and still be more thinly settled than the most prosperous agricultural districts of Europe, yet their population is almost as stationary as that of France. The great manufacturing and commercial centers are absorbing not only almost the whole immigration from Europe but many of the sons and daughters of the American homesteaders. It would be well if 1930 showed a 100 per cent increase in the population of such states as Kansas and Iowa even if New York City did not gain a single inhabitant.

## Efficiency Precedes Socialism

A recent bequest has called public attention to the fact that Mr. Rockefeller in the course of his career has given away about \$475,000,000. The first reaction to this fact would be the feeling that no one man ought to have so much to give away. Theoretically, this is so. The good done by Mr. Rockefeller's funds and foundations could have been done by the public itself if the bulk of his great fortune had been confiscated in taxation or by the nationalization of mineral oil. But would public officials have spent the money as wisely and economically as Rockefeller has done? Much would have gone to the "pork barrel," much have been frittered away by the inefficiency of the governmental machinery, and some of it perhaps have been wasted in sheer graft. When we learn to run affairs at the city hall, the state capital and at Washington as efficiently as the Standard Oil Company and the Rockefeller Foundation have managed *their* business, it will be both economically possible and ethically right to nationalize the Rockefeller fortune and all similar great private fortunes. But not till then.

# The Story of the Week

## League of Nations at Work

SENATOR Lodge says that the League of Nations is dead, but the League itself has not heard of its demise or else believes that the report is "greatly exaggerated," as Mark Twain remarked when he read his own obituary. The Assembly of the League of Nations is not only discussing international problems with great freedom and vigor, but is taking action in the most vital issues, as for instance in the case of Armenia, Vilna and the Mesopotamian oil fields.

Most of the work of the Assembly is being done by the committees, of which there are six, each composed of forty-two members, since every nation insisted upon being represented on all of them. The six vice-presidents of the Assembly comprize representatives of Japan, Argentina, Canada, Brazil, Holland and Czechoslovakia. It will be observed that two-thirds of the vice-presidents are from nations outside Europe.

One of the most effective features of the Covenant is Article 18, which abolishes the system of secret treaties that was one of the causes of the Great War and is interfering with the establishment of peace. Hereafter no treaty or international agreement will be binding unless it is reported to the League for publication. In accordance with this provision of the Covenant fifty-one treaties have been submitted to the League. Of these fifteen have been filed by Great Britain, eleven by France, six by Switzerland and four by Sweden. Germany, tho not a member of the League, has voluntarily filed nine treaties, two of which were with Soviet Russia. The United States has filed none, but Sweden has filed two, of which the United States is the other party; they relate to copyrights and consulates.

According to Article 18 of the Covenant the Council is required to formulate plans for the reduction of armament by the members of the League. Since the Council has not acted in the matter, the Assembly is taking it up. The smaller nations, which form a majority of the Assembly, are strong for immediate and general disarmament, but not France and Great Britain. It is pointed out that it would be risky for the members of the League to disarm so long as three such powerful nations as Germany, Soviet Russia and the United States remain out of it. European countries are in fact gradually cutting down on their military and naval expenditure, but the United States is preparing to spend more than ever. Dr. Gaston da Cunha of Brazil has introduced a resolution making the manufacture of munitions a government monopoly in every country so as to insure publicity and eliminate private profit.

The arrival at Geneva of Major Churchill, assistant chief of the Military Intelligence Division of the General Staff of the American Army, to confer with the secretariat of the League, created a sensation, since hitherto America has been unrepresented even by an observer.

The Assembly has been scrupulous to avoid any action that would offend American susceptibilities and make the United States more reluctant to enter the League. For instance, it was rumored that the Haitian delegates intended to bring complaints of the American occupation of Haiti before the Assembly, but they have set the rumors at rest by the public statement:

We do not intend to bring up the question of American occupation and control of Haiti at this meeting in view of the promise, already received, that the United States Government will pay Haiti's share of the League of Nations expense.

So, too, the requests of Peru and Bolivia for a revision of their treaties with Chile in regard to the disputed territory of Tacna and Arica have been shelved since it was feared that their discussion might involve the Monroe Doctrine, which by Article 21 of the Covenant is expressly excluded from the operations of the League.

The Canadian delegate, Newton R. Rowell, has several times spoken in defense of American opinion. Commission No. 1, to which has been referred all the amendments proposed to the Covenant, has decided to reserve action on any of them until the incoming American administration makes known its desires.

President Wilson has accepted the invitation of the League of Nations Council to mediate "thru a representative whom I may designate" between Armenia and the Turkish Nationalists with a view to the restoration of peace in Asia Minor. In accepting the invitation to mediate personally, President Wilson pointed out that he was without authority to employ the military forces of the United States since Congress has never agreed to the acceptance of an Armenian mandate. It is not known what arrangements the League will make to safeguard Armenia if mediation should fail.

## America Protests

ALTHO the United States remains out of the League it is the purpose of the present administration to maintain American rights and to secure equal treatment for all nations according to the spirit of the Covenant. Secretary of State Colby in a note of November 20 to the British Foreign Secretary, Earl Curzon, objects to the way in which Great Britain is carrying out her mandates in Mesopotamia, Palestine and Arabia. He says:

I need hardly refer again to the fact that the Government of the United States has consistently urged that it is of the utmost importance to the future peace of the world that alien territory transferred as a result of the war with the Central powers should be held and administered in such a way as to assure equal treatment to the commerce

Courtesy of New York Sun

### THE PROPOSED POLISH BOUNDARY

According to the armistice between Poland and Russia signed at Riga, October 5, the dividing line is drawn as shown on the above map. The troops of both armies must be withdrawn ten miles from the line, leaving a neutral zone during the armistice. The line drawn by the Allies at Paris passed thru Brest-Litovsk, but the Soviet has allowed the Poles more land. Vilna, the capital of Lithuania, is occupied by a Polish force

and to the citizens of all nations. Indeed it was in reliance upon an understanding to this effect, and expressly in contemplation thereof, that the United States was persuaded that the acquisition under mandate of certain enemy territory by the victorious powers should be consistent with the best interests of the world.

In reply to his previous protests Lord Curzon had politely intimated that it was none of our business what was done inside the League of Nations, since we were outside of it. But Secretary Colby declines to concur in this view and asserts that the United States has a right to be consulted on all such questions since by our participation in the war we had made the mandates possible:

Such powers as the Allied and associated nations may enjoy or wield, in the determination of the governmental status of the mandated areas, accrued to them as a direct result of the war against the Central Powers. The United States, as a participant in that conflict and as a contributor to its successful issue, cannot consider any of the associated powers, the smallest not less than itself, debarred from the discussion of any of its consequences, or from participation in the rights and privileges secured under the mandates provided for in the treaties of peace.

The question of Mesopotamian petroleum is a test case of the "new principle in international relations" embodied in the mandate plan:

The fact cannot be ignored that the reported resources of Mesopotamia have interested public opinion of the United States, Great Britain and other countries as a potential subject of economic strife. Because of this fact they become an outstanding illustration of the kind of economic question with reference to which the mandate principle was especially designed and, indeed, a peculiarly critical test of the good faith of the nations which have given their adherence to the principle. This principle was accepted in the hope of obviating in the future those international differences that grow out of a desire for the exclusive control of the resources and markets of annexed territories.

Lord Curzon in previous correspondence had intimated that since the United States produces more petroleum than any other country in the world and England produces little, Americans had no need to concern themselves with Mesopotamia. But our Secretary of State emphatically protests against the insinuation that our protest is based on selfish motives:

I should regret any assumption by His Majesty's Government or any other friendly power that the views of this Government as to the true character of a mandate are dictated in any degree by considerations of the domestic need of production of petroleum or any other commodity.

I may be permitted to say, however, for the purpose of correcting a misapprehension which your note reflects, that the United States possesses only one-twelfth approximately of the petroleum resources of the world. The oil resources of no other nation have been so largely drawn upon for foreign needs, and your lordship's statement that any prophecies as to the oil-bearing resources of unexplored and undeveloped countries must be accepted with reserve hardly disposes of the scientific calculation upon which, despite their problematical elements, the policies of states and the anticipations of world production are apparently proceeding. The Government of the United States assumes that there is a general recognition of the fact that the requirements for petroleum are in excess of production, and it believes that opportunity to explore and develop the petroleum resources of the world wherever found should without discrimination be freely extended, as only by the unhampered development of such resources can the needs of the world be met.

Consequently Secretary Colby demands that "the draft mandate forms be communicated to this Government for its consideration before their submission to the Council of the League," and suggests that they also be made public in advance.

## The Vilna Question

THE first task to be undertaken by the new-born League of Nations is one of the hardest of cartographic problems, the disposal of the city and province of Vilna. For a thousand years Vilna has been the chief city of the Lithuanians, but all its neighbors have in turn laid claim to it. The Lithuanians are neither Teutons nor Slavs, but crowded in between Germany, Russia and Poland they have never been able to maintain independence very long.

Harris & Ewing, from Paul Thompson

These Americans are part of a self-constituted commission which is holding hearings in Washington now on the disorders and problems of Ireland. Many witnesses have testified for the Irish Republican movement, one of them Mrs. Terence McSwiney, widow of the "martyr mayor" of Cork. In this group, from left to right, are Senator David I. Walsh, of Massachusetts; James H. Maurer, president of the Pennsylvania State Federation of Labor; Jane Addams, founder of Hull House, Chicago; Frederic C. Howe, former Commissioner of Immigration; Hollingsworth Wood, of New York

The collapse of the Russian empire gave them an opportunity to reestablish themselves as a nation. Under the leadership and with the financial aid of the Lithuanians in the United States a Lithuanian republic was set up at Vilna which has been recognized as a *de facto* Government by all of the leading powers except the United States. The American Government takes the ground that none of the seceding nationalities, except Finland and Poland, shall be recognized so long as the Bolsheviki remain in power.

Last July when the Bolsheviki drove back the Poles a treaty was concluded between the Lithuanians and Soviet Russia by which the city of Vilna was resigned to Lithuania. But when the Poles again gained the ascendancy Vilna was reoccupied by a Polish force under General Zellgouski. This force professes to be acting independently of the Polish Government of Warsaw, as in the case of d'Annunzio's seizure of Fiume. But in both cases the movement has the sympathy and secret support of the regular army and the home people.

General Zellgouski, professing to be acting in the interests of the Poles and Lithuanians of the Vilna district, announced the formation of the free state of Central Lithuania. The old Lithuanian Government, with headquarters at Kovno, has been waging desultory warfare for the recovery of Vilna, but without success. The Kovno Government approached the Warsaw Government with a proposal that the Polish troops be withdrawn from Vilna and the city turned over to the League of Nations for settlement of its ownership. But the Poles refused to listen to any arbitration proposals or to submit the question to a vote of the people of the disputed territory.

The Lithuanian Government petitioned the Assembly of the League of Nations in session at Geneva for the enforcement against Poland of Articles 16 and 17 of the Covenant, that no member of the League shall make war without previously invoking mediation of the League. Prompt action was taken on this request and, since the League has no army of its own, a joint force has been organized to take possession of Vilna and hold it until its disposition can be determined by plebiscite or otherwise. The French Colonel Chardigny has been chosen to command the force to which Great Britain, Spain and France will contribute two companies and a machine gun section apiece. It is expected that Belgium, Denmark, Holland, Norway and Sweden will also send contingents.

## Irish Outbreaks and Repression

THE Sinn Fein seems to have decided to carry the war into the enemy's country. Evidence of plots to attack the Houses of Parliament and No. 10 Downing Street, the Premier's official residence, has been discovered and numerous cases of incendiarism have occurred. The most serious of these was the burning of fifteen warehouses in Liverpool on Saturday night, November 27. One of the warehouses contained cotton to the value of \$1,500,000 and others nearly as much. The cotton could not be quenched and burned all night long. The padlocks on the steel doors had been cut with American bolt-clippers and cans of gasoline used to start the fires.

Another ambushade of the auxiliary police, commonly called the "black and tans" from their uniforms, took place near Macroom on Sunday afternoon. Two motor lorries carrying seventeen cadets, all officers in the late war, had set out on patrol, but on nearing Kilmichael they were fired upon from both sides of the road by about a hundred men in khaki uniforms and trench helmets. The bullets pierced the engines and stopped the cars. The police defended themselves as long as they could, but were all killed in the end except one who was wounded and another taken prisoner. The bodies were stripped of money and valuables and even of part of their clothing and left lying in the road. The lorries were burned up. The police in reprisal set fire to most of the houses in the village of Johnstown, nearest to the scene of the outbreak.

The British Government has adopted a new plan to suppress disorders in Ireland; nothing less ambitious than the internment of the entire republican army and the officials of the Sinn Fein Government. The first of these internment camps, large enough to hold a thousand men, has been established at Bally-Kinlar, in Dundrum Bay, County Down.

The "President of the Irish Republic," De Valera, is still in America raising funds, but the Vice-President, Arthur Griffith, has been arrested and confined in Dublin jail.

Wide World

### THE BRAINS OF THE SINN FEIN

Arthur Griffith, acting president of the Irish Republic, and the motive mind in its organization, was arrested by the British authorities at his home in Dublin last week. This is Mr. Griffith's third imprisonment; his arrest was part of a widespread effort on the part of the British Government to check the Sinn Fein propaganda and its attendant disturbances

Three elected members of the British Parliament, but who preferred to sit in the Dail Eireann, were also arrested, together with about a thousand of the Volunteers. Three Sinn Fein prisoners, who for lack of space in the jail were lodged in the guard-room of Dublin Castle, seized bombs and rifles and attacked their guards with intent to escape, but were all shot. One of them, Peter Clancy, had recently been released from Mountjoy prison as a hunger striker.

## Fight in House of Commons

WHEN the Chief Secretary for Ireland, Sir Hamar Greenwood, had related to the House of Commons the story of the shooting of British officers in their beds in Dublin, the feeling of indignation was such that when Joseph Devlin, the Nationalist leader, rose to enquire about the subsequent shooting in Croke Park, he was howled down. As he persisted several members went after him and Major Molson, who sat behind, seized him by the throat to choke him off. Jack Jones, a Socialist member, came to his assistance and a free-for-all fist fight took place. The Speaker suspended the session, and when it was resumed

Major Molson apologized to Mr. Devlin for his attack and the apology was accepted. Such disorderly scenes are common in continental parliaments, but almost unprecedented in the dignified House of Commons.

Cecil P'Estrange Malone, member of Parliament for East Leyton, has been sentenced to jail for six months for seditious utterances. In an Albert Hall speech advocating communism he asked: "What are a few Churchills and Curzons, swinging to a lamppost, compared with the massacre of thousands of human beings."

## The Vacant Throne of Greece

THE death of King Alexander from the bite of a pet monkey and the overwhelming defeat of Premier Venizelos has opened the way for the return of the exiled Constantine, deposed by the Allies during the war for his pro-German proclivities. Rhallis, the new premier, will submit the question to a plebiscite in which the friends of Constantine are likely to win. The people resent the intervention of the Allies during the war, when, without regard to the declared neutrality of Greece, her territory was overrun by foreign troops. Despite the refusal of King Constantine to participate in the war the Greek port of Salonika was used by the British and French as a base for their campaign in the Balkans and the Greek Islands in the Aegean as a base for the attack on Gallipoli. Constantine undoubtedly sympathized with the German side possibly because his wife, Queen Sophia, is a sister of the Kaiser, and he played secretly into the hands of the Bulgars, the chief enemies of Greece. He turned over Fort Rupel in Macedonia to the Bulgars and in June, 1915, he asked the Bulgarian minister in Athens why Bulgaria did not attack Serbia in the rear while the Austrians came down from the north, saying: "Go ahead, you have nothing to fear while I am here, for I will never allow the Greek Government to go to the aid of Serbia."

Love in London Star

IRELAND, 1920

"Hullo, what side are you on?"  
 "Justice and Liberty! And you?"  
 "Law and Order!"

The overthrow of Venizelos and the triumph of the Constantine party came as a great shock to France and Great Britain, for it involved the invalidation of the Sevres treaty, which Turkey still refuses to accept. Depending on the loyalty and stability of Venizelos the Allies had been generous to Greece in the way of territory. Almost the whole of Thrace was assigned to Greece regardless of the preferences of the inhabitants. Most of the Dodecanese Islands were turned over to Greece and also the Asiatic port of Smyrna with a chance to get further Turkish territory by fighting Kemal Mustafa Pasha, the leader of the Turkish Nationalists. Now, it seems, the Allies have put these strategic points, not into the hands of one of their best friends but of one of their worst enemies.

The British and French Governments were at first disposed to notify Greece that they would not permit the restoration of Constantine, but on further consideration and consultation they seem to have come to the conclusion that they had better not intervene.

The Venizelists claim that the election was fraudulent, that the registration lists were padded with false names and that the voters were bribed by German and American money. Princess Christopher of Greece, who was formerly the wife of William B. Leeds of New York, is said to have put millions into the election with a view of bringing Prince Christopher, the brother of Constantine, to the throne.

But one obvious and legitimate reason for the turn of public sentiment in Greece is that the people are tired of war and refuse to be drafted for further campaigns in Asia whatever the prospective gains. The Greek soldiers, who set out valiantly a few months ago to conquer Kemal, are now giving way before him and are said to be on the point of mutiny.

## A Slump in Millionaires

**A**RE the rich getting richer and the poor poorer? So says the Socialist on the soap box. But he can extract little evidence to that effect from the latest income tax statistics. The report of the Commissioner of Internal Revenue for 1918 (the latest year for which complete figures are available) shows a decrease in the number of persons making returns for less than \$2,000 a year, a decrease in the number reporting in every one of the groups making over \$20,000 a year, and an increase in all groups from \$2,000 to \$20,000. The "middle classes" and the moderately wealthy are increasing most rapidly in number. If we take an annual income of \$40,000 a year as representing on the average a property of \$1,000,000, we find only 20,944 in the millionaire class in 1918 as against 26,190 in 1917. On the other hand, the number of persons earning from \$2,000 to \$10,000 a year increased from 1,670,136 to 2,748,570, or about two-thirds. If we consider as the multimillionaires persons with incomes of a million a year (which would represent a probable capital of \$25,000,000 and upwards) we find only 67 in this class as against 141 in 1917 and 206 in 1916.

Of course, there is one qualification to be made. 1918 was a war year and many persons invested heavily in tax-exempt Federal securities such as the Liberty Bonds. All classes contributed to Liberty Bond purchases, but the very wealthy were naturally free to spend the most. But even making all allowance for this factor in reducing the number of persons returned as millionaires the statistics are a sufficient disproof of the alleged concentration of wealth in a few hands.

The total number of returns filed under the income tax law was 4,425,114. The amount of income declared was \$15,924,639,355; the amount of tax paid \$1,127,721,835. New York State alone paid nearly one-third of the whole,

and New York, Pennsylvania and Illinois taken together more than one-half. The southern and western states (with the exception of California) paid very little of the tax. The reason for this is the concentration of the great incomes derived from industry and commerce in the big cities of the northeastern and north central states and does not necessarily indicate either a sectional bias in the tax administration or an unequal distribution of prosperity.

## The Census on the Yellow Peril

**T**HE report of the Census Bureau on the number of Japanese residents in the United States shows that the number has been much exaggerated by those panic-stricken persons who affect to dread the rise of a new Japan in America. As a matter of fact the Japanese population of

Wide World

### THREE MILES A MINUTE

The Verville Packard battle plane, pet of the Army Air Service, established a world's record for closed circuit racing, at 178 miles an hour including turns, in the Pulitzer Trophy Airplane race held recently from Long Island. The race was open to all types of planes and of thirty-six which started twenty-five finished. Lieut. C. C. Mosley, winning pilot, stands at the propeller of his plane

the three states on the Pacific coast increased more slowly from 1910 to 1920 than it did in the previous decade. There are 70,196 Japanese in California, which has a total population of 3,426,861; in other words about one Californian out of every fifty is a Japanese. In Washington there are 17,114 Japanese, or 1.3 per cent of the total population. In Oregon there are only 4,022, or about one in two hundred of the population. Altho some Californians have criticized the census figures as too small, Director Rogers points out that a "careful, actual enumeration of each individual" as carried out by the Census Bureau is more to be trusted than the estimates of private persons.

Only in Hawaii is there anything remotely resembling the "Nipponification" of American territory. But this is not altogether the result of recent immigration as there were many Japanese already in the Hawaiian Islands when they first passed under our flag. Of a total population of 255,512 the Japanese number 109,269 by the 1920 census. There are more Japanese in the narrow confines of these islands than in all three of the Pacific coast states taken together. In Hawaii and the Pacific states alike much of the increase of the last decade is of Japanese women. More than a third of the Japanese in the Pacific states and over two-fifths in Hawaii are females. Twenty years ago the Japanese population in America was almost wholly male.

## How Two Billions Were Sunk

**T**HE investigation of the Congressional committee is revealing conditions even worse than had been suspected in the condition of American shipping. Martin J. Gillen, who had been an assistant to ex-Chairman Payne of the

Shipping Board, testified that losses incurred by the United States Shipping Board amounted altogether to about \$2,000,000,000. Not all of this, of course, was the fault of the Government. With the end of the war and the cessation of the abnormal demand for overseas shipping due to wartime conditions there was bound to be a great decline in values of shipping; moreover, an organization devised to meet the emergency of Germany's submarine campaign could not take into account commercial profit or any other consideration which would affect a private company, it was bound to build as rapidly as possible regardless of cost. We did not create a merchant marine for any other purpose than to win the war. But this does not excuse the failure to establish an adequate accounting system until August, 1919. At the time Mr. Payne became chairman of the Board \$2,500,000,000 had been distributed thru the Emergency

Fleet Corporation and the Shipping Board, but no record was available to show how this fund had been distributed.

Mr. Gillen testified that by the rates fixed by the two Governments the United States paid ship owners 230 to 275 per cent more for each deadweight ton than the British Government paid for the same service at the same time. Profits as high as 57.5 per cent were allowed to private owners. Many claims were overpaid by millions of dollars because of bad accounting and reckless expenditure of funds. He absolved the men in charge of the work of any personal "graft," declaring:

There is no fraud or evidence of fraud in the office of the treasurer of the Emergency Fleet Corporation or the Shipping Board. There has been a failure to pick a great, outstanding man. If you had had six men like Judge Gary—not one, but six—some strides might have been made in six months after the armistice in cleaning up the muddle.

He said that he had urged on President-elect Harding that the new Administration appoint only men of known administrative ability to the Shipping Board and other important Federal offices so that similar scandals might be avoided in the future.

Colonel Goff, general counsel of the Shipping Board, has promised to run down all the grafting contractors and every other person guilty of corruption, "whether he be tradesman, ship operator, claimant, attorney, lobbyist or solicitor who offers the glittering bribe or sweetens his petition, with gold." Apparently there will be much work for him to do. The chief men in the Shipping Board and the Emergency Fleet Corporation seem to have been guilty—at worst—of nothing but carelessness and incompetence, but minor employees and private concerns seem to have taken advantage of this careless accounting to rob the American taxpayer of several hundreds of millions of dollars.

## Reforming Uncle Sam

"NOW you have it what will you do with it?" This is the question which awaits President-elect Harding and the Republican Congress. No full answer can be given until after March 4, 1921, when the new administration takes office, but it is believed that the winter session of Congress, even if it does little more than approve the Budget Act and pass the regular appropriation bills, will

Norris, for George Matthew Adams Service

Woodman, spare that tree!  
Touch not a single bough;  
In wartime it did vote for me,  
And I'll protect it now.

develop the lines along which Republican policy will be conducted during the next four years. Economy, reduction of taxation and administrative reorganization are the three fields of legislative activity in which the Republicans promise reform.

There are now about 700,000 men and women employed by the Federal Government in various parts of the United States, not including the army and navy. There are about 90,000 civil employees in Washington city alone, as compared with 37,000 before the Great War. Some Congressional leaders are optimistic enough to predict that the Washington force can be cut by 20,000 and the whole payroll by 250,000. If this program can be carried out, it will result in a saving of more than \$300,000,000 a year to the taxpayers. Besides decreasing the Federal personnel, the Republicans hope to effect other economies. The departmental estimates will, it is predicted, receive very

rough handling from the Congressional committees which are to consider them.

The excess profits tax is condemned by all the conservative Republican leaders and will probably be replaced by some other tax system, tho there is as yet little agreement within the party as to what this system will be. Senator Wadsworth of New York forecasts also a reduction in the income tax rates. The tariff will be made to yield such additional revenue as is possible, tho in view of the wholly abnormal condition of our post-war trade with Europe no tariff can wholly solve our revenue problem.

Senator McCormick of Illinois has made public the preliminary draft of his bill to abolish the Department of the Interior and substitute a Department of Public Works and a Department of Public Welfare. The new Department of Public Works, under its provisions, would take over from the Department of the Interior the General Land Office, the Geological Survey, the Bureau of Mines, the Reclamation Service, the National Park Service, the Division of Capitol Buildings and Grounds and the Alaskan Engineering Commission. It would also absorb the various harbor and river engineering projects now conducted under the auspices of the War Department, and the Bureau of Public Roads and the Forestry Service now under the Department of Agriculture.

The Department of Public Welfare, the creation of which was advocated by Senator Harding in the course of the campaign, would take over Indian affairs and pensions from the Department of the Interior; the Public Health Service and the Bureau of War Risk Insurance from the Treasury; the Children's Bureau and Women's Bureau from the Department of Labor; as well as the United States Employees' Compensation Commission, the Federal Board for Vocational Education and the Social Hygiene Board. The functions of the Department of Commerce would be greatly enlarged. It would take over the Weather Bureau from the Department of Agriculture; the Patent Office from the Department of the Interior; the Coast Guard from the Department of the Treasury; the Lake Survey and the Waterways Service from the War Department, and the Hydrographic Office from the Navy. Senator McCormick's bill provides for many transfers, consolidations and simplifications within the various departments.

## Taking Banking Out of Politics

(Continued from page 356)

kept solvent to meet these needs, both domestic and foreign, but chiefly domestic. Governor Harding made it clear that unless credit expansion stopped something would blow up. The bankers were told merely that they must use common sense and lend money only where loans were imperative. No schoolmaster attitude was adopted; the Board simply told each banker what the situation was and cautioned him to hold down, showed him the shoals and the shallows and, beyond, the clear sailing attainable only by careful steering.

The inevitable result was renewed confidence. The bankers began curtailing loans at once, especially since they could blame the Board for the policy. They could pass the buck, but little the Board cared so long as the nation remained sound financially.

There was one sharp sting in the Board's word. There was a hint to the bankers that they scrutinize their portfolios and weed out paper which arose from the hoarding of commodities for speculation. *This was the first absolutely efficacious move made by any Government agency to reduce the cost of living since 1914.* It worked. Unable to obtain bank loans with which to hoard commodities, the profiteers had to bring out their wares and sell them, for what they could get.

*Immediately the price index began to drop and has been dropping ever since.*

Next came the crop moving. The progressive discount system had been extended and money was tighter than it had ever been before without a panic. Unless a man had absolute, legitimate need for funds he could not get them. No bank money was available for speculation, for promotion. The result was that it proved unnecessary for the Treasury to make emergency deposits of Government funds at the primary markets to finance the movement of the crops. The banks, tho still strained, were able to take care of their own situations.

By the time the crops were coming in, the Presidential campaign was in full swing. Plenty of growers and dealers were eager to stay the declining market by borrowing funds with which to hold the new crop off the market and wait for a rise. Despite the strongest political pressure which the campaign could produce, Governor Harding and the Board could not be induced to connive with either business men or politicians at accomplishing such a result. Tho favoring the orderly marketing, rather than dumping, of the crops, and willing to finance this, the Board would heed no political adjurations to enable farmers and dealers to hoard. Hundreds of millions of dollars were brought from eastern Reserve banks to assist the crop moving.

The promoters and others, disap-

Here are four typical figuring problems such as your office has every day. The Monroe figures all 4 problems in 21 seconds. Relative amounts of time consumed on every kind of figure-work by the Monroe, the calculating machine that makes figuring as easy as turning a crank.

## 21 Seconds by the Stop-Watch!

Can your office figure these 4 problems as fast with absolute accuracy?

21 seconds with the Monroe—see how much longer it takes your fastest worker to figure these problems without the Monroe. That's no reflection on your operator. It simply indicates how much more valuable to you the Monroe will make her.

She will figure faster, get more work done, and be sure her every answer is right—right without re-checking.

For example, to subtract 36539 from 43288, just turn the crank backward—that's all. There's your answer, 6749. No complements to figure. You know your answer is right, thanks to the Monroe's visible check feature, which proves your work step by step, from problem to result.

And turning the crank is about all there is to figuring on the Monroe—just turn it forward to multiply or add; turn it backward to divide or subtract.

It's so easy that trained operators aren't necessary—neither are complements nor reciprocals. If you know how to do figure-work on paper, you know how to do figure-work on the Monroe.

Your business may be banking or textiles, engineering or importing, mining, milling, railroads, hardware, etc. Your figure problems may be invoices or inventories, cost finding or foreign exchange, payrolls, percentages, estimates, etc. No matter. *The Monroe is at work in hundreds of offices like yours, solving problems like yours.* Let us show you its application to the figuring problems in your business. The coupon is for your convenience.

## The Contributions of Science

The greatest material benefits the world has received have come from the laboratories of the scientists. They create the means for accomplishing the seemingly impossible.

Science, after years of labor, produced the telephone. From a feeble instrument capable of carrying speech but a few feet, science continued its work until now the telephone-voice may be heard across the continent.

In February of 1881 a blizzard swept the city of Boston, tearing from the roof of the Bell telephone building a vast net-work of 2,400 wires. It was the

worst wire disaster the Company had sustained.

Now through the advance of science that number of wires would be carried in a single underground cable no larger than a man's wrist.

As the fruit of the effort of science greater safety and greater savings in time, money and materials are constantly resulting.

And never before as now, the scientist is helping us solve our great problems of providing Telephone service that meets the increased demands with greater speed and greater certainty.

pointed at their inability to get loans, capitalized the political campaign and set up a cry that the Federal Reserve System was cramping business by declining accommodation. Many joined in this, curiously enough most of the political criticism coming from Democratic quarters. Let us see how much business was cramped.

On August 27, 1920, total bills on hand in Federal Reserve banks amounted to nearly \$3,000,000,000. This vast volume of credit compares with some \$1,600,000,000 on August 30, 1918, representing an increase in accommodation to business men of nearly 100 per cent. This scarcely can be regarded as cramping. To meet the increased need for money the issue of Federal Reserve notes has risen from \$2,092,708,000 on August 20, 1918, to \$3,203,637,000 on August 27, 1920. Business men cannot, with propriety, absorb all the loanable funds and then complain that they are cramped and unable to borrow. On August 29, 1919, total loans and investments of a representative group of reporting member banks amounted to nearly \$15,000,000,000. By August 20, 1920, this had increased to nearly \$17,000,000,000. It is difficult to comprehend how a community can complain of being cramped for lack of borrowed funds when it already has procured nearly \$17,000,000,000 from one group of banks.

When the business of the country discovered that the Board could not be browbeaten into altering its policy so as to permit continuation of the carnival of expansion and extravagance, special groups began to bring up the old fashioned political heavy artillery. Governor Harding hails from Birmingham, Alabama, and is himself one of the leading experts on cotton, from the plant straight thru the industry to financing and final fabrication. This being so, the cotton men of the South assumed that with the South more or less in the saddle politically, they could fix things. They wanted to carry their cotton on funds obtained thru the Federal Reserve System and protested to the Governor, with political innuendoes interpolated, against credit curtailment. An important cotton association sent a communication to the Governor outlining a scheme which would have the desired effect and incidentally tie up a disproportionate volume of banking funds. The telegram of Governor Harding proclaiming to these gentlemen how slight their chances were of enjoying preferred treatment over other sections, so far as tenor and tone is concerned, was reminiscent of the scourging of the money changers from the temple. Later the cotton men, still hopeful, sent a big delegation to see the Governor at Washington. They stated their case very forcibly and the lay listener would have found it difficult to determine what the answer would be.

But after listening to an hour's discussion of the national credit situation and the relative rights of various sections of the country from Gov-

ernor Harding, the men who had come to Washington to obtain further accommodation went home leaving promises to curtail what loans they then had outstanding.

Other groups tried the same thing, many of them indubitably wholly sincere in their belief that they merited preferred treatment; others no less certain that they possessed the political power to induce the accommodation they wanted. The sincere but misguided were put on the right track and the politicians were told that the Federal Reserve System is not a candidate and has no ear for political problems.

The Board will not relax this policy. The latest reports show the policy to be working successfully and the post-war transition to be passing safely as a result. But rates must stay up this fall and winter in order to bring about a thoro liquidation. If it is not accomplished and spring settlements do not follow as they should normally, the rate will go still higher, for the Board is determined that another summer shall not find credit stringency in the United States.

Another angle from which the Board has been viciously attacked by politicians is presented in the par check clearing system. The Board holds it is as unsound for a bank to charge exchange for cashing a check as it would be to impose a charge for changing a \$10 note. But the par check clearing system it now has in operation, excepting in a few southern states, deprives bankers of a long-standing species of petty graft. Naturally these bankers have allied themselves with politicians to fight the plan, but have met the same imperviousness to political influence on the part of the Board noted as to bank credit policies. Claude Kitchin, former majority leader of the House of Representatives, told the Board that North Carolina would go Republican by 25,000 if the system were put into effect in that state. Mr. Kitchin learned the Board was not a candidate and was uninterested in his statement, so long as the par system would save the American people many millions a year. This fight is nearly won. In a brief time domestic exchange charges will be a thing of the past.

Tho inaugurated merely to operate the finances of the country, the Board has gained such a reputation for sound business judgment that it is supplanting the Federal Trade Commission as a helpful business doctor. Groups of business men frequently come to Washington to lay their problems before the Board. They never go away empty handed; always they obtain advice which is reported uniformly to be good.

Without disparagement to any other member, it must be recognized that Governor Harding dominates the Board—that almost he is the Board. His capacity for examining a situation, reaching a decision and executing it, all in the space of time which many a skilful banker might consume merely

# McCutcheon's The Practical Gift

Reg. Trade Mark

No gift quite so embodies the true spirit of Christmas giving as the gift of McCutcheon's Pure Linen Handkerchiefs.

Whether of sheerest Linen with exquisite hand-made Armenian lace, simple Irish embroidery or of substantial masculine plainness, all show that pleasing combination of beauty and practicality so essential to the Christmas Gift.

## 1 Pure Linen Handkerchiefs \$2.00 each

### For Men—

1-2-3 Hemstitched designs on an extra fine quality of Linen with woven cords and tapes.

### For Women—

4- A charming bit of hand embroidery with the characteristic Madeiran scalloped edge. 5- An exquisite Spanish design. 6- Hand embroidered and edged with real Armenian lace.

## Pure Linen Handkerchiefs 75c. each

Of exceptional quality and fineness of workmanship

### For Women—

7-8-9 Irish Hand-embroidered and hemstitched on a fine quality of Linen.

### Men's Hemmed—

10-11-12 Particularly pleasing and acceptable are these plain hemmed models with woven cords and tapes.

Orders by mail receive our prompt and careful attention

in diagnosing, is remarkable. Nothing in the way of information ever escapes him. He is eager to learn from anyone and will listen with as close attention to his office boy (or anyone else's) as to the Secretary of the Treasury. The Governor learned business in a hard school. He remembers the days of the reconstruction in the South and when northern business men come to him with what seems to them a difficult situation, he is wont to smile and say that a situation as good as that would make a southerner entirely content. Last spring the men in the wool industry told him \$50,000,000 must be raised or they would go on the rocks. The Governor told them, in thirty minutes, how to get the money and smilingly remarked that he knew of one southern state alone which had \$100,000,000 or more tied up and hadn't yet begun to regard the situation as anything to worry about. He and his people are used to hard times, says the Governor, and know how to meet them.

This is the sort of a Board and the sort of a banking system which is defending the country against an effort to drag the money issue into the campaign. The struggle and its incidents are of tremendous importance in showing up the principal, if not the single, weakness of the Federal Reserve System. Fortunately the incumbent personnel is such that the chances of any political color affecting the management of the country's financial affairs are extremely slight. But the fact that pressure has been brought and continues to be brought in an effort to make use of this body for political advantage shows clearly that it is of the utmost importance to maintain on this Board men of the greatest ability and highest character.

Washington, D. C.

## The Play's the Thing

(Continued from page 359)

sincerity in treating the main theme—it was unfortunate to forewarn an audience by giving it the opportunity of reading beforehand the story of poor Chloe. But the real live theater, of which Galsworthy is so interesting a part, can never be harmed by a close scrutiny of the material which it presents.

Now, I am not claiming that it is well for you to read a play always before seeing it. But I find, in my own case, that if the play is obtainable in print, my interest is enhanced, provided the piece has meat for the intellect to bite into. I have just finished Shaw's "Heartbreak House" which is scheduled for presentation in a few days by another insurgent theater group in New York—The Theater Guild—and there is expectancy on my part—curiosity as to the actableness of the piece, quickened challenge as to whether the actors will be able to wring the most out of the rapid fire of Shaw's tongue. And in the instance of the Theater Guild, their opening this season in a play I had never read, tho it was on my shelf, Pinski's "The

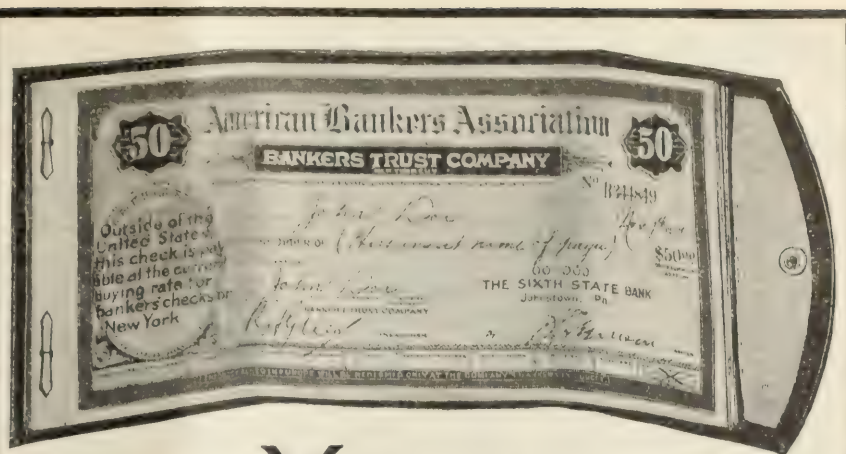

Treasure," drove me back to the script to follow its Jewish folk story. The theater is often an incentive for the printed book; the book a source of opportunity for the theater.

I never read the plays of Lady Gregory or of Yeats without hearing in my ear the echo of the Irish Players' rich accent; I can turn to the printed copy of St. John Ervine's "John Ferguson"—two years have elapsed since I saw it—and there comes to mind certain values the Theater Guild's performance gave. In other words, if you read a play after you have seen it, memory gives a hint to your imagination, and the understanding of the play in type is made easier. If the acting of it has been great the human memory of it colors the play's revival in the library. Whenever I read the morality, "Everyman," and reach the great prayer, "O eternal God, O heavenly figure," the lines sink into the flavor of Miss Matheson's voice; when I read Edmond Rostand's "Cyrano de Bergerac," and come to the "Cadets of Gascony" speech, it is as tho the shade of Mansfield had taken the book from my hand and given me a private performance. There are lines in "Hamlet" which the older theatergoer reads to the memory-tones of Edwin Booth, but which to me bear the impress of Forbes-Robertson and the later coloring of Walter Hampden. In other words, if the play is well done in the theater, and is a play of substance, a re-reading of it in the library is but a revivification of the potent wonder of the theater itself.

Incidentally, the printed play is creating a substantial body of dramaturgy for the times. And so, to a certain degree, it is not necessary for you to be in New York, or in a large city, where there are many theaters, in order to keep abreast with the drama. If you have the dramatic sense, you are just as able to say, living in a far-off village, whether Max Halbe's "Youth" has interest for the public at this moment, as I am, who saw it given by another insurgent group at the Greenwich Village theater the other evening. You can draw it down from the shelf and judge it as tho it had been submitted to you as an incipient manager. The theme of youth awakening is vibrant and lyrical, but the theology, the German sentiment of Halbe, the theatrical means of ending the tragedy are thin beside the sincerity of Galsworthy: they represent all that is past in the limbo before the war.

Keep on with the reading of plays; if you do so, you will be ahead of the theater as it is generally in New York, which is slow to accept for the stage what the mind has accepted on the printed page. In one way, so far as the theater is concerned, a play is not a play before it is produced. In another way, a play has to be in print before it can ever hope to be produced, so peculiarly material have our standards thus far been. But it looks now, from the rapidity with which I have to take plays from my shelves after

## Money The Sinews of Travel

Without money you cannot travel far, fast or with much ease. Money gives strength for the journey and comfort by the way. But it makes a difference how your funds are carried. If you use

### "A·B·A" American Bankers Association Cheques

you can rest assured that your money is safe and that the many financial worries that bother those who do not use this modern method will pass by you.

Upon arrival abroad—because of arrangements made by the Bankers Trust Company's Foreign Service—you may exchange the "A·B·A" Cheques you take with you for other "A·B·A" Cheques payable in pounds sterling, francs, lire, etc., at the rate current on the day of exchange.

"A·B·A" Cheques are issued in denominations of \$10, \$20, \$50 and \$100, in convenient wallets by most banks. Full particulars from

# When Johnny has the Croup!

That's a cough with a croupy rattle, so hurry for the Musterole and rub it in right over the chest and neck. How it will tingle at first and then grow ever so cool. And how it will reach in and penetrate right to the spot! It will dissipate all the stuffy congestion which causes that hacking cough.

Why *shouldn't* grandmother swear by Musterole for colds and coughs? It is better than amustard plaster—good as *that* was in the old days. And the explanation is this:

Musterole is made of oil of mustard and other home simples. It penetrates under the skin, down to the part. Here it generates its own heat, and this heat disperses the congestion. Yet Musterole will not blister. Musterole, on the contrary, feels delightfully cool a few seconds after you apply it.

Try Musterole for Bobby and Helen and Dorothy's croup—and for your own cough, too. Try it for rheumatism—it's a regular router out of all congestions. Always keep a jar handy.

Many doctors and nurses recommend Musterole.

35c and 65c jars—\$3.00 hospital size.

The Musterole Co., Cleveland, Ohio  
BETTER THAN A MUSTARD PLASTER

## Kunderd's New 1921 Gladioli

Eighty new sorts are offered this year. Your 1921 garden should display a collection of these grand new varieties.

These new sorts and many others are described and illustrated in my 1921 Catalog. Eight of them are shown in natural colors, and complete cultural information is given.

A copy of this book will help you to select the best Gladioli for your garden—write for it today.

## Can Air Be Too Free?

(Continued from page 357)

without essential laws governing aviation. This leaves the subject up to the individual states, the Federal government failing to provide the legislation.

And this situation is most unfortunate. Aviation is of necessity a Federal matter. The air knows no boundaries between states. A dozen state borders are passed on a single flight. No aeroplane would venture to fly without carrying a lawyer, should all the forty-eight states take a hand at governing flights over their territory. The Federal Government must establish this legislation, else a riot of senseless and contradictory statutes among the various state legislatures will so hamper aviation that it will be strangled at this delicate period in its infancy. And thus it is that state legislatures are persuaded to keep hands off this problem, leaving it to our Federal Congress to solve.

Interesting points of law will arise as aviation grows in America, and lawyers will be perplexed in their application. Collisions in air and injuries to citizens below, perhaps by night as well as by day, will call for intimate knowledge of aviation and a broad understanding of the principles of common law if both the aviator and the public is fully protected.

For instance, while the Vermont farmer unquestionably is entitled to the quiet safety of his farm, would he not be compelled by law to permit the public to operate motor boats on the surface of a navigable river which ran thru his farm? If his property bordered the public high seas, could he prosecute any citizen there who frightened his nervous horse while lawfully pursuing his calling?

What difference then should exist between the public's rights to high seas and rivers, and their rights to enjoy the public air that flows over his farm? Property rights have heretofore extended above and below the surface of one's real estate. But the rule of Public Policy has frequently been employed to limit the rights of the individual for the greater rights of the public. And so aviation, this new science that promises such extraordinary benefits to humanity, will be coddled and milk fed and made strong under Government protection, while at times, like the spoiled infant it is, aviation will arouse the indignation and distress of peaceable law-abiding citizens who wonder how it is possible a child could be brought up so badly.

Contraband is today being smuggled over our national boundaries in large quantities. How is such evasion of customs payments to be stopped? How is it possible to watch every starting place in Canada and in Mexico

## Cut Your Coal Bills

**USALYTE** makes every gas-jet a furnace. It gives you heat where and when you want it. It uses no heat where you don't need it.

USALYTE, the heating marvel, will keep you warm on the coldest winter day—at a negligible cost.

The coal it saves will pay for it a dozen times over the first season you use it. It is almost everlasting, safe, and free from carbon.

In two styles: for heating only or, with the new and exclusive in-built mantle, for heating and lighting.

For heating only, \$1.75

## New Method Makes Saving a Pleasure Instead of a Hardship

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

THE INDEPENDENT  
311 Sixth Avenue New York City

and to meet the guilty aeroplane at its unknown destination within the United States? But smuggling by aeroplane must be prevented, else the customs duties become a farce.

Why should a golf club tolerate the spoiling of its day's sport at the whim of an unknown practical joker? Is it right that thousands of interested spectators at a tennis match or a ball game should be caused anxiety by the antics of an aeroplane overhead? Suppose a low flying aeroplane over Fifth Avenue should suddenly lose its flying speed! Is it conceivable that the public will long endure this state of affairs?

Legislation and regulation of air navigation must be deeply and immediately considered, by the aviators, by Congress and by the public. Wisely controlled, aviation will prove a wonderful boon to commerce and to civilization as a whole. Within the brief four years of its existence as a war implement, it rose by common acclamation from its modest rank of the fourth arm of warfare to become to-day a nation's first line of defense. Now that the war is over new problems pertaining to the crafts of the air confront us. And these problems are so unique that courts and lawmakers alike are stumped. Federal legislation is immediately required, establishing public air highways, licensing air pilots, defining negligence and fixing responsibility, so that both the aviator and the private citizen may know his legal rights.

*New York City*

### Pebbles

A law requiring that all shoes be made of leather might help to relieve the paper shortage.—*Columbia Record*.

Heloise—Was he on his knees when he proposed to you?

Helene—No. I was.—*Voo Doo*.

Innocent—People say I have eyes just like my father.

Drowsy—Uh-huh. Pop-eyed.—*Chaparral*.

Tourist (looking at a volcano)—Looks like hell, doesn't it?

Native—How these Americans have traveled.—*Lampoon*.

Prof.—Johnny, sit down in front.

Johnny—I can't.—*Sun Dodger*.

Mrs. Benham—This dinner is fit for a king.

Benham—Me for a republic.—*Judge*.

He told the shy maid of his love,

The color left her cheeks;

But on the shoulder of his coat

It showed for several weeks.

—*Scalper*.

"No workers are called servants today," says Mr. Justice Darling. "And I am informed by those who have secured specimens that very few servants could by any stretch of the imagination be called workers."—*Lady's Pictorial*.

"I don't like these photos at all," he said. "I look like an ape."

The photographer favored him with a glance of lofty disdain.

"You should have thought of that before you had them taken," was his reply as he turned back to work.—*American News Trade Journal*.

## While the case is argued, the jury sleeps

If the lawyer talked for hours on the rising price of birdseed, the jury would miss little. But here the case is vital, and it concerns no one so much as this same heedless jury—the American people.

The judge in our picture represents a public commission, whose duty is to regulate electric light rates. And the case is whether the electric company shall obtain money needed for extension of service to make up the present shortage of light and power.

Lack of sufficient power is one reason why that shoe factory in town is running behind a thousand pairs a week—why the flour mill is short in its daily grist—why industry cannot meet the demand for larger production and lower prices.

Yet we are sadly indifferent to this problem and the solution which the electric company offers. The company's rates, taxes, extensions and improvements are matters that we leave to the public service commission to control, and we don't even take an interest in the case.

What a mistake! The case is ours. The public service commission is ours. The public servant is ours. The commission takes its authority from public opinion—the verdict we render.

So it is for us to say whether the electric company's cost of furnishing power and our own need for using power warrant an increased rate.

Certainly it is a short-sighted economy to deny a reasonable return on the money invested (often your own money) for that policy discourages investors and hampers the company's development. A fair rate assures a bigger and better service—added power available for factories to produce more at less cost per unit.

It may be that a few cents more on the electric bill will mean a few dollars less on the next suit of clothes we buy.

wherever people look to electricity  
for the comforts and conveniences of life today,  
the Western Electric Company offers a service  
as broad as the functions of electricity itself.

# "Oh, for a Nook and a Story-book—"

## Christmas Plums

There are three or four books for children in the new productions this season that both for their content and their appearance deserve special consideration.

A *Child's Book of Modern Stories* stands perhaps in the first place. It is a fat volume, illustrated in color by Jessie Wilcox Smith, and filled with seventy or more of the best short stories for children that have been written in recent years. There are animal stories and nature stories and fairy stories and some stories that sugar-coat an improving moral. But it is safe to say that the youngsters will like them all.

Another "read-me-a-story" book that children of eight or over can read to themselves is *Adventures in Mother Goose Land*, written by Edward Gowar, with gay, fantastic illustrations by Alice Bolam Preston. The story is of a little boy named Noel who made a wish and found himself whisked away on a broomstick to Mother Goose Land. There he met all the Mother Goose folk and talked with them and shared their fun. The story is written entertainingly and simply, and the very large print is ideal for the young "First Reader."

Somewhat more elaborate are three long series of stories by E. Gordon Browne, presented with full page pictures in color by Florence Anderson under the title of *The Magic Whistle*. The first story is a brave tale of caravans and Caliphs and strange magic; the second set of stories tells the adventures of "Little Dwarf Nose"; and in the third series are collected the stories of two youngsters called Molly and Dick, and their friends, Nut Cracker and Mouse King.

The same fairy tales by Edouard Labouaye that our grandmothers used to read have been republished for this Christmas in a pleasantly printed volume with a dozen colorful page illustrations painted by Edward G. McCandlish. The stories have a never-failing charm, due perhaps to the French flavor of the narrative and to their origin in the folk lore of old Europe, and due also to the fact that M. Labouaye collected them to tell first by the fire to his own children.

Coming back from the realm of magic to stories of real folks an excellent book for children from ten on thru their 'teens is *Stories*, by Juliana Horatia Ewing, collected in a large, at-

tractive book with pleasant full page illustrations in color by Edna Cooke. The famous "Jackanapes" is the first story; there are ten others, nearly all old favorites of the generation that is grown-up now.

*A Child's Book of Modern Stories*, by Ada M. and Eleanor Skinner. Duffield. *Adventures in Mother Goose Land*, by Edward Gowar. Little, Brown & Co. *The Magic Whistle*, by E. Gordon Browne. Dodd, Mead & Co. *Stories*, by Juliana Horatia Ewing. Duffield & Co. *Labouaye's Fairy Book*, translated by Mary L. Booth. Harper Brothers.

## "Going on Eight"

From all indications these are books that a child five to ten years old would horde among its treasures. *Five Funny Fables* is not only attractive in form, with the wide margins of its pages alive with all sorts of pleasant birds and animals; the fables themselves are some of Aesop's spiciest, retold in a lively and appealing way, with suggestions for acting each one out. There you have pictures, stories, plays—and five wholesome Aesop morals. *Three Little Kittens* is an animal story of a different sort. "Jazbury was a small black kitten with white markings on his face and breast and soft little white paws—all he cared for was having a good time and playing about, and if mice had to be caught he left it to his mother and Aunt Tabby to do it." The adventures of Jazbury with his friends Fluffy and Yowler are told by Katherine

Pyle in delightful stories and pictures. But the book neglects its opportunity to stimulate any accurate understanding of animals, and oversentimentalizes to an unfortunate degree. *Peggy in Toyland* is a long, adventurous, whimsical story, by Archibald Marshall, of Peggy who was kind to her dolls and who got for reward a breathlessly exciting trip thru Toyland. The illustrations have the charm of the narrative; a child would like both story and pictures. And he would like *Sandman's Rainy Day Stories*, certainly. Abbie Phillips Walker, an author who seems to know about such matters, relates convincingly many surprising deeds of industrious fairies, gnomes and ogres. The "meows" and "squeaks" of cats and bunnies too are translated into tales that will keep the sandman away.

*Five Funny Fables, and How to Play Them*, The Look and Listen Series, by F. B. Kirkman. A. & C. Black, London. The Macmillan Co. *Peggy in Toyland*, by Archibald Marshall. Dodd, Mead & Co. *Three Little Kittens*, by Katherine Pyle. Dodd, Mead & Co. *Sandman's Rainy Day Stories*, by Abbie Phillips Walker. Harper Brothers.

## Some Books for Boys

There is really no justice in classing them so. Most girls like so-called "boys' books" much better than they do their own suitably feminine fiction. And if boys do not return the compliment, it is only because "girls' books" are in general so flat and insipid that the girls themselves are ashamed to read them. So let the title mean simply "books about boys."

There are always new football stories. Between *Quarterback Bates* and *Fourth Down* you may have your choice. In either you have Ralph Henry Barbour in his most readable, likeable vein. Here as usual is boarding school, with some lessons and a great deal of breathless football, with friendships and jealousies and emulations, with boy chivalry and boy loyalty, and over it all the glamour and excitement not of school life as it actually is, perhaps, but of school life as the young imagination would have it be. *Touchdown—and After*, by Gardner Hunting, is mostly "after," and so out of the football class. But it is still a story of school, a thoroly pleasant tho rather mild story of an escapade and what came of it, when one boy took on himself the blame for another's guilt, and all sorts of misunderstandings ensued, and in the end, as usual, the right man came out gloriously on top.

Such poetic justice is lavishly dispensed in *Jimmy Quigg, Office Boy*, by Harold S. Latham. It is a tale, not too strictly realistic, but sufficiently human

# Has This Ever Happened to You?

**I**F you were a guest at dinner and you overturned a cup of coffee, what would you do? What would you say? Would you turn to the hostess and say "I beg pardon?" Would you offer your apologies to the entire company? Would you ignore the incident completely? Which is the correct thing to do?

To be able to do and say the right thing at the right time is the badge of culture, and the man or woman who has that power is indeed an individual of polish and poise.

## What Do You Know About Introductions?

To establish an immediate and friendly understanding between two people who have never met before, to make the conversation flow more smoothly and pleasantly, to create an agreeable, harmonious atmosphere—that is the purpose of the *introduction*. A correct, courteous conversation—making an introduction is an art itself, and reflects refinement and cultivation on the person who is the medium.

How do YOU introduce two people? Do your introductions create a pleasant, easy atmosphere, or one that is uncomfortably strained?

Try this simple test and see what you really know about the art of introduction:

Mrs. Brown and Miss Smith have met at your home for the first time. Would you say, *Mrs. Brown, meet Miss Smith*, or *Miss Smith, meet Mrs. Brown*? Would you say, *Miss Smith, let me make you acquainted with Mrs. Brown*?

If Mr. Blank happened to drop in for a little chat, how would you present him to the ladies; to both at once, or to each one individually? And how would you present Bobby, who comes running in from school; *Bobby, this is Mr. Blank*, or *Mr. Blank, this is Bobby*, or would you use the *I want you to meet method*? Do you ever say *I take pleasure in introducing*? Is it right or wrong?

How do you introduce a sweetheart to your relatives for the first time? How do you introduce her or him, to your friends?

On the other hand, if you are being introduced, how do you acknowledge it. Do you use any of these expressions: *"Pleased to know you," "Delighted," "How do you do?"* Does a gentleman rise upon being introduced to a lady? Does the lady rise? Is it correct for the lady and gentleman to shake hands?

The difference between the right and wrong thing in introducing, is the difference between culture and coarseness.

The man who would be polished, impressive, and the woman who covets the wonderful gift of charm must cultivate the art of introduction.

## Etiquette at the Dance

The ball-room should always be a center of culture and grace. To commit a breach of etiquette at the dance is to

condemn yourself as a hopeless vulgarian. But alas! how many blunders are made by people who really believe that they are following the conventions of society to the highest letter of its law! What blunders do you make in the ball-room? These questions may help you discover them.

Does etiquette allow a woman to ask for a dance? May she refuse to dance without a reason? What is the proper thing for a young girl to do if she is not asked to dance? What is a polite and courteous way of refusing a dance? How many times may a girl dance with the same partner without breaking the rules of etiquette? Is it correct to wander away from the ball-room with a fiance?

According to etiquette's laws it is necessary for a gentleman to dispose of his escort to another partner before he asks another lady for a dance? How shall he ask a lady to dance. Which are the correct forms and which the incorrect? How shall he dispose of the lady after the dance if he must return to his escort? What is the right dancing position for the gentleman? For the lady? What style of dress is correct to wear at a dance?

There is perhaps no better place to display the culture and finesse of your breeding than the ball-room, resplendent with the gay gowns of women and enchanting with the ease and gracefulness of dancing couples. Here the gallantry of true gentlemen and the grace and delicacy of cultured women asserts itself. Here you can distinguish yourself either as a person of culture or a person of boorishness.

## When Wedding Bells Ring Out

etiquette again comes to the fore. What is the right dress for the bride to wear? How shall the invitation be worded? When shall the groom give his farewell bachelor dinner? How shall congratulations be extended? And after the wedding there are cards of thanks and cards of invitation to be sent. The wedding breakfast must be arranged and perhaps a honeymoon trip must be planned. Suffice to say that the bride and bridegroom will find invaluable aid in Everyman's Encyclopedia of Etiquette.

# Everyman's Encyclopedia of Etiquette

## In Two Comprehensive Volumes

In the most minute details of daily life, in the hours of prosperity and adversity alike, at all times, there is the omnipresent need of holding one's self in hand, of impressing by one's culture and breeding, of *doing the right thing*. Culture is, after all, one of the fine arts. To excel in music or painting, the price is vigilance, study and incessant effort; to be cultured, polished, the price is conscientious effort and study.

"Clothes may make the man," but whether you are clothed in rags or silks your culture can not be hidden. For he who is polite, refined and well bred wears a gorgeous robe endowed with the fine embroidery of honor and respect. Not even rags can cover it.

The world is a harsh judge, but it is just. It will not tolerate the man who makes blunders at the dinner table. It will not tolerate the woman who breaks the conventions of society at the dance. It will not tolerate the illiterate in the Art of Etiquette.

"Everyman's Encyclopedia of Etiquette" is excellent in quality, comprehensive in proportions, rich in illustrations. It comes to you as a guide, a revelation toward better etiquette. It dispels lingering doubts, corrects blunders, teaches you the *right thing to do*. It is a book that will last. You will preserve it, to refer again and again to its invaluable aid toward culture and refinement.

## New Chapters On Foreign Countries

Two new and interesting chapters have been added to the original edition of "Everyman's Encyclopedia of Etiquette." They are "The Etiquette of Travel" and "The Etiquette in Foreign Countries." The woman who is traveling alone must be extremely circumspect in her conduct. The conventions of etiquette must be strictly observed. The man who is escorting a woman abroad must not subject her to embarrassment by blunders in etiquette. Tips, dress, calling cards, correspondence, addressing royalty and addressing clergy abroad are

discussed and the dinner etiquette in France, England and Germany is disclosed. The two chapters are brimful of hints and pointers for the man or woman who travels.

## Send No Money

This is the first time that a complete and intensive two-volume set of "Everyman's Encyclopedia of Etiquette" has been offered. The edition will go quickly. Don't delay—send for your set NOW before you forget.

The coupon below entitles you to 5 days' FREE examination of the two-volume set of "Everyman's Encyclopedia of Etiquette." At the end of that time, if you decide that you want to keep it, simply send us \$3.50 in full payment—and the set is yours. Or, if for any reason you are not satisfied, return it to us and you won't be out a cent. You owe it to yourself and to the children in your home to have a set of "Everyman's Encyclopedia of Etiquette" in your library. This opportunity may never come again. Send for the set today and surprise your friends with your knowledge of the correct thing to do, say, write and wear at all times. Just mail the coupon—don't send any money.

## BOOKS FOR GIFTS

Coningsby Dawson's  
Christmas Romance

### THE LITTLE HOUSE

By CONINGSBY DAWSON

Author of "The Garden Without Walls,"  
"Carry On," etc.

Third Edition. Beautifully illustrated, \$1.50

"Has a charm as elusive as the appealing quality  
that won so many followers for Maude Adams."  
—New York Times.

"Really a Christmas story—and a very delightful  
and charming one."—The Outlook.

Laugh With Leacock

### WINSOME

### WINNIE and Other NEW NONSENSE NOVELS

By STEPHEN LEACOCK

Author of "Nonsense Novels," "Behind  
the Beyond," etc. Cloth, \$1.75

A merry collection of new burlesque novels by  
America's greatest living humorist.

The Most Vital Novel of 1920

### CHILDREN OF STORM

By IDA A. R. WYLIE

Author of "Towards Morning," *Holy  
Fire*, etc. Second Edition. Cloth, \$2.00

A novel of great vision, dealing with a new con-  
flict—between love and labor—a conflict every man  
and every woman may soon have to face. A wonder-  
ful love story.

Anatole France's Latest Book

### LITTLE PIERRE

By ANATOLE FRANCE

Translated by J. Lewis May

8vo. Cloth, \$2.50

This is the great French master's latest book. It  
is a worthy sequel of "Pierre Nozière" and "My  
Friend's Book"—a delightful mixture of tales, witty  
satire and philosophy.

Adventures With Pen and Pencil

### TALES OF A VANISHING RIVER

By EARL H. REED

Author of "The Dune Country," etc.

With 14 Full-Page Illustrations by the Author.  
8vo. Cloth, \$4.00

The background of this collection of delightful  
stories is the country through which flowed one of the  
most picturesque of our Western rivers (the Kan-  
kakee) before its destruction as a natural waterway.

Art and Literature

### ART AND I AUTHORS AND I

By C. LEWIS HIND

Author of "The Education of an Artist,"  
etc. Two Volumes. Cloth, \$2.50 each

The seeds of these two volumes were sown during  
the years in which Mr. Hind was editor of "The  
Studio" and "The Academy" of London, at which  
time his acquaintance with the prominent men of  
Art and Letters began and has continued down to  
the present time.

## OF ALL BOOKSELLERS

JOHN LANE CO., NEW YORK

and appealing, about Jimmy's first  
year of work as an office boy, and his  
interesting and commendable behavior  
under different sorts of circumstances.  
There is a pronounced moral flavor,  
but it is quite wholesome. Another story  
about a boy who "made good," this  
time under more obviously exciting cir-  
cumstances calculated to interest the  
scientifically-minded boy, is *The Young  
Wireless Operator—Afloat*, by Lewis  
E. Theiss, the adventures upon the high  
seas of Roy Mercer, a wireless oper-  
ator with the merchant marine.

Animal stories can be so good that it  
is strange that most of them are not.  
Walter Pritchard Eaton has achieved  
one of the rare and happy exceptions  
in *On the Edge of the Wilderness*. Ani-  
mal stories must necessarily be done  
from the human viewpoint; but these  
are no domestic, highly sentimental  
animals, endowed with pity and char-  
ity and a high order of intellect. They  
are wild brutes, lonely in their wild-  
ness, and tragic in their slavery to  
dim, blind instinct. Marshall Saun-  
ders, the author of "Beautiful Joe,"  
has written a horse story, *Bonnie  
Prince Feltar*, which friends of Beau-  
tiful Joe will be disappointed in.  
It is less a story of a horse than a  
story about human beings as seen thru  
a horse's uncannily human eyes. But  
after all, comparisons are unnecessary  
—and *Bonnie Prince Feltar*, left to it-  
self, is an attractive book, full of inci-  
dent and interest. *Rick and Ruddy*, by  
Howard R. Garis, for readers a little  
younger, is not only a dog story. There  
is a dog and a boy, and other boys,  
and all sorts of fine adventures.

A genuinely entertaining book for  
boys—whether scouts or not—is *The  
Boy Scouts' Year Book*, edited by  
Franklin K. Mathews, chief scout li-  
brarian, Boys Scouts of America. The  
book abounds in everything that will  
delight a boy—animal and camping  
stories, character sketches of the great-  
est scouts of them all—Abraham Lin-  
coln and Daniel Boone; out-of-doors  
cookery; Indian secrets and exciting  
tales of land and sea.

Writers are always trying their hand  
at historical books for children. Prob-  
ably "history made palatable" is the  
pet aversion of every normal boy who  
just wants a good book to read. But  
here are some that are good books, be-  
cause they make room for the facts of  
history without leaving out the inter-  
est. Give them to any boy who com-  
bines with a healthy taste for adven-  
ture a healthy curiosity about things  
that have really happened. Chelsea  
Curtis Fraser has two new books.  
*The Boys' Book of Sea Fights* is a  
chronicle of great naval battles from  
Sir Francis Drake and the Spanish Ar-  
mada down to Admiral Beatty and the  
battle off Jutland Bank in our own  
war. *The Young Citizen's Own Book*,  
as the name implies, is less a tale of  
the past than a study of history in the  
making—a discussion in simple lucid  
terms of the forms and departments  
and methods of our government in  
country, city, state and nation. It is a  
good book for young people who are

sometime going to vote. *The Book of  
Bravery, Third Series*, by Henry  
Lanier, calls itself "True Stories in  
an Ascending Scale of Courage." They  
are fact, and yet they cover no period  
of history, and obey no chronological  
law. Mr. Lanier has ranged the earth,  
the centuries, and the human race for  
stories of all sorts of courage; it is a  
collection worth making. *Sons of Lib-  
erty*, by Walter A. Dyer, is such a  
thoroughgoing yarn that it is hard to be-  
lieve that it is fact. But the point is  
simply that "the life and times of Paul  
Revere" were actually almost too ex-  
citing to be true, and Mr. Dyer has  
only done them justice.

In *America First*, one hundred  
stories from our own history, Lawton  
B. Evans has done an excellent piece  
of work in retelling the dramatic inci-  
dents of American history, from the  
voyage of Leif, the Lucky, to the ex-  
ploits of Sergeant York. The stories are  
all very short, told in simple style that  
boys and girls will like to read for  
themselves. Tho the emphasis is put  
altogether on human interest the book  
will be a valuable supplement to school  
study of our national history and it  
will stimulate a healthy national pride.

And when the boy is tired of read-  
ing, and it is no longer a question of  
books, then here are books still—this  
time not to read, but to tell him what  
to do. *Games for Boys*, by G. Sherman  
Ripley, is a large collection of games  
of all kinds—except the sort no boy  
wants to bother with, such as games to  
play at parties. There are a few quiet  
things to do on rainy days; but the  
rest are all active outdoor sports. For  
a boy with a taste for such things, *The  
Boys' Book of Magic*, by Hereward  
Carrington, is one of the few books in  
its class of any value. Its subject mat-  
ter is very various, ranging from  
Hindu magic thru ventriloquism, and  
sleight-of-hand, to animal tricks. Es-  
pecially, the directions are clear and  
practicable, and there are many help-  
ful illustrations. It is written for boys;  
the author was a boy when he began it.

*Quarterback Bates*, by Ralph Henry Bar-  
bour, Dodd, Mead & Co. *Fourth Down*, by  
Ralph Barbour, D. Appleton & Co. *Touch-  
down—and After*, by Gardner Hunting. The  
Macmillan Co. *Bonnie Prince Feltar*, by  
Marshall Saunders, George H. Doran Co.  
*Rick and Ruddy*, by Howard R. Garis, Mil-  
ton Bradley Company. *The Boys' Book of  
Sea Fights*, and *The Young Citizens' Own  
Book*, by Chelsea Curtis Fraser, Thomas Y.  
Crowell Co. *Sons of Liberty*, by Walter A.  
Dyer, Henry Holt & Co. *The Book of Brav-  
ery, Third Series*, by Henry W. Lanier,  
Charles Scribner's Sons. *The Boys' Book of  
Magic*, by Hereward Carrington, Dodd, Mead  
& Co. *Games for Boys*, by G. Sherman Rip-  
ley, Henry Holt & Co. *The Boy Scouts' Year  
Book*, edited by Franklin K. Mathews, D.  
Appleton & Co. *The Young Wireless Oper-  
ator—Afloat*, by Lewis E. Theiss, W. A.  
Wilde. *On the Edge of the Wilderness*, by  
Walter Pritchard Eaton, W. A. Wilde Com-  
pany, Boston. *Jimmy Quigg, Office Boy*, by  
Harold S. Latham. The Macmillan Com-  
pany.

## Eighteen Children of History

Some of these story-book children  
are the very old-fashioned little girls  
in *Four Girls of Forty Years Ago*, by  
Nina Rhoades. Children of today will  
be interested in children of so long ago,  
when telephones were marvels and

automobiles were not thought of. *Little Heroes of France*, by Kathleen Burke, are children who are actually living now, across the sea in France; and these are true stories of the brave and self-forgetful deeds they did for France, in the days of the war.

*Four Girls of Forty Years Ago*, by Nina Rhoades Loshop, Lee & Shepard Co. *Little Heroes of France*, by Kathleen Burke, Doubleday, Page & Co.

### Famous Biblical Paintings

One of the most beautiful books got out for Christmas this year is *The Story of Jesus*, a large, handsome volume containing forty colored reproductions of paintings by old masters from scenes in the life of Christ. Each painting has on the opposite page the Scripture passage on which it is based. The book would be of much educational value to children, from both the artistic and the religious standpoint; and it is also a treasure to art lovers, since its color reproductions are excellent, and copies of many of these paintings cannot be obtained elsewhere.

*The Story of Jesus*, Marshall Jones Co., Boston.

### History, New Style

For once a "child's book" has been written up to, rather than down to, the youthful imagination. And the result is a wealth of information presented in such a way as to make its acquisition lots of fun! *Ancient Man*, by Hendrik Willem Van Loon, is the book to which this praise is due. It is to be the first of a series of nine history books in story form, which "will explore the intricate wilderness of the bygone ages" and in summing up "try to show where the human race has lived up to its highest possible achievements and wherein it has failed to rise above the status of the earliest caveman." The famous historian undertook this task for his own boys, eight and twelve years old, and he has sensed unflinchingly the way to stimulate the interest and satisfy the curiosity of youngsters of about that age. The history is told in easy-going, simple narrative presented with as much care and accuracy as Dr. Van Loon's more famous histories for grown-ups, and supplemented by colored illustrations, pen and ink sketches, charts and maps, all prepared by the author. The map of the ancient world, which lines the covers of the book, is as thrilling as the chart to Treasure Island and as comprehensible as a diagram of the backyard.

The Van Loon History for Children will probably have in the realm of children's literature somewhat the status of the circus in entertainment for the young. The youngsters won't be happy without it, and their elders will welcome an excuse to enjoy it, too.

*Ancient Man*, by Hendrik Willem Van Loon. Boni & Liveright.

### This for Parents

Parents who are interested in their children's reading, from whatever standpoint, can find much that they want in *Roads to Childhood*, by Annie

# He Has a Most Remarkable Knack for Reading Faces

## How Tom Rutherford Makes \$18,000 a Year!

I hadn't seen Tom Rutherford in nearly 10 years. When you consider that we had been pals at college, you can imagine how delighted I was to hear his cheery voice come ringing over the telephone.

He was on one of his big swings over the eastern territory and he wanted to know if I wouldn't come down and eat dinner with him at his hotel.

I found him to be the same old Tom—older of course—a trifle gray around the temples—perhaps a little keener of eye—but all in all the same old Tom. Success hadn't turned his head one bit and I felt no hesitancy in asking him how it was that he had been so successful.

"I can sum it up in five words," he said quickly—"The ability to read men. I can tell within three minutes after I meet a man the kind of man he is. I can tell if he is honest; I can tell if he is kind; if he is open to reason or if he is obstinate; if he is dependable; if he is careful or if he is careless. His eyes tell me one thing—his nose something else—his mouth, his lips, his forehead, his profile, his ears, every feature in fact has a never-failing message to the skilled observer.

"Everybody reads character. Almost everybody can tell a clergyman from a ruffian or a bricklayer from a musician just by looking at their faces. But the important thing is to be able to read character when the lines are not so clearly defined.

"You know I had no more ability to start with than any one else. But one day I heard of a very rich man named L. Hamilton McCormick who had been making a life-time study of Character—as revealed in the face. I determined to visit him in his home and I did. I found him to be one of the most charming—most unusual men I have ever met.

"For forty years he had been making a study of CHARACTEROLOGY—not for money, for he is many times a millionaire, but through a desire to establish this study as an exact science. His study of types had taken him all over the world. After a life-time of effort he had formulated certain definite rules for reading character. When he told me that any one who studied these rules could read character my enthusiasm

knew no bounds. We got to be fast friends and I persuaded him to let me read the manuscript of this monumental work.

"From then on my success in business was assured. People marveled at my ability to swing conferences to my point of view—to make friends—to sell prospects who had been listed as impossible. It was all due to my ability to read men.

"For several years I have been urging Mr. McCormick to publish his rules for reading character. But always he would shake his head and say kindly—'Not yet, my dear sir. I must be ten times sure of every word before I offer this work to the public.'

"And now at last, CHARACTEROLOGY has been published. In it you will find every rule for reading character that has made my business and social life so successful. You, too, can become an expert reader of character if you study the rules laid down by Mr. McCormick.

"You will find this not only the most interesting work you have ever read but the most profitable. It is something that you can use every day of your life. I firmly believe—in fact I know—that my ability to read men is the one big reason why I am earning \$18,000 a year."

Tom Rutherford said good-by that night but before he left I had sent to Rand McNally & Company for CHARACTEROLOGY. It has meant more to me than any other book I have ever read. As Mr. McCormick himself says—"There is no study of more importance to man than the study of man."

#### SEND NO MONEY

We want to send you this remarkable work on CHARACTEROLOGY. We are willing to send it to you on approval because we know that once you start reading it and begin applying its rules you will realize its practical value to you in every-day life. You need send no money. Without cost, without obligating yourself in any way, sign and mail the coupon printed below.

THOMAS Y. CROWELL CO.  
PUBLISHERS :: NEW YORK

Carroll Moore. Out of her experience as supervisor of children's work in the New York Public Library, the author has prepared a series of chapters dealing in an informal and undidactic way with the variety of problems that present themselves as soon as a child is old enough to read. There are lists of books for parents to turn to at crises like Christmas and birthdays; there are suggestions of books of verse and books with charming illustrations. But the volume's special contribution is its discussion, neither sentimental nor over-theoretical, of the psychology of children's reading. A child is inarticulate about his likes and dislikes; and who else should venture to define them? Only such a person as the author of *Roads to Childhood*, who has seen for herself what so many children want that she may safely generalize.

*Roads to Childhood*, by Annie Carroll Moore. George H. Doran Co.

## For the "First-Reader"

SONG DEVICES AND JINGLES, by Eleanor Smith (Lothrop, Lee & Shepard), is a charmingly illustrated book of tunes and jingles. Not only the child who sings, but the so-called "monotone"—the child apparently without musical gifts—will enjoy the lively dialogs and rhythmic games of this attractive volume.

THE AIRPLANE SPIDER by Gilbert Murray (Little, Brown & Co.), is a small book for small children, in very large clear print. Laura is a spider and this is the story of her life; a little science, some interesting observation, and considerable pleasant fancy.

NURSERY RHYMES it is simply called. But the rhymes are set to music and there are line drawings for illustrations, left for the child to fill in with crayons or water colors. These rhymes, selected by Agnes Nightingale, are in the series of "Black's Painting Books" (A. & C. Black, Ltd., London).

UNCLE SQUEAKY'S COUNTRY STORE, by Nellie M. Leonard (Thomas Y. Crowell Co.), is more about the Graymouse Family, and the other country gentry, Lady Spider, Dolly Grasshopper, Simon Skunk and the rest. There are funny colored illustrations by Carle M. Boog.

QUEERFUL WIDGET, by W. B. Hawkins (Boni & Liveright), is a book of whims—rimes, stories, tricks and fancies. A child might like them; a grown person would be more likely to. There is some real charm, at points stretched rather thin. The book is a worthy descendant of Lewis Carroll or the "Just So Stories"—it would be hard to say which.

THE ITALIAN TWINS, by Lucy Fitch Perkins (Houghton Mifflin Co.), makes a good story a vehicle for much information about life and customs in Italian city and highway and countryside. Beppo and Beppina are lively children.

THE STRANGE YEAR, by Eliza Orne White (Houghton, Mifflin Co.), takes the children already familiar in "The Blue Aunt" and carries them on thru a fresh simple narrative of the incidents and vicissitudes of one year of the war. A slight, small, thoroly pleasant book.

## Irish Tales

THE CHILDREN OF ODIN, by Padraic Colum (Macmillan) is a re-creation, not merely a retelling for children, of the great Norse Sagas. They are stately and stirring old tales, and not the least part of the beauty of this telling of them is that, for all his Norse subject, Mr. Colum is as usual invincibly Irish.

THE GOLDEN BARQUE, by Seumas O'Kelly (Putnam), is so finely and purely Irish that it is doubtful whether a child could make the most of it. But these are tales with so much literary and poetic quality that it would be unfortunate not at least to give the child a chance.

## Trails to Wonderland

THE WHIRLING KING AND OTHER STORIES, by Harriett Mead Olcott (Henry Holt). Delightful stories adapted from the French—their non-

sense always ends enchantingly; and the silhouette illustrations keep up the spirit of fun.

TRAILS TO WONDERLAND, by Isa L. Wright (Houghton, Mifflin Co.). Fanciful stories which, without preaching, will convey to the young reader that after all, the way to be really truly happy is to make others happy. "The Magic Whistles," "The Gift of the Fairies" and "The Old Whale's Toothache" are good insurance against rainy-day discontent for youngsters from eight to twelve.

SWISS FAIRY TALES, by William E. Griffis (Thos. Y. Crowell). Good stories of fairy folk, bits of folklore and real atmosphere are given in these twenty-five tales. They tell us, incidentally, that it was really the lovely queen of the Swiss fairies who put it into Soft Pudding's head to invent the cuckoo clock.

THE CRYSTAL BALL, by Mary D. Gordon (Little, Brown & Co.), is the story of Jack and Joan, who go adventuring in search of the crystal ball in the Garden of the Sun. It is a good story, tho so like many others that it is natural to say simply that it is the "kind" of book that children are interested in.

WONDER STORIES by Carolyn Sherwin Bailey, illustrated in colors by Clara M. Burd (Milton Bradley Co.). An attractive collection of several dozen of the classic myths retold in a simple, entertaining way for children from nine to twelve or thirteen years old.

## For the First "Teens"

LUCKY PENNY OF THISTLE TROOP, by Amy E. Blanchard (W. A. Wilde). Girls from twelve to sixteen will enjoy Penny, her friends and her adventures in Thistle Troop—the girl scout organization in her town. The girls, besides doing many other helpful and kind things, adopt a Belgian orphan and the story of how she found happiness in America adds interest to this wholesome book.

THE EMERALD STORY BOOK, arranged by Ada and Eleanor Skinner (Duffield), is a really valuable collection of favorite stories from a wide choice of authors—Eugene Field, Kate Douglas Wiggin, Selma Lagerlof, many others. It would go well on a shelf beside its companion volumes, "The Topaz Story Book" and several others.

RAINBOW GOLD, by Millicent Evison (Lothrop, Lee & Shepard). The story of a young girl's faith in her father who has been sentenced to ten years' imprisonment—her love for him is the rainbow on the cloud of adversity. Young people beginning their teens will like "Toni."

## Country Roads

THE LAND OF THE GREAT OUT-OF-DOORS, by Robert Livingston (Houghton Mifflin). The story of Pen and Penny, a little brother and sister of five and seven, who move to the country and have all sorts of happy times in the woods, pastures and gardens, will create envy in youngsters who have to play in paved streets and crowded city apartments.

LITTLE FOLKS TRAMPING AND CAMPING, by Anna Blunt Morgan (Lothrop, Lee & Shepard). An uncle-chum offers a prize to the children seeing, and becoming acquainted with, the greatest number of birds during the summer; the story relates, interestingly, the adventures of the children, and, incidentally, promotes a knowledge of natural history and love of birds.

## The Bible Re-told

THE STORY OF PAUL AS TOLD BY HIMSELF, and THE STORY OF ABRAHAM AS TOLD BY ISAAC, by Edward Leigh Pell (Revell), are attempts to vivify the Bible for children by placing some outstanding Bible figures in their background and letting them speak for themselves. As stories and as studies in history, they are probably justified; it is doubtful whether any child will be induced by them to read the Bible.

## Adventure

SEA FIGHTERS, by Warren H. Miller (Macmillan), are yarns of adventure, navy life, and the sea, not over-literary in manner, but lively and rapid enough to furnish diverting reading for a boy who likes such things.

TROOP "ONE" OF THE LABRADOR, by Dillon Wallace (Revell), carries on the characters introduced in "Grit-a-Plenty" thru another story of Labrador adventure. Mr. Wallace knows from personal experience the scene of his story.

THE HIDDEN PEOPLE, by Leo E. Miller (Scribner's), is a scientific novel for boys, a really sound study of a remnant of an ancient South American tribe in interesting natural surroundings, all this hung on a skeleton of plot.

## And Other Books

### La Belle Ville

A Frenchman always speaks of Paris as if she were a woman and he loves her in the same way. He can indicate to you certain features which make her beautiful, certain traits of character which he admires, but above and beyond that there is an intangible, an indefinable tho a very real charm. Paris is Paris and that is why he loves her. It is not quite sufficient, however, to say, "a Frenchman"; French women love Paris in the same way and so do foreigners who have fallen under her spell. If you love Paris from afar books about her, even mediocre books, give you a thrill just as, when there is all of the Atlantic between you, you can get terribly excited over a postcard picture of the lady of your dreams. Helen Davenport Gibbons—she is the wife of Herbert Adams Gibbons, the correspondent—*Paris Vistas* is not in the least a remarkable book, but you will enjoy it, if you love Paris, because she loves the city too, because she is on such delightfully intimate terms with the streets and bridges and gardens that you know and because she writes of the pleasant little everyday things that are at the basis of true affection. It is a very personal book. It tells of her years in Paris as a child, as a school girl, as a young bride, and of how she lived there with her four children during the war. She is annoyingly complacent, sure that her way of doing things was always the best possible, still there are compensating qualities.

But the really delightful thing about the book is the pictures. It may not be a kind thing to say, but Mrs. Gibbons' text is quite unimportant as compared to Lester Hornby's illustrations. He has put down in black and white not simply the buildings and the people, but the feel, the atmosphere, the air of Paris. The pictures are a pure joy—especially if you are homesick for Paris.

*Paris Vistas*, by Helen Davenport Gibbons. Century Co.

### Four Kinds of Thrill

There is no need for anyone to find life unexciting so long as there are men in the world with imaginations like Frank L. Packard's. *The White Moll* is a tale of the underworld in which so many unexpected things happen every second that the end of each chapter leaves you breathless and gasping. How Rhoda Gray, the White Moll, was forced to disguise herself as Gypsy Nan, plot with and then foil the plots of the toughest gang in New York, is a story for which thrilling is far too mild a word. Mr. Packard rivals E. Philips Oppenheim in fertility of imagination. If you like back alleys and secret panels, revolvers, flashlights and unadulterated melodrama—which, by the way, is one of

### JUST OUT

By

J. PATERSON-SMYTH

Author of "The Gospel of the Hereafter"

## A People's Life of Christ

A life of Christ which the average person will read for the sheer pleasure of reading it. It leaves in every reader's mind a clean, consecutive, unbroken view of the life of Jesus, with all the main incidents and teachings in the right places. A book for which we've long waited.

\$3.50 net

## CHINA, the Mysterious and Marvellous

By VICTOR MURDOCK, Editor, Journalist, Congressman

Out of the innermost regions of the "Celestial Kingdom," now a Republic, Mr. Murdock has found material that is not included in the usual "globe-trotter's" book about China. A notable volume on China which will scarcely be laid down until the last page is reached.

Illustrated. Net \$2.50

## With Grenfell on the Labrador

By FULLERTON L. WALDO, Philadelphia "Public Ledger"

An exceptionally full and deeply interesting account, not only of Dr. Grenfell's work, but of the quaint, outlandish ways of the people of Newfoundland and The Labrador. Net \$1.50

"Shall a Man Live Again?"

## The Passion for Life

JOSEPH HOCKING'S GREATEST NOVEL

"One of the finest, most significant and most absorbing stories of the great cataclysm that brought sorrow and suffering to most all of the world."—*Pittsburgh Chronicle-Telegraph*.

A Romance of the Strongest Human Desire. With Colored Jacket.

Cloth, \$1.75

### Troop "One" of the Labrador

By DILLON WALLACE  
Author of "Ungava Bob" etc.

A great feast is here spread for all those who admire courage, hardihood and square dealing—and what healthy boy does not? Dillon Wallace's name as author is sufficient guarantee.

## Training for Authorship

How to write, what to write,  
and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

150-Page illustrated catalogue free. Please Address

ESTABLISHED 1897

INCORPORATED 1904

the most restful things in the world—by all means read *The White Moll*.

If you prefer your melodrama with an Oriental setting, a garniture of knives and fezes, of eastern odors and strange oaths, try *The Eye of Zeitoon*. Talbot Mundy would like to be a second Rudyard Kipling and he never will, but if you don't insist on making invidious comparisons and if you like hot fighting you can find a lot of interest and excitement in this tale of the mad adventures of three Englishmen, one American and, of course, a beautiful girl, who tried to help the Armenians against the Turks.

And if that is too strenuous for you and you would rather have the fascination of disguise and mystery without quite so much bloodshed there is Henry Milner Rideout's *The Foot-Path Way*, which winds chiefly about the Indian secret service where almost anything can happen.

Perhaps you like your thrills in subtler form? In that case try Lucas Malet's *The Tall Villa*. It tells of the love of a beautiful young English woman for the disembodied spirit of one of her ancestors. It is not exactly an old fashioned ghost story; neither is it crude and modern enough to deal with Ouija boards and trances; it is rather skilfully balanced between the old and the new ghost law.

*The White Moll*, by Frank L. Packard. George H. Doran Co. *The Eye of Zeitoon*, by Talbot Mundy. Bobbs-Merrill Co. *The Foot-Path Way*, by Henry Milner Rideout. Duffield & Co. *The Tall Villa*, by Lucas Malet. George H. Doran Co.

## A Divorce Reform Novel

W. B. Maxwell has joined the group of writers who are fighting the iniquitous English divorce law. The scene in the courtroom where the Vaughn case is tried is a remarkable study in psychology as well as a dramatic climax. How the truth, which the reader knows, can be distorted and twisted by a clever, coarse and unscrupulous cross-examiner, is shown in a passage of painful interest. *For Better, For Worse* is one of the strongest pleas ever made against the existing law in England. As a work of art the novel suffers little from the evident propaganda, because of the clearness of characterization, and the gradual working out of an inevitable crisis in an intolerable situation. The present British marriage law is highly unjust to the weaker sex and prevents divorce even where married life has become intolerable.

*For Better, For Worse*, by W. B. Maxwell. Dodd, Mead & Co.

## Prejudices

*Prejudices* is an excellent name for the book of critical essays by H. L. Mencken, but one is tempted to adopt Mr. Mencken's own method and say that Pigheadnesses would have been an even more accurate title. He has a tremendous assurance of the rightness of his own point of view, an assurance which no critic can altogether avoid, but which Mr. Mencken insists upon with vigorous, slashing blows. His method of argument is that of the man

in the Lewis Carroll poem, "I said it very loud and clear, I went and shouted in his ear." Some of the things he shouts are quite worth listening to for he has a keen and clever mind and the fact that he disagrees with most of the generally accepted standards and opinions makes him distinctly worth reading. It is quite as possible to disagree with the majority and be right, as it is possible to disagree with the majority and be wrong—the latter fact never seems to enter Mr. Mencken's head.

Now it is probably quite incorrect in reviewing a book to quote from someone else's review, but Professor Stuart P. Sherman of Iowa, one of Mr. Mencken's *bêtes noires*, gives such a delightful picture of him in an article in the *New York Times* that we hand it on.

At this point enters, at a hard gallop, spattered with mud, H. L. Mencken, high in oath—thus illustrating the Goethean maxim—*Aller Anfang ist schwer*. He leaps from the saddle with sabre flashing, stables his horse in the church, shoots the priest, hangs three professors, exiles the Academy, burns the library and the university, and, amid smoking ashes, erects a new school of criticism.

*Prejudices*, by H. L. Mencken. Alfred A. Knopf.

## A Dutch Novel of the Nile

The barge was now gliding up the Nile in the night; the sky was softly blue, like dark byssus; the water was a pale blue, like rippling silk; and the waning moon hung above the palm-clusters and country-mansions on the river-bank like a great overripe fruit which threatened to burst in the sky and whose juice was already trickling in thick orange drops that flowed over the Nile.

This is Louis Couperus, the Dutch novelist whom America is just beginning to know. His style is exquisite, delicate, unusual, and beautifully translated. *The Tour*, which is the story of a young Roman Cook's-touring up the Nile, consulting oracles for news of his lost love, is not altogether typical of Couperus' work. It is more concerned than most of his books with external atmosphere and less with the subtleties of the human soul.

*The Tour*, by Louis Couperus. Dodd, Mead & Co.

## A Book You Can't Forget

*Sanctus Spiritus and Company* is one of the saddest books that I have ever read. It seems to gather every form of human grief and to merge them all finally in the greatest sorrow of all, the sorrow of a shattered ideal, which does not, of course, recommend it to a modern audience. And yet it is a book that anyone interested in Americanization ought to read. The fact that it is written by the author of *On the Trail of the Immigrant* is sufficient proof that he knows whereof he speaks when he writes of Bohemian Hungary, of the racial bitterness there, of the men who came back rich from America, where "it is fine."

*Sanctus Spiritus and Company* were three old men in the little Hungarian town of Hraszova who ever since their boyhood had been friends altho one

was a Jew, one a Catholic priest and the other a land owner and a Calvinist. The story of their friendship and of their several tragedies which came for the most part thru racial antagonisms and the changing times, is poignant and enthralling. Closely mingled with their story, dominating it really, is the story of the coachman's son who went to America, worked in the mines, went thru college, studied for the ministry and returned to his own people as a missionary. He found himself in many ways estranged from them and yet still curiously akin. In an attempt to help the peasants he became involved with the Government and had to flee back to America.

He and his wife are very happy in the Pennsylvania mining town where he has a parish among the Slovak miners and then the war breaks out and in America rises the same hysterical, fanatical hatred of those of another race and creed that he thought he had left behind in the old world. It is not a charge which Americans can turn aside lightly, there is too much truth in it. The tottering of his idol almost breaks the young man's heart but he clings still to a hope that there will some day be a New World where men may live in brotherliness.

*Sanctus Spiritus and Company*, by Edward A. Steiner. George H. Doran Co.

### Odd Moments

**SKETCHES IN DUNELAND**, by Earl H. Reed. (John Lane Co.) Beautiful gift book with fourteen etchings by the author, continuing the account of the "doin's" of the old derelicts in the dune region around Lake Michigan.

**AN ANTHOLOGY OF RECENT POETRY**, compiled by L. D'O. Walters (Dodd, Mead & Co.). A brief selection from the best contemporary British poets. Many of the poems are familiar: Rupert Brooke's famous "Soldier" sonnet, for instance, and John Masefield's "Sea Fever." It is a good coat-pocket anthology.

**PLAYS**, by Susan Glaspell (Small, Maynard & Co.). These eight plays, all of which have been produced by the Provincetown Players, have a literary quality and a somewhat philosophical viewpoint that make them as readable as stories. Miss Glaspell writes in a crisp, descriptive style and she shows keen insight into the underlying human motives. "Trifles" is a really great play.

### Speed and Thrills

**THE ROARING ROAD**, by Byron Morgan (George H. Doran Co.). Geared to a speed of ninety miles or more these half dozen stories of automobile racing are guaranteed to furnish thrills a-plenty to anyone susceptible to the lure of the steering wheel.

**THE SLEUTH OF ST. JAMES'S SQUARE**, by Melville Davison Post (Appleton). Episodes, sketches, glimpses of mystery. A certain amount of good atmosphere and description, but a stage elaborately set too many times for the amount of actual performance.

**32 CALIBRE**, by Donald McGiberty (Bobbs-Merrill). A not too lurid mystery interestingly built up and broken down, in a rapid easy narrative style. Thoroughly readable.

### About People

**LINCOLN THE WORLD EMANCIPATOR**, by John Drinkwater (Houghton Mifflin). A rather random miscellany of essays on the spirit of Americanism by the British dramatist who "discovered" Lincoln for London.

**A SHORT LIFE OF MARK TWAIN**, by Albert Bigelow Paine (Harpers). A condensation of the author's well known longer biography.

**GAMBETTA**, by Paul Deschanel (Dodd, Mead). The recent President of France writes a sympathetic biography of one of the greatest statesmen of the Third Republic. Of particular interest is the discussion of the adoption of the present French constitution after the war with Prussia. Ex-President Deschanel writes with the blend of lucidity and enthusiasm characteristic of the best French political literature.

## FOR THE BUSY EXECUTIVE

BOOKS THAT TELL HOW, WHEN AND WHERE

Sent on ten days' approval, ask for them on your letterhead

### EMPLOYEES' MAGAZINES

By Peter F. O'Shea, organizer and Consulting Specialist on house organs.

Employees' house organs, properly conducted, can aid the management greatly. Mr. O'Shea tells you the kind of articles that can be used most profitably and how to get them. Practical from cover to cover. \$1.80 postpaid.

### STANDARD PRACTICE IN PERSONNEL WORK

By Eugene J. Bengt, of the Department of Industrial Relations, Atlantic Refining Company; formerly Fellow in Industrial Research, Carnegie Institute of Technology.

Mr. Bengt has the advantage of practical experience in industrial employment and Army Personnel Work. He presents the methods of selection, training and retention. About 300 pages of workable suggestions. \$3.00 postpaid.

### 2400 BUSINESS BOOKS AND GUIDE TO BUSINESS LITERATURE

An analytical list of books, directories, periodicals and other worth-while printed matter. Tells you where to find the very book or perhaps only the chapter of a book that deals with the problem in hand. 456 pages. \$5.00 postpaid.

S. S. DELANO, Treasurer.

H. C. WICK, Secretary.

# How to Study This Number

## THE INDEPENDENT LESSON PLANS

### English, Literature and Composition

- I. Taking Banking Out of Politics.
  1. Write an explanation of the Federal Reserve system of banking that would make it clear to a person who had never heard of it before.
- II. Can Air Be Too Free?
  1. As a class, make suggestions for the control of aviation. Then appoint a committee to sift and condense your suggestions into a table of laws.
  2. Have you any personal experience to add to the two incidents Mr. Driggs tells about of the plowed field and the golf course? If you have, write an interesting account of it, considering at the same time its legal aspects.
  3. Have a mock trial—Mr. Driggs' farmer versus the aviator—based on your own laws.
  4. The fact that the sky, after any amount of legislation has been passed, must always remain really uncharted and unpossessed, has many stirring suggestions. If any of them strikes you, you might write a poem about it. Be humorous, if you are moved to be; but you might very easily be serious.
- III. The Play's the Thing.
  1. Just what exactly is the point of Mr. Moses' article? Criticize the article for clearness and unity, in the light of what you decide to be its intention.
  2. Give examples, with reasons for your choice, of three plays better read than acted, then of three better acted than read, and then of three which need both treatments.
  3. Choose one Shakespeare play, with which you are or can be really familiar, and write an essay about it, considering it as an acting and as a reading play, and the ways in which it is both.
  4. What do you think about Shakespeare in general? Does an acted performance or a reading extract more from one of his plays? What do we mean when we say, "Oh, Shakespeare's all right, but he could never be really popular?"
  5. Which of the plays that Mr. Moses describes does he make you most want to read? Read it, and as many others that he mentions as you can, comparing your reactions with his.
- IV. Wells on the World.
  1. "There is no bigger writer than Wells." In what sense do you think Mr. Slosson uses the word "bigger"? Do you agree with such a description?
  2. Do you know of any novel by Wells that is unmixedly a novel, that is, free from any propaganda or intention to inform? What about "Mr. Britling," or "Joan and Peter"? Read one of the two that you have not read before, and write a discussion of Wells' method of handling literary and propagandist material together.
  3. Define the following words: biolog, minuscules, mummies, potentate, idiosyncrasies, bias, retina, fortnightly, illegible, obsolete.
- V. Here Are Books.
  1. Write an informal essay for children about all of your very first favorite books that you can remember.
  2. From the reviews of children's books in this number make out a list of ten for a child, with some particular child in mind. Then write out your list together with a character sketch of the child that will show why you chose the books you did.
  3. Pick out one of the general types of stories reviewed in this issue—animal stories, fairy stories, adventure stories, etc.—and write a letter to The Independent explaining your views as to the faults and shortcomings of the average run of that kind of children's fiction.
  4. Write several short reviews of any other new books for children that have come to your attention.
  5. La Belle Ville. Write a description of any town that you know well and care about that would make an absent native homesick, and a stranger want to go there to live.
  6. Louis Couperus is one of the important new novelists. Read any one of his novels you can get hold of, and in class discussion compare notes with the people who have read others of his books, in an effort to discover and define his characteristic qualities.

### History, Civics and Economics

- I. National Finance—Taking Banking Out of Politics.
  1. What can you tell about the Federal Reserve System? Under what President and by what law was it established?
  2. What steps did the Federal Reserve Board take to curb inflation after the war? How did this affect business? What complaints did this policy cause?
  3. Do you think that the curtailment of credits by the banks is a leading cause of the recent decline in prices? What other causes have been operative?
  4. Why was political pressure brought to bear on the Federal Reserve Board to reverse its deflation policy? What would have been the effect in the long run if the Board had yielded to political considerations?
- II. Efficiency at Washington—Reforming Uncle Sam. How Two Billions Were Sunk.
  1. What is a "cabinet"? Point out the difference between the English or French cabinet and the American. Is there anything about the cabinet in the American Constitution?
  2. What are the present departments of the Federal Government and who is at the head of each? What two new departments are proposed?
  3. Prepare either side of a debate on the question: Resolved, that the Department of the Interior be abolished and its present functions divided between a Department of Public Works and a Department of Public Welfare.
  4. What men would you like to see appointed to each office in the cabinet next March? Send in your list to The Independent.
  5. What defects in our political methods seem to you to be revealed by the Shipping Board investigation?
- III. Regulation of Aerial Traffic—Can Air Be Too Free?
  1. "The United States is still at war with Germany, and is still without essential laws governing aviation." If you can get hold of a copy of the Treaty of Versailles look up Part XI (Articles 313-320).
  2. "Property rights have heretofore extended above and below the surface of one's real estate." If this principle were generally applied and strictly interpreted what effect would it have on cross-country aviation?
  3. "Aviation is of necessity a Federal matter." What difficulty has conflicting state legislation caused railroads which run thru several states? Compare interstate rail traffic with interstate air traffic.
  4. "Contraband is today being smuggled over our national boundaries in large quantities." Should the Government establish "revenue cutter" airplanes? If the spirit moves you, write a thrilling short story of chasing airplane smugglers carrying jewels across the Canadian border.
- IV. American Commercial Rights—Freezing Out Uncle Sam. America Protests.
  1. On what grounds does Secretary Colby base his protest against discrimination in the matter of petroleum claims in Mesopotamia?
  2. How does our refusal to enter the League of Nations affect our commercial rights in mandated territory?
  3. What is the mandatory system? How did it come to be adopted? What parts of the world have been assigned under mandate to various Powers?
  4. Secretary Colby declares that the United States has only one-twelfth of the world's petroleum resources. What other countries besides the United States are rich in oil?
  5. Show the connection between the petroleum resources of such countries as Russia, Persia, Mesopotamia and Mexico and the interest foreign powers take in their political situation.
- V. Japanese Immigration—Pricking the Bubble. The Census on the Yellow Peril.
  1. Do you think that the Japanese population in the United States is increasing too rapidly? If so, what remedy would you suggest?
  2. If you were President what recommendations would you make to Congress on the general question of immigration? Would you discriminate against or in favor of certain nations or races, or adopt tests (such as the literacy test) which would apply to immigrants from all countries?

# The Independent

FOUNDED 1848

## Pebbles

She—You dance divinely.  
He—I was an angel child. *Octopus.*  
He—I feel like proposing. Where can we go?  
She—Let's try the court yard. *Panther.*

"Maw says you can't kiss me any more. Willie Jones, 'cause you might get microbes and I might get your crobes." *Sun Dial.*

Yes Xenophon, when you see a string of letters after a man's name you know that he got that way by degrees.—*Widow.*

Husband (studying menu)—Extra good dinner tonight—expecting company?

Wife—No, but I think cook must be.—*London Opinion.*

Mother—I don't know what we can make of Ethel; she sleeps so much.

Ethel's Brother—I know, mummy. Make a chaperone of her!—*London Mail.*

"What did Helen say when you turned out the light and kissed her?"

"She said that she felt as if she never wanted to see my face again."—*Columbia Jester.*

He—I wish to goodness someone would invent a way of using a hammer so's you wouldn't hit your fingers.

She—Why not take both hands to it, dear?—*Blighty.*

Instructor—Young man, you're the first one that ever went to sleep in one of my lectures.

Frosh—Well, you gave me the dope, didn't you?—*Juggler.*

Teacher—If Shakespeare were alive today, wouldn't he be looked upon as a remarkable man?

Student—Shure he would, he would be 300 years old.—*Virginia Reel.*

Little Vernon found his dad's home brew. Thought he'd see what the stuff would do—He took two drinks and climbed a tree And never came back to normalcy.

—*Frivol*

Minister—I made seven hearts happy today.

Parishioner—How was that?

Married three couples.

That makes only six.

Well, do you think I did it for nothing?

—*Kansas City Independent.*

A country lad was writing a letter to a city friend. Having no other envelope than a very dirty one that he had carried in his pocket for quite a while, he used it but annexed at the end of his letter:

"P. S.—Please excuse the envelope. It was clean when it left my hands."—*Boys' Life.*

The valued cook of a certain family has been in the same situation for years and the other afternoon the mistress of the house visited the kitchen and said:

"You know, Mary, we are all very fond of you. I hope you like your wages. I am thinking of giving you one of my silk petticoats."

Whereupon cook's eyes widened, and she answered the mistress:

"Oh, mum, how ever many people have you been an' gone an' asked to dinner now?"—*New York World.*

## Remarkable Remarks

MARSHAL FOCH—There is no militaristic policy in France.

REV. JOHN ROACH STRATON—Thomas Edison is off his beat.

HERBERT HOOVER—America "does not and never will fight children.

GABRIELE D'ANNUNZIO—Sickness, pain, prison, death—I dare them all.

JOHN D. ROCKEFELLER—Whatever is good about me I owe to my wife.

EX-KING CONSTANTINE—I count greatly upon the moral support of America.

FRANK CRANE—Most of us would be pretty contented if it were not for other people.

HAMILTON HOLT—A year's subscription to The Independent is an ideal Christmas present.

LORD ROBERT CECIL—We would like to know the Republican side regarding the League.

FATHER JAMES CRONIN—The labor unions have the right to insist on the closed shop.

MRS. VINCENT ASTOR—I do not qualify for one of the many Newport amusements, playing bridge.

GEORGE G. LIVERMORE—There's no use worrying about what people think of you; probably they don't.

JAMES E. HUNEKER—Grand opera occupies the position midway between football and the horse show.

BLASCO IBANEZ—American business men pay for their conquest of wealth by never knowing what true love is.

VICE-PRESIDENT MARSHALL—What the country did at the last election is the greatest injustice of the century and will bring one of the world's greatest figures to an untimely grave.

HENRY T. FINCK—Melba and Patti never saw the day when from the dramatic point of view they were anything but the merest amateurs and tyros compared with Geraldine Farrar, supreme mistress of facial expressions and eloquent actions.

## Opening Nights

*The Whispering Well.* A fable-fantasy of rural England in early eighteenth century times. Staging and acting both create a charming fairy-tale atmosphere. (Neighborhood Playhouse.)

*Rollo's Wild Out,* a sprightly comedy by Clare Kummer, in which the young hero realizes his wildest ambition—and plays Hamlet! Roland Young fits the title role to perfection; his acting has the rare trait of sharing with the audience the surprise of a joke on himself. (Punch and Judy Theater.)

John E. Kellard and Company began their Shakespeare repertory in New York with the *Merchant of Venice* and continued with *Hamlet* and *Macbeth*. A thoroly entertaining and acceptable performance from all points of view. While hardly supreme Shakespeare, it is nevertheless no second class production. (Manhattan Opera House.)

*She does* a thousand times more work than her grandmother did. Neatly and easily she turns out five thousand letters in an hour. No wonder America is the world's pace-maker! Her great inventions have brought her unmatched wealth—by tremendously multiplying the power of her workers. The Mimeograph quickly reproduces all kinds of typewritten matter, drawings, plans, etc.—at negligible cost. First copies in a few minutes, and five thousand an hour thereafter. Private printing! No especial training necessary. As in typewriting, neatness depends upon the operator. The Mimeograph is beating down expenses and increasing efficiency in unnumbered thousands of American institutions—for perhaps no other invention has so directly multiplied the power of the worker. Ask for interesting booklet "E-12" today. A. B. Dick Company, Chicago—and New York.

## The New Germany

Some Personal Impressions

By Hamilton Holt

I had intended to go on to Italy and not to Germany when I left Paris to visit the American Army on the Rhine, but everyone at Coblenz told me that I ought to visit unoccupied Germany without fail as the Fatherland would never be again what it is today, whereas Italy in all probability would be much the same five or ten years from now. I did not know how the German people would treat Americans, and as I had my two daughters with me I did not want to take any chances. But I was assured by many friends who had recently been across the Rhine that the German people were showing every consideration to foreigners and were especially cordial to Americans.

We therefore decided on Germany, deferring the visit to Italy to some future date.

I had hardly set foot in Coblenz when it was evident that all the bitter hatred that the Germans had for England during the war had now turned to France. The feeling between the French and Germans was worse than at any time during the war. France has historical reasons for not trusting Germany. Germany had before the war almost twice the population of France and was progressing much faster in industry, wealth, power, and numbers. But now that France is victor the whole situation is changed. The English army at Cologne is being reduced so fast that today there are actually fewer English troops on the Rhine than Americans. When England and America withdraw, France is apparently the only power ready and able to occupy the entire Rhineland. France, therefore, becomes the very visible symbol to all Germans of their defeat. France, moreover, is the one nation that is insisting on the heaviest reparation from Germany. I was told by several American officers that the French and Germans are so much on each other's nerves that there is continual friction wherever the two populations meet. The in-

cident the other day where the French raised their flag on a national holiday and a German soldier climbed to the roof and pulled it down, is only one of many typical examples. France, in that instance, demanded an apology by a salute to the French flag. But after the salute was sullenly given the German soldiers marched off singing "Deutschland über Alles." That kind of an apology only made matters worse.

The United States and Germany still being technically at war with each other, neither the American Embassy in Paris nor the State Department in Washington would issue passports to Germany. Consequently we had to avail ourselves of General Allen's good offices to get our passports visé for Berlin by the American army and the German civil government in Coblenz.

We left Coblenz in the evening and found ourselves on a train which was in better condition than any of those we encountered on the French side of the Rhine. Despite the fact that under the terms of the armistice Germany had to deliver a vast quantity of her rolling stock and general railroad equipment to the Allies, her transportation system is the best to be found in any of the nations engaged in the war except England's.

On the train we were pleased to find that both officials and passengers were courteous, and we arrived in Berlin the next morning on time. We took a rickety automobile at the station to the Adlon Hotel, where I was advised to stop. It was as luxuriously appointed an hotel as one could find anywhere in any country,

Wide World

Many of the underfed German children would actually starve if it were not for American relief agencies, such as the Society of Friends, which gives 650,000 meals a day to the neediest children in Germany. But tho this food will sustain life it gives less than half enough nourishment for normal development

and was occupied mostly by German profiteers and foreigners, among whom Americans seemed to predominate. With the exception of one or two breakfasts when we could not get butter or milk, we had just as good meals as one could procure in New York, Chicago, or San Francisco. Of course we had to pay prices that only the very richest Germans could afford; but even so, the exchange was so much in our favor that we managed very well on less than \$1.50 per meal apiece. Before I left Berlin I wondered that the German people had not mobbed the Adlon Hotel, for in a country where no one except a millionaire can afford to buy sufficient food to keep himself in a normal healthy condition, it must be galling to see a lot of foreigners and swinish German profiteers gorging themselves with food and wine. I never would have gone to the Adlon if I had known what kind of a place it was and what kind of company I was keeping.

We were in Berlin only five days and a good deal of our time was spent in the usual sightseeing. But I did have time to talk with many men of many shades of opinion. I mention particularly the American newspaper correspondents, who seemed to be an ultrapro-German lot. We also lunched with the American "Consul" and the Chargé d'Affaires at the Embassy. Technically, we have no consulate or embassy in Berlin. But actually we have them functioning pretty much as the peace relations had been reestablished. Ordinarily our officials conduct their business directly with the German Foreign Office, but on formal occasions they present their communications thru the Spanish embassy. I had a most interesting interview with President Ebert, to which I shall devote a subsequent article. I also had interviews with several of the outstanding officials, Socialists and professors.

The food situation is better than at any time since the war. The crops are more abundant this year than ever. But even before the war Germany had to import enough food to supply 7,000,000 of her population, and this of course was accomplished by exporting manufactured goods. But the destruction of foreign markets during the war, and the demoralization of industry, especially the fall in the exchange value of the mark, have made it impossible to import the raw materials with which to manufacture. The result is that many factories cannot be reopened and much labor is still unemployed. Thus while the crops are better in Germany than in previous years, the manufacturing situation is slowly getting worse, and there does not seem to be any immediate prospect for a change for the better. The whole situation is aggravated by the fact that Germany, which is one of the richest coal countries in the world, has to surrender as part of her indemnity to France so many tons of coal that there is neither sufficient coal left to keep the houses warm in winter or to adequately supply her manufactures that are running.

The great mass of people cannot earn enough to buy what food is needed. The professors and the salaried classes are in the most pitiful condition of all. Whereas the wages of a university professor, for instance, may have gone up 70 per cent, the

cost of living has gone up 1200 per cent. I called upon a famous theologian who looked as tho he might be actually starving. Many, I am told, have so depleted their systems that when any disease or ailment comes it carries them off. We spent one morning visiting the children's food stations and maternity hospitals supported by the American Society of Friends. I wish every American could see the wonderful work the Quakers are doing. Such sights as I saw I shall never forget.

There were children who looked six years old who were twelve. I saw two-year-old babies that looked two months old. I was assured that 90 per cent of the children in Germany born since 1914 have rickets. Many children are still-born as the mothers literally cannot give them life. The American Friends give 650,000 meals a day to underfed children. This means that 650,000 children get one fair meal a day, which consists of 600 calories of food value. A growing child ought to have at least 1800 calories per day. The American Friends Relief Mission, which has its headquarters at Philadelphia, pays for all the overhead and has given several million dollars in addition, but most of the money spent under their direction comes from Mr. Hoover's committee.

The Mission attempts to relieve as far as it can all German cities of over 50,000 inhabitants. It has from twenty to twenty-five volunteer American workers and about 20,000 German workers who are giving full or part time to the work. It has 3392 stations in eighty-eight cities. Only children between two and fifteen years old are fed and of these only those recommended by Government physicians after a medical examination. There is of course no distinction made on religious, political or economical grounds.

In addition to the children, mothers are selected by medical examinations and fed for limited periods before and after childbirth. I sampled some of the meals, which consist of cocoa, sugar, flour, peas, beans, rice, lard, and condensed milk, and found them excellent. In short these good Samaritan Americans are really doing a wonderful work and all Germany gratefully acknowledges their devotion and humanity.

The German people are still wearing their old clothes. I was told by one reliable authority that half the German people have not money to buy underclothing. I myself saw a number of barefooted

men walking on Unter-der-Linden, the Fifth Avenue of Berlin. I saw women on the street with shoes, but without stockings, and when we went into the houses we frequently found the servant girls going about their tasks barefooted. I should think half the school children are barefooted and many wear sandals with wooden soles instead of shoes. Open the shirt front of any schoolboy and the chances are you will find no underclothing.

There are two misapprehensions about the Germans that the American people should dispel from their minds at once. The world has for the present at least no reason to fear German monarchism or militarism. While there is of course an active, but small, monarchist and militarist party, militarism and Kaiser- [Continued on page 410]

# One Man's Secret of Success

By Edwin A. Alderman

President of the University of Virginia

THOSE who are friendly and those who are unfriendly to the administration of Woodrow Wilson are one in the belief that it constitutes one of the great historic epochs in American history. Libraries and legends will grow up around its achievements, its vicissitudes, its policies, its triumphs and its defeats. It met the greatest shock and sustained the heaviest strain yet put upon the machinery of democratic society. In the complexity, vastness, and difficulty of the issues—domestic, foreign, military, social, and reconstructive—which have faced it and demanded treatment by it, it has no equal in the story of the Republic. As the healing years pass by all citizens will come more and more to have interest, curiosity, and pride in the men who had charge of affairs and bore the burdens of this heavy time.

David Franklin Houston, at present Secretary of the Treasury, and for seven years Secretary of Agriculture in this administration, is one of the strong and faithful men of the era who deserves the attention and gratitude of his fellow citizens. He is the sort of man the nation has need of, and should know more about. Of Scotch ancestry, of southern birth, in the prime of vigorous life, bred in the school of simple living but fighting his way to the highest training in the best schools, and becoming himself a great teacher and administrator, Secretary Houston illustrates in his equipment and personality precisely the type of leader democracy is searching for at this present moment.

From his graduation at Harvard in 1891, thru all grades of educational service to the presidency of two great universities—Texas and Washington—Houston has presented an almost perfect example of the man who knows and yet the man who does things. Houston is not an orator, nor a mob-master, nor a political dramatist. His first concern is to know accurately the thing he is to deal with; his second concern is to state it persuasively and clearly; his third is to put the matter into action and pass on without a flutter or a whoop to the next logical step and the next insistent task. I know of no man whose "durable satisfactions" in life, as Mr. Eliot happily calls them, arise more completely from fruitful achievements set afoot, firmly based on solid foundations. With the possible exception of Herbert Hoover, it may be doubted whether there is a man in our country who understands the economic structure and needs of the present disorganized world more accurately than David F. Houston. His management of the Department of Agriculture, during the past seven years, illustrates very perfectly the essential qualities of this far-seeing and capable man.

Houston is not a farmer. He is a combination of statesman, economist, scientist, business man, with a passion for democracy and an understanding alike of

Paul Thompson

David Franklin Houston, Secretary of the Treasury

its sources of strength and of the perils that surround it. He beholds the most vital thing in a nation's life—the soil that produces the food that feeds the millions—in its infinite relations to an orderly society, to self government and to liberty. It is interesting to note how unheralded and unexploited he has carried forward his great task in the tremendous test to which agriculture has been subjected in the War of the Nations.

Of course, this quiet and steadfast mode of progress is due partly to the temperament of the man and partly to the fact that the very word agriculture with its connotation of peaceful labor and fruitful yielding and waving grain

somehow fails to quicken the pulses and stir the blood of men. Men will shout over a victorious skirmish on a battlefield in Mesopotamia and remain unmoved at the story of a record wheat crop on the western plains that preserves the existence of nations. President Wilson has described the Department of Agriculture as "the greatest practical and scientific agricultural organization in the world," and so it is. It is perhaps not extravagant to say that this Department touches the business of the nation at more points than any other two departments combined. A successful Secretary of Agriculture must, therefore, be a great business man, understanding and promoting production and distribution in their relation to world trade, rather than a bond issuer or a promoter or a banker or a fiscal expert. With its sixteen great divisions, not to mention its coöperative work with the colleges of agriculture thruout America, the Agricultural Department administers thirty laws as follows: The animal and plant quarantine, the meat inspection, the twenty-eight hour, the virus serum toxin, the food and drugs, the seed importation, the game and migratory bird laws, the laws appropriating money for the land-grant colleges, including the Hatch, Adams, and the agricultural extension acts, the laws relating to National Forests, those involving the marketing and distribution of farm products, including the cotton futures, the grain standards, and the warehouse, and the Federal aid road acts; and the Secretary is a member of the Rock Creek Park Commission, the National Forest Reservation Committee, and the Council of National Defense. Its regular budget is \$37,500,000, and in its coöperative service assisted in expending nearly \$1,000,000 in the year 1919-20.

So smoothly and efficiently have these undertakings gone on under his guidance, and so naturally have great new constructive legislative measures made necessary by the world's war needs and the nation's war needs been correlated to the productive agencies of our people that men have not been aware of their magnitude and have accepted them as they do the beneficences of nature, the [Continued on page 407]

# Sisters Under Their Skins?

By Chester T. Crowell

Illustrations by W. C. Morris

**A**BOUT six months ago the editor of The Independent asked me to write my impressions of Eastern women, comparing them with the women of the Southwest, especially Texas, which was my home until a year ago. I have written that article half a dozen times. After allowing each article a few days "to cool" I read it with horror and promptly tore it up, then burned the scraps. Writing about women is a perilous adventure. You may write about men and safely admit that they have a few faults. You may even make fun of those faults. But if you utter anything about women which is not soothing to their vanity—well, women are not certain to understand generalities. It is personal to them. As I write this article caution whispers in my ear that I am sealing my doom. My few women friends will say: "So that is what he thought of me! The beast!" I am also mindful of the fact that in the East one is not always seeing "Eastern women." Some of them are from Texas. So this article is about women in the East rather than Eastern women. Nevertheless, if I am to write about women I shall write frankly. Writing to please is time wasted.

There is a very apparent difference between the women of the larger cities along the North Atlantic coast and the women of the Southwest. It is, at first, startling. If the impressions of my first month in New York City had been written they would have been very unfair. Perhaps they are not entirely fair yet. I was unprepared for such contrasts. Eastern men and Texans are not very different, and this made it the more difficult for me to understand at first how the women could be so extremely different.

I had heard that many Eastern women smoked and I have not the slightest objection, tho most Texans would object. The big surprise for me was to learn that so many Eastern women drink intoxicants. So far as my observation goes a majority of Eastern women object vigorously to prohibition. In the Southwest about 99 per cent of the women favor prohibition with drastic enforcement. The women wear their dresses shorter in the East than in the Southwest. There you have a combination of three facts which startle anyone from an inland village, whether in Texas or elsewhere, in this Puritanical country of ours.

It was easy for me to understand why there is so much ranting and raving about the "modern women" ruining the country.

People with small town ideas come to large cities and draw false conclusions. They have lived in communities where no decent woman smoked, very few drank even beer and all avoided anything unusual in attire lest it be construed as an advertisement of their lack of morals. I know that type of small town citizen very well. He is one

My first stenographer was an elderly woman who was very watchful of my health

of the reasons why cities are growing so rapidly. People like to get away from him, and his snooping wife and his meddling old maid sister. To him a woman with bobbed hair is a fit subject for police investigation. He has always been worried about other people's morals and he always will be. He has been deploring the frivolity of the age ever since the pyramids were new. But I must confess that I have lived in the environment he created and the change was startling. I was almost alarmed. I hoped that personal liberty and individualism were not being perverted into license. I need not have worried, because they are not. These queer looking girls with kalsomined and varnished cheeks and lips redder than blood, these girls with bobbed hair and open work stockings and short dresses, who look you straight in the eye without the slightest shyness, are very busy attending to their own affairs.

I have observed them at the beaches this summer. They swim well, they know how to handle boats, they are the healthiest looking women I have ever seen and I am willing to place a wager they are the best looking women on earth. I have heard it whispered that some of them play their phonographs in their summer cottages and dance in their bathing suits. Shocking! Thrice shocking because I have been too busy all my life to learn to dance.

Shortly after my arrival, when I walked thru the lounging rooms and corridors of hotels, I was startled into staring at women sitting with legs crossed and their limbs showing to the knee. The first thought that entered my mind was that they were unconscious of the exposure and that perhaps I ought to call their attention to it. I experienced a number of very embarrassing moments. I am willing to admit that I was the "hick" complete. I had never seen so much bizarre clothing nor evidence of such lavish expenditure for adornment. Women have loved pretty clothing since the world was young. They love pretty clothing in the Southwest; but in the East millions of them are abject slaves to clothing. One of my first conversations with an Eastern woman brought out this point of view very clearly. She was a matron of thirty-five with two children. She told me of the engagement of a man of whom she did not approve with a beautiful girl whom she liked very much. She was resentful because the man had offered this pretty girl dresses, jewels and an automobile as the principal inducement. Her position was that no woman could resist such temptation and that it was wicked and unfair for an undesirable man to take advantage of a girl in this manner. Evidently, her idea was that offering such things to a girl may properly be classed as a polite form of abduction. It did not occur to her that any woman could reasonably be expected to resist regardless of the debit side of her suitor's ledger.

New York, however, is not a fair test of the East because in matters relating to the fair sex, Manhattan is

There is a type of woman at large in Manhattan who will probably not be found anywhere else on earth

a separate nation unlike even Brooklyn, much less Philadelphia, Washington or Boston. There is a type of woman at large in Manhattan who will probably not be found anywhere else on earth. She drinks to excess, smokes to excess, regards midnight as the very beginning of the evening, tells indecent stories and enjoys hearing them, would willingly starve to wear expensive clothes, fawns upon money regardless of its source and is fascinated by the successful gambler, takes it for granted that life consists of a war of wits between the sexes in which neither side is expected to be either fair or chivalrous. Her one ambition in life is to make men spend money foolishly. Her behavior is precisely that of the most sordid creature, yet she wishes it understood distinctly that she is virtuous and "a lady." Oddly enough she prospers in Manhattan. She is a complete mystery to me. She is not very numerous, but she flaunts herself to such an extent that she is a well recognized type. I wonder that men pay any attention to her at all. The woman of the streets is bad enough, but her counterfeit is certainly worse by quite a wide margin. She stands out so prominently that no treatment of this subject is complete without mentioning her, but I gladly hasten on to another type that I did not know existed and that I very much admire.

I am thinking of the young woman who worked before she was married and made nearly as much as her husband. Now that the high cost of living has caught them in its vise she cheerfully goes to work again. She and her husband live in a tiny apartment with a kitchenette. On her return from work in the evening she hastens into this kitchenette without even changing her clothes. Forty minutes later there issues from this tiny room a meal that is wholesome and beautifully served. Then she and her husband wash the dishes. Ten minutes later the dining room has again become the drawing room. Husband and wife go out to a show or to dance or find the entertainment that pleases them. They are partners in business and in the home. They are as happy as children on a picnic. Sometimes they have a child or two and in spite of all the difficulties they manage to provide for the care of them. I marvel. I cannot understand how they do it, with no negro servants. Most of these couples, however, have no children. As I observe them I lose all interest in preachments on the subject of race suicide. These people are in cities which have made absolutely no provision whatever for children. In such places it is just as well not to have children. They are doing the best they can to surmount the difficulties which confront them and to win happiness. I have seen a dozen or more of such couples succeeding. Most of them have some definite aim in view. They are striving to break the chains which bind them. Words cannot express my admiration for these energetic, cheerful, prettily dressed and charming women.

Energy is a trait of the women of the East which quickly impresses the visitor. In most parts of the world it is the privilege of women to be as lazy as they wish.

Our office relations in Texas were based primarily upon the fact that we are men and women. . . . None of us ever thought of entering an elevator until all the women were in

There are wasters of time and money here also, but they are not idle. They work hard at the business of wasting time while Texas women of their type let the time waste itself.

Eastern women are wonderful housewives. They manage to get system into their work and eliminate the drudgery. They are thrifty, close buyers, and rather remarkable for their ability to save money. Many of them have budgets for household expenses and a certain amount of each month's income goes into the bank.

The woman who works is more efficient in the East than in the Southwest. She has also overcome one of the century-old weaknesses of the sex by learning to be punctual. Her business-like attitude toward business interests astounds

me. It is totally different from the office atmosphere to which I am accustomed. While the accepted point of view in the East is rapidly gaining ground in the South and Southwest, it has not yet won a complete victory. Our office relations in Texas were usually based primarily upon the fact that we were men and women. From the president of the company to the office boy, we opened and closed doors for the women of the office, just as we would in our own homes. None of us ever thought of entering an elevator until all the women were in; we always removed our hats in the elevator. A man would use the same tone of voice toward his stenographer and his daughter. I know at least a few offices in Texas, where a man would probably not be permitted to remain if he neglected "Please" and "Thank you" in giving orders to the women under his direction. So far as I have been able to observe, an efficient office in Texas would compare favorably with any efficient office in New York. But, in some offices—especially among the older men, the office-force becomes the business family. Not only the employers, but the men and women in the office become very close, loyal friends. Many of the older men feel that they are the guardians of the young women in their employ and there is a tacit agreement on that subject. If one of the young women were going to be married, she would almost certainly make an occasion for her employer to meet the young man.

I have two friends who are law partners in Texas. They are about fifty years of age. Their stenographer has been with them many years and is about the same age. She is a widow. They bought her a home and she repaid them on the installment plan. When her boy finished high school they sent him to college. Her relation to them is plainly that of a sister. When they are guilty [Continued on page 408]

There is a type of small town citizen to whom the woman with bobbed hair is a fit subject for police investigation

# Master Workshops of America

A Series of Monthly Articles Written from a First Hand Survey of Big Business Enterprises That Have Given the United States the Name of the Foremost Industrial Nation of the World

## The Largest Corporation in the World

By Edward Earle Purinton

**T**O be a better worker and a bigger man; the secret of getting ahead is merely the science of doing these two things at once. A great corporation is the greatest demonstration of the force and the fulfilment of this ambition.

The world's largest business concern is the United States Steel Corporation. That makes it the world's largest school of industry, efficiency, economy, safety, concentration, coöperation, ideation, will and character. If you want to know the rules and rewards of life—learn them from the leaders of an industry like this.

Personal talks with Judge Elbert H. Gary, chairman of the U. S. Steel Corporation, and other high officials, careful study of the literature describing their corporate activities, and finally a visit to their model plant and town at Gary, Indiana, made very clear to us the interesting and inspiring lessons to be gleaned from this branch of "Big Business." A few, condensed, are these:

1. *The power of a single man to dominate the world.* Here is the evidence that a bobbin boy, earning \$1.20 a week, with no capital but his own head, heart and hands, grew to be not only master of the steel industry and the second richest man in the world, but also the material creator of the first billion dollar corporation ever conceived. If any young man with an overtowering ambition finds the road hard before him, let him for encouragement read the history of Andrew Carnegie and U. S. Steel!

2. *The commercial, intrinsic value of a colossal dream.* Imagination is the parent of production. A young western lawyer, doing corporation work and training himself to vision corporation possibilities, dreamed of a giant steel merger big enough to insure wholesale economies in securing and handling raw materials, with all departments so highly specialized as to obtain maximum efficiency, all waste eliminated, all markets of the world open to the supreme buying

power of the master corporation, and all employees benefited by a new standard of wages, dividends and opportunities.

The young lawyer was Elbert H. Gary, now famous thruout the world as head of U. S. Steel, business philosopher, protector of industry, sponsor of a modern school system, arbiter of the destinies of the million people who depend on U. S. Steel for support. His great idea made him great. He didn't have the capital to form the merger, but he did have the courage, faith, tact, shrewdness, zeal, persistence, to hold and shape the tremendous idea for capitalists to develop later.

3. *The reward for the capacity to seize an opportunity.* The only man able to finance the corporation that existed merely in the brain of young Gary was J. P. Morgan. There were two things to sell: the Gary plan, which had no proved value, and the Carnegie outfit of steel properties worth about half a billion dollars. Mr. Morgan didn't want either. Various attempts by Mr. Gary and Mr. Carnegie failed to induce Mr. Morgan to act. Then a social dinner was arranged, whereto Mr. Morgan was invited, and whereat Charles M. Schwab was asked to speak. Now Mr. Schwab is a word-painter as well as a business-builder. He painted the steel company of the future in rosy colors, on a background of solid earth.

The idea was "sold" in that half-hour speech. Mr. Morgan paid Mr. Carnegie some \$492,000,000 for the Carnegie interests—and it is rumored he said later he would have paid a million more if necessary. The world's record of salesmanship, for both size and speed, was thus made by Charles M. Schwab at the rate of a billion dollars an hour! The real "captain of industry" was first a major-general of opportunity.

4. *The necessity of acting regardless of public opinion.* The formation of the much-maligned and little-understood "Steel Trust," capitalized for approximately a billion and a half dollars, gave the croakers, "experts," and wiseacres a chance to prophesy a quick and mournful doom for so ambitious an enterprise. Because it hadn't been, it shouldn't and couldn't be. Gary, Morgan, Schwab and the others concerned figured that, because it should be, it could and would be! If you want to prove the pessimist a fool, you have but to point to U. S. Steel.

5. *The necessity of acting regardless of public interest.* Having the power to be autocratic, these men were democratic. They held the interests of customers and employees paramount with those of the highest officials. They determined to reduce the relative price of steel products, and did so. They decided to give their employees a share of the profits in good times, but not to cut wages in hard times. They made corporation profits so attractive that over a third of the men who toil in the mines, mills and furnaces are stockholders,

These are some of the houses furnished by the United States Steel Corporation to employees at Gary, Indiana, practically at cost. They are modern, comfortable, livable, in every way

along with the directors. They cast off the old secrecy and suspicion that formerly surrounded big enterprises, opened the books to the public, esteemed and invited the confidence of everybody. They prepared a system of cost sheets, by which they knew the exact cost of operating every mine and furnace, and from which they saved \$4,000,000 the first year in the blast furnaces alone. They put a staff of chemists to work redeeming waste, one of the new commercial products developed thus being phosphate fertilizer made from open-hearth slag, another being Portland cement made from blast slag. They conceived and equipped a museum of safety appliances in the New York office, where hundreds of employers and factory, mill and mine heads have learned how to save life and health for hundreds of thousands of employees in other lines of trade.

The five lessons named above might be extended to five hundred.

What is the first thing that impresses you when you enter an office, a factory, a store, a bank, a church? Is it the wealth of the institution, or the size, or the gloss, or the system, or the power? These things are all secondary.

People marvel at the size of U. S. Steel. But the spirit seems to us more impressive than the size, more worthy of being mentioned first. A profound optimism animates both leaders and workers. By "profound" I mean optimism based on facts instead of feelings—a rare sort. Events have with such uniform regularity justified the Gary predictions that their author is deemed by many a scientific prophet—which appears, but is not, a contradiction of terms. History furnishes the key to prophecy.

A wholesome respect for work seems to pervade every shop, mine, mill and office. Men are ashamed here *not* to work. The highest positions are open to the men serving in the lowest jobs. The man who does the best and gives the most has the best and most of the company's rewards. The two former presidents, Schwab and Corey, started at the bottom and worked up—all the way up. James A. Farrel, now president, was at first a laborer in a wire mill; but after he had learned to build up sales for one of the steel companies of \$90,000,000 a year, to carry in his head all the details of freight rates and steamship facilities for the entire globe, and do other little jobs like these, the directors thought it was time to make Farrel president. Judge Gary says: "The U. S. Steel Corporation has made efficiency the one standard by which continuance of employment in its plants is determined." High production based on a square deal is the result.

Working and living conditions and surroundings are exceptionally favorable, attracting a better class of employees than would naturally gravitate to mines, mills and furnaces. The Steel heads were among the first large employers to discover that a heavy pay envelope is not the only magnet to draw a select grade of employees. Young fellows of good families or critical associates didn't want to be seen going to and from work in the rough, grimy clothes of the mine or mill worker—they preferred to get a "respectable" job in some little office or store, even for less pay. To counter-

One of the hundreds of afternoon and evening classes of the Americanization Schools maintained by the United States Steel Corporation, with the purpose of saving America from "illiteracy, idleness, irresponsibility, anarchy and mob rule"

Judge Elbert H. Gary, the Chairman of the United States Steel Corporation, the largest corporation in the world

act this tendency, the corporation built for each mine or mill a large "comfort room," with washbowls, shower baths and lockers, enabling every worker to come and go in his street garb, changing clothes at the start and close of the day, and looking, feeling, acting clean, when he returned home. A symbol of the spirit of the organization is the presence of flower gardens near the walks and lunch places of employees in the yards of most of the steel plants.

The corporation goes even further, in demonstrating the psychology of surroundings. The tiled floors of boiler rooms, for example, are kept immaculate. The tools are in their places. The machinery, dark and ugly for the most part, is concealed so far as effective operation will permit. The cotton waste, rubbish and litter found in most plants of this kind is noticeably absent. Oak tables furnish handsome receptacles not only for

utility articles, but as well for brass jardinières and fragrant flowers. Make a worker proud of his environment and you tend to make him proud of his work—a stimulus that everybody needs.

Wages are the highest paid. When some of the independent companies, rivals of the U. S. Steel, have been tempted in times of business depression to reduce wages and "liquidate labor," they didn't dare because of the example of Judge Gary, who kept on paying top-notch wages and insisting that capital, not labor, should bear the brunt of hard times. Even when U. S. Steel was unable, temporarily, to earn its usual dividends, the workers received their usual pay. Loyalty has been further increased by the fact that the lowest classes of labor have always gained most by the periodic wage advances.

A cardinal principle, worthy of emulation by all business concerns and private citizens, may be stated thus: *Be fair to the other fellow first.* Illustrating this precept, Judge Gary declares: "Every employee should have the chance to progress from one position to another, depending upon his merits. We make it plain to our men that they all have a clear field for the development of their maximum [*Continued on page 412*"]

# Unemployment, Now and Past

By Talcott Williams

UNEMPLOYMENT to the number of 1,500,000 is "estimated" by newspapers and trade journals. This is inevitably a guess rather than an estimate, but, if not now reached, this number of men and women is likely to be out of work before January is over. Those not at work vary greatly among trades.

The wool, cotton and silk mills have had wide shut-downs. Carpets vary less, year by year, than dry goods in general and, when one of the two largest mills in this country found practically half its year's weave on its hands, thru cancellations, it shut down until it could market these goods. Wools, silks and cottons have to be sold at once. Wool has fallen to one-third its price a year ago and as woolen mills have heavy stocks facing a like fall in woolen goods, they shut down, beginning last June. So of cotton. Iron and steel are at full tide of employment and nearly of price; but the users of steel and iron—tool-makers, agricultural implements, automobiles, building hardware, face heavy cancellations and an abrupt suspension of exports and there are shutdowns here. Building began to revive in November—tho this trade has a seasonal shrinkage in winter and building disputes over wages, hours and, more serious, a drop of over one-half in efficiency have made very serious inroads on employment. High freights and the high cost of crates have made it impossible to ship Fall fruit, particularly apples, and this outlet for casual labor has been closed. Miscellaneous trades have especially suffered, as these feel economies early. The war greatly increased the volume of freights, swelled the numbers of those employed by railroads, trucks and in freight-handling at depot or wharf, and here there has been a reduction severe but inevitable. The discharge of clerical force comes last just as its employment does when revival begins, and lay-offs have begun in this field.

The demobilization of an army everyone notices and awaits, but for every one of the 4,000,000 in line at the close of the war there was an invisible 8,000,000 extra men keeping the home-forges and other furnaces and fires burning for the men at the field. In all, between November, 1918, and June, 1920, about 8,000,000 men and women, with a large share of youth, had to seek a new job, simply because the war was over.

"Unemployment" even to the number of 1,500,000 cannot be attributed merely to the deflation of prices, otherwise beneficent, and the general pause in business when from sheep-fold and cotton-field to the retailer in a country store prices are falling and profits shrinking as inventories are revised for a drop in prices of one-half and over. "Excess profits" have had a big gouge taken out of them. Many a manufacturer, jobber, merchant, agent and retailer as he comes on December 15, 1920, to pay his income tax and his 8 per cent tax on "excess profits" which he thought he had made as he reckoned up his business for "1919," finds that he has no money left to pay his last quarter of these two taxes and quite unable to go on manufacturing with his high raw materials until prices rally again or reach a stable level on which he can depend and obtain the credit to buy raw material.

Two factors give this country an advantage in "unemployment" over Europe or the rest of the world. Our industrial population is quick, mobile, intelligent, newspaper-reading, hunts new jobs and is not afraid of moving as is the laborer elsewhere. Second, the number demobilized here, relative to population, is far less in proportion than in any other belligerent country. England is swept by mobs of men who have left the army or lost the jobs war

brought, who are seizing halls and public buildings for shelter and commandeering food. Parliament is hastily passing a measure which proposes to give relief to the unemployed now and provide in the future for "unemployment."

Of all the terrors, the disasters and the burdens of labor "unemployment" is the worst. It is limited as to fields of employment. The farm has little unemployment and the country always needs men to work. Great strata of the employed are always on the pay-list. This is true of a large portion of the salaried, of many professional men, teachers and those who fill the ranks of personal service. A barber can always get a place, but places find it hard to keep barbers. Printers are in constant demand. Nor, even now in widespread unemployment, is any maid-servant hunting a job.

No class, however, suffers more in times of "unemployment" than clerks, the selling force and those whose work is wanted most in days of activity, as, for instance, delivery men in our large cities and the odd-job or supernumerary men in all shapes. These are the first to be stranded by the ebb of labor.

The investigation conducted in England in 1910-11 showed that taking trades as a whole, covering all those that were organized, and deducting every absence, unemployment, sickness and all, men, good, hard-working, steady men, on the average, had in any year only forty-two weeks of employment out of fifty-two.

The neglect to cure this evil is a scandalous evil, all things considered the worst indictment and condemnation of our industrial machinery. Insurance against unemployment has been urged over thirty years. Germany began it a generation ago. The public employment agency does something to meet unemployment, but not enough. More, much more is needed. The measure now before the English Parliament proposes, when men are out of work, useful and needed public works, school-houses, roads, improving lands, building, both for housing and general communal ends, all intended to benefit both the community and the "unemployed."

No social reform is more needed than this. None is more difficult to propose, to plan and to put into practical working shape. No remedy has yet proved successful or adequate.

## We Answer a Conundrum

IS diplomacy more like fire or water? Fire, of course. How do we know? Well, pour oil on water and you calm the waves; pour oil on fire and you get a furious blaze. Now take a look at China, Mesopotamia, Mexico, Southern Russia, and the other oil producing countries!

## The All-American Political Eleven

NOW is the time of year when these "dopesters" the sporting editors look back upon a finished football season and select their "All Star" elevens. The men selected have never played together and perhaps would not play together so well as a team of lesser ability which had been drilled into a single machine. In the same way, if we select an "all star" cabinet eleven it might not operate as harmoniously as a group of more ordinary men whose minds would "run willingly with" the President and their colleagues. But if an all-star cabinet were politically possible whom should we pick?

Our captain and quarterback will shortly be selected by vote of his college (the Electoral). "Uncle Warren" Harding, the Ohio veteran, is slated for the job. But the other ten positions remain to be filled. The greatest public interest attaches to the responsible position of full back, for which we need a quick, alert, experienced Secretary of State not easily rattled by rooters in the bleachers or by the wily tactics of opposing European teams. If merit alone could assign the post we would unhesitatingly award it to "Tommy" Wilson, the Princeton star who scored more touchdowns during the past eight years than all the diplomats of Europe. But as Tommy was knocked out in the Election Day game, Captain Harding had better choose from the Republican squad that foxy and cool-headed marvel "Eli" Root who played so brilliantly on Captain Ted Roosevelt's championship team a few years ago.

In the half-back positions, where they can throw the weight of the nation's economic resources to any beleaguered department of the Government, stand the Secretary of Commerce and the Secretary of the Treasury. For such posts we should have experienced business men who are accustomed to take a broad view of the needs of the nation. Such noted cracks as Frank Vanderlip, "Hank" Davison, Dan Willard, and Tom Lamont would be satisfactory in either position.

The two "guards" of our national safety are, it is needless to say, the army and navy. "Black Jack" Pershing or "Len" Wood as Secretary of War and Admirals "Billy" Sims or "Brad" Fiske as Secretary of the Navy would bring expert knowledge and fighting spirit to their bucking any hostile line.

At the pivotal position of center we have the Attorney-General, pouncing on the lawbreaker and charging ahead with the full force of the Federal team behind him into every public menace. Weight, experience and training would suggest that colossal Yale champion, "Big Bill" Taft; but some would prefer a lighter and scrappier man, such as "Featherduster" Hughes of Brown.

As for those who "tackle" the problems of developing our national resources, the Secretaries of Agriculture and of the Interior, it is agreed by all that "Herb" Hoover, the California star, would be worthy of either place. If we assign him to the Interior we could let some agricultural expert, such as "Farmer" Bailey from Cornell or "Doc" Ladd of North Dakota have the other post. Bailey is especially good on "field" play.

Now at the "end" we come to two posts hardest to fill; the Postmaster-General and the Secretary of Labor. It has been suggested that some big publisher, such as "Cy" Curtis of Philadelphia, would know more about postal affairs than an inexperienced politician suddenly lifted into the post. As for Labor, if the team is to represent all parties the Socialists might stake a claim to the place on behalf of that lanky proletarian guy "Gene" Debs. But old Sam Gompers undoubtedly represents a larger body of labor sentiment and we all know that he is a clever and cautious player with many triumphs to his credit.

Perhaps you think you could make up a better All-American eleven. Very likely you can. Try, anyhow, and send in your line-up at once to the Cabinet Contest editor.

## Does Prohibition Prohibit?

FOES of prohibition say that you can still get the hard stuff; only, of course, it is ten times as hard to locate, ten times as expensive and ten times as bad when you get it. This reminds us of a parable.

Sultan Abdul Inbadd wearied of peace and called in his Vizier to ask what nation he might go to war with next. The Vizier cogitated. "You might try the people of Tigeristan. You used to fight the people of Catistan, and I assure you that the Tiger-folk are only ten times as numerous, ten times as well armed and ten times as warlike." Somehow the remark of the Vizier abated the warlike ardor of Sultan Inbadd and he turned to easier and less expensive occupations.

## How to Review Books

By Preston Slosson

THERE is an impression abroad that the book reviewer is an efficiency demon who with one glance at the title page, the publisher's "blurb," the preface and perhaps the last page can dispose of any book sufficiently for the purposes of a review. Just as a competent restaurant chef can cut a tiny chicken into forty chicken sandwiches, so can an expert reviewer cut an afternoon into forty book reviews. But those who think this way do not reckon with the natural laziness of the reviewer. Once he gets started on a book his temptation is to keep on reading for his own pleasure at far greater length than the needs of his review would justify. Just put yourself in his place. There is a tantalizing detective story in your hand and a typewriter at your elbow. Stern duty whispers: "You've read quite enough to give the main idea of the story and tell whether or not it is any good. Drop the book and write your review." Inclination whispers in the other ear: "Just one more chapter . . . and then just another . . . and so on to the end." Which whisper would prevail with you?

The gambler keeps on playing when he is in luck to reap the full advantage of his winning streak; he keeps on playing when he loses in the hope that his luck will turn. So the reviewer, unless he is exceptionally conscientious or is paid by space rates and is very hungry, keeps on reading an interesting book for the pleasure it gives him and keeps on reading a dull book in the hope that it will become interesting by an' by. Now this is scandalous inefficiency, to read three hundred solid pages and then be compelled by the inexorable laws of space to condense your comment into thirty words. But it is what happens when a literary-minded man is ill-advised enough to start in the book reviewing profession. We only state this method of reviewing (our own) as a warning.

Really scientific book reviewing is itself divided into different schools. The Nil Nisi Bonum School simply copies the blurb on the slip cover. This not only makes it unnecessary even to open the book and thus run the temptation of reading it, but makes it certain that the review will contain nothing which the author and publisher do not wish said. It has always appeared to us, however, as a bit un-

## The Line Up

Cyrus <sup>o</sup> Curtis	Herbert <sup>o</sup> Hoover	General <sup>o</sup> Pershing	W. H. <sup>o</sup> Taft	Admiral <sup>o</sup> Fiske	L. H. <sup>o</sup> Bailey	Samuel <sup>o</sup> Gompers
		Warren <sup>o</sup> Harding				
	Frank <sup>o</sup> Vanderlip			H. P. <sup>o</sup> Davison		
		Woodrow <sup>o</sup> Wilson				

sportsmanlike; like shooting birds in the nest. It gives no scope to the creative imagination.

Then there is the Vivisection School, created by the British quarterly reviews, which aims to give the greatest possible pain to the author. It skims a volume of poems to find the worst stanza and then prints that with ghoulish glee. It looks thru a history to find an inaccurate date or a misreference with which to blast the author's reputation. Level mediocrity is its despair, but a rich and radiant badness its delight. Irony, sarcasm, parody, burlesque, mock admiration and downright denunciation are the methods it relies on for effect. Sometimes these weapons are wielded with sufficient skill as to amuse the reader, at least if the reader is able to turn his mind from the thought of the unhappy author or if he dislikes the author anyway and delights to have him skinned alive.

Let us not omit to mention the Discursive School. G. K. Chesterton is its best-known exponent in England and he has many American followers. This school treats a book as a minister treats his text; it is a point for departure. Suppose that Shakespeare's "Julius Cæsar" were freshly from the press and given to a reviewer of this school. He would begin a thousand word review somewhat in this fashion:

Will Shakespeare, who put Stratford on the map, has turned his attention recently to Roman history. Finding that he had exploited to the full the early English kings, or at least had exhausted his somewhat scanty knowledge of this field of history, he was wise to seek a subject where Plutarch can give him a plot and plenty of material for the "incidents" which he handles so deftly.

And, indeed, there may be a weightier reason for this regilding of the ancient gold of Rome. Can any man advance far into the historical drama without desiring to experiment with the most dramatic figure in classical history? Cæsar is an enigma to us. Was he the superman in very deed, or but a clever politician with a gift of military strategy, as remote from true greatness as an accidental gift for playing chess? Or was he a tool of destiny, a child of the Fates, commissioned to turn the swift current of Roman life from a republican to an imperial channel?

Then there is the Propaganda School. It takes life and even literature seriously and is furious with any author who writes a book which does not further the One Good Cause. Suppose the book in question were Browning's "Ring and the Book." Propagandists of various persuasions would comment:

It is pitiable to see how a brain like Browning's is caught in the trap of bourgeois ideology. Not one reference to the need of Socialism to cure such slum-tragedies as the Pompilia case can be found from cover to cover.

The only true poem is the lyric. The wings of Pegasus are bound to grow weary in long flights. Mr. Browning's poem is too long to be classed as a lyric and should therefore have been written as a novel.

With so many interesting modern topics to handle, it is unfortunate that Mr. Browning should have to grub in the dusty annals of medieval Italy for a subject.

It will be noticed that all critics of the Propaganda School quarrel not with the failure of the author to accomplish his purpose, but with the purpose itself. They are like a sporting editor who when asked to comment on Babe Ruth's ability as a ball player should write: "Baseball is a much inferior game to cricket, and Mr. Ruth is wasting his time on a game which can never bring genius to full fruition."

Of course we have the Ready Label School. Perhaps it is the commonest of all. The reviewer of this type saves brain fag by drawing on a ready stock of phrases to meet every situation. Anything by Shaw or Chesterton is "brilliant and paradoxical." Anything in free verse is "daring." Anything from Russia is "a rebuke to our prudish Anglo-Saxon Puritanism." Any interesting book cannot "be laid down until the last page is finished." A scholarly book is always "by perhaps the greatest living authority on his subject." It is almost as easy to write this way as to copy the publisher's announcement after the fashion of the Nil Nisi Bonum School already mentioned.

In a spasm of reaction from the Ready Label School we have the Original-If-I-Die-For-It School. Its aim is to shock the reader. When Shaw insisted that Bunyan was a greater dramatist than Shakespeare he wrote in the spirit of this school, but many have gone beyond his conservatism. It is not strange nowadays to pick up a literary paper and read such phrases as: "Amy Lowell, probably the greatest epic poet since Blake"; "the insufferable tedium of Dumas"; "Henry James's too sensational detective fiction"; "O. Henry's self-evident superiority to Hawthorne"; "the Irish wit of Robert Burns"; "Homer's complacent Philistinism contrasting with the rakish Epicureanism of Sophocles"; "almost as theological as Karl Marx."

What is the moral of it all? There isn't any. The reader, if he is a born bromide, will surely join one of the above-mentioned schools as soon as he starts reviewing. If he is an independent thinker he will create his own school and it would be impertinent to offer him advice.

## After You, My Dear Austria

How very polite Uncle Sam is to stay out of the League of Nations until even his enemies have entered!

## Good Precedents

THE most just reproach brought against the Democratic Administration of the last eight years was the inferior quality of its personnel. Still in common justice to President Wilson we must not forget that the dark sky of administrative mediocrity had some very bright stars in it. If President Harding will guarantee all his Cabinet as able as Secretary Lane, all his foreign ambassadors as efficient as Brand Whitlock and all his Supreme Court appointments of the quality of Justice Brandeis, we will be more than content.

## Traitors to Cornell

By Edwin E. Slosson

CHILDREN often turn out different from what their parents intended. Institutions generally do. A non-partizan movement is quite sure to end up as a political party. An anti-fraternity club becomes a fraternity. A church founded as a protest against ritualism will be found in the course of time to have a ritual of its own. A religious order based upon poverty and universal charity may ultimately become wealthy and selfish. A charitable or reform foundation sometimes results in perpetuating the evil it was designed to eliminate. If one endows a chair to teach a particular doctrine he may safely surmise that a later occupant of it will be advocating the opposite.

This irony of history is strikingly shown in educational institutions. Most of the Oxford colleges and public schools were endowed to give poor boys a chance for schooling, but they are now noted for their exclusiveness and expensiveness. And the university that Ezra Cornell founded is turning out just the sort of young men that he most particularly detested. Nine prominent members of the present senior class have issued a pronunciamiento demanding the immediate limitation of the number of women students and their ultimate expulsion on the ground that coeducation is a failure. They are especially disgusted at the women students because they presume to cheer football games, sing Cornell songs on New York ferryboats and get in on the college publications.

Now if, as they allege, there is danger that Cornell is getting too big why not raise the intellectual requirements? If, for instance, "the gentlemen's grade" of C were made a flunking instead of a passing grade the opposition to coeducation would very largely disappear. If, however, the authorities went farther and restricted graduation to those

who could maintain a standard of scholarship equal to that now required for admission to Phi Beta Kappa, Cornell would virtually cease to be a coeducational institution, tho not in the sense desired by the signers of the anti-feminist manifesto.

In his latest report Dean Thilly despairingly asks "whether the faculty ought not to consider the advisability of protecting the inexperienced freshman against the temptation to regard study as a mere unpleasant incident of his academic life." He calls attention of the fraternities to the fact that universities were established for scholastic aims and he even ventures to say:

The notion ought not to gain ground that only a few peculiar and freakish persons are expected to take the academic tasks seriously while the normal and healthy minded are here chiefly to shine in extra-curricular activities.

I know these young fellows, not these nine, but their like, for I have met them in various universities, including Cornell. I remember sitting with a group of them on the porch of their luxurious fraternity house and asking them what were their real objections to the presence of the co-eds who, it seemed to me, were harmless, well-behaved creatures on the whole, some of them even pleasant to look upon. My inquiries were answered with the delightful frankness of young men when they know that there is danger that what they say may appear in print. "Just look at 'em," said one, pointing to a passing pair of girls; "see how they dress—and how they do their hair!" I looked and saw the point. The two gowns together obviously did not cost as much as my friend's suit; one of them, I suspect, was home-made and made by one who was more interested in other things than dress. Their hair looked all right to me, but I recognized that it had not had the advantage of a \$25 permanent wave.

"Their hands are the worst," chipped in another. "It makes me sick to look at them in class, all red and rough, and their finger nails unmanicured." I glanced at his own hands. He had reason to be proud of them. They seem never to have handled anything rougher than a silver fork or perhaps a tennis racket, and the nails had a gloss that is hard to get for love or money. Now that he mentioned it, I did remember seeing the marks of toil upon the hands of some Cornell girls. Housework cannot be handled altogether with gloves and certain of these co-eds, as I knew, had worked hard to send their brothers to Cornell and longer yet to get a chance to join them. More than a fifth of the Cornell women have to work their way thru college, some at quite menial occupations, such as waiting on table or teaching. Of course a wealthy fraternity man would not want to associate with working girls, at least on the campus.

"The girls get more than their share of prizes and positions wherever they have a chance. It isn't safe to leave anything to open competition any more," was another common complaint. This, I found on investigation, was quite true.

"Why do you shut out the co-eds from your parties and import outside girls?" I asked.

"Because the girls here are too bookish to talk to," was the answer. I felt the force of the objection for I had been reading the president's reports, which year after year confessed the failure to bring up the grades of the fraternity men to equal those of the men who lacked the advantages of fraternity life. It was esteemed a triumph if in any year their examinations showed that they knew 72 per cent of what they were supposed to know.

Such was the substance of several conversations at Cornell a few years ago and I presume reflects the psychology of those behind the present movement. They hypocritically vociferate their loyalty by "I yell Cornell," but the spirit

of Cornell has departed from them. "That long-whiskered old goat" is the way those who enjoy his bounty refer to one of the foremost of America's educational statesmen. They would eliminate his effigy from the center of the university seal, but still more do they desire to get rid of the motto engraved on the rim of the seal: "I would found an institution where any person can find instruction in any study." Or at least they would move to amend by inserting after "person" the words "of the male sex and with not less than \$150 a year to spend on tuition."

What Mr. Cornell wanted may be seen from his words:

I hope we have made the beginning of an institution which will prove highly beneficial to the poor young men and the poor young women of our country.

Cornell University did so serve the country and still does. The present reaction arises out of its former success. It proved so beneficial to poor young men that it made them rich old men and their sons, the rich young men, came to Cornell, from which they would now exclude the poor young men and especially the poor young women. The number of women students is now limited to one thousand, less than one-fifth of the entire student body. One would think this proportion too small to alarm the aristocratic misogynists.

Of course they will not succeed. Coeducation is not a failure. On the contrary it has gained ground continually. About 96 per cent of the elementary education, about 90 per cent of the secondary education and about 85 per cent of the higher education of the United States is now carried on in coeducational institutions. There is hardly a university in the country, except Princeton, and the Catholic institutions, that do not admit women in some degree. Europe is beginning to adopt coeducation in the new system that is growing up after the war. Now that even Oxford has freely opened her doors to women it is no time for Cornell to close them.

Not all are suited for coeducation. There are certain young men in all our universities who are not fit associates for decent girls. There are certain girls who study best when segregated. But most young people are the better for mingling at work as well as at play. The new psychology shows the great danger of the isolation of the sexes during adolescence. "Single men in barracks don't grow to plaster saints," says Kipling. Sometimes "single women in barracks do grow to plaster saints" unfortunately, for plaster saints are not so much needed in this world as normal wives and mothers. Our educational method is too artificial anyway and should not be made more unnatural than it need be.

In 1872 when Mr. Sage founded the Sage college for women at Cornell he took the bold step with courage and hope—but with certain misgivings. There was one point on which he feared that feminine education might fail. But he did not want to endanger the experiment, so he put his forebodings in a sealed letter and enclosed it in the cornerstone of Sage College. When that stone is opened his message to posterity is likely to prove laughable. For all the published prophecies of the dangers of allowing the female sex to enter our schools and colleges have turned out to be nonsense. Chief among the objections was that the presence of women students and the employment of women teachers would make the American youth effeminate. Instead it seems to have had the contrary effect for this has been the Athletic Age *par excellence*. American college men hold most of the world championships and the World War showed no deficiency in manliness on the part of those who had been taught by women and had even studied with them.

# The Story of the Week

## President Wilson's Message

ON December 7, President Wilson sent his message to Congress. He did not read it in person, as has hitherto been his custom, since his physician thought it inadvisable for him to make a long public address at present. The message was almost wholly devoted to the problems of economic reconstruction after the war.

The President's first specific recommendation was for the prompt enactment of the Budget Act, which failed of passage earlier in the year. President Wilson vetoed it because it gave to Congress instead of the President the power of removing certain officials, but in its revised form it is satisfactory to him.

The President congratulated the nation on the marked improvement in Federal finances. The receipts for the fiscal year 1920 show a marked advance over the previous year and the expenditures a corresponding decline, and the gross public debt has been reduced by over two billions. "The cessation of the Government's borrowing except thru short term certificates of indebtedness has been a matter of great consequence to the people of the country at large." He pointed out that seven and a half billions of the war indebtedness would mature within the next two and a half years and that "the fiscal program of the Government must be determined with reference to these maturities." He urged economy and condemned "practices which take money from the Treasury by indefinite or revolving fund appropriations." He called attention to the "extraordinary burdens thrown upon the Treasury by the Transportation Act," which have "seriously limited the Government's progress in retiring the floating debt." He defended the income and excess profits taxes, but admitted that "the need for their simplification is very great," and intimated that the Secretary of the Treasury and the Commissioner of Internal Revenue would make recommendations on this matter.

With respect to other questions of the hour, President Wilson urged more adequate facilities for the care and treatment of those disabled in the Great War; spoke of the necessity for encouraging the manufacture of dye-

stuffs and other chemicals; called attention to the need of legislation regulating cold storage, and suggested that "goods released from cold storage for interstate shipment should have plainly marked on each package the selling or market price at which they went into storage"; recommended a system of Federal licensing for corporations engaged in interstate commerce, and declared that the time had come for giving independence to the Philippine Islands.

President Wilson made no reference to the still unratified Treaty of Versailles or to the League of Nations. He spoke in general terms of foreign affairs and declared it to be the "manifest destiny" of the United States to champion the principle of democracy thruout the world. Specifically, he urged a loan to Armenia, the expenditure of which should be under the supervision of a commission from the United States.

## Harding Speaks in the Senate

THE first day of the winter session of Congress was signaled by an address from President-elect Harding. This was the first time in American history that a man has been chosen directly from the Senate to the Presidency and therefore the first time that a President-elect had a right to address the Senate as a member of that body. Senator Harding paid a brief and tactful tribute to his colleagues and to the spirit animating the Senate as a legislative body. He avoided controversial topics and outlined no political program, but he expressed the hope that the present session of Congress would not content itself with marking time when so much work remained to be done:

Three months of the present Administration remain, and I would have the House and Senate join cordially in making them fruitful rather than wasted months. There is so much to be done, and we have already had so much of delay, that I should like unanimous recognition that there are no party ends to serve, but precious days are calling for service to our common country.

Senator Harding's address was warmly applauded by Senators of both parties and all factions.

In a subsequent interview with newspaper men Senator Harding said that he had not yet offered any cabinet position to anyone. He forecasted an early special session of the new Congress and thought that the revision of the tariff and of the Federal taxation system would be dealt with. He announced his intention of retiring from the Senate early in January, when the new Republican Governor of Ohio would appoint Senator-elect Willis to succeed him for the rest of his term. With respect to foreign affairs he remained steadfastly non-committal.

Altho Senator Harding's advice to Congress seems to have been nothing more than a general permission to "go ahead," this is not without importance. The present Congress is not the Congress which was elected last month, but the one which was elected in November, 1918, before the armistice with Germany had been concluded. Its popular mandate has been weakened by time, by changed circumstances and by the new election and there has therefore been a feeling in some quarters that it would be enough to pass routine appropriation bills this winter and wait till the newly elected Congress took office before tackling important or novel legislation. President-elect Harding seems willing that the present Congress shall do all it can without waiting for March 4.

### DISTINGUISHED SERVICE IN SALESMANSHIP

The United States Government has awarded its Distinguished Service Medal to a civilian, Ernest C. Morse, in recognition of his work as Director of Sales in the War Department. More than a billion and a half dollars' worth of surplus property, ranging from a can of beef to an army camp, has been sold by Mr. Morse

## The Governors' Conference

At the beginning of December the Governors of the forty-eight states of the Union were invited to attend the annual interstate conference. This year the conference was held at Harrisburg, Pennsylvania, and Governor Sproul of the Keystone State was host. Governors and Governors-elect from more than half the states found time to attend and a number of important addresses were made.

The chief achievement of the meeting was the preparation of a report on the financial situation of the country by a committee consisting of Governors Harding of Iowa, Bickett of North Carolina, Holcomb of Connecticut, Parker of Louisiana and Goodrich of Indiana. This report deplored "the swift decline of prices of farm commodities to far below the cost of production." It urged, first of all, that liberal time for payment be extended by creditors to debtors as "under existing conditions it would be the acme of inhumanity and of unwisdom to force any debtor into bankruptcy if by the most liberal indulgence he would be ultimately able to pay." It requested the Federal Government to create "a finance corporation of some sort that will enable the people of other lands to obtain from us the commodities they so greatly need but for which they are not able to make immediate payment." Finally it asked the Federal Reserve Board "to advise all banks to adopt a liberal policy of renewals" and suggested that, if necessary, the Federal Reserve law be amended "to temporarily supply additional currency and afford more time in which to pay to debtors in distress." This report was approved by the conference after some discussion.

## Blue Laws?

THE Pilgrim tercentenary has been marked by an attempt to revive the Puritan Sabbath. The organizations are busy at Washington, D. C., in the interest of securing Federal legislation to secure the observance of Sunday as a day of rest; the International Reform Bureau, of which Dr. Wilbur Fisk Crafts is superintendent, and the Lord's Day Alliance, whose general secretary is the Rev. Harry L. Bowlby. The campaign for stricter observance of the Sabbath, called by its enemies the "blue law" movement, has been indorsed in several states by conferences of the Methodist Church. On the other hand several Catholic and Episcopalian clergymen have preached against it. The movement has created the liveliest comment in the daily press of the great cities, which professes to fear that the Anti-Saloon League is lending its efficient machinery to secure Federal legislation with respect to Sabbath observance. The Anti-Saloon League, however, asserts that it has not taken part in any propaganda outside its own chosen field of enforcing the eighteenth amendment. It is, indeed, probable that the Sabbatarian movement is being deliberately exaggerated by the liquor forces in the hope of discrediting prohibition in a general wave of anti-Puritan reaction.

The bill which is being urged on Congress by the Sabbatarian organizations is certainly a very drastic one. It forbids any person in the employment of the Federal Government "to work or carry on his ordinary vocation on Sunday"; makes it unlawful for mail to be carried or delivered on Sunday; prohibits the carrying "as mail" of any

International

Metropolitan newspapers lately have been getting much excited over the so-called Blue Laws campaign, undertaken by the Lord's Day Alliance to restore to the American Sunday the Puritan traditions that it is a day devoted to worship and quiet. But the Rev. Harry L. Bowlby, general secretary of the Lord's Day Alliance and leader of the movement to enact and enforce Blue Sunday legislation, contends that his purpose is to make Sunday less, rather than more, blue by giving every one a chance to spend the day in orderly rest. No more Sunday work for newsboys or soda clerks or streetcar conductors or baseball players or anybody!

Kirby in New York World

The Blue Law Fanatic: "Stop shining"

"paper or publication published or purporting to be published on Sunday" forbids interstate traffic on Sunday to "any person or corporation," and provides heavy penalties for violation of the law. Senator McKellar of Tennessee was asked to introduce the bill into Congress at the December session, but he has refused to do so. Advocates of the measure say that representatives and senators from the southern states are almost unanimous in its favor and that they can count on the support of many northern Congressmen in both houses.

## Rockefeller's Giant Gift

JOHN D. Rockefeller, supposed to be the richest man in the world, has given another great fund to benevolences. This fund is known as the Laura Spelman Rockefeller Memorial and was established in honor of the wife of Mr. Rockefeller, who died in 1915. The directors of the fund are Messrs. John D. Rockefeller, Jr., Charles E. Hughes, George Welwood Murray, Starr J. Murphy and Willard S. Richardson. It has no connection with the Rockefeller Foundation and other funds established by the philanthropist, but is devoted to a large range of causes and benevolences. The largest appropriation as yet made from the fund was the gift of \$4,000,000 to the Baptist Church. Another million was given to the Palisades Interstate Park Commission, and lesser sums to charity organizations and settlements, the Young Woman's Christian Association, missionary activities and welfare funds. John D. Rockefeller, Jr., has just announced the total fund available for the purposes of the Laura Spelman Memorial as \$63,763,357.37. About \$8,000,000 has thus far been appropriated.

The total amount given by Mr. Rockefeller in benevolences to date is estimated at \$475,000,000. Since 1915 the Rockefeller Foundation has been given \$82,000,000; the General Education Board, \$70,000,000; the Rockefeller In-

stitute, \$10,000,000; the Laura Spelman Memorial, as already stated, over \$63,000,000; all this in addition to gifts made before 1915 to these funds, or to other organizations, universities and private benevolences.

## Martial Law in West Virginia

FOR several months there has been a coal strike in Mingo County, West Virginia. Recently the attempt to work the mines with non-union labor brought about disorders beyond the power of the local authorities to control. Judge Bailey of the local Circuit Court explains this failure on the ground that no emergency fund was available for the employment of extra deputy sheriffs. On November 29 Governor Cornwell issued a proclamation declaring Mingo County under martial law:

To the end that the law shall be respected and that disorder shall cease, I have called upon the Government of the United States for assistance, and until further notice the County of Mingo will be under the direct charge of the commanding general of the Fifth Army Corps area, who has full power and authority to establish peace and order in said county by such means as he may deem best in the interest of good government and the laws of the land.

Colonel Hall, commanding a battalion of Federal troops, has issued orders prohibiting public mass meetings, parades and demonstrations, and forbidding persons other than the officers of the law to carry weapons or possess explosives. The civil authorities continue to act within their jurisdiction while the military authorities undertake the duties consequent upon the proclamation of martial law.

## Shall We Bar the Gate?

IT has always been the boast of Americans that we invited the poor and oppressed of all the world to find liberty and opportunity within our borders. But the most hospitable host may be embarrassed by an unanticipated influx of guests. The United States has already passed legislation excluding paupers, illiterates, Chinese and other classes of persons who have, in the opinion of Congress, entered the melting pot more rapidly than they could be smelted into sound American metal. The Pacific coast is alarmed over a relatively small increase in the Japanese population and is demanding a general exclusion law against Orientals. Congress is even considering the total exclusion of labor immigration from Europe for two years.

The situation is this. Immigrants are now coming to the United States at the rate of about 95,000 a month, according to the United States Commissioner General of Immigration. Immigration at this rate could, perhaps, be assimilated, especially since there is also heavy emigration back to the "old countries." But passports are still ordinarily required of immigrants. This legacy of wartime conditions will soon be removed and no one knows how fast the tide of immigration will run westward if this barrier is taken down and no substitute put in its place. All that is certain

is that hungry, tax-ridden, war-stricken Europe is a place which the average workingman would be glad to leave for the comparative prosperity of the United States. American trades unionists fear that in any case there will be much unemployment this winter and perhaps for a year or two to come, and that heavy immigration at this time would overstock the labor market and force down the whole standard of living. They are therefore demanding of Congress drastic legislation to protect them against any competition with alien immigrant labor.

Representative Johnson has introduced a bill placing an absolute ban on immigration for two years with the exception of certain specified classes of aliens. These exceptions include: (1) "otherwise admissible aliens lawfully resident in the United States"; (2) Government officials and their families and attendants; (3) travelers not intending to stay more than six months in the United States; (4) students coming to "particularly designated" institutions of learning. All immigrants must obtain passports visé by an American consulate. Partial and conditional exemption from the exclusion act is also granted to relatives of citizens, naturalized citizens and aliens who have declared their intention of becoming citizens; to skilled laborers and domestic servants, and to residents of Canada, Newfoundland, Cuba and Mexico. Even with these exceptions, the proposed general exclusion bill is drastic beyond precedent and will probably be modified before it is approved in both houses of Congress.

## Argentina Withdraws

ONE of the most determined members of the Assembly of the League of Nations is the young Foreign Minister of the Argentine, Señor Pueyrredon. He brought forward four motions and when he found that none of them would carry he announced that the Argentine delegation would withdraw from the Assembly until these measures had all been adopted.

The first of the Argentine amendments provides for the election of the whole Council by the Assembly. The Covenant only allows the election of four members of the Council; the others being the representatives of Great Britain, France, Italy, Japan and the United States.

Second, that the World Court of the League have compulsory jurisdiction. This was the original recommendation of the International Conference of Jurists appointed by the Council to draft the plan for the Court and is commonly accredited to Elihu Root. But the Council in adopting the report struck out the compulsory clause.

Third, that all sovereign states recognized by the international community be admitted to the League of Nations unless they voluntarily stay out. This applies of course primarily to Germany, which Argentina is anxious to get into the League as soon as possible. But France has declared her determination to withdraw if Germany is admitted.

Knott in Dallas News

The Landing of the Pilgrims

Fourth, that small states, whose boundaries are not defined, shall be admitted in a consultative capacity but without the right to vote. This would apply to such states of uncertain status as Lithuania, Latvia, Armenia, Albania, and Georgia.

Some of the Argentine amendments would quite likely have been adopted, but the Assembly had voted to postpone all amendments until the next session when, having the proposals of President Harding before it, the League can consider the revision of the Covenant as a whole to meet the various objections brought against it. Mr. Balfour, in reporting to the Assembly the decision of Commission No. 1, not to act on any of the amendments proposed, said:

Let me say that our reason was not that we thought the pact Heaven inspired, immutable or perfect in all parts and never to be changed or modified. In many respects we felt that changes were necessary. They must and will come, but the time is not ripe yet.

The Argentinians are accused of being pro-German and of having a secret agreement with Germany to secure the speedy admission of that country. But Señor Pueyrredon denies the charge and says that his only purpose is to make the League more democratic.

Commission No. 5 has voted to recommend for admission to the League, Austria and Costa Rica, but not Lichtenstein, Ukraina and Azerbaijan. The rejection of Ukraina and Azerbaijan is possibly in deference to American opinion since the Wilson administration is so decidedly opposed to any recognition of the states seceding from Russia.

## Article X

ARTICLE X of the Covenant of the League of Nations, which was the chief point of contention in the recent presidential campaign, is causing similar trouble in the Assembly. American critics of the Covenant argued that under Article X the national boundaries as determined by the Paris Peace Conference would be fixed for all time and that the League might compel American troops to be sent abroad to defend them. On the other hand President Wilson stated to the Senatorial Foreign Relations Committee that there was no legal obligation in the instrument requiring the employment of military force by any nation and that there was nothing in Article X to prevent the transfer of territory by any means except "external aggression."

The question came up in the Assembly of the League at Geneva over the objection raised by Dr. Motta of Switzerland, that if Austria were admitted to the League it might insure her perpetual possession of Vorarlberg. This province remains Austrian under the Treaty of St. Germain, but the inhabitants are desirous of annexation to Switzerland. The question was referred to a sub-committee of Commission Five, which reported that there was no ground for the apprehension. Article X was intended to maintain the map in its present state forever. The report says:

We cannot help adding that the suggestion that admission to the League should have any such effect arises from a misconception of Article X. It cannot be too emphatically stated that Article X does not guarantee the territorial integrity of any member of the League. All it does is to condemn external aggression of the territorial integrity and political independence of

any member of the League and calls upon the Council to consider what can be done to resist such aggression.

This decision, approved by the full commission of the forty-one nations, completely confirms the interpretation of the Covenant made by President Wilson and other American advocates of the League.

Further confirmation of this view is afforded by the action of the delegates from Denmark, who favored contributing a contingent of troops to the force that the League is sending to Vilna, but said that such action could not be taken without previous approval by the Danish Parliament. This is in accordance with the position taken by the friends of the League that under the Covenant the consent of Congress would still have to be obtained for the use of American troops abroad.

Probably Article X will ultimately be eliminated altogether since it gives rise to such misconceptions and since it would be of no effect in an emergency unless the members of the League wholeheartedly supported such action. A motion to strike out Article X was made by Charles Doherty, Canadian Minister of Justice, who said:

My motion should surprise no one. It is a continuance of the old fight made by the Canadian representatives at the Peace Conference against Article X. Their protests were vain. Afterward, when the Covenant came before our Parliament, it was proposed to ratify it with a reservation on this point, but finally it was decided that Canada could do better work to get Article X removed from inside the League than by making an outside protest of this character at that time.

I am sure that the United States will see the justice of the Canadian viewpoint. In point of fact, the article is nothing but a humbug. Every one knows that it cannot be enforced. We are opposed to it on principle. It is an endorsement of the territorial lines laid down in the Peace Treaty. It is also unfair.

Canada, for instance, is like a man living in a fireproof house who is forced to take out an insurance policy like some one whose home is surrounded by kegs of gunpowder. If guarantees were necessary for the protection of nations less fortunately situated than ourselves, they might be supplied by the four big powers chiefly concerned, who are armed for the purpose sufficiently and whose interests are at stake.

Mr. Balfour, representing England, thought it better to abide by the previous decision of the Assembly not to take up amendments at this, its first session, but he added:

Personally, I am no lover of Article X. The true spirit of the Covenant resides in other articles. I do not think that Article X really matters so very much.

## Obregon Takes the Helm

GENERAL Alvaro Obregon took office as President of the Republic of Mexico at midnight of November 30, 1920. This was an event in Mexican history; for it has rarely happened that a President took office—except when succeeding himself for another term—with perfect order and legality. Provisional President Adolfo de la Huerta permitted his successor to take office with no more attempt at resistance than President Wilson will show when President-elect Harding succeeds him on March 4.

Everyone hopes that this peaceful transmission of power marks the beginning of an era of constitutional government in Mexico, but it would be premature to predict this in view of the fact that nearly every week since the provisional Government took office it has been disturbed by

International

### THE FLAG OF FREE DANZIG

The Baltic port of Danzig, claimed by both Germans and Poles, was made a free city by the Treaty of Versailles. The new flag, two crosses on a red field, is shown flying from a window of the Landehaus where the municipal parliament, the Folkstag, meets. Dr. Sahm, the former burgomaster, has been elected first president of the new state

THE ARMENIAN REPUBLIC IN PERIL

The Turkish Nationalists under Mustafa Kemal Pasha have invaded Armenia from the west and taken Kars and Alexandropol. The Bolsheviks of Russia and the Caucasus have invaded Armenia from the east and taken Erivan. A hundred thousand Armenian refugees are trying to make their way thru the snowy mountains to Batum. The American Committee for Relief in the Near East, with headquarters in New York, is appealing for funds to keep them from starving and freezing. President Wilson has accepted the invitation of the League of Nations to mediate between Armenia and her enemies. He was appointed by the Treaty of Sevres to draw the boundary of Armenia but within the limits of the beaded line on the above map. The Armenians claimed all the territory within the heavy dashed line, but the Paris Peace Conference decided against them on the ground that they constituted a small minority in the territory claimed. The Tatar republic of Azerbaijan is now under Soviet control. The Government of Georgia is Socialistic, but not Bolshevistic.

insurrections in some part of the country. Moreover, while General Obregon takes office as the direct result of a peaceful election, it may be contended that indirectly he owes his Presidency to the violent revolution by which he overthrew the Carranza Government. In Latin American countries the question of "who shall be elected?" is really determined by the previous question, "under the auspices of what party will the election be held?"

While the United States has not yet granted formal recognition to the Obregon Government, the present relation between Washington and Mexico City is friendly and even cordial and recognition awaits only the settlement of some outstanding controversies concerning American interests. Secretary Colby in a note to Roberto Pesqueira, Mexican agent at Washington, suggested that it would contribute to good feeling between the two countries if the Mexican Government were to embody in a formal treaty its pledges that Article 27 of the Mexican constitution, concerning the nationalization of natural resources, would not be interpreted in a retroactive sense to wipe out American oil and mining concessions already granted. Secretary Colby approved the Mexican proposal of "a joint arbitration commission to adjudicate the claims presented by citizens of other countries for damages sustained as a result of disorders" in Mexico. Mr. Summerlin, the American chargé d'affaires in Mexico City, attended the inauguration of President Obregon. Such an act, if not equivalent to recognition, certainly approaches and foreshadows it.

## Arbitration for Armenia

ARMENIA is now invaded by the Turkish Nationalists from the west and by the Tatar Bolshevik from the east and is in danger of losing its chance of independence. The Assembly of the League of Nations in session at

Geneva requested the Council to take action in regard to mediation in behalf of Armenia and the Council asked President Wilson to undertake that office. The President replied:

While the invitation to accept the mandate for Armenia has been rejected by the Senate of the United States, this country has repeatedly declared its solicitude for the fate and welfare of the Armenian people in a manner and to an extent that justifies you in saying that the fate of Armenia has always been of special interest to the American people.

I am without authorization to offer or employ the military forces of the United States in any project for the relief of Armenia, and any material contribution would require the authorization of the Congress, which is not now in session and whose action I could not forecast. I am willing, however, upon assurances of the moral and diplomatic support of the principal powers, and in a spirit of sympathetic response to the request of the Council of the League of Nations, to use my good offices and to proffer my personal mediation thru a representative whom I may designate, to end the hostilities that are now being waged against the Armenian people and to bring peace and accord to the contending parties, relying upon the Council of the League of Nations to suggest to me the avenues thru which my proffer should be conveyed and the parties to whom it should be addressed.

WOODROW WILSON.

Lord Curzon, speaking for Great Britain, has pledged the moral and diplomatic support for which the President asks. Denmark, Spain and Brazil have also responded favorably to the appeal of the League.

It is said that if an expeditionary force is organized under authority of the League of Nations to go to the rescue of Armenia the command of it will be offered to General Leonard Wood. Since he belongs to a nation that has no territorial ambitions in this region his appointment would not arouse the apprehension of the Armenians or the jealousy of the European powers. General Wood has had exceptional experience in campaigning in rough regions and his medical training would be of service to him in solving the sanitary problems of Armenia as it was of Cuba. The Armenian delegation at Geneva has expressed a preference for General Wood. According to the estimates of General Sir Frederick Morris, who investigated the question for the League, it would require \$20,000,000 to insure Armenia's safety and set her on her feet.

According to Article 89 of the treaty with Turkey the delineation of the southern and western boundaries of Armenia was assigned to President Wilson. It is understood that he has completed his study of the boundary question and is ready to report his decision. But since the Turkish Government at Constantinople refuses to sign the treaty of Sevres and the Turks of Asia are in revolt against any treaty at all, it is doubtful whether any action toward fixing the limits of Armenia can be taken at present.

## D'Annunzio Defiant

THE Italians and the Yugoslavs came to a compromise at the conference of Rapallo over the division of territory on the eastern side of the Adriatic. According to this Fiume was to become a free city. But Gabriele d'Annunzio, who seized the city over a year ago to prevent its being turned over to Yugoslavia according to the Treaty of London and the decision of the Paris Peace Conference, refused to accept the Rapallo agreement and declared that

Fiume must be annexed to Italy or he would blow up the city. It is understood that he has had the docks and public buildings mined for that emergency and would be quite capable of carrying out his threat.

When General Caviglia, who commands the Italian troops encircling Fiume, demanded the surrender of the city, d'Annunzio responded with a declaration of war on Italy, December 2. But no active hostilities have taken place.

The Italian fleet from the neighboring port of Pola steamed up the Gulf of Quernaro and passed the mouth of Fiume harbor as a demonstration to d'Annunzio, whose fleet consists of one dreadnought, one cruiser and four destroyers. Some of his soldiers fired at the fleet from the shore, but the shots were not returned. Another destroyer has mutinied from the Italian navy and entered Fiume harbor to place itself under d'Annunzio's orders.

D'Annunzio has some 4000 soldiers in his army, equipped with airplanes, machine guns, armored cars and gas. But the regular Italian forces form a complete cordon on the land side and d'Annunzio can only get supplies by capturing the vessels that cruise along the Adriatic shore.

The Chamber of Deputies sent to Fiume a commission of sixteen, composed of representatives of all the constitutional parties, to persuade the recalcitrant poet to submit to the Italian Government. He will be required to evacuate the islands of Veglia and Arbe, which d'Annunzio had occupied by his troops, but which have been allotted to the Yugoslavs by the Treaty of Rapallo.

D'Annunzio on his side insists that the Government he has set up, the "Italian Regency of Quernaro," shall be recognized by Italy as the free state of Fiume.

## The Greeks Recall Constantine

IN the referendum of Sunday, December 5, the Greek people voted by an overwhelming majority for the restoration of the exiled King Constantine to the throne. The plebiscite was more like a joyous demonstration than an election, for the voting was public and the voters came in processions with banners and music, casting in ballots printed with the name of Constantine.

The new Premier, Demetrios Rhallis, will soon send an invitation to Constantine at Lucerne to return to his kingdom. Altho Rhallis now appears as a supporter of Con-

stantine, he has not always been such. In 1897 when Deliyannis—like Venizelos in 1916—refused to resign the Premiership and—like Venizelos in 1916—was dismissed by King George in accord with Article 31 of the Hellenic Constitution, Rhallis was chosen Premier, for the second time. He gravely censured the then Crown Prince Constantine for his share in the disastrous war with Turkey, and it was his thankless task to bring that war to an end and save what he could for Greece out of the wreckage.

Again, in 1909, when Rhallis was Premier for the fourth time, at the time of the reforms of the Military League, he was so outspoken in his opposition to any participation by the royal princes in the military affairs of Greece that his ministry lasted only a short period.

Rhallis has occupied continuously the same seat in the Beulé of the Hellenes for something like thirty years—a remarkable record for a Greek. His political attitude has been consistently in favor of constitutional government in Greece and against such excursions into unconstitutionality and dictatorship as that lately conducted by Venizelos—however profitable they might prove, materially.

On the eve of the election the ministers of Great Britain, France and Italy at Athens called together upon Premier Rhallis and delivered a joint note of protest against the recall of Constantine. The Greek Government was warned that the financial support which Greece had been receiving from the Allies would be withdrawn in case of the restoration of the King whom they had deposed during the war on the belief that he was conspiring with the Germans. In particular they protested against the issuance of 200,000,000 drachmas of paper currency which the new Greek Government had ordered. According to the agreement of 1897 Greece has no right to issue more currency without permission of the protecting powers. The British, French and Italian Governments declare in their note that:

They have no wish to interfere in the internal affairs of Greece, but feel bound to declare publicly that restoration of the throne of Greece to a king whose disloyal attitude and conduct toward the Allies during the war caused them great embarrassment and loss could only be regarded by them as ratification by Greece of his hostile acts.

This step would create a new and unfavorable situation in the relations between Greece and the Allies, and in that case the three governments reserve to themselves complete liberty in dealing with the situation thus created.

In an interview immediately after the receipt of the three-power note Premier Rhallis said:

The note came as a surprise. In it the Allies say they do not wish to interfere in our internal affairs. Then I should like to know what are they doing now by sending such a note.

The Allies say they are painfully surprised by such events. What events? It is merely that we held elections, in which the people expressed their will, and that is what elections are for. The Allies pushed Venizelos to hold the elections, altho the royalists opposed them.

By the election the people have shown that they want Constantine. They also gave Venizelos his political death blow, burying him in a huge tomb of unfavorable votes. He cannot return. The Greek people still are willing to carry out the contracts undertaken with the Allies. It is the Allies who are failing us.

The Greek army, to which the Allies entrusted the campaign against Mustafa Kemal Pasha in Anatolia, is costing them 4,000,000 drachmas a day (\$800,000 at normal rate of exchange). But the Allies will no longer feel like financing a campaign for giving more territory to a King whom they distrust. In fact, they may feel safer with Smyrna in the hands of the Turks than of the Greeks in their present mood, so it is possible that the Treaty of Sevres, which gave Smyrna to Greece, may be revised on this point. The treaty has not yet been ratified and President Wilson has accepted the offer of the League of Nations to negotiate with Mustafa Kemal. But Kemal will not be willing to relinquish his hold on Armenia unless the Allies have something to offer him in exchange, so Smyrna may come in handy as trading-stock.

International

A MAN MAY BE DOWN, BUT—

The plebiscite held in Greece on December 5 showed an overwhelming majority in favor of the return of the former King Constantine to the Greek throne. Constantine has announced that he is ready to come back but the Allies have warned Greece that the return of the monarch whose sympathies were with Germany in the World War will be considered a hostile act and will cause the withdrawal of about \$70,000,000 in credits, chiefly French, from Greece. This photograph, one of the most recent of King Constantine, shows him in exile with his German wife, Queen Sophie, and their youngest child, the Princess Catherine

# A Little of Everything

In his recent book on "American Police Systems," Raymond Fosdick has compiled some startling figures on the difference between the crime rates of American and of British cities. Greater London in 1916, with a population of more than seven millions, had nine murder cases. Chicago, with one-third the population, had 105 the same year. This was a greater number of murders than were reported in all England and Wales. In 1917 Chicago had more murders than England, Wales and Scotland all put together.

But Chicago is not exceptional. New York had more homicide cases (murder and manslaughter) in 1914, 1915, 1917 and 1918 than England and Wales. Glasgow and Philadelphia are about the same size; from 1916 to 1918 the Scotch city had thirty-eight homicides and the American city 281. Liverpool and St. Louis are about the same size; in 1915 St. Louis had eleven times as many homicides as Liverpool. In 1916 and 1917 Los Angeles had more homicides than London; and Cleveland in 1917 three times as many.

WORLD'S CHAMPION—1940

misdemeanors and arrests. Thus in 1915 there were 838 robberies in New York City; 20 in London; 102 in all England and Wales. This difference is not wholly due to wartime conditions in England, as is shown by the fact that in each of the four years from 1915 to 1918 inclusive, New York City had from four to five times more robberies than occurred in all England and Wales in any one of the five years before the Great War.

The relative homicide rates in American cities is shown in records compiled by Dr. Frederick L. Hoffman. During the last ten years Memphis, Tennessee, has led all other cities in the United States in illegal killings. In 1919 the rate was 55.9 per 100,000 of the population; or, in other words, if you lived in Memphis for a year you stood one chance in less than two thousand of being murdered. Savannah, Georgia, had the next worst record of forty-two per 100,000. The safest large city in the United States is Milwaukee, Wisconsin, with a homicide rate of only 2.5 per 100,000. Dayton, Ohio, comes second with a rate of 2.7. The average for all the cities studied in 1919 was 9.1. Dr. Hoffman confirms Mr. Fosdick's assertions that the United States is far behind other civilized countries in detecting and punishing homicide.

This temporary monument marks the exact spot where brave Edith Cavell was martyred by the Germans on the Belgian rifle range in Brussels.

## Hexanitrodiphenylamine

This is what the Germans loaded their torpedoes with; this mixed with another explosive that does not sound quite so bad, tri-nitro-toluene, better known to the public by its initials as TNT. The mixture is 30 per cent more powerful in explosion than gun-cotton, which is commonly used. A torpedo, such as the Germans made, two feet in diameter and packed with five hundred pounds of such stuff, is sufficient to sink the biggest ship afloat. Now that the war is over—except for the United States, which does not

matter—the Germans are beginning to publish their wartime inventions. So the secret is out; out, that is, for the chemist. The layman looking at this unpronounceable name will be none the wiser, altho he will suspect that a compound holding in its cognomen nearly as many letters as there are in the alphabet would be apt to blow up with a loud bang if roughly handled.

Samuel Rzeschewski was sitting at a low table beside a window, his whole attention centered on a chess board in front of him.

The pieces were set for a problem—white to mate in three moves. It was an intricate and difficult problem and the boy, who is not yet nine years of age, was studying it with profound attention.

404

then—Samuel snapped into electric life and speech.

He had solved the problem. With swift motions of the pieces he showed the necessary moves to mate in three moves. A quiet spoken kind-faced man who sat by the boy's side suggested a different defense which red could have used, but Samuel like a flash replied with moves for white which tore the red defenses to pieces and forced the mate in three.

Up jumped Samuel, stretched himself, stamped, sang fragments of two songs marching up and down. Then suddenly with a mischievous grin on his face he rushed at his secretary and

There it was that Samuel learned the game by watching his father play. He seemed to have been born an expert for he won the first game he ever took part in and his opponent was a strong player.

In addition to chess Samuel is fairly well advanced in ordinary studies and has a smattering of languages, but is not yet well versed in English. His secretary spoke for him and for the party:

"He is greater than Paul Morphy was at his age. Morphy played at eight years of age, but Samuel played at five. Yes, he has beaten European champions—well, he beat Griffith, formerly champion of England. He played a draw with Rubinstein and another draw with Bardeleben. These were all blindfold games.

"So far the greatest number of opponents he has ever encountered in simultaneous play was thirty-five and he defeated all but two of these. Ordinarily there is no more strain on him in playing chess than there would be on another boy in playing marbles. But it could easily be overdone. Samuel is in perfect health now and we want to keep him so. He never had a serious sickness in his life. This afternoon he is going out for a walk to see the city. So far he has only had a glimpse of it and the immense buildings have excited his wonder and curiosity."

A few hours after his arrival in New York little Samuel paid his respects to the American champion, Frank J. Marshall, by visiting him at his chess club, 57 West Fifty-first Street. News of his coming had gone

© Kadel & Herbert

The sculptor calls it "The Holy Family," but it looks like a goblin to us. This illustrates a new school of modeling—"Expressionism"—introduced by Zadkin, a well known futurist sculptor of Paris. He attacks his subjects directly in wood and stone: "the sensation of creation is wholly thus preserved" as it has no longer the intermediate medium (clay) to deal with. Zadkin spent some years in Russia, where, perhaps, "he got that way!"

before and there was a gathering of about one hundred players—with some of the strongest in the country among them—to meet him. Some had fixed up tests wherewith to try him out and soon Samuel was sitting in front of a problem prepared by A. B. Hodges, former United States champion. A lot of expert problem solvers had tackled this and a few had conquered it in forty minutes. It had baffled the others. Samuel gave it his undivided attention for about three and a half minutes, then made a characteristic snatch at the pieces and opened the problem up wide—a mystery no longer—solved.

Along came Herman Helms, another great figure in the American chess world and editor of the *Chess Bulletin*. Mr. Helms had a position set

up on the board and wanted to know if Samuel recognized it. Samuel had never seen this position with his physical eyes. It was one that had occurred in the middle of a blindfold game that he played in London about two months ago. He identified it immediately.

Samuel is not here seeking any championship and his games in this country against first class players will probably be few. His guardians are careful of his health and are getting him to bed each evening in good season.

The nine-year-old chess giant, Samuel Rzeschewski, who has recently arrived from Poland issuing open challenge. His father, a Polish linen merchant, claims to have started it all when he taught Samuel the game in an idle hour one night when the boy was hardly five years old

seizing him by the legs exerted his utmost strength to trip him and throw him down. While bending over the chessboard Samuel looked old and careworn; but when trying to put his secretary out of business as a wrestler he was just a boy with all a boy's ambition to shine as an athlete.

Samuel is about the height of the normal nine-year-old boy and squarely built. His complexion is rather pale and his features sharp. All his motions are very swift. He seems nervous and his voice in speaking sounds sharp, querulous, thin, like the voices of some midgets. He seemed also to have midget self-sufficiency. He is well aware that he is no ordinary person. He is blasé to fame and as to newspapers and newspaper men—he is all fed up with them.

Samuel's father and mother were in the room with him, heavy, ordinary looking persons of middle age and peasant type. The father sat still and silent; the mother moved about now and then. They did not address Samuel and he seemed not to see them. The family are Polish Jews who lived in a little Polish village four years ago.

## Is Unpalatable Food Properly Digested?

Three investigators in the laboratory of Physiological Chemistry of the Jefferson Medical College, Philadelphia, recently put this question to the scientific test, with the result that the answer returned was "yes." The experiment was so conducted as to determine whether the ultimate return to the body from unpalatable food was different from that of the same food palatably served.

The experimental procedure was simple. A seven-day period during which the subjects were on a uniform diet, served palatably and amid pleasant surroundings, was followed by a two-day period during which the same diet was fed in an unpalatable condition and in dirty and unpleasant surroundings. The food was rendered unpalatable and unappetizing by the following treatment. All the food ordinarily used for each meal (meat, biscuits, jelly, cornstarch, pudding, oleomargarine, etc.) was stirred together in a large, flat porcelain dish. The dish itself was smeared with animal charcoal, as was the beaker used as a drinking glass. The table was dirty and strewn with dirty dishes. A little indol was sprinkled about under the table. The subjects were kept in ignorance of the constituents of the unpalatable mixture. The food was so unpalatable that one subject vomited his first meal shortly after he had eaten it.

The experiment showed that the differences in utilization of the palatable and unpalatable foods were quite small, as were the variations in nitrogen retention, but, what is more to the point for most of us, that flavor is not the outstanding dietetic asset that some people would have us believe. If the

stomach and intestines can only be cajoled into making the proper effort, the unsavory concoction can be digested just about as satisfactorily as can the food mixture which makes a stronger appeal. If the things we eat have proper food value, we need not worry unduly as to their digestion, absorption, and utilization by the normal body. This ought to be good news to millions of people who eat unpalatable food in untidy surroundings, in spite of the fact that one of our leading physiologists says "What man likes best he digests best." This experiment simply shows how insulting we can be to the normal stomach and get away with it but does not necessarily prove this to be the wisest policy.

## Harding's Newspaper Creed

*This set of rules, perhaps indicative of more than the journalistic ethics of the President-elect, is given to every young reporter on joining the staff of the Marion Morning Star.*

Remember there are two sides to every question. Get them both.

Be truthful. Get the facts.

Mistakes are inevitable, but strive for accuracy. I would rather have one story exactly right than a hundred half wrong.

Be decent, be fair, be generous.

Boost—don't knock.

There's good in everybody. Bring out the good in everybody and never needlessly hurt the feelings of anybody.

In reporting a political gathering give the facts, tell the story as it is, not as you would like to have it. Treat all parties alike.

If there's any politics to be played we will play it in our editorial columns.

Treat all religious matter reverently.

If it can possibly be avoided never bring ignominy to an innocent man or child in telling of the misdeed or misfortunes of a relative.

Don't wait to be asked, but do it without asking, and, above all, be clean and never let a dirty word or suggestive story get into type.

I want this paper so conducted that it can go into any home without destroying the innocence of any child.

WARREN G. HARDING.

Wide World

To enjoy the wonders of an Alaskan sunset from the cozy interior of a modern parlor car is perhaps more prosaic than whirling over snow and ice in a dog sled, but the completion of the new Government railroad in this country not only affords comfort to travelers but marks another epoch in the development of the far North

## One Man's Secret of Success

(Continued from page 389)

sunshine and the rain. But it is hardly necessary to point out that fundamental legislative measures like the Coöperative Agricultural Extension Act; the Cotton Futures Act; the Federal Farm Loan Act; the Federal Aid Road Act; the Food Control Act; the Food Production Act, are not autochthonic contrivances that sprang up unbidden from the soil or self starting automatic agencies that ran of their own motion. Back of them has been a patient, steadfast scholar, statesman and executive, seeing things in the large, adapting means to ends, and getting satisfaction in big results. The old days in America of the virgin soil and the big crop surplus are at an end. It is to the everlasting credit of the Wilson administration, the Congress, and the Secretary of Agriculture that they have focused their attention upon the farmer.

What Administration and what Secretary of Agriculture can point to a nobler and more scientifically conceived scheme of agricultural amelioration than that contained in the program embodied in the eight great acts herein detailed which have sustained the productive strength of the nations in a period of world collapse and promise to stand the test of years:

Federal Reserve Act,  
Marketing Investigations,  
Cotton Standards,  
Grain Standards,  
Warehouse Bill,  
Rural Credits,  
Good Roads,  
Agricultural Extension.

In all these great undertakings the quiet force of the present Secretary of the Treasury has been constantly exerted, and the actual administration of most of them has been his peculiar task. He has been with the Administration since the beginning, and I venture to predict he will remain to the end, discharging the duties of his new and more outstanding office in a financial crisis of the world with the same strength born of knowledge, and devotion born of duty, that has hitherto marked his career. Each new era in the world needs new servants, and generally contrives to find what it needs after many trials and sometimes tragic failures. There have been times when it needed philosophers and soldiers and reformers and radicals and even poets and orators and fierce idealists. It seems now to be searching for the man who can diagnose its troubles and put into play remedies for its ills. This sick world will not be content merely with a physician of impressive and loquacious bedside manner. It asks for one who looks beyond the symptoms to the causes and beyond the nostrums to the vital processes that repair and heal. Here is a man made to order for this welter in which the world finds itself—a scholar without pedantry, a man of action grounded in thought, a patriot without sham or pretense.

Charlottesville, Virginia

# Five Quick Effects

## When you brush teeth in this way

This new way of tooth brushing brings five desired effects. Some are immediate, all are quick. A ten-day test, which costs you nothing, will clearly show you what they mean to you.

Leading dentists everywhere advise this new-day method. Millions now employ it. You see the results in glistening teeth wherever people gather. Now let your own teeth show them.

## You must fight film

Brushing does not save the teeth if you leave the film. That's why well-brushed teeth so often discolor and decay.

Film is that viscous coat you feel. It clings to teeth, enters crevices and stays. The ordinary tooth paste does not end it, so very few people have escaped its damage.

## A 10-Day test is free

Pepsodent quickly proves itself. The results are unique and conspicuous. And a book we send tells what each one means.

One ingredient is pepsin. Another multiplies the starch digestant in the saliva, to digest starch deposits that cling. The saliva's alkalinity is multiplied also. That to neutralize the acids which cause tooth decay.

Two factors directly attack the film. One of them keeps teeth so highly

It is the film-coat that discolors, not the teeth. Film is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So dental science has in late years sought ways to fight that film.

## Scientific methods

Efficient methods have been found. Able authorities have proved them by many careful tests. The best dental opinion endorses them.

These methods are combined in a dentifrice called Pepsodent. And to let all know its benefits a 10-Day Tube is being sent to everyone who asks.

polished that film cannot easily adhere.

Pepsodent twice daily attacks the teeth's chief enemies.

Send the coupon for this 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coat disappears.

The results in ten days will amaze and delight you. Make this test now. Cut out the coupon so you won't forget.

## Sisters Under Their Skins?

(Continued from page 391)

of such offenses as getting drunk they try to avoid her accusing eye in just about the same way that a bad boy would dodge his mother. If she thinks it necessary she speaks very plainly to them on the subject of morals.

My first stenographer was an elderly woman whose attitude toward me was distinctly that of a mother. She used to brag about my achievements, she was very jealous of me and especially was she watchful of my health. At another time I had two stenographers, both young. Whenever I returned from a trip it was necessary to work late the first day to catch up with the mail. The girl selected for the extra work was in high good humor for several days afterward and the other was inclined to pout. Both were careless about money. When they were unable to meet pressing obligations, they simply told me about it. They didn't ask for loans. They took it for granted that I would straighten out the affair. And I did. It never occurred to me that there was any other possible course to pursue. I know the present address of every woman who ever worked under my direction with one or two possible exceptions which are due to my own carelessness in losing their letters. A collection of wedding announcements is usually to be found in my desk because I forget my old friends' new names. While many offices in the South and Southwest still maintain such relations, conditions are changing very rapidly. Within a few more years there will be no difference between New York and Texas in this regard. Slight wonder that the "woikn goil" has become the "business woman." She has indeed. To a provincial person like myself the change is astonishing, almost incredible.

The club women of the East are very different also. They are self-confident, assertive, and far from bashful in giving an estimate of the value of their work for the public welfare. The club women of the Southwest are timid when compared to their Eastern sisters. But the Southwestern women have played their cards perhaps better than they know. They appeal to the men of influence to help them. As a matter of fact the women supply the idea and the men are induced to supply the power and knowledge of the machinery of government necessary to get results. I have observed the process with much amusement, especially when I was the person being used. The Eastern women do a great deal more "demanding" and lobbying. Which system is the more effective I do not know, but the two systems are quite different. The one goes frankly and directly to the merits of the case. The other takes advantage of our Southern tradition of chivalry.

It is my observation that the women of the East are much more outspoken, frank and direct than any other women I have ever known. However, there is a suspicion in my mind that the women of Texas and the women of the East are "sisters under their skins." Their

desires and purposes and their attitude toward men are about the same. They simply use different methods. And the drift is toward the Eastern methods. The New York woman openly announces that such is the case and therefore she will act accordingly; she looks you in the eye and asks you by inference what you are going to do about it, suggesting quite plainly that you are not going to do anything about it. The Texas woman says whatever she thinks the man believes she ought to say, but she gets approximately the same results. To put it in plain Texas terms, they both "bring home the bacon." One announces she is going after bacon; the other declares herself on the way to visit her grandmother. But they come home with the same article.

As nearly as I can judge the women of the Southwest are happier than those of the East. There is an itching restlessness about Eastern women. Some are standing just where the rural women of Texas have always been; others are forging ahead to new ideals. Their ways of doing things clash and result in conflicting points of view on the part of men. There are men who are prepared to be partners to the most advanced women of the East. There are other men who cannot judge these new ways and new ideals fairly. This places many women in conflict with a considerable part of public opinion. If I were a woman aged twenty-five and single, I should consider that I had selected a very unfortunate time to be born. There is turmoil and conflict, acute and acrimonious. Woman's position is not fixed. She is fixing it right now. The task is not one of unmixed delight.

**D**URING my first month in New York City I used to give my seat to the nearest woman I observed standing. Not one ever said "Thank you." I decided that such cattle were not worth bothering about and resolved never to give up another seat. But habit is stronger than resolution. I compromised by a process of selection, giving the seat to elderly women or women with children or bundles or to those who were quite plainly tired. To my astonishment I observed that not only these women but any others present seemed to appreciate this. After a while it dawned upon me that those to whom I had previously given my seat took it for granted that I was leaving the train at the next stop. They are not accustomed to acknowledging courtesy in the subway because there isn't much to acknowledge. And then one day I saw a man give his seat to a pretty girl and leer at her as he did so. His manner was quite insulting. Eastern women are disillusioned. They may love or honor or trust one man, but for men they have contempt. There is such a mixture of races and religions and traditions in the East that misunderstandings occur. What is accepted cus-

tom to one person is boorishness to the other, and everyone sees much boorishness—some real, some fancied. The man of one race and religion does not have quite the same respect for the women of other races and religions. He may talk about honor for womanhood but it is really a wholesome respect for the laws of the clan. You see, I am also becoming disillusioned. No wonder the women smile when some of my rural friends and I go through the accustomed motions of being "Southern gentlemen." Slight wonder that women mistake us for burglars or oil stock salesmen. From all of this medley in the East—fraught with so much promise for progress in spite of its ugly features and lunatic fringes—I turn to pleasant contemplation of the most unenlightened of the women of the far rural districts. They are imposed upon, they work too hard, they bear too many children, their husbands are not always as kind as they should be, but those women do not expect anything better. Like Alice they can weep with delight over one smile, from Ben Bolt. I doubt if a woman in New York City has wept with delight during the past ten years. They are too busy and restless and self centered for that.

Fate has played a scurvy trick on these Eastern women. The burden is upon them to bring about a mighty change. It is certain to be for the better. It may not work out just as they plan it but in the long run it will be for the better. They are saving the other women and opening the way into a broader and better life. They are going to make possible new relations between men and women, which will mean greater happiness for all concerned and a much better world in which to live. In the meantime, however, there is considerable disorder. There are women who mistake liberalism for anarchy, women who think they win a victory for their sex when they try to look and act like men, and there are other women who do the bragging for the real workers. I find the workers regard the bragging brigade as one of their principal handicaps.

But the differences between Texas and the East which are so startling today will be less startling ten years hence. With the stimulus of suffrage the more backward women will catch up. With the responsibilities that go with new powers and opportunities Eastern women will laugh the lunatic fringe out of existence. The constructive features of the new movement will remain and the effervescent will vanish. Even now much of the freakishness one observes among women in the East is furnished by women from inland villages. It is their way of registering emphatic protest against repression. They do not realize what they are doing, but that is precisely what they are doing. Just as Czarism produced a reaction of Bolshevism, so the little village with its incessant criticism of women produces the woman revolutionist whose excess of enthusiasm for liberty may make her a freak.

New York City.

## The Laziest People in the World!

"Will you row me across the river?" I asked a Malay one day. "Tuan, I have eaten and I have had plenty," he responded. "You may take my boat and row yourself across the river. Tomorrow, if Allah grants me life, and if I need the boat, I will swim over for it." "That Malay trait of living for the moment has led many a European to murder!" says CHARLES MAYER in the JANUARY number of

# ASIA

The American MAGAZINE on the Orient

More than 60 Illustrations—Art Insert of Eight Pages

One of Mayer's difficulties in trapping elephants for show purposes was trying to persuade the indolent natives to help in the jungles. Mayer's adventures were endless. How he found a twenty-toed elephant, and foolishly sold it without reckoning the value of its toes; how he subdued a mad young creature of the deep jungle, and how it remembered him years after—are tales that read like fiction. But his story is solid fact. You will roar with laughter one minute, and be grasping the arms of your chair the next.

Are you familiar with ASIA—the magazine? This story of Mayer's, for instance, tells not only of adventure but throws the calcium light on the life of the Malay Archipelago—the people and their customs. And so in ASIA—you will find as you read, stories of adventure and accomplishment, articles portraying native customs, translations of Oriental literature, clear presentations of our political and diplomatic relations. And all the while you will be living in the rare atmosphere of the East, amid the scenes of future world peace and prosperity or war and chaos.

ASIA is the only general magazine treating exclusively of the Orient. Its illustrations, photographs, drawings—and art insert—usually of eight pages—make it a magazine of distinctive beauty and unusual interest.

## 30 Days' Trial BE WELL AND KEEP WELL 30 Days' Trial THE ROCHE ELECTRIC HYGIENIC MACHINE

HELPS NATURE IN HER FIGHT AGAINST DISEASES AND PAIN

It increases blood circulation, strengthens and soothes the nerves, brings sleep to the sleepless.

The Vigorous Man or Woman is Leader of All— Don't be a Dead One at 50

You cannot realize the benefits derived from this machine except you try it. One treatment will convince you of its extraordinary qualities. If you are suffering from paralysis, locomotor ataxia, vertigo, apoplexy, neuritis, rheumatism, lumbago, gout, hardening of the arteries or high blood pressure, be sure to investigate this machine. A perfect circulation wards off and overcomes such ailments. Takes the place of exercise and hand manipulation. Gives your muscles firm elasticity. Be neither fat nor thin.

### NORMALIZE YOUR WEIGHT

Do you realize what this machine means to one wanting in vital strength, or suffering from general weakness, nervous debility, insomnia, constipation, headaches or pains through the back and limbs?

Remember our machines are not vibrators, but a genuine health-helping, life-prolonging apparatus. As electrical manufacturers we build high-frequency machines of special design, including our new combination machine "High-Ray," or, in other words, "Violet Ray," which is operated from direct or alternating current, and two No. 6 dry cells furnish the pulsating and atomical vibration.

We know that we have overcome the possibility of accidents through short circuit which so commonly happens in cheap and inferior machines.

Invented and patented by Prof. J. B. Roche

Our machine should be in every home. Write for our free trial offer and testimonials. It is for men and women who want to become healthy, vigorous and efficient. Address

ROCHE ELECTRIC MACHINE CO., Dept. T. I., Grand Rapids, Mich., U. S. A.

## The New Germany

(Continued from page 388)

ism are killed as dead as a door nail—certainly for this generation. I found no one who had a good word to say for the late Emperor or the Crown Prince. Both are hated as cowards and of the two the Crown Prince is most detested. I was also told by everyone that there is not the slightest possibility of Germany's secretly re-arming herself and making war upon Europe. The Socialist Party is the only real pacifist political party in the world and it is now in supreme control. Even if the Socialists are overthrown the people are heartily sick of militarism as the failure of the recent military coup d'etat shows.

Under the new constitution there is universal suffrage for everybody over twenty years of age. Kautsky, the Socialist of Germany who most nearly wears the mantle of Karl Marx, told me that Germany now has the most liberal constitution of all the nations of the world. Not only do the German people claim that they have democratized politics, but they propose to democratize industry as well. The railroads were, of course, nationalized before the war, but now it is planned to nationalize the waterways, forests and mines. Besides this strong trend towards State Socialism, there is also a sort of Sovietism growing up within the separate units of industry. Before the war there was no political or economical self-government in all the Fatherland. Politically the Junkers reigned; economically the capitalists reigned. Before the war trade unions and the Socialists were the only forces in Germany that dared to champion the workers. Now in addition to the trade unions there are local factory unions. The twofold purpose of the act that was put into effect by the present Coalition Government last year is (1) to improve the condition of the workers and (2) to increase output. These aims will be accomplished in the following ways: In any factory from a business which employs over twenty people, the workers can elect their delegates to a council or soviet with which the employers must confer. It is the duty of the Council to help the management make the factory more efficient, to report new methods of scientific management, to prevent strikes, to enforce the arbitration laws on the statute books, to promote community of interests between employers and employees and to enforce safety devices, sanitation, etc. The employee has the right to go to the council to protest if discharged for cause. If he has been discharged because of trade union, religious, or military activities he must be reinstated. He cannot be dismissed without cause or because he refused to do work other than that for which he contracted. In other words, there must be a real reason for discharge, such as inefficiency or insubordination. If the Council and the Employers cannot agree, the dispute must go to the Arbitration Court, and if the

Court finds against the employer he is liable to pay a damage, which in the case of discharge may amount to half the employee's income for the last year he has been working.

This law has been in operation a year and is already a great success. The employers were originally terrified at its radicalism, but now their point of view has changed, and they no longer desire a restoration of their former autocratic power. It is now generally admitted thruout Germany that the worker has rights in the management of the concern in which he works, and it is expected that this statute will be put finally in the German Constitution. All these various shop councils are expected eventually to elect a Trades Council and all the trades of the land to elect an Economic Council for the Empire, to propose economic laws and advise the parliamentary government on economic matters. This National Council has already come together in a provisional form, but the matter has not yet been worked out by the Reichstag.

The movement for democracy manifests itself in many other ways. For instance Herr Sassenbach, the Socialist member of the Berlin Town Council and one of the ablest leaders of the new Germany, told me that the German Government is going to have a "social attaché," in addition to its Military, Naval and Commercial Attachés, in all her foreign Embassies and Legations. Thus the German working people will have a special official representative in all foreign countries hereafter to keep them in touch with the working people of other lands. Herr Sassenbach told me that as soon as peace was concluded between Germany and the United States he expected to be the first Social Attaché from Germany at Washington.

Another incident showing the trend towards democracy is the law now in actual practice against tips. Altho this seemed to be a dead letter at the Adlon Hotel, wherever else I went no tips were asked or taken, and when I came to pay my bill 10 per cent was added for personal service.

The deposition of the University Professor from his exalted position in the German scheme of things is another step in the leveling process. In the old days the universities were governed entirely by professors who in turn as state officials were under the direct control of the Government. Now the students are absolutely self-governing in their own affairs. They have their own eating rooms, reading rooms, apartments and offices which they manage themselves. They even have a student parliament. It is expected that they will share the actual government of the university with the professors just as the workers are sharing the management of industry with their employers.

A surprising innovation in Germany which I commend to American tenants is that no landlord is permitted to evict a tenant or raise the rent without specific governmental permission.

Moreover, no person can keep an extra house idle. He must either sell or rent the house he does not personally occupy. Even in his own dwelling he can not have more than one spare room or rather one more than the number of people who occupy the house. If he has extra rooms beyond these he must rent them out to boarders or lodgers from outside.

There may be a sense of guilt on the part of the German people for bringing on this war, but if there is, I found none. They cannot understand why we should have any loathing for them. They apparently have little bad feeling for us. All they want is to forget the whole horror and start afresh as tho nothing had happened. They seem to look on the war after this fashion: War is a terrible thing. Germany had to do things for military necessity that she did not want to do. But the Allies did the same.

When an American, or a Frenchman, or an Englishman, or a Belgian thinks of Germany he thinks of the rape of Belgium or the U-boat warfare. When a German thinks of the Allies he thinks of the economic blockade which he claims starved to death or permanently injured 750,000 women and children, and of his country's betrayal at the Peace Conference when under the promise of the Fourteen Points Germany laid down her arms and then when she was militarily impotent had to accept something far different from Mr. Wilson's program. Apparently we are just as incapable

of understanding the German point of view as they of understanding ours. Moreover, they do not even believe they were the aggressors in the war. My friend, Dr. Sherwood Eddy, who probably knows more about foreign students than anyone else in America, told me that a few days before I arrived in Berlin he made an address before the student body at the University. After he had gained the confidence of his audience he asked them if they had any objection to frankly discussing the causes of the war. They told him "to go ahead," and when he called for a show of hands as to whom they thought responsible for starting the war, 90 per cent said that Russia was to blame and that Germany was compelled to fight a war of defense. This demonstrates, I think, how powerful the German official propaganda has been in fooling all the German people ever since the beginning of the war.

The wisest man that America ever produced, Benjamin Franklin, once said that "the bill for war comes afterwards." The bill is now being presented to Germany. She does not fully realize it yet; but she will as time goes on. Whether this will drive her into Bolshevism only a rash man would predict. Suffice it to say that every German with whom I conferred said that if it ever came to an issue as to which Germany would have to accept—government by Bolshevism or government by General Foch, all Germany would choose Bolshevism.

## The Largest Corporation in the World

(Continued from page 393)

powers and possibilities. When a man has outgrown his job and we have no other suitable for him, we let him go elsewhere and bid him godspeed. Every business concern should offer his employees as many different avenues of promotion as there are different kinds of position and types of men; this regardless of the selfish interests of the company.

The generous open treatment of competitors by U. S. Steel has created a new standard of commercial ethics. The frank and courteous policy of Judge Gary toward competition has made his business rivals his personal friends—a transformation that a typical business man of a generation ago would have declared impossible. When the Government officials, claiming that U. S. Steel was a monopoly of dire proportions, went about to dissolve the corporation, they were halted by the competitors of U. S. Steel, who arose and defended the corporation as a notable example of business honor, safety and equity!

The world's leading business organization has more than 250,000 employees, with a total annual payroll of nearly \$480,000,000. The average salary or wage per employee per day is \$6.17. The volume of business averages about \$1,500,000,000 a year. In round numbers, the raw, semi-finished and finished products during last year were

as follows: 25,000,000 tons of iron ore mined; 5,000,000 tons of limestone quarried; 28,000,000 tons of coal mined; 15,000,000 tons of coke manufactured; 9,000,000 barrels of Portland cement manufactured; 11,000,000 tons of rolled and other finished steel products made—including steel rails, bars, plates, tubing, pipe, axles, car wheels, wire, wire rods and other products; 30,000,000 tons of blast furnace and steel ingot production.

The property assets equal more than \$1,900,000,000. They include items like these: 800,000 acres of coal property, 23,000 coke ovens, 1,600 miles of railroad, 356 steamers and barges, 59,000 passenger and freight cars and steam locomotives. There are 145 industrial plants, 373 steel works, 66 warehouses, 71 wire mills, 616 roller mills. A complete, itemized list of properties owned or controlled would fill several of these pages.

But we are more deeply interested in figures that show the magnitude of the conception of human relations held by the concern. We quote from the official current report. Last year the corporation expended \$1,131,446 for safety work; \$3,208,661 for sanitary equipment and appliances; \$4,267,355 for measures of accident relief. During the year pensions amounting to \$733,707 were disbursed to retired employees. Active employees—66,477 of them—

subscribed for an aggregate number of 167,407 shares of Steel stock at \$106 per share, thus putting on record the most colossal testimonial of the faith of employees in the product and the management that was ever adduced in the space of a year during the annals of business.

Industrial chemists retained by the corporation have ensured savings of millions of dollars. Electric power for operating an entire steel mill is generated from the by-product gases, formerly wasted, of the blast furnace process. Portland cement from waste slag is turned out in vast quantities, the capacity of one plant being approximately \$30,000 worth of cement a day. By-product coke ovens are saving 20 tons of coke on every 100 tons of coal burned to make it; and as 12,000,000 tons of coke are used every year in steel manufacture, the saving not only reduces the price of steel but also conserves the coal supply of the nation. These by-product coke ovens retain the gases which they elaborate, and from which are derived coal tar, ammonia, benzol and other valuable chemicals, in addition to gas for illuminating purposes, whole cities now being lighted from the harnessed fumes of a battery of coke-ovens.

The locating, interviewing, investigating, employing and training of a new man costs a business anywhere from \$50 to \$150, which amount is, of course, charged against the customer. If U. S. Steel had to break in 100,000 new employees a year because of losing that many old ones—a reasonable estimate according to percentages of turnover in other lines of trade—you can figure what the excess cost would be. Various plans have been worked out to obviate this loss. One of the most effective is the bonus on employees' stock; the corporation shares are first offered to employees at a price below the market valuation, then the employee who stays five years gets not only the regular dividends but in addition a bonus of \$5 a year thereafter on each share of stock a year. The employee thus made a partner is likely to stay and get his bonus.

The monopoly of U. S. Steel is not in market control but in management control. The corporation furnishes less than half the finished steel production of the United States.

All foreign-born workers are helped by U. S. Steel to train for American citizenship by learning to read and write good English, to discuss current events, to regard the public school building as a community center and use it as such, to attend night classes in appropriate subjects, to study at home the science of household economy and the art of child training, to observe and adopt American standards of living. The night-school enrollment in a single district averaged more than 300 a month. Visiting nurses and domestic science teachers carry the message, "America First" to the foreign women and children. Thousands of immigrants are led thru these Americanization campaigns to secure naturalization pa-

## BON-OPTO

SHARPENS VISION

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

pers and to feel, think and act like real American citizens.

Practical hygiene is made imperative. The water used for drinking purposes on the grounds of each subsidiary company must be certified pure by a bacteriological analysis, once a year or oftener. Faces and hands are washed in flowing streams, not in stagnant basins or troughs. Care and cleanliness in the home, with health conservation and improvement, are taught by precept, instruction and example. Model houses are built and furnished.

Company restaurants in all parts of the United States are conducted on a uniform, standardized basis, with specifications and requirements as follows: Location convenient to men's work; light and ventilation properly guaranteed; appearance and equipment attractive and comfortable, with sufficient space to avoid crowding; cleanliness absolute; service prompt and available at all hours, with hot drinks sure to be hot; food fresh, of highest quality, well cooked and served in an appetizing manner, with variety limited yet pleasing; prices covering actual cost only; payment by meal tickets bought in advance, to save delay and trouble in making change; management by competent person in charge, with restaurant a department of the works on the same footing with other departments.

Strong nerves and clear brains are essential to mill and factory workers; mineral salts and vitamins are essential to strong nerves and clear brains; fresh garden products are rich in these food elements, and must be supplied regularly, abundantly. The possession of a family garden also aids thrift, health and vitality, good fellowship, wholesome relaxation. The various companies provide land for community or home gardens, plow the land, lay it out in attractive plots, offer it to employees rent free, and give suitable prizes for the best gardens. The employees of one company raised in one year garden produce valued at \$25,700.

Waste land is turned into playgrounds for the children. Almost under the eaves of mills, factories and other grimy prosaic structures may be seen hosts of happy children reveling in the delights of swings, sand-boxes, slides, rings, seesaws, wading pools, and other playthings and sports that boys and girls love.

The community houses recently established are becoming very popular. They combine the functions of housekeeping, educational and social centers. The trained nurses in charge act not only as teachers and demonstrators, but also as personal friends and family counselors when problems of all sorts are submitted for solution. Classes for women and girls are held in dressmaking, bedmaking, infant hygiene, practical housekeeping, public health, art and economy of environment, the most valuable instruction being that in the choosing, preparing, cooking and serving of wholesome, palatable foods. Boys' and girls' clubs, largely self-constituted and self-governing, provide rules and ideals of good conduct.

We regard the conception, creation and operation of the model city of Gary, Indiana, as the most original and important educational service rendered the nation by U. S. Steel. Gary has become internationally famous for its modern school system, but is equally worthy of note for its modern municipal methods.

Fifteen years ago, the site of Gary was a desolate sand dune, where wild fowl resorted, and nothing grew but sage brush and scrub oak. Now the world's largest steel mills operate here, and the residential population of Gary numbers 60,000, making it the world's largest industrial city. Not only was it built "from the ground up"—it was built from below the ground, as houses are but never cities. Before anything would grow on its wastes of sand, about 2,000,000 cubic yards of rich, black earth had to be imported from Illinois, as top soil. About 16,000 trees were planted, over 1,000 homes erected, 120 miles of streets paved with concrete or macadam, and 31 square miles of territory bought and laid out for city property. The cost, thus far, of making Gary a model plant and city has been over \$100,000,000.

The first impression a visitor receives is that of a different atmosphere from other cities. The breezes from Lake Michigan, a couple of miles away, do not account for it.

Almost everybody here works, and thinks at the same time, and does both for a common purpose in a common cause. About 75 per cent. of the people are active steel workers and their families. They run the city.

The city property is about seven miles long and four wide. It was laid out with a view to both present needs and ultimate growth—250,000 people could live here and no one be crowded.

Homes are standardized but not stereotyped. There is a big difference. The homes of Gary workmen stand out as models of both inspiration and utility. They are factory-made, but they don't look it. The standardization is all inside, none outside.

Homes costing from \$1,500 to \$25,000 are built by the company, and sold to employees at a special discount, or to outside people of desirable character at no-profit prices. The company makes a small margin on business property—none on residence. Terms on homes are 10 per cent. down, and 10 years to pay balance. If the employee would rather build his own house, and lacks ready money, he can borrow from the company 75 per cent of the price of the house and lot, and besides get free plans from the company architects, with free consultation and supervision. The company has loaned to employee home-owners \$5,000,000 in the past four years.

All building plans and methods must be submitted to the company, and approved as measuring up to the ideal standards, present and future. Nobody can put up a skimpy, ugly or unsanitary building for any purpose whatsoever.

The high character of all construc-

tion work has so raised property values that city lots bringing \$100 a foot front not long ago now bring \$1,000 to \$1,500 a foot front. And the workers like the place so well, and their home investment so much, that the labor turnover at the mills and shops averages only about 15 per cent.

The conduct of city affairs is based on coöperation, sympathetic and scientific, of municipal, educational, industrial and religious forces and leaders of the community. Government is by and for the workers—free of politicians, pedants, grafters, reformers, idlers, bunglers. The aim is to combine all the advantages of public and private ownership of public utilities, and to omit all the disadvantages of both.

Public utilities are owned and operated by company, that reasonable rates and efficient service may be guaranteed not only to employees but to all citizens of Gary. The head of utilities organization is as efficient as the head of the steel plant—no tolerating of poor men in public service jobs. Gas, water and sewer pipes—60 miles of them—are laid not under streets, but under alleys between the streets, obviating necessity of tearing up streets for repairs. Water is piped from Lake Michigan, at a point three miles out for absolute purity of drinking water.

Thoroughfares are clean, attractive, spacious, with real city name and atmosphere—Broadway 100 feet wide, Fifth Avenue 80 feet wide. Public buildings are models of architecture and serviceability. Gary Y. M. C. A. is the gift of Judge Gary, costing \$260,000, equipped by Steel Corporation, with class rooms, dormitories, gymnasium, swimming pool and other educational and recreational features. There is a Gary Library donated by Andrew Carnegie; the Gary Hospital, built and operated by Steel Corporation, equal to best hospitals in largest cities; the Gary Federal Building, costing \$150,000, a structure maintained for the benefit of all the people, and eliciting their pride. Churches of all denominations are active in social service, and co-operative in educational and civic enterprises.

In short, as a peerless example of modern community growth, whether physical, financial, industrial, social, mental or moral, Gary should be studied by all educators, employers, ministers, welfare workers, municipal authorities.

## We're Sorry

We owe the University of Illinois a sincere apology, and Chicago University a retraction of unearned glory. In The Independent of November 27 we printed a photograph of the University of Illinois' new chimes and of President Emeritus Edmund Janes James, and then gave Chicago the credit for them both! The information came to us accompanying the photograph and we neglected to verify it—a mistake for which we are very sorry. We hope that this correction comes in time to ward off actual bloodshed.

**S**INGERS, Public Speakers, and thousands of others who use their voices in public have come to find a handy and very efficient help in

## BROWN'S BRONCHIAL TROCHES

For over seventy years these tablets have been serving faithfully in relieving sore throat, hoarseness, coughing, loss of voice, bronchial and asthmatic troubles.

Not a confection, but a genuine remedy. Contain no opiates or other harmful ingredients, hence are especially fine for children, as even a small piece will relieve a cough or sore throat.

May be carried in a vanity case or vest pocket and taken any time, anywhere. Bring surprisingly quick relief and have a wonderfully soothing effect upon irritated membranes of mouth and throat.

Four sizes, 15c, 35c, 75c and \$1.25. At all druggists.

**CHRISTMAS SUGGESTION**

Thousands of Independent readers give yearly subscriptions to their friends. You will find it difficult to buy for so small a sum a gift, which fifty-two times a year will bring so much of interest, information, inspiration and good cheer to the recipient.

Your days for holiday shopping are numbered. Save time and trouble by just writing an order for a yearly subscription to The Independent to be sent to a few of your friends. Our especially attractive Christmas Card will be mailed to these friends announcing your gift.

**THE INDEPENDENT**  
311 Sixth Avenue New York City

**How to Study This Number****THE INDEPENDENT LESSON PLANS****English, Literature and Composition****I. The New Germany.**

1. Write a fuller description of the incident of the French forcing the Germans to salute the French flag. Write from the standpoint of one person in the crowd, either French or German.
2. Who was Karl Marx? Write out a general statement of his theories. What distinction are people making when they speak of "Fabian" socialism and "Marxian" socialism? Into which class do most people fall? What do you think to be the socialist theory upon which our Socialist party is founded?
3. Do you think Germany has any right to the sense of injury which Mr. Holt found existing among the people? If you think she has write out your argument. If you think she has not, refute the argument of some one in the class who disagrees with you.

**II. One Man's Secret of Success.**

1. There is surely someone in your town, whom no one knows about, whom you have particular reason to admire. Perhaps he brings your mail or tends to your garden or keeps the corner grocery. Whoever he—or she—is, write a sympathetic character sketch.

**III. Sisters Under Their Skins?**

1. Are you an ardent feminist? What does that part of you think of Mr. Crowell's article?
2. What makes the intention of this article humorous, or serious, or both? Write an essay of your own, doing for the people in your school, or your church, or your town, what Mr. Crowell does for Eastern women.
3. The intimate essay is a popular modern form of literature. Do you know whether it has always been so? Look that up.
4. Choose one of the older writers of the familiar essay, whom you think you can like and enjoy, and read as many essays as you can. When you feel thoroly at home with them, write a familiar essay about them—being critical, but not forgetting to be human and sympathetic and readably personal. Mark Twain, Stevenson, Charles Lamb—any of these would do.

**IV. The Largest Corporation in the World.**

1. Mr. Purinton gives a good idea of Gary as a model town. Look up the facts of the Gary School System, and write a clear exposition of them. If you know about any other modern experiment in education you might make your essay a comparison of the two schemes.
2. Probably you have your own ideas about the ideal educational system. Write a criticism of the system in your own town, not simply of its superficial features but of the theories that underlie it. And remember that "criticism" does not mean "attack."

**V. Traitors to Cornell.**

1. Look up the circumstances of the founding of any college you know about—the aims and principles in its founder's mind—and compare what was hoped for with what has happened. You could do it by an interchange of letters between a father and son, both alumni of the college.
2. (a) Debate the question of coeducation in general. The fairest arrangement would probably be to have an even number of boys and of girls in each team. (b) Or debate this question: Resolved, that coeducation in colleges instead of in High Schools would give the best results.

**VI. The Story of the Week.**

1. President Wilson's message. Read the message as it appeared in full in the daily papers, and criticize its literary style. Probably you can find others of his messages and addresses in your library. Read a number of them and write an essay on President Wilson as a writer and public speaker.
2. Blue Laws. Debate one of the following questions: Sunday baseball; Sunday mail deliveries; keeping open soda fountains on Sunday; Sunday traveling.
3. Write a poem with the same idea as that of the cartoon, "The Founding of the Pilgrims."
4. D'Annunzio Defiant. Read what you can find about the lives of d'Annunzio in Italy, and Paderewski in Poland, trying to get a sense of their personalities. Do you think the two have anything in common? If you do, can you think of any others to put in their class?

**History, Civics and Economics****I. The Steel Industry—The Largest Corporation in the World.**

1. What, in the opinion of Mr. Purinton, are the causes of the success of the "steel trust"? Can you name any favoring factors that he does not mention?
2. What does Mr. Purinton have to say about the labor policy of the United States Steel Corporation? Can you find in his article any explanation of the recent steel strike? What demands of labor are not met by Judge Gary's benevolent paternalism?
3. Why did the United States Steel Corporation build a new city "from the ground up" at Gary, Indiana? Study a map, paying particular attention to the location of iron and coal mining regions, rail and water routes and the neighborhood of great commercial centers. In view of these conditions do you think that Gary was a good location for a steel manufacturing center? Give your reasons.
4. What triumphs of municipal government has Gary, Indiana, achieved? What features of Gary's civic life does your town lack?
5. Write an essay showing the importance of the steel industry in peace and war. What differences do you note in the economic life of countries such as the United States, Great Britain, Belgium and Germany which have extensive resources of iron and coal, and countries such as Italy, Russia, Argentina and Greece whose iron and coal resources are relatively small?

**II. The New Germany.**

1. What facts justify Mr. Holt's title? Name as many points as you can in which the Germany of 1920 differs from the Germany of 1913.
2. Compare Germany's present form of government with that which existed up to the revolution of 1918. Do you agree with Mr. Holt that "The world has for the present at least no reason to fear German monarchism or militarism"?
3. Along what lines do Socialism and trades unionism appear to be developing in Germany?

**III. The Department of Agriculture—One Man's Secret of Success.**

1. "This Department touches the business of the nation at more points than any other two departments combined." Justify this statement from facts in Mr. Alderman's article.
2. What has Secretary Houston accomplished to further the agricultural prosperity of the nation?

**IV. The League of Nations—Arbitration for Armenia. Argentina Withdraws. Article X.**

1. What difficulties have developed in establishing a free Armenia? In what way is President Wilson able to help the Armenians now that the Senate has refused to give the United States a "mandate" over the country?
2. What amendments to the Covenant of the League of Nations have been proposed by Argentina and by Canada? What is the method of amending the Covenant laid down in the Treaty of Versailles?
3. Has Argentina "left the League" or simply withdrawn her representatives from the Assembly (hint—Look up Article 1 of the Covenant as to conditions of the withdrawal of a Member State from the League)?
4. Show how the decision of the Assembly as to the meaning of Article X "completely confirms the interpretation of the Covenant made by President Wilson."

**V. National Problems—President Wilson's Message. Harding Speaks in the Senate. The Governors' Conference. Shall We Bar the Gate?**

1. What recommendations are made in President Wilson's message to Congress? Pick out any one of these (for instance, Philippine independence or Federal licensing for corporations engaged in interstate commerce) and prepare a brief for either affirmative or negative.
2. Has the annual conference of state Governors any constitutional standing? When was the custom first established? What advantages may arise from consultations between the executives of different states?
3. Why is there a demand at the present time that Congress raise fresh barriers against immigration? What legislation on the subject would you favor?

## I Am the Farmer By James P. McDonnell

I am the provider for all mankind.  
Upon me every human being constantly  
depends.

A world itself is builded upon my  
toil, my products, my honesty.

Because of my industry, America,  
my country, leads the world. Her prosper-  
ity is maintained by me; her great  
commerce is the work of my good  
hands; her "balance of trade" springs  
from the furrows of my farm.

My reaper brings food for today;  
my plow holds promise for tomorrow.

In war I am absolute; in peace I am  
indispensable—my country's surest de-  
fense and constant reliance.

I am the very soul of America, the  
hope of a race, the balance wheel of  
civilization.

When I prosper, men are happy;  
when I fail, all the world suffers.

I live with nature, walk in the green  
fields under the golden sunlight, out in  
the great alone where brain and brawn  
and toil supply mankind's primary  
need. And I try to do my humble part  
to carry out the great plan of God.

Even the birds are my companions;  
they greet me with a symphony at the  
new day's dawn and chum with me till  
the evening prayer is said.

If it were not for me the treasures  
of the earth would remain securely  
locked; the granaries would be useless  
frames; man himself would be doomed  
speedily to extinction or decay.

Thru me is produced the energy that  
maintains the spark of life.

I rise with the early dawn and re-  
tire when the "chores" of the world are  
done.

I am your true friend.

I am the Farmer.

From the "Star Tribune," Waverly,  
Minn.

## I Am the Editor

Let every cock crow for his own  
chicken coop. We were stirred to vindi-  
cate our own noble profession:

I am the provider of news to all  
mankind. Upon me every human being  
constantly depends for something to  
talk about.

I go forth early in the morning with  
my Hoe (press) and return late in the  
evening with my sheaves of garnered  
manuscript.

I burn the midnight kilowatt while  
my subscribers are peacefully sleeping.

I am bowed down with unending toil  
over Russian proper names. I am a  
"galley" slave. My valor and endur-  
ance are daily put to the "proof."

Even the spring poets are my com-  
panions, and they beguile my busiest  
hours with personal explanations of  
their manuscripts. My path is light-  
ened by the letters from "Constant  
Subscriber" who is breaking off a sub-  
scription of fifty years on account of  
my latest editorial.

If it were not for me America would  
be very much like Thibet, where the  
people have nothing to read but old  
Buddhist almanacs. No one would  
know that a political campaign was in  
progress if I did not point out that the  
poor old constitution stood once more  
on the brink of Bolshevism. In war I  
am accused of propaganda; in peace  
of being bought up by the capitalists.

Alas! No capitalist will condescend  
to buy me.

My dreams are disturbed by mis-  
prints; my visions of the printer giv-  
ing President Wilson of Armenia a  
mandate for America. I dread the in-  
evitable accidents which creep past the  
proofreader and brand me with "Lord-  
George" and "Samuel Yonkers." I am  
humiliated by schoolma'ams who ask  
why I split an infinitive, or use a  
preposition to end a sentence with. I  
am convicted of misquotations and sta-  
tistics with too many innocent ciphers  
on the end.

But they also serve who stand and  
get into hot water.

Business would expire without my  
advertising pages and 90,000,000 liter-  
ate Americans would also expire with-  
out my reading matter to discuss and  
cuss.

I am the Editor.

## What Are You?

Perhaps you follow a pro-  
fession almost as noble and in-  
dispensable as agriculture or  
journalism. Perhaps you would  
like to celebrate it in such in-  
spired rhetoric as Mr. McDonnell  
and ourself. If so, The Inde-  
pendent will be glad to look over  
your views on your own occupa-  
tion and award a prize, not to  
the best job (for that each of us  
has), but to the most adequate  
vindication of its worth.

# Another Whittier Poem

In the sixties and seventies The Independent had the honor of being the medium thru which John Greenleaf Whittier gave many of his best poems to the public. After his death his son-in-law and literary executor, Samuel T. Pickard, of Amesbury, Mass., used to favor us with further Whittier poems—some which he found among the poet's literary treasures and which had never been printed and others which he discovered in old magazines which had long since been forgotten by the public and not reprinted in Whittier's collected works. The last of these poems Mr. Pickard sent us just before the war. Mr. Pickard has since died. This, therefore, is probably the last poem we shall ever print from the good Quaker Poet, whose honor and fame will endure as long as the English language is spoken. Mr. Pickard's letter accompanying the poem is as follows:

This is a poem which appeared anonymously at the head of the first page of the first number of the *Boston Daily Post*, in 1831. I am confident that it was written by Whittier. He had been a frequent contributor to the *Statesman*, the weekly predecessor of the *Post*, during previous years. Nathaniel Greene and his brother Charles, who founded both weekly and daily, began their journalistic work in Haverhill, and were personal friends of the Whittiers. The first visit the young poet made to Boston was as a guest of

Nathaniel Greene, then postmaster of that city. In 1831 Whittier had become an active partisan for Henry Clay, and the Greenes as active for Jackson. It occurs to me as probable that Whittier did not give his name to this poem, because he did not wish to appear as a contributor to a Jackson paper. Indeed his name does not appear with any of the poems he had been sending to the *Statesman*, but which are recognizable by the Quaker dating and the signature "W."

SAMUEL T. PICKARD.

## Hymn to the Stars By John Greenleaf Whittier

Aye! there ye shine, and there have shone,  
In one eternal "hour of prime:"  
Each rolling, burning, alone,  
Thru boundless space and countless time.  
Aye! there ye shine, the golden dew  
That pave the realms where seraphs trod;  
There thru that echoing vault, diffuse  
The song of choral worlds to God.

Ye visible spirits! bright as erst  
Young Eden's birthnight saw ye shine  
On all her flowers and fountain first,  
Ye sparkle from the land divine;  
Yes! bright as then ye smiled to catch  
The music of a sphere so fair,  
To hold your high, immortal watch,  
And gird your God's pavilion there.

Gold frets to dust; yet there ye are;  
Time rots the diamond; there ye roll  
In primal light, as if each star  
Enshrined an everlasting soul.  
And do they not? since yon bright throngs  
One all-enlightening Spirit own,  
Praised there by pure sidereal tongues,  
Eternal, glorious, blest, and lone.

Aye! there ye roll, emblems sublime  
Of Him whose spirit o'er us moves,  
Beyond the clouds of grief and crime,  
Still shining on the world He loves.  
Nor is one scene to mortals giv'n,  
That more divides the soul and sod,  
Than yon proud heraldry of heaven,  
Yon burning blazonry of God.

Could man but see what ye have seen,  
Unfold awhile the shrouded past,  
From all that is, to what has been;  
The glance how rich, the range how vast;  
The birth of time; the rise, the fall  
Of empires; myriads, ages flown;  
Thrones, cities, tongues, arts, worships; all  
The things whose echoes are not gone.

Ye saw red Zoroaster send  
His soul into your mystic reign;  
Ye saw the adoring Sabian band,  
The living hills his mighty fane;  
Beneath his blue and beaming sky,  
He worshipped at your lofty shrine,  
And deemed he saw, with gifted eye,  
The Godhead, in his works divine.

And there ye shine, as if to mock  
The children of an earthly sire;  
The storm, the bolt, the earthquake's shock,  
The red volcano's cat'ract fire,  
Drought, famine, plague, and blood, and flame,  
All nature's ills, and life's worst woes,  
Are nought to you: ye smile the same,  
And scorn alike their dawn and close.

## Peace on Earth, Good Will to Men

A Christmas Message to the American People

By Herbert Hoover

THE test of idealism's worth in a nation or an individual is the extent to which the idealism becomes concrete in service. There has been a great deal of talk lately about a let-down of American unselfishness, a sort of hardening of our arteries so far as sentiment is concerned. I believe that this impression is due to two desires on America's part: first, to check up carefully our own after-the-war situation, keeping in reserve sufficient of our energies and resources adequately to meet those problems vital to the nation's welfare, such as the present tendency toward widespread unemployment; second, to make sure that, in undertaking our share of burdens incident upon the rehabilitation needs of the whole world, we shall assume those responsibilities which have the most just claim, and none that we cannot follow thru to solution. This necessity for survey and sane procedure has been misinterpreted in many quarters. I do not conceive that now, or at any other time, the American people will fail to rise and give of themselves generously in any cause that clearly deserves their support.

We have, in the peril of 3,500,000 helpless children in Eastern and Central Europe this winter, a specific opportunity to avert a tragedy that cannot be prevented except thru our assistance, and we have the stimulating certainty that there cannot be two sides as to the worthiness of so simple and humane an intervention. The task is, of course, a continuation of one which we undertook when the invasion of Belgium created the first of a series of misfortunes to great groups of children in the Old World. I assume that during the period of the war and down to date, at a very minimum, somewhere between 10,000,000 and 15,000,000

Mr. Hoover, Chairman of the European Relief Council, which is the new union of a number of previously existing relief organizations, presents the case of the needy children of Europe. "They are no more my children than they are yours. The task is creedless, raceless, bounded only by the supreme need. It is wholly out of key with our traditions that, depending upon us for elemental succor, these children should be left to death or worse thru our negligence"

children have been supported by American charity for longer or shorter periods. In the middle of 1919 the American Relief Administration alone was feeding more than 6,000,000 children.

The urgent need and our moral obligation to continue large operations grow less as the various European countries win to something like economic stability. In Roumania, for instance, we fed 500,000 children in the winter of 1919. Roumania had a harvest the following summer that gave it a food surplus and we withdrew entirely. This year Serbia has a great surplus of 2,000,000 tons and we have therefore withdrawn our contribution of supplies from Serbia.

The present emergency is indeed grave. The shrinkage of need during 1920 was much less than we had hoped. The invasion of Poland by the Bolsheviks stripped that country of vast supplies of grain and destroyed the growing crops in the areas most depended on for sustenance. Polish money will do some things inside Poland, but it is useless outside, at prevail-

ing rates of exchange, as a purchasing medium for the immense quantities of wheat, milk and fats that must be imported to carry the population. We fed 1,308,000 children a day in Poland at the height of last year's program and now, as winter closes down, the need is certain to leap hundreds of thousands past our December schedule of 900,000 daily feedings. In Austria, another economic impasse for the present at least, we are now feeding 300,000, and January will find the need increased. It goes without saying that we shall continue to support the American Quakers' work in Germany, on the premise, accepted by the bulk of Americans, that, in the saving of helpless children, we will make no discrimination between enemies and friends.

Available funds for American child-feeding in Europe will be exhausted in January, and the American Red Cross, Jewish Joint Distribution Committee and other organizations furnishing medical aid and clothing to children must have financial support at once or abandon children who are desperately needy. Before describing briefly the steps being taken to meet this condition, it seems to me worth while to explain how painstakingly the American Relief Administration has labored, not only to prevent pauperization, but to build up self-help in such form that there will be local organizations capable of carrying on the work when we are able to withdraw.

After the armistice I set up in some twelve or fourteen capitals in Europe, including those of the new nations created under the treaty, an organization of the principal people of each one of those centers. These associations combined all their existing charities and undertook the total child problem in each of the countries, with American direction over all the sub-committees. We require these associations, which extend down into the small villages, to find the whole of any local expenditure; that is, they furnish buildings, labor, equipment, clerical help, cash contributions where possible and all the local food supplies that are obtainable. We narrow our contributions to the locally unobtainable necessities, and for every American dollar used in child-feeding the peoples aided put up two dollars in one form or another. The most gratifying result of this system is that in those countries from which we have been able to withdraw the child welfare work has gone on uninterruptedly after our departure.

It is further worthy of note that not one penny of any American dollar contributed to the child-feeding will go for overhead. Using the same machinery and personnel thru which the child-feeding operations are conducted, the American Relief Administration instituted, with the generous coöperation of the American Bankers' Association, a system of food drafts, purchasable in this country and cashable on the other side in the form of basic food-stuffs. The small profits on these food drafts meet all child-feeding overhead that the Administration pays, enabling every contributed dollar to go in full for the purchase of food. Any further balances of profit are allocated to the child-feeding funds in the countries where the balances accrue.

We face, to sum up, a situation in which America is supplying a vitally necessary part of the sustenance and medical care of about

*Underwood & Underwood*

The squalid and hopeless destitution of this mother and baby in their dark Vienna tenement can be reached only by such organizations as the American Relief Council, that has behind it American minds and dollars and supplies

3,500,000 waifs, under-nourished and orphan children.

More than 17,000 hospitals, clinics, orphanages and feeding-stations depend on our support, and the children will have to be turned into the streets unless the American public responds with the needed funds. By next harvest the problem should dwindle until our obligation is small. In the meantime \$33,000,000 is required, \$23,000,000 for feeding and \$10,000,000 for medical service.

In order to coöperate both the raising of this money and its expenditure, to the end that there shall be no wastage and no overlapping, the European Relief Council has been formed, comprizing the American Relief Administration, the American Red Cross, the American Friends Service Committee, the Jewish Joint Distribution Committee, the Federal Council of the Churches of Christ in America, the Knights of Columbus, the Young Men's Christian Association, and the Young Women's Christian Association. I was chosen chairman of the Council; Franklin K. Lane is its treasurer; and the Council's address is 42 Broadway, New York.

The view of this Council is that, until this children's relief is financed, until it can come thru the next year, all American charity save our home necessities should go to that end. It should have complete priority and is the thing that ought to be concentrated on from the American point of view. I have not the slightest hesitancy in bringing this situation before the American people. They are no more my children, as I said in a recent article on the same subject, than they are yours. The task is creedless, raceless, bounded only by the supreme need. It is wholly out of key with our traditions that, depending upon us for elemental succor, these children should be left to death or worse thru our negligence. I can think of no more wisely and humanely American thing for any man to do than to sit down and mail Mr. Lane his check for the largest amount possible.

One of the 3,500,000 helpless and needy children in Eastern and Central Europe this winter, whose peril is America's clear opportunity

# Where Do You Come In?

## Some Straight Talk to Business Men

By Chester T. Crowell

**T**HE purpose of this article, Mr. Business Man, is to spark up your thinking machine. I am not going to be so complimentary as to tell you that I disagree with what you think; I suspect that you are not thinking at all. Your conclusions will probably be something near the truth after you have done your thinking, but as I said, I have a suspicion that you are not thinking.

Some Bolsheviki and Socialists and reformers and self-styled idealists and alleged humanitarians and some dyspeptics who mistake their ailment for patriotism have been yelling at you. They have made you angry and you are yelling back at them. Let us retire from the Arena of Yell for a few minutes and talk this situation over among ourselves.

We will begin with the points upon which we can agree. We are convinced that no good will come of the abolition of private property.

We observe that no matter what label the particular trouble-maker uses, he always makes an assault upon private property.

We have examined more or less casually the remedies our loud-mouthed friends have to offer for present ills and we can see plainly that they are not remedies at all.

Now let us go a step further and say just what they are; we know they are not remedies. Then what are they? They are the hysterical protests of men displeased with the present system.

Did the malcontents found the present system? We know very well that they did not. Do they maintain it? We strongly suspect that they do not. Who then does maintain it? The men who operate it.

The loud-mouthed complainers do not operate this system. They are operated by the system. We do not hesitate to tell them so. And they say the same thing. But the purpose of any system is to bring order, efficiency and contentment. Is it not? If our system is not doing so then there must be something wrong either with the system or the way we operate it.

I think we are agreed that the system is all right. We believe in our form of government and we believe in private property. If the system is all right then there must be something wrong with the operation of it. That means that there must be something wrong with us, because we operate it. They don't.

These premises being true, wouldn't it be much better for us to close the door and do some constructive thinking instead of engaging in a yelling contest with the malcontents?

Since I have the floor I will speak first. I don't care whether you agree with me or not, if only you will proceed to think. I have unlimited faith in your thinking machinery, provided you use it.

You will probably recall that there was recently a war. As a result of that war, nearly every article of prime necessity became scarce. When the supply of such articles is not equal to the demand speculation

Harding in Brooklyn Daily Eagle

Beware of the dog!

enters. For several years men whose businesses were distribution have found themselves transformed into gamblers and speculators against their will. That is to say, it should have been against their will. It was not against the will of all of them; quite a number of them liked it. There has been profiteering.

I do not say that you are or were a profiteer, but you will admit that there has been profiteering in this country.

Now, let us get at the root of this hatred of the profiteer. Is it not true that we hate him because he is in business solely to make a profit? And that he wants the

largest profit possible regardless of the life and rights of any other human? Surely it cannot be true that a man is hated solely because he makes a profit. We hate the profiteer because he is a pervert, he is a degenerate, he desecrates the temple of business. But, unfortunately, when the plague spot of profiteering appears upon the body economic, men suspect that every atom of the tissue is infected.

That is the position in which you find yourself today. If you have been a profiteer, you have been tearing down our system. If you have not been a profiteer you are the victim of men who have been tearing down the system upon which your hope of stability rests.

Two tasks confront you. One is to root out profiteering to the best of your ability. It is not an easy task. Laws will probably help you very little. Some of them actually hinder. About the most valuable contribution you can make to a campaign against profiteering is not to profiteer. Next, do as little business as possible with profiteers. Your other task is to convince those who live under our system, but who do not operate it, that the majority of business men are still ethical. And what do I mean by ethical? I mean this: the ethical business man believes life is work and work is life—he believes the making of a pair of shoes is a prayer—he believes men build bridges because they like to build bridges, and that they take a profit because if they didn't, economic laws would intervene and rob them of the pleasure of building bridges. This philosophy may sound idealistic, but it is back of every successful business, large or small. You cannot hope that the man who drives a wagon for you will understand this very clearly. If he could understand this as clearly as you do, he would be operating a business of his own. In other words, he would have mastered the system under which we live and he would be operating it instead of being operated by it. You cannot convince this man who drives the wagon that you have any such philosophy as I have outlined, by yelling at him. But you can convince him by facts. Those facts must be visible facts. Facts which you state will not convince him of anything.

Let me call to your attention a few of your shortcomings that have had considerable effect in establishing the bad opinion of you now entertained by the man who drives your wagon. You doubtless know that worth-

less stock has been sold in this country to the tune of millions of dollars. You know that blue sky laws have been passed and that most of them have accomplished very little good. In fact quite a number of them have harassed honest men more than the rascals. But what have you, as a business man, done to discourage the sale of worthless stock? If you are an officer or an owner of a stock company you were damaged by every sale of worthless stock. Real business has been damaged more than foolish investors. You have been damaged also by every man who mismanaged a stock company.

Doubtless you realize that the form of business organization known as corporation is one of the cleverest contrivances the human mind has produced. Without it, business cannot be transacted on the present day American scale. But like everything else it is subject to abuse. I am asking you what you have done to protect it. After all, a corporation is simply a form of expressing faith. Is it not? An aggregation of individuals who have faith in each other and faith in the men they employ, use the corporation form of organization. When faith is diminished this great system with its vast capacity for serving mankind is injured.

I wonder if it has occurred to you that private property is a public trust. Private property is simply the possession of a job. That is why private property should be protected; because it is a public trust. The only difference between you, the owner, and your employee, is that you own your job and he does not. But if you abuse the job which you own you are just as likely to lose it, as tho you abused the job you do not own. And every man who abuses a job like yours is blasting the foundations under your job; he tears down what you build.

Kings and Czars and Emperors used to be considered very necessary and valuable employees. They were so necessary and so valuable that they were permitted to enjoy quite a number of privileges. When they strutted around and pinned decorations on themselves and stuck feather dusters in their hats their bosses were inclined to agree that their egotism was justified.

But, after a while, these employees began to think that the wearing of feather dusters was more important than attending to the business of their bosses. They got the mistaken notion that empires existed for the pleasure of emperors. They lost track of the fact that emperors existed to work for empires. And they lost their jobs. They are a pitiful crew now. Some of them have been hungry during the last twelve months. And none are so pitiful as those who are still wearing the feather dusters.

When the emperor business was in its infancy, a first class journeyman emperor

who knew his business and had some executive ability used to select his lieutenants because they were good workmen. After the emperors ceased to serve, they began to select lieutenants who danced well or who wore feather dusters at a particularly jaunty angle. The same immutable law, which wished upon the unfortunate emperor these grafting sycophants, brings disloyalty into the plant operated for profit only. Unfortunately the germ doesn't confine its activities to profiteering establishments. It spreads.

A business man in these days of theories rampant would do well to arm himself with some philosophy. Permit me to offer you a well established and tested theory: Men will work long and hard and live on a crust of bread in order to pay tribute to "the god of a job well done." They have always been that way.

If I had a shoe factory today I would put over it an electric sign with letters ten feet high: "Here we serve humanity by making shoes." Then if I had to "fire" anyone, he would be disgraced. He would be disgraced because he did not belong to the goodly company of those who serve humanity by making shoes. But if I were making shoes for profit only and "fired" some one, it would be a reasonable assumption on his part that I

was not satisfied with the amount of profit I collected off his labor. He would go out of the place angry and resentful; he might set fire to it or put a bomb under it. No matter what I paid him, he would still be convinced that it was much less than I could afford to pay.

That is the trouble today. The men who do not operate the system, but are operated by it have lost faith in the men who operate it. And so my advice to you is to restore that faith.

You cannot do that by talking or writing. You have got to do that by delivering the goods. A lot of you are doing it now. If you were not the country would be in a revolution before the close of this year. So let us withdraw from the yelling contest.

To the extent that there may be some grain of truth in what the malcontent says, he is going to injure you. When you have brought that element of truth down to a minimum you make a monkey out of him without saying anything.

Our form of government and our system are going to survive. You know that. But they are not going to survive because anyone's mouth is shut by violence. These poor, unfortunate malcontents have no substitute to offer anyway. You are in no real danger of seeing a new system imposed. They have no system. They are furious. They are simply yelling. While they lack the cleverness to build, however, they do not [Continued on page 443]

# The Americans in Belgium

## The First Complete Story of Our Combat Operations

By Captain Joseph Mills Hanson

Where the 37th and 91st United States Divisions fought in Belgium in November, 1918

WE have followed our soldiers thru all of their greatest operations excepting the one in which two of our divisions shared in the Allied victories at the northern end of the far-flung line and aided materially in loosing the grip of the Germans from heroic Belgium. In taking their places in this area, these divisions completed the record of American troops for participation in the struggle on every portion of the Western front. It was but fitting that before the tale should be completely told some Americans should fight in close coöperation with the steadfast sons of Belgium.

It was in response to a request from Marshal Foch that in the middle of October the 37th and 91st United States Divisions, after having participated in the first phase of the Meuse-Argonne battle, were sent to reinforce the 6th French Army under General Degoutte, which had been added to the Army Group of the King of the Belgians for the forward drive in Flanders. The troops of the Belgian army, aided by French and British forces, had made their initial attack on September 28, from the coast of the English Channel at Nieuport to a point south of Ypres. Thenceforward in heavy fighting against General Sixt von Arnim's 4th German Army they had steadily gained ground until they had compelled the Germans, on October 17, to evacuate Lille, and likewise to give up Ostend and all their submarine and aircraft bases on the coast and to move back their right flank along the frontier of Holland. Progress since that date had been somewhat slower and American coöperation was asked to aid in pushing the center ahead toward Brussels by clearing the enemy from the watershed between the Lys and the Scheldt and forcing the passage of the latter stream.

The two American divisions entered the battle line on October 29 by relieving two French divisions along the grade of the Ghent-Lille railroad, just east of the Lys River, which stream had been conquered by the

Allied troops. The Ohio National Guardsmen of the 37th Division under General C. S. Farnsworth were assigned to General Penet's 30th French Corps and took over a portion of the front called the Cruyshautem sector. General William H. Johnston's 91st Division of National Army troops from the Northwestern states, accompanied by the 53rd Field Artillery Brigade of the 28th Division, was placed in the 7th French Corps and occupied a sector further south, with a French division between it and the 37th. From left to right in this region when the Americans came on the line lay the Belgian Army, closely approaching Ghent with its flank on the Dutch frontier, then General Degoutte's 6th French Army with its 34th Corps on the left, the 30th in the center and the 7th on the right, and then the 2nd British Army of General Plumer, still further to the south. The divisional order of battle in the 30th and 7th Corps was: the 12th French Division on the left, then the 37th U. S., 128th French, 91st U. S. and 41st French.

The resumption of the general offensive by the armies of King Albert was scheduled for 5:30 o'clock on the morning of October 31. Meantime thru the preceding day the Americans lay in their fox holes, awaiting the zero hour. The coming battle was to be fought out over a countryside very different from the one in which the men from Ohio and the Northwest had advanced from Avocourt and the Bois de Cheppy thru Ivoir and Epinonville. In place of the woodlands, the scattered, stone-built villages and the sterile hills of the Meuse-Argonne country, here in Belgian Flanders they were in a land generally open and thickly dotted with villages of cozy, low brick houses, where the infrequent hills sloped gradually to crests crowned by broad-winged windmills.

In the sectors of the 37th and 91st American Divisions, the Scheldt River, the general objective of the attack of the Allied armies in Belgium, was about fourteen kilometers distant, in a southeasterly direction. To reach it General Farnsworth's men would have to mount the long slope of Cruyshautem Ridge to its top, conquer the village of the same name in a narrow valley just over the crest and then push on down the open reaches of farming country beyond to the banks of the Scheldt between the villages of Heurne and Eyne. General Johnston's division had a more southerly portion of the same ridge to cross, but before reaching the crest it had to conquer a detached hill covered with woods called the Spitaals [Continued on page 443]

This is the last of a series of ten articles in which Captain Hanson has told the complete story of what the American troops did on the battle line in France—a series written from a thoro study of the official records and with the background of actual experience overseas. "Up the Line from Cantigny" was published in The Independent of March 27, "Those Desperate Days at Chateau-Thierry" in the April 24 number, "Zero Hour Along the Marne" May 29, "One Day's Work at St. Mihiel" June 19-26, "Covered with Mud and Glory" July 24-31, "Getting on to Berlin" August 28, "Our Greatest Victory" September 25, "The Battle of Blanc Mont" October 30, and "Breaking the Hindenburg Line" November 27

# Confessions of a Movie Educator

"In the course of a month or more" says the Scenario Chief who wrote these confessions of gathering golden berries from the Tree of Knowledge, "I dramatized cheese, soap, ball bearings, frying fat, axle grease, chewing gum, coffee, insurance, rubber tires, tenpenny nails, automobile springs, self-playing pianos, pickled olives, phonographs, artificial pearls, rum barrels, automatic conveyors, premium merchandise, fertilizer, terra cotta and Portland cement"

**W**HEN the Educational Department of our film manufacturing concern was organized, a star salesman was appointed as general manager and a stage-and-film expert as chief of production. The former had successfully sold everything from blouses to couch beds, and the latter had been a highly popular knockabout actor in his time. These qualifications were not deemed handicaps in the educational race, indeed the persuasive and entertaining pair had themselves sold the departmental idea to the movie president who was now thoroly convinced of there being "millions in it." As the most scholarly person of the entourage I was appointed Chief of Scenarios and now beheld myself a full-fledged popular educator!

Of course the movie president didn't expect to pluck immediately one million golden berries from the Tree of Knowledge. The scheme was far subtler than that. It was to manufacture and distribute at a profit industrial, *i. e.*, business and advertising films, which later could be used as educational. A film miscellany nicknamed a magazine presented the weekly table d'hôte of the company's short subjects to the theaters, and it was also planned to distribute this and the company's standard fiction photoplays to the schools, eked out with the pedagogically reëdited business films.

The only faults of the scheme were (1) industrial and technical films may or may not be useful to the schools, and (2) they're not wanted by the theaters at all. Otherwise the scheme was "strictly O. K.," as the Boss said. The weekly release, as I have said, was a fifteen-minute film miscellany devoted to art, science, world's progress, adventure and humor. The general manager was a liberal buyer. He paid a fancy price for "The Confessions of Mrs. Scheherezade" and "Smart Sayings by Saucy People." Both were collections of slangy cynicisms, mostly jokes about unhappy marriage, from the denizens of the Gay White Way.

Ye gods of education! The epigrams arrived in batches of a thousand or so at a whack, and it was my duty to sort out the 'sure-fire laughs' from the tremendous stack and condense them into screen titles or sentences. The rest of this time I spent in getting up tabloids of travel out of old film. Carefully eliminating the geography, I pointed up the thrill, the laugh or the sentiment to tickle the midriff of hoi polloi. With the further aid of a barefoot-dancer subject, a pseudo-scientific subject,

Wall paper

and a cartoon animating the outrageous kiddies of the Sunday comic sections, we burst upon a dazed public with our first number. I believe that we at one time attained a circulation of something like five hundred theaters.

Our real business, now quickly developing, was, however, to meet national advertisers and induce them to buy production contracts. The salesmen—we had ten of them—first presented the general plea. Then, studying the printed matter of the industrial concern, I prepared a synopsis of the proposed picture. If this was liked and approved, I surveyed the factory, office or plant and

wrote the "continuity scenario." Somewhere down the line of the proceedings the client's signature was secured along the dotted line, else the salesmen's labors and mine were wasted and we moved to pastures new.

My educational progress was now certainly most amazing. I called on all sorts of firms and gave them pictorial pointers, generally learning much more than I gave. In the course of a month or more I dramatized cheese, soap, ball bearings, frying fat, axle grease, chewing gum, coffee, insurance, rubber tires, tenpenny nails, automobile springs, self-playing pianos, pickled olives, phonographs, artificial pearls, rum barrels, automatic conveyors, premium merchandise, fertilizer, terra cotta and Portland cement. Never in my life—not even during college crams—have I acquired so much knowledge within so brief a period. It's all forgotten now, but it's all back within the subliminal self—yes, I sometimes dream it in my sleep! Where my education stopped, the education of the director and the cameraman began. They trod the paths I had trod before, learned the jargon of salesmanship and the meaning of many technical terms, and "shot" scenes in big industrial plants where applied technology and not stagecraft was the thing.

Meantime our tiny Visual Instruction Division of the organization was almost a still-born infant. Vainly did our general manager try to oxygenate it or bottle-feed it. It was always gasping for breath or crying for educational. In default of some fairy Rockefeller to finance real film textbooks, we worried along renting "features" and "magazines" to the schools and expecting to impart plenty of facts to them later in our automobile, rubber tire and domestic science industrials. We had far better luck with churches. Several of the denominations became our clients, and one of them actually moved over its publicity staff and camped out with us. The church folk were friendly, very amiable and quite willing to learn. If too often they began by filming some high ceremonial that wouldn't register on

Tires

the screen, they usually wound up by writing and supervising the production of human and interesting stories.

The office was now all agog with the preparations for issuing the industrial motion pictures. The production chief was like a conjurer in his art of keeping men and objects flying. The night stands and the two-a-day vaudeville had given him a fast pace, which studio training had redoubled. He was in his glory now—ordering directors here, cameramen there, buying free lance negative, bossing cutter girls and printers, getting artists to illustrate and editors to title the successive pictures as they arrived from Akron or the Yellowstone, from some big New York factory or from a great automobile plant 'way out West. Extremes met, the fool became the monarch and the clown the savant, when the artists of our coarse comics tackled the scientific subjects. The very chap who'd been drawing jam-eating kiddies or jazzing dancers or impossibly somersaulting dogs would turn aside to make and pile up heaps of celluloid accurately picturing the transmission gear of a motor car or the processing of materials inside a mill.

There was enough talent in that organization to have built a film Encyclopedia Britannica; to have picturized the school syllabi of all the states; to have made a complete workable course in general technology. They possessed both breadth of vision and accuracy, and it was certainly an ironic fate that condemned them in the very midst of an "Educational Department" (God save the mark!) to draw dog-and-cat futilities and picture screen advertisements of doubtful value.

Our first industrial release was "At Home with the Tire Makers." Our second was a technical automobile story, and our third a scenic showing the triumph of the same motor car over rough roads. Each of these was released in short form thru the film miscellany or magazine. Longer editions were prepared for the use of the manufacturer-clients and ultimately it was hoped for the schools.

The first industrial didn't create much commotion, but we heard a-plenty from the second and the third. Please remember they were being circulated in motion picture theaters along with the travel and adventure stuff and the "Sunday supplement" cartoons that formed the burden of our miscellany. About four weeks from the first release date the general sales manager of the company came tearing into the departmental manager's office and waving aloft a Western Union telegram cried: "Will you look at this!" The Educational manager read:

Exhibitors' Association Pittsburgh District voted to exclude \_\_\_\_\_ Magazine from all their theaters. Advertising in release must be stopped, otherwise feature pictures as well as Magazine will suffer.

(Signed): \_\_\_\_\_  
Manager Pittsburgh Branch Exchange.

"'Twas that confounded ad film did it; I wish all our short subjects could be dumped!" ejaculated the sales manager bitterly. "Say," he added, eyeing my superior none too amiably, "I sometimes think we'd make more money if your whole Educational Department were fired!"

It was indeed a crisis. The great movie corporation could not afford to endanger its millions upon millions in feature rentals by continuing to handle a boycotted short subject, one boycotted furthermore because of advertising masked as entertainment. On the other hand, the Department's side was not to be ignored. The "education" of manufacturers was proceeding rapidly and they were paying as high as \$15 per film foot—\$15,000 per reel—for the privilege of telling their business stories via the screen. One of the contracts was in six figures, others were being signed up quickly. Were these lucrative contracts to be canceled and a valuable new business relinquished because some of the advertising was too bald?

The production manager thought he saw a workable compromise by cutting out direct advertising and putting over the business stories as apologue or fiction. And we tried that. We invented heroes and heroines, made studio scenes, drew characters, devised thrillers, and raised and smoothed away all kinds of obstacles in the path of true love to Portland cement homes, ideal frying fats, imitation pearls and preserved pickles. It was not at all pleasant, I can assure you. If an industrial is worth anything, it is worth telling on its own merits. I don't think any of the films of that unhappy period will survive.

The ultimate debacle came a few weeks later thru the continuance of the automobile scenics. They were really not very "raw." In the picture-series a certain make of car went everywhere and did everything, touring Bad Lands, climbing Rockies, exploring the Yellowstone, with the leader of the party a certain film comedian to whom all sorts of funny trouble happened except of course the breakdown of the Impeccable Car.

What the exhibitors took a dislike to was not the fairly possible story, but the name of the car and of the manufacturer hugely placarded on garages and service stations en route. It seems that this automobile manufacturer had previously had some films of his own and had unsuccessfully tried to introduce them in Central West theatres. When therefore exhibitors saw his car brand and his placards traipsing thru the Magazine and literally obtaining footage on their jealously guarded screens, they rose in their wrath and the Middle West added its voice to that of Pittsburgh in noisy official boycott. They [Continued on page 447]

# The Christmas Gift the World Needs

By Charles Edward Jefferson, D.D.,

Pastor of Broadway Tabernacle, New York

CHRISTMAS is one of the things which are inexorable. It arrives in the month of December inevitably. It comes on the twenty-fifth of that month punctually. Not all the king's horses nor all the king's men can dislodge it from its place in the procession of the days. It is impossible to postpone it. There are years when we are not ready for it, but it comes nevertheless. Failures and disappointments and worries may have thrown us into a dishevelled and dismal mood, but no matter what our mood, Christmas knocks at the door and comes in. There is no escape from the clutches of the calendar. We may have fallen among circumstances which like robbers have left us bleeding and half dead, but Christmas, like a good Samaritan, picks us up and does its best to send us along our way rejoicing.

Surely the world just now is in sore need of Christmas. The human race is in a surly and disgruntled mood. All the spirits of the underworld are working overtime. The human heart in every land is torn and feverish. The great war has left us a legacy which many of us had not counted on. War quickens and feeds all the demons of the heart, and these do not suddenly languish when the guns have fallen silent. The passions which war unchains do not go back swiftly to their cells. War is an arch demoralizer. It upsets everything. It brings down standards which the toil of generations had established, it dims ideals to eyes which had been trained to follow them. All the rapacities and greeds, the dishonesties and cruelties of the heart find liberty in times of war, and when peace comes they go right on working their depredations. When was civilization ever more plagued than now? When was society ever more chaotic and hysterical? The wounds are deep and the world is faint from loss of blood. In its weakness vices, which are easily thrown off in days of health, fasten on it with tenacious grip. Selfishness has attained a new robustness by what it fed on thru the war, and everywhere there is suspicion, and greed, and discontent, and a disposition to fight.

Into a world which has become unusually bitter and wrathful, there now comes like a messenger from heaven this festival of Christmas, with its carols and laughter, its memories of light and its spirit of good will. Christmas is a kind, charitable time. It speaks to the angels of our better nature. It is the anniversary of the birthday of a baby, and who can be surly and mean in the presence of a baby? This baby grew to be a man who thru nineteen hundred years has been known as the "Prince of Peace." His heart was gentle and his spirit was sweet. He nourished no prejudices, and he gave room to no dark passions. His sympathies were broad and his ideals were high. Suspicion and malice, envy and fear found no place in his heart. Race hatred was odious to him and religious bigotry was abhorrent. He was free from class consciousness and he claimed all men as his brothers. His spirit of brotherly kindness began at once to influence those who were nearest to him, and after his death they banded themselves together to spread his spirit over their own nation and then over the entire world. Wherever the spirit of Jesus becomes established, anger and clamor and railing are put away, and men become kind one to another, tender-hearted, and ready to forgive.

This is the spirit which the world now conspicuously lacks, and it is the spirit which the world must possess if civilization is to escape unimaginable disaster. All thoughtful men are coming to see more and more clearly that without the spirit of Jesus society is doomed. Man has harnessed forces and created machinery which, unless con-

trolled by the mind of Jesus Christ, will work his undoing. It is not merely members of the Christian Church who are saying this; it is being said by Jews and Agnostics, and by many representatives of non-Christian religions. Statesmen and business men, publicists and diplomats, now see that there is no way out of our present distresses but by a fresh baptism of the spirit of good will. The world needs to breathe in the soul of Christmas.

It is easy to catalog the things which the crowd would like to have. Multitudes clamor for cheaper rents and groceries, many long for lower taxes, others set high hopes on a league of nations, and still others dream of some social or economic reorganization of the world, but there is a need which lies deeper than any of our conscious wants, and that is the need of more brotherliness in the hearts of the people. The whole world needs just this, and without this we must perish.

There are many who are despondent. There are some who are without hope. They sit in the seat of the scornful, and they refuse to be comforted even amidst the festivities of Christmas. They persist in staring at what they call the facts. All the facts which they see are dark. There is no light anywhere. Conditions in America are bad—in the Old World they are worse. "Let us not delude ourselves. Let us feed ourselves on no foolish dreams. Let us face the facts!" This is the burden of their story. By all means let us face the facts. Let us hide our eyes from nothing. But let us be sure that we face all the facts. Let us be careful not to drop out of sight the most important fact of all, the fact that at the center of the universe there beats a heart which is wonderfully kind. This is the fact to which Christmas calls our attention. It is easy to overlook it, but we cannot ignore it without immeasurable loss. The universe is founded on good will. The earth is wrapped in the meshes of the law of brotherly kindness. The mightiest of all known forces is love. If the Creator of the universe has a heart which is gentle and loving, then the future of mankind is secure. If we are held in the hands of a God of good-will, those hands will never let us drop. Some time, somehow, our ugly passions will all be conquered, and all men will find their supreme delight in doing their Maker's will.

Christmas is a day of giving. What shall I give? is a question which springs spontaneously to every tongue. Many express the answer in terms of matter. They think of things which can be bought in the store. But those who discern the spiritual significance of the day, see that it is not things which the world is most in need of but life, not toys but disposition, not confectionery but temper, not diamonds but a sympathetic spirit. He then most truly celebrates Christmas who casts out of his own soul all racial prejudices, and national antipathies, and class hatreds, and religious animosities, and social resentments, and gives to society the grace and power of a loving heart.

## The Test of Citizenship

A GOOD citizen may, indeed ought to, criticize and seek to change the laws he does not happen to like. But he will obey them. Anyone who for the "sake of the joke," or to gratify his appetite, or to vindicate his "personal liberty" violates the eighteenth amendment and the Volstead Act is in the same class as the man who smuggles goods past the customs because he disbelieves in tariffs or "expropriates" somebody else's diamonds because he dis-

believes in private property. A prohibition law is neither more nor less a restraint on natural liberty than a tariff or a legally established right to ownership. All three derive their authority not from any divine commandment or principle of pure reason, but from the common agreement of all citizens in a democracy to submit to the laws made by their constitutionally chosen representatives. A good citizen is a man who "plays square with the gang"; a good sport, in short.

### To New Yorkers

GOVERNOR-elect Miller has started off well by disproving any further attempt to expel lawfully elected Socialists from the Legislature. In this he is a worthy successor to Governor Smith who refused to sanction the anti-Socialist laws. The Empire State should be proud of her two liberty-loving chieftains.

## The Anti-Semite Scare

By Edwin E. Slosson

AMONG the evil influences that come from Europe to America since the war is the anti-Semitic movement, which has for many years caused trouble in France, Germany, Russia, Rumania and other countries, but from which the United States and Great Britain have hitherto been free. Such prejudice as the Hebrews in America have had to endure is due to social snobbishness, business rivalry and personal antipathies. There has been no concerted political and literary anti-Jewish agitation, no deliberate attempt to inflame the mob-mind as in continental Europe. The Jews have not been worse treated than other immigrants. If one will turn to the caricatures of our esteemed constituent, *Harper's Weekly*, he will find that the Irish on their arrival by wholesale in this country had to suffer much more from the contempt and hostility of the earlier immigrants than the Jews have met in spite of their more rapid influx and the strangeness of their language and customs. There was indeed good reason to hope that we were gradually outgrowing the xenophobia to which all human beings are congenitally subject.

But now it seems that the Anglo-Saxon race is not immune to the virus of anti-Semitism. In England, G. K. Chesterton and Hilaire Belloc, an Anglican Catholic and a Roman Catholic—forming together what Shaw calls "the Chesterbelloc"—have turned their pointed pens against the Jews and in the United States Henry Ford has taken up the idea as his latest hobby. The London *Morning Post* is matched in virulence by the *Dearborn Independent*, which, much to our annoyance, is sometimes quoted without the first word of its title. American publishers have been found for two of the most pernicious of the anti-Semitic volumes, "The Protocols of the Wise Men of Zion" and "The Cause of World Unrest."

Both are anonymous. The former was first brought out in 1905 by a Russian fanatic named Nilus, who wrote on the coming of Anti-Christ. It purports to be the plan for the subversion of Christian civilization and the overthrow of all governments to secure the supremacy of the Jewish race over the world. The American Jewish Committee, 31 Union Square West, New York, has issued a denial of the existence of any such organization as the Wise Men or Elders of Zion and refutation of the arguments based on it.

Even the editor of the London *Morning Post*, who brings out the second book, does not deny that it may be a forgery. Nilus said that the manuscript was given to him by a friend who said he got it from a mysterious lady, but nobody knows whether Nilus is alive or dead. But the unknown author of "The Cause of the World Unrest" tacitly assumes the genuineness of the "Protocols" and so lays to the secret council of the "Elders of Zion" everything in the

world that he dreads or dislikes. As an Englishman he unconsciously presupposes that Great Britain is the leader and sole support of modern civilization, so any anti-British movement in any part of the world must be instigated by the Jews. He admits that the Irish republican movement, the Indian nationalist movement, and the British labor movement are not known to be under Jewish leadership, but this is, to his mind, additional proof that they really are due to the machinations of this secret Hebrew council. This gives him a wide net and he hauls in horrors enough to raise the hair of any reader who has hair to raise. Gandhi and other Hindu agitators have been considered disciples of Vishnu rather than of Moses, but since they are anti-Christian they must be pro-Jew.

The Jews are held responsible not only for all national movements but for all international movements. Therefore, Wilson with his League of Nations and Lenin with his Third International are really working hand in hand, altho in public they profess little liking for one another. Of course both the American and the Russian, altho they appear to be men with wills of their own, are mere puppets pulled by Jewish wires. "Between the Fourteen Points and the Kremlin manifestoes there is little to choose," and the author adds that "'making the world safe for democracy' and 'the dictatorship of the proletariat' sound equally sweet in a rebel's ear." The principle of self-determination and the scheme for a League of Nations were, it seems, both hatched in the hidden Hebrew conclaves. It had hitherto been supposed by historians that George Washington believed in national self-determination and William Penn had a league of nations hobby. But possibly they were crypto-Jews and we may be told next that the Father of his Country was named Cohen and that the Quaker statesman was Goldfeder in disguise.

AMONG the agencies which are mentioned as carrying out the Jewish plot to destroy civilization by putting a stop to war are the League to Enforce Peace and the League of Free Nations Association. Now my colleague on The Independent staff, Hamilton Holt, was one of the three men who met to start the League to Enforce Peace and I happened to sit in with the group who first formed the League of Free Nations Association and we have attended the councils of these organizations very faithfully ever since. No Jews were in at the birth of these bodies. Neither Mr. Holt nor I read Hebrew, so if we have been acting under orders from the Elders of Zion they must have been transmitted by subconscious telepathy. And if Jewish capitalists have been any more ready to contribute to the funds of these associations than Gentile capitalists they have successfully concealed their desires from the finance committees. The whole volume is filled with this sort of absurd insinuations.

The author of this scare story makes the most of the Masons. It is thru this and similar secret societies that the Jews fomented the French and Russian revolutions and now scheme to overthrow all other governments and to annihilate Christianity. Some objections naturally arise in one's mind; for instance, that Jews were formerly excluded from British and German Masonic lodges; that one important branch of Freemasonry, the Knights Templars, is the outgrowth of a militant Christian organization, not particularly pleasant to the Jews; that the medieval Masons were cathedral builders; that the Rosicrucians were by name men of the Red Cross; that Jews were not conspicuous in the French revolution and Freemasons were not conspicuous in the Russian. But Nilus says that his Protocol was "signed by representatives of Zion of the thirty-third degree," so that settles it.

The author has with his uncanny insight discovered that Freemasons have some symbols and phrases in their ritual that indicate Hebraic origin. I got ahead of him in that

discovery. In fact when I was a boy a Masonic friend in a moment of unguarded confidence imparted the information that the Freemasons built Solomon's temple. I forbear to mention his name lest he should have his tongue pulled out by the roots. I did not believe him then and I do not now, but I add this to the similar evidence contained in this volume. If the author keeps on with his sleuth work he may discover evidences of Hebraic origin in Christianity and that would cause a scandal!

I have not yet heard that Pope Benedict is a Hebrew and a thirty-third degree Mason, but I expect to any day. I have, however, been seriously assured by a traveler recently returned from Switzerland that "all Europe knows" that the Vatican, the Soviet and the Sinn Fein are allied and that the Pope, Lenin and De Valera are working together to overthrow British Protestantism and Russian Orthodoxy. Now if, as the *Morning Post* holds, the Jews and Freemasons control at least two out of these three organizations, this is indeed a "formidable sect."

Who can prove that such a conspiracy does not exist? No one. A secret can never be disproved. Once get a conspiracy complex on the brain and not even a psychoanalyst can dislodge it. The perverted imagination will find additional evidence of its delusion in every newspaper. The fanatical Protestant believes that every Catholic church has an armory in its basement and that it is the intent of the papists to substitute the auto da fé for the automobile. The fanatical Catholic believes every Protestant is at heart an atheist and sees in every modern movement the disintegrating and demoralizing influence of the arch-fiend Luther on the family and the state. The anti-Mason is sure that the lodges are up to some nefarious business else why should they be secret? In every reform movement the capitalist sees red and the Socialist suspects the crafty hand of the multi-millionaire. Some say "the Mongol waits" to wipe out all of us white folks; others see a negro in every woodpile. A few years ago we were scared of the Germans; now the Bolsheviki are our bugaboo. If the landlord who takes away a large part of our money and the Communist who threatens to take away all of it both happen to be Jews, then we are ready to give ear to the insinuation that the two are joint conspirators against us in spite of their ostensible disagreement.

The conspiracy phobia is one of the worst forms of crowd-madness, easy to start, hard to eradicate and leading to persecution and pogroms, riot and revolution. Let us not encourage it.

## England and Ireland

By Hamilton Holt

**I**T is inconceivable that England will give Ireland her independence. Self-preservation, the first law of life, prevents.

England, to be sure, had to permit her American colonies to set up their own separate government. She would doubtless permit her overseas dominions to do the same today if they wished. But Ireland is, and has been, an integral part of the United Kingdom. To expect England to let Ireland secede, set up a new government, make treaties with her enemies, and become a possible base of operations against her in time of war, is to expect the impossible. England will fight to the last man to prevent this, as the North fought in 1861-4 to prevent the South from seceding.

England, however, has given Ireland just cause for rebellion. She has temporized and temporized and temporized. Her policy of never settling a thing right, once and for all, but always compromising, has got her into her present predicament.

Ireland has appealed to force. Force can only be met by force. England has retaliated. But England cannot solve

the Irish question by force and everybody knows it. There are too many civilized people in England to countenance the extermination of the Irish people. Ireland has only to continue fighting and sooner or later she will get justice.

What is justice to Ireland? It seems all very simple to us in America. In all affairs that concern the Empire let Ireland be given a voice in proportion to her population. In all affairs which concern Ireland alone let her have complete home rule. But that is not enough. Let the four provinces and eighteen counties within Ireland be given complete autonomy within their respective boundaries. Ulster should be given the same freedom by Ireland that Ireland asks for herself from England. And so on down to the smallest political subdivision.

Does this mean a revolution in the government of Great Britain? It does. But it is the only just solution of the Irish question. It is, moreover, the only solution that Great Britain would be justified in imposing on Ireland whether the Irish approve or not. England can justly use force against Ireland to compel her to accept justice. Ireland can justly use force against England until justice is granted. Let us have justice.

## Overdue Reconstruction

**W**HEN a man's house is burning he doesn't wait to criticize the arrangement of its rooms. But when the fire is over and repairs are in order then is just the time to consider long needed changes. We suffered much from inefficient administration during the Great War, but President Wilson and his colleagues had at least the excuse that their first task was to save the nation, not to reform it. But in the days of reconstruction it would be unpardonable not to reconstruct the Federal Government on a business basis: adopt the budget system, reorganize the cabinet departments, abolish what remains of the spoils system in the civil service and base preferment on merit instead of seniority or political pull.

## Jonathan Edwards as a Freudian

**T**HE idea, now exploited to the extreme by Freud, Jung and Adler, that dreams indicate our unconscious desires, is not so new as some seem to suppose. The greatest of early American theologians, Jonathan Edwards, used the Freudian method, but on himself, not on other folks. In that very remarkable record of auto-analysis, his diary, he notes under the date of May 2, 1722:

I think it a very good way to examine dreams every morning when I awake; what are the nature, circumstances, principles and ends of my imaginary actions and passions in them; in order to discern what are my prevailing inclinations, etc.

Doubtless Edwards got the idea from the Bible, which lays great stress upon the interpretation of the symbolism of dreams. For instance, it is evident from the story of Joseph, as narrated in Genesis 37, that when the spoiled child dreamt that his brothers' sheaves bowed down to his and that the eleven stars made obeisance to him, that he was simply dramatizing his secret ambitions. His father Jacob promptly gave the Freudian interpretation, no doubt correctly. The Adler idea is also involved for Joseph in his dreams was endeavoring to compensate for his sense of inferiority as the youngest and weakest of the twelve brethren. A lot of coarse big brothers would be sure to rub in an "inferiority complex" to papa's pet.

Edwards also employed the Freudian therapeutics of frank self-examination, starting in random reverie. In the entry dated "Saturday, August 10, 1722, about sunset," he records the resolution:

As a help against that inward shameful hypocrisy, to confess frankly to myself all which I find in myself, either infirmity or sin; also to confess to God and open the whole case to him, when it is what concerns religion, and humbly and earnestly im-

plore of him the help that is needed: not in the least to endeavor to smother over what is in my heart but to bring it all out to God and my conscience. By this means I may arrive at a greater knowledge of my own heart.

When I find difficulty in finding a subject of religious meditation in vacancies, to pitch at random on what alights in my thoughts, and to go from that to other things which that shall bring into my mind, and follow this progression as a clue, till I come to what I can meditate on with profit and attention and then to follow that.

The significant difference between the Edwardsian and Freudian methods is the religious element which permeates the former, but which the new psychology endeavors to eliminate. Laplace, when Napoleon asked him why he had not mentioned God in his great work on "Celestial Mechanics," replied: "Sire, I had no need for such an hypothesis." This may work for physics, but it remains to be proved whether psychology can dispense with the idea of God without impairing its healing and reformatory power.

Another point of importance. It has always been recognized that "confession is good for the soul." But hitherto those who received or elicited the confessions, whether priests, preachers or physicians, were all expected to be men of proved probity, trained for the purpose and upheld by a high standard of professional ethics. But the modern psychoanalyst is a free lance, authenticated by nobody and uncontrolled by his colleagues. He may not even be master of his own science and he may even make use of the intimate secrets entrusted to him for blackmail or personal power. He may be moved by pure scientific zeal or drawn by an evil-minded curiosity. To impose state regulations upon this infant science in its formative period would be injurious to its prospects, but it is well to warn those who enter the new confessional to exercise a certain caution before they expose the contents of their mental garrets and cellars to the gaze of a stranger.

## Salvation Is More Than Rescue

By Shailer Mathews

UNLESS optimism is a deceiver, the quadrennial meeting of the Federal Council of the Churches of Christ in America held in Boston, December 1 to 4, marks a real advance in the coöperative action of American Protestantism. The disappointing outcome of the Interchurch World Movement had at least the result of showing that coöperation must be organized with full regard for the new sense of denominational solidarity. This has always been the policy of the Federal Council, and its justification is now in no need of argument. There are great social and religious tasks which confront all churches. A super-organization cannot face them. So long as American Protestantism is denominational, so long must the center of common responsibility be found in denominational coöperation rather than outward church unity.

This was the keynote of the great convention in Boston. Picturesque features were not wanting, but the undercurrent of feeling was one of solemn acceptance of the work of coördinate meeting of the world's misery and moral need. The Council sees its duty clearly. In accepting the memorable report of its Committee on Methods of Coöperation, undoubtedly the Council's most important action, the Council instructs the Execution and Administration Committee to plan the work of the Council in accordance with the view that the time has come for fuller action in the prosecution of work that can be better done in union than in separation. To this end the Council is ready to adjust its organization so far as its broad constitutional powers permit, strengthen its secretarial staff, summon a conference of inter-board agencies of the denominations. It proposes to raise an annual budget of \$300,000 from its constituent bodies. All this

is in the right direction. The election of Robert E. Speer as President assures deliberate planning and well considered progress. What the Interchurch Movement failed to accomplish, there is good reason to believe the Federal Council is now prepared to perform.

But machinery, while needed, is after all machinery. What the meeting in Boston seems to have done is to supply inspiration sufficient to make the machinery run. Not that results will be immediate. Churches are always behind their leaders. But the inspiration was not lacking. The addresses before the great popular meetings as well as those before the Council itself were full of an almost prophetic insight into the state of the world. Mr. Hoover pleaded for the starving children of Europe, Mr. Bible for the starving millions of China. The Council will see that their pleas are brought to the churches of the land. Temperance legislation was supported and government officials entrusted with its enforcement were warned. Sectarian control of national policies was condemned. Internationalism was urged as practicable. Fraternal greetings were sent to the churches of European countries, both our former allies and among our former enemies. Industrial justice was championed, negroes were assured fraternal care, education was urged to recall its ideals, anti-Semitism was denounced.

Here is a new reading of Christian morality. All these mighty appeals were made by Christian churches! When one looks back twenty-four years, the new spirit seems indeed providentially begotten. Christianity is no less eager to save the individual than in the last generation, but its leaders have come to see that salvation is more than rescue. The gospel must touch creative social forces. A polemical denominationalism will be impotent to maintain the morale of a world struggling to newer freedom and without the moral control demanded by great social movements. Internationalism of the Christian sort is an ideal that demands interdenominationalism. A common danger demands a united operation. The Federal Council can furnish what the day needs, if for no other reason than that its leaders understand the magnitude and the complexity of the church's task. It is a seasoned institution. Its leaders have high purposes but are never swayed by unreasoning enthusiasm. If only the denominations can be made to share in its purposes and coöperate in its sane and practicable policies, its next quadrennial will mark even greater progress in applied evangelicalism than did even those at Chicago, St. Louis, and this the greatest of all, Boston.

## Radicalism

THE Socialist Party obtained only about 950,000 votes in the November election. Allowing for the doubling of the electorate by the woman's vote, this is a poorer showing than in either 1912 or 1916. The vote for the somewhat less radical Farmer-Labor Party was apparently even smaller. The number of Communists, Communist Laborites and anarchists in this country is all told probably less than a tenth that of either of these parties. The I. W. W. and other radical or syndicalistic labor unions are at all times so insignificant in numbers that if they should all go on a general strike at once industry would suffer only a local and temporary embarrassment.

In these facts there lies a message to both radical and conservative. The radical must learn that in a country with so overwhelming a conservative majority even among the "proletariat" he can accomplish absolutely nothing by violence or violent talk. The conservative must see that all panic talk of the United States being in danger of Bolshevism and needing drastic sedition laws is as silly and undignified as it is cowardly. Public opinion in the United States is as widely removed from that in Moscow as the distance which separates American prosperity from Russian starvation. There is as much chance of the nation going Buddhist or Voodooist as of its going Bolshevik.

# The Story of the Week

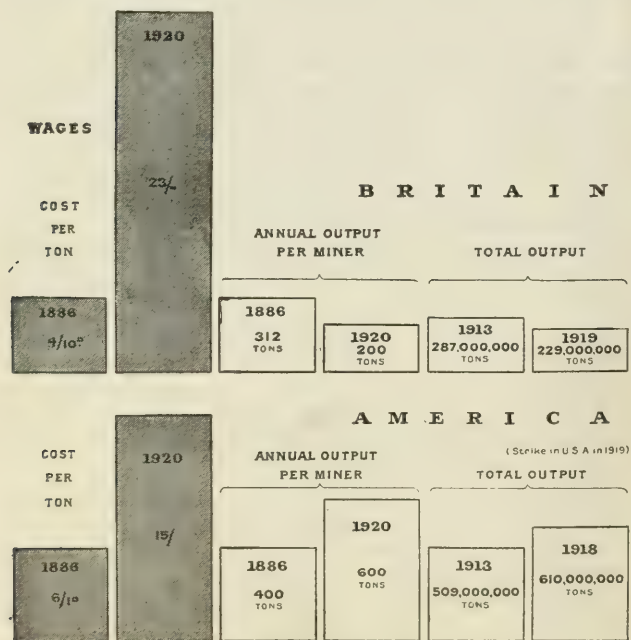

## The Near East Tangle

THE trouble with that unhappy part of the world known as "the Near East" is the trouble with a pile of jack-straws; you cannot touch any part without affecting the whole. Turkish nationalism, Bolshevik propaganda, the oil wells of the Caspian region, the oil wells of Mosul, the French designs on Syria, the British policy in Arabia, the refusal of the American Senate to let President Wilson assume a mandate in Armenia, the refusal of the Greeks to support the Venizelos policy of a Greater Greece, the National rivalries of the Balkan States, the ambitions of Italy, the desire of French creditors to realize something on former loans to Russia and to Turkey—all these factors are intertwined in such a way that, with the best will in the world, the whole of Christendom looks on while Turks and Kurds and Bolsheviks overrun Armenia.

For the moment the Armenians have bought a respite from massacre by becoming, or pretending to become, converts to Bolshevik doctrine. It is reported that the Armenians have agreed to Turkish terms which limit the boundaries of the country to the Erivan and Lake Gokcha region, excluding the important cities of Kars and Alexandropol. The Turks have also imposed disarmament on the tiny little country which remains. Even this petty tract of independence is not really a free government since under

Russian pressure it has been forced to adopt the soviet form of constitution. President Wilson has submitted his decision, under the terms of the Treaty of Sèvres, defining the boundaries of the Armenian Republic. But it is only too probable that this will remain a "scrap of paper" since the Turkish Nationalists are in possession of nearly the whole territory in question. President Wilson has offered to act as mediator between the Armenians and the Turkish Nationalists but he is supported by no military forces to enforce his decision in case the Turks reject it. The Senate has not authorized him to give American military, financial or administrative aid to Armenia, and while the European Powers offer "moral support" they are as reluctant as the Senate itself to give any effective material aid. England and France relied on Greece to crush the Turkish Nationalist army, thinking that a mandate over the Smyrna region in Asia Minor was reward enough for this service, but the recent overthrow of the Venizelos Government has killed this hope.

King Constantine has been officially notified of the result of the plebiscite in his favor and the Greek Government has made all arrangements for his return. He has refused all suggestions that he abdicate in favor of the Crown Prince or of anyone else. He assures the Allied Powers that he has never been a pro-German and is "going to be their best friend" in the future. The Entente statesmen do not appear to place any confidence in his assurances but they seem to have given up the idea of placing an absolute veto on his return to power. The French, however, are saying a great deal in favor of revising the Sèvres treaty at the expense of Greece. The decision of the Greeks to recall King Constantine to power in defiance of the wishes of the Allied Powers may cost Greece all or part of her treaty rights in Asia Minor and at the same time diminish her chances of getting foreign loans. The Russian Bolshevik Government has formally protested against any coercion of the Greek people by the Allied Powers; ostensibly on the grounds of abstract justice and the right of self-determination, but perhaps more fundamentally because the withdrawal of Greece from coöperation with the Allies would give the Bolsheviks a freer hand to carry on their propaganda in Armenia and Anatolia.

THE BRITISH COAL CRISIS

The London *Sphere* publishes the above diagram which shows graphically the danger that threatens the British coal mining industry and the foreign commerce that depends on exporting coal. The wage cost per ton of coal has increased much more rapidly in England than in America in the last thirty-four years as appears from the dark columns. The next pair of rectangles shows that in England each miner on the average brings to the surface only 200 tons of coal in the course of the year instead of 312 tons as he did formerly. In America, on the contrary, the coal miner is increasing his efficiency and now produces 50 per cent more than he did in 1886. The result is that the total output of coal is falling off in England while increasing in America. The decline in the British production is in large part due to the policy of the unions which oppose the use of mining machinery and believe that they can gain more wages by doing less work

## The Burning of Cork

ON the night of December 11 the city of Cork, the most important city in the western part of Ireland and surpassed in commercial importance only by Dublin and Belfast in the whole country, was set on fire and a large part of it burned to the ground. The property loss is placed at \$15,000,000. Few persons lost their lives in the flames but hundreds were rendered homeless. The city hall, the business district and the Carnegie library were swept by the conflagration.

The cause of the fire is not known. It is commonly believed in Ireland that it was the work of the British military or police forces in reprisal for Sinn Fein outrages. Early in the evening some Sinn Feiners threw bombs from ambush into a motor lorry. Twelve policemen were killed or injured. Shortly afterwards fires broke out all over the city. The fire department was unable to cope with the damage and a special fire engine was sent clear from Dublin to help put out the blaze. A large military force was sent to Cork to keep order in the stricken city.

Cork has for many months been a center of Sinn Fein

International

Months of fighting between the Sinn Fein rebels and the British police in the city of Cork culminated on December 11 in a great fire that destroyed \$15,000,000 worth of property. It is thought that the fire was started in reprisal for the attempted murder of a motor load of British policemen in whose midst some ambushed Sinn Feiners threw bombs earlier in the evening. This photograph shows one of the motor lorries filled with British policemen on a principal street of Cork

activity and has suffered numerous outrages from both sides in the civil war. Two mayors of the city have lost their lives in recent months. Lord Mayor MacCurtain was assassinated in March, but the murderer was never discovered. Lord Mayor MacSwiney, who was elected to succeed him, starved himself to death in prison. Both officials were of the Sinn Fein party. Scores of police constables have been assassinated in Cork or its vicinity and many buildings have been burned by one party or the other, but no destruction comparable with the recent great fire has taken place in any part of Ireland since the Dublin riots of 1916.

## Civil War in Ireland

NO longer can conditions in Ireland be discussed as a mere epidemic of riots, outrages and disorders; the case is now one of civil war in the full meaning of the phrase. This is admitted by both sides. In County Monaghan the Sinn Feiners have posted a proclamation declaring that "the public must at once realize that Ireland is in a state of war with forces of the British crown." On the other hand, Premier Lloyd George, speaking in the House of Commons of the "insurgent forces," declared "we have decided to declare martial law and to mete out to these persons the same treatment as if they were open rebels." In other words, the "Irish Republic" is in the same position as the "Confederate States of America" during the American Civil War: it is a *de facto* Government, deriving its support from one section of a country, claiming independence and in open insurrection to obtain acknowledgment of that independence from the ruling Government and from foreign powers. Foreign nations have thus far refused to recognize the Irish Republic, as to do so would be a hostile act toward Great Britain, just as it would have been a hostile act toward the United States if the French or English had formally recognized the independence of the Confederacy in 1861.

The chief difference between the Irish Civil War of 1920 and the American Civil War of 1861-1865 is in the relative strength of the forces engaged. The Confederate States were strong enough to be for several years the sole ruling authority in the Gulf States and in some of the border states and they fought the Federal armies with definitely organized armies of their own along a fairly definite war zone. But the Irish are so few in number and confined to so small an area that the British Government is able to place soldiers and police in every town. The Irish cannot organize in formal armies and are reduced to guerrilla or

skirmish warfare. Thruout all history, this has been the cruelest form of warfare. Insurgents, hiding in ambush and disguised as civilians, carry on war by assassination, bomb plots and midnight raids. Government forces in reprisal burn and loot the towns which are the centers of insurgency.

Premier Lloyd George apparently sees no way out of the situation but to carry on coercion more relentlessly than ever. Martial law has been proclaimed over the City and County of Cork, the City and County of Limerick and the Counties of Tipperary and Kerry. Within this zone persons carrying arms without authority are liable to trial by court martial and the death penalty. A large bomb plant, camouflaged as a bicycle repair shop, has been seized in Dublin, which is not yet within the martial law area.

While expressing his unrelenting determination to crush rebellion, Lloyd George said at the same time that he would welcome negotiations with Sinn Fein leaders who had not been "involved in the commission of serious crimes." He said that the Government could not deal directly with the "Irish Republican Parliament" since it did not recognize the existence of an independent Irish Republic, but that those members of the Irish Parliament who had been elected on the Sinn Fein ticket to the British House of Commons and had not been guilty of serious crimes would be given every facility and safe conduct to meet and negotiate with the British Government. This peace offer was in reply to the proposal of negotiations by Father O'Flanagan, one of the more moderate Sinn Fein leaders, and also by the Galway County Council.

## Relief for China

A great famine in northeastern China threatens the lives of more millions of human beings than perished during the Great War and the famines in Europe which came as its result. The President has appointed a relief committee of 180 under the chairmanship of Thomas W. Lamont, with Mr. Norman Davis, under-Secretary of State, as treasurer. The President's statement graphically depicts the situation:

A famine, alarming in its proportions, today holds in its grip several important provinces in China. That crop failure is complete, and the present distress which is great is likely, before winter has run its course, to become appalling. In fact our diplomatic and consular agencies in China inform me that the loss resulting from death in distressing form may run into millions of souls. It is certain that the local Government and established

The People, London

WHY NOT LET 'EM LOOSE?

A demand for reprisals has been growing in English sentiment with the desire to punish the Sinn Fein murderers of British policemen in Ireland

agencies of relief are unable to cope with the magnitude of the disaster.

The case of China I regard as especially worthy of the earnest attention of our citizens. To an unusual degree the Chinese people look to us for counsel and for effective friendship. Our churches, thru their religious and medical missionaries, their schools and colleges, and our philanthropic foundations have rendered China an incalculable benefit, which her people recognize with gratitude and devotion to the United States.

The movement for relief to the Chinese famine unfortunately comes at a time when there are also calls on American generosity to preserve from starvation the children of Armenia, Syria, Austria, Poland and other parts of Europe and western Asia, but it is hoped that the people of the United States will from the surplus of their wealth be able to check the famine in both poverty-stricken areas. At any rate, if the United States does not do so, no other nation has the resources to come to the rescue.

Famines may be divided into two types. One, which may be called the "European" famine, is due to a breakdown of normal economic life under some exceptional calamity. Such is the case of the countries of central Europe, which would be able to feed themselves without any aid from foreign charity had not the Great War dislocated manufactures, taken men from agriculture, inflated currency till money would buy nothing, and broken the threads of commerce with other nations. Even Armenia, with a more primitive economic life, would be self-supporting if the Turks, Kurds and Bolsheviks had not carried fire and sword into the country. Those parts of Europe which have returned to peace are already returning to agricultural sufficiency.

But the other type of famine, which we may term the "Oriental," is different. It is not the result of some exceptional disaster, such as war or earthquake, but recurs every few years after a succession of bad crop seasons. The present famine in China has no relation at all to the Great War and has only in a slight degree been made worse by the recent civil wars. The provinces of Chili, Shantung, Honan, Shansi and Shensi, in the region of Hoang river, have had a drouth on top of three or four years of inferior crops. There is no agricultural reserve and the people have no resources to fall back on; nor can the rest of China send relief, because in the best of years the Chinese produce barely enough to live on. Famines of this type are common in China, India and the remotest districts of Russia. The reason for them is partly over-population and partly a primitive stage of economic development with lack of modern facilities for production and distribution. Conditions which in the United States would mean "hard times" or a "bad year," with farm mortgages, unemployment and bankruptcies, mean to China wholesale starvation, suicide and the selling of children for a few pounds of rice.

## The Lord of Kamchatka

WASHINGTON Baker Vanderlip, American financier and promoter, is back from Russia with marvelous tales of trade opportunities and with contracts and concessions alleged to be worth \$3,000,000,000 in his pocket. He gave out a detailed list of exports which Russians are eager to obtain from the United States in return for the concessions in eastern Siberia and the great and desolate peninsula of Kamchatka. In this almost uninhabited region there was, he declared, vast wealth in coal, oil and other resources. He denied many rumors that had grown up about

his mysterious mission to Russia, such as that he was authorized by President-elect Harding to promise the recognition of the Bolshevik Government, that he was backed by Standard Oil interests, that he was an agent of British companies, and that his real object was to gain concessions in the Batum oil district. He also denied that he was a Bolshevik or inclined to promote Bolshevik interests in the United States. He said that he told Lenin quite frankly that there was no chance of a revolution in the United States and that Lenin had replied that a revolution was hardly to be expected "in a country where there virtually was a motor car for every man."

Reports sent by way of Riga and Helsingfors, however, have it that Lenin claims to have outwitted the American capitalist. Lenin, according to this account, declared that Russia sacrificed nothing, since in case of a general war against the bourgeoisie of the world it would always be possible to retake the concessions as booty, and that granting concessions in eastern Siberia to Americans would tend to embroil Americans and Japanese to the advantage of Russia.

## Another Infant Republic

NEWS comes from Vienna that one of the Hungarian counties is in revolution. In southwestern Hungary, near the Yugoslav frontier, is the city of Pecs, the chief city of Baranya. Here the independent republic of Baranya has been proclaimed by a group of insurgents. The Serbs coveted this region, but the Peace Conference awarded it to Hungary. But now that the district has exercised its "self-determination" and revolted from Hungary it is not easy to see how the Government of Admiral Horthy will bring it back under Hungarian control until the people are better pleased with the course of events at Budapest. The Yugoslav Government has extended its "protection" over the infant republic, and a war between Hungary and Yugoslavia would also involve Rumania and Czechoslovakia as nations friendly to the Yugoslavs and hostile to the Magyars. So Hungary refrains from crushing the new Republic of Baranya in the cradle.

There is no reason to think that the new Republic will be permanent. It is but a symptom of the present political instability along the Danube. Hungary is in the position that France was in for a few years after the Franco-Prussian War; it has a monarchist Government but it is without a royal head. Admiral Horthy is maintaining order and acting as provisional head of the nation until international conditions are such that it is safe to call a Habsburg to the throne. Such a move would be unpopular with the Allies, who seem to care little for the abstract issue between monarchy and republic but dread lest a Hungarian ruler would take steps to restore the old Austro-Hungarian State. The rebellion in Baranya seems to prove that many Hungarians are likewise displeased at the reactionary tendencies of the Government. The report that the Hungarian Government contemplates the disfranchisement of all its Jewish population has caused much unfavorable comment in the European press.

Washington B. Vanderlip, American mining engineer, has come back to this country from Russia and Siberia with contracts concessions from the Soviet Government that he says are worth \$3,000,000,000, and which cover 400,000 square miles of Siberian territory. Mr. Vanderlip accomplished these negotiations by personal interviews with Lenin; he was backed by a syndicate of Pacific Coast capitalists

## The Leaders of Soviet Russia

NIKOLAI LENIN, PREMIER

ZINOVIEV, PRESIDENT OF PETROGRAD

These statues were modeled by Mrs. Clare Sheridan, an English sculptress, who has just returned from Moscow where she was given every opportunity to study the government of Soviet Russia

In Jugoslavia itself there is a republican and separatist movement in Croatia. The Croatian nationalists, however, seem to be in a minority even in their own part of the country and the Serbs are a unit against any attempt to break up the unity of the Yugoslav monarchy. The recent elections are reported to have given the following division of strength in the Assembly: Radicals, 96; Democrats, 92; Communists, 55; Radich (Croatian nationalist) Party, 50; Mussulmans, 25; Clericals, 22. The Radicals and Democrats are the parties which support the present Government. Naturally, the refusal of d'Annunzio to give up his dictatorship and accept the frontier terms agreed on between Italy and Jugoslavia adds to the instability of the whole situation in southeastern Europe.

## The Church and the League

THE Federal Council of Churches of Christ in America, recently in session in Boston, adopted a message to the churches of the thirty Protestant denominations represented in the Council. Perhaps greatest interest attaches to the declaration in favor of a League of Nations:

We welcome, therefore, the proposal for a League of Nations which shall be in truth an association of free peoples for mutual helpfulness in the tasks of peace, and we call upon our own nation to join with other nations in moving along this new pathway of hope.

Other resolutions called for a stricter enforcement of the prohibition law and a campaign to "banish from the entire world traffic in intoxicating liquor and debasing narcotics"; favored coöperation with other nations for general disarmament; sent fraternal greetings "to all our sister Churches in Europe, both in allied lands and in those countries with which we have lately been at war"; commended the "most Christian utterance" of the Anglican Church at Lambeth on Christian unity, and condemned as "cruel and unwarranted" all attempts to "create race prejudice and arouse animosity against our Jewish fellow-citizens."

## Sword or Olive Branch?

SHALL the United States coöperate with other nations in the reduction of armaments? This question has been made urgent by the current discussion of disarmament in the League of Nations Assembly. President Wilson has refused to send special representatives in a consultative capacity during the discussions by the Commission on the Reduction of Armaments. He made the following statement:

The President is deeply interested in this question and is most

desirous of coöperating to this end, but as the Government of the United States is not a member of the League, he does not feel justified in appointing a commission to take even a *de facto* participation in the deliberations of the Council or of the Commission acting on behalf of the Council in the execution of provisions of the Covenant of the League of Nations.

The refusal of the United States to participate in the general work of disarmament has reacted unfavorably on the disarmament program of the member nations of the League. Viscount Ishii of Japan told the Armaments Commission that Japan could not accept any resolution pledging the nation to curtail military expenditures so long as "one certain great power" (meaning, of course, the United States) was not bound by any action of the League. The Commission eventually agreed to "recommend" to the member nations of the League that none of them add to their armaments for the next two years, but this recommendation has no positive binding force. The Assembly by a vote of 30 to 7 acted favorably on the report of the Commission and recommended to the Council a two years' truce in armament building. France voted with the minority.

General Tasker Bliss, who was one of President Wilson's colleagues at the Paris Peace Conference, has urged that the United States take the lead in world disarmament. He said that the United States should issue the following manifesto to the other Powers of the world for reducing all armaments to a purely defensive status:

We will agree with you that each nation that so desires shall keep and build whatever frontier and coast fortifications it wishes. Fortifications cannot stride across the earth, devastating fields and destroying cities.

We will agree with you that each nation may maintain its navy. No navy without an army can conquer and hold foreign territory.

We will agree with you on a date when we shall simultaneously abolish any military system which is solely necessary for international war.

We will agree with you on a date as remote as the existing conditions make absolutely necessary when we shall begin the gradual reduction of our armed forces until they are at the limit necessary for the maintenance of internal order. . . .

We will agree with you on the proper amounts of material to be kept on hand for the reduced forces. And we will further agree with you to cease the manufacture of material until the amounts now on hand are reduced to what we agree upon as necessary for the reduced forces.

Secretary Daniels of the Navy declares that if the United States joins the League of Nations and takes part in the work of disarmament "our present navy, with the addition of some special types, will be adequate for our defense and the prevention of aggression." On the other hand, if the

United States stands aloof and isolated another three-years' building program would have to be authorized. This program includes the construction of three new battleships, a battle cruiser, thirty light cruisers, eight gunboats, eighteen destroyers, twelve mine laying submarines, six cruiser submarines, three destroyer tenders, three submarine tenders and four airplane carriers; eighty-eight vessels of all types to be under construction by 1924. He defended the policy of having "two great fleets, one in each of the great oceans we are called upon to defend," and recommended the development of Hawaii as a naval base. Senator Borah offered a resolution for disarmament by the common agreement of Great Britain, Japan and the United States.

## Wilson Gets Nobel Prize

THE Nobel peace prize for 1920 was formally awarded to President Wilson on December 10. At the same time, the prize for 1919, which had not been awarded last year, was given to Léon Bourgeois, who represented France in the negotiations at Paris for the establishment of the League of Nations.

It is a remarkable tribute to the peace-making diplomacy of the United States that three Americans have received the Nobel peace prize. Theodore Roosevelt in 1905 and Elihu Root in 1912 shared the honors now granted to Woodrow Wilson. During the Great War, as if in silent rebuke to the belligerent world, no award was made of the annual peace prize, save that in one year it was given to the Red Cross. It is significant that with the restoration of peace it was decided by neutral judges that of all the statesmen who met at Versailles, President Wilson had done most to bring about an enduring peace.

As President Wilson could not go to Christiania in person, the prize was taken on his behalf by the American minister to Norway. But the President sent a letter of thanks in which he said:

May I not take this occasion to express my respect for the far-sighted wisdom of the founder in arranging for a continuing system of awards? If there were but one such prize, or if this were to be the last, I could not, of course, accept it, for mankind has not yet been rid of the unspeakable horror of war.

I am convinced that our generation has, despite its wounds, made notable progress, but it is the better part of wisdom to consider our work as only begun. It will be a continuing labor. In the definite course of the years before us there will be abundant opportunity for others to distinguish themselves in the crusade against the hate and fear of war.

There is, indeed, a peculiar fitness in the grouping of the Nobel rewards. The cause of peace, and the cause of truth are of one family. Even as those who love science and devote their lives to physics or chemistry, even as those who create new and

higher ideals for mankind in literature, even so with those who love peace, there is no limit set. Whatever has been accomplished in the past is petty compared to the glory of the promise of the future.

## Houston's Horrible Hints

SECRETARY Houston of the Department of the Treasury is making himself very unpleasant just at present by pointing out that the state of the nation's finances makes imperative new taxes if the Excess Profits tax is abandoned. In his annual report he points out:

Revision of taxes should be effected. There can and should be a better distribution of the tax burden. Unwise taxes should be eliminated. But any scheme which would, after this fiscal year, yield for several years to come less than \$4,000,000,000 would be incompatible with safety and sound finance. And the country should face the fact that present taxes even may not in the future be relied upon to yield the needed revenue.

He agreed that the Excess Profits tax in its present form was not working well because it discriminated against conservatively capitalized corporations and encouraged over-capitalization, and also that some of the wartime consumption taxes which had proved difficult to collect might be abandoned and that the supertax on incomes might be so modified as not to drive the very wealthy to investing all their wealth in tax-exempt securities. So far, so good, says the taxpayer. But look at the new taxes which the Treasury Department thinks necessary to fill the vacuum so created:

Tax of 20 per cent on corporation profits, distributed or undistributed, plus a higher surtax rate; to yield \$690,000,000.

Additional tax of 6 per cent on corporation incomes; to yield \$465,000,000.

Readjustment of supertax on individual incomes; to yield \$230,000,000.

Abolition of \$2000 exemption on corporation incomes; to yield \$58,000,000.

Increase from 4 to 6 per cent on incomes of \$5000 or less, and from 8 to 12 per cent on incomes from \$5000 to \$10,000; to yield \$150,940,000.

Tax of two cents a gallon on gasoline; to yield \$90,000,000.

License tax of 50 cents a horse power on motor cars; to yield \$100,000,000.

Additional sales tax on automobiles, motor cycles and accessories; to yield \$100,000,000.

Additional 10 per cent tax on theater tickets, to yield \$70,000,000.

Additional \$2 a thousand on cigarets; to yield \$70,000,000.

Additional 25 cents a thousand on cigars; to yield \$5,000,000.

Additional tax on tobacco and snuff; to yield \$8,000,000.

Additional tax of 5 per cent on candy; to yield \$20,000,000.

Additional tax of 7 per cent on chewing gum; to yield \$2,000,000.

Additional tax of 7 per cent on toilet soap; to yield \$4,000,000.

A 10 per cent tax on sales by manufacturers and importers of cosmetics, perfumes and medicinal articles, in place of present tax on consumer; to yield \$10,000,000.

Norrie, for George Matthew Adams

Brown in Chicago Tribune

Congress: This hurts me more than it will you

Seems kind o' careless, doesn't it?

Greene in New York Evening Post

It's his turn now

Additional tax of 5 per cent on jewelry and precious metals; to yield \$25,000,000.

Additional tax of 5 per cent on musical instruments; to yield \$13,000,000.

Additional tax of 5 per cent on motion picture films; to yield \$4,000,000.

## Immigration Bill Passes House

ON December 13 the House of Representatives passed the Johnson bill establishing a temporary bar against all labor immigration. The vote was 293 to 41. Twenty-three Democrats and eighteen Republicans voted in the minority; nearly all the opponents of the bill representing industrial constituencies in such states as New York, Illinois and Massachusetts. The measure is not intended as a basis for permanent immigration policy, but simply as an emergency "injunction" to halt immigration until Congress, with its usual leisureliness, can determine the policy it wishes to adopt.

The bill as originally drafted barred immigration for two years, but in the course of discussion in the House it was amended to a one year's exclusion policy. Further important amendments are expected in the Senate. Senator Dillingham of Vermont has introduced a bill limiting the number of aliens of any nationality who may be annually admitted to the United States to 5 per cent of the number of persons of that nationality already resident in the United States. The aim of this measure is to restrict immigration from southern and eastern Europe and from Asia, without any direct discrimination against any nation, and this is possible because the older immigration, which would count largely in determining the number of persons resident in the United States, came largely from such countries of northwestern Europe as Germany, Scandinavia, Great Britain and Ireland, and the big immigration from such countries as Italy, Poland, Russia and Syria is comparatively recent.

The House of Representatives voted unanimously to repeal legislation "that by its terms is in force only during the existence of a state of war." The Lever Food Control Act, the Trading with the Enemy Act, the War Finance Corporation Act and the acts governing the Liberty and Victory loans were not comprized within the scope of the original resolution, but by a vote of 179 to 137 an amend-

ment was adopted, on the motion of Representative Bland of Indiana, including in the repeal the Lever Act with the exception of a section relating to rents in the District of Columbia. Among the measures repealed were the temporary clauses of the Espionage Act, frequently used during the war to suppress pro-German and pacifist agitation, and the Overman Act, which enabled the President to reorganize at his will the machinery of the executive branch of the Government.

## On the Listening Porch

PRESIDENT-elect Harding is spending his days at Marion picking thoughts from "great minds" before he announces the personnel of his cabinet or the direction of his foreign policy. He is keeping his pre-election pledge that he would make the Marion porch a "listening post" and would consult with representative men of all shades of thought in the endeavor to reconcile differences and find a common ground on which all Americans might stand. Asked if he had determined on any cabinet appointments he said to the reporters that he had made no offers to anyone and "You can put that in your papers today and tomorrow and every day after until announcement to the contrary is forthcoming." Among those who have been asked into consultation by Senator Harding are ex-President Taft, Elihu Root, Herbert Hoover, Charles E. Hughes, Colonel George Harvey and many members of the Senate. The exact advice given by these men is, of course, confidential; but it is believed that Taft, Root, Hoover and Hughes favor the existing League of Nations with some amendments, and that Harvey and many Senators, even including some who were formerly "Lodge reservationists," are opposed to the whole idea. President Wilson has intimated that he would be glad to confer with Senator Harding, but no definite arrangements have as yet been made for a White House conference.

Governor Cox has extended a signal courtesy to his successful rival for the presidency. He telegraphed Harding that he would appoint Senator-elect Willis, who is a Republican, to the Ohio Senatorship if he wished to resign now. Hitherto Senator Harding has hesitated to resign for fear that the Democratic Governor of Ohio would appoint a Democratic Senator in his place to fill out the term.

Here is a real stunt in horsemanship—pyramid riding three abreast and three deep. It was exhibited by members of the New York City police force as one of the incidents in their annual Field Day

# A Little of Everything

## Telephoning Pictures

We think our present news-gathering facilities are perfect, yet that is far from true. Correspondents throughout the world send their stories to the newspapers and periodicals via telegraph, cable and wireless. But until now we have had to send our photographs by courier, express or mail. The far-off correspondent sends his story by the fastest route, and the photographs come along several weeks or months later.

With a view to perfecting our news-gathering facilities, several inventors have been at work on some means for sending photographs over telegraph or telephone wires, and possibly cables and wireless. By far the most successful of these schemes is that of Edouard Belin, of Paris, France, who is now in this country for the purpose of demonstrating his system. Already Belin has transmitted photographs over hundreds of miles of telegraph and telephone lines in France and Belgium, as well as over the short cable under the English Channel, in a test from Paris to London. His system is certainly well beyond the laboratory stage.

The photograph to be transmitted is

Now escaping convicts will find their photographs there before them, and telegraphed news stories can be accompanied by news pictures. This photograph was received over 550 miles of wire in France, retaining remarkably the expression and the light-and-shade values of the original

photographically printed on to a brass cylinder, which print is then treated so as to produce the printed photograph in bas relief. The cylinder is then placed in the transmitter, which resembles the old-time cylinder type phonograph. As the cylinder is revolved at a speed identical to that of the receiving cylinder at the other end of the line, there presses on its uneven surface the stylus of a microphone. The latter member is not unlike the usual telephone transmitter. The uneven surface of the bas relief photograph on the transmitter cylinder causes more or less current to flow over the telegraph or telephone line. Obviously, then, the delicate half-tone modulations of the original photograph are thus translated into delicate modulations of an electric current.

Following the delicate modulations of the current over the wires to the receiving end, we find that they are passed through what is known as a Blondel oscillograph, an instrument which carries a diminutive mirror on a pair of silver wires, said mirror turning more or less on its axis in accordance with the strength of the received current. A special form of lamp is employed to project a thin but intense beam of light on to this small mirror. As the mirror swings about on its axis, it reflects the beam of light in a horizontal plane from side to side. This reflected beam passes through a screen of varying density, through a lens which concentrates the beam, and on to a tiny hole no larger than the finest needle hole. Obviously, when the beam passes through the more transparent parts of the screen, the light falling on the tiny hole is strongest, and when the beam strikes the opaque sections of the screen, the light does not reach the tiny hole. Thus the current fluctuations, which represent the photographic blacks and whites and half tones at the transmitting end, are translated into varying strengths of light.

Behind the tiny hole is a cylinder revolving at exactly the same speed as the transmitter cylinder, but covered with sensitized photographic paper. The tiny hole starts at one end of the cylinder and travels over to the other end, thus covering every part of the cylinder. The changing values of light are recorded on the sensitized paper or film, which is then developed in a dark room in the usual manner.

The speed of transmission is a matter of photographic detail. If a coarse result matters little, then the speed can be increased. If a photo-

graph is quite detailed and this detail must be preserved, then the speed is materially reduced. Thus good work requires from four to eight minutes; crude photographs can be transmitted in from three to six minutes. By a special attachment at the transmitting end and a slight modification in the receiver, type matter, handwriting, drawings, maps and other documents executed in black and white can be rapidly transmitted.

© Underwood & Underwood

In Hamburg, Germany, all the street cars running past the post-office have been fitted with post boxes into which letters can be dropped at any point. All the mail clerk has to do is to get the letters from the boxes when the cars stop at the Post Office. Not so much walking for him, and a far more rapid transit for the letters

## When Dragons Lived in Canada

A half-dozen fossil skeletons of giant dinosaurs that lived millions of years ago have been recently taken out of the Red Deer bone quarries in Alberta, which had already produced some of the most remarkable prehistoric relics in the world. An expedition from the Royal Ontario Museum was in the field thru the summer, and its discoveries have been removed to Toronto to be mounted.

Dr. W. A. Parks, in charge of the bone-hunting work of the Ontario museum, believes that he has among this year's finds a dinosaurian skeleton different from any previously known to science. It is a crested dinosaur with a backward spine-like prolongation of the skull. The skull measures fully six feet from the tip of the jaw to its extreme point.

The Red Deer River fossil beds are now known to be as good a hunting

He measures 30 feet in his bones. And there were more like him on the Red Deer river-banks, three million years ago

ground for reptilian remains as are the South Dakota Bad-Lands for mammals. The river cuts thru the prairie, about one hundred miles north of Calgary, to a depth of 400 feet, and sides in the canon, caused by the river current setting against the bank, have laid bare many bones of various sorts and sizes. With these clues to work on, the relic hunters have dug further into the bank, finding the best specimens still imbedded in slabs of rock, which they have then packed in plaster paris for shipment. Cutting the skeletons loose from the rock for mounting, the final process at the museums, is always a work of extreme difficulty and delicacy.

It is believed to be at least 3,000,000 years since the creatures found in the Alberta boneyards were in the flesh. That was before the Rocky Mountains existed, or when they were in process of formation, and what is now the prairie country east of them was but slightly raised above sea level. It was then a well-wooded country and was full of marshes, lakes, and sluggish streams. The conditions were thus perfectly adapted to an abundant reptilian life, which at last was overwhelmed by the gigantic earth-push that came in from the Pacific, raising the mountains and filling up the country immediately beyond them. That a change of climate came with that vast re-creation is evident in the contrast between present conditions and those indicated by the sub-tropical remains in the Red Deer valley.

While the most important discoveries have been classified as dinosaurs—crested, horned, and duck-billed—there have been many reptilian specimens of minor proportions as well, such as, the scientists tell us, batrachians, plesiosaurs, and rhynchocephalians. Furthermore, the relic-hunters have found remains of turtles and fishes, of crocodiles and primitive mammals, of tree trunks and now extinct plant life. And the sum total of these remarkable discoveries has been of many tons' weight.

With all the bones that have gone from the Red Deer quarries to Ottawa, Toronto, and New York, there are still many more, it is believed, awaiting future digging. The erosion of the canon-sides as time goes on will lay bare further treasures, and some more big skeletons will be added in due time to the continent's fossil galleries.

## Between the Acts

Frank Vanderlip, the banker, has purchased the entire village of Sparta, New York, which he will rebuild as a model town.

\*\*\*

In Nebraska, owing to the high price of coal and the size of the corn crop, farmers are again burning corn for fuel as in pioneer days.

\*\*\*

A "jinrickmobile" has been established in Tokio. It has the framework of the old jinricksha but is run by motor instead of by man power.

\*\*\*

According to the United States game warden of the Department of Agriculture there are 7,000,000 people in the United States who make a practice of hunting.

The trend toward standardization keeps up. American paint manufacturers have reduced the number of standard colors from 100 to 24 and automobile tire manufacturers have reduced sizes from 287 to 9.

\*\*\*

The new superintendent of police in Chicago has ordered a chart prepared showing the home of every known criminal in Chicago. Patrolmen will be required to keep a record of every change of address of those on the crook list.

## Lives and Dollars

One hundred dollars a year does not seem a very high valuation for the average human life—in fact, many of us might feel that we are worth rather more than that. Yet, with only this amount as a unit, it has been estimated that the economic loss to the United States thru one disease alone is \$25,000,000,000, and possibly double that sum. A recent study made by the National Tuberculosis Association and the Metropolitan Life Insurance Company, indicates that an average of two and a half years could be added to every individual's life if tuberculosis were eliminated.

Since the National Tuberculosis Association began its campaign fifteen years ago, the death rate from tuber-

"American Ladies Will Not Be Slaves. Give Us a Fair Compensation." And the picture on the banner is of a shawled and be-flounced "lady" kneeling at the feet of Tyrant Man. Way back in 1860 the women workers of Lynn, Massachusetts, went on strike for more wages, with slogans and parades and all the other trimmings. This is the scene reconstructed for the industrial film that Carlyle Ellis has just made for the Industrial Committee of the Y. W. C. A., National Board. This three-reel picture, "From Whistle to Whistle," and another two-reel industrial film, "When Women Work," both produced and directed by Mr. Ellis, are two interesting evidences of the widening range and reach of the motion-picture medium. "When Women Work," in which the subject is treated in fictional narrative style, was prepared for the Women's Bureau of the United States Labor Department

culosis has declined from over 200 per 1,000 population to approximately 145 thereby saving the country about 50,000 lives a year. But there are 1,000,000 cases of tuberculosis in this country at the present time and approximately another 1,000,000 persons have the disease in a quiescent stage. If the terrific economic loss from the disease were confined to one occupation, the enormous waste of human life caused by a preventable and curable disease would stagger the civilized world. But tuberculosis takes its toll from all classes of society and its victims are scattered thru every trade and profession.

In order to continue its campaign against the white plague, the National Tuberculosis Association and its 1,200 affiliated agencies are conducting a sale of Christmas seals from December 1 to 11 inclusive. It has been estimated that the necessary health machinery to control tuberculosis would cost approximately \$2 per person in any American community, or a total for the entire population of the United States of \$2,000,000 spread over a period of ten years. This would mean a net saving to the United States of producing power valued at approximately \$23,000,000,000 within ten years if tuberculosis could be eliminated.

## Grow Your Own Ice

To make natural ice one essential is water, and the other is freezing weather. The trouble is that in many cases there is plenty of the right kind of weather, but little or none of the water, at least the kind of water that will be still long enough to be frozen. There are several ways of getting around this difficulty, according to "Harvesting and Storing Ice on the Farm," a farmers' bulletin issued by the United States Department of Agriculture.

Suppose a farmer finds no suitable lake or pond in his neighborhood. He can create an artificial lake by diverting a stream into an excavation, or by building a dam across a low piece of ground. Some farmers have made artificial lakes in their front yards, and they have been pretty in summer as well as useful in the winter. One thing that must not be forgotten is to keep these lakes pure and clean.

But suppose a farmer has no place for a lake, altho cold weather prevails

in his part of the country for several weeks at a time. He can freeze his ice in metal cans or special paper bags.

"The cans may be made in any convenient size by a local tinsmith," says the bulletin, "and should be of galvanized iron reinforced at top and bottom with iron strips."

"The bottom is made smaller than the top, to make the removal of the ice easier. The cans are placed near the water supply, filled with water, and left exposed to the weather. A shell of ice soon freezes around the inner surface, and when the shell is from one and one-half to two inches thick, hot water is poured over the outside of the can and the shell removed. A hole is broken thru at the top of the shell and most of the water inside is

then poured out. As the freezing progresses water is poured into the shell a little at a time until a solid block of ice is produced. By this method only a few cans are required.

"About the same method is employed when special paper bags are used, altho they do not last so long as the cans. The advantage of the bags over the metal cans is mainly in cheapness, for they are not so convenient to handle.

Another method that can be used in very cold sections of the United States is to run water into the ice house and let a layer freeze. This is done by first constructing a dam of snow around the floor of the house 10 or 12 inches from the walls in order to allow sawdust insulation next to the walls. The interior of the house is then flooded with a few inches of water, which soon freezes, the procedure being repeated until the house is filled with ice. It is then covered with sawdust and closed up until ice is needed. A great disadvantage of this method is that in order to remove ice it must be cut or chopped out with an ax, which results in uneven and irregular pieces."

Bray Studios

Three of the flakes that you brush carefully from your coatsleeve or clear from your front walk with a shovel

## Nature's Formal Art By Jerome Lachenbruch

When man seeks models for design, he invariably turns to nature. And so faithfully has he copied her that we often refer to the copy rather than to the original when we suddenly come upon a thing of beauty. "As pretty as a picture" came into the language after someone had seen nature and painted her truly.

Bray Studios

The spider makes a lovely web for dew crystals to thread themselves upon

Snowflakes and frost crystals are an endless source of design. In the accompanying photographs, taken by the Bray Studios, dew, frost and snow crystals have been many times enlarged to show the intricacies of their pattern. And by studying these crystal forms, one may tell whether a snowflake on one's coat sleeve is from a local or a "great" storm.

All crystals are hexagonal in form, and their detail varies according to the altitude in which they are found. The lacy, open-work crystals are the product of local storms, whereas the solid ones sometimes fall from as great a height as eight miles.

The phenomenon of crystallization is very much like plant growth. If a crystal breaks an arm, it grows another to replace the missing member. In the formation of snow and dew crystals, the nucleus, or center, forms first. This determines the shape of the full-grown crystal.

In these exquisite, variegated patterns designers are continually finding suggestions for brocades, wall papers, silks and tapestries.

## The Movie Aristocracy

The Motion Picture Magazine has done its bit in solving the pressing problems of the day by taking a poll of its readers on the most popular moving picture actors and actresses.

The ten table of those ranking highest is just announced as follows:

Actresses	Votes
Mary Pickford	117,387
Norma Talmadge	74,812
Pearl White	35,174
Mme. Nazimova	19,003
Constance Talmadge	13,195
Bebe Daniels	7,040
Mary Miles Minter	6,762
Viola Dana	5,944
Theda Bara	5,715
Lillian Gish	5,604
Actors	Votes
William S. Hart	58,157
Wallace Reid	48,319
Richard Barthelmess	32,004
Douglas Fairbanks	15,165
Eugene O'Brien	10,123
William Farnum	9,802
J. Warren Kerrigan	5,616
Tom Mix	5,210
Thomas Meighan	5,090
Charles Ray	5,065

Elsie Ferguson, Marguerite Clark, Anita Stewart, Dorothy Gish, Dorothy Dalton and Geraldine Farrar are left freezing out in the cold, and Charlie Chaplin can only hold down sixteenth place with a muster of 2901 votes.

# A Number of Things

By Edwin E. Slosson

I am baffled by a theological problem. I wonder if any of my readers are expert enough to solve it for me. The case is this:

Last November the army of Baron Wrangel, together with a host of Russian refugees, pursued by the Bolsheviks, escaped into the Crimean peninsula. The isthmus of Perekop, connecting the Crimea to the mainland, is less than three miles wide and it had been strongly fortified with trenches and barbed wire by French engineers and was defended with ten and twelve inch cannon as well as machine guns. On the left of this causeway was an arm of the Black Sea, protected by the French and British fleets. On the right the shallower but impassable Putrid Sea, a branch of the Sea of Azov. General Wrangel announced to the world that his army was now safe and could hold out all winter. He might have said like Horatius at the bridge:

In yon strait path a thousand  
May well be stopped by three.  
Now who will stand on either hand  
And keep the bridge with me?

But that night occurred one of those events which our legal documents, inheriting their phraseology from the age of faith, call "an act of God," meaning generally by that a calamity of nature. The Siwash or Putrid Sea very rarely freezes over altogether, even in the dead of winter, and this was early in November. The Crimea is the Riviera of Russia, where the nobility have their winter homes. But there came a severe freeze and when the Bolsheviks woke they found an ice bridge had been placed across the waters that separated them from their foes. It was strong enough to hold the army and artillery so they crossed quickly, took the White forces in the rear and defeated them with great slaughter. The fortress of Sevastopol fell into the hands of the Reds a few days later and with it the food and military supplies that had been stored there for the winter. The French and British ships could carry away only a part of the hundred thousand men, women and children who had sought safety in the Crimea from the Bolsheviks.

Now this is the sort of unprecedented occurrence that would formerly have been called "providential"—if it had happened on the other side. I used to hear of such special providences in Wednesday night prayer meetings and there are many of them recorded in American, English and Jewish history. If now the Siwash Sea had frozen over to let pass the Russian refugees, mostly members of the Orthodox Church, doubtless praying as hard as they could, and then broken up just in time to engulf the wicked Bolsheviks, that would seem all right and afford a good illustration for a sermon. But nobody can imagine the Lord's in-

tervening in behalf of Bolsheviks who openly flout him and violate all the commandments, especially the tenth. The Moscow wireless does not say that Trotsky, like his historic ancestor, stood on the shore and stretched out his hand over the sea and caused it to become dry so all his host could pass over in safety. There is no reason to think that any of the Bolsheviks prayed to have their enemies delivered into their hands by a miracle. We might suppose they swore when they found their quarry had escaped and swearing is said to be a form of prayer. But the Bolsheviks, being officially atheists, could not even swear without making hypocrites of themselves, and we should not accuse them of that without proof.

If now the devil had a kind of special providence of his own—that might help us out of the dilemma. It seems a sort of devilish trick, but I'm not sure that Satan possesses the power to upset the customary order of nature to help out or rather on his disciples. Besides flame rather than frost is his special weapon—tho we have Dante's testimony to the contrary.

But I have not heard anything about the devil for years, that is, in church. The preachers seem to have forgotten him, altho he used to be considered an important personage, not safely to be ignored. I miss him. There are some theological problems that I can't seem to solve without him. The older I get the more puzzled I become. Things seemed simpler when I was young.

My appeal for relief from my perplexity brought a quicker response than I anticipated, for as soon as the galley proof came in due course to the desk of my colleague, Preston Slosson, he turned in the following commentary. But it would shatter the tradition of paternal omniscience to accept the solution of my son as entirely satisfactory, so I still hold the question open to the reader.

The devil may easily have great power over the weather, for is he not "Prince of the Power of the Air"? Is he not in all ages credited with the power to raise storms and other untoward meteorological conditions? Would this not be especially true in a hellish country like Russia near a place with the sinister name of the "Putrid Sea"?

Robinson, it is true, says in "The New History" that "there are few events which can nowadays be ascribed with certainty to the devil," but he is perhaps unduly sceptical.

Of course, the question might be asked why God permitted the devil to send inappropriate weather since, in all legends, divine miracles are supposed to affect climatic conditions also (sinners struck by lightning, etc.). But that would raise the prior question of why God permitted the Bolsheviks to exist at all or any evil to exist at all, which would raise the

whole problem of the existence of evil which is not to be settled in a footnote.

And then there is another hypothesis; the Wranglers may have been sinners also. If not so much as the Bolsheviks, at least enough to require divine "chastisement." From what I know of the white Russians this seems at least plausible.

My own view is that whether other things be predestined or no, the weather (being a material and natural phenomenon) is quite thoroly predestined and that until the human race has devised apparatus to make weather at will we must adapt our prayers and our military strategy to the weather as we find it instead of adapting the weather to our prayers and strategy. God does not temper the wind to the shorn lamb; the shorn lamb had better move south or get a coat.<sup>1</sup>

Charlie Chaplin declares that his wife is wrong when she says he is a Bolshevik. But why then does he act like one, smashing up the furniture, bothering everybody with his stupidity and bobbing up again whenever he gets knocked down?

\* \* \*

If your house is infested by relatives perhaps you will be interested in the following advertisement that appeared in the Sydney, Australia, *Daily News*:

WHITE AUNTS positively destroyed for £2 2s. No charge while any remain alive on your property. White Aunt Chemical Coy.

\* \* \*

At this season it is meet that our minds should revert to our heroic ancestors who starved and died three hundred years ago that we might enjoy freedom and plenty. Captain Roger Clay in his *Memoirs*, written about 1676, gives a distressing picture of the pioneer days at Plymouth:

In our beginning many were in great straits for want of provision for themselves and their little ones. Oh, the hunger that many suffered, and saw no hope in an eye of reason to be supplied, only by clams, mussels and fish. . . . In those days God did cause his people to trust in him and to be contented with mean things. It was not accounted a strange thing in those days to drink water, and to eat samp or hominy without butter or milk.

Such were the privations of the Puritans. But the chief change in the three subsequent centuries seems to be that things have got scarcer and dearer. Clams, which they had for the digging, are now seventy-five cents for six of the size of the dime. Mussels are hardly to be had and fish of the boniest kind costs \$1.50 per plank. As for the spirits that our spiritual forefathers missed so much, it is not accounted a strange thing in these days to drink water. So let us trust in God and keep our country dry.

<sup>1</sup>The Wrangel army was moving south as fast as it could. E. E. S.

# Here are Books—and Books

## The Real Carnegie

*The Autobiography of Andrew Carnegie* is an extraordinary book. The romance of an unknown immigrant boy who became one of the richest men of the world is a demonstration that in business—as in life itself—honesty is the best policy and character is the only thing that counts. The old-fashioned virtues of thrift, faithfulness, courtesy and perseverance, thank God, still lead in America to fame and fortune.

The autobiography is naturally divided into two main sections: the period in which the author amassed his fortune and the period in which he put his wealth to public use. The first period is much more complete than the second. It was written some twenty years before the latter part of the book and shows a unity of design that the latter lacks. What Mr. Carnegie tells about the last part of his life is largely anecdotal. He does not divulge the triumphs and trials of giving away money as he does the making of it. Carnegie the business statesman we see pretty clearly, but Carnegie the philanthropist does not come out in clear relief. Yet Mr. Carnegie's ultimate fame will rest on his practice and theory of benevolence. Mr. Carnegie scarcely mentions his big foundations and then in only the most casual way. Most of the latter part of the book is devoted to his friendships with Lord Bryce, John Maley, Matthew Arnold, John Hay, Viscount Bryce, Herbert Spencer and others. All this is interesting enough, but he could have told us more about Peace and Libraries, and hero funds, and his religious belief. Mr. Carnegie's personality, however, which is after all the essence of any autobiography, is revealed in every page. We see a man who was never too old to learn, who knew poetry, who loved music, who adored his mother, his wife and his daughter. We come to love this vital, high-minded, generous American who looks out upon the world with such a kindly and optimistic but whimsical and sometimes mischievous glance.

The volume is as entertaining as it is inspiring. It will undoubtedly rank high among the world's lasting autobiographies.

Happily Dr. Lynch's little volume of personal recollections of Mr. Carnegie admirably supplements the autobiography. Dr. Lynch only knew Carnegie the philanthropist, and his book therefore deals with Mr. Carnegie during that period of life which is hurried over in the autobiography when the iron master was at his wisest and mellowest. Here we see Mr. Carnegie in the intimacy of his household and about his daily avocations. Mr. Carnegie always declared he owed his success in life more than anything else to the young men of promise whom he picked for partners and associates. Dr. Lynch's interest in the peace and in other humanitarian movements was

the reason that Mr. Carnegie made him a trusted friend. Mr. Carnegie would talk to him like a junior partner and Dr. Lynch gives many "close ups" of Mr. Carnegie's views on peace, education, literature, and religion. If Dr. Lynch is more of a eulogist than critic, we forgive him. He even would make out Mr. Carnegie to be a very religious man. But in this Dr. Lynch is not far wrong for tho Mr. Carnegie seldom went into a church, he did know his Bible like a true Scot and for the real essence of religion he had only the deepest reverence.

Dr. Lynch also tells us, as the autobiography does not, how some of the great foundations took their inception, for Dr. Lynch was one of the three or four who suggested to Mr. Carnegie his \$10,000,000 endowment for peace and he more than anyone else was the one who induced Mr. Carnegie to endow the Church Peace Union with \$2,000,000.

The envious, the thoughtless, have said many harsh things about Mr. Carnegie. The Socialists have held him up as the type of man that only a wicked capitalist system could produce. Whether in the good days to come society will permit future Carnegies to enjoy the prestige and power that comes with amassing and distributing millions we do not have to express an opinion here.

But considering the times in which he lived and the business and economic standards prevailing, Andrew Carnegie lived a great and good life and has served his day and generation as have few men.

These two fascinating books taken together will explain the real Carnegie to his countrymen. We cordially recommend them to the public.

*The Autobiography of Andrew Carnegie*, by Andrew Carnegie. Houghton, Mifflin Co.  
*Personal Recollections of Andrew Carnegie*, by Dr. Frederick Lynch, Fleming H. Revell & Co.

## Russian People

An interesting contribution to America's increasing collection of first-hand impressions of the Russian revolution is *Russian People*, by Princess Cantacuzène, the grand daughter of General U. S. Grant. For twenty years or more Princess Cantacuzène has lived in Russia; she describes from intimate knowledge the attitude of the mass of Russian peasants, outside the cities, toward the fall of the aristocratic régime and the establishment of the Bolshevik government. Because Prince Cantacuzène was a leading officer in the campaigns in the south of Russia and the Ukraine his wife writes authoritatively, too; of "The Crimea's Effort," "The Ukrainian Movement" and "Kolchak."

These "revolutionary recollections" are, as their author implies, only side-lights on the general trend in Russia during the last three years, but they present readable and accurate impres-

sions of events on which full information is still hard to get.

*Russian People*, by Princess Cantacuzène, Charles Scribner's Sons.

## Things Eternal

An excellent book for leisurely reading on a Sunday afternoon is *Things Eternal* by the Rev. John Kelman, D. D., pastor of the Fifth Avenue Presbyterian Church. In the preface Dr. Kelman stresses the point that this collection from his sermons is but "fugitive glimpses of eternal things." And because of their somewhat fragmentary presentation these "glimpses" are more stimulating than well-rounded addresses with no loose ends to serve as starting points for further reflection. "An old author, speaking of the journey of life, has described Sundays as the inns where the traveler rests for a little while and collects his thoughts, both of the road he has traveled and of the destination whither it is leading him," says Dr. Kelman. "Such is the intention of these studies."

*Things Eternal*, by Rev. John Kelman, D. D. George H. Doran Co.

## When You're Not in a Hurry

"The reading public in America and England get so few good sketches, indeed so few volumes of sketches at all, that even the best work of this kind has unfairly little chance," says John Galsworthy in his introduction to *The Golden Bird*, a volume of sketches by a young English writer, Dorothy Easton. I wonder if the chief reason does not lie in the speed at which most of us do our reading. Books of sketches and essays are not meant to be gulped in huge mouthfuls but picked up casually from time to time; casually and leisurely, not between trains. If you can ever manage to be leisurely and casual there are several new books you will very much enjoy.

One of them is *The Golden Bird*, already mentioned, which is made up of little pictures of people, some of them country people of southern England, some of them French. They are simple, vivid and effective in their simplicity. There is real insight and real skill in putting down what the author has seen. There is also a certain youthful insistence on the irony of fate and the blindness of most of the rest of the world.

Very different in form and tone is E. Temple Thurston's *Sheepskins and Grey Russet*. It is not exactly a series of sketches, neither is it exactly a novel tho a thread of story runs thru it. It is a record of a delightfully impractical couple's experiment in farming, but a situation at which the average person would look with hilarious humor Temple Thurston regards with whimsical philosophy, a touch of pathos, and a very charming smile. In the end it is the story of the love of a man and his wife, quietly, delicately and intimately told.

Again very different in tone, tho

likewise not intended to be read thru in a hurry, are Katharine Fullerton Geroulds' *Modes and Morals*. Mrs. Gerould is infinitely more agreeable as an essayist than as a short story writer and her discussions of current problems, social, spiritual and literary, are not only clever but stimulating. She reaches no very definite conclusions, but then how definite a conclusion do you reach when you discuss the affairs of the universe over the dinner table with a brilliant, well read and entertaining friend?

All Gaul, according to Dennis and Marion Chatham, the authors of *Cape Coddities*, is divided into "those who claim for the State of Maine the exclusive right to the title of 'God's Own Country,' those who think of the North Shore and Paradise as synonymous, and those other fortunates whose regard for Cape Cod places it second only to heaven itself." If you belong to the "fortunates" you will take great joy in this slender volume of amusing, informal essays on scallops and tea-houses, sailboats, fish, marshes and motors. Even if you do not know The Cape you will find them agreeable reading. I hesitate to say it for "gift book" is such a damning term, but this is the sort of volume, attractive in form as well as substance, which would make an ideal Christmas present for a Cape loving friend.

Speaking of New England, if I wanted to teach a foreigner, or even perhaps a Westerner, to love it and to know what it really looks like, I should make him look at pictures by Walter King Stone. Even when he is drawing a chipmunk on a wall or a chickadee balancing on a bare bough Mr. Stone slips into the background the curve of a little hill or a bit of plowed field that never could be anywhere else in the world except New England, and when he paints a landscape it breathes atmosphere which is to places what personality is to people. In *Berkshire Fields*, which is illustrated by Walter King Stone, is written by Walter Prichard Eaton and if you find "delight and stimulation—in the personalities and the retreats of wild flowers" or in "the imaginative realization—of how the world looked last night to the animal which tracked warily here, searching for its prey," you will find pleasant reading in these ramblings of an informal naturalist.

There are not many people in the world who enjoy life so thoroly as E. V. Lucas. He seems always to have plenty of time and, rare trait in an Anglo-Saxon, not to feel ashamed of it. He wanders slowly and pleasantly about London, Paris, New York, little towns in Devonshire, discovering books and pictures, gateways and inns and people which the ordinary traveler has sped by unseeing. He writes of them, and of all sorts of ordinary, everyday things like aunts and telephones and punctuality, with pleasant leisureliness, with whimsicality and with deep enjoyment. *Adventures and Enthusiasms* is well named; it arrives at the same conclusion that Stevenson drew

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

from the fact that "the world is so full of a number of things."

When you add to an artistic temperament a thoroly good sense of humor you get a delightful result, in other words Robert Haven Schaufler. His *Fiddler's Luck* is the adventures of a 'cellist who "spent his spare time roaming to and fro and up and down seeking what he might devour in the way of musical fun." How he learned to play the 'cello in his youth; the dangers and difficulties of traveling with a 'cello; how the 'cello entangled itself in his love affair; the adventures, agreeable or amusing or both, of a "fiddler militant" at Plattsburg, in a base hospital in France, with a friendly French family in Paris, in occupied Germany; of all these he tells in a style as original as it is charming. Many of the chapters appeared in the form of essays in the *Atlantic Monthly* and now, strung on a gay thread of story they make one of the most thoroly enjoyable books—whether you are a musician or not—that you have read in a long, long while.

*The Golden Bird*, by Dorothy Easton. Alfred A. Knopf. *Sheepskins and Grey Russet*, by E. Temple Thurston. G. P. Putnam's Sons. *Modes and Morals*, by Katharine Fullerton Gerould. Charles Scribner's Sons. *Cape Cod-dities*, by Dennis and Marion Chatham. Houghton Mifflin Co. *In Berkshire Fields*, by Walter Prichard Eaton. Harper & Brothers. *Adventures and Enthusiasms*, by E. V. Lucas. George H. Doran Co. *Fiddler's Luck*, by Robert Haven Schaufler. Houghton Mifflin Co.

## Tales of a Vanishing River

When you establish yourself in front of a wood fire in an easy chair with an hour or two of leisure to look forward to, an excellent book to have at hand is *Tales of a Vanishing River*, by Earl H. Reed. The author of "The Dune Country" presents in it another collection of sketches and essays of outdoors, the text enlivened by a dozen or more drawings of unusual charm. The scene is laid in the region south-east of Lake Michigan; the characters are dry-humored, weather-seasoned natives whose shrewd philosophy and provincial customs Mr. Reed catches with genial sympathy and real literary skill.

*Tales of a Vanishing River*, by Earl H. Reed, John Lane Co.

## The Fallen Ulysses

*Venizelos*, by Herbert Adams Gibbons, is more than the biography of a man. It is also the story of a nation, for the career of Venizelos was so inseparably bound up with that of Greece that biography inevitably becomes history. Mr. Gibbons, moreover, has packed into his 376 stirring pages not only biography and history but a prophecy and a plea. The prophecy is that Greece will continue to expand to its full ethnographic limits, including Constantinople. The plea is that, instead of accusing Venizelos of imperialism, the American people should sustain with their moral support his ideal of a "Greater Greece." The book was written before the downfall of Premier Venizelos, but it will be none the less useful to show how great has been the

loss of both Greece and Europe in the defeat (tho perhaps but a temporary one) of the greatest Greek statesman of modern times.

*Venizelos*, by Herbert Adams Gibbons. Houghton Mifflin Co.

## The Case Against Venizelos

In *Constantine I and the Greek People*, by Paxton Hibben, we get the other side of the Greek story. While the author adheres strictly to a faithful and accurate recounting of the events which took place in Greece between the beginning of the Great War and the abdication of Constantine in 1917—events of which he as a special correspondent of the Associated Press had first-hand knowledge—his sympathies are very frankly with the deposed king. Constantine, he declares, was at all times loyal to the cause of the Allies and maintained his neutrality only because he believed that an alliance with the Entente under the conditions which they set down would mean ruin for Greece, whose interests he was bound to defend before everything else. On three distinct occasions, however, he is said to have offered to join with the Allies, but was prevented from doing so by the political machinations of Venizelos and the Allied representatives.

*Constantine I and the Greek People*, by Paxton Hibben. Century Co.

## Once Upon a Time

James Stephens' writing has the gift of everlasting youth. Arthur Rackham's drawings have inherent magic. Wherefore the two are fortunately met in a new book, primarily for children, but also full of appeal to grown-ups with a sense of humor—*Irish Fairy Tales*, wherein is narrated the folk lore of the origin of the Fenians. Mr. Stephens tells these fairy legends of second-century Ireland with the same whimsical humor that flavored "The Crock of Gold," and with the same delicate charm of style. The book is one that any young person from eight to eighty would like to own.

*Irish Fairy Tales*, by James Stephens. The Macmillan Co.

## Present Pilgrims in Boston

There could hardly be a pleasanter guide book for a devout explorer than *The Crooked and Narrow Streets of Boston*, by Annie Haven Thwing. By numerous beautiful illustrations and intelligible maps it lures the reader to follow with increasing interest the story of how the town of Boston grew up, and it makes possible a hundred or more informal pilgrimages that may be made in Boston today to comparatively unknown points of historic interest.

*The Crooked and Narrow Streets of Boston*, by Annie Haven Thwing. Marshall Jones Co.

## Galsworthy Limited

Illustrations and text fit together with unusual charm in *Awakening*, a short story by John Galsworthy, which is published in "gift book" style. The hero of the tale is young Jon, the most

recent representative of the Forsythe family whose annals were recorded in "A Man of Property" and "In Chancery." Jon is a lovable, alert youngster, somewhat over-idealized in this story of Mr. Galsworthy's. But R. H. Sauter's accompanying drawings accentuate Jon's human idiosyncrasies and portray with remarkable insight the inner workings of the "young idea." Perhaps there never was a better picture of a small boy's nightmare!

*Awakening*, by John Galsworthy. Charles Scribner's Sons.

## The World Remade

Four books of exceptional value at this time have appeared on the political situation of the world arising out of the Great War and the Great Peace. *The Making of the Reparation and Economic Sections of the Treaty*, by Bernard Baruch, is the most authentic account of just what these clauses are, what they were intended to mean by the men who framed them and what will be their method of working. The only widely circulated book dealing exclusively with this phase of the peace-making which has yet appeared in English is Keynes's "Economic Consequences of the Peace"; and Mr. Baruch's book is far more valuable. It is straight history, instead of being, like Keynes's book, a blend of history, literary satire and propaganda. *The League of Nations at Work*, by Arthur Sweetser of the League of Nations Secretariat, is an almost indispensable account not only of the organization of the League, with which the country is by now fairly familiar, but of the work which it did during the first few months of its existence; a subject not so well known as it should be, or we would not find responsible public men referring to this very lively organization as "dead."

*The New World Order*, by Mr. Hicks, law librarian of Columbia University, is a useful reference manual on various types and forms of international association, including not only the League of Nations and The Hague conventions, but minor cases such as the Central American Court of Justice, the condominium of the New Hebrides and the international Danube Commission. The book is heavily documented and contains a long bibliography. *Political Systems in Transition*, by Professor Fenwick of Bryn Mawr, deals with the changes in internal administration of the most important governments as a consequence of the war; including not only such countries as Russia and Germany, which were fundamentally revolutionized, but countries such as the United States and Great Britain where the administrative system was expanded without formal change of the constitutional basis.

*The Making of the Reparation and Economic Sections of the Treaty*, by Bernard Baruch. Harper Bros. *The League of Nations at Work*, by Arthur Sweetser. Macmillan Co. *The New World Order*, by Frederick C. Hicks. Doubleday, Page & Co. *Political Systems in Transition*, by Charles G. Fenwick. Century Co.

## Where Do You Come In?

(Continued from page 422)

lack strength to destroy. If you yell back at them you merely add to the din and disorder. The thing for you to do is to justify this system by clean administration of it. That is easy to say, but it is a creed and it is a lifetime of work. You are not worried about the stability of the United States Government nor the system of private property. What you want to do is bring this yelling to a close as soon as possible. Very well, then, let's up and at it!

In trying times some men are certain to "lose their heads." They are dazzled by opportunity to take a quick profit. They forget that there is tomorrow and tomorrow and tomorrow. The men who do this are usually a small minority. Otherwise the whole edifice would crumble. We have not only the duty to crush them by sounder methods but we have the opportunity to profit off their bad management. They are without the pale. They have excommunicated themselves. They have turned wolf. It is absolutely fair for you to rob them of tomorrow and tomorrow and tomorrow. How?

By remaining on the main track. Remember that a grocer's job is to distribute groceries to the largest number possible and with the greatest efficiency possible. Remember that the job of the manufacturer of bricks is to make the best bricks and the cheapest bricks possible and to deliver them to the largest number of persons. Remember that the purpose of a bank is to oil the wheels of commerce by holding the faith of depositors and lending for constructive purposes which advance the welfare of the community.

You must pin your faith to the proposition that there are too many sound men in this country for a few fools to ruin it. It follows then that the yelling will be over within twelve months. The men who first get on the main track will be leading the procession twelve months from now. This isn't a time to yell. It is a time of great opportunity.

## Journalism As An Aid To History Teaching

By EDWIN E. SLOSSON Ph.D.

Literary Editor of The Independent

Associate in the School of Journalism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers.—Write to The Independent, 311 Sixth Avenue, New York.

planes and balloons cared for overhead protection and observation.

Moving forward from the railroad embankment on a front about 3500 meters in length the Americans immediately met with vigorous enemy artillery fire and machine gun resistance from the farmsteads, hedges and fences. A part of the storm of high explosive shells speedily wrecked the village of Olsene, on the river bank just in rear of the division, killing a number of Belgian civilians, while the fumes from the German gas projectiles were carried by the wind as far back as division headquarters at Denterghem, four kilometers further to the northwest. But despite the resistance the Americans continued to advance steadily until 8:30 a. m., when a brief halt was made on the line of the first objective. The 12th French Division, on the left, was somewhat behind. But the Ohio troops immediately pushed on and approached the crest between 10 and 11 o'clock in the morning, having gained about 3½ kilometers of ground since the beginning of the attack.

The artillery now took the ridge under destructive fire, following which, early in the afternoon, the advance was resumed, Colonel Gerlach's men and, shortly after, those of Colonel Pickering, attaining the summit, where they could look down upon Cruyshautem and toward the still distant Scheldt River. The line of these positions had been thoroly consolidated by dusk and here the troops were ordered to remain during the night, their flanks drawn back for liaison with the adjoining divisions, which had not progressed so far.

More than 300 prisoners had been taken during the day, representing the German 207th Infantry, 21st Infantry, 3rd Landwehr, 6th Dismounted Cavalry and Guard Ersatz Divisions. General Von Arnim has been warmly commended by General von Ludendorff, in the latter's memoirs, for his skilful conduct of the German retreat in Belgium, and with justice.

While General Farnsworth's troops had been forcing their way up Cruyshautem Ridge those of General Johnston, further to the south, had been meeting with success also, at the cost of still hotter fighting. The 91st Division attacked in dispositions especially designed to overcome the wooded hill of Spitaals Bosschen. Two battalions of Colonel J. B. Woolnough's 362nd Infantry were placed in line on the right to advance along the southern edge of the woods, one battalion of Colonel L. C. Bennett's 364th Infantry in the center and one of the 363rd Infantry, Colonel H. L. T. Cavanaugh, on the left. The 361st Infantry, Colonel A. D. Cummings, supported Colonel Woolnough, while the left was supported by the remainder of the 363rd Infantry. Colonel Bennett's battalion in the center, having within supporting distance behind it the two remaining battalions of its own regiment as well as the 346th Machine Gun Battalion and the greater part of the 316th Engineers, was to make a hold-

ing attack only direct on Spitaals Bosschen until 7:10 o'clock a. m., at which time it was expected that the flanks of the division would have so far enveloped the woodland that the enemy would be obliged to retreat from it.

The anticipated result occurred, but not so early in the day as was hoped. When the attack went over, the batteries of the 53rd Field Artillery Brigade, besides delivering the usual rolling barrage along the division front, laid a screen of smoke shells on the edge of the woods while each front line battalion commander had two 75 millimeter sniping guns at his disposal for point-blank firing in close coöperation with the infantry. With this powerful assistance, the battalion on the left was able gradually to overcome the fierce machine gun resistance in the northern part of Spitaals Bosschen and by noon had attained the first objective, just beyond the woods. Colonel Woolnough's men on the right, however, were unable to make as much progress, partly because of the difficult ground and partly because the 41st Division, their flank, was held up by machine gun fire from the village of Steenbrugge and the sunken roads in the vicinity. But the men of the holding battalion in the center, eventually reinforced by Colonel Bennett with another battalion of the 364th Infantry and some 37-millimeter trench guns, retrieved the situation by forcing their way thru Spitaals Bosschen, capturing many machine gun nests, and reaching its eastern edge by nightfall. Here the front lay until daybreak excepting the right flank.

At 6:30 o'clock on the morning of November 1 the attack was renewed all along the line. General Farnsworth's division, descending into the crooked streets of Cruyshautem, encountered but light rear guard resistance and it soon became evident that the enemy, having lost the day before his line of resistance behind the Lys, was retreating to take up similar positions behind the Scheldt. By 7 o'clock the advance battalion of Colonel Stewart's regiment had Cruyshautem in possession and before 8 a. m. Wancgem-Lede, the next village down the valley, was also occupied. Belgian inhabitants of the thickly peopled countryside, wild with joy over the advent of their deliverers from the hated German rule, turned out in crowds, their waving handkerchiefs making it difficult for aeroplane observers to keep track of the front line, which marked its progress with panels of white cloth. But by 11 o'clock in the morning the line was nearly at the Scheldt, having advanced about eight kilometers in 4½ hours. By 6 o'clock that evening the front was holding the west bank of the Scheldt from Heurne to Eyne, Colonel Stewart's 148th Regiment occupying the former village, on the left, and Colonel Gerlach's 145th Infantry having possession of Eyne, on the right.

In these positions the Americans were treading the exact ground on

which the Anglo-Dutch army under the Duke of Marlborough and Prince Eugene of Savoy defeated the French under Marshal Vendome in the great battle of Audenarde, July 11, 1708.

Starting forward from the eastern edge of Spitaals Bosschen at the same moment in the morning as the 37th Division, General Johnston's troops found no stronger opposition than the Americans further north. The enemy was in full retreat and it was not until the front line attained the crest of the last long slope looking down to the Scheldt, with the steep roofs of Audenarde rising on its nearer shore, that lively resistance again commenced. Southeast of Audenarde, directly across the Scheldt, a massive hill, the highest in the region, rises to an elevation of more than 200 feet above the level of the river. Here the Germans had massed their artillery and, with strong holding detachments in the intricate streets of Audenarde itself, were prepared to resist to the utmost the passage of the Scheldt. Colonel Cummings' men on the right and those of Colonel Cavanaugh on the left of the American line worked down the slopes and into the outskirts of Audenarde. But the shell fire from beyond the river and the fierce opposition of the German rear guards in the houses and streets forbade the penetration of the city itself without more elaborate preparation. With outposts established just beyond the edge of the town, a line of resistance for the night was organized along the crest of the ridge between Petegemstraat and Oycke, some five kilometers northwest of Audenarde.

The problem now confronting the Allied armies was that of forcing the crossing of the Scheldt, the most considerable watercourse between the sea-coast and Brussels. The retreating enemy had destroyed all the permanent bridges and, not only at Audenarde but in the sector of the 37th Division, his artillery fire from the hills east of the river swept the breadth of the marshy valley, the lines of the canal and the Ghent-Audenarde railroad grade, west of the river, and the low but steep bluff on whose crest stand Heurne and Eyne. On the morning of November 2 detachments of the 37th Division undertook to pass the river, closely supported by the light batteries of the 132d French Division while from further back the heavier guns bombarded the German artillery positions on the hills. After a protracted struggle some men of the 148th Infantry succeeded in crossing in front of Heurne on bridges thrown together of felled trees and house wreckage and by 10:30 o'clock in the morning about 300 men were over at this point. But they could not be reinforced owing to the intense shell fire which was sweeping Heurne and the exposed bluff face below it and, indeed, it required much of the fire power of the French artillery of the 128th Division and that of the 91st U. S. Division, firing diagonally across the river from their own sectors, to protect the men already over the Scheldt from an enemy flank attack.

It became clear that no pontoons could be laid at Heurne and so the bridge material was moved to Eyne, in the sector of the 145th Infantry, where after nightfall a pontoon bridge was finally thrown. A second pontoon bridge and a foot bridge were completed near Eyne before midnight and on these during the night two battalions of the 148th and one battalion of the 145th went over, deploying in their proper sectors east of the river.

The morning of November 3, therefore, found the American bridgehead well begun. But at daylight the enemy assailed it so furiously that it seemed that it might have to be relinquished. A tremendous shell fire was poured upon the troops of Colonel Gerlach and Colonel Stewart which had crossed over, while squadrons of low flying German planes swept the bridges with machine gun fire. Nevertheless, troops of the 12th French Division, to the left of the 37th, began filtering over early in the morning, with more American units, and later in the day the French supporting batteries got the upper hand of the German batteries in the artillery duel so that by evening six machine gun companies and nearly fourteen companies of infantry of the two divisions were holding the line on the eastern bank.

Meantime, in the sector of the 91st Division, Colonel Cummings' regiment on the morning of November 2 had mopped up the western part of Audenarde and coming to the bank of the river where it winds thru the city had placed the demolished stone bridges under machine gun fire. But they could get no further and a regiment was therefore made ready to march to the bridges at Eyne, cross during the night and make a flank attack on the morning of November 3 on the high hill opposite Audenarde. These troops, however, arrived at Eyne too late to cross under cover of darkness on the morning of the 3rd and the plan, deferred until the following night, was abandoned on receipt of orders for withdrawal.

The relief was effected during the night of November 3-4 by the 41st French Division, General Farnsworth's troops being relieved on the same night by the 12th French Division. The Americans, thoroly tired out by the pursuit of between twelve and fourteen kilometers and four days of constant fighting, retired, the 91st Division to Vive-St.-Elloi, on the Lys, and the 37th to Thielt, for a short period of rest. General Farnsworth's troops had lost about 1600 men in casualties and those of General Johnston, 969. The former had forced the Scheldt and left the troops which relieved it well established on the other side; the latter had captured Audenarde, the largest city taken by American arms during the war, unless Chateau-Thierry be excepted.

The two American divisions remained out of action only five days, during which time no advance was attempted by the 6th Army. They were then, on November 9, placed back in

## The Disastrous Dollar

"Oh, if I just hadn't taken the *first* dollar!" is the plaint of many defaulters.

Their experience shows that the *first* dollar wrongfully taken is the disastrous one.

It leads to disrespect of self and associates; to insincerity, poverty, prison, exile, suicide; to poignant grief of innocent people.

Moral breakdowns do not occur suddenly. Their beginnings are small and their progress insidious.

Many defaulters are astounded when told that they are common embezzlers.

We have dealt with more than 35,000 embezzlers, not one of whom ever expected at the outset that he would become a criminal. That was something which might happen to the other fellow, but not to him.

Aside from ethical considerations, which should be controlling, our experience teaches that it pays to be honest.

We see that honor and happiness go hand in hand, as do also dishonor and despair.

The employee who spurns the dishonest dollar and leads such a life of rectitude as to make himself eligible for our bond is laying a sure foundation for success and happiness. The endorsement implied by the bond of this Company is a positive asset to any employee.

Bonds issued for officers and employees of Banks, Mercantile, Manufacturing and Financial Companies, Fraternal Organizations, etc.

## Stop the Leaks that Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

**New Method Makes Saving a Pleasure Instead of a Hardship**

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

## Training for Authorship

How to write, what to write,  
and where to sell,

Dr. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

Rand-McNally Building, Chicago

line, the 91st in its former sector at Audenarde, extended northward to include Eyne, and the 37th in the Syngem sector, directly north of its former sector with its right flank approximately where its left flank had been in the earlier operations. The 37th Division was now in General Nudant's 34th Corps and the 91st Division in the 30th Corps of General Penet and the order of battle in this vicinity stood, from left to right: 5th (later 11th) French, 37th American, 12th French, 91st American and 41st French Divisions. From right to left opposite these units stood the German 3rd Landwehr Division, then the 21st, the 49th Reserve, the 39th and the 12th Bavarian Divisions.

The 6th Army command had issued orders for a general attack to sweep the enemy back over the watershed between the Scheldt and the Dendre River, twenty-five kilometers distant over a hilly country, very thickly peopled even for Belgium. The Americans were scheduled to participate in this attack on the morning of November 10. During the afternoon of the 9th, however, while General Johnston's division was on the march to the front, the 12th and 41st French Divisions, already in the Audenarde sector, found that the enemy was already beginning to retreat. They pushed across the Scheldt and scaled the heights east of Audenarde where on the morning of the 10th the Northwesterners began relieving them while advancing, Colonel Cavanaugh's and Colonel Bennett's regiments of General V. A. Caldwell's 182nd Infantry Brigade, supported by one regiment of field artillery, going into position between the two French divisions above mentioned.

The pursuit continued uninterruptedly until night, when the line halted eight kilometers directly east of Audenarde, in front of Roosebeke Ridge, where some machine gun resistance developed. Here the 91st Division, which had sustained only one casualty during the day, completed the relief of the French. More artillery having been brought across the Scheldt at Audenarde, orders were received to resume the advance at 10 o'clock on the morning of November 11 but before that time the order was countermanded and notice given that an armistice would come into effect at 11 o'clock. At that hour, therefore, General Johnston's front lay before Roosebeke Ridge on a line between the villages of Boucler, St. Blaise and Bonteveld.

In the Syngem sector General Farnsworth's troops experienced greater difficulty in crossing the Scheldt, which here stretched toward the enemy in a deep convex bend bordered on the further side by a marshy bottom, enabling the Germans to maintain a searching cross fire on the possible bridge sites. The left of the 12th French Division and the division on its left flank, which were relieved on this ground during the night of November 9-10 by Colonel Pickering's 146th and Colonel Galbraith's 147th regiments, had not succeeded in laying bridges nor in cross-

ing the river. During the following morning, however, the 146th Infantry, on the right, began crossing up stream at Heuvel, near Heurne and by the middle of the afternoon had advanced and taken Nederswalm and Hermelgem, prolonging the front of the 12th French Division on the high ground east of the river. The supporting artillery, meanwhile, so effectively bombarded the Germans opposite to the American left that Colonel Pickering's men were enabled to lay a foot bridge on which before midnight most of the regiment had crossed.

Orders now came from General Nudant for the 34th Corps to resume the advance at 10 o'clock a. m. of the 11th; orders which were later modified, in view of the advent of the armistice at 11, by the provision that the advance should cease if resistance were encountered. But strong patrols thrown out at 10 o'clock encountered no opposition and they had advanced nearly three kilometers into the hills and stood, at the moment when hostilities ceased, on a line between the villages of Zwartebroek and Kerken, nearly at their second objective.

As was the case during the last few days of the war with the American armies from the Moselle to Sedan and with the 2nd American Corps east of Bellicourt, the divisions in Belgium, in common with all the Allied hosts on the Western front, were pushing forward toward the borders of Germany with ever increasing momentum and only the advent of the armistice prevented them, in conjunction with the Belgians and the French, from pursuing the defeated and disorganized Germans thru the streets of Brussels. In the redemption of outraged Belgium the 37th and 91st American Divisions had worthily done their share.

Nearly two years have elapsed since the last cannon shot of the Great War. Only the hundreds of thousands of graves scattered over what was the Western front remain to attest the permanent blood sacrifice offered by the Allied nations for principles of freedom and justice which are eternally right and by those opponents of theirs for ambitions which are eternally wrong.

Among those graves are many thousands which contain the dust of gallant sons of America, and among the memories of the Great War none loom more significantly than the decisive entry of America into the death grapple of the nations in the summer of 1918. If those graves in the soil of republican France shall pledge to her people and those of her Allies that so long as they remain true to the ideals for which they fought from 1914 to 1918, America will remain true to them; if those ominous memories harbored by the peoples of the former Teutonic Alliance shall continue to warn them that American friendship is contingent upon their avoidance of future breaches of international faith and wars of brutal ambition, no sacrifice will have been in vain.

Yankton, South Dakota

## Perhaps this is the Country Home You've Been Looking For

By Hamilton Holt

Having just inherited the Old Homestead in which my great-grandparents set up housekeeping and where my grandfather was born, I desire to sell to some good citizen my present country home situated in the ancient and historic town of Woodstock, Connecticut.

Woodstock is one of the most beautiful and unspoiled hill towns in all New England. It is situated in the extreme northeastern corner of Connecticut—one hour and forty minutes by train from Boston and less than five hours from New York. It is by automobile (over perfect state roads) within an hour of Worcester, Mass., an hour and a half of Providence, R. I., and two hours of New London and Hartford, Conn.

The pretty summer resort towns of Pomfret and Thompson are but four and seven miles away, while Putnam, five miles distant, is the thriving railroad center where Woodstock people do most of their shopping and marketing.

My home is the last one on the village street before you strike the open country. It consists of three acres, which include, besides the buildings, lawn, vegetable and flower gardens, an orchard of twenty or thirty varieties of apple, pear, peach, cherry, plum, and quince trees.

From the front porch is a delightful view of the valley between Woodstock, Thompson and Dudley, checkerboarded with woods, streams, fields, and farm houses. In the center of the valley is Woodstock Lake, a mile and a half long and half a mile wide.

From the little hill behind the barn where I have laid out the tennis court, one of the most beautiful and extensive views in Connecticut can be had. On a clear day one can see the faint purple of Mt. Wachusett and Mt. Holyoke in Massachusetts, fifty miles away. There are several trout streams within walking distance of my place, but I can hardly be expected to indicate publicly in which one I caught my 21 "sparklers" that red-letter morning last May.

The cottage consists of nine living rooms, besides two bath rooms, three toilets, and a huge sleeping porch large enough for all the family. I have installed water and electricity in both house and barn. The house is one of those old-fashioned, low-ceilinged affairs with a Dutch oven beside the fire place in the living room. Additions have been built in all directions from time to time to accommodate the expanding needs and family of the village postmaster who owned it before me.

The outbuilding which used to be the Post Office, I have turned into a study, but of course it could be used for a hundred and one other purposes.

Besides the barn for two horses, two cows, and the pair of swallows who nest in the eaves, is a garage (with running water and concrete floor), an ice house, a chicken house and a pump house.

The pump house is over the best artesian well in Woodstock. When I dug it several years ago, I tested it with a pump that registered as high as 40 gallons a minute. But the pump could make no impression on the water level. There is evidently enough pure water in that well to supply the whole township.

In addition to the orchard there are a number of mature shade trees on the place. Along the road (the old Buffalo trail of Indian days) runs a fine row of ancient elms.

In fact my home is just the kind that is found only in New England—one that you can hardly refrain from planting about with old-fashioned perennial flowers and furnishing with treasures from the neighboring attics. (Yes, there are lots of pieces of antique furniture still waiting to be picked up round about. I speak with knowledge.)

There is a free academy in Woodstock which prepares boys and girls for college, and on any pleasant afternoon after school you can see the pupils playing games on the village "Common." There is a famous and fashionable private school for boys in the neighboring town of Pomfret and one for girls in Thompson. At Putnam there is a vocational high school and one of the best hospitals in the state.

On the shores of Woodstock Lake, a mile from "the Hill" is Roseland Park, famous for its 4th of July celebrations a generation ago and today a very popular resort for picnic parties from the neighboring towns. The lake affords excellent boating and bathing in season.

I once caught a bass weighing over five pounds just off the inlet, and have caught many in the lake over three pounds.

Connected with the Park is a sporty little natural golf links that has the most delicious spring of crystal cold water down the ravine next to the 7th hole that I have ever tasted.

In short, anybody who is looking for a New England country place—nothing elegant or pretentious, but homelike, charming, thoroughly comfortable, and all in perfect condition—has here an opportunity that is worth investigating.

I am asking \$8,000 for the property. I believe the price is fair and represents its true market value. I shall of course be delighted to supply any further information.

HAMILTON HOLT,

311 Sixth Ave., N. Y. City

## Confessions of a Movie Educator

(Continued from page 425)

vowed that never, never by means of "Educational Magazine" or other device would this very much pushing and too aggressive automobile enter their film gates again!

There was but one thing to be done.

To remove the boycotts, the company pledged the exhibitors that the Magazine would henceforth be free from all forms of advertising, direct or indirect. Other movie concerns followed suit as regards their mediums. Theatre film was thus rid of advertising. Mr. Exhibitor breathed a heavy sigh of relief and sank back to sleep again.

The Educational Department survived the smashup of its industrial-theatrical circulation about two months. And my industrials, the things we sweated blood to make and fondly thought were science-on-the-screen. What of them? Yes, they are being distributed—by the Y. M. C. A. and other agencies that take business films to business folk.

Looking back over the activity of nine months and comparing the conditions with the present, I cannot find that our so-called Educational Department changed the status of things in the slightest. The trouble is not with educational movies (in which I firmly believe), but with the brand of commercialism that misuses the name to camouflage quite other aims. Most educational departments are organized merely to sell or rent film production service. Such organizations, managed by such executives as I have described, have no vision of classroom needs. Provide men of vision with the necessary capital, and how different would be the result. Suppose for example that our movie president had handed his \$100,000 educational appropriation to a film-wise school expert and told him to make film textbooks and report back in five years. Probably even now the classroom rentals would be repaying interest on the sums expended to date, and by the end of five years the enterprise would be flourishing and prosperous. Let me cite just two facts tending to prove this: men like Foster, Hugon and Herm are now producing film highly useful in the classroom, and on the other hand the City of New York alone is expending \$10,000 for school film rentals this season. It can be done and it is being done. And the business man can help. He should be big enough and broad enough to desire the universal picturization of knowledge, including his own little corner of applied knowledge, as a public service and not as a sales vehicle. The example of Ford's Screen Weekly, publishing every year 52,000 feet of useful visualized knowledge without a line of sales advertising, shows that Henry Ford is alive to the opportunity, and others will follow in his footsteps as they realize what direct teaching by the eye means to humanity.

**How to Study This Number**

## THE INDEPENDENT LESSON PLANS

English, Literature and  
CompositionHistory, Civics and  
Economics

## I. The Americans in Belgium.

1. Compare the last paragraph in Captain Hanson's article with Mr. Holt's analysis, in the last number of The Independent, of the German attitude toward the war.

## II. Peace on Earth.

1. Reduce Mr. Hoover's appeal to personal terms; that is, write a letter from a child in Europe or its mother to some person or organization in America.

## III. Confessions of a Movie Educator.

1. What do you think is really the best thing that the movies do in the educational line? Give examples from your personal experience of the ways in which the attempts of the moving picture to educate fail or are successful.
2. Write an essay about the capacities and limitations of the moving picture as a dramatic medium, describing the type of play that you think is best adapted to such a production. If possible, take some picture, or pictures, that you have actually seen, as basis for your discussion.
3. Write a scenario for an educational movie, on any subject, in any form—that is, fiction, or frank instruction, or a mixture—providing only that whatever you do is interesting. Notice the illustration, in A Little of Everything, from an industrial film.
4. Discuss examples that you have seen of plays for the stage that have later been given by the movies.
5. Discuss the list of moving picture actors and actresses in the list in A Little of Everything, giving carefully critical reasons for your opinion as to where various ones should be placed in the scale.

## IV. Where Do You Come In?

1. How do you like Mr. Crowell best—in one of his frankly humorous articles, or in this one with its serious subject? Why?

## V. A Little of Everything.

1. Telephoning Pictures. Discuss this as a piece of expository writing. Can you give an explanation of the process described in your own words? Try writing it.
2. Nature's Formal Art. (a) For one day, observe and take notes on all the examples you can find of natural design. Spider webs and snow crystals are not the only ones. Notice the traceries of tree branches, the arrangements of flights of birds, clouds, any number of other things. (b) In the course of a week see how many natural designs you can find that you could use in some specific way for decoration for houses, clothes, book-covers, etc. (c) Write a poem or a passage of description about one of your examples.

## VI. Editorials.

1. England and Ireland. Discuss the plan in the next to the last paragraph of Mr. Holt's editorial.
2. The Anti-Semite Scare. (a) "Such prejudice as the Hebrews in America have had to endure is due to social snobbishness, business rivalry, and personal antipathies. There has been no concerted political and literary anti-Jewish agitation, no deliberate attempt to inflame the mob-mind as in continental Europe." How can you explain the different race conditions in America and on the Continent? (b) Can you think of any other case in which a superstitious panic has grown up about a class or group of people. If you can, tell the story of it.

## VII. Hymn to the Stars.

1. Criticize this as poetry.
2. Compare it with Shelley's "West Wind" or "To a Cloud," for point of view. Explain the difference in as many ways as you can. Do you think the fact that Shelley was an Englishman, and Whittier an American has anything to do with it?
3. Compare the poem with other poems by Whittier. In what ways is it characteristic and in what ways not? If you were not told that this was by Whittier, do you think you would know it?
3. What poets contemporary with Whittier do you think of when you think of him? Why do you connect them? Compare two or three early American poets for likenesses and differences. If they all have something in common, try to explain how that came about.
4. Write an appreciation of your favorite Whittier poem.

## I. International Relief Work—Peace on Earth, Good Will to Men. Relief for China.

1. Study Mr. Hoover's appeal for relief work in Central Europe and President Wilson's appeal for relief work in China. On what grounds is the appeal in each case made to the American people? Mention reasons why no other nation is in a position to do as much as the United States to fight world famine.
2. Indicate on a map of the world those countries where there are famine conditions and give a particular reason in each case why conditions are worse there than in nearby countries (for example, Poland is worse off than Czechoslovakia for a variety of reasons one of which is the recent Bolshevik invasion of Poland). Why is overcrowded Japan better off than overcrowded China and India?

## II. The Irish Question—England and Ireland. Civil War in Ireland. The Burning of Cork.

1. What do you think of Mr. Holt's proposal with regard to Irish Home Rule? You can use it as subject for a debate if you wish.
2. Look over the following list of words and phrases, and check those which you think apply accurately to the Irish situation, leaving blank or striking out those which seem to you inaccurate: Riot, rebellion, revolution, civil war, international war, guerrilla warfare, agrarian outrages, state of belligerency, *de facto* republic, insurrection, reprisals, repression, vindication of the law, treason, religious conflict, racial conflict, nationalism, sectionalism, party strife, self-determination, domestic question. This little exercise is not so silly as it seems. All of these words are used freely about the Irish situation, without much examination into their meaning, in newspaper accounts. It is well to examine just what meaning we attach to them and to what cases we would apply them.

## III. Industrial Policy—Where Do You Come In?

1. Comment on the following statements by Mr. Crowell: (a) "Private property is simply the possession of a job"; (b) "The men who do not operate the system but are operated by it have lost faith in the men who operate it"; (c) "The corporation is one of the cleverest contrivances the human mind has produced."
2. After reading the article write an editorial on any one of the following topics: (a) "What the Business Man Should Do in Hard Times"; (b) "The Responsibility of the Property Owner to the Community"; (c) "How Can We Vindicate the System of Private Property?"

## IV. American History—The Americans in Belgium.

1. Look up the back numbers of Captain Hanson's articles; read them all; then write a brief summary of America's part in the Great War. Do not exaggerate the dimensions of the military contribution made by this country, but assess it fairly, as a historian would in writing about the extent of England's aid to Prussia in the Seven Years' War or the extent of France's aid in bringing about the independence of Italy from Austrian domination.

## V. The Near East—The Near East Tangle.

1. Show how and why each of the factors in the situation mentioned in the first paragraph has delayed the restoration of peace in the region of the old Turkish Empire.
2. Why do the Allied Powers object to the restoration of King Constantine of Greece?

## VI. National Problems—Sword or Olive Branch? Immigration Bill Passes House. Houston's Horrible Hints. On the Listening Porch.

1. Do you agree with Secretary Daniels that disarmament is impossible until agreed on by the League of Nations, or with Senator Borah that naval limitation, at any rate, can be brought about by direct agreement with Britain and Japan?
2. Why did the House of Representatives adopt a bill for the exclusion of all immigrant labor? Why did it limit the period of exclusion to one year?
3. Why is heavy taxation still necessary now that the war is over, in fact if not in form? Why does a great war always burden the next generation with expense?
